Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? ☒ Yes ☐ No

- Refer to Appendix III – MHI & Distressed Communities Documentation

Categories (select applicable project):

Project Grants (Check All that Apply) __Not Applicable__

☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.

☐ Wetland restoration.

☐ Floodplain restoration.

☐ Construction of swales and settling ponds.

☐ Living shorelines and vegetated buffers.

☐ Structural floodwalls, levees, berms, flood gates, structural conveyances. Storm water system upgrades.

☐ Medium and large scale Low Impact Development (LID) in urban areas.

☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.

☐ Dam restoration or removal.

☐ Stream bank restoration or stabilization.

☐ Restoration of floodplains to natural and beneficial function.

☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Study Grants (Check All that Apply) __Not Applicable__

☐ Studies to aid in updating floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.

☐ Revising other land use ordinances to incorporate flood protection and mitigation goals, standards, and practices.

☐ Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the

Federal Emergency Management Agency (FEMA). For example, a local government might conduct a hydrologic and hydraulic study for an area that had not been studied because the watershed is less than one square mile. Modeling the floodplain in an area that has numerous letters of map change that suggest the current map might not be fully accurate or doing a detailed flood study for an A Zone is another example.

☐ Studies and Data Collection of Statewide and Regional Significance.

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard. Other relevant flood prevention and protection project or study.

Capacity Building and Planning Grants

☐ Floodplain Staff Capacity.

☒ Resilience Plan Development

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.

☒ Resource assessments, planning, strategies, and development.
- Policy management and/or development.
- Stakeholder engagement and strategies.

Location of Project (Include Maps): Refer to Appendix I – Vicinity Map

NFIP Community Identification Number (CID#):(See Appendix F) #510051-DCR1

Is Project Located in an NFIP Participating Community? ☐ Yes ☒ No

Is Project Located in a Special Flood Hazard Area? ☐ Yes ☒ No

Flood Zone(s) (If Applicable): Not Applicable

Flood Insurance Rate Map Number(s) (If Applicable): Not Applicable

Total Cost of Project: $57,000

Total Amount Requested $51,300 (Low-income Geographic Areas – 10%)

Flooding

CONTINUED FROM PAGE 1

collapsed. A rusted drainpipe that had been installed for an estimated 60 years crumpled, causing a section of the road to give way, Baker said.

Virginia Department of Transportation employees worked until after 4 a.m. Saturday morning to replace the pipe.

Baker said town employees work hard to keep drainpipes and ditch lines cleaned out, but Wednesday's storms simply brought more water than the drains could contain.

While Clintwood received the worst of the storms, other areas in the county also reported some slight damage.

County Administrator Mark Vanover said he received several reports of flooded basements in the Clinchco area. Runoff seemed to be a bigger problem than rising water in that area, Vanover said. The Haysi area reported hit-and-miss showers, with far less damage than in the Clintwood area.

The county received some reports of roads and driveways being washed out, Vanover said. Whenever possible, the county tries to assist residents, Vanover stated. But legal restraints prevent county equipment or resources from being used on private property.

It came close, but water fortunately didn't make its way into the high school's gymnasium. The worst damage in town occurred in front of the school, when a section of the road collapsed after a

APPENDIX IV: SCOPE OF WORK NARRATIVE

Appendix IV – Scope of Work Narrative
Planning & Capacity Building

Capacity Building – Resiliency Plan

The Town of Clintwood is located in the western part of Dickenson County, with a population of 1,438 (Dickenson County – 14,318). It is the County seat and the largest of the three (3) towns in Dickenson County. Access if provided via US Route 23 and US Route 83; refer to Appendix I – Vicinity & Drainage Area Maps. US Route 83 is the only cross-county thoroughfare providing access to the more rural areas of the County, the Town of Haysi, and Buchanan County, the location of jobs for many who live in Dickenson County.

The Town does not participate in the National Flood Insurance Program (NFIP). However, the Virginia Department of Conservation and Recreation (VDCR) has assigned it CID #510051-DCR1. Clintwood does not have a Resiliency Plan (Plan) at this time. Dickenson County has submitted its Resiliency Plan to VDCR and is awaiting approval. Clintwood will use the County Plan as a basis for developing its own. Chris Rakes, County Building Inspector, will serve as the Locally Certified Floodplain Manager for the Town's Plan. A copy of his certification is provided in Appendix X – Certified Floodplain Manager.

Holly Creek is the only conveyance through Town. Due to the small drainage area of the creek (refer to Appendix I – Vicinity & Drainage Area Maps and Appendix V – Budget Narrative) and localized impact, the Town Plan will be less formalized than that of a larger community with numerous streams and rivers. The Town will provide the financial, technical assistance, and maintenance of the conveyance systems with current staff and equipment, as it has in the past. Additional training, staff, and other resources are not envisioned. Should additional, funding beyond the CFPF, be necessary, the Town will work with other state and federal agencies who fund similar projects with grant funds, as it is not in a position to incur additional debt for non-revenue generating projects.

The Resiliency Plan will further identify and provide planning and support, to mitigate the risks of Holly Creek's local flooding impacts. Public Meetings will be held to educate local stakeholders and solicit input prior to submission to VDCR. Services will generally consist of:

- Conduct a kick-off meeting with Town and County officials to review the County Plan and determine which elements are applicable to the Town; establish goals, objectives, roles, and responsibilities; and establish a timeline for completion.
- Compile available plans, reports, and other documents germane to generating the Plan.
- Develop a draft Plan for review by Town Council and input from Dickenson County.
- Conduct a Public Meeting soliciting input from local stakeholders.
- Submit the Plan to VDCR for review and approval.

The Town has solicited and procured professional engineering services of The Lane Group, Inc. (Lane) via a Master Services Agreement (Task Order-based) in compliance with the Virginia Procurement Act. Lane, in conjunction with Mr. Rakes, will provide expert consulting and advise relative to generating the Plan. Preparation of the Plan will also allow the Town to generate a Preliminary Engineering Report (PER) as a part of its Planning effort to remedy the localize flooding the Town is experiencing.

Planning – Preliminary Engineering Report

The PER will model and analyze the hydrology and hydraulics (H&H) of the existing drainage system to existing determine conveyance capacity. The H&H model will then be adjusted, sizing culverts and stream channels, to convey the 25-year event, the VDOT standard event for Minor Rural Arterial and Major Rural Collector (US Route 83). An opinion of probable cost for the design and construction will be generated from preliminary design plans for the improved drainage system. In addition to the technical aspects of the services, the PER will also address environmental concerns and compliance with the National Environmental Policy Act (NEPA); basis of design; permitting and construction issues; and other project elements necessary to fully analyze the project, its costs, and its impact to the community. The PER will be the basis of a future Project Application seeking CFPF funds. Services will generally consist of:

- Compile available mapping and conduct a field reconnaissance.
- Conduct field survey relative to conveyance system structure sizes and flow line elevations.
- Generate a hydrologic and hydraulic model of the system and proposed systems, sizing culverts and stream channels, to convey the 25-year event, the VDOT standard event for Minor Rural Arterial and Major Rural Collector (US Route 83).
- Develop conceptual plans.
- Contact state and federal agencies relative to NEPA compliance and generate an Environmental Assessment.
- Contact state and federal agencies, and private utilities relative to permit compliance.
- Generate an opinion of probable cost.
- Publish the PER.
- Meet with Town Council to review the PER and secure approval.
- Submit and secure VDCR approval.

APPENDIX V: BUDGET NARRATIVE

Appendix V – Budget Narrative
Planning & Capacity Building

Project Information

Dickenson County is situated in the Cumberland Plateau Physiographic Province, comprised of sandstones, shales, and numerous surface and deep mine coal seams. This Province is characterized by deeply incised narrow valleys and steep, high ridges leading to rapid runoff and flooding peaks ("flash flooding"), with limited long-term inundation. The Town itself is located at the headwaters of Holly Creek. Holly Creek has a small drainage area of approximately 0.74 square miles where it enters to the west of the Town, increasing to 1.79 square miles to the east, where it exits, a possible reason it does not participate in the NFIP. Refer to Appendix I – Vicinity & Drainage Area Maps.

Flooding of downtown Clintwood has been problematic since the 1950's. With the advent of coal strip mining in the 1970's, the problem was further exacerbated. More recently, storms have been more intense and localized; climate change is suspected.

The recurrent and repetitive flooding problems is due to an inadequate stormwater drainage system conveying Holly Creek through the Town. As stormwater flows through Town, there are a number of constrictions where the downstream culverts are actually smaller than those upstream. The restricted flow creates backwater that floods the downtown, sometimes closing US Route 83. When the backwater exceeds the available storage capacity of the upstream areas, additional overflow flooding occurs in other areas. This has resulted in property damage and loss on a continuing basis. Residential and commercial areas are impacted. They include doctor's offices, pharmacies, banks, auto dealerships, restaurants, and other businesses along the path. The creation of new in-town businesses is further hampered due to flooding concerns.

The purpose of this Application is to generate a Resiliency Plan for the Town and PER, analyzing the storm drainage system, generating a preliminary design for the mitigation improvements, and projecting design and construction costs for a future CFPF Project Application.

Funding

Per Adapt Virginia, the Social Vulnerability Index is "Moderate." The Median Household Income (MHI) for the Town of Clintwood and Dickenson County is $45,920 and $30,116, respectively. The MHI for the Commonwealth is $76,398. As such, the Town and County are 60% and 39% of the state MHI, respectively, well below the 80% threshold used to determine a low-income geographic area. In addition, the Appalachian Regional Commission lists Dickenson County and the Town of Clintwood as "Distressed." Refer to Appendix III – Vulnerability Index, MHI & Distressed Communities for the documentation.

Based on the foregoing, the Town of Clintwood qualifies for 90% CFPF grant funding with a 10% local match. Refer to Appendix VI – Matching Funds Resolution & County Support Letter whereby the Town will commit funds to meet the 10% match.

Budget & Schedule

The following provides the costs, Town of Clintwood matching funds requirement, and the CPFP funds requested from VDCR.

Task	Total Cost	Town Match	CPFP Funding	Schedule
Resiliency Plan	$ 18,500	$ 1,850	$ 16,650	6 months
Preliminary Engineering Report	$ 38,500	$ 3,850	$ 34,650	6 months
Total	**$ 57,000**	**$ 5,700**	**$ 51,300**	**6 months**

APPENDIX VI: MATCHING FUNDS RESOLUTION & COUNTY SUPPORT LETTER

This Instrument Prepared By:
Greg Baker Attorneys at Law, PLLC
P.O. Box 338
Clintwood, Virginia 24228

RESOLUTION

This Resolution is made effective as of this 5 day of April, 2022, by the Clintwood Town Council the governing body of the Town of Clintwood, hereinafter referred to as the "**Town**".

RECITALS

WHEREAS, the Town desires to apply to the Virginia Department of Conservation and Recreation for a Virginia Community Flood Preparedness Fund grant;

WHEREAS, the Virginia Community Flood Preparedness Fund grant application requires a grant matching requirement of 10% from the Town;

WHEREAS, the Town desires to resolve the following:

RESOLUTION

NOW THEREFORE, be resolved that the Clintwood Town Council the governing body of the Town of Clintwood hereby agrees to apply for a Virginia Community Flood Preparedness Fund grant and further agrees it has identified and will make available the 10% matching funds, with authorization pending Virginia Department of Conservation and Recreation approval of the Virginia Community Flood Preparedness Fund grant funds to the Town.

IT SHALL BE FURTHER RESOLVED that the Clintwood Town Council authorizes the Mayor of the Town, Danny Lambert to complete any documentation required or necessary to finalize the grant application.

THE TOWN OF CLINTWOOD, VIRGINIA, BY ITS DULY ELECTED TOWN COUNCIL, THE GOVERNING BODY OF THE TOWN OF CLINTWOOD HEREBY RECORDS ITS VOTE ON THE ABOVE RESOLUTION AS FOLLOWS:

Danny Lambert, Mayor: Non-Voting

Ronald Kendrick: Aye

Talbert Bolling: Aye

Doris Rife: Aye

James Childress: Aye

Shelly Mullins: Aye

ADOPTED THIS 5 **day of April, 2022.**

Re: Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Application

Dear Mayor Lambert:

The Dickenson County Board of Supervisors is fully supportive of the Town's submission to the Virginia Department of Conservation and Recreation (VDCR) Virginia Community Flood Preparedness Fund (CFPF) grant application. As some of the County offices are located in downtown Clintwood, we are well aware of the flooding problems the Town has faced over the past few decades. Preparation of a Resiliency Plan and Preliminary Engineering Report will allow the Town to address this issue and add to the safety of residents not only in the Town, but also in the County, where access to other towns and rural communities is affected when US Route 83 in the downtown is affected by high water and flooding.

The Town has recently submitted its Resiliency Plan to VDCR for approval. The use of our approved Plan may facilitate the Plan to be developed by the Town. The County is committed to working with the Town on this initiative.

Should you have additional questions or needs the County can address, please contact us at your earliest convenience.

Sincerely,

Larry Barton, County Administrator

Chris Rakes, County Building Official and Certified Floodplain Manager

RESOLUTION

WHEREAS, the Disaster Mitigation Act of 2000, as amended, required that local governments develop and adopt natural hazard mitigation plans in order to receive Hazard Mitigation Grant Program (HMGP) project grants and certain other forms of non-emergency disaster assistance; and

WHEREAS, a Mitigation Advisory Committee ("MAC") comprised of representatives from all jurisdictions within the Cumberland Plateau Planning District was convened in order to study Dickenson County's risks from and vulnerabilities to natural hazards, and to make recommendations on mitigating the effects of such hazards on Dickenson County; and

WHEREAS, the efforts of the MAC members in consultation with members of the public, private and non-profit sectors, have resulted in the development of a Hazard Mitigation Plan Update for the Cumberland Plateau Planning District communities including Dickenson County.

NOW THEREFORE, BE IT RESOLVED by the Dickenson County Board of Supervisors that the Cumberland Plateau Planning District Commission Hazard Mitigation Plan dated August 20, 2013 is hereby approved and adopted for Dickenson County. A copy of the plan is attached to this resolution by reference.

ADOPTED this 20th day of August, 2013.

AUG - 1 2013

Dear Mr. Moore:

RE: Hazard Mitigation Plan Update Adoption

This is to inform you that the Cumberland Plateau Hazard Mitigation Update Plan has been approved by FEMA and can now be adopted by each of the localities in the Cumberland Plateau Planning District Commission area. Enclosed are all of the changes and updates to the original Hazard Mitigation Plan, pages should correspond to the original and can be removed and replaced where needed. Also enclosed is a Resolution that again must be adopted and approved by each locality in the Cumberland Plateau Planning District. This adoption must take place as soon as possible by each locality. The Update Plan must be adopted by September 20, 2013 and signed resolution mailed back to us in order for full and final approval from FEMA. If you have any questions please let me know. Thank you so much for your time and efforts during this process.

Sincerely,

M. Shane Farmer

Cumberland Plateau Planning District Commission

Hazard Mitigation Plan Update

May, 2013

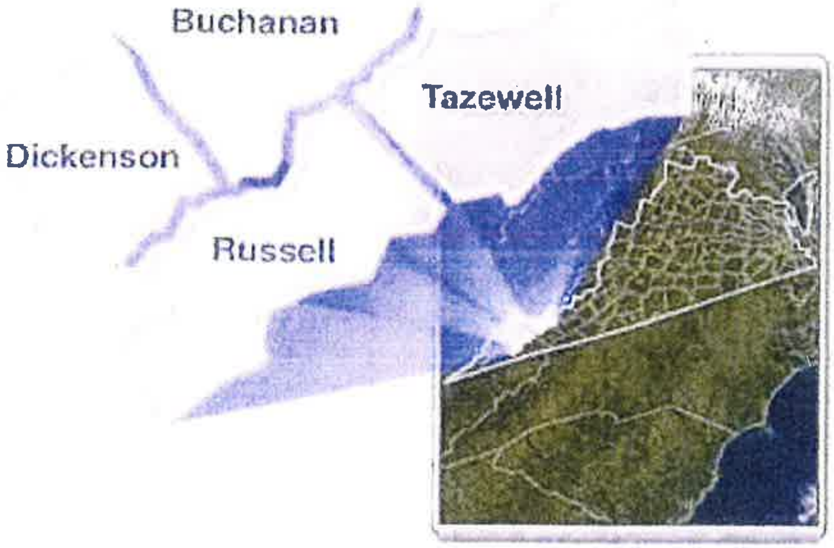

Table I-1 summarizes the results of this analysis, which is explained more fully in Section V of this plan.

Table I-1 — Hazard Identification Results

Hazard Type	Hazard Level
Flooding	High
Severe Winter Storms	Medium-High
Wildfire	Medium-High
Landslides	Medium-High
Severe Thunderstorms/Hail Storms	Medium
Severe Wind	Medium-High
Earthquake	Medium
Dam/Levee Failure	Medium
Drought	Medium
Tornado	Low
Extreme Heat	Low
Karst	Low

The Mitigation Strategy

During the presentation of findings for the Hazard Identification and Risk Assessment workshop, the Mitigation Advisory Committee (MAC) was asked to provide comments and suggestions on actions and policies, which could lessen the area's vulnerability to the identified hazards. The MAC supported the following preliminary comments below:

- Top priorities for the area were public safety, public education, and reduction of potential economic impacts of disasters.
- Alternatives should consider the impacts on the Cumberland Plateau Planning District as a whole.
- Alternatives must not conflict with other local government programs.
- Outreach and other efforts should be attempted to repetitive loss properties, including those designated by FEMA.
- Past experiences from disasters should be built upon.
- The success of past mitigation projects should be considered in developing alternatives.

The following overarching goal and six specific goals were developed by the MAC to guide the area's future hazard mitigation activities.

OVERARCHING COMMUNITY GOAL:

"To develop and maintain disaster resistant communities that are less vulnerable to the economic and physical devastation associated with natural hazard events."

SECTION III. PLANNING PROCESS

In 2003, the counties of Buchanan, Dickenson, Russell and Tazewell, Virginia, as members of the Cumberland Plateau Planning District, (referred to hereinafter as the Planning District) collaborated with the Virginia Department of Emergency Management to undertake a multi-jurisdictional natural hazards planning initiative. To facilitate the planning process, a Mitigation Advisory Committee (MAC) was established to 1) provide leadership and guidance for the planning initiative, and 2) develop a beginning set of goals to guide the development of a natural hazards mitigation plan. Currently this document is an update to that original plan with the addition of hazards that have effected the Planning District from 2005-partial 2011.

These goals were based on the principles of hazard awareness and disaster prevention. These goals included:

- Ensure that the Planning District has sustainable communities and businesses resistant to the human and economic costs of disasters;
- Maintain and enhance the economic stability, public health, and safety to the communities of the area;
- Ensure that the Planning District's cultural richness and environmental quality are not jeopardized by the occurrence of a disaster; and
- Recognize the potential impact of natural or manmade hazards on public and private buildings and facilities, and the utility and transportation systems that serve them.

Beginning in March 2011, the MAC held regular meetings and commenced work to identify and update the area's natural hazards. They coordinated and consulted with other entities and stakeholders to identify and delineate natural and manmade hazards within the four local jurisdictions and to assess the risks and vulnerability of public and private buildings, facilities, utilities, communications, transportation systems, and other vulnerable infrastructure. New FEMA Digital Flood Insurance Rate Maps were incorporated into the plan update. Neighboring counties adjacent to the planning district were contacted by the MAC as the planning process began. However, no response was received.

In addition, the MAC initially contacted all incorporated towns within the Planning District to solicit interest and input concerning participation in the development of a multi-jurisdiction hazard mitigation plan. Representatives from the towns participated in committee meetings throughout the process to again solicit their input for the inclusion of mitigation actions from each community into the mitigation strategy portion of the plan and to request adoption of the plan upon completion, as well. The communities' responses are incorporated into the final plan. Table III-1 provides more information on the individual MAC meetings.

Table III-1 — Mitigation Planning Workgroup Meetings

CUMBERLAND PLATEAU PLANNING DISTRICT
COMMISSION Steering Committee Participation

Meeting Dates	Meeting Purpose
4/20/11	Kick-off Meeting
7/11/2011	HMA Meeting
5/2012	Presentation of HIRA Findings
7/2012	Mitigation Strategy Development Meeting
8/2012	Second Mitigation Strategy Development Meeting
11/2012	Public Meeting

In September 2010, Cumberland Plateau Planning District Commission (Planning District) to update the multi-hazard mitigation plan including a Hazard Identification and Risk Assessment (HIRA) and mitigation strategies. The Planning District worked with the stakeholders throughout the Planning District localities updating the past Hazard Mitigation plan to ensure that potential stakeholders participated in the process and would have opportunities for input in the draft and final phases of the plan update.

The Mitigation Advisory Committee and Mitigation Management Team

A Mitigation Advisory Committee (MAC) and Mitigation Management Team (MMT) comprised of public representatives, private citizens, businesses, and organizations worked with the Planning District and provided input on each section of the plan, including hazards addressed, mitigation actions, and prioritization. Efforts to involve county departments and community organizations that might have a role in the implementation of the mitigation actions or policies included invitations to attend meetings and serve on the MAC, e-mails of minutes and updates, strategy development workshops, and outreach through local government meetings and public libraries, plus opportunities for input and comment on all draft deliverables.

The Planning District would like to thank and acknowledge the following persons who served on the MAC, MMT and their representative departments and organizations throughout the plan update process:

Public Participation and Citizen Input

Several opportunities were provided to the public for input and participation throughout the planning process. Drafts of the Hazard Identification and Risk Assessment and Mitigation Strategies were made available via the project team website. The planning process was discussed on a regular basis at the Cumberland Plateau Planning District Commission board meetings, which includes representation of all counties and towns in the planning district. Additionally, the plan was discussed at Board of Supervisor meetings in the participating counties.

Other PDC's such as Mt. Rogers and Lenowisco were contacted and sought out for advice as they were working on updating the Hazard Mitigation plans for their localities.

In October, a copy of the Draft Hazard Mitigation Plan was made available in the County Administrators office in Buchanan, Dickenson, Russell, and Tazewell counties, and each of the town halls. Copies of the announcements notifying the public of the availability of the draft plan for review is included in Appendix D.

In addition, an open public meeting was held in November 2012 at 11:00 a.m. at the Southwest Virginia Community College in Richlands to provide an overview to the public of the planning process and the results of the hazard identification and mitigation strategy. The meeting date was advertized in the local papers. Also, draft copies of the complete plan are also available on the Cumberland Plateau PDC website at www.cppdc.org for review and comment by the public.

Adoption

Participating jurisdictions must formally adopt the hazard mitigation plan in order for it to be approved by the State of Virginia and the Federal Emergency Management Agency. This plan was adopted by the Counties of Buchanan, Dickenson, Russell and Tazewell and the towns of Grundy, Clinchco, Haysi, Cleveland, Honaker, Lebanon, Bluefield, Cedar Bluff, Pocahontas, Richlands and Tazewell. The town of Clintwood did not participate in the flood program. Copies of the adoption language for each community is included in Appendix E.

Appendix A: Hazard Identification Worksheet

Hazard Type	Probability	Impacts			Total Score	Hazard Level
		Affected Area	Primary Impact	Secondary Impacts		
SEVERE WINTER STORM	6	3.2	1.4	1.5	37	Medium-High
DROUGHT	4	3.2	0.7	1	20	Medium
EARTHQUAKE	4	3.2	1.4	1	22	Medium
WILDFIRE	8	2.4	2.1	0.5	40	Medium-High
FLOOD	8	2.4	2.1	2	52	High
EXTREME HEAT	2	3.2	0.7	0.5	9	Low
LANDSLIDES	8	1.6	2.1	1	38	Medium-High
SEVERE THNDERSTORM / HAIL STORM	8	1.6	0.7	0.5	22	Medium
DAM/LEVEE FAILURE	2	1.6	2.8	2	13	Medium
TORNADO	2	1.6	2.1	1	9	Low
SEVERE WIND	6	3.2	1.4	1.5	37	Medium-High
KARST	2	0.8	0.7	0.5		Low

Total Score = Probability x Impact, where:
Probability = (Probability Score x Importance)
Impact = (Affected Area + Primary Impact + Secondary Impacts), where:
Affected Area = Affected Area Score x Importance Primary
Impact = Primary Impact Score x Importance Secondary
Impacts = Secondary Impacts Score x Importance

Hazard Level Total Score	(Range)	Hazard Level	Distribution
0.0	12.0	Low	2
12.1	28.0	Medium	4
28.1	48.0	Medium-High	3
48.1	64.0	High	1

The probability of each hazard is determined by assigning a level, from 1 to 4, based on the likelihood of occurrence from historical data. The total impact value includes the affected area, primary impact and secondary impact levels of each hazard. These levels are then multiplied by an importance factor to obtain a score for each category. The probability score is multiplied by the sum of the three impact categories to determine the total score for the hazard. Based on this total score, the hazards will be separated into four categories based on the hazard level they pose to the planning area: high, medium-high, medium, low.

Probability Importance 2.0

Based on average annual frequency of occurrence estimated from historical data

Level	Average Annual Frequency	Score
1	Unlikely (less than 1 % occurrence)	2
2	Possible (between 1% and 10% occurrence)	4
3	Likely (between 10% and 100% occurrence)	6
4	Highly likely (near 100% occurrence)	8

Affected Area Importance 0.8

Based on size of geographical area of community affected by hazard

Level	Affected Area	Score
1	Isolated - limited to one building/facility	0.8
2	Small - limited to a handful of buildings/facilities	1.6
3	Medium - affecting a portion of an area	2.4
4	Large - affecting a widespread area	3.2

Primary Impact Importance 0.7

Based on percentage of damage to typical facility in community

Level	Impact	Score
1	Negligible - less than 10% damage	0.7
2	Limited - between 10% and 25% damage	1.4
3	Critical - between 25% and 50% damage	2.1
4	Catastrophic - more than 50% damage	2.8

Secondary Impacts Importance 0.5

Based on estimated secondary impacts to community at large

Level	Impact	Score
1	Negligible - no loss of function, downtime, and/or evacuatio	0.5
2	Limited - minimal loss of function, downtime, and/or evacua	1
3	Moderate - some loss of function, downtime, and/or evacua	1.5
4	High - major loss of function, downtime, and/or evacuations	2

NOTE:
Total Score values assume a margin of error of + 10 percent. 0.5

Section 2 - Hazard Identification

The FEMA guidelines emphasize using "available data" for this plan, especially for the Hazard Identification and Risk Assessment (HIRA). As mentioned earlier, this Appendix was developed by the Virginia Tech Center for Geospatial Information Technology, under a subcontract with Anderson and Associates of Blacksburg, Virginia. Besides the data provided by the Town of Bluefield, the following organizations all provided data used for this HIRA:Anderson and Associates, Inc.

- Bluefield Daily Telegraph
- Cumberland Plateau Planning District Commission (Virginia)
- Dewberry
- Federal Emergency Management Agency
- Marshall Miller and Associates
- Region I Planning and Development Council (West Virginia)
- Tazewell County, Virginia
- Tuck Engineering
- US Census Bureau
- US Geological Survey
- Virginia Department of Conservation and Recreation
- Virginia Department of Emergency Management
- Virginia Department of Transportation
- Virginia Geographic Information network
- Virginia Tech Center for Geospatial Information Technology
- Willis Engineering

Types of Hazards

While nearly all disasters are possible for any given area in the United States, the most likely hazards that could potentially affect the communities in the Cumberland Plateau Planning District generally include:

- Flooding
- Severe Winter Storms
- Wildfires
- Landslides
- Dam Failures
- Drought
- Earthquake
- Severe Wind
- Severe Thunderstorms
- Tornadoes
- Extreme Heat
- Karst

Types of Hazards

While nearly all disasters are possible for any given area in the United States, the most likely hazards (based on local official knowledge and professional judgment) that could potentially affect the communities in the Cumberland Plateau Planning District generally include:

- Dam Failures
- Drought
- Earthquake
- Flooding
- Landslides
- Karst Topography
- Severe Thunderstorms
- Severe Wind
- Severe Winter Storms
- Tornadoes
- Wildfires
- Extreme Heat

Depending on the severity, location, and timing of the specific events, each of these hazards could have devastating effects on homes, business, agricultural lands, infrastructure and ultimately citizens.

In order to gain a full understanding of the hazards, an extensive search of historic hazard data was completed. This data collection effort utilized meetings with local community officials, existing reports and studies, state and national data sets, and other sources. A comprehensive list of sources utilized for this plan can be found at the conclusion of this document.

Unfortunately, extensive local historical data is not currently available for many of the potential hazards. In some cases, the precise number of events that have affected the Planning District and the subsequent level of impact to the local communities are not known. In these cases, state and regional hazard information was collected and referenced whenever possible.

Probability of Hazards

The historical data collected includes accounts of all the hazard types listed above. However, some hazards have occurred much more frequently than others with a wide range of impacts. By analyzing the historical frequency of each hazard, along with the associated impacts, the hazards that pose the most significant risks to the Cumberland Plateau Planning District can be identified. This analysis will allow the local communities to focus the Mitigation Strategy of those hazards that are most likely to cause significant impacts.

Prioritizing the potential hazards that can threaten the Planning District will be based on two separate factors:

- the probability that a potential hazard will affect the community, and
- the potential impacts on the community in the event such a hazard occurs.

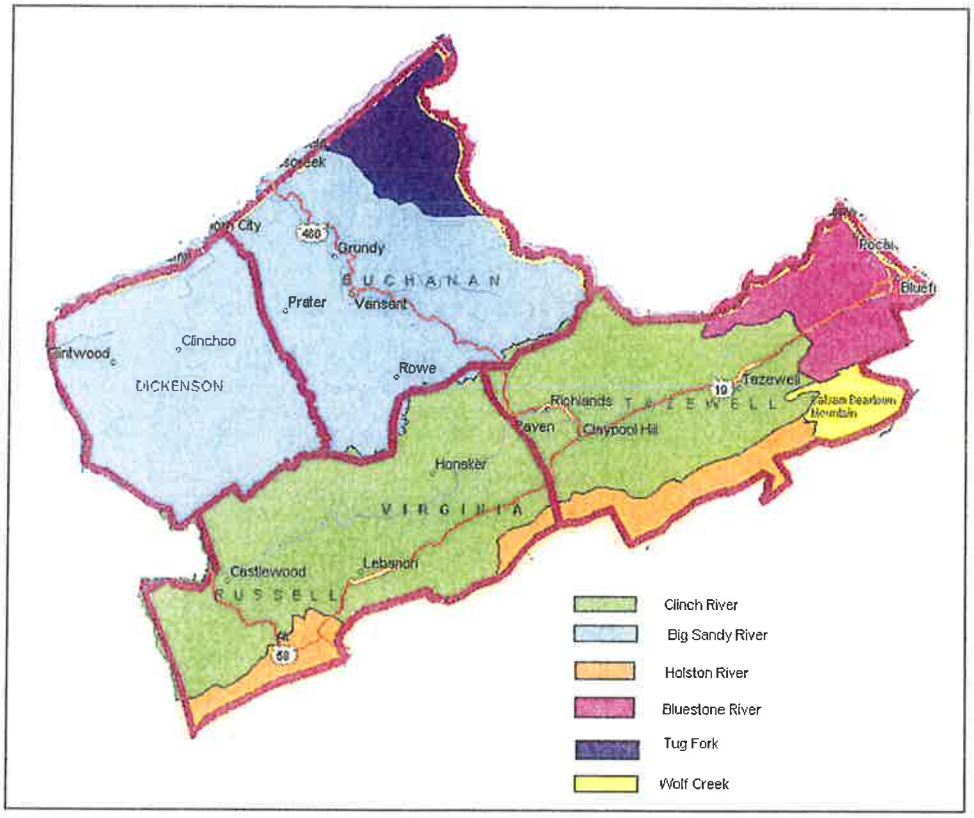

Figure V-1 — Cumberland Plateau Watersheds

Hazard History

The following sections include a description of the known flood history by major watershed. Because a majority of the flood history and flood data available for the area is organized by watershed (as opposed to by county), the discussion of flood characteristics for the CPPD also have been organized by watershed.

A list of repetitive loss properties in the Planning District are as follows in the chart below:

Community	Total # of Repetitive Loss Properties	# Residential	# Commercial
Bluefield	12	5	7
Buchanan County	6	5	1
Buchanan Town	6	2	4
Dickenson County	2		2
Tazewell County	15	13	2
Tazewell Town	2		8
Grundy Town	10	2	1
Richlands Town	11	10	1
Pocahontas Town	1		1
Haysi Town	1		1

Planning District varies from area to area. Specific building types will be discussed in the specific flood area descriptions below.

Structures at Risk

In order to assess the Planning District's potential vulnerability to flooding, specific data regarding structures located in the floodplain was collected as a part of this analysis. Structures potentially in the floodplain were identified by comparing the floodplain areas from the FEMA FIRMs with each County's existing building data. Specific data on these structures was collected during a 'windshield survey' and included the structures' occupancy type, building material type, number of stories, area, value per square foot, total value, and flooding source. Using the type, occupancy, and use of these structures, estimated building values were developed. For the purpose of this analysis, comparable buildings with the same uses, approximate age and general conditions were identified in the Planning District. Tax appraisal values for these buildings (minus land value) and R. S. Means Square Foot Costs were used to develop a square foot value for each building type, which was applied to the properties located in the flood plain to estimate a structure value. Typical per square foot costs for building construction were considered in analyzing the relative accuracy numbers developed for this analysis and some adjustments were made for certain properties in the field based on visual analysis (e.g., decreases in value for blighted or damaged buildings).

Data including the location of existing structures in all four counties located within the Planning District is available in a GIS format, however, detailed data regarding the structures is limited. A vast majority of the existing structures are classified as an unidentified building type. Additional data does vary from county to county but, in general, the location of existing hospitals, police stations, schools, fire stations, and government buildings are known. Therefore using the digital flood data described above, a count of the number of structures located within the floodplain was generated and total value at risk approximated.

From the data collected, a total of 6,045 structures were located in the floodplain, with an estimated total value of over $290 million dollars. This number is based on estimated values for each of the building types described above. Because the structure type for many of the structures is listed as unknown, the cost of the average residential structure was utilized.

Tables V-5 through V-8 include a summary of the number, value, and predominant use of the structures located in the floodplain of all FEMA recognized flood sources. A more detailed discussion of the vulnerability of each flood source follows these tables.

Table V-5: Structures at Risk by Flooding Source
Buchanan County

Flood Source	Number of Structures	Total Value
Big Sandy River	3,219	$150,964,600
Tug Fork	989	$55,051,000

Table V-6: Structures at Risk by Flooding Source

Flood Source	Number of Structures	Total Value
Big Sandy River	322	$12,979,400

Table V-7: Structures at Risk by Flooding Source
Russell County

Flood Source	Number of Structures	Total Value
Clinch River	691	$31,190,250

Table V-8: Structures at Risk by Flooding Source
Tazewell County

Flood Source	Number of Structures	Total Value
County-wide	824	$40,533,400

The vast majority of structures located in the floodplain of the Cumberland Plateau planning area are residential. The most common type of structure in the flood plain is single-family homes or mobile homes. Mobile homes tend to be more vulnerable than other residential types due to their poor structural stability and flood-prone construction materials as well as the reduced means these residents have to protect themselves from potential flood damage.

Critical Facilities

The impacts of floodwaters on critical facilities, such as police and fire stations, hospitals, and water or wastewater treatment facilities, can greatly increase the overall effect of a flood event on a community. Some of these facilities in the Planning District are located in areas with a high risk to flooding. As stated previously, the location of some of these types of structures are known throughout the Planning Area. Using this data, a list of these facilities located in the floodplain has been generated, and is included in Table V-9. It should be noted that these facilities have been determined to be in the floodplain using a planning level analysis, and should be used only as a planning tool. In order to accurately determine if a structure is actually located in the floodplain, site-specific information must be available.

Table V-9 — Known Critical Facilities in the Floodplain

Jurisdiction	Type	Facility
Buchanan County	Fire and Rescue	Knox Creek Volunteer Fire
	Fire and Rescue	Grundy Volunteer Fire
	Fire and Rescue	Quality Care Ambulance Service
	Fire and Rescue	Dismal River Volunteer Rescue
	Fire and Rescue	Council Volunteer Fire
	Government Building	Buchanan County Courthouse
	School	Hurley Combined School
	School	Vansant Elementary School
	Hospital	Buchanan General Hospital
Dickenson County	Fire and Rescue	McClure River Volunteer Fire
Russell County	Government Building	Lebanon Town Hall
	School	Cleveland Elementary School
	Treatment Plant	Central Shop STP
	Treatment Plant	Cleveland STP
	Treatment Plant	Honaker STP
Tazewell County	Police	Richlands Police
	School	Raven Elementary School
	Fire and Rescue	Rescue 9
	Fire and Rescue	Rescue 10

Special needs populations are those that require additional attention during a flood event, are not as able to protect themselves prior to an event, or are not able to understand potential risks. These can include non-English populations, elderly populations, or those in a lower socioeconomic group. Special needs populations in the Planning District area are primarily lower income and elderly individuals, living in a flood-prone area, without the resources to take actions to protect themselves.

Future Land Use Trends

Due to existing development and very steep topography outside of the river valleys, developable land in the Planning District is scarce. For that reason, one of the dominant development trends in the area is redevelopment. Older, lower value structures are being destroyed and replaced by newer construction with significantly higher dollar values. This is especially true with older mobile homes that are being replaced by new pre-fabricated modular homes. Many of these structures are located in the floodplain, where this redevelopment trend is increasing the value of structures at risk to damages due to flooding in the Planning District.

A complete list of events from 2005-2011 can be found at the end of this document.

Winter Storms

Severe winter storms and blizzards are extra-tropical cyclones that originate as mid-latitude depressions (FEMA, 1997). Snowstorms, blizzards, and ice storms are the most common examples. These storms can bring heavy snowfall, high winds, ice, and extreme cold with them. Historically, winter storms in southwestern Virginia have produced significant snowfall, sleet, and freezing rain.

Recent Snowstorm History

Between January 20 and 22, 1985, an arctic cold front swept across the state, ushering in extreme cold and high winds. Wind chill temperatures plunged well below zero. Winds knocked out power compounding the effects of the cold. Pipes froze and burst. Fresh snowfall of 4 inches helped temperatures across the entire state fall below zero. New records were set at several locations in the state.

During the winter of 1993-1994, Virginia was struck by a series of ice storms. Although ice storms are not an uncommon event in the valleys and foothills of the Appalachian Mountains, and the region had been overdue for an ice storm, it was unprecedented to have several occur in succession.

The most significant winter storm to affect the Cumberland Plateau Planning District was the "Super Storm of March '93", also known as "The Storm of the Century". Occurring between March 12 and 15, 1993, this storm affected 26 states throughout the central and eastern portions of the United States. The storm resulted in a Federal disaster declaration. Throughout the region, the snowfall amounts ranged from 12 inches to over 48 inches depending on elevation. Extreme southwest Virginia saw 30 to 42 inches of snow from the storm (the most snow in more than 25 years). Some roofs collapsed under the weight of the snow. Winds produced blizzard conditions over portions of the west with snow drifts up to 12 feet. Interstates were shut down. Shelters were opened for nearly 4,000 stranded travelers, and those that left were without heat and electricity. Virginia called out its National Guard to help with emergency transports and critical snow removal.

During the February 10 and 11, 1994 ice storm, some areas of southern Virginia received a devastating 3 inches of ice, causing tremendous tree damage and power outages for up to a week. The "Blizzard of '96" or the "Great Furlough Storm" began late on Saturday, January 6. As much as 30 to 36 inches of snow fell over the western mountains.

On December 18, 2009 the area was hit by a heavy snowstorm that moved out of the eastern Gulf of Mexico. The heavy snow event was declared a state of emergency by Governor Kain. Multiple homes were damaged and electricity was out for many days. In some locations the snow was above 2 feet.

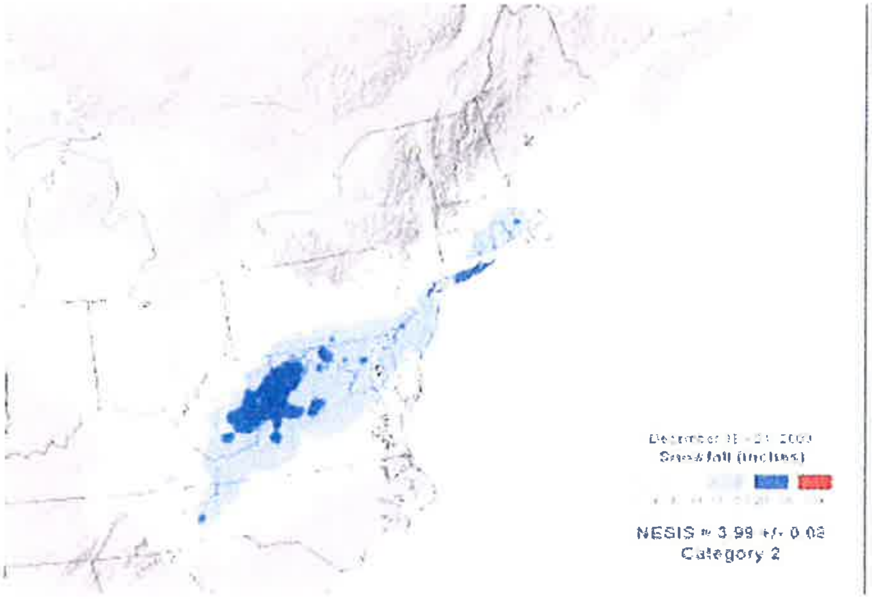

Figure V-6 — Snowfall Totals from 2009 Blizzard

Table V-10 includes ranges of snowfall for select historic events in Southwest Virginia. This table is not inclusive of all historic snowfall events.

Table V-10 — Historic Snow Fall Amounts

Date	Amount
February 12 -March 10, 1960	65 inches
December 10 - 12, 1960	4 - 13 inches
January 20 - 22, 1985	4 inches
March 13-14, 1993	30 - 42 inches
January 6-13, 1996	30 - 36 inches
January 27-28, 1998	12 - 24 inches
December 18-21 , 2009	10-20 inches

Hazard Profile

Although the Commonwealth of Virginia is not generally associated with severe winter storms, the mountainous area in the southwestern portion of the state regularly experiences several snow storms each year. These storms can produce between 4 and 12 inches of snow from each event. Total average annual snowfall within the Planning District varies from county to county. Buchanan County has an average annual snowfall of 23" per year, Dickenson County is 15" per year, Russell County 21" per year, and Tazewell County 40" per year as illustrated in Figure V-7. However, as Table V-10 illustrates, storms producing higher snowfall amounts are possible.

Utility infrastructure also can be adversely affected by winter storms. Heavy snow and ice can cause power lines to snap, leaving citizens without power and, in some cases, heat for hours or even days. Likewise, telephone lines can also snap, disabling communication within portions of a community. Frozen water pipes can rupture in people's homes, and water and sewer mains can also freeze and leak or rupture if not properly maintained. These ruptures can lead to flooding and property damage.

People's health can also be adversely affected by severe winter weather. People who lose heat in their homes and do not seek alternate shelter, people who get stuck in snowdrifts while driving, or people working and playing outdoors can suffer from hypothermia and frostbite. Since winter weather hazards generally affect the entire Planning District and vary in intensity and form, it is not possible to quantify primary effects or specific damages.

Secondary effects

Secondary effects of winter storms are broad. Treacherous driving conditions can result in automobile accidents in which passengers may be injured and property damages may occur. Deliveries of heating fuel can be delayed by impassible roads. Impassable roads also can result in schools being closed because buses are not able to access their routes and bring children to school. The costs of salting and sanding roads and of snow removal can be staggering to communities both large and small. The costs to repair roads after spring thaws also can be significant.

After a significant snowfall, the resulting thaw that occurs when the temperature rises above freezing can cause flooding in some areas. As noted in the flood portion of this document, January through March are the months with the highest occurrences of flooding. The rainy season coincides with snowfall and subsequent melting. Because of the mountainous terrain in this area, flood events tend to occur rapidly and with little warning.

The local economy can also suffer if businesses close due to inclement winter weather. The impact could be significant in a larger event. In addition, disabled transportation systems may mean that shipments of goods and services are delayed, which may result in decreased inventory for retailers and increased inventory for industrial and commercial suppliers.

A complete list of events from 2005-2011 can be found at the end of this document.

Wildfire

"A wildfire is an uncontrolled fire spreading through vegetative fuels, exposing and possibly consuming structures" (FEMA 386-2, 2001) and may originate from a variety of ignition sources. The risk of wildfires, though not as high as it is in the western U.S., is a genuine concern for the Commonwealth of Virginia. Each year, about 1,600 wildfires consume a total of 8,000 to 10,000 acres of forest and grassland in the Commonwealth. During the fall drought of 2001, Virginia lost more than 13,000 acres to wildfires (Virginia Department of Forestry website) level of High, Medium, or Low. The results are shown on the map prepared by VDOF, *"Cumberland Plateau, Virginia Fire Risk Zones",* included at the end of this section. As indicated on the map, only a small area within Russell and Tazewell Counties has a low fire risk zone. The Cumberland Plateau Planning District is mostly a high risk area. This high risk is most likely due to the topography (steep slopes) and the inaccessibility of the area, particularly in Buchanan and Dickenson Counties.

Vulnerability Analysis

As stated in the section above, according the VDOF Wildfire Risk Assessment large portions of the Cumberland Plateau Planning District are at high risk for wildfire occurrence. Although these high risk areas tend to be located in the more rural and mountainous portions of the planning district, higher density areas have also been classified as having a high risk. Because these high risk areas are so vast, many of the residents of the planning area live or work in or near a high risk area. Therefore, the most significant threat to the Cumberland Plateau Planning District is that to human life and safety. Many residents in the area live within the urban-wildlife interface and are at the greatest risk from potential wildfires. A commonly found scenario in the Cumberland Plateau Planning District is the 'stacking' of structures up a ridge with one-way access and flammable fuels in between the structures. These circumstances can greatly increase the risk of loss from wildfire and is hazardous to firefighters trying to protect the structures.

Structures at Risk

As stated in the previous section, large portions of the Cumberland Plateau Planning District have been designated as having a high risk to wildfires as determined by VDOF. In an attempt to quantify the potential vulnerability in the areas, the approximate number structures located in these areas have been estimated. As mentioned in earlier sections of this report, the counties included in the CPPDC have a comprehensive GIS system which includes an inventory of building locations and building type. With this data available, and because the VDOF Risk Assessment is also readily available in GIS format, determining the number of structures located in each Risk Wildfire zone was relatively simple. Table V-12 below includes the results of this analysis.

Table V-12 — Structures in Wildfire Risk

Jurisdiction	High Risk	Medium Risk Zone	Low Risk Zone	Percent Structures in High Risk Zone
Buchanan	22,903	660	484	95%
Dickenson	16,999	1,575	45	91%
Tazewell	27,268	13,113	865	66%
Russell	19,556	14,888	317	56%

A complete list of events from 2005-2011 can be found at the end of this document.

Hazard Areas

Because of the physical characteristics of the area, virtually the entire Cumberland Plateau Planning District is located in an area that has a high risk to the effects of landslides. As stated previously, due to the many factors that contribute to when and where a landslide will occur, it is extremely difficult to indicate precise locations that are at a greater risk of being affected by a landslide than other areas. However, one of the best indicators of where a landslide may occur is the locations of past landslide activity. These areas have demonstrated susceptibility to landslide occurrence, making additional landslides at these locations likely.

Historic landslide problem areas are indicated in the landslide location maps included at the end of this section. As noted previously, these maps do not depict all areas within the planning district where historic landslides have occurred, or where they may be a problem in the future. Historically, detailed records have not been maintained by local or county governments, therefore the data required to identify all known high landslide risk areas located within the planning district is not available.

Vulnerability Assessment

Because the conditions that cause a landslide are extremely site specific, the impacts of an individual landslide can vary greatly. Landslides can damage or potentially destroy anything in the path of the slide including homes, businesses, roads, and utilities. Landslide debris can also partially or fully block rivers, in which case the potential for significant flooding exists. The precise impacts of a landslide will depend on the specific characteristics of the slide, as well as the level of development in the slide area.

Due to the extreme steep slopes throughout the Cumberland Plateau Planning District, virtually all of the development in the area is at high risk to the effects of landslides. The vulnerability of specific structures and assets can only be determined by a detailed investigation of the site characteristics, primarily the proximity to at-risk slopes. A majority of the more densely developed areas of the planning district are located in areas with more gradual slopes. Therefore, the risk of widespread damages due to landslides in the densely developed areas is limited. However, a majority of the unincorporated areas throughout the planning district have extremely steep slopes. The potential for landslide damage to structures in these areas could be high.

Based on past occurrences, the most vulnerable assets located within the Cumberland Plateau Planning District are its roadways. Many of the roads in the area traverse steep slopes increasing the vulnerability to damage. The damage to a roadway affected by a landslide can vary from partial blockage to total destruction. In addition to the damage to the road itself, more significant economic and safety impacts may be felt by the community due the loss of function of the roadway. Many of the roadways throughout the planning district provide the only direct access from one community to another, or potentially the only access certain remote areas. This reduction in access can increase the response time of emergency vehicles, creating a potentially serious threat to public safety in these areas.

A complete list of events from 2005-2011 can be found at the end of this document.

Due to the mountainous terrain, tornado occurrences in the area have been rare, although they are possible. Table V-14 includes historical tornado occurrences in the counties within the Planning District.

Table V-14 — Tornadoes from 1950-2011

County	# of Tornadoes
Buchanan	1
Dickenson	2
Russell	6
Tazewell	2

Wind Zones

The Planning District is not classified as an area with a higher than average base wind speed nationally. According to the Virginia Uniform Statewide Building Code (BOCA, 1996), the minimum design wind speed for the Planning District area is 70 mph.

High wind events, primarily severe thunderstorms, have occurred in every portion of the Planning District. There are no proven indicators to predict specifically where high winds may occur, and these events can be expansive enough to affect the entire area. Although localized geography, such as mountain ranges and gorges, can contribute to potential damages caused by these events, no specific locations within the Planning District have been identified due to these conditions. Therefore, the entire Planning District is considered to have an equal risk of being impacted by a high wind event.

Building Type	Building Damage	Contents Damage	Building Damage	Contents Damage
Manufactured	25%	40%	50%	100%
Light Engineered	5%	2.5%	15%	15%
Non-Engineered Wood	7.5%	5%	20%	20%
Non-Engineered Masonry	5%	2.5%	15%	15%
Fully Engineered	2.5%	2.5%	5%	15%

A complete list of events from 2005-2011 can be found at the end of this document.

Earthquakes

The earth surface is composed of a series of tectonic plates, which are constantly moving and shifting against one another. The movement of these plates causes stress to develop along plate boundaries, and along fault lines. When the stress along one of these boundaries or fault lines exceeds the strength of the adjacent rock and earth, a slip or fracture occurs, releasing the built up energy as waves. Energy waves travel through the earth's crust up to the ground surface, causing the shaking that is associated with an earthquake.

Earthquakes in the United States occur most frequently along the West Coast, due to the close proximity to the North American plate boundary. Earthquakes can also occur along the East Coast of the United States, but the mechanisms causing these earthquakes are as not well understood, as these earthquakes occur within the plate rather than at plate boundaries (USGS, 2003).

The Commonwealth of Virginia is subject to earthquakes occurring in two primary areas of seismic activity. The Eastern Tennessee Seismic Zone extends from Charleston, South Carolina through western North Carolina and eastern Tennessee into central Virginia. The New Madrid Seismic Zone is located in southern Missouri. Both zones have the potential to affect the Cumberland Plateau Planning District. Although these faults have not produced a significant earthquake in recent years, both have a history and the potential to produce severely damaging earthquakes in the future.

Primary and Secondary Impacts

As listed in Table V-161, the primary impact of an earthquake can range from toppled chimneys and broken windows, to crack walls and roadways, to complete collapse of structures and bridges. Depending on the magnitude and location of the earthquake, the overall effects on the community can range from minimal to catastrophic. In larger events, loss of life and injuries can be extensive and the cost of damages can be massive. As stated previously, although historically moderate earthquakes have affected the Planning District, the potential for a higher magnitude earthquake does exist, due mainly to the proximity of the two key seismic zones.

In some cases, the secondary impacts from an earthquake can be as damaging and disruptive to a community and its citizens. The most significant potential secondary effect of an earthquake to the Planning District is the potential for landslides. Ground shaking during an earthquake can cause previously weakened steep slopes to fail, as well as otherwise stable slopes. The specific impacts of landslides are discussed further in other sections of this plan.

In addition to landslides other secondary effects can include disruption of critical services such as water, electrical, and telephone services. Damage to police stations, fire stations, and other emergency service facilities can weaken a community's ability to respond in the crucial hours and days following an event.

A complete list of events from 2005-2011 can be found at the end of this document.

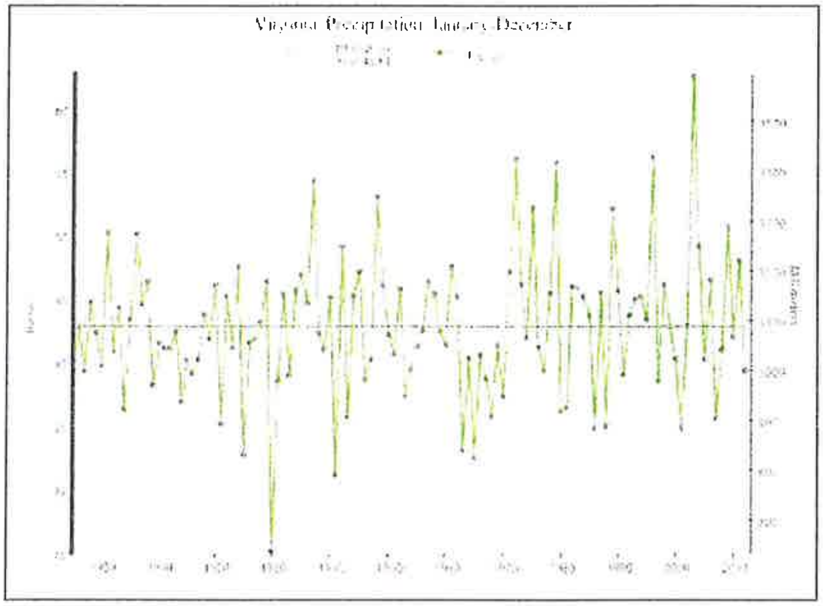
Drought

"Drought is a condition of moisture deficit sufficient to have an adverse effect on vegetation, animals, and man over a sizeable area" (USGS, 2000). Three significant types of drought can affect the Cumberland Plateau Planning District, which are meteorological, agricultural, or hydrologic drought. Meteorological drought is simply a departure from a normal precipitation amount, and is reliant on no other factors. Agricultural drought describes a soil moisture deficiency to the extent it effects the needs of plant life, primarily crops. Hydrologic drought is defined in terms of shortfall of water levels of lakes and reservoirs, and stream flow in rivers, streams, and soils (Multi Hazard Risk Assessment, 2000). Drought is a natural part of most climatic areas, but the severity of droughts differs based on duration, geographic extent, and intensity.

Hazard History

There have been a number of significant droughts recorded in Virginia since 1900. The most recent drought extended over a period of one year, from 2007 to 2008. This period saw rainfall levels well below normal and caused many communities throughout the region to institute water restrictions.

Although meteorologists have attempted to predict long term changes and trends in weather patterns, the onset of a significant drought cannot be predicted. Extended periods of dry weather have occurred many times from over the past 100 years.



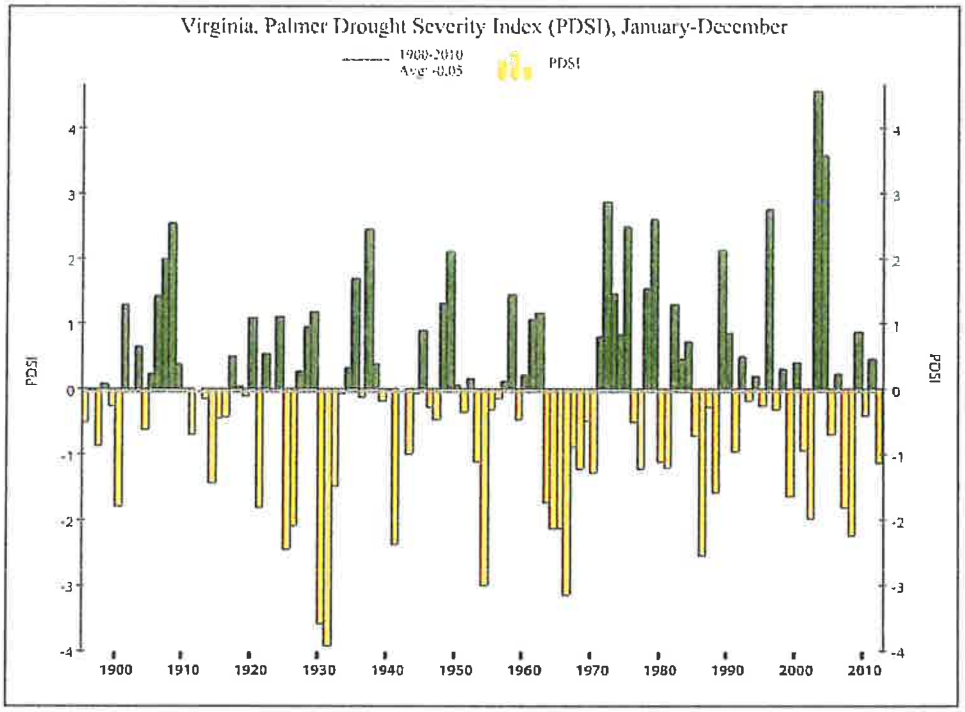
V-12 — Virginia Statewide Precipitation, January 1900-2010

Hazard Profile

Just as there are multiple types of drought, there are multiple methods to indicate when a drought is occurring, as well as the severity of the drought. The multiple indices are based on a variety of data including precipitation amounts, stream flows, soil moisture, snow pack, as well as other water storage data. Commonly, the drought indices used depends on the type of drought being measured. It is important to note that not all types of drought must be occurring simultaneously. In some cases an area can be affected by one form of drought, while levels measuring another form of drought are normal.

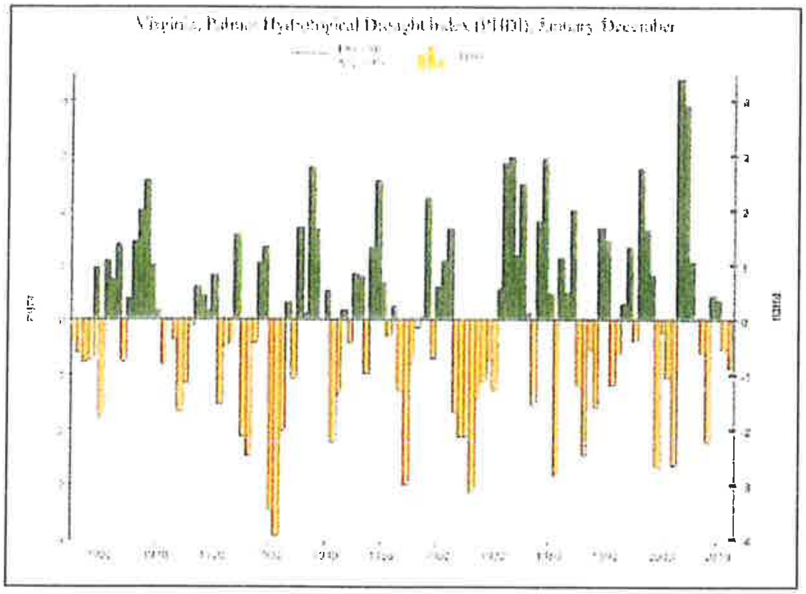
The most commonly used drought indicator is the Palmer Drought Index. This index was developed in the 1960s by the National Oceanic and Atmospheric Administration, and uses temperature and rainfall data to determine dryness. Negative numbers indicate drought, while positive numbers indicate surplus rainfall. Minus two is considered a moderate drought, minus three is severe drought, and minus four is extreme drought. Likewise, positive two is considered a moderate rainfall, positive three a severe rainfall, and positive four, an extreme rainfall. In addition to the Palmer Index, the Standard Precipitation Index (SPI) and the Crop Moisture Index (CMI) also are used to measure drought. The SPI relates the deficit in precipitation compared to normal levels to varying degrees of time. Because the duration of lower than average precipitation levels has varying effects on stream flows, water storage levels, and soil moisture content, the SPI attempts to measure drought based on the long term deficit in precipitation. The CMI measures short term moisture conditions across predominate crop producing regions. It is based on the temperature and precipitation levels for a given week as well as the CMI value for the previous week (http://www.drought.unl.edu/whatis/indices.htm).

The Virginia State Climatology Office uses the Palmer Drought Severity Index (PDSI) to measure long-term moisture status. A reading of -3.0 is considered to be a "severe drought.".Shown below is the PDSI history for Virginia from 1900 through December 1, 2010. .



Virginia State Climatology Office

Figure V-13 —Virginia Palmer Drought Severity Index



V-14 — Virginia Statewide Palmer Hydrological Drought Index, January 1900 - December 2010

Vulnerability Analysis

If a significant drought event were to occur, it could bring extensive economic, social, and environmental impacts to the Planning District. Commonly one of the most significant economic effects to a community is the agricultural impacts. Other economic effects could be felt by businesses that rely on adequate water levels for their day to day business such as carwashes and laundromats.

Drought also can create conditions that promote the occurrence of other natural hazards such as wildfires and wind erosion. The likelihood of flash flooding is increased if a period of severe drought is followed by a period of extreme precipitation. Low-flow conditions also decrease the quantity and pressure of water available to firefighters to fight fires, while the dry conditions increase the likelihood fires will occur.

Environmental drought impacts include those on both human and animal habitats and hydrologic units. During periods of drought, the amount of available water decreases in lakes, streams, aquifers, soil, wetlands, springs, and other surface and subsurface water sources. This decrease in water availability can affect water quality such as salinity, bacteria, turbidity, and temperature increase and pH changes. Changes in any of these levels can have a significant effect on the aquatic habitat of a numerous plants and animals found throughout the Planning District. Low water flow can result in decreased sewage flows and subsequent increases in contaminants in the water supply. Decrease in the availability of water also decreases drinking water supply and the food supply as food sources become scarcer. This disruption can work its way up the food chain within a habitat. Loss of biodiversity and increases in mortality can lead to increases in disease and endangered species.

A complete list of events from 2005-2011 can be found at the end of this document.

(3) the objective(s) it is intended to help achieve,
(4) some general background information,
(5) the priority level for its implementation (high, moderate, or low),
(6) potential funding sources, if applicable,

When formulating a Mitigation Action Plan, a wide range of activities should be considered to help achieve the goals of communities and lessen the vulnerability of the participating jurisdictions to the effects of natural hazards. In general, all of these activities fall into one of the following broad categories of mitigation techniques. Tables VII-8 and VII-9 shows which jurisdictions have chosen to participate in the proposed actions. Appendix C includes the range of alternatives that were considered in by the Mitigation Advisory Committee.

ACTION #1

Obtain official recognition of the Mitigation Advisory Committee by the Planning District's communities in order to help institutionalize and develop an ongoing mitigation program.

Category: Public Information & Awareness
Hazard: All
Goal(s) Addressed: 4
Background: After the passage of the Disaster Mitigation Act of 2000 (DMA2K), local governments are required to develop and to adopt all hazards mitigation plans to be eligible for certain types of future disaster assistance including funds for mitigation activities. Nationwide, many communities have formed committees, councils or citizen groups to assist in developing and implementing plans. In the case of multi-jurisdictional plans, "mitigation advisory committees" are often formed and are comprised of local officials and residents from the participating jurisdictions. One way to assure the effectiveness of such committees is to bestow official status to them. An officially recognized Mitigation Action Committee will aid each community by sharing the workload on regionally beneficial actions and present a unified voice in dealing with state and FEMA officials. **Priority:** High **Funding Sources: N/A Responsibility Assigned to: MAC and PDC Target Completion Date:** In progress. August, 2013.

ACTION #2

Target FEMA's Repetitive Loss Properties, and other known repetitively flooded properties, throughout the Planning District for potential mitigation projects.

Category: Property Protection

Hazard: Flood
Goal(s) Addressed: 1, 3
Background: Currently, over 40,000 of the four million properties insured under the National Flood Insurance Program have been identified by FEMA as repetitive loss properties. The known repetitive loss properties are those that have sustained flood damage and received flood insurance claim payments on multiple occasions. Repetitive loss properties, though they represent a minority of the active policies, represent the majority of claims made to the National Flood Insurance Program. In addition to these properties, there are also a number of properties throughout the planning district that are repetitively flooded yet the property owners do not carry flood insurance, so therefore would not appear on FEMA's repetitive loss properties list. Efforts should be made to identify these properties and determine the most effective mitigation approach (e.g., acquisition, relocation, elevation). **Priority:** High
Funding Sources: FEMA's Pre-Disaster Mitigation (PDM) program, Hazard Mitigation Grant Program (HMGP) and Flood Mitigation Assistance (FMA) program
Responsibility Assigned to: Mitigation Advisory Committee and Planning District Commission **Target Completion Date:** In progress. Some localities are aware of repetitive loss properties. Lack of Funding

ACTION #3

Undertake educational outreach activities by developing and distributing brochures and education materials for FEMA's Repetitive Loss Properties with specific mitigation measures emphasizing acquisition, relocation and elevation.

Category: Public Education and Awareness
Hazard: Flood **Goal(s) Addressed: 3**
Background: The Planning District has several repetitive loss properties which have been identified by FEMA. Although an acquisition program for flood-prone properties has been undertaken in the state previously, local citizens are reluctant to relocate from an area where they have strong family and community ties. Citizens should be educated about the flood loss cycle associated with flood-prone areas and encouraged to work with local government officials to develop mutually agreeable strategies to address repetitive losses in the Planning District.
Priority: High
Funding Sources: FEMA, VDEM
Responsibility Assigned to: MAC, PDC and local emergency management agencies
Target Completion Date: In progress. Educational materials will be made available to the public on websites.

ACTION #4

Publicize the Virginia Department of Forestry's *Money for Mitigation Program.* Utilize existing wildfire maps to prioritize project areas in the Planning District.

SECTION VII. MITIGATION STRATEGY

The Mitigation Advisory Committee discussed the results of the hazard identification and risk assessment, review mitigation goals and objectives based on the priority areas and hazard types, discuss community strengths and weaknesses, and begin developing the mitigation strategy.

This section of the Hazard Mitigation Plan describes the most challenging part of any such planning effort - the development of a mitigation strategy. It is a process of:

1. Setting mitigation goals,
2. Considering mitigation alternatives,
3. Developing objectives and implementation approaches, and
4. Deriving a mitigation action plan.

Essentially these four elements comprise this mitigation strategy.

Setting Mitigation Goals

The hazard mitigation planning process followed by the MAC is a typical problem-solving methodology:

- Describe the problem (Hazard Identification),
- Estimate the impacts the problem could cause (Vulnerability Assessment),
- Assess what safeguards already exist that could/should lessen those impacts (Capability Assessment), and
- Using this information, determine if you should do something (Determine Acceptable Risk), and if so, what that something should be (Develop an Action Plan).

When a community decides that certain risks are unacceptable and that certain mitigation actions may be achievable, the development of *goals* and *actions* takes place. Goals and actions help to describe what should occur, using increasingly more narrow descriptors. Initially, broad-based goals are developed, which are long-term and general statements. Goals are accomplished by implementing actions, which are very detailed and achievable in a finite time period.

The MAC reviewed goals for this plan that were set by the original Hazard Mitigation Plan. General goals remained primarily the same as the initial tone and direction for the overall plan as well. Goals were revisited to confirm that the updated data collection process supported them. Lastly, actions were developed as a logical extension of the plan's objectives. Most of these actions are dynamic and can change. These actions have been utilized to develop a Mitigation Action Plan for the Planning District.

Hazard: Flood
Goal(s) Addressed: 1, 3
Background: Currently, over 40,000 of the four million properties insured under the National Flood Insurance Program have been identified by FEMA as repetitive loss properties. The known repetitive loss properties are those that have sustained flood damage and received flood insurance claim payments on multiple occasions. Repetitive loss properties, though they represent a minority of the active policies, represent the majority of claims made to the National Flood Insurance Program. In addition to these properties, there are also a number of properties throughout the planning district that are repetitively flooded yet the property owners do not carry flood insurance, so therefore would not appear on FEMA's repetitive loss properties list. Efforts should be made to identify these properties and determine the most effective mitigation approach (e.g., acquisition, relocation, elevation). **Priority:** High
Funding Sources: FEMA's Pre-Disaster Mitigation (PDM) program, Hazard Mitigation Grant Program (HMGP) and Flood Mitigation Assistance (FMA) program
Responsibility Assigned to: Mitigation Advisory Committee and Planning District Commission **Target Completion Date:** In progress. Some localities are aware of repetitive loss properties. Lack of Funding

ACTION #3

Undertake educational outreach activities by developing and distributing brochures and education materials for FEMA's Repetitive Loss Properties with specific mitigation measures emphasizing acquisition, relocation and elevation.

Category: Public Education and Awareness
Hazard: Flood **Goal(s) Addressed: 3**
Background: The Planning District has several repetitive loss properties which have been identified by FEMA. Although an acquisition program for flood-prone properties has been undertaken in the state previously, local citizens are reluctant to relocate from an area where they have strong family and community ties. Citizens should be educated about the flood loss cycle associated with flood-prone areas and encouraged to work with local government officials to develop mutually agreeable strategies to address repetitive losses in the Planning District.
Priority: High
Funding Sources: FEMA, VDEM
Responsibility Assigned to: MAC, PDC and local emergency management agencies
Target Completion Date: In progress. Educational materials will be made available to the public on websites.

ACTION #4

Publicize the Virginia Department of Forestry's *Money for Mitigation Program.* Utilize existing wildfire maps to prioritize project areas in the Planning District.

Assist local residents, in priority areas, to reduce wildfire hazards through the use of funding from the *Money for Mitigation Program*.

Category: Public Education and Awareness
Hazard: Fire **Goal(s) Addressed: 1**
Background: Financial assistance to reduce fire hazards has been established at the Virginia Department of Forestry. The program provides a 50% cost share funds to reduce wildfire fuels, particularly in wildland-urban interface areas. Citizen's groups and homeowner's associations are eligible applicants. A program description including eligibility criteria can be accessed at the agency's website www.vdof.org.
Priority: High
Funding Sources: Virginia Department of Forestry
Responsibility Assigned to: MAC, PDC and local emergency management agencies.
Target Completion Date: In progress. Will publicize on website.

ACTION #5

Develop a comprehensive compilation of landslide activity in the Planning District to be used as a planning tool for future infrastructure projects.

Category: Prevention
Hazard: Landslide
Goal(s) Addressed: 2
Background: Landslide activity is prevalent in the mountainous regions of the Planning District. Most often, roadways are impacted by landslide events. The Virginia Department of Transportation and local government road and bridge departments usually respond to events on an as-needed basis. A compilation of landslide activity, both past and present, can assist decision-makers as a planning tool when determining where to cite new and upgraded infrastructure.
Priority: High
Funding Sources: VDOT and local public works departments/agencies
Responsibility Assigned to: MAC, PDC and local public works departments/agencies
Target Completion Date: Not started. Have been unable to obtain this information from localities.

ACTION #6

Evaluate the Planning District's community flood plain ordinances and enforcement procedures that may be outdated for possible upgrades.

Category: Prevention
Hazard: Flood **Goal(s)
Addressed: 3**
Background: Each county and community in the planning district has adopted and enforces the NFIP floodplain management regulations. By utilizing the working

relationship established by the formalization of the Mitigation Action Committee communities can share information on the state of current regulations as well as enforcement procedures. By sharing this information communities can learn from one another on ways to best implement, monitor, and enforce NFIP regulations and over all floodplain management. **Priority:** Moderate **Funding Sources: N/A**
Responsibility Assigned to: Planning District communities' floodplain managers
Target Completion Date: In progress. Will be completed by 2015.

ACTION #7

Initiate discussion concerning which individuals shall be designated as the Floodplain Manager in each of the four Planning District's jurisdictions. MAC and PDC will make recommendations to the appropriate decision-makers in each jurisdiction.

Category: Prevention
Hazard: All
Goal(s) Addressed: 3
Background: Over nineteen thousand communities participate in the National Flood Insurance Program (NFIP) and have adopted floodplain ordinances that specify the designation of a local floodplain official or administrator. In many cases, the local floodplain administrator is either 1) an individual with little or no experience about flooding and the NFIP, or 2) an individual with many responsibilities. Buchanan, Dickenson, Russell and Tazewell Counties have adopted floodplain ordinances and designated a local floodplain administrator. A review of these individual's responsibilities, not just floodplain administration, can assist local decision-makers in the effective allocation of personnel resources and funding.
Priority: Moderate
Funding Sources: N/A
Responsibility Assigned to: MAC,PDC and local government decision-makers including county commissions.
Target Completion Date: In progress. To be completed by August, 2013.

ACTION #8

Initiate discussions with public utility companies about incorporating mitigation as infrastructure is laid, maintained, or repaired. Invite utilities to make a presentation to the MAC to begin dialogue.

Category: Prevention
Hazard: All
Goal(s) Addressed: 2

Background: Mitigation initiatives that protect utility infrastructure can most often be installed at the beginning of a project for much less money than if installed as a retrofitting project after the fact. Many utility companies have the financial capacity and desire to protect their facilities from the impacts of natural hazards but are often unaware of the risk until an event occurs. Local governments can serve to educate the companies about the risk of natural hazards and provide technical guidance and references about hazard proofing their facilities.
Priority: High
Funding Sources: FEMA; VDEM, VDC
Responsibility Assigned to: MAC, PDC, local public works departments/agencies, emergency management agencies and area Chambers of Commerce
Target Completion Date: Not started. Low priority of localities.

ACTION #9

Develop and distribute a brochure targeting the Planning District jurisdiction's community staff, which details mitigation principles and options.

Category: Public Information and Awareness
Hazard: All
Goal(s) Addressed: 4, 6
Background: Local governmental staff should be educated about the benefits of natural hazard mitigation and encouraged to incorporate the principles into the decision-making processes related to their jobs. Information on potential mitigation measures, as well as potential funding sources and partnering opportunities, should be shared with all appropriate local staff. **Priority:** Moderate
Funding Sources: FEMA, NWS, VDEM, VDC
Responsibility Assigned to: MAC, PDC and local emergency management agencies.
Target Completion Date: In progress. Website link will be given to local government through PDC website.

ACTION #10

Develop "hazard information centers" on the Planning District's community's websites and in public libraries where individuals can find hazard and mitigation information.

Category: Public Information and Awareness
Hazard: All
Goal(s) Addressed: 6
Background: As the Internet continues to become "the information super highway", more local governments around the country are using it as a primary means of official communication with community residents through the development and administration of websites. Today, many residents pay their water and power bills online, register to vote and even obtain driver's licenses over the Internet. Use of local government

websites to educate community residents about natural hazards and mitigation opportunities is growing nationwide.
Priority: Moderate
Funding Sources: Local government annual budgets for information technology
Responsibility Assigned to: Planning District community's local government communications departments/offices, the MAC and PDC.
Target Completion Date: In progress. The four counties will be asked to incorporate info on their websites.

ACTION #11

Investigate the benefits of submitting Community Rating System Applications for non-participating jurisdictions.

Category: Prevention
Hazard: All
Goal(s) Addressed: 3
Background: Communities that regulate development in floodplains are able participate in the National Flood Insurance Program (NFIP). In return, the NFIP makes federally-backed flood insurance policies available for properties in the community. The Community Rating System (CRS) was implemented in 1990 as a program for recognizing and encouraging community floodplain management activities that exceed the minimum NFIP standards. There are ten CRS classes: Class 1 requires the most credit points and gives the largest premium reduction (45%); class 10 receives no premium reduction. Each class, starting with Class 9, receives at least a 5% premium reduction. MAC members should be educated on the benefits of participation of CRS, so that each community may potentially submit a CRS application.
Priority: Medium
Funding Sources: Local government department budgets
Responsibility Assigned to: MAC, PDC, local government planning departments work with the State NFIP Coordinator at the VDC
Target Completion Date: Not started, Lack of funding.

ACTION #12

Investigate all critical facilities to evaluate their resistance to wind, fire, landslide and flood hazards. This study will examine all critical facilities within the Planning District communities and make recommendations as to ways in which the facilities can be strengthened or hardened.

Category: Public Information and Awareness
Hazard: All
Goal(s) Addressed: 2
Background: The ability to recover quickly after a disaster rests, in part, on the community's ability to maintain critical functions during response and recovery. Efforts should be undertaken to ensure that community critical facilities (e.g., fire departments, hospitals, schools) can withstand the impact of various hazards. Local facilities

management offices/agencies and local emergency management agencies will work with the MAC and PDC to undertake a future study with recommendations for improvements. In order to finance this initiative, the MAC and PDC will submit a Pre-Disaster Mitigation (PDM) program grant application to the Virginia Department of Emergency Management.
Priority: Moderate
Funding Sources: FEMA, VDEM
Responsibility Assigned to: MAC, PDC, local facilities management agencies and local emergency management agencies
Target Completion Date: Not started. Lack of funding.

ACTION #13

Support Public Works initiatives to improve stormwater infrastructure throughout the area.

Category: Structural Projects
Hazard: Flood
Goal(s) Addressed: 2, 4
Background: Many times, local stormwater channels are not identified on FEMA Flood Insurance Rates Maps (FIRMs). Consequently, stormwater hazards are often overlooked as natural hazards although they can cause significant problems during times of high water. Many jurisdictions do not regulate stormwater runoff, thereby, increasing flood damage potential during an event.
Priority: Medium
Funding Sources: EPA, USACE, FEMA
Responsibility Assigned to: MAC, PDC and local public works departments
Target Completion Date: In progress. Low priority.

ACTION #14

"Verify the geographic location of all NFIP repetitive losses, and make inquiries as to whether the properties have been mitigated, and if so, by what means."

Category: Prevention
Hazard: Flood
Goal(s): 2
Background: By keeping track of NFIP repetitive losses we can eliminate or reduce damage to properties that are caught in the flood-repair-flood-repair cycle and sustain actions that reduce vulnerability and risk from hazards, or reduce the severity of the effects of hazards on people and property.
Priority: Medium
Funding Sources: Local
Responsibility Assigned to: PDC\MAC
Target Completion Date: In progress. Will be completed in 2014.

SECTION VI. CAPABILITY ASSESSMENT

Introduction

This portion of the Plan assesses the Cumberland Plateau Planning District's current capacity to mitigate the effects of the natural hazards identified in Section V of the plan. This assessment includes a comprehensive examination of the following local government capabilities:

1. *Staff and Organizational Capability*
2. *Technical Capability*
3. *Fiscal Capability*
4. *Policy and Program Capability*
5. *Legal Authority*
6. *Political Willpower*

The purpose of conducting the capabilities assessment is to identify potential hazard mitigation opportunities available to the Cumberland Plateau Planning District's local governments including the Counties of Buchanan, Dickenson, Russell and Tazewell. Careful analysis should detect any existing gaps, shortfalls, or weaknesses within existing governmental activities that could exacerbate a community's vulnerability. The assessment also will highlight the positive measures already in place or being done at the County level, which should continue to be supported and enhanced, if possible, through future mitigation efforts.

The capabilities assessment serves as the foundation for designing an effective hazard mitigation strategy. It not only helps establish the goals and objectives for the Planning District to pursue under this Plan, but assures that those goals and objectives are realistically achievable under given local conditions.

This section of the plan is divided into four parts, each of which is a brief profile of the capabilities of the participating jurisdictions. The following table summarizes the plans and ordinances of each jurisdiction that can support hazard mitigation goals and strategies.

Table VI-1 — Capability Matrix - Plans and Ordinances

Plan or Ordinance	Buchanan County	Dickenson County	Russell County	Tazewell County
Building Code	X	X	X	X
Capital Improvements Plan or Program				
Comprehensive Land Use Plan	X	X	X	X
Emergency Operations Plan	X	X	X	
Floodplain		X	X	X

Management Ordinance				
Floodplain Management Plan				
Land Use Regulation				
Local Hazard Mitigation Plan				
Open Space Plan				
Stormwater Management Plan				
Stormwater Ordinance				
Subdivision Ordinance	X	X	X	X
Watershed Protection Plan				
Zoning Ordinance				

Buchanan County

1. Staff and Organizational Capability

Buchanan County has limited staff and organizational capability to implement hazard mitigation strategies. Buchanan County is governed by a seven-member Board of Supervisors. The members represent the seven districts into which the county is divided. There is also a County Administrator. The Board bears the responsibility of serving the people and improving the quality of life in the County. The business of the County is conducted through the department and board system. There are eight (8) county departments and twenty-nine (29) boards and commissions.

Those professional staff departments and boards are as follows:

- Board Of Election Commissioners
- Legal Department
- Fire Department
- Sheriff's Department
- Public Works Department
- Board Of Building Code Appeals
- Black Diamond R C & D Council
- Coal Haul Road And Gas Improvements Adv. Committee
- Cumberland Mountain Community Service Board
- Cumberland Plateau Planning District
- Cumberland Plateau Regional Waste Management Authority
- Disability Service Board
- Emergency Services
- Finance Committee
- Buchanan General Hospital Board
- Industrial Development Authority
- Insurance Committee
- John Flannagan Water Authority
- Parks And Recreation Board
- Personnel Committee
- Planning Commission
- Buchanan County Public Library
- Public Service Authority
- Buchanan County Public School
- Social Services Advisory Board

management operations. Buchanan County does currently have GIS capability to further hazard mitigation goals.

2.C. Internet Access

Buchanan County does provide some of its critical employees with high-speed broadband Internet service. Internet access provides an enormous opportunity for local officials to keep abreast of the latest information relative to their work and makes receiving government services more affordable and convenient. Information technology also offers increased economic opportunities, higher living standards, more individual choices, and wider and more meaningful participation in government and public life. Simply put, information technology can make distance - a major factor for County officials and residents - far less important than it used to be. It is believed that Internet access will help further the community's hazard mitigation awareness programs, but should be supplemented with more traditional (and less technical) means as well.

3. Fiscal Capability

Buchanan County has limited fiscal capability to implement hazard mitigation strategies. For Fiscal Year 2012, the County has a public safety budget of $47,609,000. The County receives most of its revenues through State and Local sales tax and other local services and through restricted intergovernmental contributions (federal and state pass through dollars). Considering the current budget deficits at both the State and local government level, in Virginia, combined with the apparent increased reliance on local accountability by the Federal government, this is a significant and growing concern for Buchanan County.

4. Policy and Program Capability

This part of the capabilities assessment includes the identification and evaluation of existing plans, policies, practices, programs, or activities that either increase or decrease the community's vulnerability to natural hazards. Positive activities, which decrease hazard vulnerability, should be sustained and enhanced if possible. Negative activities, which increase hazard vulnerability, should be targeted for reconsideration and be thoroughly addressed within Mitigation Strategy for Buchanan County.

4.A. Recent Hazard Mitigation Efforts

Buchanan County received emergency funding from the VA Department of Housing in 2002 for major flooding in the Hurley community.

Buchanan County has received these same funds from 2002 to current. In all approximately 100 houses have been removed and replaced or rehabilitated that were damaged during the flooding of 2002. Homes were either moved or built up out of the flood plain in the Hurley area. In all $2,275,000.00 has been received during the Hurley Flood Recovery Projects.

The County has a person responsible for Information Technology (IT) which can enhance local government operations and the community's ability to develop and maintain a state-of-the art hazard mitigation program.

2.B. Geographic Information Systems (GIS)

GIS systems can best be described as a set of tools (hardware, software and people) used to collect, manage, analyze and display spatially-referenced data. Many local governments are now incorporating GIS systems into their existing planning and management operations. Dickenson County has existing GIS capability to further hazard mitigation goals.

2.C. Internet Access

Dickenson County provides its employees with high speed broadband Internet service. Internet access provides an enormous opportunity for local officials to keep abreast of the latest information relative to their work and makes receiving government services more affordable and convenient. Information technology also offers increased economic opportunities, higher living standards, more individual choices, and wider and more meaningful participation in government and public life. Simply put, information technology can make distance - a major factor for County officials and residents - far less important than it used to be. It is believed that Internet access will help further the community's hazard mitigation awareness programs, but should be supplemented with more traditional and less technical means as well.

3. Fiscal Capability

Dickenson County has limited fiscal capability to implement hazard mitigation strategies. For Fiscal Year 2012, the County has a public safety budget of $3,647,242.00. The county receives most of its revenues through state and local sales tax and other local services and through restricted intergovernmental contributions (federal and state pass through dollars). Considering the current budget deficits at both the state and local government level, in Virginia, combined with the apparent increased reliance on local accountability by the federal government, this is a significant and growing concern for Dickenson County.

4.A. Recent Hazard Mitigation Efforts

Dickenson County is currently participating in a U.S. Corps of Engineers project to evaluate all structures in the flood plain zone. The school consolidation project is receiving funds through this agreement. Ervinton High, Clinchco Elementary, Sandlick Elementary and some buildings at Haysi High will be demolished and new facilities constructed outside of the floodplain. Between 200 and 300 homes/business are identified as being eligible also.

4.B. Community Rating System Activities

Communities that regulate development in floodplains are able participate in the National Flood Insurance Program (NFIP). In return, the NFIP makes federally-backed flood insurance policies available for properties in the community. The Community Rating System (CRS) was implemented in 1990 as a program for recognizing and encouraging community floodplain management activities that exceed the minimum NFIP standards. There are ten CRS classes: class 1 requires the most credit points and gives the largest premium reduction; class 10 receives no premium reduction.

Dickenson County does not participate in the Community Rating System.

4.C. Emergency Operations Plan

Dickenson County has developed and adopted a Comprehensive Emergency Management Plan, which predetermines actions to be taken by government agencies and private organizations in response to an emergency or disaster event. For the most part, the Plan describes the County's capabilities to respond to emergencies and establishes the responsibilities and procedures for responding effectively to the actual occurrence of a disaster. The Plan does not specifically address hazard mitigation, but it does identify the specific operations to be undertaken by the County to protect lives and property immediately before, during and immediately following an emergency. There are no foreseeable conflicts between this Hazard Mitigation Plan and Dickenson County's Comprehensive Emergency Management Plan, primarily because they are each focused on two separate phases of emergency management (mitigation vs. preparedness and response). The Plan does identify the Board of Supervisors as having lead role in the long-term reconstruction phase following a disaster - which presents a unique window of opportunity for implementing hazard mitigation strategies. However, none are specified within the Emergency Management Plan.

4.D. Floodplain Management Plan

Dickenson County does not currently have a separate floodplain management plan for purposes of the National Flood Insurance Program's Community Rating System (CRS). This plan is intended to fulfill the CRS planning requirement should the City decide to enter the CRS.

The County has a person responsible for Information Technology (IT) which can enhance local government operations and the community's ability to develop and maintain a state-of-the art hazard mitigation program.

2.B. Geographic Information Systems (GIS)

GIS systems can best be described as a set of tools (hardware, software and people) used to collect, manage, analyze and display spatially-referenced data. Many local governments are now incorporating GIS systems into their existing planning and management operations. Dickenson County has existing GIS capability to further hazard mitigation goals.

2.C. Internet Access

Dickenson County provides its employees with high speed broadband Internet service. Internet access provides an enormous opportunity for local officials to keep abreast of the latest information relative to their work and makes receiving government services more affordable and convenient. Information technology also offers increased economic opportunities, higher living standards, more individual choices, and wider and more meaningful participation in government and public life. Simply put, information technology can make distance - a major factor for County officials and residents - far less important than it used to be. It is believed that Internet access will help further the community's hazard mitigation awareness programs, but should be supplemented with more traditional and less technical means as well.

3. Fiscal Capability

Dickenson County has limited fiscal capability to implement hazard mitigation strategies. For Fiscal Year 2012, the County has a public safety budget of $3,647,242.00. The county receives most of its revenues through state and local sales tax and other local services and through restricted intergovernmental contributions (federal and state pass through dollars). Considering the current budget deficits at both the state and local government level, in Virginia, combined with the apparent increased reliance on local accountability by the federal government, this is a significant and growing concern for Dickenson County.

4. Policy and Program Capability

This part of the capabilities assessment includes the identification and evaluation of existing plans, policies, practices, programs, or activities that either increase or decrease the community's vulnerability to natural hazards. Positive activities, which decrease hazard vulnerability, should be sustained and enhanced if possible. Negative activities, which increase hazard vulnerability, should be targeted for reconsideration and be thoroughly addressed within Mitigation Strategy for Dickenson County.

4.A. Recent Hazard Mitigation Efforts

Dickenson County is currently participating in a U.S. Corps of Engineers project to evaluate all structures in the flood plain zone and implement a flood warning system.

4.B. Community Rating System Activities

Communities that regulate development in floodplains are able participate in the National Flood Insurance Program (NFIP). In return, the NFIP makes federally-backed flood insurance policies available for properties in the community. The Community Rating System (CRS) was implemented in 1990 as a program for recognizing and encouraging community floodplain management activities that exceed the minimum NFIP standards. There are ten CRS classes: class 1 requires the most credit points and gives the largest premium reduction; class 10 receives no premium reduction.

Dickenson County does not participate in the Community Rating System.

4.C. Emergency Operations Plan

Dickenson County has developed and adopted a Comprehensive Emergency Management Plan, which predetermines actions to be taken by government agencies and private organizations in response to an emergency or disaster event. For the most part, the Plan describes the County's capabilities to respond to emergencies and establishes the responsibilities and procedures for responding effectively to the actual occurrence of a disaster. The Plan does not specifically address hazard mitigation, but it does identify the specific operations to be undertaken by the County to protect lives and property immediately before, during and immediately following an emergency. There are no foreseeable conflicts between this Hazard Mitigation Plan and Dickenson County's Comprehensive Emergency Management Plan, primarily because they are each focused on two separate phases of emergency management (mitigation vs. preparedness and response). The Plan does identify the Board of Supervisors as having lead role in the long-term reconstruction phase following a disaster - which presents a unique window of opportunity for implementing hazard mitigation strategies. However, none are specified within the Emergency Management Plan.

4.D. Floodplain Management Plan

Dickenson County does not currently have a separate floodplain management plan for purposes of the National Flood Insurance Program's Community Rating System

(CRS). This plan is intended to fulfill the CRS planning requirement should the City decide to enter the CRS.

4.E. Stormwater Management Plan

Dickenson County does not currently have an adopted stormwater management plan, but does apply stormwater management provisions through their subdivision regulations. Lands subject to flooding, irregular drainage conditions, excessive erosion and other reasons unsuitable for residential use shall not be platted for residential use unless the hazards can be and are corrected. For major subdivisions, a stormwater drainage plan must be prepared and necessary stormwater drainage improvements must be completed before final plat approval.

4.F. Comprehensive Plan

Dickenson County developed and adopted a Comprehensive Plan in 2008. The plan provides the future vision for the community regarding growth and development. Hazard mitigation planning is not specifically addressed in the plan.

4.G. Ordinances

Dickenson County has adopted several ordinances that are relevant to hazard mitigation. The following table provides an inventory of these ordinances.

Table VI-2 — Dickenson County Ordinances Related to Hazard Mitigation

Title(s)	Adoption Date(s)	Description/Purpose(s)	Mitigation Effectiveness
Flood Damage Prevention and Control Ordinance	1/23/91	The Flood Damage Prevention Ordinance is designed to minimize public and private losses due to flood conditions in specific areas. It requires a development permit be submitted to the County prior to any construction or substantial improvement activities. Permits will only be approved if they meet the provisions of the ordinance, which include development standards that will minimize the potential for flood losses. Standards are established for construction materials, equipment, methods, practices and uses. Most importantly, establishes the requirements for elevation and floodproofing (non-residential) to base flood elevation. The Ordinance requires the minimum standards of the National Flood Insurance Program (NFIP). The	HIGH

3. Fiscal Capability

Russell County has limited fiscal capability to implement hazard mitigation strategies. For Fiscal Year 2012, the County has a public safety budget of $4,463,848.00. The county receives most of its revenues through state and local sales tax and other local services and through restricted intergovernmental contributions (federal and state pass through dollars). Considering the current budget deficits at both the state and local government level, in Virginia, combined with the apparent increased reliance on local accountability by the federal government, this is a significant and growing concern for Russell County.

4. Policy and Program Capability

This part of the capabilities assessment includes the identification and evaluation of existing plans, policies, practices, programs, or activities that either increase or decrease the community's vulnerability to natural hazards. Positive activities, which decrease hazard vulnerability, should be sustained and enhanced if possible. Negative activities, which increase hazard vulnerability, should be targeted for reconsideration and be thoroughly addressed within the Mitigation Strategy for Russell County.

4.A. Recent Hazard Mitigation Efforts

In the past 5 years, Russell County Emergency Management has only completed one mitigation project in Maple Gap. The project replace a failed drained pipe at the lower end of Maple Gap, which caused flooding during heavy rainfall events when the excess water was not allowed to flow through the drain pipe and back up into nearby homes.

4.B. Community Rating System Activities

Communities that regulate development in floodplains are able participate in the National Flood Insurance Program (NFIP). In return, the NFIP makes federally-backed flood insurance policies available for properties in the community. The Community Rating System (CRS) was implemented in 1990 as a program for recognizing and encouraging community floodplain management activities that exceed the minimum NFIP standards. There are ten CRS classes: class 1 requires the most credit points and gives the largest premium reduction; class 10 receives no premium reduction.

Russell County does not participate in the Community Rating System.

4.C Emergency Operations Plan

Tazewell County has limited technical capability to implement hazard mitigation strategies.

2.A. Technical Expertise

The County does have a full-time planner on staff to administer the community's hazard mitigation programs. The County Engineer provides expertise in the area of water resources and associated technical work. The County does have an inspections office which enforces a building code.

The County has a person responsible for Information Technology (IT), which can enhance local government operations and the community's ability to develop and maintain a state-of-the art hazard mitigation program.

2.B. Geographic Information Systems (GIS)

GIS systems can best be described as a set of tools (hardware, software and people) used to collect, manage, analyze and display spatially-referenced data. Many local governments are now incorporating GIS systems into their existing planning and management operations. Tazewell County has GIS capability and a person responsible for maintaining/implementing the GIS to further hazard mitigation goals.

2.C. Internet Access

Tazewell County does provide most of its employees with high speed broadband Internet service. Internet access provides an enormous opportunity for local officials to keep abreast of the latest information relative to their work and makes receiving government services more affordable and convenient. Information technology also offers increased economic opportunities, higher living standards, more individual choices, and wider and more meaningful participation in government and public life. Simply put, information technology can make distance - a major factor for County officials and residents - far less important than it used to be. It is believed that Internet access will help further the community's hazard mitigation awareness programs, but should be supplemented with more traditional (and less technical) means as well.

3. Fiscal Capability

Tazewell County has limited fiscal capability to implement hazard mitigation strategies. For Fiscal Year 2012, the County has a public safety budget of $85,347,000.. The county receives most of its revenues through state and local sales tax and other local services and through restricted intergovernmental contributions (federal and state pass through dollars). Considering the current budget deficits at both the state and local government level, in Virginia, combined with the apparent increased reliance on local accountability by the federal government, this is a significant and growing concern for Tazewell County.

		by emergency vehicles for fires or severe weather events.	
Tazewell County State of Emergency Ordinance	Unknown	The purpose of this ordinance is to authorize the proclamation of a State of Emergency and the imposition of prohibitions and restrictions during a State of Emergency. Establishes the authority and procedures for the Board of Supervisors to proclaim a State of Emergency, and to impose the following restrictions as described in the ordinance: curfew; evacuation; possession/transportation/transfer of intoxicating liquors, dangerous weapons and substances; access to areas; movements of people in public places; operation of businesses and other places; and other activities or conditions the control of which may be reasonably necessary to maintain order and protect lives or property during the State of Emergency. The ordinance does not incorporate any long-term mitigation actions, such as temporary moratoria on the reconstruction of structures damaged or destroyed by a disaster event.	LOW
Erosion And Sediment Control		The purpose is to conserve the land, water, air and other natural resources of Tazewell County. It establishes requirements for the control of erosion and sedimentation, and establishes procedures whereby these requirements shall be administered and enforced.	MODERATE

4.H. Open Space Plans

Tazewell County does not currently have a separate Open Space Plan.

4.I. Watershed Protection Plan

Tazewell County does not currently have a separate Watershed Protection Plan. However, the Upper Tennessee River Watershed Strategic Plan dated 2000 contains information for the Clinch, Holston and Powell Rivers.

5. Legal Authority

Local governments in Virginia have a wide range of tools available to them for implementing mitigation programs, policies and actions. A hazard mitigation program can utilize any or all of the four broad types of government powers granted by the State of Virginia, which are (a) regulation; (b) acquisition; (c) taxation; and (d) spending. The scope of this local authority is subject to constraints, however, as all of Virginia's political subdivisions must not act without proper delegation from the state. All power is vested in the state and can only be exercised by local governments to the extent it is delegated. Thus, this portion of the capabilities assessment will summarize Virginia's enabling legislation which grants the four types of government powers listed above within the context of available hazard mitigation tools and techniques.

SECTION VIII — PLAN MAINTENANCE PROCEDURES

The long-term success of the Cumberland Plateau Planning District's mitigation plan depends in large part on routine monitoring, evaluating, and updating of the plan so that it will remain a valid tool for the communities to use. The first step in ensuring that the plan's activities will be implemented is to obtain official recognition of the Mitigation Advisory Committee (MAC) as proposed in Mitigation Action#1 and assign the responsibility to the MAC.

Plan Adoption, Implementation and Maintenance

Formal Plan Adoption

Fifteen local governments in southwestern Virginia have participated in this planning process and formally adopted this plan by resolution of their governing Board. Those local governments are the counties of Buchanan, Dickenson, Russell and Tazewell and the towns of towns of Grundy, Clinchco, Haysi, Cleveland, Honaker, Lebanon, Bluefield, Cedar Bluff, Pocahontas, Richlands and Tazewell. The plan was completed under the auspices of the Cumberland Plateau Planning District.

The adoption process necessitated that the MAC 1) place the plan review and adoption on the appropriate meeting agendas in each jurisdiction, 2) produce and provide copies in official meeting packets, 3) facilitate the actual adoption, 4) collect the adoption resolutions, and 5) incorporate the adopted resolutions into the final Hazard Mitigation Plan.

The Cumberland Plateau Planning District appreciates the willingness that both Virginia Department of Emergency Management and FEMA Region III demonstrated by reviewing this plan concurrently and providing comments for revision *prior* to the adoption process. Not having done so would clearly have added more months to the adoption process.

Implementation

Upon adoption, the plan faces the biggest test: *implementation.* Implementation implies two concepts: action and priority.

While this plan puts forth many worthwhile and "High" priority recommendations, there may be competition among the participating communities in the Cumberland Plateau Planning District for limited mitigation funds. The decision of which action to undertake first will be the primary issue that the district's communities face. Fortunately, there are two factors that will help make that decision workable. First, there are high priority items for each participating community, so each can pursue an action independently. Therefore, the Plan's specific recommendations will begin to be addressed. Second, funding is always an important and critical issue. Therefore whenever possible, the Planning District communities will pursue low or no-cost recommendations.

An example of a low-cost, high-priority recommendation would be to pursue the education efforts necessary for elected officials and the general public as they relate to participation in the National Flood Insurance Program (NFIP). In other cases, some communities need to strengthen their commitment to the NFIP by amending local floodplain ordinances.

Another example would be to pursue the regional goal of increasing education opportunities for the Planning District communities' employees, MAC representatives, and public officials regarding natural hazard mitigation, floodplain management, floodplain regulations, and enforcement. These initial efforts will lead to long-standing changes in vulnerability and can be initiated at very little cost, while promoting public education through their relative "visibility" in the community.

Another important implementation approach that is highly effective, but low-cost, is to take steps to incorporate the recommendations, and equally important, the underlying principles of this Hazard Mitigation Plan into other community plans and mechanisms, such as:

- Comprehensive Planning
- Capital Improvement Budgeting
- Economic Development Goals and Incentives

Mitigation is most successful when it is incorporated within the day-to-day functions and priorities of government and development. This integration is accomplished by a constant effort to network and to identify and highlight the multi-objective, "win-win" benefits to each program, the communities and their constituents. Just as importantly, the mitigation plan and its recommendations should be presented as a *"framework for mitigation"* in all future planning efforts undertaken by the district's communities such as the development or revision of local comprehensive plans. This effort is achieved through the often tedious actions of monitoring agendas, attending meetings, sending memos, and promoting safe, sustainable communities.

Since 2005 Russell County has incorporated the 2005 mitigation recommendations into their Comprehensive Development Plan. Buchanan, Dickenson, Russell and Tazewell Counties have incorporated it into their Local Emergency Operations Plans. The PDC will continue to stress the need to integrate with other local community plans.

Simultaneous to these efforts, it will be important to constantly monitor funding opportunities that can be utilized to implement some of the higher cost recommended actions. This will include creating and maintaining a repository of ideas on how any required local match or participation requirement can be met. Then, when funding does become available, the Cumberland Plateau Planning District communities will be in a position to take advantage of an opportunity. Funding opportunities that can be monitored include special pre- and post-disaster funds, special district budgeted funds, state or federal ear-marked funds, and grant programs, including those that can serve or support multi-objective applications.

NEWS RELEASE

Cumberland Plateau Draft Hazard Mitigation Update Plan Available on Website

The Cumberland Plateau Planning District Commission, in cooperation with local counties and towns, has been working to complete a Regional Mitigation Plan Update for the District. The entire update plan is now available for review and comments on the Planning District's website at www.cppdc.com. Hard copies are available at each County Administrator's office and each Town Hall in the District.

Completion and adoption of the Plan is required by the Virginia Department of Emergency Management (VDEM) and the Federal Emergency Management Agency (FEMA) in order for localities to be eligible for certain pre-disaster mitigation funds.

For more information, contact Shane Farmer at 276-889-1778.

This add was printed in the Richlands News Press, The VA Mounaineer, The Dickenson Star, and the Lebanon News Press.

This add was printed in the Richlands News Press, The VA Mounaineer, The Dickenson Star, and the Lebanon News Press.

PUBLIC MEETING

Cumberland Plateau Regional Hazard Mitigation Update Plan

A public meeting on the Cumberland Plateau Regional Hazard Mitigation Update Plan will be held on Thursday, November 15, 2012 at 10:00 a.m. at Southwest Virginia Community College in Richlands, Room C-126 at the Community Center. The public will be able to ask questions or request additions to the Update Plan at this hearing. An electronic copy is now available on the Cumberland Plateau Planning District Commission website at www.cppdc.com.

Copies also are available for public view at the Planning District Commission's office at 224 Clydesway Drive, Lebanon, Virginia, and the PDC counties of Buchanan, Dickenson, Russell, and Tazewell Boards of Supervisors Offices, as well as the Towns located in these counties.

BALZER AND ASSOCIATES —— CONSULTANTS
PLANNING AREA

INTRODUCTION

INTRODUCTION

On June 3, 1980, the Town of Clintwood, Virginia contracted with Balzer and Associates, Inc. of Salem, Virginia to prepare a comprehensive community development plan. The planning area was defined as the land within the corporate limits of the Town as well as land located in Dickenson County but adjoining and vitally affecting the development of the Town. Much of this peripheral planning area was annexed by the Town of Clintwood in 1986. The Town has worked with the Weldon Cooper Center for Public Service and the Cumberland Plateau Planning District Commission in 1998-1999 to review the Comprehensive Plan and update certain portions according to Title 15.2-2230 of the Code of Virginia, 1950, amended.

It was agreed that the Clintwood, Virginia Planning Document would be composed of five essential components. They are as follows:

Part I - Inventory and Analysis examines the environmental characteristics, existing land use, building conditions, community facilities, thoroughfares, utilities, economic base, population and financial resources of the Town and the peripheral planning areas.

Part 2 - Goals and Objectives provides the direction and framework for public and private decision-making relative to the physical development of the Town. The goals and objectives address the areas of environment, housing, land use, transportation, economic development and public services and facilities.

Part 3 - Comprehensive Community Development Plan supplies policies that may be used by the Town Council to determine the future physical development of the community and a physical design which will allow the policies to be realized. The plan focuses on land use, transportation and community facilities.

Part 4 - Community Development Programming prioritizes Clintwood's community development needs and evaluates the Town's eligibility for and ability to obtain future grants.

Part 5 - Maps depicting existing land use, building conditions, slope and drainage, existing water system, existing sewer system, community facilities, future land use, and future land use of the Clintwood Courthouse-Commercial Center are on display in the Town Hall Building. The future land use map is also contained within this document.

PART I
INVENTORY AND ANALYSIS

CHAPTER I
ENVIRONMENTAL CHARACTERISTICS

ENVIRONMENTAL CHARACTERISTICS

The consultants completed an urban suitability study which analyzed the natural environmental characteristics of the Town of Clintwood and its eastern and western peripheral planning areas. The study identified those areas that are the most intrinsically suited for future development. The identification process was premised upon the concept of carrying capacity; i.e., that there are limits to the extent of growth certain geographic areas of the study area can absorb without endangering the public health or safety or damaging the natural environment. The following studies examine the ability of the land as defined by physiography, soils, geological formations, climate, and vegetation, to withstand and support the impacts of residential, commercial and industrial development, as well as recreational utilization and mineral extraction. The findings of these studies will be the basis for the future land use, major thoroughfare, and conmunity facilities plans presented later.

PHYSIOGRAPHY

The topography within Clintwood is extremely variable ranging from an elevation of about 1,750 feet along Holly Creek to a high point of 3,050 feet directly southwest of the central business district. Many areas of the Town, and primarily sections of the Central Business District, are within the 100 year flood plain of Holly Creek. Steep slopes surround many of the developed areas posing unique development problems and opportunities. There is one primary drainage basin which encompasses the Town and both planning areas.

Slope

A slope analysis of uncommitted or undeveloped land was conducted utilizing the following four gradient classifications:

- Flood Plain - slope conditions are not favorable for residential
- Range A - slope conditions range from 0 - 10 percent and present few if any limitations to development.
- Range B - slope conditions range from 10 - 20 percent and present moderate limitations to development.
- Range C - slope conditions exceed 20 percent and present major limitations to development

These slope indicators represent the steepness of an area. For example, a 10% slope means that the elevation of the land increases 10 feet for every 100 feet of surface distance. Areas with slopes greater than 20 percent offer special development problems and opportunities. Steep slopes are more susceptible to erosion, encourage runoff and are generally unsuited for most commercial and industrial development. The provision of transportation and utility services also becomes more difficult. However, with proper design and consideration of other development determinants such as soil and climate, steep-slope areas may be utilized as unique residential environments emphasizing such positive aspects as architectural design, neighborhood design, solar access and natural vistas. Generally, the type and intensity of steep-slope development is directly proportional to the cost of the improvements required to insure the functional ism of the building as well as the public health, safety and welfare.

Functional, economical, and safe steep-slope development is dependent upon the effective administration of the building code and the building permit system. The site plan review procedures included in the permit application process should consider not only the data and standards contained within this document, but also the specific environmental characteristics of the site. It is more important that the building permit be evaluated by a trained building inspector. Larger developments should be reviewed by a site plan review committee which could consist of the building official and members of the planning commission.

Flood Hazard Areas

A dominant feature in Clintwood is the existence of the Holly Creek flood plain. This flood hazard area is indicated on the Slope and Drainage Map on display in the Town Hall. However, for specific information pertaining to property in the Town, the flood hazard boundary maps on file in the Town Clerk's office should be referenced. These maps, prepared by the United States Department of Housing and Urban Development, Federal Insurance Administration in 1977 and 1978 indicate the official boundaries of the "Special Flood Hazard Area" (100 year flood plain) in Clintwood and the peripheral planning areas.

The 100 year flood is a flood that, on the average, is likely to occur once every 100 years. A 100 year flood has a I percent chance of occurring each year, although the flood may actually occur in any year. The flood fringe is that area immediately adjacent to the 100 year flood plain that is within the realm of the 500 year flood.

The Town has no regulations pertaining to current or future development in the flood hazard areas. The Consultants recommend that the Town manage all land located in flood plains by way of flood plain regulations. These regulations may be included either within the building permit application process or within the provisions of the zoning ordinance or building code.

Slope Characteristics of Undeveloped Land: Town of Cintwood

Approximately 57 percent, or 367 acres, of Clintwood's total area of 640 acres is undeveloped or uncommitted. The following table indicates quantities of vacant land by slope category.

SLOPE CHARACTERISTICS OF UNDEVELOPED OR UNCOMMITTED LAND 1

TOWN OF CLINTWOOD

SLOPE CATEGORY2		TOTAL ACREAGE
FLOOD PLAIN		4.6
0-10%		83.8
10-20%		175.6
OVER 20%		102.9
	TOTAL	366.9 ACRES

Source: Balzer and Associates

1 It is extremely important to understand that undeveloped or uncommitted land is not synonymous with land suitable for development. Development suitability will be determined not only by the natural environmental characteristics discussed in this section but also by ownership and value.

2 Slope characteristics were determined from United States Geological Survey Topographical Maps. In some locations, actual slope characteristics may vary slightly from those mapped because of strip mining activities or erosion.

Approximately 29 percent of all undeveloped or uncommitted land in Clintwood is either situated in flood hazard areas or in areas with slopes greater than 20 percent. In contrast, two hundred and fifty nine acres or 71 percent of all undeveloped or uncommitted land is topographically adequate for development. Although some of this acreage occurs as small and isolated parcels much of this land is adjacent to roads, water and sewer facilities. In general, the future cost of developing these sites for residential and commercial purposes would be reasonable. Industrial development is also possible, although large expanses of level or nearly level land (0-5 percent) required for manufacturing is not as prevalent as land with slopes in the range of 5 to 20 percent.

Slope Characteristics of Undeveloped Land: Peripheral Planning Areas

Approximately 86 percent, or 565 of the 660 acres which constitute Clintwood's peripheral planning area are undeveloped or uncommitted. The following tables list quantities of vacant land by slope category for both the western and eastern peripheral planning areas.

SLOPE CHARACTERISTICS OF UNDEVELOPED OR UNCOMMITTED LAND

WESTERN PERIPHERAL PLANNING AREA

SLOPE CATEGORY	TOTAL ACREAGE
FLOOD PLAIN	8.6
0-10%	77.9
10-20%	142.8
OVER 20%	38.3
TOTAL	267.6 acres

Source: Balzer and Associates

SLOPE CHARACTERISTICS OF UNDEVELOPED OR UNCOMMITTED LAND

EASTERN PERIPHERAL PLANNING AREA

SLOPE CATEGORY		TOTAL ACREAGE
FLOOD PLAIN		11.8
0-10%		108.2
10-20%		143.7
OVER 20%		34.0
	TOTAL	297.7 acres

Source: Balzer and Associates

Only 16 percent of all undeveloped or uncommitted land in the peripheral planning areas is either situated in flood hazard areas or in areas with slopes greater than 20 percent. Four hundred and seventy three acres or 84 percent of all undeveloped or uncommitted land is topographically adequate for development. It is especially significant to note that in the eastern peripheral planning area, 108 acres or 36 percent of the total amount of undeveloped or uncommitted land in this area is characterized by slopes which range between 0 and 10 percent. Most of this land occurs in large expanses and is located adjacent to existing roadways.

The future land use element will identify those undeveloped or uncommitted sections that could be developed economically and in accordance with sound land use planning standards.

Drainage Areas:

Drainage areas are significant for two primary reasons: infrastructure planning, primarily sanitary sewers, and storm drainage management.

The drainage or ridge lines for the Town of Clintwood are identified on the Slope and Drainage Map on display in the Town Hall. The Town and most of the area within the peripheral planning areas drain into the Holly Creek drainage basin. Only a very small area in the eastern peripheral planning area drains into the Cranesnest River Basin. Both Holly Creek and the Cranesnest River are part of the Big Sandy River system. Most of the tributaries of Holly Creek contain running water throughout the year, although none of the streams has very large flows. Sandy soils and steep stream gradients act to reduce flooding but make swollen streams very dangerous.

Infrastructure Planning:

Drainage basin and sub-basin delineation is the first and perhaps the most important step in determining the appropriate size of the sanitary sewer service area. Excess capacity of the sewage system may result in excessive cost responsibilities for the users and may allow for unplanned growth which may burden the community in terms of added service requirements.

Sanitary sewer systems are often the least expensive and the most practical when they can be designed as self-cleaning gravity flow systems. Therefore, the most economical means of providing sanitary sewer service is to remain with the natural drainage basins of the community.

While gravity flow is very important, sewer service is not required to serve an entire drainage basin. The identification of Clintwood's drainage basins and sanitary sewer service areas is very important for encouraging or discouraging future growth within the Town and the peripheral planning areas.

Storm Drainage Management:

As rain falls to the earth's surface, it continues to move. Some of it may be quickly evaporated, some of it may be absorbed into the ground to be used by vegetation and for other purposes. The remainder, called runoff, moves by gravity through a system of natural channels into collecting creeks, rivers, and larger water bodies at low elevations eventually terminating in the oceans. The pattern of the drainage network is determined by the topography (influencing the rate of flow) and the geologic make-up of the area through which each drainage path flows (some geologic materials are more resistant than others to erosion caused by the movement of water).

When development of a community takes place, the natural drainage system is affected. As improvements are placed upon the ground, the amount of precipitation which can be absorbed is reduced and that quantity of water is added to the volume of water which must be accommodated by the drainage system. Within urbanized areas, it is often necessary to construct storm drainage facilities that substitute for natural surface drainage. The storm drainage system consists of a drainage surface, open gutters and ditches, and possibly a series of underground pipes connected by manholes and fed by inlets. The system does not need to be continuous but may terminate into streams, lakes, or gullies wherever flooding or pollution will not be increased.

Because underground storm sewers are very expensive, the drainage basins and sub-basins indicated on the map should be studied carefully by a qualified engineer before any major capital expenditures for storm drainage facilities are made by the Town.

SOILS AND GEOLOGY:

The Town of Clintwood and its peripheral planning areas are characterized by terrain that ranges from hilly to mountainous. Flat lands, even a few acres in extent, are rare. Very steep, although not precipitous valley slopes are common. The entire area is thoroughly dissected by streams. Principle water sources are generally only a few miles apart and are usually separated by ridges 500 to 1,000 feet high. Valleys are V-shaped (deep and narrow) and have little or no flat bottom lands. Alluvium (water deposited clay, silt, sand, gravel or other rock) along streams may be up to 20 feet deep and consists of fine materials or very large boulders in varying proportions. Ridges are steep sided, winding and very irregular in outline, with many side spurs. Most of the few small, flat areas in the region are on divides, but by far the greater part of the ridge tops are very narrow. These steep, narrow ridges are usually capped by sandstone or conglomerate. Flat ridges are generally capped by sandy shale, shale or highly weathered sandstone.

Thick coal is found southwest of Clintwood. The Clintwood coal seam, by far the most predominant seam in the area, is found on the hillsides surrounding the Town and the peripheral planning areas. No coal formations are found within the corporate limits of the Town. A representative geological cross-section of the area surrounding the Town contains the following formations: Clintwood Coal, Eagle Coal, Blair Coal, Lyon Coal, Glamorgan-Dorchester Coal, Gladeville Sandstone, Hagy Coal, Splash Dam Coal, Upper Banner Coal, and Lower Banner Coal. Of these, only the Clintwood coal seam located north of the Town and 20 to 100 feet below the surface, can be mined. The other seams can not be mined because of the presence of shale partings, their lack of thickness, and their occurring depth. With the exception of the Clintwood seam, it is likely that the other formations are still intact.

It is fortunate that only limited strip and deep mining has taken place in the immediate vicinity of the Town and the peripheral planning areas.

Strip mining is utilized to remove thin seams of coal that are near the earth's surface. Ultimately, once the overburden has been removed and the coal has been extracted, the fill (debris) is pushed off the side of the mining bench. The discarded fill has very poor load bearing capacities because of its placement on steep slopes and the improper densification of its component materials which range from large pieces of rock to small stones. As a result of those characteristics, the fill is very likely to either settle or slide further down the embankment. Development of any strip mine bench should be undertaken only after a thorough examination of the site by a qualified engineering geologist or soils engineer.

The primary development problem caused by deep mining operations is subsidence. Subsidence is surface and subsurface movements of the earth that are related to active and abandoned underground mining activities. The development of a subsidence trough is generally a slow, progressive occurrence. Vertical subsidence resulting from mining operation is a function of the coal seam thickness and the method of support remaining within the extraction area. Support is generally provided by way of rooms and pillars. Once the mine is abandoned, however, there is no guarantee that the pillars will remain intact. Additional unrecorded mining activities may render the pillars too weak to provide adequate support for surface development. It is virtually impossible to accurately document the existence or extent of remaining pillars in abandoned mining operations.

Horizontal surface movements are also likely to occur during subsidence. As the trough develops, earth from the sides is pulled horizontally into the depression. Therefore, subsidence is very detrimental to development located not only within but also adjacent to the trough.

In both the Town and peripheral planning area soil is limited and scarce.

Major fills will probably be "rock-fill" or mostly rock-fill. In general, slope stability is a problem. Caution should be used in all cut and fill operations. Fill heights should not exceed 15 feet and cut heights should not exceed 20 feet.

The most common soils as designated by the unified soil classification system are SM (silty sand) SC (sandy clay) ML (low plasticity silt) and CL (low plasticity clay). Of these, the latter two types are the most prevalent. The anticipated California Bearing Ratio is 8 to 12 percent. Resultant pavement thickness required in housing developments or light commercial areas would be 9 to 12 inches.

CLIMATE:

Precipitation, wind, and temperature are important for the future planning of such diverse elements as airports, large parking lots and reservoirs.

Clintwood has mild winters and warm summers. Temperatures range between 32° F and 40° F during the winter months and between 67° F and 71° F during the summer months. Extreme temperatures seldom occur but freezing spells do occur during the winter months. It is not uncommon for the temperature to occasionally reach 90° F or higher during the summer. The frost-free season usually lasts from early May to late September.

With total precipitation between 45 and 50 inches annually, Clintwood is within one of the wettest regions of the United States. Because of the surrounding mountainous terrain, a wide variation in amounts of precipitation may occur. Precipitation is distributed evenly throughout the year with 51 percent occurring during the growing season. Approximately 10 drought days, or one-half of the total drought days, occur during the growing season. During the summer, hard showers or thunderstorms from the west and northwest and slow steady rains from the east and the northeast are typical. Although severe snow storms do occur, snowfall is generally not a significant part of the total annual precipitation.

VEGETATION

In Clintwood, where precipitation is abundant and the terrain is rugged, the effects of vegetation, including foliage, root composition, and density are crucial for controlling surface runoff and erosion.

One of the primary functions of vegetation is to limit surface runoff. Surface runoff occurs only when the intensity of a rainfall exceeds the infiltration capacity of the soil. Vegetation protects the soil by decreasing the intensity, forcing the rain to pass through protective filters provided by both trees and grasses.

Erosion, the actual destruction of the soil, is a function of both slope and surface runoff. Surface runoff by itself is not damaging but when combined with the gravitational component of slope the increased water velocity causes a greater amount of soil movement. Slopes covered by rooted trees, grasses and abundant leaf litter are not as vulnerable to erosion as are bare slopes.

Pine, oak, hickory, beech and birch are the dominant species found in the Clintwood area. Pines and other scrub growth are found where soil and/or wind conditions are not as favorable for growth. The oaks and hickories predominate the lower levels while the birch and beech trees are generally found at higher elevations.

There are also many other types of low growing shrubs and ground covers including dogwood, rhododendron, mountain laurel, wild azalea, redbud, mountain spurge, arbutus, St. John's wort, and trailing wolfbane which serve to stabilize and protect the soils in Clintwood and the neighboring areas.

CHAPTER 2
EXISTING LAND USE

EXISTING LAND USE AND BUILDING CONDITIONS

The Town occupies one square mile of area in the northwest quadrant of Dickenson County. In addition to the Town, the Consultants examined the existing land use and building conditions within 2 peripheral planning areas adjacent to the eastern and western corporate limits. These areas comprise 355 acres (.55 sq. miles) and 305 acres (.48 miles) respectively.

The Town has not been divided into neighborhoods. The data is presented for the Town, the western peripheral planning area and the eastern peripheral planning area.

In July of 1980 and March of 1981 the Consultants, in conjunction with the Town of Clintwood, conducted a survey of the u-se of lands in Clintwood and the peripheral planning areas as well as an examination of the condition of all principle structures. The results and subsequent revisions are presented on the Existing Land Use Map and the Building Conditions Map on display in the Town Hall Building. (Also see Appendix B.)

It should be noted that the principle land use is depicted on the map in all instances of mixed use except where residential/non-residential mixed use occurs, and in those cases the non-residential use is depicted. The acreage of land use shown in the following tables is based upon the Existing Land Use Map.

The condition of each principle structure was defined in accordance with the following criteria:

* Condition A - Indicates buildings in sound condition in need of normal routine maintenance only.

* Condition B - Indicates buildings with deficiencies in need of corrective measures significantly beyond those associated with routine maintenance.

* Condition C - Indicates buildings with deficiencies to an extent that is considered impractical to repair.

PAST LAND USE TRENDS

In the preparation of the future land use, community facilities and major thoroughfare plans it is necessary to assess past development trends in order to determine future land use requirements. The following table describes the trends which have occurred Clintwood and the peripheral planning areas, 1977-1981.

NEW CONSTRUCTION BUILDING PERMITS ISSUED
TOWN OF CLINTWOOD AND PERIPHERAL PLANNING AREAS - 1977-1981[1]

TOTAL	69	22	91

January 1 - June 30, 1981

[2] Number of single family and mobile home units estimated using Dickenson County building permit data and where appropriate, aerial photographs.

Sources: Tayloe Murphy Institute
Building Inspector, Town of Clintwood
Balzer and Associates, Inc.

The greatest amount of development activity has occurred within the residential sector. Eighty-three building permits were issued for the construction of new single family and mobile home dwelling units within the Town of Clintwood and the peripheral planning areas. In addition, permits were issued for the construction of 8 new commercial, trade, office and institutional facilities.

Eighteen acres of vacant land in the Town of Clintwood were converted to active use between January 1977 and July 1981. The corresponding amount of newly developed land in the peripheral planning areas for the same time period was 11 acres. Based on this past combined rate of 6.5 acres per annum, an additional 124 acres of undeveloped or uncommitted land will be required for development within the Town and the peripheral planning area by the year 2000. Of this amount, 78 acres will be needed in the Town, 46 acres will be required in the planning areas. This projected need is dependent upon the continuation of the current per annum population growth rate and the availability of land economically and environmentally suitable for development. (For further discussion of future land use requirements please see page 94)

LOW- AND MODERATE-INCOME HOUSING

The Small Cities Community Development Block Grant Program (CDBG) was established to assist small cities and communities like Clintwood that have high concentrations of impoverished citizens and substandard housing by expanding low- and moderate-income housing opportunities and meeting community development needs. The Community Development Program is especially significant in smaller cities and towns where budgetary allotments tend to be residual after important operating, maintenance, health, and social service responsibilities are met.

The nature of the CDBG program necessitates the establishment of "target areas" for the purpose of upgrading the total physical environment. There are no more large scale urban renewal or slum clearance programs that completely eliminate all urban problems. Instead, the CDBG program tends to be incremental, demanding an incremental approach to community problem solving. With CDBG annual funding, which in any one year is small in comparison with the total amount needed, effective planning requires a realistic long-term plan for orderly assistance to neighborhoods and "target areas."

To facilitate the provision of this assistance, the Consultants identified all housing occupied by low- and moderate income persons. Low- and moderate-income persons were defined as those whose annual income was less than $12,004 per year, which was 80 percent of the Statewide non-metro median income, as defined by the United States Department of Housing and Urban Development in October, 1980. The results are as follows:

LOW- AND MODERATE-INCOME HOUSING - CLINTWOOD AREA

TOTALS	TOWN	PERIPHERAL PLANNING AREA	TOTAL
HOUSEHOLDS	501	136	637
ELDERLY HEAD	145	40	185
FEMALE HEAD	164	25	189
HANDICAPPED HEAD	24	29	53
L/M HOUSEHOLDS	226	69	295
PERCENT OF ALL HOUSEHOLDS	45.1%	50.7%	46.3%
L/M PERSONS	531	170	701
L/M ELDERLY HEAD	101	35	136
L/M FEMALE HEAD	117	20	137
L/M HANDICAPPED HEAD	19	23	42

CHAPTER 3
COMMUNITY FACILITIES

COMMUNITY FACILITIES

The quality of community facilities is the best indication of the quality of life in any community. Facilities for education, recreation, administration and police and fire protection are essential components of a viable community.

As centers of common use, community facilities provide for basic needs and serve as centers and symbols of community life. Good community facilities enhance residential values as well as add to the corporate image, thereby attracting more industries and strengthening the tax base on which community facilities are created and maintained.

A survey of the existing community facilities in Clintwood was undertaken by the Consultants in the Fall of 1980 to ascertain the size, location, type, capacity and physical condition of each facility. An evaluation of each facility was accomplished by comparing the facility system with tested community planning principles and standards of space (current distribution, growth potential, area requirements) and location (convenience, performance and security).

The facility systems included in this study are:

1. Education including public schools and the community library.

2. Governmental Services including police protection, emergency services and administrative

facilities.

3. Recreation including neighborhood parks, athletic playfields and playgrounds.

PUBLIC SCHOOLS

Pupils residing in the Town of Clintwood and the peripheral planning areas are served by the Clintwood High School (grades 8-12) and the Clintwood Elementary School (grades K-7). Each of these facilities is owned and administered by the Dickenson County School Board. The 1976 and 1981 enrollments and enrollment capacity for each school are presented on the next page:

CLASSROOM CAPACITY AND ENROLLMENTS BY SCHOOL

	ENROLLMENT		ENROLLMENT CAPACITY	VACANT SPACES	
	1976	1981		1976	-1980
Clintwood H.S.	714	680	520	0	0
Clintwood E.S.	614	717	700	86	0
TOTAL	1,328	1,397			

Source: Dickenson County School Board

Preliminary Draft, Dickenson County Comprehensive Plan

Constructed in 1954, the Clintwood High School is situated on a 36 acre site immediately adjacent to Primary Route 83 within the corporate limits of Clintwood. A football stadium and track facility are also located on the site. The location of the high school promotes convenient ingress and egress for both school buses and passenger cars. Safe pedestrian access from the nearby housing areas is aided by the availability of sidewalks along most of the major roadways and the virtual lack of traffic on many of the local residential streets.

The Clintwood Elementary School was completed in 1977 and is located on a 21 acre site adjacent to Route 607 approximately three-quarters of a mile east of the Town's corporate limits. The facility is situated within the eastern peripheral planning area. Because of the school's relatively remote location, most of student enrollment uses bus transportation. The distance from the Town's residential areas and the lack of safe pedestrian access have acted to discourage effective useage of the school site as a community recreation area.

School sites of adequate size are imperative to the development of the community. The increasing use of one story buildings, the expanded utilization of school facilities for adult education programs and community recreation areas, and the requirements for off-street parking facilities are creating demands for school sites of increasing size. The standards of the State Board of Education pertaining to size and location are as follows:

1. The minimum size for usable school sites shall be as follows:

a. Elementary schools - 5 acres, plus I acre for each 100 pupils to be enrolled.
b. High School - 30 acres, plus I acre for each 100 pupils to be enrolled.

2. Safe drinking water and sewage disposal at a safe distance from the source of the water supply shall be provided on all school sites.

3. The location of the building on the site shall provide for future expansion.

4. The site shall be accessible to state or county highways with careful consideration being given to safe exit and entrance.

5. The site shall slope enough for drainage but not be too steep for use as a playground.

6. The site shall be away from objectionable noises, odors and other hazards that would produce an unpleasant environment.

Each of the two school sites is of an adequate size, however much of the area behind the high school is too steep to allow for an economical expansion of the building.

The most significant issue, however, is the intensity of use of each school building. The number of users should be the major determinant of facility size. In a clear application of sound business principles, supply, or classroom capacity should respond to demand. In response to such principles, it is incumbent upon public decision makers to invest in those facilities which are designed to most nearly satisfy current and anticipated future needs.

All of the County schools serving Clintwood's students are over-crowded. Although serious, this problem is beyond the scope of this document. As a part of the Dickenson County School System, it is the responsibility of the Dickenson County Board of Supervisors and members of the School Board to address the issues of current and potential overcrowding or under-utilization of all school facilities in the system. A partial examination of only those facilities used by Clintwood's pupils may result in an investment by the County for a building designed for a level of anticipated use that is significantly greater than subsequent need. This type of policy can lead to unnecessarily high tax bills for Town and County residents. Under-estimating future demands can also have serious consequences although less critical in effect. It is always possible to add facilities if subsequent realized need exceeds projected needs; it is not so easy to dispose of a large surplus school capacity.

LIBRARY FACILITIES

The Lonesome Pine Regional Library System, with a new branch facility located in Clintwood, provides services to Dickenson County and the residents of Clintwood. In addition to the regular services, elderly and handicapped persons residing in the Town and the County may participate in a books by mail program. The four-county regional system has a total collection of 266,500 volumes. Of these, 53,000 volumes are located in the Clintwood-Dickenson County branch and two smaller facilities located in Haysi and Clinchco. In 1980 - 81, the total circulation of these 3 branches was 107,195 volumes.

The American Library Association, Subcommittee on Standards for Small Libraries recommends that a library system servicing an area such as Dickenson County should have at least 2 volumes per capita with a maximum of 175,000 volumes. The Dickenson County portion of the Lonesome Pine Regional System far exceeds this standard. In addition, the ALA recommends that a branch facility, such as the one serving the Town of Clintwood and the surrounding hinterland should contain at least 25,000 volumes. The Clintwood-Dickenson county branch surpasses this goal.

Clintwood is very well served by the current regional system. An additional facility should not be needed within the Town before the year 2000.

ADDITIONAL EDUCATIONAL FACILITIES:

The Dickenson County vocational and Technical School, located in Clinchco provides instruction to those county students who desire additional training in a craft or trade. Classes are available for both high school students and adults. Clintwood High School offers an industrial cooperative program which allows a student to work part-time and to study part-time.

Three colleges are located in the region and serve the residents of Clintwood and Dickenson

County. Clinch Valley College, a part of the University of Virginia, is located in the Town of Wise. Mountain Empire Community College is situated southeast of Big Stone Gap and Southwest Virginia Community College is located in the Town of Richlands.

Clinch Valley College is a four year state supported institution that offers Bachelor of Arts and Bachelor of Science degrees as well as two year terminal and transfer programs. Mountain Empire Community College and Southwest Virginia Community College are also state supported and offer Associate of arts, Associate of Science, and Associate of Applied Science degrees as well as certificates in number of programs.

POLICE PROTECTION:

The Town of Clintwood Police Department is supervised by a chief of police and consists of 2 officers. The department operates an average patrol of 16 hours per day with emphasis on security and enforcement. The Clintwood Police Department exceeds the acceptable standard of 1.5 officers per 1,000 persons. As the Town's population grows, this ratio should be matched or exceeded.

The Police Department headquarters is located in the rear of the Town Hall. Currently, the portion of the building devoted to the department has a separate entrance so that the public may visit other Town departments without passing through the police area. This situation is architectural 1y and administratively desirable and should be maintained.

Clintwood does not maintain a jail or a 24-hour lock up facility. Currently the Town uses the Dickenson County correction and detention facility located in Clintwood and operated by the County Sheriff's Department.

EMERGENCY SERVICES

The Town of Clintwood Fire Department is controlled by the Town under the terms contained within the Town Charter. The fire station is centrally located in the Town but has storage accommodation for only 3 pieces of equipment. Currently, the Town owns 2 750 gallons per minute pumper trucks, 1 older 500 gallons per minute pumper truck, a tank truck and a utility vehicle. The equipment is operated by 27 on-call volunteer firefighters.

The Clintwood Fire Department serves approximately 10,000 persons who reside in the western one-third of Dickenson County. The peripheral planning areas are within this service area. The independent fire departments of Haysi and McClure River are responsible for the remaining two-thirds of Dickenson County.

Clintwood's fire department exceeds the National Board of Fire Underwriters recommendations of 1.6 to 2.4 personnel per 1,000 population. The entire Town of Clintwood can be reached in less than ten minutes travel time, the period considered to be the maximum in order to avoid major losses of property. Not all of the service area can be reached within ten minutes, however.

The Town of Clintwood is served by a unit of the volunteer Dickenson County Rescue Squad. The Clintwood Fire Department and Rescue Squad are independent organizations, but work closely with each other and other emergency service agencies.

The Clintwood-Dickenson County area is served by four hospitals. Three are located in Norton, 30 miles southwest of Clintwood. The other is situated in Grundy, 24 miles east of the Town. The southern portion of the County is also served by the Lebanon General Hospital located in Russell County.

The Dickenson Health Clinic has its office in Clintwood. The clinic is staffed by 4 general practitioners. Emergency room care is available 7 days a week until II P.M.

ADMINISTRATIVE FACILITIES

The Town of Clintwood administrative offices (Town Clerk, Accounting Clerk and Building Inspector) are located in the Town Hall Building situated on Main Street in the central business district. The Dickenson County administrative offices are also located on Main Street in the Dickenson County Courthouse. The Dickenson County School Board offices are located on Route T-1003 near the Town water storage tank.

PARKS AND RECREATION

Clintwood residents have access to a variety of parks and recreation facilities. Within the Town are the high school athletic fields and tennis courts situated on a 2.7 acre site immediately adjacent to Clintwood High School. A football stadium and track facility constitute an additional 5.0 acres. A 2 acre playground and play field area is located behind the Clintwood Elementary School. There are no neighborhood parks in the Town or the peripheral planning areas.

In addition to these community facilities, 2 regional parks, the John W. Flannagan Reservoir and the Breaks Interstate Park provide facilities for camping, hiking, swimming, boating and fishing. Both of these parks are located in Dickenson County. The Jefferson National Forest, a portion of which is located in Dickenson County, is also accessible to Clintwood's residents.

The location of a community's parks and recreation facilities is the primary factor that affects the amount of use. The Town has effectively utilized the centrally located Clintwood High School as an outdoor athletic area and should continue to do so. However, there are no neighborhood parks or play areas situated within the corporate limits. The playground facility behind the Clintwood Elementary School is too great a distance from the Town's residential areas and is not safely accessible by foot or bicycle.

The Heritage Conservation and Recreation Service (formerly the Bureau of Outdoor Recreation) of the U. S. Department of the Interior suggests the following space standards for neighborhood facilities.

- 1.25 acres/I ,000 population for playgrounds - usually part of a school ground.
- 1.25 acres/I,000 population for play fields - active sports activities such as baseball, f football and soccer.
- 2.0 acres/1,000 population for neighborhood parks in multi-family areas.
- .75 acres/1,000 population for neighborhood parks in single-family areas.

With the predominance of single-family housing in Clintwood, approximately 4.0 acres of neighborhood facilities are needed for every 1,000 persons. Combining this standard with the 1980 planning area population estimate of 1,850 persons, approximately 7.4 total acres of playgrounds, play fields and neighborhood parks are necessary to adequately serve the citizenry. Including the Clintwood Elementary School playground and the high school athletic fields, the Town currently has a total of 4.7 acres. By the year 2000 with an estimated population of 2,531 persons, 5.4 additional acres of parkland will be required for the residents of the Town and the peripheral planning area.

In conclusion, the Consultants must emphasize that parks and recreation space does not necessarily constitute service. In this and any future analysis the question of how good is as important as how much.

CHAPTER 4
THOROUGHFARE SYSTEM

THOROUGHFARE AND SERVICE STREET SYSTEM

The Town of Clintwood's existing thoroughfare and service street system includes the arterial and major collector streets that are essential to the economic, efficient, and safe movement of people and goods within and through the Town and the local streets and service alleys that are intended to serve adjacent land uses.

Arterial streets function primarily to move large volumes of vehicles from one part of the community to another. Access to and from adjacent land uses is secondary, although adjoining commercial development is common.

Major collector streets are conduits which channel vehicles from local streets to arterial routes and generators such as shopping centers, schools or community centers. Although this class of street often serves contiguous land uses, direct residential access is discouraged.

Local streets exist solely to provide access to an adjacent land use.

Service alleys provide access to utility services and allow access for garbage pickup and the loading and unloading of merchandise.

Clintwood and its peripheral planning areas are served by one State primary highway. Route 83. Route 83 is the major east-west thoroughfare transferring both the Town and Dickenson County. Route 83 connects to U. S. Route 23 at Pound about 20 miles west of Clintwood and intersects with U. S. Route 460 at Vansant in Buchanan County approximately 25 miles east of Clintwood.

A network of State secondary roads provides easy access to all parts of the Clintwood and Dickenson County areas. These routes are as follows: Route 631, Route 607 and Route 672.

The following tables examine the average daily traffic volumes on the primary and secondary routes that constitute Clintwood's existing thoroughfare system.

AVERAGE DAILY (24 hours) TRAFFIC VOLUME ON PRIMARY ROUTE 83 IN THE CLINTWOOD AREA. 1980

ROUTE NUMBER

83	Passenger Cars	Single Unit Trucks	Trailer Trucks	Buses	Total
* Vansant to Haysi	2,525	2,660	50	20	5,255
* Haysi to Rt. 63 (Clinchco)	1,610	1,000	20	25	2,655
* Rt. 63 (Clinchco) to Rt.	1,420	960	20	15	2,415

Source: Commonwealth of Virginia, Department of Highways and Transportation, Division of Traffic and Safety.

ADDITIONAL OBSERVATIONS AND CONCLUSIONS

- The traffic volumes on all arterial and major collector streets in the Clintwood area have remained relatively stable during the study period.

- The greatest average daily traffic volumes were consistently recorded on Route T-607 (Main Street), but only in the central business district. This pattern suggests that the central business area of the Town is a destination for many persons living outside of the corporate limits.

- Access to the Town's only shopping center is difficult.

- There are few off-street parking areas.

- Circulation throughout the Town is impeded by an extreme number of very narrow streets. In addition, many service alleys are being used as local streets for the purpose of serving adjacent residential and commercial land uses. A lack of turning lanes compounds the problem.

- The following table describes the existing street pavement widths in the Town and the peripheral planning areas. (Note: right-of-way width of Route 83 in corporate limits is approximately 50 feet. All other routes have an approximate right-of-way width of 30 feet. The corresponding widths in the peripheral planning areas are approximately 110 feet and 40 feet respectively.)

TOWN OF CLINTWOOD

Pavement Width (feet)	10	15	20	25	30	35
Length (Miles)	.44	4.3	4.5	.13	.45	.75

Total Length 10.57 miles

Length (Miles)	.60	1.7	-	-	-	.74

Total Length 3.04 miles

Source: Balzer and Associates

The major thoroughfare plan will address these issues while emphasizing a distribution and storage system that will provide the motor vehicle user with viable options when he arrives in the vicinity of the downtown.

CHAPTER 5
UTILITIES

CHAPTER 5

UTILITIES

Revised in 1998

by Weldon Cooper Center for Public Service,

University of Virginia Southwest Virginia Office

Utilities

This section of the Comprehensive Plan will examine the existing facilities, in 1998, used by the Town of Clintwood for the provision of clean potable water, the removal of waste water, and disposal of solid waste material. Clintwood Water System Existing Water Supply and Storage Residents of Clintwood, the Town of Grundy and portions of Dickenson, Buchanan and Tazewell Counties are served by a water purification and distribution system owned and operated by the John W. Flannagan Water Authority. Raw water is obtained from the John W. Flannagan reservoir, a flood management facility completed in 1966 by the U.S. Army Corps of Engineers. After purification, water from the reservoir is pumped approximately 19 miles in to a one-half million gallon storage tank north of Clintwood's central business district. From this point water flows through the filtration system (owned, maintained, and operated by the town) to Town of Clintwood water customers.

The John W. Flannagan filtration plant has a designed production capacity of four (4) million gallons of finished potable water per day. This is an enlargement of the plant from its original two (2) MGD production capacity.

The town's total capacity to store potable water is 1,900,000 gallons. This capacity is provided with four (4) town owned water storage tanks. One is a 500,000 gallon tank on Mullins Ridge (mentioned above). One is a 600,000 gallon tank at Red Onion. Two are at the Dickenson County Technical Park and hold 500,000 and 300,000 gallons respectively. The town shares use of a fifth tank with the county Public Service Authority. That tank holds 200,000 gallons.

Existing Water Distribution System:

The 1981 edition of Clintwood's comprehensive plan makes reference to the need for a "fire flow" of 1,500 gallons a minute in its water distribution system. It said this was necessary for adequate fire protection" in a town the size of Clintwood. Deficiencies in the town's water distribution system at that time were cited as an obstacle to achieving proper fire protection. Management of the town's water system since that time has included a policy of unrelenting annual investments in the upgrading of the grid of distribution lines.

Today, the deficiencies cited in the 1981 plan are largely addressed. It is also noteworthy that a draw of 1,500 gallons per minute could be sustained for two hours by the towns smallest water tank even if the draw began with the tank filled to only 60% of capacity. (1,500 gals. x 120 minutes = 180,000 gallons. 60% of smallest tank at 300,000 gals. = 180,000 gallons.)

The improved state of Clintwood's water distribution system is also partly responsible for the town's ability to maintain a Class 5 ISO (Insurance Services Office) fire protection rating. This rating translates into fire insurance premiums for commercial properties in Clintwood 10% to 20% lower than for comparable properties located in Dickenson County outside of Clintwood's fire and water service area.

Existing Water Consumption and Water Losses:

There are 1,706 metered water users connected to the Town of Clintwood system. Of these, 902 are located in the town and 804 are located outside the town's corporate limits. "Accountability" is the term used in the water utility industry to denote the percentage of treated water (or wholesale purchased water) for which a system can account as product delivered to customers or users. For example: If Clintwood purchased ten(IO) million gals. of water from the J.W. Flannagan Authority in a given month and recorded metered sales of only six (6) million gals. during the same time frame, Clintwood's accountability would be calculated as 60%.

In fact, Clintwood's accountability, on a monthly basis, holds consistently in at least the mid 80's with frequent recordings of over 90%. This is very good by industry standards, and certainly compares favorably with many water utilities in southwest Virginia. Unaccounted for water can be the result of a number of things including undetected leakage, fire department operations, water line & storage tank maintenance, and the tendency of water meters to allow more water to pass through them than is recorded as their internal moving parts wear with age.

In 1997, the daily transfer of water from the John W. Flannagan Authority to the Town of Clintwood was in a range of 300,000 to 340,000 gallons. The town's recorded monthly sales convert to a daily average approaching 300,000 gallons.

Sanitary Sewerage Facilities:

Clintwood's sanitary sewerage treatment plant was built in 1988 as a replacement for a smaller inadequate facility built in 1963. The town's NPDES (National Pollutant Discharge Elimination System) permit provides for a discharge of up to .49 MGD or 490,000 gals. per day of treated effluent into the Crane's Nest River. A secondary treatment facility, the plant is located on route 607 near Holly Creek.

The Town of Clintwood contracts with Professional Services Group, Inc. (PSG) for the operation and maintenance of it's sewerage treatment plant. PSG's services include all administrative matters and testing connected to the town's NPDES permit issued by the state DEQ (Dept. of Environmental Quality). It also handles all operational and permitting requirements connected to the land application of sludge produced as a by-product at the plant.

Normal flow to the sewer plant averaged approximately 220,000 gals. per day in 1997, less than one half the plant's capacity. During some rain events, inflow and infiltration (17I) entering the town's sanitary sewer collector system consumes the treatment plant's entire capacity. Permit limitations have not been violated, but I & I does present a challenge in the maintenance of the town's sanitary sewer collector system. The seepage of ground water into sewer lines increases naturally as pipe joints, manholes, lid seals, etc. age, but a vigilant guard needs to be kept against intentional violations such as the connection of roof drains. Treating rain water with sanitary sewerage not only costs a community unnecessary financial expense but also robs it of potential capacity to accommodate new economic growth.

Solid Waste Disposal:

Dickenson County participates with Buchanan and Russell Counties in a regional solid waste authority operated by the Cumberland Plateau Planning District. The Town of Clintwood delivers solid waste to the regional authority's transfer station in Fremont, approximately six miles west of town.

Residential refuse customers in the Town of Clintwood receive weekly curb-side pick-up service and are charged a fee of $5.25 per month. Commercial service is geared to the specific needs of customers with a graduated fee structure starting at $8.25 per month. The town role in solid waste disposal is limited to pick-up and transport to Fremont. The regional authority currently transports the refuse to Hawkins County, Tenn., where it is disposed of in the Carter Valley Landfill. The authority's operating costs are $59.90 per ton.

In 1997, the Town of Clintwood generated an approximate average of 156 tons of solid waste per month.

Utilities - Summary

At the time of the original drafting of this comprehensive plan, in 1981, the term "infrastructure" was not in popular use. Utilities are clearly part of those things to which that term applies in the context of local government today. Clintwood certainly deserves high marks for its assiduous efforts over more than the last one and one-half decade to improve its utilities infrastructure.

CHAPTER 6
ECONOMIC ANALYSIS

ECONOMIC ANALYSIS

An understanding of the structure and functioning of Clintwood's urban economy is fundamental to all land use planning analysis and policy statements contained within this document. The purpose of this analysis is to define, describe and examine the economic characteristics of Clintwood by reviewing pertinent economic activities, employment, employment trends and income statistics.

ECONOMIC ACTIVITIES:

Mining:

Coal mining is currently and historically the major industrial activity and source of income in the Clintwood-Dickenson County area. In July of 1980, 20 percent of the employed persons residing in the Town were directly affiliated with the coal industry. In March of 1979, 54 percent of the persons employed by firms operating in Dickenson County (including Clintwood) were working within the coal mining industry.

In the first quarter of 1981, a payroll of $15,142 million was disbursed by 66 coal mining establishments operating in Dickenson County. This amount was 84 percent of the total 1981 first quarter payroll of $18,075 million paid by all establishments licensed to operate in the County. By comparison, in 1979 the mining industry in Virginia constituted only 1.9 percent of the State's total payroll and only 1 percent of the State's total employment. (Note: Bituminous coal mining comprises approximately 85 percent of Virginia's total mining activities.)

Dickenson County is one of 7 coal producing counties in southwestern Virginia. In 1979, the coal extracted from this area was valued at $1.14 billion, sixth among the nation's coal producing states. The value of coal mined in Dickenson County in 1979 was approximately $220 million.

The Federal Power Commission has designated 5 primary coal producing regions within the United States. In 1975, the Appalachia region, of which Dickenson County is a part, produced 49 percent of the coal purchased by the nation's utility companies. Because of increased production anticipated in the western part of the country, this percentage is projected to decrease to 34 percent by 1985. This decrease reflects a shifting share of the coal market and not a reduction in demand. Nationally, coal production, after sluggish growth from 1973 to 1978 has experienced dramatic increases in 1979, 1980 and 1981. The primary cause has been greatly increased purchases of coal by both domestic and foreign utility companies responding to the rapid price increase of oil and the difficulties encountered in constructing and operating nuclear power plants. During the past two years, domestic electric utilities have not only consumed much larger amounts of coal but have also built up large stockpiles. Virginia is in a very favorable position for supplying coal to the export market via the Hampton Roads port facilities.

Manufacturing:

Manufacturing employed less than 4 percent of Clintwood's residents in 1980. In March of 1979, manufacturing firms employed only 5.9 percent of the persons working within Dickenson County. The total first quarter payroll in 1981 for Dickenson County's manufacturing concerns was $535,854. This amount was less than 3 percent of the total first quarter payroll disbursed by all commercial and industrial establishments operating in the County. Seven manufacturing establishments are currently located within Dickenson County. Of these, only I is located in Clintwood. According to the Division of Industrial Development, there were no announcements in 1979 or 1980 of any new or expanding manufacturing firms in either the County or the Town.

The primary manufacturing businesses in Dickenson County produce clothing and lumber. The average hourly wage for manufacturing employees in Dickenson County is $3.93, considerably lower than either the State ($5.58) or the national ($6.69) average.

The gross state product, an estimate of the value of all goods and services produced in the state in I year, totalled $267,381.5 million in 1980. Of this amount, manufacturing accounted for 21.6 percent, as opposed to mining which contributed only 1.3 percent. Manufacturing has

been and will continue to be vital to Virginia's economic balance. Therefore, it is important that manufacturing concerns be encouraged to locate within Dickenson County and Clintwood. Not only does manufacturing bolster the local economy by way of property and income taxes, purchases and payrolls, but it has one of the highest employment multipliers of any economic sector.

An employment multiplier occurs as a new or expanded industry injects income into the community that results in a cumulative ()r multiplier effect on community income or employment that exceeds the initial input. The U. S. Chamber of Commerce has estimated that in rural areas, an increase of 68 nonmanufacturing jobs occurs for every increase of 100 factory workers. On an employment basis; therefore, the approximate multiplier effect for manufacturing in Clintwood is 1.68. Because of the Town's relative isolation, the effect may be even greater.

Trade and Service:

Retail and wholesale trade and service enterprises employed over 18 percent of Clintwood's residents in 1980. In March of 1979, trade and service activities employed 15.2 percent of the individuals working within Dickenson County. The total 1981 first quarter payroll for trade and service firms operating in Dickenson County was $1,417,478, or 7.8 percent of the total first quarter payroll disbursed by all commercial enterprises in the County. Of the 277 trade and service businesses operating in Dickenson County in 1981, approximately 95, or 34 percent are located in Clintwood.

Taxable sales (including motels, hotels, and selected other services but excluding automobiles, gasoline, and alcoholic beverages) in Dickenson County and Clintwood in 1979 were $35 million, an increase of 3.6 percent from 1978. Taxable sales in Virginia in 1979 were $17.8 billion, up 7.0 percent from 1978.

The chart on the following page, prepared from data published by the Virginia Department of Taxation, indicates that the growth rate of taxable sales in Dickenson County from 1971 to 1979 has been comparable to that of the State and the region. The Table demonstrates that the amount of taxable sales in

[1] Note: the rate of inflation between 1978 and 1979 was 11.5 percent.

Source: Virginia Department of Taxation

in 1979 however, was far below the regional average of $91,184,600. Careful examination reveals that the most significant retail growth has paralleled increases in coal mining activity.

GAF sales (general merchandise, apparel, furniture and appliances) in Dickenson County and Clintwood in 1979 were $7 million, an increase of 3.0 percent from 1978. However, the County's and Town's GAF sales in 1979 were substantially lower than GAF sales transacted in the neighboring Counties of Buchanan, Wise, Tazewell and Russell. GAF sales in Virginia advanced 3.6 percent from 1978 to 1979. The table on the preceding page documents these findings as well as the index of change for GAF sales in the State and the region.

Sales Tax Revenue:

Sales tax revenue is generally a reliable indicator of economic health. Patrons of businesses in Clintwood pay a sales tax of 4 percent for every $1 spent. Of this 4 percent, I percent is returned from the State to the County for local option, I percent is allocated by the State to all local school districts according to student membership and 2 percent is retained by the State.

In Dickenson County yearly sales made during the calendar year ending December 31, 1979 as reflected by deposits of sales tax revenues totaled $35,260,451. In 1980 this figure had increased 4.3 percent to $36,763,180. The consultants estimate that of these amounts sales transacted in Clintwood accounted for $11,988,553 and $12,499,481 respectively. Based on these estimates, it is clear that Clintwood is the retail trade center of Dickenson County.

EMPLOYMENT

Employment analyses and forecasts serve two primary purposes: they provide information necessary for population studies which in turn are used for determining space needs for residential areas and community facilities, and they aid in estimating commercial and industrial land use requirements.

Note: The rate of inflation between 1978 and 1979 was 11.5 percent.

Current Employment

Employment in the Town of Clintwood totaled 469 workers in July of 1980. This represents 34.3 percent of the Town's 1980 total population. Of these 469 workers, 220, or 47 percent, are employed within the Town. An additional 157 workers commute to places of employment in Dickenson County. The remaining 92 persons work in Wise, Buchanan, Tazewell or Russell Counties or in the adjacent counties of Kentucky.

Future Employment:

There are 2 primary means of forecasting future employment: the analytical method and the short-cut method. The analytical method develops employment projections by analyzing probable future production and worker output data. In essence, future demand for a particular good or service is determined. The short-cut method chosen for this analysis is much simpler, utilizing one or more employment statistics directly.

Projection Methodology:

A simple step-down procedure was developed to derive categorical employment projections for the year 1990. This methodology is founded upon the principle that local employment trends are a function of national trends and that by using a carefully conceived national forecast a reasonably accurate local estimate may be developed.

[1] Employment data based on place of residence not place of work.

Sources: Survey by Town of Clintwood
Balzer and Associates

Projections for the Town of Clintwood were computed by using the current employment by place of residence figures for the Town and employment projections, 19781990 prepared by the United States Bureau of Labor Statistics. The national forecasts were calculated using the most recent data pertaining to population, industry, occupational employment, productivity and consumer expenditures. In addition, the Bureau's projections were based on the following assumptions:

* Inflation will decelerate to 5.2 percent annually during 1980-1990.

* A stable, long-run unemployment rate close to 4.5 percent will be achieved by the mid-1980's.

* Higher energy prices will not constrain growth in gross national products.

* The institutional framework of the U. S. economy will not change radically

* Current social, technological, and scientific trends will continue.

* No major event such as widespread or long lasting energy shortages or war will significantly alter the industrial structure of the economy or alter the rate of economic growth.

A per annum percentage increase as determined for each employment category, 1978-1990, by the Bureau of Labor Statistics was applied to the August, 1980 estimated labor force components of the Town of Clintwood. The results are as follows:

EMPLOYMENT PROJECTIONS, TOWN OF CLINTWOOD

Survey conducted by Town of Clintwood
Balzer and Associates, Inc.

Manufacturing:

Population increases and rising incomes have increased demands for almost all types of goods, but improved methods of production have and will continue to limit employment growth. Employment grew more slowly in manufacturing than in any other sector between 1965 and 1978. Between 1980 and 1990, however, employment in durable goods manufacturing is expected to increase substantially.

Coal Mining

As the nation's need for energy increases in the next decade, employment in the mining sector is expected to grow significantly.

Transportation - Communications - Public Utilities

Employment in the railroad and water transportation industries will continue to slowly decline. Other forms of transportation such as trucking and air transit will increase steadily.

The demand for communication equipment as well as electric power, gas utilities, water and sanitary services will increase as the population grows and more households and businesses are formed. Technological advances in the systems required to provide these services will moderately restrict future employment growth.

Trade:

Employment growth in the retail and wholesale industries will parallel increases in population and income. Retail employment is projected to increase much faster than wholesale employment.

Services:

Service employment which includes hotels, barber shops, auto repair shops, business services, hospitals and nonprofit organizations is projected to increase dramatically between 1980 and 1990. Employment opportunities in health care are expected to grow rapidly due to population growth - especially the elderly and rising incomes that increase people's ability to pay for medical care. Business services, including accounting, data processing and maintenance are also expected to increase.

Finance - Real Estate:

Employment in this sector is expected to rise in order to meet increasing consumer demand for credit and other financial services.

Construction:

The Department of Labor projects that during the early 1980's, the demand for new housing will remain high because the number of households is expected to increase. Expansion of businesses and maintenance of existing buildings will also require more construction employment.

Government

It is expected that new government programs will not be enacted because of the public's desire to limit government growth. However, school employment will rise moderately in response to the immigration of school age children accompanying adults employed by the coal mining industry and its service affiliates

INCOME

Personal income is made up of wage and salary disbursements, proprietors' income, rental income of persons, dividends, personal interest income, and transfer payments. Although most personal income is in a monetary form, there are several exceptions such as (1) wages and salaries paid in kind; (2) the net rental value of owner-occupied houses; (3) the net value of food and fuel produced and consumed on farms; and (4) imputed interest received by persons from financial intermediaries. Capital gains are not included in personal income principally because they are not attributable to current economic activity. Personal income is measured before deduction of income and other personal taxes, but after deduction of Social Security taxes, government retirement, and other social insurance programs.

Total Personal Income by Place of Residence

The total personal income of the residents of the State increased $18,418 billion (70 percent) between 1974 and 1979. The total personal income of those persons residing in Dickenson County increased 87 percent for the same time period. The estimated amounts of total personal income for the residents of Clintwood during the period 1974-1979 are presented on the following page:

"Personal Income Estimates for Virginia Counties and Cities," 1973-1978, p.7. Tayloe Murphy Institute

TOTAL PERSONAL INCOME BY PLACE OF RESIDENCE, 1974-1979 (millions of dollars)

Per Capita Personal Income

The per capita personal income of Dickenson County residents increased between 1969 and 1979. In 1969, the County's per capita personal income was $1,870 or 55% of the State average of $3,400. By 1979 the County's per capita personal income had risen to $6,340 or 73% of the State average, ranking the County 95 out of 136 Virginia localities. It is assumed that the per capita personal income of Clintwood's residents is equivalent to that of the County.

Low and Moderate Income

Low- and moderate-income persons are defined as those whose annual income is less than $12,004 per year, which is 80% of the Statewide non-metro median income, as defined by the United States Department of Housing and Urban Development in October 1980.

In July of 1980, there were 226 low- and moderate-income households in the Town of Clintwood. These households constituted 45.1 percent of all the households in the Town. Approximately 533 persons resided in these households.

In March of 1981, there were 69 low- and moderate-income households in the peripheral planning areas. These households comprise 50 percent of all the households located in these areas.

CHAPTER 7
POPULATION ANALYSIS

POPULATION ANALYSIS

Analysis of current and future population size is the foundation for almost all major planning decisions. Current and future demands for community services and facilities as well as land for residential, commercial and industrial purposes are directly affected by the size, composition, and spatial distribution of the population. Population size indicates the basic amounts of land required for the various types of uses. When a time element is introduced and future population trends are projected) these trends become the basis for calculating future community service facility and spatial requirements. Population composition encompasses age, household size and income levels, all of which are indices of the types and extent of services and facilities as well as policies required by the community. An examination of population distribution reveals the most functional location for future land uses, community services and facilities, and public utilities. Therefore, the population analysis of the Town of Clintwood is necessary as a means of defining the scale, location and temporal considerations of future public and private development within the Town and its environs.

CURRENT POPULATION SIZE:

Between 1940 and 1980, the Town of Clintwood experienced an increase in population of 263 persons, a net gain of 23.8 percent. The population of the Town in 1940 was 1,106. The 1980 final population count as prepared by the Bureau of the Census indicates that 1,369 persons reside in the Town. A 1981 survey conducted by the Consultants reveals that an additional 481 persons live within the Town's peripheral planning area. The current total population of Clintwood and its planning area is 1,850.

POPULATION GROWTH:

The Town of Clintwood's total population has increased on the average of .6 percent per annum since 1940. However, as may be seen in Figure I, this growth has not been continuous. The Town's population increased 27 percent from 1940 to 1960. Between 1960 and 1970 the Town experienced a 6 percent decline in population. Since the 1970 census the Town's population increased from 1,320 persons to the current total of 1,369 persons, a gain of 3.7 percent or a growth rate of .4 percent per annum.

By seeing aerial photographs and the standard of 3.0 persons per household, the Consultants were able to establish that 336 persons resided in the Town's peripheral planning area in 1970. Between 1970 and 1980, this area experienced a 43 percent increase in population or a per annum growth rate of 4.3 percent.

In summary, the population of the Town of Clintwood and its peripheral planning are grew from 1,656 person in 1970 to 1,850 person in 1980, an increase of 12 percent.

The Dickenson County Comprehensive Plan and the 1990 Report of the U.S. Census Bureau show population trends for the County, including the Town of Clintwood, as follows:

CHAPTER 8
FINANCIAL ANALYSIS

FINANCIAL ANALYSIS

The purpose of this study is to determine the relative financial capability of the Town of Clintwood to undertake a program of capital improvements to support the developmental growth in the Town as envisioned by the future land use element of this document.

The analysis includes an evaluation and comparison of the past revenues and expenditures, from fiscal years 1972 through 1981, as well as a review of the Town's assessable basis and outstanding bonded indebtedness for fiscal year 1981.

GENERAL OPERATING FUND

General Operating Revenues

As stated in the municipal audits 1972-1980, general operating revenues increased every year. From a level of $152,552 in 1972-74, general operating revenues rose to $228,323 in 1978-1980. The budgeted revenues in 1980-82 were estimated to be $307,642. This budgeted amount represents a significant increase in revenues, not mere compensation for inflation. (Note: To account for inflation, adjust values using constant dollars - Appendix C.; Some of the major sources of revenue are discussed as follows: (Also see Table 1)

* Property Taxes increased from a total of $37,796 in 1972-74 to $41,453 in 1978-80. This is

an increase of $3,657 during the period and represents an overall increase of 9.6 percent or 1.2 percent per annum. The estimated property tax revenue for 1980-82 is $47,000.

* Local Sales Tax increased $13,256 from 1972-74 to 1978-80. An overall increase of 103 percent or 12.9 percent per year. (Note: Local sales tax is disbursed by Dickenson County to the Town on the basis of school children, not sales volume.) The estimated local sales tax revenue for 1980-82 is $24,500.

* Refuse removal fees received increased by 81 percent from 1972-74 to 197880 or 10 percent per year.

General Operating Expenditures:

As stated in the municipal audits 1972-1980, general operating expenditures have increased from $108,161 in 1972-74 to $294,718 in 1978-80. This rise of $186,557 represents an average annual increase of almost 22 percent per year. The average inflation rate during the same period was 8.3 percent. The major expenditures are briefly discussed below. (Also see Table 2.)

* Insurance costs have increased dramatically since 1972. Hospital, automobile and workman: compensation insurance have increased from a combined amount in 1972-74 of $6,624 to $36,325 in 1978-80. This represents a rise of $29,701 or a percentage increase of 448 percent.

* Fuel and power costs have also increased significantly during the study period.

* Police and Fire Departments combined increased from $36,358 in 1972-74 to $70,709 in 1978-80. This is an overall increase of 94 percent or amost 12 percent per year. The budgeted amount for 1980-82 is $80,138.

* Refuse collection has increased more than $15,400 between 1972 and 1980. This is an overall increase of 67 percent or 8.4 percent per year.

Comparison of Past General Operating Revenues and Expenditures

A comparison of the general operating revenues and expenditures for the period 1972 to 1980 indicates that revenues have increased an average of 6.2 percent per year while expenditures have increased an average of almost 22 percent per year. Table 3 shows that in 1978-80 general operating expenditures exceeded revenues by more than $66,000.

An examination of the municipal audits 1972-1980 reveals that the Town has maintained financial equilibrium only by way of short term bank loans and a modest amount of cash in bank savings.

UTILITY FUND

The Town of Clintwood maintains a separate water and sewer department budget. User charges (as opposed to tax revenues or licensing fees) for water and sewer services are imposed to pay operational expenses and to retire bonds that financed previously constructed facilities.

Tables 4 and 5 indicate that during the period 1972-1980, water department expenditures exceeded revenues by an average of $7,078 per year. Sewer department expenditures surpassed revenues by an average of $3,185 per annum.

ASSESSED VALUATION:

The assessed valuation of the Town of Clintwood has increased from $1,046,270 in 1975 to $22,107,340 in 1981. Prior to 1980, all real estate and public service corporations were assessed at 10 percent of their fair market values. Mobile homes were assessed as personal property at 10 percent of their fair market value. After 1980, real estate, mobile homes and public service corporations were all assessed at 100% of their fair market values. During the study period the assessment procedures for personal property, machinery and tools and merchant's capital remained unchanged.

From 1975 to 1980 the tax rates on real and personal property, machinery and tools, merchant's capital and public service corporations were constant. Subsequent to the 1980 reassessment, taxes on real estate declined from $2.00 per $100 of value to $.10 per $100 of value. Taxes on personal property, machinery and tools and merchant's capital increased from $2.00 per $100 of value to $3.00 per $100 of value. Mobile homes were taxed as real property but categorized as personal property. (See Table 6)

INDEBTEDNESS

As of June 30, 1981, Clintwood's long-term municipal debt was estimated to be $587,895. All of this debt has been incurred to finance improvements to the Town's water and sewer system with a major portion, $532,895, incurred within the last 2 years to pay for the Town's distribution line from the John Flannagan reservoir.

As of June 30, 1981, the Town's short-term municipal debt was estimated to be approximately $39,000.

RATIO OF BONDED INDEBTEDNESS TO ASSESSED VALUATION

Clintwood can not legally issue any bonds or other interest bearing obligations which, including existing indebtedness, exceed 10 percent of the assess valuation of that real estate property in the Town which is subject to taxation as determined by the proceeding tax assessment. This limitation does not apply to any short-term notes or to bonds used for the supply of water or other undertakings from which the Town may derive a revenue. As of June 30, 1981, the Town had $55,000 of bonded indebtedness backed by the full faith and credit of the Town.

Epilogue to Chapter 8 Financial Analyses "Two Decades Later"

Today, in 1998, the Town of Clintwood, Virginia operates with an annual budget of more than one million dollars. Once the new Red Onion prison becomes operational, the town's combined operations, including general government operation and water and sewer utility services, will equal approximately 1.25 million dollars annually in total. The constituent parts are:

General Fund, approximately	$ 500,000
Water Fund, ..	$ 500,000
Sewer Fund, ..	$ 250,000
	$ 1,250,000

The budget's growth to current levels from a total of less than one-half million dollars annually in 1980 may, at first blush, seem surprising. However, a review of circumstances surrounding the town's finances makes the budget's growth understandable.

Town of Clintwood financial records from the late 1970's reveal successive annual deficits indicating a state of virtual insolvency. In addition to starting from a deficit position, each of the eighteen years between 1980 and 1998 has been inflationary. Indeed, the federal Consumer Price Index (CPI), which measures changes in the costs of commodities, including labor, recorded a cumulative increase of nearly 100% during the eighteen year period ending in 1998.

In 1986 the Town of Clintwood also annexed approximately 300 new residents, expanding its service base by roughly 25%. As alluded to above, serving, the new Red Onion prison will also expand the town utility customer base.

Various circumstances and actions have enabled the Town of Clintwood to successfully respond to the financial challenges before it in the 1980's and 1990's. The real estate subject to town property taxation increased from an assessed value of $20,116,850 in 1980 to a 1998 value of $38,421,069. This helped produce a comparable increase in property revenues during the same time frame. The 1986 annexation, new construction and the effect of inflation generally, as reflected in updated county assessments, caused the increase.

While inflation pulls only certain line items on the revenue side of a municipal budget up with it, it pushes all the items on the expenditure side upward over time. For Clintwood to maintain the level of service funded in its general fund budget, new taxation strategies were employed. In April, 1992, a consumer utility tax payable by tenants and property owners alike with a moderate cap was implemented. In December, 1988, a prepared good and beverage tax, known as the meals tax, was installed at the rate of four percent (4%).

Public utilities are commonly operated as free-standing entities known as enterprise fund activities. Clintwood has applied the philosophy that its water and sewer utilities should not only be free-standing but also self-supporting. In the sewer fund this led to contracting with a private firm(PSG-Prof. Services Group) to operate and maintain its sewer treatment plant. Public

CHAPTER 6
ECONOMIC ANALYSIS

ECONOMIC ANALYSIS

An understanding of the structure and functioning of Clintwood's urban economy is fundamental to all land use planning analysis and policy statements contained within this document. The purpose of this analysis is to define, describe and examine the economic characteristics of Clintwood by reviewing pertinent economic activities, employment, employment trends and income statistics.

ECONOMIC ACTIVITIES:

Mining:

Coal mining 1s currently and historically the major industrial activity and source of income in the Clintwood-Dickenson County area. In July of 1980, 20 percent of the employed persons residing in the Town were directly affiliated with the coal industry. In March of 1979, 54 percent of the persons employed by firms operating in Dickenson County (including Clintwood) were working within the coal mining industry.

In the first quarter of 1981, a payroll of $15,142 million was disbursed by 66 coal mining establishments operating in Dickenson County. This amount was 84 percent of the total 1981 first quarter payroll of $18,075 million paid by all establishments licensed to operate in the County. By comparison, in 1979 the mining industry in Virginia constituted only 1.9 percent of the State's total payroll and only I percent of the State's total employment. (Note: Bituminous coal mining comprises approximately 85 percent of Virginia's total mining activities.)

Dickenson County is one of 7 coal producing counties in southwestern Virginia. In 1979, the coal extracted from this area was valued at $1.14 billion, sixth among the nation's coal producing states. The value of coal mined in Dickenson County in 1979 was approximately $220 million.

The Federal Power Commission has designated 5 primary coal producing regions within the United States. In 1975, the Appalachia region, of which Dickenson County is a part, produced 49 percent of the coal purchased by the nation's utility companies. Because of increased production anticipated in the western part of the country, this percentage is projected to decrease to 34 percent by 1985. This decrease reflects a shifting share of the coal market and not a reduction in demand. Nationally, coal production, after sluggish growth from 1973 to 1978 has experienced dramatic increases in 1979, 1980 and 1981. The primary cause has been greatly increased purchases of coal by both domestic and foreign utility companies responding to the rapid price increase of oil and the difficulties encountered in constructing and operating nuclear power plants. During the past two years, domestic electric utilities have not only consumed much larger amounts of coal but have also built up large stockpiles. Virginia is in a very favorable position for supplying coal to the export market via the Hampton Roads port facilities.

Manufacturing:

Manufacturing employed less than 4 percent of Clintwood's residents in 1980. In March of 1979, manufacturing firms employed only 5.9 percent of the persons working within Dickenson County. The total first quarter payroll in 1981 for Dickenson County's manufacturing concerns was $535,854. This amount was less than 3 percent of the total first quarter payroll disbursed by all commercial and industrial establishments operating in the County. Seven manufacturing establishments are currently located within Dickenson County. Of these, only I is located in Clintwood. According to the Division of Industrial Development, there were no announcements in 1979 or 1980 of any new or expanding manufacturing firms in either the County or the Town.

The primary manufacturing businesses in Dickenson County produce clothing and lumber. The average hourly wage for manufacturing employees in Dickenson County is $3.93, considerably lower than either the State ($5.58) or the national ($6.69) average.

The gross state product, an estimate of the value of all goods and services produced in the state in I year, totalled $267,381.5 million in 1980. Of this amount, manufacturing accounted for 21.6 percent, as opposed to mining which contributed only 1.3 percent. Manufacturing has

PAYROLL AND NUMBER OF ESTABLISHMENTS BY INDUSTRY: FIRST QUARTER, 1981

Source: Virginia Employment Commission

been and will continue to be vital to Virginia's economic balance. Therefore, it is important that manufacturing concerns be encouraged to locate within Dickenson County and Clintwood. Not only does manufacturing bolster the local economy by way of property and income taxes, purchases and payrolls, but it has one of the highest employment multipliers of any economic sector.

An employment multiplier occurs as a new or expanded industry injects income into the community that results in a cumulative or multiplier effect on community income or employment that exceeds the initial input. The U. S. Chamber of Commerce has estimated that in rural areas, an increase of 68 nonmanufacturing jobs occurs for every increase of 100 factory workers. On an employment basis; therefore, the approximate multiplier effect for manufacturing in Clintwood is 1.68. Because of the Town's relative isolation, the effect may be even greater.

Trade and Service:

Retail and wholesale trade and service enterprises employed over 18 percent of Clintwood's residents in 1980. In March of 1979, trade and service activities employed 15.2 percent of the individuals working within Dickenson County. The total 1981 first quarter payroll for trade and service firms operating in Dickenson County was $1,417,478, or 7.8 percent of the total first quarter payroll disbursed by all commercial enterprises in the County. Of the 277 trade and service businesses operating in Dickenson County in 1981, approximately 95, or 34 percent are located in Clintwood.

Taxable sales (including motels, hotels, and selected other services but excluding automobiles, gasoline, and alcoholic beverages) in Dickenson County and Clintwood in 1979 were $35 million, an increase of 3.6 percent from 1978. Taxable sales in Virginia in 1979 were $17.8 billion, up 7.0 percent from 1978.

The chart on the following page, prepared from data published by the Virginia Department of Taxation, indicates that the growth rate of taxable sales in Dickenson County from 1971 to 1979 has been comparable to that of the State and the region. The Table demonstrates that the amount of taxable sales in

[1] Note: the rate of inflation between 1978 and 1979 was 11.5 percent.

Source: Virginia Department of Taxation

in 1979 however, was far below the regional average of $91,184,600. Careful examination reveals that the most significant retail growth has paralleled increases in coal mining activity.

GAF sales (general merchandise, apparel, furniture and appliances) in Dickenson County and Clintwood in 1979 were $7 million, an increase of 3.0 percent from 1978. However, the County's and Town's GAF sales in 1979 were substantially lower than GAF sales transacted in the neighboring Counties of Buchanan, Wise, Tazewell and Russell. GAF sales in Virginia advanced 3.6 percent from 1978 to 1979. The table on the preceding page documents these findings as well as the index of change for GAF sales in the State and the region.

Sales Tax Revenue:

Sales tax revenue is generally a reliable indicator of economic health. Patrons of businesses in Clintwood pay a sales tax of 4 percent for every $1 spent. Of this 4 percent, I percent is returned from the State to the County for local option, I percent is allocated by the State to all local school districts according to student membership and 2 percent is retained by the State.

In Dickenson County yearly sales made during the calendar year ending December 31, 1979 as reflected by deposits of sales tax revenues totaled $35,260,451. In 1980 this figure had increased 4.3 percent to $36,763,180. The consultants estimate that of these amounts sales transacted in Clintwood accounted for $11,988,553 and $12,499,481 respectively. Based on these estimates, it is clear that Clintwood is the retail trade center of Dickenson County.

EMPLOYMENT

Employment analyses and forecasts serve two primary purposes: they provide information necessary for population studies which in turn are used for determining space needs for residential areas and community facilities, and they aid in estimating commercial and industrial land use requirements.

Note: The rate of inflation between 1978 and 1979 was 11.5 percent.

Current Employment

Employment in the Town of Clintwood totaled 469 workers in July of 1980. This represents 34.3 percent of the Town's 1980 total population. Of these 469 workers, 220, or 47 percent, are employed within the Town. An additional 157 workers commute to places of employment in Dickenson County. The remaining 92 persons work in Wise, Buchanan, Tazewell or Russell Counties or in the adjacent counties of Kentucky.

Future Employment:

There are 2 primary means of forecasting future employment: the analytical method and the short-cut method. The analytical method develops employment projections by analyzing probable future production and worker output data. In essence, future demand for a particular good or service is determined. The short-cut method chosen for this analysis is much simpler, utilizing one or more employment statistics directly.

Projection Methodology:

A simple step-down procedure was developed to derive categorical employment projections for the year 1990. This methodology is founded upon the principle that local employment trends are a function of national trends and that by using a carefully conceived national forecast a reasonably accurate local estimate may be developed.

TOTAL EMPLOYMENT

TOTAL	469	100.0

[1] Employment data based on place of residence not place of work.

Sources: Survey by Town of Clintwood
Balzer and Associates

Projections for the Town of Clintwood were computed by using the current employment by place of residence figures for the Town and employment projections, 19781990 prepared by the United States Bureau of Labor Statistics. The national forecasts were calculated using the most recent data pertaining to population, industry, occupational employment, productivity and consumer expenditures. In addition, the Bureau's projections were based on the following assumptions:

* Inflation will decelerate to 5.2 percent annually during 1980-1990.

* A stable, long-run unemployment rate close to 4.5 percent will be achieved by the mid-1980's.

* Higher energy prices will not constrain growth in gross national products.

* The institutional framework of the U. S. economy will not change radically

* Current social, technological, and scientific trends will continue.

* No major event such as widespread or long lasting energy shortages or war will significantly alter the industrial structure of the economy or alter the rate of economic growth.

A per annum percentage increase as determined for each employment category, 1978-1990, by the Bureau of Labor Statistics was applied to the August, 1980 estimated labor force components of the Town of Clintwood. The results are as follows:

EMPLOYMENT PROJECTIONS, TOWN OF CLINTWOOD

1980-1990

INDUSTRIAL CATEGORY	1980 TOWN EMPLOYMENT[1]	PROJECTED PER ANNUM PERCENTAGE INCREASE	1990 TOWN PROJECTED EMPLOYMENT[1]

Source: U. S. Department of Labor, Bureau of Labor Statistics
Survey conducted by Town of Clintwood
Balzer and Associates, Inc.

Manufacturing:

Population increases and rising incomes have increased demands for almost all types of goods, but improved methods of production have and will continue to limit employment growth. Employment grew more slowly in manufacturing than in any other sector between 1965 and 1978. Between 1980 and 1990, however, employment in durable goods manufacturing is expected to increase substantially.

Coal Mining

As the nation's need for energy increases in the next decade, employment in the mining sector is expected to grow significantly.

Transportation - Communications - Public Utilities

Employment in the railroad and water transportation industries will continue to slowly decline. Other forms of transportation such as trucking and air transit will increase steadily.

The demand for communication equipment as well as electric power, gas utilities, water and sanitary services will increase as the population grows and more households and businesses are formed. Technological advances in the systems required to provide these services will moderately restrict future employment growth.

Trade:

Employment growth in the retail and wholesale industries will parallel increases in population and income. Retail employment is projected to increase much faster than wholesale employment.

Services:

Service employment which includes hotels, barber shops, auto repair shops, business services, hospitals and nonprofit organizations is projected to increase dramatically between 1980 and 1990. Employment opportunities in health care are expected to grow rapidly due to population growth - especially the elderly and rising incomes that increase people's ability to pay for medical care. Business services, including accounting, data processing and maintenance are also expected to increase.

Finance - Real Estate:

Employment in this sector is expected to rise in order to meet increasing consumer demand for credit and other financial services.

Construction:

The Department of Labor projects that during the early 1980's, the demand for new housing will remain high because the number of households is expected to increase. Expansion of businesses and maintenance of existing buildings will also require more construction employment.

Government

It is expected that new government programs will not be enacted because of the public's desire to limit government growth. However, school employment will rise moderately in response to the immigration of school age children accompanying adults employed by the coal mining industry and its service affiliates

INCOME

Personal income is made up of wage and salary disbursements, proprietors' income, rental income of persons, dividends, personal interest income, and transfer payments. Although most personal income is in a monetary form, there are several exceptions such as (1) wages and salaries paid in kind; (2) the net rental value of owner-occupied houses; (3) the net value of food and fuel produced and consumed on farms; and (4) imputed interest received by persons from financial intermediaries. Capital gains are not included in personal income principally because they are not attributable to current economic activity. Personal income is measured before deduction of income and other personal taxes, but after deduction of Social Security taxes, government retirement, and other social insurance programs.

Total Personal Income by Place of Residence

The total personal income of the residents of the State increased $18,418 billion (70 percent) between 1974 and 1979. The total personal income of those persons residing in Dickenson County increased 87 percent for the same time period. The estimated amounts of total personal income for the residents of Clintwood during the period 1974-1979 are presented on the following page:

"Personal Income Estimates for Virginia Counties and Cities," 1973-1978, p.7. Tayloe Murphy Institute

TOTAL PERSONAL INCOME BY PLACE OF RESIDENCE, 1974-1979 (millions of dollars)

	1974	1975	1976	1977	1978	1979	# CHANGE	% CHANGE
State of Virginia	$26,212	$28,738	$31,997	$35,431	$39,687	$44,630	$18,818	70%
Dickenson County	68.0	81.4	86.4	94.7	98.1	127.8	59.7	87%
Clintwood (estimated)	5.1	6.1	6.1	6.5	6.6	8.5	3.4	67%

Source: Regional Economics Informational System Bureau of Economics

Per Capita Personal Income

The per capita personal income of Dickenson County residents increased between 1969 and 1979. In 1969, the County's per capita personal income was $1,870 or 55% of the State average of $3,400. By 1979 the County's per capita personal income had risen to $6,340 or 73% of the State average, ranking the County 95 out of 136 Virginia localities. It is assumed that the per capita personal income of Clintwood's residents is equivalent to that of the County.

PER CAPITA INCOME 1974-1979

	1974	1975	1976	1977	1978	1979	1974-1979 # CHANGE	% CHANGE
State of Virginia	$5,339	$5,770	$6,333	$6,955	$7,666	$8,588	$3,249	61%

Low and Moderate Income

Low- and moderate-income persons are defined as those whose annual income is less than $12,004 per year, which is 80% of the Statewide non-metro median income, as defined by the United States Department of Housing and Urban Development in October 1980.

In July of 1980, there were 226 low- and moderate-income households in the Town of Clintwood. These households constituted 45.1 percent of all the households in the Town. Approximately 533 persons resided in these households.

In March of 1981, there were 69 low- and moderate-income households in the peripheral planning areas. These households comprise 50 percent of all the households located in these areas.

CHAPTER 7
POPULATION ANALYSIS

POPULATION ANALYSIS

Analysis of current and future population size is the foundation for almost all major planning decisions. Current and future demands for community services and facilities as well as land for residential, commercial and industrial purposes are directly affected by the size, composition, and spatial distribution of the population. Population size indicates the basic amounts of land required for the various types of uses. When a time element is introduced and future population trends are projected) these trends become the basis for calculating future community service facility and spatial requirements. Population composition encompasses age, household size and income levels, all of which are indices of the types and extent of services and facilities as well as policies required by the community. An examination of population distribution reveals the most functional location for future land uses, community services and facilities, and public utilities. Therefore, the population analysis of the Town of Clintwood is necessary as a means of defining the scale, location and temporal considerations of future public and private development within the Town and its environs.

CURRENT POPULATION SIZE:

Between 1940 and 1980, the Town of Clintwood experienced an increase in population of 263 persons, a net gain of 23.8 percent. The population of the Town in 1940 was 1,106. The 1980 final population count as prepared by the Bureau of the Census indicates that 1,369 persons reside in the Town. A 1981 survey conducted by the Consultants reveals that an additional 481 persons live within the Town's peripheral planning area. The current total population of Clintwood and its planning area is 1,850.

POPULATION GROWTH:

The Town of Clintwood's total population has increased on the average of .6 percent per annum since 1940. However, as may be seen in Figure I, this growth has not been continuous. The Town's population increased 27 percent from 1940 to 1960. Between 1960 and 1970 the Town experienced a 6 percent decline in population. Since the 1970 census the Town's population increased from 1,320 persons to the current total of 1,369 persons, a gain of 3.7 percent or a growth rate of .4 percent per annum.

By seeing aerial photographs and the standard of 3.0 persons per household, the Consultants were able to establish that 336 persons resided in the Town's peripheral planning area in 1970. Between 1970 and 1980, this area experienced a 43 percent increase in population or a per annum growth rate of 4.3 percent.

In summary, the population of the Town of Clintwood and its peripheral planning are grew from 1,656 person in 1970 to 1,850 person in 1980, an increase of 12 percent.

The Dickenson County Comprehensive Plan and the 1990 Report of the U.S. Census Bureau show population trends for the County, including the Town of Clintwood, as follows:

POPULATION TRENDS

1950-1990, Clintwood, Virginia

CHAPTER 8
FINANCIAL ANALYSIS

FINANCIAL ANALYSIS

The purpose of this study is to determine the relative financial capability of the Town of Clintwood to undertake a program of capital improvements to support the developmental growth in the Town as envisioned by the future land use element of this document.

The analysis includes an evaluation and comparison of the past revenues and expenditures, from fiscal years 1972 through 1981, as well as a review of the Town's assessable basis and outstanding bonded indebtedness for fiscal year 1981.

GENERAL OPERATING FUND

General Operating Revenues

As stated in the municipal audits 1972-1980, general operating revenues increased every year. From a level of $152,552 in 1972-74, general operating revenues rose to $228,323 in 1978-1980. The budgeted revenues in 1980-82 were estimated to be $307,642. This budgeted amount represents a significant increase in revenues, not mere compensation for inflation. (Note: To account for inflation, adjust values using constant dollars - Appendix C.; Some of the major sources of revenue are discussed as follows: (Also see Table 1)

- Property Taxes increased from a total of $37,796 in 1972-74 to $41,453 in 1978-80. *This is* an increase of $3,657 during the period and represents an overall increase of 9.6 percent or 1.2 percent per annum. The estimated property tax revenue for 1980-82 is $47,000.

* Local Sales Tax increased $13,256 from 1972-74 to 1978-80. An overall increase of 103 percent or 12.9 percent per year. (Note: Local sales tax is disbursed by Dickenson County to the Town on the basis of school children, not sales volume.) The estimated local sales tax revenue for 1980-82 is $24,500.

* Refuse removal fees received increased by 81 percent from 1972-74 to 197880 or 10 percent per year.

General Operating Expenditures:

As stated in the municipal audits 1972-1980, general operating expenditures have increased from $108,161 in 1972-74 to $294,718 in 1978-80. This rise of $186,557 represents an average annual increase of almost 22 percent per year. The average inflation rate during the same period was 8.3 percent. The major expenditures are briefly discussed below. (Also see Table 2.)

* Insurance costs have increased dramatically since 1972. Hospital, automobile and workman: compensation insurance have increased from a combined amount in 1972-74 of $6,624 to $36,325 in 1978-80. This represents a rise of $29,701 or a percentage increase of 448 percent.

* Fuel and power costs have also increased significantly during the study period.

- * Police and Fire Departments combined increased from $36,358 in 1972-74 to $70,709 in 1978-80. This is an overall increase of 94 percent or amost 12 percent per year. The budgeted amount for 1980-82 is $80,138.

- * Refuse collection has increased more than $15,400 between 1972 and 1980. This is an overall increase of 67 percent or 8.4 percent per year.

Comparison of Past General Operating Revenues and Expenditures

A comparison of the general operating revenues and expenditures for the period 1972 to 1980 indicates that revenues have increased an average of 6.2 percent per year while expenditures have increased an average of almost 22 percent per year. Table 3 shows that in 1978-80 general operating expenditures exceeded revenues by more than $66,000.

An examination of the municipal audits 1972-1980 reveals that the Town has maintained financial equilibrium only by way of short term bank loans and a modest amount of cash in bank savings.

UTILITY FUND

The Town of Clintwood maintains a separate water and sewer department budget. User charges (as opposed to tax revenues or licensing fees) for water and sewer services are imposed to pay operational expenses and to retire bonds that financed previously constructed facilities.

Tables 4 and 5 indicate that during the period 1972-1980, water department expenditures exceeded revenues by an average of $7,078 per year. Sewer department expenditures surpassed revenues by an average of $3,185 per annum.

ASSESSED VALUATION:

The assessed valuation of the Town of Clintwood has increased from $1,046,270 in 1975 to $22,107,340 in 1981. Prior to 1980, all real estate and public service corporations were assessed at 10 percent of their fair market values. Mobile homes were assessed as personal property at 10 percent of their fair market value. After 1980, real estate, mobile homes and public service corporations were all assessed at 100% of their fair market values. During the study period the assessment procedures for personal property, machinery and tools and merchant's capital remained unchanged.

From 1975 to 1980 the tax rates on real and personal property, machinery and tools, merchant's capital and public service corporations were constant. Subsequent to the 1980 reassessment, taxes on real estate declined from $2.00 per $100 of value to $.10 per $100 of value. Taxes on personal property, machinery and tools and merchant's capital increased from $2.00 per $100 of value to $3.00 per $100 of value. Mobile homes were taxed as real property but categorized as personal property. (See Table 6)

INDEBTEDNESS

As of June 30, 1981, Clintwood's long-term municipal debt was estimated to be $587,895. All of this debt has been incurred to finance improvements to the Town's water and sewer system with a major portion, $532,895, incurred within the last 2 years to pay for the Town's distribution line from the John Flannagan reservoir.

As of June 30, 1981, the Town's short-term municipal debt was estimated to be approximately $39,000.

RATIO OF BONDED INDEBTEDNESS TO ASSESSED VALUATION

Clintwood can not legally issue any bonds or other interest bearing obligations which, including existing indebtedness, exceed 10 percent of the assess valuation of that real estate property in the Town which is subject to taxation as determined by the proceeding tax assessment. This limitation does not apply to any short-term notes or to bonds used for the supply of water or other undertakings from which the Town may derive a revenue. As of June 30, 1981, the Town had $55,000 of bonded indebtedness backed by the full faith and credit of the Town.

Epilogue to Chapter 8 Financial Analyses "Two Decades Later"

Today, in 1998, the Town of Clintwood, Virginia operates with an annual budget of more than one million dollars. Once the new Red Onion prison becomes operational, the town's combined operations, including general government operation and water and sewer utility services, will equal approximately 1.25 million dollars annually in total. The constituent parts are:

General Fund, approximately	$ 500,000
Water Fund, ..	$ 500,000
Sewer Fund, ..	$ 250,000
	$ 1,250,000

The budget's growth to current levels from a total of less than one-half million dollars annually in 1980 may, at first blush, seem surprising. However, a review of circumstances surrounding the town's finances makes the budget's growth understandable.

Town of Clintwood financial records from the late 1970's reveal successive annual deficits indicating a state of virtual insolvency. In addition to starting from a deficit position, each of the eighteen years between 1980 and 1998 has been inflationary. Indeed, the federal Consumer Price Index (CPI), which measures changes in the costs of commodities, including labor, recorded a cumulative increase of nearly 100% during the eighteen year period ending in 1998.

In 1986 the Town of Clintwood also annexed approximately 300 new residents, expanding its service base by roughly 25%. As alluded to above, serving, the new Red Onion prison will also expand the town utility customer base.

Various circumstances and actions have enabled the Town of Clintwood to successfully respond to the financial challenges before it in the 1980's and 1990's. The real estate subject to town property taxation increased from an assessed value of $20,116,850 in 1980 to a 1998 value of $38,421,069. This helped produce a comparable increase in property revenues during the same time frame. The 1986 annexation, new construction and the effect of inflation generally, as reflected in updated county assessments, caused the increase.

While inflation pulls only certain line items on the revenue side of a municipal budget up with it, it pushes all the items on the expenditure side upward over time. For Clintwood to maintain the level of service funded in its general fund budget, new taxation strategies were employed. In April, 1992, a consumer utility tax payable by tenants and property owners alike with a moderate cap was implemented. In December, 1988, a prepared good and beverage tax, known as the meals tax, was installed at the rate of four percent (4%).

Public utilities are commonly operated as free-standing entities known as enterprise fund activities. Clintwood has applied the philosophy that its water and sewer utilities should not only be free-standing but also self-supporting. In the sewer fund this led to contracting with a private firm(PSG-Prof. Services Group) to operate and maintain its sewer treatment plant. Public discussions of government frequently include comments like this; "government is a business, it should be run like one." This business analogy has been taken seriously in the operation of Clintwood's water utility system. The control of overhead has been pursued aggressively and is reflected in the system's improved "accountability" figures as explained in chapter five. Placing the revenue collection process on a more business like footing has brought accounts receivable in line with proper expectations. When the opportunity to expand presented itself, with regard to the new prison, negotiations were conducted with an eye on the bottom line.

PART 2
GOALS AND OBJECTIVES

CHAPTER 9
GOALS AND OBJECTIVES

GOALS AND OBJECTIVES

INTRODUCTION:

THE GOALS AND OBJECTIVES ARE THE FOUNDATION OF THE CLINTWOOD PLANNING DOCUMENT. THEY ARE "THE CORNERSTONE OF THE PLANNING PROCESS" FOR THEY PROVIDE THE DIRECTION AND FRAMEWORK FOR PUBLIC AND PRIVATE DECISION-MAKING RELATIVE TO THE PHYSICAL DEVELOPMENT OF THE COMMUNITY.(1)

A GOAL IS A GENERAL STATEMENT OF A FUTURE STATE THAT HAS BEEN DETERMINED TO BE DESIRABLE; IT IS AN END TOWARDS WHICH THE TOWN'S ACTIONS ARE TO BE DIRECTED.

AN OBJECTIVE IS A STATEMENT OF PURPOSE; IT IS A CLEAR AND REALISTIC MEANS OF ACHIEVING A GOAL.

Objectives are realized by the formulation of policies, definitive actions which are officially adopted by the Town and are selected from among carefully specified alternatives. Alternatives (many of which were described in the proceeding inventory and analysis) are founded upon planning principles and standards; rules that provide qualitative and quantitative measurements that serve as the basis for community design or future courses of action.

(1) Goodman, W., ed Principles and Practice of Urban Planning, p. 327.

The planning goals and objectives of the Town of Clintwood are presented on the following pages:

ENVIRONMENTAL GOAL:

TO ELIMINATE EXCESSIVE OR WASTEFUL LIMITED NATURAL RESOURCES SUCH AS FOSSIL FUEL, LAND SUITABLE FOR URBANIZATION, FRESH WATER AND AIR, WILDERNESS AREAS, ENVIRONMENTALLY SENSITIVE AREAS, AND OTHER TYPES OF NON-RENEWABLE RESOURCES SUCH AS HISTORIC SITES THAT ARE LIMITED IN BOTH LOCATION AND QUANTITY.

OBJECTIVE:

To establish the location, extent and type of growth and development the natural environment of the town can expect to absorb without either degradation or the endangerment of the public health, safety and welfare.

OBJECTIVE: To direct new development to those areas that are the most intrinsically suited.

OBJECTIVE:

Where in the public interest, to increase the capacity of the natural environment to absorb growth and development by encouraging the construction of appropriate public facilities and capital improvements.

HOUSING GOAL:

TO INSURE THAT ALL CITIZENS HAVE A DECENT HOME IN A SUITABLE LIVING ENVIRONMENT

OBJECTIVE: To encourage the development of a variety of housing that reflects community needs and allows a prospective owner or renter a choice of price, type and location.

OBJECTIVE: To require that all homes, new and existing, be structurally sound and large enough to prevent crowding.

OBJECTIVE: To encourage the removal of all houses (except those of historical or architectural significance) which have serious deficiencies and are not practical to repair.

OBJECTIVE: To insure that all housing is free from the dangers of flooding.

OBJECTIVE: To insure adequate access to and from the areas of work, education, community facilities and services, recreation, public transportation, health care and shopping.

OBJECTIVE: To insure an adequate living environment by providing necessary community services and facilities required to guarantee the public health, safety and welfare.

LAND USE GOAL:

TO INSURE THAT ALL LAND, WITHIN THE CORPORATE LIMITS AS WELL AS LAND ADJOINING AND VITALLY AFFECTING THE DEVELOPMENT OF THE TOWN, BE CONSIDERED A VALUABLE RESOURCE DESERVING OF RESPONSIBLE USE BY ALL CITIZENS, AND BE ABLE TO ACCOMODATE GENERAL GROWTH AND DEVELOPMENT WITHOUT COMPROMISING THE PUBLIC HEALTH, SAFETY, OR WELFARE, ECONOMIC FEASIBILITY, CONVENIENCE, LIVABILITY OR HISTORICAL SIGNIFICANCE.

OBJECTIVE: To develop a community ethic and community trust by basing all land use decisions upon consistent policies, principles and plans.

OBJECTIVE: To develop and observe space and location standards that guide the development of the residential, commercial, industrial, educational, recreational, and civic areas of the community.

OBJECTIVE: To reduce the flood-prone areas of the Town to the maximum extent possible.

OBJECTIVE: To increase the amount of usable land in Town through recovery of flood hazard areas.

OBJECTIVE: To control the amount of improvements and other impediments within flood hazard areas where such improvements and impediments might: (1) aggravate the flooding problem; (2) pose a threat to personal safety; (3) be otherwise contrary to the public interest.

OBJECTIVE: To protect and strengthen the existing downtown area and adjacent shopping center. Accommodate new commercial development through redevelopment and modest expansion in a direction and manner which would minimize disruption in the surrounding area.

OBJECTIVE: To maintain the prevailing low density character of Clintwood. Higher density areas would.. be limited in number and be located near principal roads, sewer interceptors and water mains.

OBJECTIVE: To utilize scarce undeveloped or uncommitted land in an efficient manner.

OBJECTIVE: To encourage new industrial development within and adjacent to the Town. Identify sites and accommodate the type of industry desired.

OBJECTIVE: To monitor the development of land contiguous to the Town to insure that growth is managed consistently with the principles and policies established by this planning document.

OBJECTIVE: To assume an active role in Dickenson County's planning objectives for the

Clintwood area.

TRANSPORTATION GOAL:

TO ESTABLISH AND MAINTAIN A CIRCULATION SYSTEM THAT FACILITATES THE ECONOMIC, EFFICIENT, AND SAFE MOVEMENT OF PEOPLE AND GOODS WITHIN AND THROUGH THE TOWN.

OBJECTIVE: To develop and maintain a street, highway, and alley network that is compatible with, and complimentary to, the surrounding land use.

OBJECTIVE: To encourage the development of properly designed streets, highways and off-street parking areas which include satisfactory storm drainage facilities.

OBJECTIVE : To develop city-wide pedestrian and non-motorized alternatives that will serve to better manage traffic, improve the environment, conserve resources, increase safety, and encourage utilization of existing educational, recreational and commercial areas.

OBJECTIVE: To promote area-wide public transportation and paratransit systems that are responsive to the needs of the community, but especially the young, the elderly and the handicapped.

ECONOMIC DEVELOPMENT GOAL:

TO ESTABLISH AND MAINTAIN AN ADEQUATE ECONOMIC BASE AND TO DEVELOP POTENTIAL economic RESOURCES AVAILABLE TO THE COMMUNITY.

OBJECTIVE: To provide suitable space within the Town for industrial development and expansion, and to encourage neighboring governmental agencies to do the same within their respective jurisdictions.

OBJECTIVE: To encourage the arrival of new and suitable Industry as well as the expansion and development of existing industry.

OBJECTIVE: To enhance the commercial base of the community by encouraging rehabilitation, reuse, and new construction in the central business district.

PUBLIC SERVICES AND FACILITIES GOAL:

TO PROVIDE AND ANTICIPATE THOSE COMMUNITY SERVICES AND FACILITIES REQUIRED TO MAINTAIN HIGH STANDARDS OF PUBLIC HEALTH, SAFETY, AND WELFARE.

OBJECTIVE: To provide all residents of the Town an adequate and safe supply of water for human consumption and fire protection.

OBJECTIVE: To expand the Town's water system to serve adjacent developing and develop able areas as is consistent with the Town's overall growth policy.

OBJECTIVE: To rehabilitate or replace portions of the existing water distribution system as is required to stop excessive leakage and to insure adequate fire flow.

OBJECTIVE: To provide all residents of the Town a sanitary and economic means of wastewater and solid waste disposal.

OBJECTIVE: To expand the Town's public sewerage system to serve adjacent developing and develop able areas as is consistent with the Town's overall growth policy.

OBJECTIVE: To expand the sanitary sewerage treatment facility to accommodate anticipated growth.

OBJECTIVE: To encourage the development of suitable community facilities designed to promote education, the arts, recreation, and efficient municipal administration.

OBJECTIVE: To provide parks, playgrounds, and other recreational facilities located and designed to accommodate a wide range of activities throughout all the seasons, and suitable for the differing needs of all age groups.

PART 3

COMPREHENSIVE COMMUNITY DEVELOPMENT PLAN

CHAPTER 10
COMPREHENSIVE COMMUNITY DEVELOPMENT PLAN
-FUTURE LAND USE
-MAJOR THOROUGHFARES
-COMMUNITY FACILITIES

THE CLINTWOOD COMPREHENSIVE COMMUNITY DEVELOPMENT PLAN

The Clintwood comprehensive community development plan is an official public document adopted by local government as a policy guide for decisions concerning the physical development of the Town. There are three types of physical development plans.

The short-range project plan is required for specific projects and buildings which can be completed within one to five years. These plans may be contained within the Town's capital improvements program and must reflect the policies of both the mid and long-range plans.

Mid-range plans have a time range of 5 to 10 years. They are more limited in scale and more specific in application than the long-range plans. These plans must be consistent with the long-range goals. Mid-range plans have a project orientation and may take the form of the site development plan.

Longer range plans, such as this one, provide comprehensive and general policies for guiding community growth 5 to 20 years into the future. These plans provide a guide for both public and private decision-making by clearly indicating policy for each type of development. Long-range plans apply to the entire community and should reflect community interrelationships.

Natural and Man-Made Environmental Policies of the Plan:

Natural Environmental Policies

The comprehensive community development plan should provide the basis for all decisions dealing with the use of the environment. It should establish policies that deal with land, water, and air resources; fragile environmental elements, unique natural features such as special conservation or restoration areas, and natural hazard areas; and policies that supervise the use, protection, and production of such things as forests, fisheries, and mines.

Man-Made Environmental Policies

These policies pertain to the general elements of the more traditional comprehensive community development plan. They are divided according to private and public uses. Private uses include commercial, residential, industrial, and institutional facilities and areas. Public uses include those dealing with education, recreation, public housing, communication, and transportation.

Characteristics of Clintwood's Comprehensive Community Development Plan:

Clintwood's comprehensive community development plan must focus on physical development. It must be long-range to provide for the future needs of the community. The plan must specify distant objectives so that the community can progress in one direction. The plan must be comprehensive, accounting for all of the essential physical elements of the urban area as well as recognizing the importance of the Town's regional setting and the social and economic forces it proposes to accommodate. The plan must be general, and it must remain general. It cannot be vague. It is important to note that private planning and innovation are facilitated primarily when public policies for major public services are very specific and when public policies for guiding and coordinating the development and use of private land are as general and flexible as possible. The general plan must relate the major physical design proposals to the bas'ic plan policies. It must clarify the subordinate role of these proposals to the role of the policies. The plan must be suitable for debate. Two of the primary uses of the plan are policy determination and policy effectuation both of which are the responsibility of the Town Council. This body should act on important questions of policy only after thorough public debate. The plan should be identified as a tool of the Town Council. The plan should be available to the public and easily understood. Its understanding will facilitate its potential as an educational tool. To guarantee that the plan is effective, it must be amendable.

The Uses of the Comprehensive Community Development Plan:

The primary use of the plan is that it allows the Town Council to consider and agree upon a definite set of policies that may be utilized to determine the future physical development of the community and a physical design which will allow the policies to be effectuated. The plan affords the Council an opportunity to evaluate every specific project in view of desirable long-range developmental goals. The plan communicates long-range physical development policies to both leaders and citizens encouraging constructive debate and action. The nature of the plan enables the Town Council to receive advice and recommendations concerning physical development from the Town planning Commission in a unified and coherent form. The plan allows the members of the Town Council to learn about the physical development problems and opportunities of the community and the relationship of these problems to the social and economic issues involved.

FUTURE LAND USE PLAN

The future land use plan of the Town of Clintwood proposes how growth and rehabilitation should proceed in the future, recognizing the Town's goals, objectives and generally accepted principles and standards of location and space.

The land use goals and objectives of the Town were presented in the proceeding chapter. The following section will define and describe the location and space requirements upon which Clintwood's future land use plan will be founded.

LOCATION REQUIREMENTS:

Location requirements are guiding principles and standards that determine the placement of uses on the land. Location requirements seek to insure the health, safety, convenience, economy and the general amenities of urban living. For example, health and safety standards may deal with the dangers of flooding. Convenience standards may relate to the time and distance which separate land uses. Economic principles may be concerned with land values or the cost of development. Amenity standards may address the livability and general appearance of the community. The way in which each of these principles and standards is defined depends entirely upon local goals and objectives as well as local characteristics. Each locality has its own environmental hazards, fiscal capabilities or concept of convenience.

There are, however, general locational principles and standards that apply to all communities. They may be categorized as follows:

1. Work Areas (industrial, trade and service)

Industrial:

* Fast, easy and convenient access to good transportation facilities including highway and rail is required.

* A reasonable location with respect to labor supplies, raw materials source, markets, and existing and/or planned urbanization is needed

* A location that is compatable with adjacent land uses and protected from encroachment of residential or other land uses. (Note: compatibility is often determined by the type of industry

* An adequate amount of land that is as flat as possible, well drained, devoid of low load bearing capacity soils, shallow or pinnacled bed-rock, peat, a high water table and sinkholes is mandatory.

* An adequate amount of land is necessary to accomodate current as well as future industrial demands.

* Property must be under the ownership or control of the Town, County, industrial

development corporation, chamber of commerce, or other person or agency responsible for and desirous of industrial development.

* An adequate water supply and distribution system is required to provide water for human consumption, manufacturing processes and fire protection.

* The existing or proposed sewer system must have adequate capacity to accept estimated flows from the proposed development. The sewage treatment plan must have an adequate capacity and capability to treat sewage effluents.

* Adequate electric and telephone service as well as fuel supplies must be available.

Trade and Service:

* Trade and service areas should be accessible to living areas but should not occur as spot commercial areas within residential neighborhoods.

* Commercial areas should be accessible by major streets.

* Strip or ribbon commercial development along major streets should not be encouraged. Shops and stores should be grouped in a rectangular or square arrangement.

* Trade and service areas should be located on sites of sufficient size to provide for ample

off-street parking.

* If possible, compatible commercial enterprises should be grouped together.

* The central business district should be recognized as the central location of the Town's commercial interests.

* Commercial establishments designed to serve tourist traffic should be located along tourist routes.

* Commercial establishments requiring areas for open displays, such as automobile dealers, should be located in outlying areas along major thoroughfares.

* Shopping centers are more accessible and visible when situated at intersections.

2. Living Areas (residential areas, elderly residential areas, schools and parks)

Residential Areas:

* Residential areas should be convenient to work areas and leisure time areas by way of thoroughfare routes.

* Residential areas should be convenient to larger open space and should include smaller

open space areas.

* Residential areas should be protected from through traffic and incompatible land uses.

* Residential areas should be located on sites which are economically feasible to develop.

* Residential areas should be attractive and able to accomodate a wide range of densities.

Elderly Residential Areas:

* Elderly housing must be located within walking distance (1,500 to 3,000 feet) of commercial, civic, health and government services.

* Cultural and recreational facilities such as a community elderly center, neighborhood park, and churches should be located within 2,000 feet of the elderly housing site.

* The location should have immediate access to a lighted, paved, and maintained walkway.

* The elderly housing site and the pathways to the affiliate service areas should be located so as to insure maximum pedestrian security.

* The topography of the site should not exceed 10 percent.

* Elderly housing should be located so as to insure continuing family and friend relationships.

* Elderly housing should not be located adjacent to strip commercial areas, heavy industry, noise generating land uses, or automotive servicing facilities which are larger than a service station.

Schools and Parks:

* The elementary school should be near the center of the population to be served.

* Parks and recreation facilities should be located within residential neighborhoods, easily accessible by walking.

3. Leisure Time Areas (major educational, recreational and cultural facilities)

* Leisure time areas should be convenient to living areas.

* Cultural and sporting facilities should be centrally located and on sites of an adequate size.

* Parks and Open space should take advantage of natural or unusual features and should provide for a variety of activities.

These general principles and standards serve as reference points for assigning locations to Clintwood's future land uses. As these locations are identified and a pattern of distribution is designed, more specific analyses such as land capability, provisions of utilities or ownership may be pursued.

SPACE REQUIREMENTS:

Space requirements are used to determine the amount of land needed to accommodate future growth in the urban area.

Future space requirements are developed by analyzing existing land use .and distribution as well as current and projected population and employment characteristics. These indexes are combined with generally accepted standards of space allocation to formulate approximate future guidelines.

Review of Past Development Trends

As described in Chapter 2, Existing Land Use, the consultants evaluated past development trends in Clintwood and the peripheral planning areas by identifying building permits issued for new construction.

Using this data it was determined that 18 acres of vacant land in the Town of Clintwood were converted to active use between January 1977 and July 1981. The corresponding amount of newly developed land in the peripheral planning areas for the same period was II acres. Based on this past combined rate of 6.5 acres per annum it was estimated that an additional 124 acres of undeveloped or uncommitted land would be required for development within the Town and the peripheral planning area by the year 2000. Of this amount, 78 acres would be needed in the Town, 46 acres would be required in the planning areas.

Assuming that the past building trends remain constant and the current percentages of land uses continue to the year 2000, the consultants estimate that the 124 acres of land would be develooed as follows:

LAND USE	ACREAGE
Residential	94
Commercial	12
Office and Institutional	16
Industrial	2
TOTAL	124 acres

(Note: the total of 124 acres does not include future demand for educational, recreational, civic/cultural, and health facilities or corridor open space and drainage. These land uses will be accounted for in the following discussion.)

Recommended Minimum Spatial Allocations - Year 2000

The following estimated minimum space requirements for Clintwood and the peripheral planning areas for the year 2000 are founded upon projected population and economic growth as well as generally accepted planning principles and standards. The past development trends discussed previously are used only as points of reference (For further detail, please refer to Appendix C)

RESIDENTIAL

FUTURE LAND USE CLASSIFICATIONS

The following classifications were utilized to identify future land uses either in the Town and the peripheral planning areas or the courthouse-commercial center (the central business district). The accompanying definitions are intended to be representative of some of the individual uses which may occur within each land use classification.

Residential

- Low Density Residential - primarily single family homes occuring at a maximum density of 3 units per net residential acre.

- Medium and High Density Residential - single family, duplex and multi-family homes occuring at a minimum density of 3 units per net residential acre.

Transitional

Transitional Residential/Commercial - a mixed use area characterized by established single family homes, loft apartments, small shops and professional offices.

Commercial

- Retail, Service and Office Commercial - a concentrated area offering retail sales and general, professional and financial services.

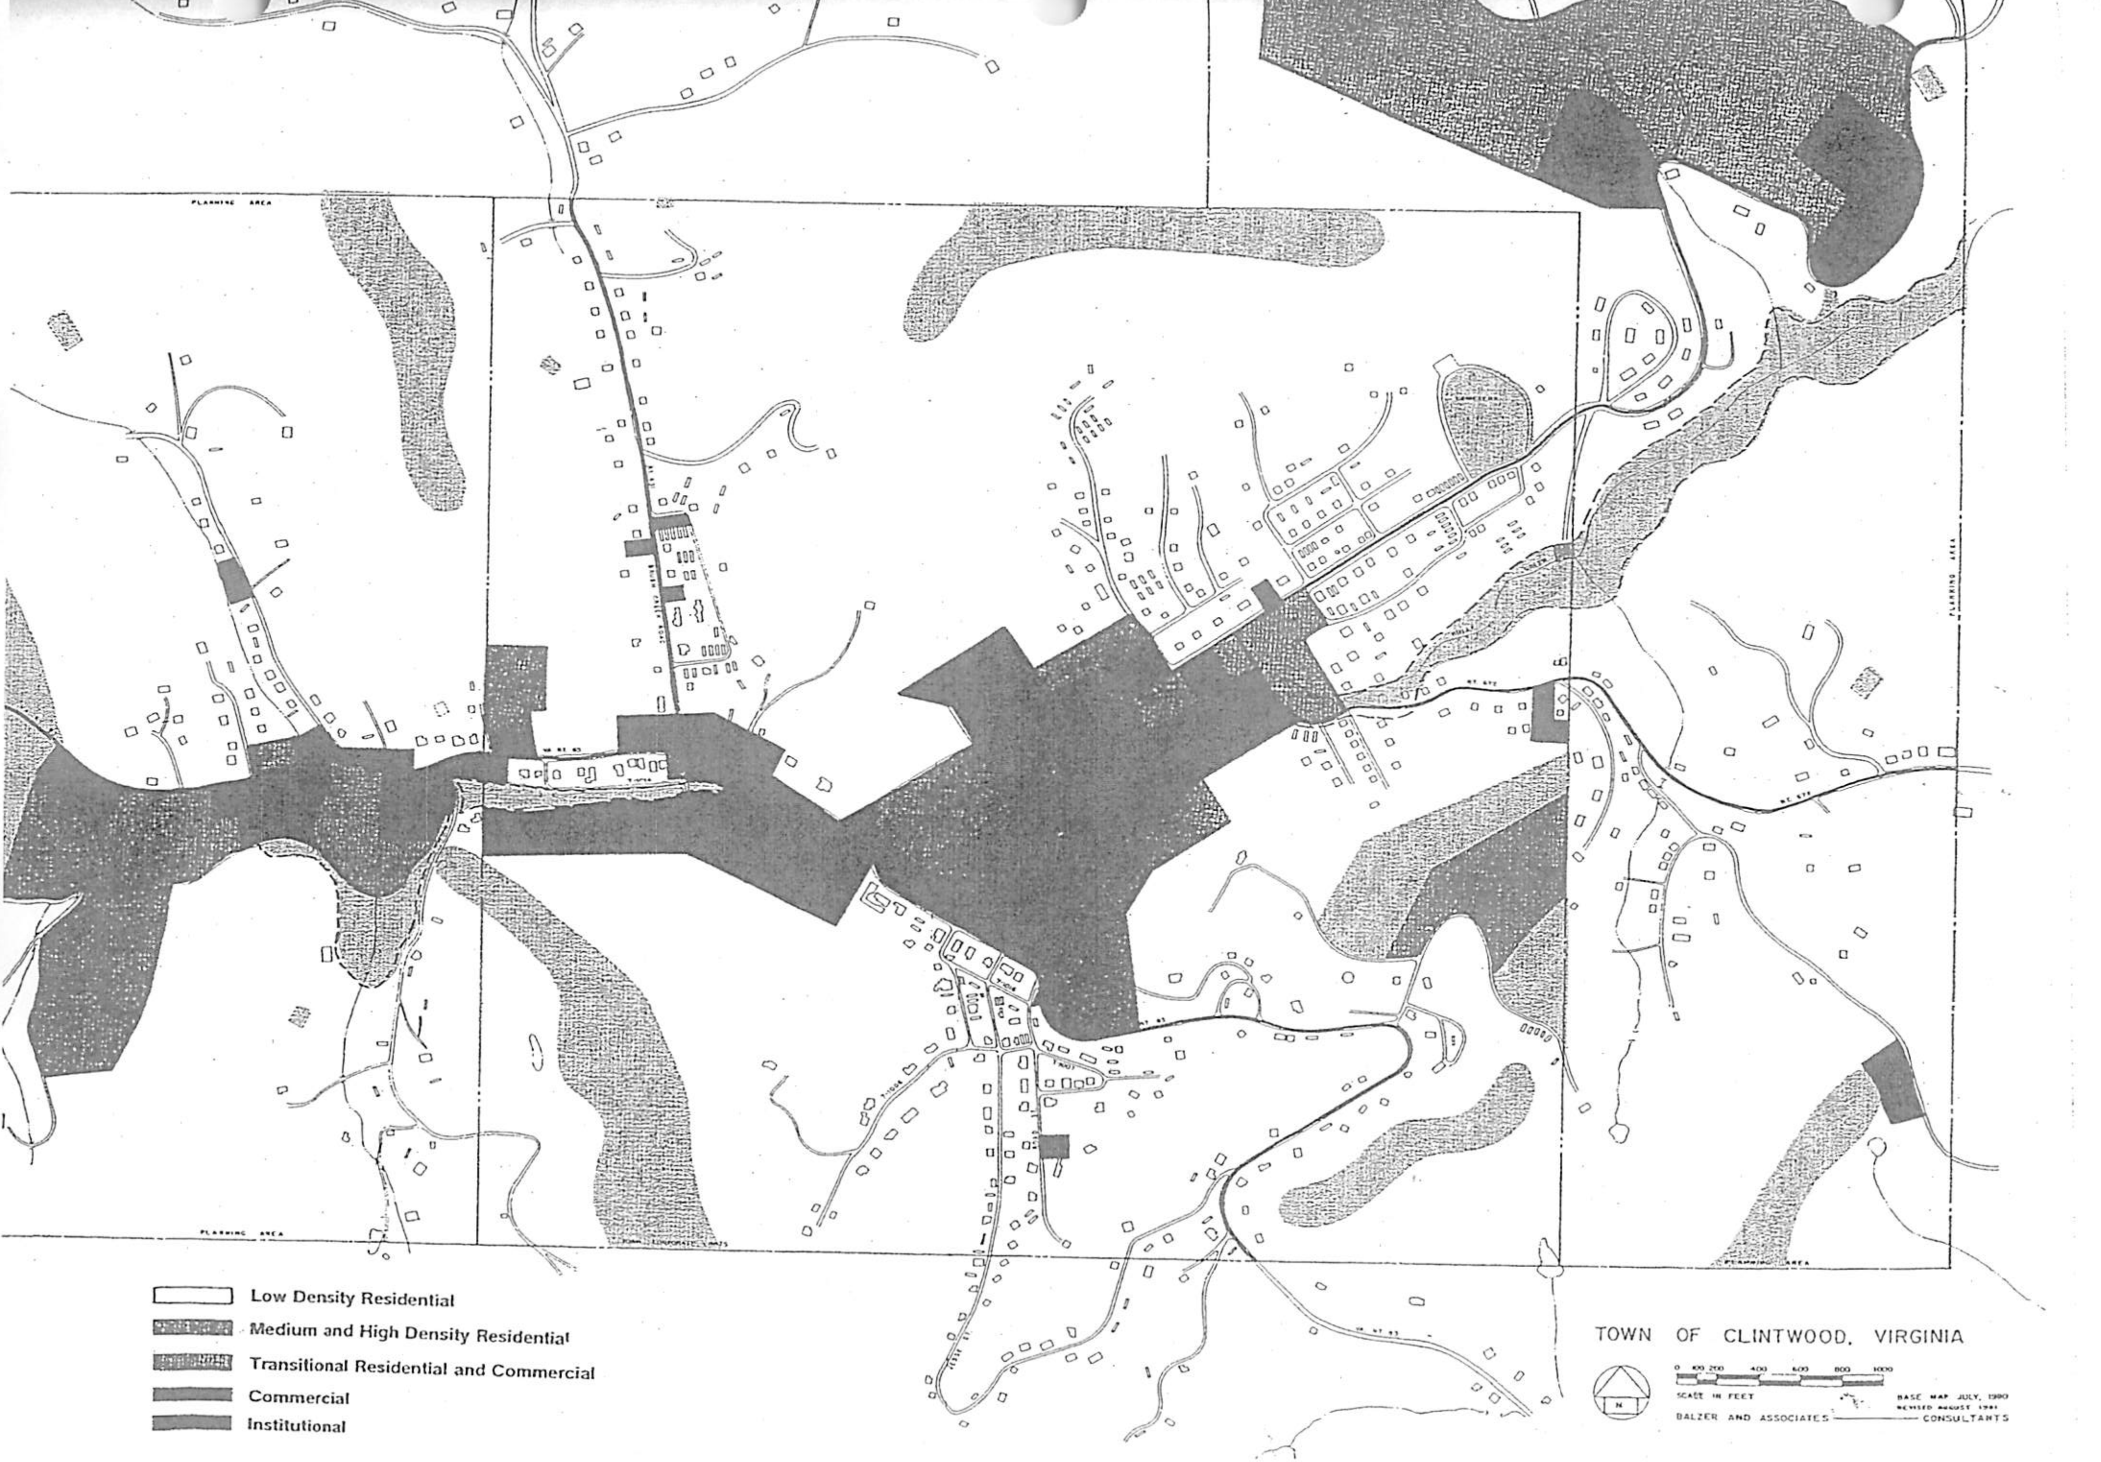
- General Commercial - retail and service uses requiring open areas such as gas stations or automobile dealerships.

Institutional

- Civic/Government - Town, County, State and Federal government offices, as well as community facilities devoted to history, the arts, and the social needs of the elderly and the poor.

- Education - high school and elementary school buildings and the accompanying properties.

FUTURE LAND USE PLAN



- Health and Health Services - health clinic, health department, or institutional home for the elderly and handicapped.

Industrial

- Restricted/Light Industrial - manufacturing, assembling, and fabrication conducted within enclosed buildings or in open areas screened from view from adjacent areas.

- Heavy Industrial - operations which create a large amount of noise, dust, odor, blast or smoke.

Open Environmentally Sensitive Areas

- Flood Plain - area required to accommodate a 100 year flood.

- Parks/Recreation - neighborhood or community parkland facility, private recreation facility.

- Open Space - corridor open space designated to establish an interconnected system of public greenblets which may be used for recreation, buffers, easements, or pedestrian walkways.

FUTURE LAND USE

CLINTWOOD, VIRGINIA

CATEGORY	ACRES	PERCENT
Low Density Residential	994	76.5
Medium and High Density Residential	69	5.3
Transitional Residential/Commercial	16[1]	1.2
Retail, Service, and Office Commercial	32	2.5
Civic/Government/Health	14	1.0
Education	17	1.3
Restricted/Light Industrial	18	1.4
Heavy Industrial	13	1.0
Park	13	1.0
Open Space	114	8.8
TOTAL	1,300 Acres	100.0%

1. Includes acreage identified as commercial in existing land use survey.

Source: Balzer and Associates

Commentary

- Low density residential, the predominant future land use designation, functions to preserve the rural characteristics of the community.

- Medium and high density residential areas are required to insure that the residents of the Clintwood community have a choice of housing types and prices. The future land use area for medium and high density housing has been concentrated primarily in the eastern peripheral planning area adjacent to the elementary school. This location has direct access to the retail and services stores in the courthouse-commercial center (central business district) but is removed from the strip commercial area west of Town and the High School, both of which are major traffic generators.

- The acreage allocated for future medium and high density residential useage is three times greater than the anticipated need. However, most of the need (18 acres) was determined to be for higher density multi-family development. The provision of a greater amount of land for future utilization will allow for lower density multi-family development via internal open space or low density residential infill.

- Land for future commercial use has been concentrated primarily in the courthouse-commercial center (central business district). The existing commercial area west of Town has not been enlarged.

- Although land appropriated for future total industrial use is far below the anticipated need, it is assumed that virtually all heavy industrial activity; i.e., mining will take place in the hinterlands. Land designated for future industrial use in the Town and the planning areas should be adequate to accommodate the needs of light, labor intensive industries. If required, limited amounts of this land may also be used for heavy industrial purposes.

- Open space designations were used to protect environmentally sensitive area such as ridge tops and flood hazard areas.

TRANSPORTATION PLAN

The Clintwood transportation plan proposes improvements to the community's vehicular and pedestrian circulation system. The suggested enhancements are founded upon the Town's goals, objectives, desired future land uses and generally accepted planning principles and standards.

The recommendations (which are shown on the Future Land Use and the Clintwood Courthouse-Commercial Center maps on display in the Town Hall) and the desired results are as follows:

- Route T-1001 (McClure Road) should be widened to a paving width of 40 feet.
    - two moving traffic lanes 24 feet wide and 2 parking lanes will improve access to stores and parking facilities located in the interior of the courthouse-commercial center.

- Route T-1009 (Chase Street) between McClure Road and Mullins Avenue should be widened to a paving width of 28 feet.
    - Two moving traffic lanes will facilitate access to the public library, the proposed library park and the proposed Chase Street parking lot.

- The Town should promote the development of the Chase Street Parking Facility.
    - A 40,000 square foot parking lot capable of accomodating approximately 100 vehicles. The facility will utilize the vacant parcel(s) located in the Holly Creek flood plain.
    - The facility will exemplify the merits of proper parking lot landscaping and surface runoff disposal.
    - The facility will increase the total number of off-street parking places in the courthouse-commercial center to over 250.

- The Town should encourage the development of the Walnut Walkway by prohibiting all vehicles, except emergency units, on Walnut Avenue between Alley 4 and McClure Road. Pedestrian comfort and convenience should be provided for.

  - The walkway, in conjunction with the proposed adjacent parking facility, will provide for better pedestrian accessibility to existing stores and offices in the courthouse-commercial center. The walkway will provide an impetus for the construction of new stores and shops on parcels that have remained vacant.
  - Tax revenue, property values and sales volumes will likely increase.

- The open space corridors which parallel Holly Creek should be developed as pedestrian, bicycle and bridle paths.
  - The development of these paths will separate non-motorized and vehicular traffic thereby increasing safety and encouraging the utilization of existing educational, recreational and commercial centers.

- Controlled pedestrian crosswalks should be established on Route 607 in the courthouse-commercial center and near the Clintwood Elementary School.

n addition to these capital improvements, the consultants recommend that the Town adopt the following planning principles and standards to guide the future development of streets, alleys, and pedestrian pathways in Clintwood.

- Residential driveway entrances should be disallowed on heavily traveled streets.
- All streets and alleys must be accessible by emergency and service vehicles.
- Through-traffic on residential streets should be limited.
- Pedestrian, bicycle and vehicular traffic should be separated.
- Proper lighting along streets and walkways should be provided.
- Sight distances should conform to traffic speed, terrain and road alignments.
- Turning lanes at heavily used intersections should be provided.
- Provision of streetside sidewalks should only be in response to a need.
- Future street planning should correlate with the Future Land Use plan contained within this document.

COMMUNITY FACILITIES PLAN

The Clintwood community facilities plan proposes improvements to the community's public parks, and public service accommodations. The suggested enhancements are founded upon the Town's goals, objectives, desired future land uses and generally accepted planning principles and standards.

The recommendations (the locations of which are shown on the Future Land Use and Clintwood Courthouse-Commercial Center maps) are desribed below:

- The existing fire station should be enlarged or replaced. The improved facility should be large enough to accommodate 6 vehicles and should have space for drying hose, equipment maintenance and storage, offices and meeting rooms. The consultants estimate that an adequately sized facility would require approximately 4,560 square feet of floor space. If a new building is constructed, the same location snould be used.

- A community recreation facility should be constructed in a central and accessable location. The consultants recommend that a suitable parcel from the proposed library park be used for this purpose. Accommodations for recreation, indoor sports and community meetings should be provided.

- The Town Council should advocate the establishment of neighborhood parks and playgrounds. The consultants have proposed several parks located in residential areas as well as the expansive park surrounding the existing public library facility.

PART 4

COMMUNITY DEVELOPMENT PROGRAMMING

COMMUNITY DEVELOPMENT PROGRAMMING

The Community Development Block Grant Program was first authorized in 1974 and subsequently continued under the Housing and Community Development Act of 1977. The Community Development Program, administered by the United States Department of Housing and Urban Development (HUD), was designed to provide financial assistance in the form of grants to communities to meet their housing and community development needs.

The Housing and Community Development Act Amendments of 1981 revised the original Act by shifting the allocation of CDBG funds to States wishing to develop their own Community Development Block Grant Program. Virginia opted to set up its own small cities CDBG Program and gave responsibility for operating the Program to the Virginia Department of Housing and Community Development.

The 1981 Amendment did not, however, change the primary objective of the Community Development Program which continued to be the development of viable communities, including decent housing and a suitable living environment and expanding economic opportunities, principally for persons of low-and moderate-income. This objective is achieved by the following means:

* Elimination of slums and blight and the prevention of blighting influences;

* Prevention of deterioration of property and neighborhood and community facilities;

* Elimination of conditions detrimental to health, safety, and public welfare;

* Conservation and expansion of housing opportunities;

* Increased public services;

* Improved use of land;

* Increased neighborhood diversity;

* Preservation of property with special value; and

* Alleviation of community physical and economic distress.

What Community Development Block Grants May Be Used For

Grant funds may be used for a variety of local housing and community development needs. The following brief descriptions summarize the project types that are eligible under the Virginia CDBG Program:

* Comprehensive Community Development

* Industrial Employment Creation/Retention

* Marketed Shell Building Program

* Distressed Communities Economic Development

* Commercial Employment Creation/Retention

* Central Business District Revitalization

* Vocational Education/Sheltered Workshop

* Tourism

* Microenterprise Assistance Projects

* Other Economic Development Projects

* Housing Preservation

* Housing Production

* Other Housing Projects

* Water and/or Sewer Improvements

* Drainage/Flood Control

* Other Community Facilities

*Day Care Facilities

* Facilities for Protected Populations

* Community Centers/Recreation

* Other Community Service Facilities

Eligible activities within each project type include acquisition and/or development activities that address the structural needs of a community or neighborhood in the areas of community facilities, housing, economic development, comprehensive community development, and community service facilities.

The Town originally established the following priorities for its community development needs in 1982:

1. Courthouse - Commercial Center -
   - acquisition, construction and rehabilitation of commercial buildings
   - center for elderly, handicapped
   - parking facilities
   - pedestrian walkways
   - street improvements
   - flood and drainage facilities

2. Community fire protection facilities
   - enlargement or replacement of existing firehouse

- water line improvements including leak detection

3. Acquisition of land for industrial purposes

    - improvement of the site

4. Residential rehabilitation

Of these needs, the Town has addressed all of them except the Courthouse-Commercial Center and residential rehabilitation needs. And within the Courthouse-Commercial Center priority, the Town has addressed the need for flood and drainage facilities on Holly Creek. In addition, the very few substandard homes present today are scattered around the community and do not lend themselves to inclusion in a CDBG project.

Therefore, upon review of these needs, the Town Council has identified the Revitalization of Downtown Clintwood as its primary community development need. This would include the acquisition and rehabilitation of commercial buildings and residential structures, as well as the development of parking facilities, street improvements, pedestrian walkways, and recreation facilities in the Central Business District.

APPENDICES

APPENDIX A LEGAL DESCRIPTION OF PERIPHERAL PLANNING AREAS

Legal description of the eastern and western peripheral planning areas is as follows:

BEGINNING at a point on the existing corporate limits said point being the southwest corner of the existing corporate limits, thence with the present corporate limits S 90 00' W (due west) 2,515 feet to a point; thence N 0 00' E (due north) 5,280 feet to a point; thence N 90 00' E (due east) 2,414 feet to a point, said point being the northwest corner of the existing corporate limits; thence with the existing corporate limits N 90 00' E (due east) 3,510 feet to a point, thence N 0 00' E (due north) 1,300 feet to a point, thence N 90 00' E (due east) 3,780 feet to a point, thence S 0 00' W (due south) 6,580 feet to a point, thence S 90 00' W (due west) 2,010 feet to a point, said point being the southeast corner of the existing corporate limits, thence with the existing corporate limits S 90 00' W (due west) 5,280 feet to a point, said point being the southwest corner of the existing corporate limits.

APPENDIX B

LAND USE GUIDE

RESIDENTIAL

- Single Family
- Two Family
- Multi Family
- Mobile Home

RETAIL AND SERVICE COMMERCIAL

Retail sales and service uses generally enclosed in a structure, including:

- Motels, hotels
- Restaurants
- ABC Store
- Night Club
- Barber Shop, Beauty Shop
- Grocery Store
- Cleaners
- Furniture Sales
- Carpet Sales
- Theater
- Pharmacy
- Sewing Center
- Lock Smith
- Car Sales
- Photography Studio
- Skate Arena (Skate Land)

GENERAL COMMERCIAL

Retail and service uses generally not fully enclosed in a structure, including:

- Gas Station
- Car Wash
- Lumber Sales
- Auto, truck, boat, mobile home, heavy equipment sales
- Repair garages
- Veterinary Hospitals
- Tire recapping

OFFICE and INSTITUTIONAL

- Banks and other financial institutions
- Real Estate and Insurance
- Attorney
- Public Offices
- Community Services
- Clubs
- Churches
- Radio and TV Studios
- Passenger Transportation Terminals
- Utility Company Offices
- Medical Offices
- Hospitals
- Schools
- Libraries
- Newspaper
- Museum
- Clinic
- Senior Citizens Center
- Mental Health Clinic
- DMV
- Funeral Home

LIGHT INDUSTRY

Industrial uses generally enclosed in buildings without outside storage, and including:

- Wholesale and warehouse facilities
- Radio and TV transmission facilities
- Power substations
- Trucking terminals
- Public, trasportation, and utility company vehicle and equipment, storage and repair facilities
- Garment Company
- Water Plant
- Water storage tank

HEAVY INDUSTRY

Industrial uses generally not fully enclosed in buildings and with outside raw material and product storage and including:

- Mining
- Coal loading operations
- Sawmills
- Junk yards

PARKS and OPEN SPACE

- Cemetary
- Community Athletic Field

APPENDIX C
FUTURE SPACE REQUIREMENTS

Residential

- Existing households within Clintwood and the peripheral planning area categorized according to household size:

HOUSEHOLD SIZE	1	2	3	4	5 or more	TOTAL
HOUSEHOLDS	137	206	131	97	58	629
% OF TOTAL	21.8	32.7	20.8	15.4	9.2	100.0

Source: Balzer and Associates

Housing Data: Survey conducted by Town of Clintwood July, 1980 and March, 1981.

- Households for the year 2000 projected and categorized according to household size:

HOUSEHOLD SIZE	1	2	3	4	5 or more	TOTAL
HOUSEHOLDS	190	285	181	134	80	870

Source: Balzer and Assoiates

(Note: 1980 average household size for Town and planning area, 2.76 and 3.53 respectively, applied to projected Town and planning area populations for the year 2000 to determine total households. 1980 household size percentages as defined above applied to projected totals.)

- Dwelling type percentage established according to household size:

	DWELLING TYPE			
HOUSEHOLD SIZE	SINGLE FAMILY[1]	DUPLEX	MULTI FAMILY	TOTAL
1	49.0%	1.0%	50.0%	100.0%
2	77.0%	1.5%	21.5%	100.0%
3	90.0%	1.0%	9.0%	100.0%
4	93.5%	1.0%	5.5%	100.0%
5 or more	96.8%	.8%	2.4%	100.0%

[1] Includes mobile homes

Source: Balzer and Associates

- Total number of units by dwelling type established for households ranging from 1 to 5 or more persons:

SIZE OF HOUSEHOLD	TOTAL NUMBER OF UNITS	SINGLE FAMILY	DUPLEX	MULTI FAMILY
1	190	93	2	95
2	285	219	5	61
3	181	163	2	16
4	134	125	2	7
5 or more	80	77	1	2
TOTAL	870	677	12	181

Source: Calculated by Balzer and Associates

- Net residential acres determined per dwelling type:

Net residential acres calculated by dividing the total units per dwelling type by desired density of units per net residential acre, multiplied by an affluence factor. The affluence factor varies from 1.2 to 1.4 and indicates the ability to inhabit differing amounts of acreage based on income levels. Higher affluence factors attached to single family homes. The results are as follows:

	TOTAL UNITS	÷	DESIRED DENSITY NET RESIDENTIAL ACRES	x	AFFLUENCE FACTOR	=	NET RESIDENTIAL ACRES
SINGLE FAMILY	677		3.0		1.4		316
DUPLEX	12		6.0		1.3		3
MULTI FAMILY	181		14.0		1.2		16

Source: Balzer and Associates

- Residential density classifications:

TYPE	DESIRED DENSITY	NET RESIDENTIAL ACRES
LOW DENSITY	1-3 units	316
MEDIUM DENSITY	3-6 units	3
HIGH DENSITY	6-14 units	16

Commercial

- The commercial element was calculated as 4 percent of the total net acreage.

Industrial

The calculation of industrial area was based upon the number of the persons in the labor force and the type of industrial base. For the purposes of this analysis it was assumed that Clintwood's industrial base is and will continue to be essentially commercial. Industrial density was determined by the number of workers required for the type of job, for example a higher density of workers requires a smaller land area. The following table describes the standards used to calculate future industrial densities for the Town and the planning areas.

DENSITY CATEGORY	PLANNING STANDARD WORKERS/NET ACRE
LIGHT	
Printing, publishing, allied industries	48
Food and kindred products	
Lumber and wood products	
Garment production	
LIGHT-INTERMEDIATE	
Research development/testing laboratories	
Machinery (except electrical)	24
Professional, scientific, controlling instruments	
Primary metals industries	
Fabricated metal products	
HEAVY-INTERMEDIATE	
Motor freight transportation/warehousing	
Wholesale trade	12
Paper and allied products	
Electrical machinery equipment, supplies	
HEAVY	
Chemical and allied products	
Furniture and fixtures	6
Petroleum and coal products	

Source: Balzer and Associates

Results

TYPE OF INDUSTRY	WORKERS[1] ÷	WORKERS/NET ACRE +	RESERVE FACTOR =	TOTAL INDUSTRIAL NET ACRES
LIGHT	500	48	3 acres	13 acres
LIGHT-INTERMEDIATE	600	24	8 acres	33 acres
HEAVY-INTERMEDIATE	450	12	12 acres	50 acres
HEAVY	400	6	22 acres	88 acres
TOTAL	1,950		45 acres	184 acres

[1] Estimated potential labor supply available to Clintwood within a 20 mile radius.

Sources: Virginia Employment Commission
Calculations by Balzer and Associates

Public Recreation

The Heritage Conservation and Recreation Service (formerly the Bureau of Outdoor Recreation) of the U. S. Department of the Interior suggests the following space standards for neighborhood facilities:

- 1.25 acres/1,000 population for playgrounds - usually part of a school ground.
- 1.25 acres/1,000 population for playfields - active sports activities such as baseball, football and soccer.
- 2.0 acres/1,000 population for neighborhood parks in multi-family areas.
- .75 acres/1,000 population for neighborhood parks in single-family areas.

With the predominance of single-family housing in Clintwood, approximately 4.0 acres of neighborhood facilities are needed for every 1,000 persons. By the year 2000 with an estimated population of 2,531 persons, 10 acres of parkland will be required for the residents of the Town and the peripheral planning area.

Civic/Health

- 20 acres were allocated for Dickenson County health facilities.
- 30 acres were allocated for Town and County civic facilities.

APPENDIX D

CONSUMER PRICE INDEX ANALYSIS

JANUARY 1st	CPI[1] INDEX	PERCENT CHANGE YEARLY AVERAGE	FACTOR TO CONVERT TO FISCAL 1981 DOLLARS[2]
(Dec) 1981	258.4	-	1.0
1980	233.2	13.5	1.108

APPENDIX IX: VDCR SCORING CRITERIA: ELIGIBILITY AND CAPACITY BUILDING & PLANNING, AND VDCR CHECKLIST

Appendix D: Scoring Criteria for Capacity Building & Planning

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Town of Clintwood	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	**X**
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	
No	Eligible for consideration for studies, capacity building, and planning only	**X**
3. If the applicant is not a town, city, or county, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	**NA**
No	Not eligible for consideration	**NA**
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	**X**
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	**X**
No	Not eligible for consideration	
N/A	Match not required	

Capacity Building and Planning Eligible for Consideration	**Yes** **No**

Applicant Name:	Town of Clintwood

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Capacity Building and Planning Activities (Select all that apply)		
Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.	**55**	
Development of a new resilience plan.	**55**	**55**
Resource assessments, planning, strategies and development.	**45**	**45**
Policy management and/or development.	**40**	
Stakeholder engagement and strategies.	**25**	
Goal planning, implementation and evaluation.	**25**	
Long term maintenance strategy.	**25**	**25**
Other proposals that will significantly improve protection from flooding on a statewide or regional basis.	**15**	
7. Is the area within the local government to which the grant is targeted socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	**8**
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed activity part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No – Drainage area through Town is 1.79 square miles, deemed too small for the NFIP.	**0**	**NA**
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	**10**
No	**0**	
10. Does this project provide "community scale" benefits?		
Yes	**20**	**20**
No		
Total Points		**163**

APPENDIX XI: TOWN FLOODPLAIN ORDINANCE

2. Any use permitted in the Single Family Residential District.
3. Any use permitted in the Multiple Family Residential District.

Section 8. Lot Size Standards

1. Single family dwelling or individual mobile home:

	Minimum Lot Area
A. Without public water service or public sewer service	20,000 sq ft
B. With public water service but not public sewer service	15,000 sq ft
C. With both public water service and public sewer service	5,000 sq ft

Section 9. Yard and Set Back Standards

1. Single Family Dwelling or Individual Mobile Home Minimum In Feet:

Front yard shall be 25 feet from edge of paved road or street or 10 feet from edge of right of way, whichever shall be the greater distance. Side yard 5 feet. Rear yard 15 feet. Total width of both side yards shall be at least 15 feet.

Section 10. Flood Plain District

I. Purpose of the District

The purpose of this district is to aid in the reduction of losses to life and property, the reduction of health and safety hazards, the disruption of commerce and governmental services, the imposition of extraordinary public expenditures for flood protection and relief, and impairments of the tax base, which result from periodic flooding. Recognizing that these flood losses are caused by the cumulative effect of obstructions in floodways causing increases in flood heights and velocity, and the occupancy of flood hazard areas by uses vulnerable to floods or hazardous to others which are inadequately elevated or otherwise protected from flood damages, this district is designed to restrict or prohibit uses which are dangerous to health, safety, or property in time of flood or cause increased flood heights or velocities by requiring that uses vulnerable to floods, including public facilities which serve such uses, be provided with flood protection at the time of initial construction, and further to protect individuals from purchasing lands which are unsuited for intended purposes because of flood hazard.

II. Application of the District

To enable the district to operate in harmony with the plan for land use and population density embodied in these regulations, the Flood Plain District is created as a special district to be superimposed on other districts contained in these regulations and is to be so designated by a special symbol for its boundaries on the Zoning District Map. Except as they are in conflict with the specific requirements for the Flood Plain District, permitted uses, accessory uses, and signs, minimum lot requirements, minimum yard requirements, maximum height, and requirements for off-street parking and loading, shall be determined by the requirements of the basic district regulations contained elsewhere in this ordinance.

III. Warning and Disclaimer

This section does not imply that areas outside Flood Plain District boundaries or land uses permitted within such districts will be free from flooding or flood damages. The granting of approval of any structure or use or approval of filling shall not constitute a representation, guarantee or warranty of any kind or nature by the Town of Clintwood or the Board of Zoning Appeals, or by any officer or employee of either thereof, of the practicality or safety of any structure or use proposed and shall create no liability upon or cause action against such public body, officer or employee for any damage that may result from such approval.

IV. Permitted Uses

A building or land shall be used only for the following purposes, subject to applicable district regulations:

1. Agriculture and forestry, general farming, truck gardens, cultivation of field crops, orchards, nurseries, turf farming and livestock.

2. Open-type private or commercial recreational uses of facilities.

3. Open-type uses such as open yard areas, loading and unloading areas, parking lots, used car lots, and signs.

4. Storage yards for equipment and material not subject to major damage by floods or which may cause damage by floating away in flood waters and not including inflammables such as gasoline.

5. Facilities and structures necessary for rendering public utility service, including poles, wires, transformers, telephone booths, and the like for normal electrical power distribution or communication service, and pipe lines or conduits for electrical, gas, sewer, or water service, but not including buildings, treatment plants, pumping or regulator stations, sub-stations and power transmission lines which are permitted as conditionals uses.

6. Accessory uses incidental to and customarily found in connection with permitted uses of the premises as determined by this section and applicable district regulations.

V. Special Provisions

1. No structure (temporary or permanent), fill, including fill for roads and levies, deposit, obstruction, storage of materials or equipment or other uses shall be permitted, which acting alone or in combination with existing or future uses, unduly affects the efficiency or the capacity of the floodway or unduly increases flood heights, consideration of the affects of a proposed use shall be based on a reasonable assumption that there will be an equal degree of encroachment extending for a significant reach on both sides of the stream.

2. Any fill proposed to be deposited in the floodway must be shown to have some beneficial purpose and the amount thereof not greater than is necessary to achieve that purpose as demonstrated by a plan submitted by the owner showing the uses to which the filled land will be put and the final dimensions of the proposed fill or other material. Such fill or other materials shall be protected against

erosion by rip-rap, vegetative cover, or bulkheading.

3. Structures shall not be designed for human habitation and shall have a low flood damage potential. The structure or structures, if permitted, shall be constructed and placed on the building site so as to offer the minimum obstruction to the flow of flood waters.

4. The storage or processing of materials that are buoyant, flammable, explosive or could be injurious to human, animal, or plant life in time of flooding, is prohibited. Storage of other material or equipment may be allowed if not subject to major damage by floods, firmly anchored to prevent floatation or shall be readily removable from the area within the limited time available after flood warning.

VI. Encroachment on Drainage Channels and Streams

1. Location of any Structure

Any structure proposed to be located within one hundred (100) feet of any main drainage channel or stream (hereafter referred to as stream) within any zone must be approved by the *Town Council. The Town Council* shall determine on the basis of the area of the watershed, and probable runoff, the opening needed for the streams or how close a structure may be built to the stream - in order to assure adequate space for flow of floodwater; provided, however, no building shall be permitted within ten (10) feet of the top of bank of any stream.

2. Location of Drain Pipes

Any individual who proposes to install a drain pipe to be located within one hundred (100) feet of any main drainage channel or stream (hereinafter referred to as stream) within any zone must be approved by the Town Council and Building Inspector. A permit to install said drain pipe must be obtained from the Town Hall. The fee for such permit shall be $25.00. Any individual who proposes to install such a drain pipe must comply with all standards as set forth by the Virginia Department of Transportation and Town Building Inspector. The Town Building Inspector's decision may be appealed to the Board of Zoning Appeals as set forth in Article 6 of this Ordinance.

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

March 29, 2022

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Matthew Wells,

Enclosed in this packet are twelve applications for flood protection and prevention projects that involve implementation of nature-based shoreline solutions.

Among the applications are projects which are currently at the design stage. Design projects are requesting funds for professional designs and development of Joint Permit Applications which are needed before the property owner can move to construction of a nature-based flood protection solution.

Below is short summary of proposed projects in Gloucester County:

A. **Prevention and Protection for Wilson Farm Lane for Altemus**
(CID): 510071 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. The shoreline is seemingly protected by a high riprap sill, but the original design has failed and did not include any backing with Filter Cloth to prevent soil from leaking out through the riprap. Over time, tidal water through the rocks has dissolved the soil and created a scarp. In effect, it has changed from a shoreline sill at the edge of the lawn to an offshore sill with tidal wetlands behind it. The project site needs a more comprehensive design solution.

B. **Flood Prevention and Protection for Guinea Road for Blackburn**
(CID): 510071 Total Cost (from individual project application): $19,671
This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. The applicant is also willing to donate 16 acres of pristine tidal wetlands in Monday Creek in Gloucester if the value of the

land can count toward the applicant's match. The land donation would be held by the Middle Peninsula Chesapeake Bay Public Access Authority as a nature-based flood mitigation protection site. The assessed value of the tidal wetlands is $8,000.

C. **Flood Prevention and Protection for Marshfield Lane for Doyel**
(CID): 510071 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. The applicant is partnering with adjoining landowner who previously submitted a proposal during Round 1, creating a greater community-scale impact.

D. **Flood Prevention and Protection for White Hall Road for Meeker**
(CID): 510071 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss in a high energy, high erosion VE flood zone. The Fight the Flood program (Figure 11A) is already having an impact on driving community scale applications with greater reach. Within 700 yds of the project site four Round 1 and Round 2 applicants have applied to the Flood Fund for financial assistance.

E. **Prevention and Protection for Ware Point Road for Morgan**
(CID): 510071 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution and draft joint permit application to reduce the impacts of storm events, flooding, and wetland loss. The property owner has been seeking a solution for over 20 years for two contiguous parcels along the North River in Gloucester County; however, has not been in a position to support the funding necessary for construction of a nature-based solution which was designed in the late 1990s. This project will revisit and modify the existing design to incorporate nature-based features which protect further flooding and erosion of the shoreline and property to the greatest extent possible. The project site needs a more comprehensive design solution to achieve an effective level of flood protection.

F. **Flood Prevention Design and Legal work to Maintain Access on Griffin Road**
(CID): 510071 Total Cost (from individual project application): $16,089
This proposal requests funding for the development of a nature-based shoreline design solution to prevent impacts of storm events, flooding and wetland loss to a private right of way (ROW) in Gloucester County. This project will also entail legal work associated with preparing for implementation/construction of the nature-based shoreline design as the solution may need to be implemented outside of the deeded ROW.

G. **Flood Prevention and Protection for Robins Neck Road**
(CID): 510071 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design

solution and draft joint permit application to reduce the impacts of storm events, flooding, and wetland loss. The property was purchased in 1972 and the owner has witnessed significant changes due to erosion. The northeast facing part of the property has lost 100 yards. Also there are three large tees falling into the water that will have negative impacts to the pecan grove and daffodil garden on the property. This project will look to address the site needs to prevent flooding.

H. **Flood Prevention and Protection for Pinewold Lane**
(CID): 510071 Total Cost (from individual project application): $6,807
This proposal requests funding for the development of a nature-based shoreline design solution to prevent impacts of storm events, flooding and wetland loss. The property has approximately 200 feet of riprap that is beginning to fail. As the waves overtake it, this causes erosion issues. Additionally, the property is experiencing undercutting of its shorelines.

I. **Flood Prevention and Protection for Briggs Cove Road**
(CID): 510071 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution to prevent impacts of storm events, flooding and wetland loss. The property has approximately 300 feeet of shorleing that has seen challenges over the years with erosion and now its occurring an an exponential rate. While previous efforts have been taken to mitigate erosion there has not been an effective solution. This project will look to implement a more comprehensive nature-based shoreline design.

J. **Flood Prevention and Protection for L's Island Road**
(CID): 510071 Total Cost (from individual project application): $9,836
This proposal requests funding for the development of a nature-based shoreline design solution to prevent impacts of storm events, flooding and wetland loss. This project looks to utilize NATRX nature-based solution to address the lose of tidal widal wetlands and to protect a long family legacy on the property.

K. **Flood Prevention and Protection for Briggs Cove Road**
(CID): 510071 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution to prevent impacts of storm events, flooding and wetland loss. The property has approximately 300 feeet of shorleing that has seen challenges over the years with erosion and now its occurring an an exponential rate. While previous efforts have been taken to mitigate erosion there has not been an effective solution. This project will look to implement a more comprehensive nature-based shoreline design.

L. **Flood Prevention and Protection for Friends Road**
(CID): 510071 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution to prevent impacts of storm events, flooding and wetland loss. This project will

address severe erosion issues on the shoreline and the water inundation around and under the road to access the home on this property.

M. Flood Prevention and Protection for Ware Neck Road
(CID): 510071 Total Cost (from individual project application): $6,807
This proposal requests funding for the development of a nature-based shoreline design solution to prevent impacts of storm events, flooding and wetland loss. This project site has about 300 feet of shoreline. The entire 7 foot high bank is being undercut at high tide and storm surge. Where there is no shading from plants on the bank, the eroded sand component supports marsh grass, but the bank still is being assaulted.

The total project costs for Gloucester County Round 3 applications is **$181,003** and MPPDC staff are requesting **$126,707** from DCR to support this work.

We consider helping both public and private entities manage flooding a critical and essential function of government.

Thank you for considering the enclosed proposed projects. If you have any questions about the enclosed, please contact me by email at llawrence@mppdc.com or by phone at 804-758-2311.

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. The shoreline is seemingly protected by a high riprap sill, but the original design has failed and did not include any backing with Filter Cloth to prevent soil from leaking out through the riprap. Over time, tidal water through the rocks has dissolved the soil and created a scarp. In effect, it has changed from a shoreline sill at the edge of the lawn to an offshore sill with tidal wetlands behind it. The project site needs a more comprehensive design solution.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem-based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located Wilson Farm Lane in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

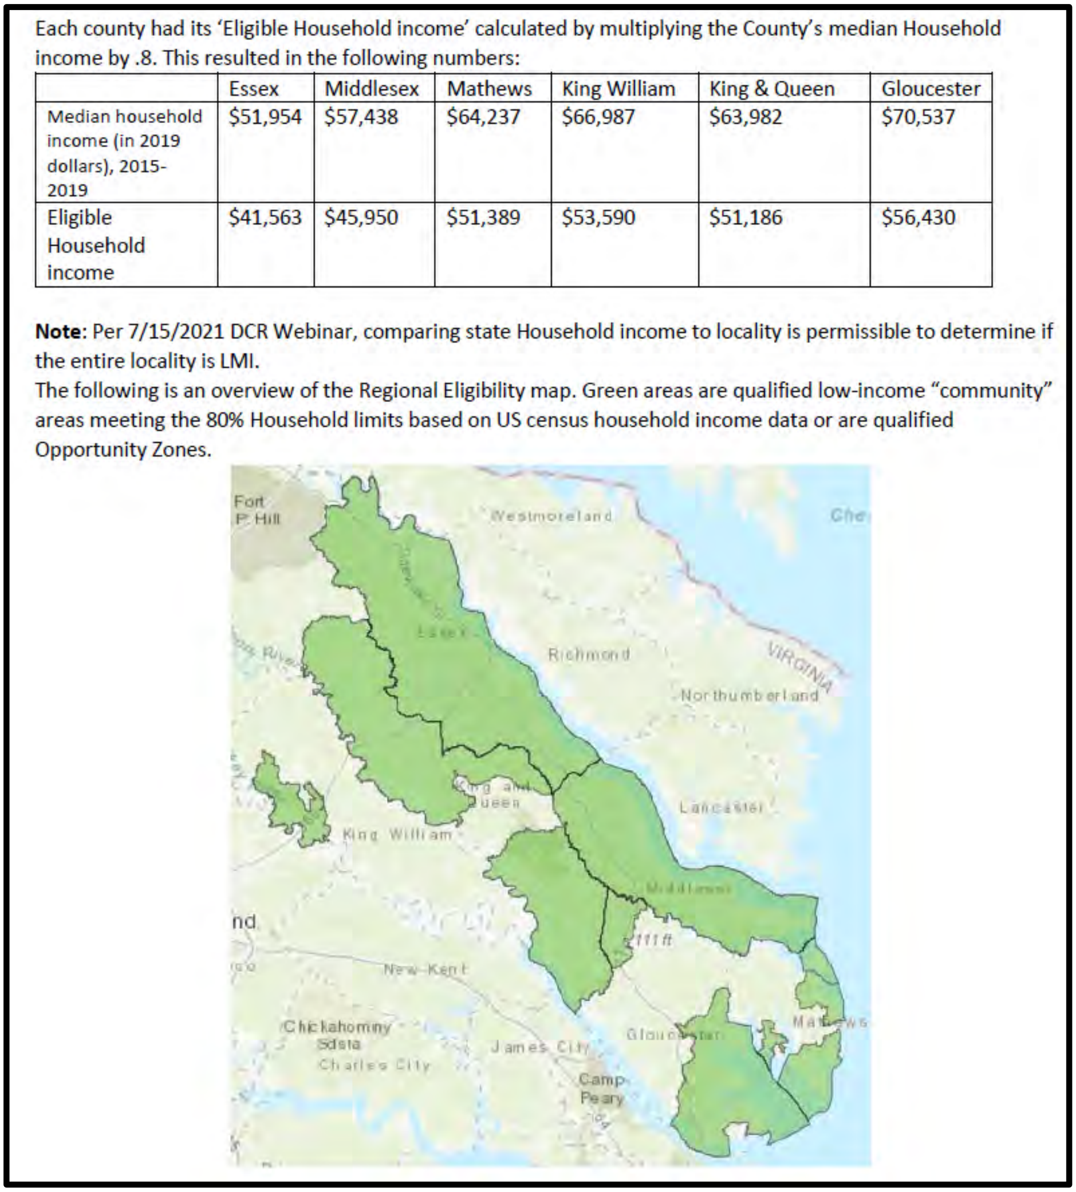
RPC: 18618
Tax Map Number: 12-1C

Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is not within the low-income area.

According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a low social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively low level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

Create Report

The project is located at Wilson Farm Lane, Gloucester, VA 23061 (-76.4949, 37.53541). The property was purchased in 2006 and has experienced a number of issues over the past 15 years. The shoreline is seemingly protected by a high riprap sill, but the design did not include any backing with Filter Cloth to prevent soil from leaking out through the riprap. Over time, tidal water through the rocks has dissolved the soil and created a scarp. In effect, it has changed from a shoreline sill at the edge of the lawn to an offshore sill with tidal wetlands behind it. While the eroded space has been replaced with marsh grasses, the 1’ high erosion scarp has steadily advanced toward the property owner’s house along a 72’ long front. It is now within 3’ of the deck corner support pole and will surely undermine it soon. See accompanying pictures.

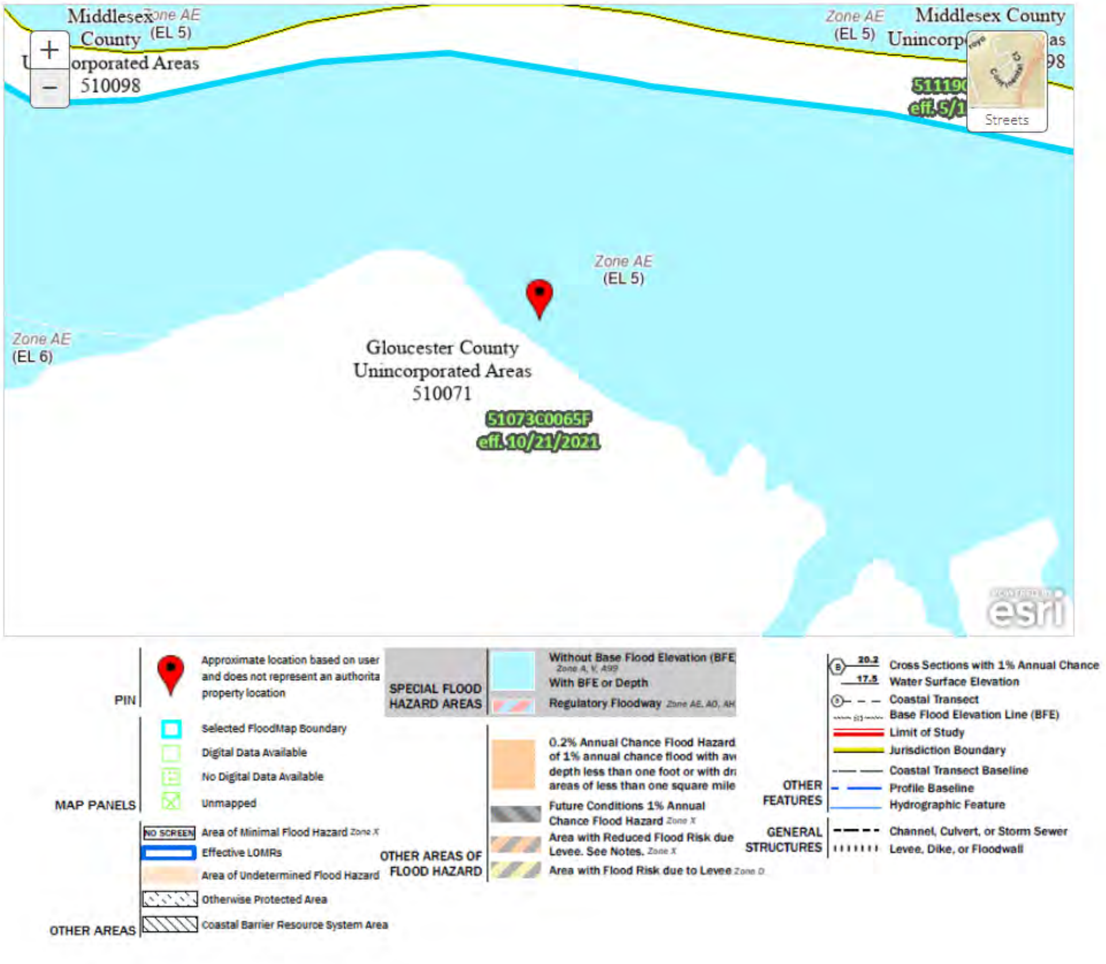
SCARP AT DECK

SCARP DROPOFF

Please see **Appendix 2** for additional property photos.

This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 3** for the FIRMettes (last mapped 10/21/2021).

Figure 9: Map of FEMA Flood Zones



Due to the project site’s proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate change of 427.8 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor’easter events. **Appendix 4** lists 79 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 11**.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)

For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Gloucester County's current floodplain ordinance can be found at: http://gloucestercounty-va.elaws.us/code/coor_ch8.5.*

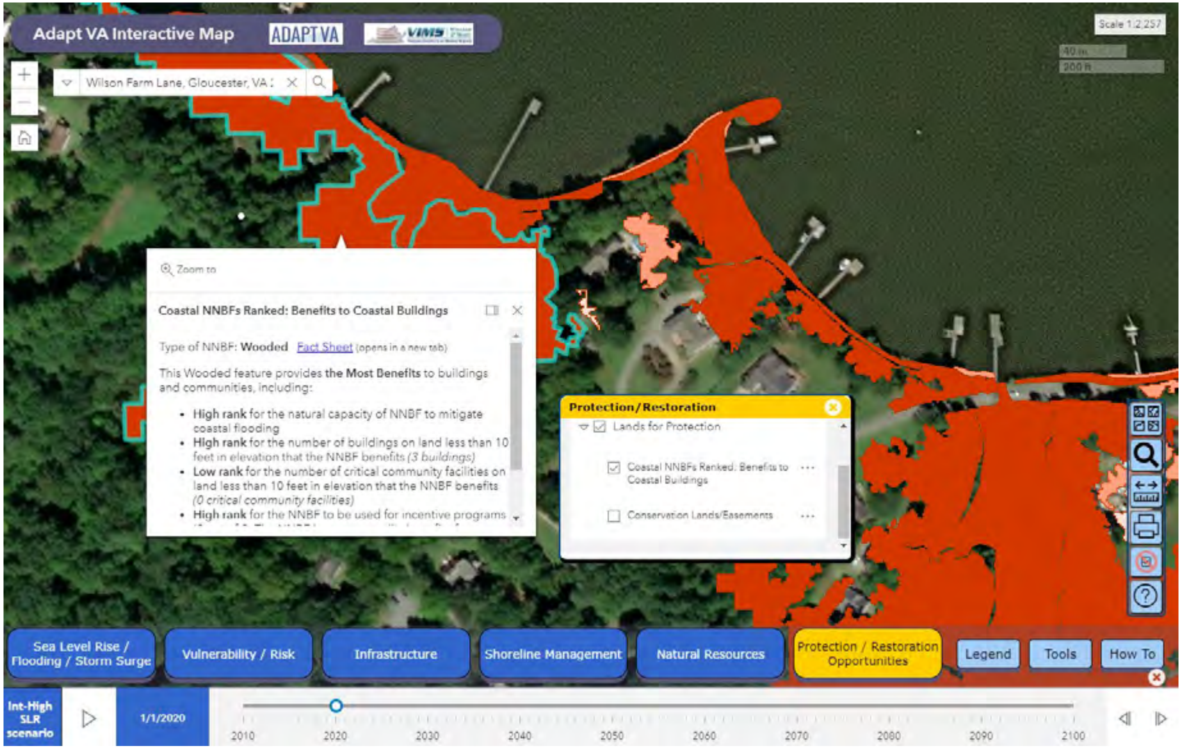
COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12**. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Wooded** Fact Sheet (opens in a new tab)

This Wooded feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(3 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **High rank** for the NNBF to be used for incentive programs

Protection/Restoration

☐ Conservation Lands/Easements

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, the Middle Peninsula PDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES*.*

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural*

shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Gloucester County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six-month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

RELATIONSHIP TO OTHER PROJECTS.

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
  - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula

PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	
No	**0**	0
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**

III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that reside in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not reside in a low-income area, then the following does not apply. For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

The project budget is:

- ***Estimated total project cost: $17,399***
- ***Amount of funds requested from the Fund 12,180***

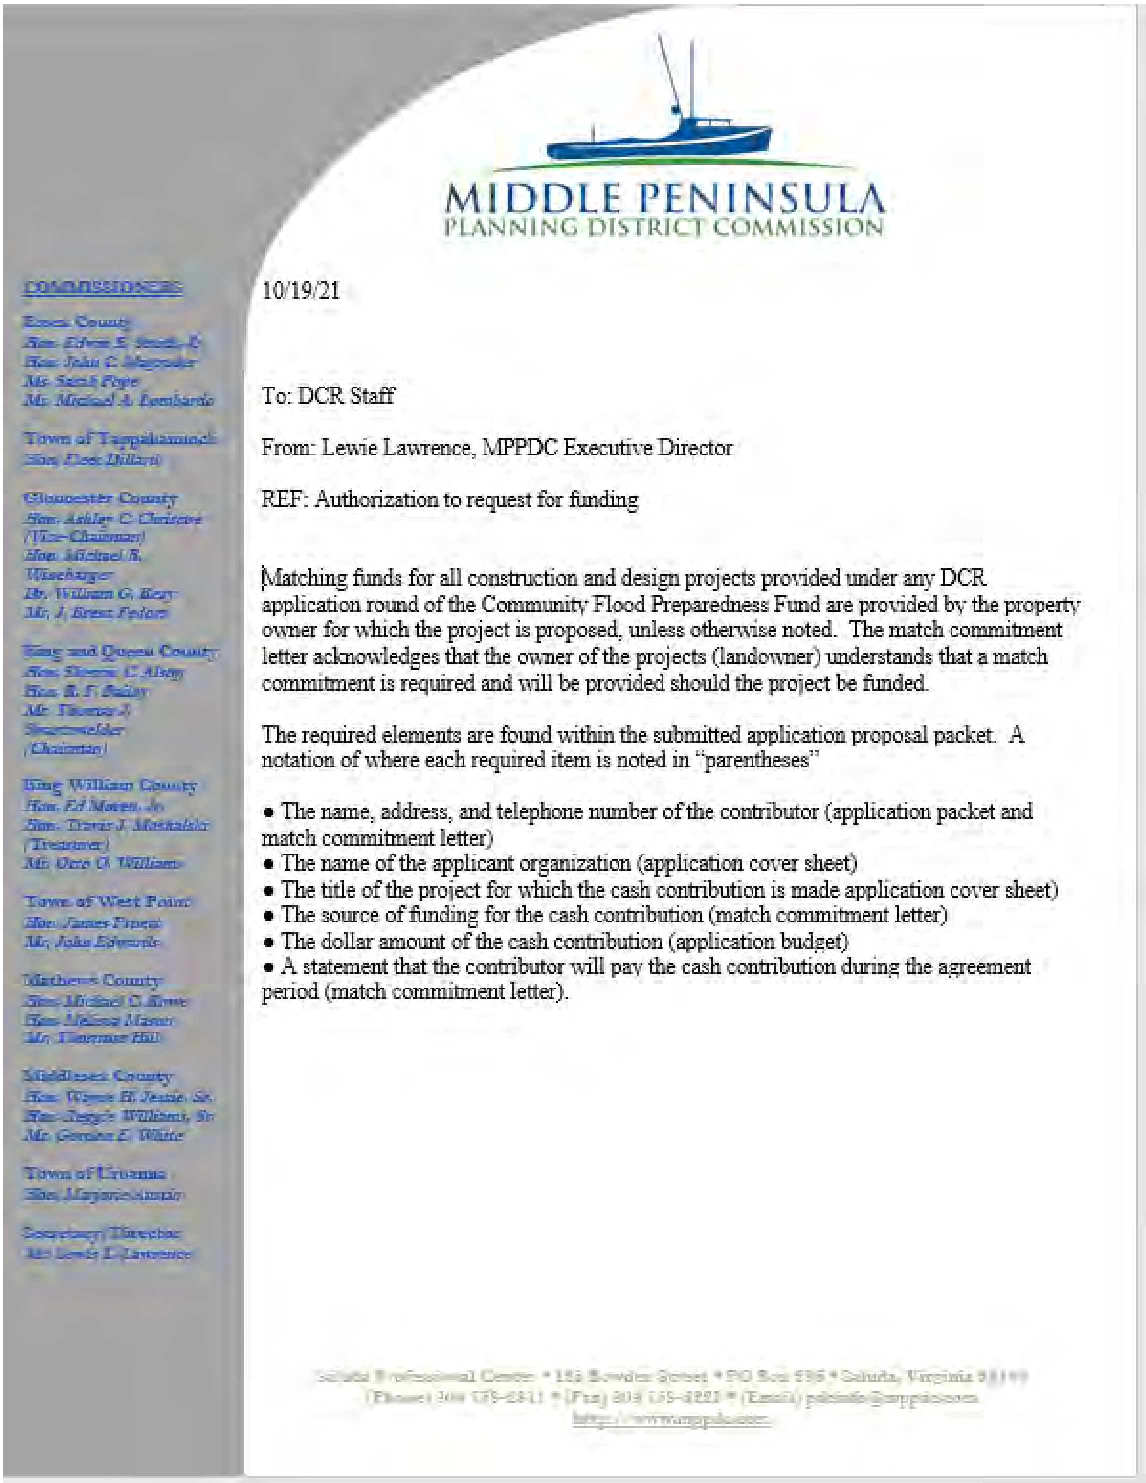
MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Authorization request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

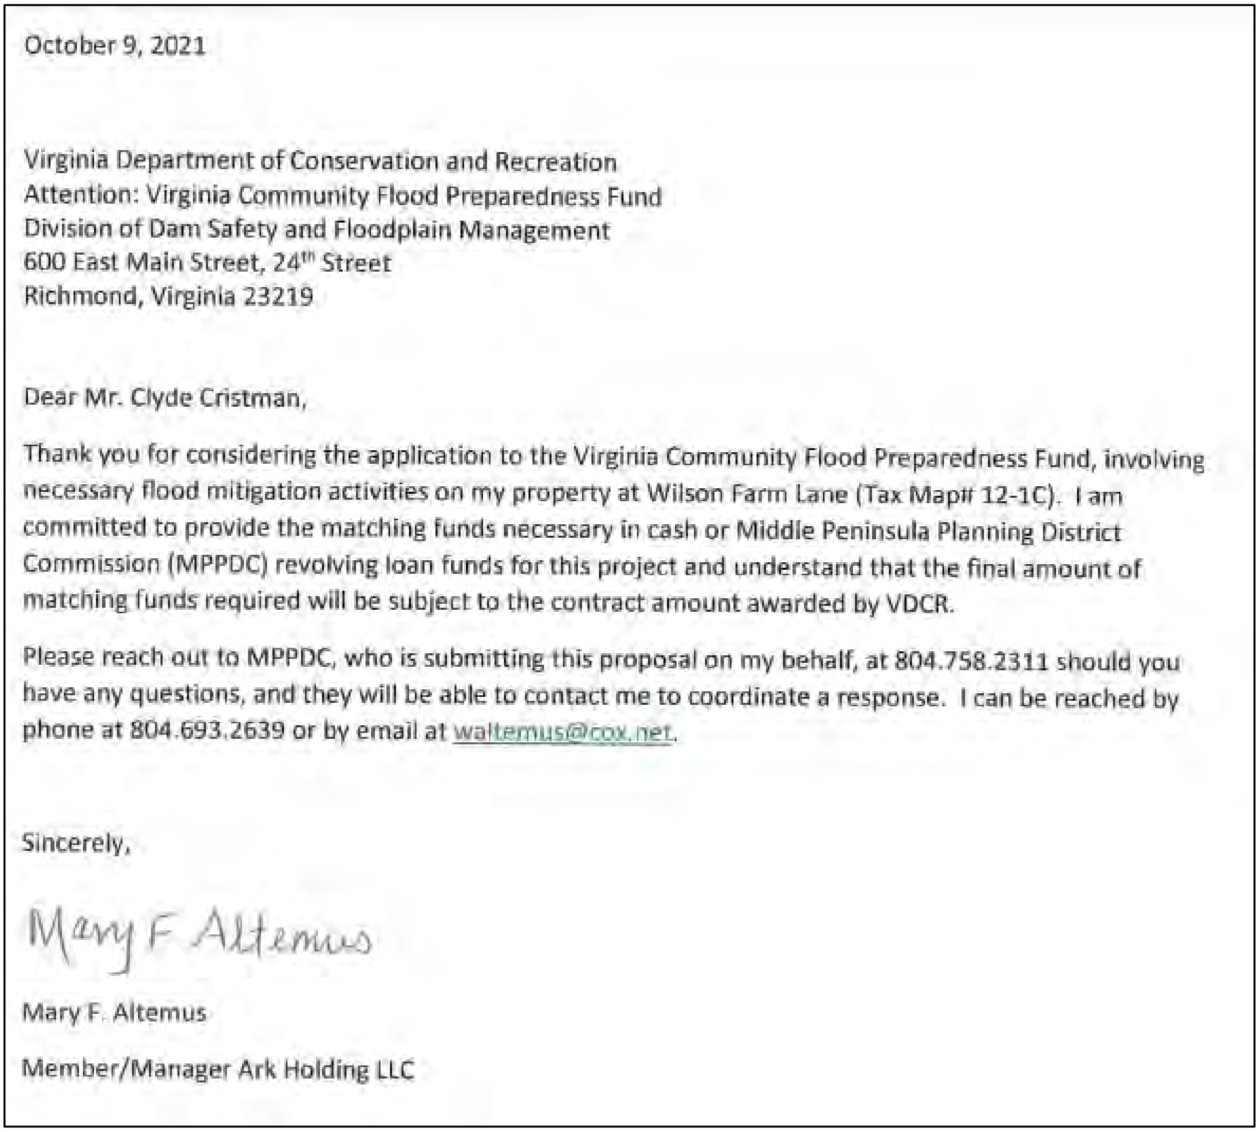
REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Signed pledge agreement from each contributing organization:



October 9, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Street
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at Wilson Farm Lane (Tax Map# 12-1C). I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to MPPDC, who is submitting this proposal on my behalf, at 804.758.2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 804.693.2639 or by email at waltemus@cox.net.

Sincerely,

Mary F Altemus

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

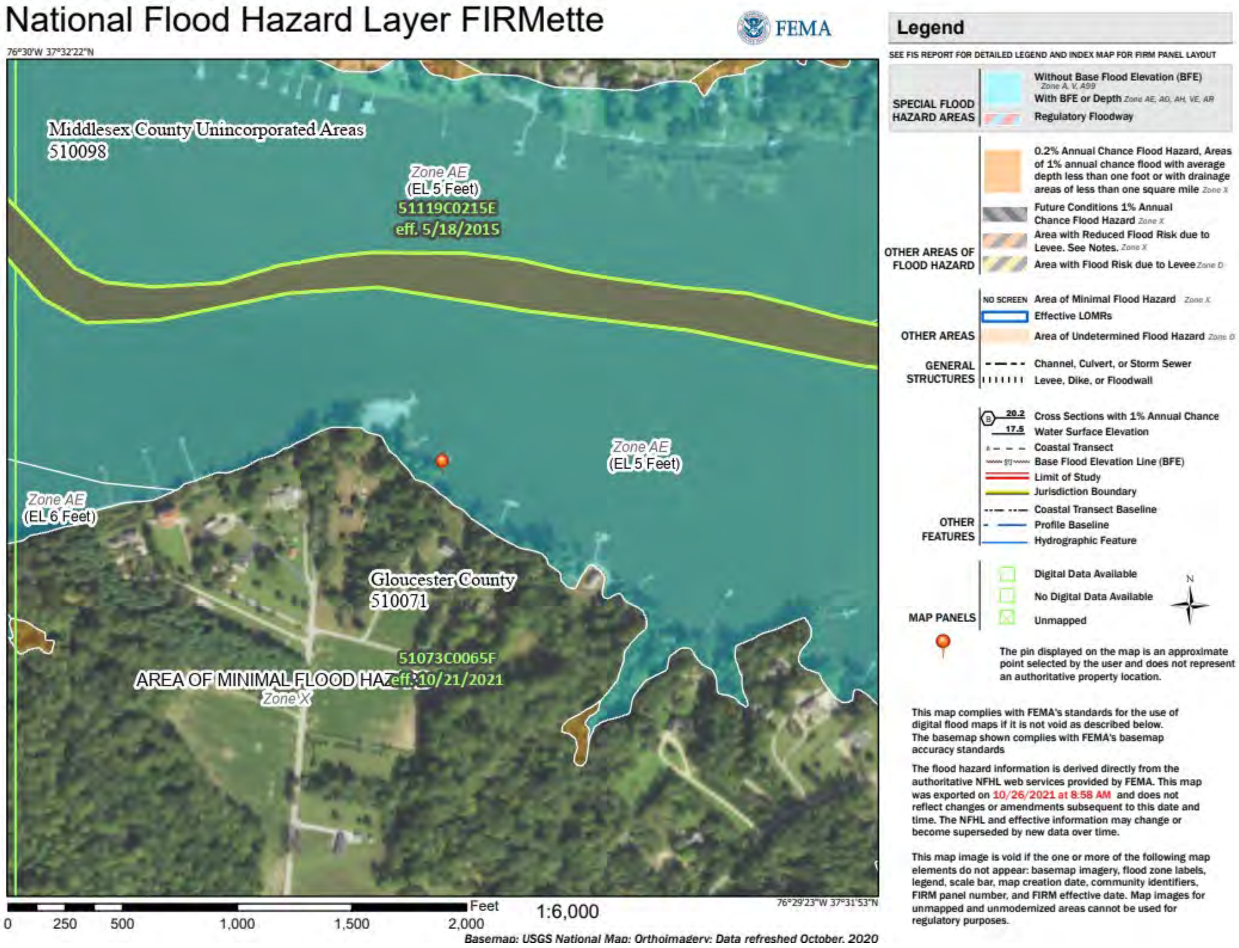
Project Location FIRMette

(FIRMette #: 51073C0065F)



The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 10/26/2021 at 8:58 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter

October 9, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Street
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at Wilson Farm Lane (Tax Map# 12-1C). I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to MPPDC, who is submitting this proposal on my behalf, at 804.758.2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 804.693.2639 or by email at waltemus@cox.net.

Sincerely,

Mary F Altemus

Total Cost of Project: ***$19,671***

Total Amount Requested: ***$13,769***

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. The applicant is also willing to donate 16 acres of pristine tidal wetlands in Monday Creek in Gloucester if the value of the land can count toward the applicant's match. The land donation would be held by the Middle Peninsula Chesapeake Bay Public Access Authority as a nature-based flood mitigation protection site. The assessed value of the tidal wetlands is $8,000.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem-based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Guinea Road in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

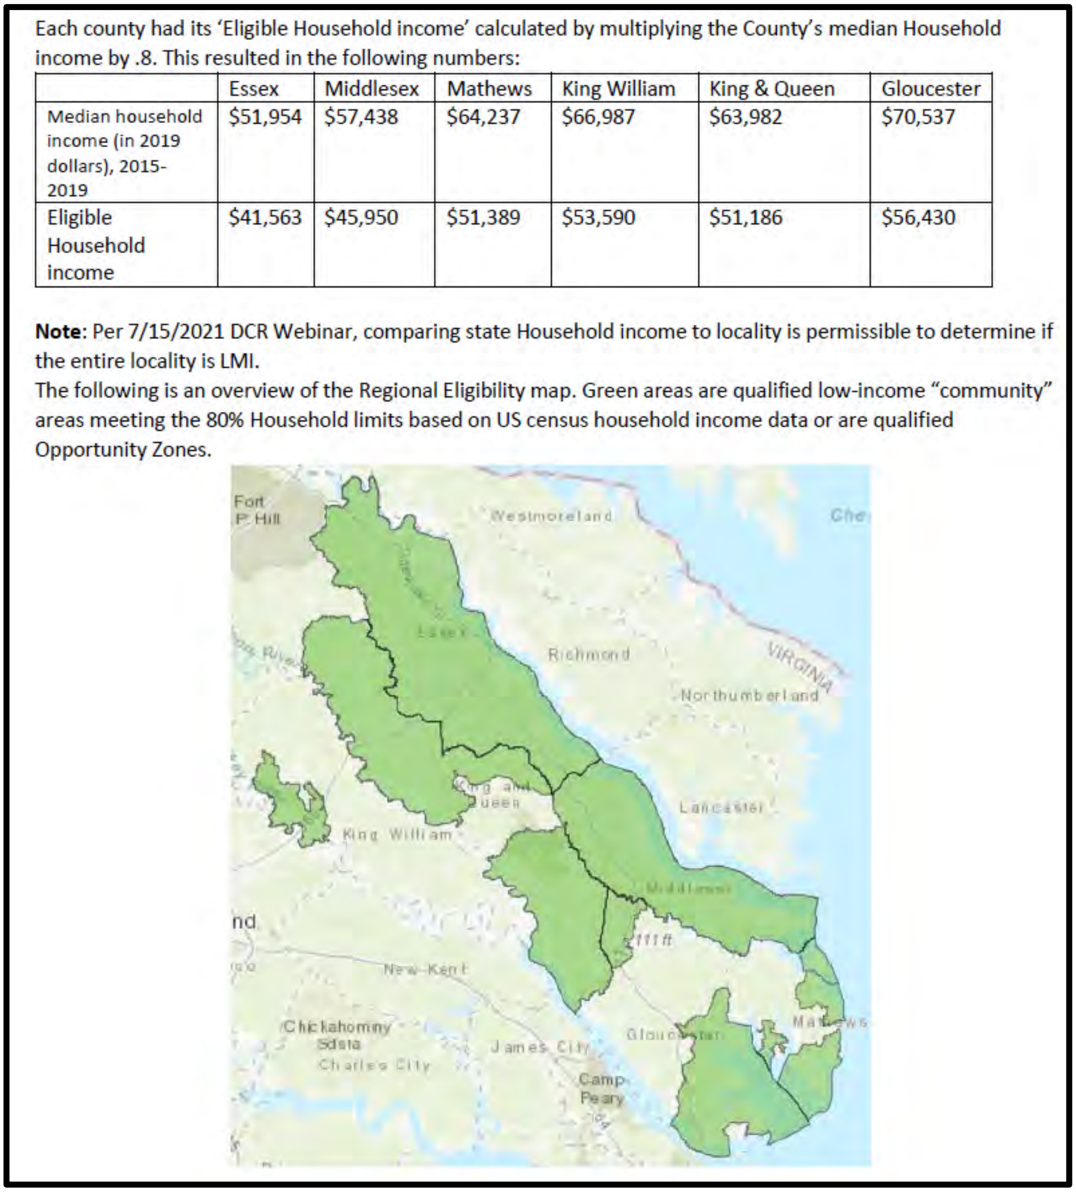
Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

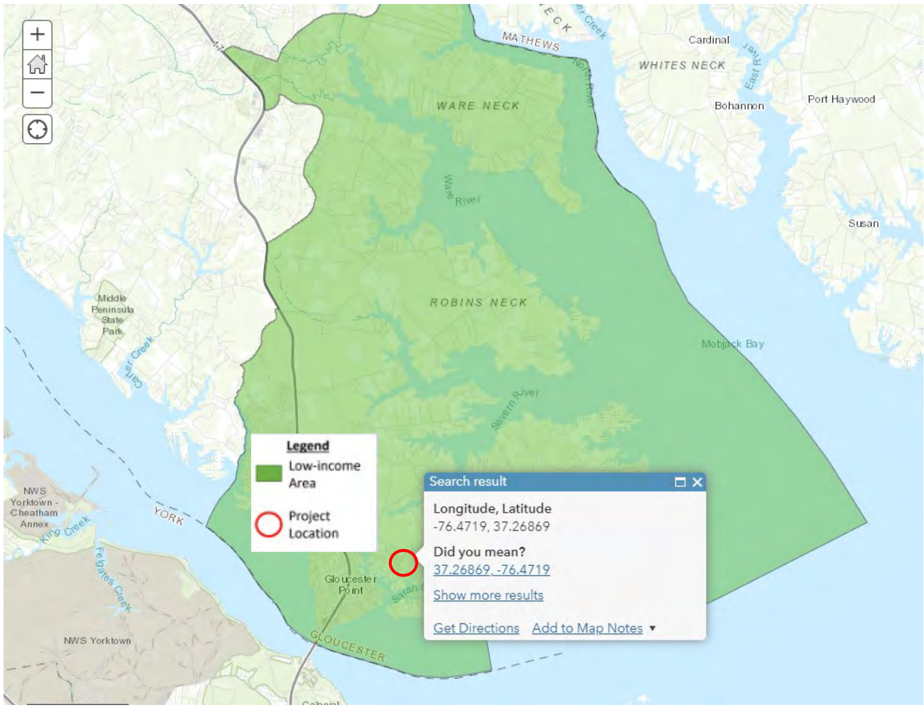
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a low social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively low level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

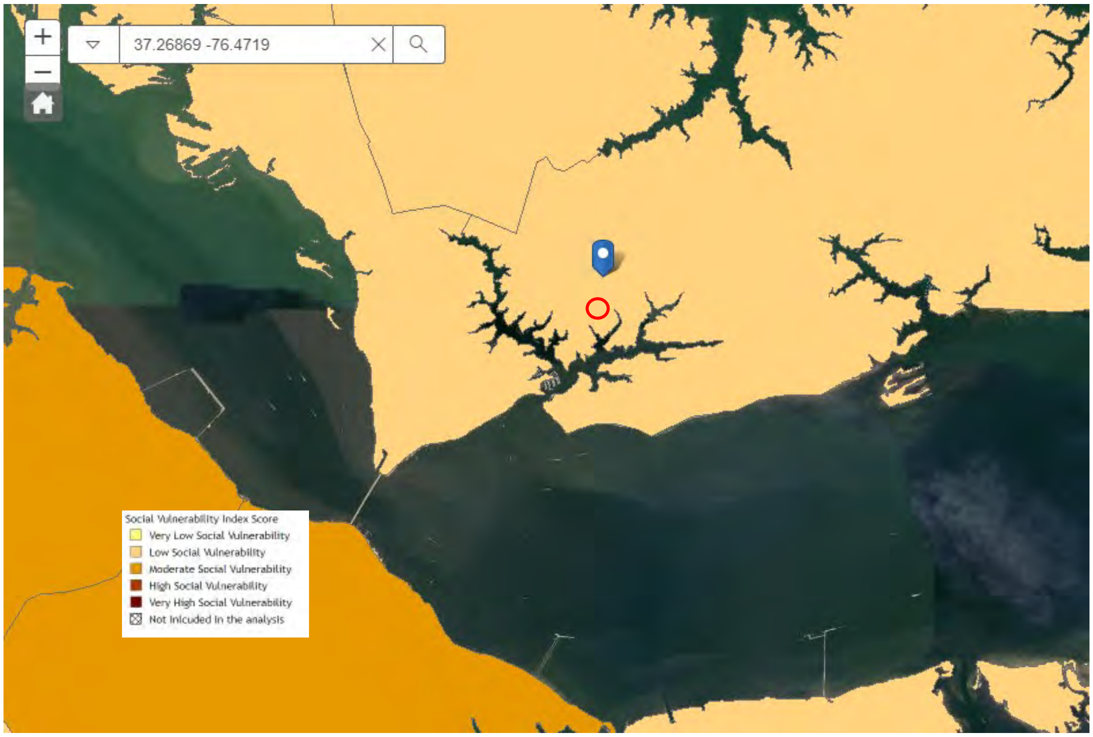


Figure 8. FEMA Nation Risk Index of Census Track of Project Location

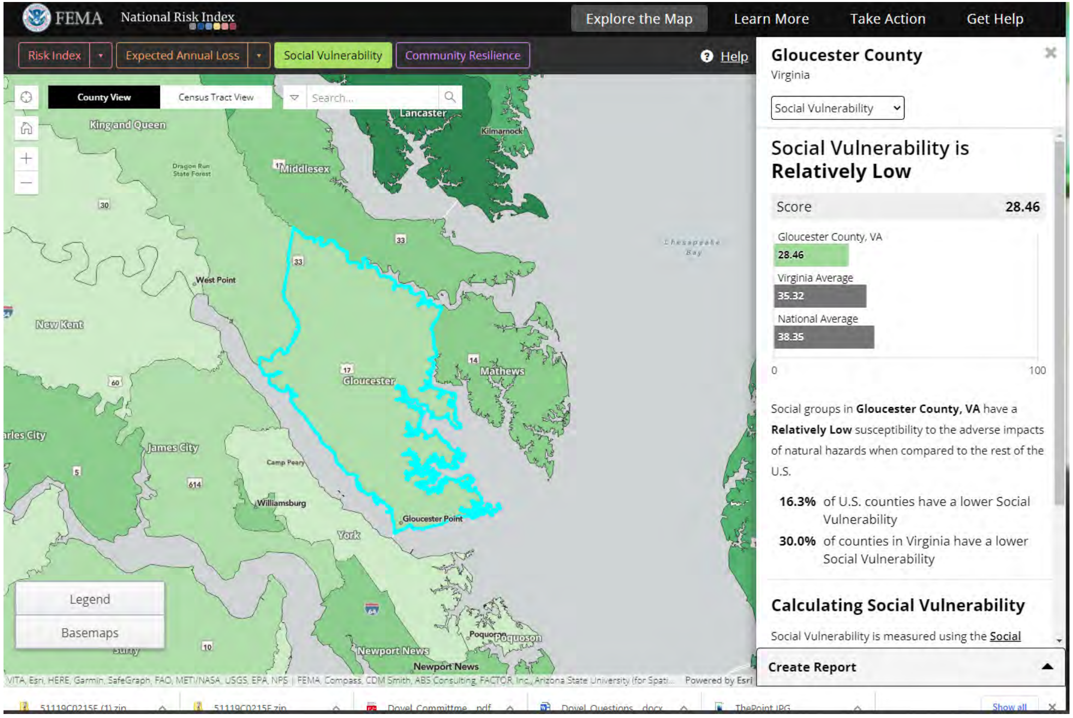


Gloucester County
Virginia

Social Vulnerability

Social Vulnerability is **Relatively Low**

Score 28.46

Gloucester County, VA 28.46
Virginia Average 35.32
National Average 38.35

Social groups in **Gloucester County, VA** have a **Relatively Low** susceptibility to the adverse impacts of natural hazards when compared to the rest of the U.S.

16.3% of U.S. counties have a lower Social Vulnerability

30.0% of counties in Virginia have a lower Social Vulnerability

Calculating Social Vulnerability

Social Vulnerability is measured using the Social

Create Report

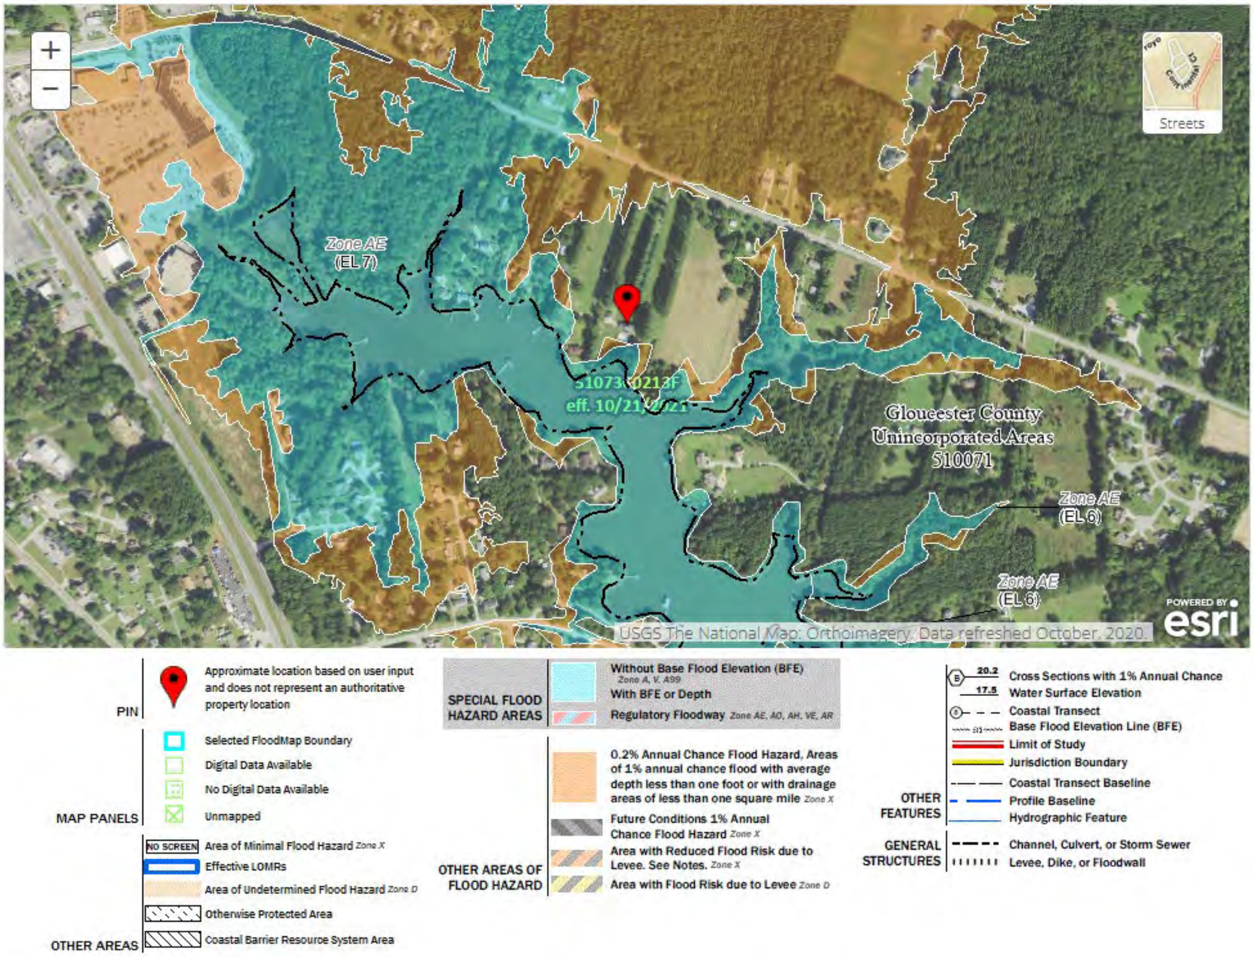
The project is located at 7822 Guinea Road, Hayes, VA 23072 (-76.4719, 37.26869). The property was purchased in 1975 and has experienced a number of issues the past 45+ years. The property owner's father tried to stop erosion on the approximately 300-400 feet long shoreline several years ago by bulkheading using old railroad ties which are coated with creosote. Over the years, many have floated out into the creek and river, potentially causing other harmful impacts to the environment. It would be ideal to remove the remaining railroad ties and do shoreline remediation with natural grasses to enhance the ecosystem. Additionally, although there are not currently any tree deaths falling into water, erosion due to wind and wave action is getting close enough that a few trees are close to falling. There have been other erosion issues increasingly getting closer to the septic system. See accompanying pictures.

Photos of railroad ties lining the shoreline and mature tree close to the shoreline.

Please see **Appendix 2** for additional property photos.

This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 3** for the FIRMettes (last mapped 10/21/2021).

Figure 9: Map of FEMA Flood Zones

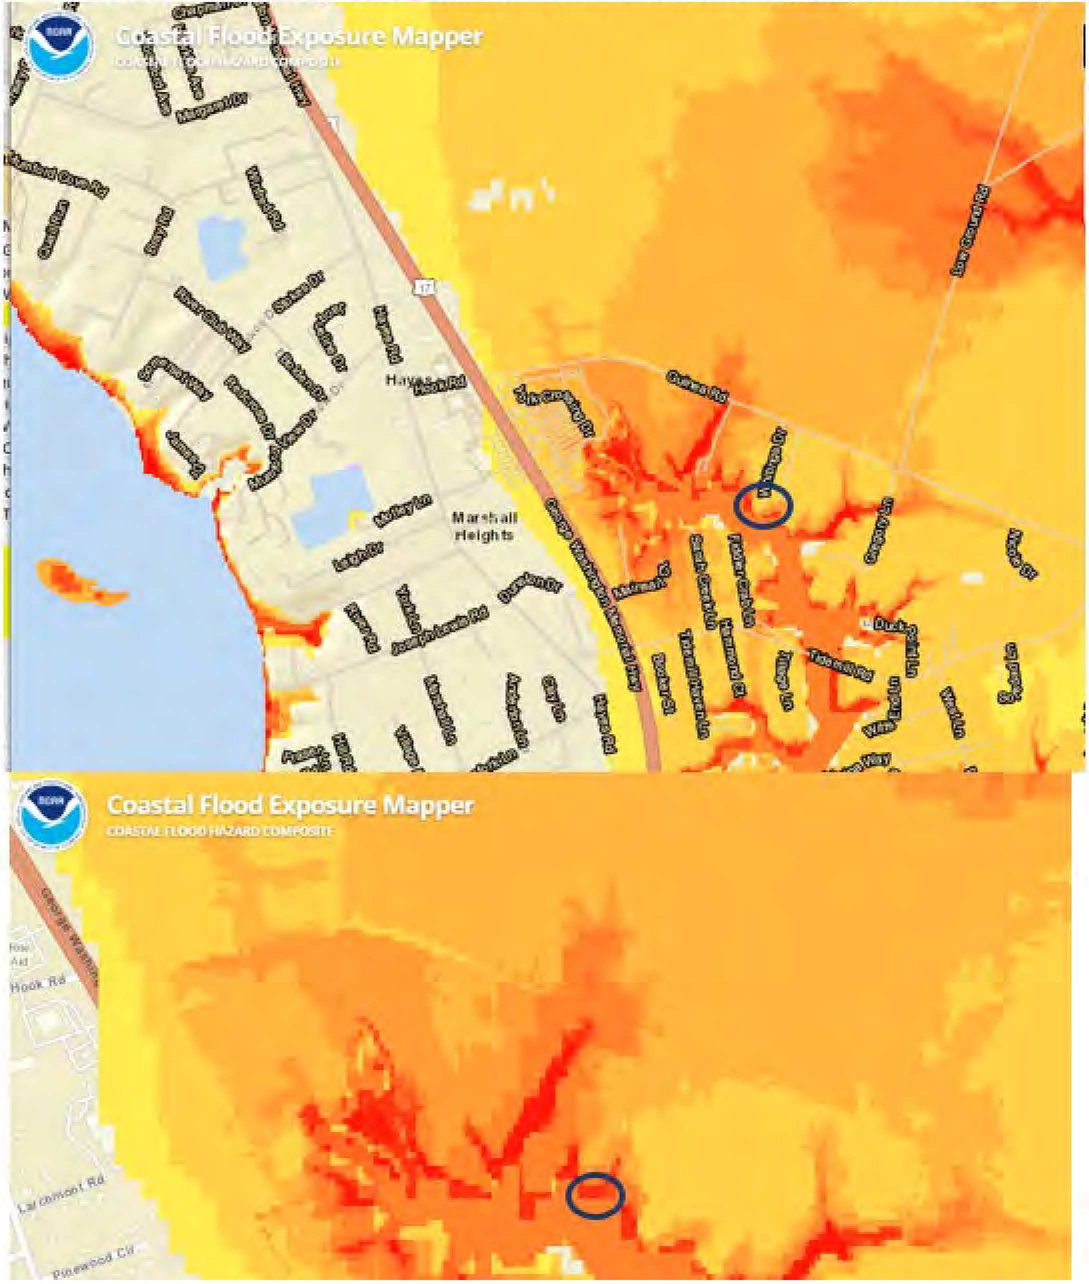


Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate change of 4,342.8 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 87 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 (Purple) and 2017 (red).

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 11**.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Gloucester County's current floodplain ordinance can be found at: http://gloucestercounty-va.elaws.us/code/coor_ch8.5.*

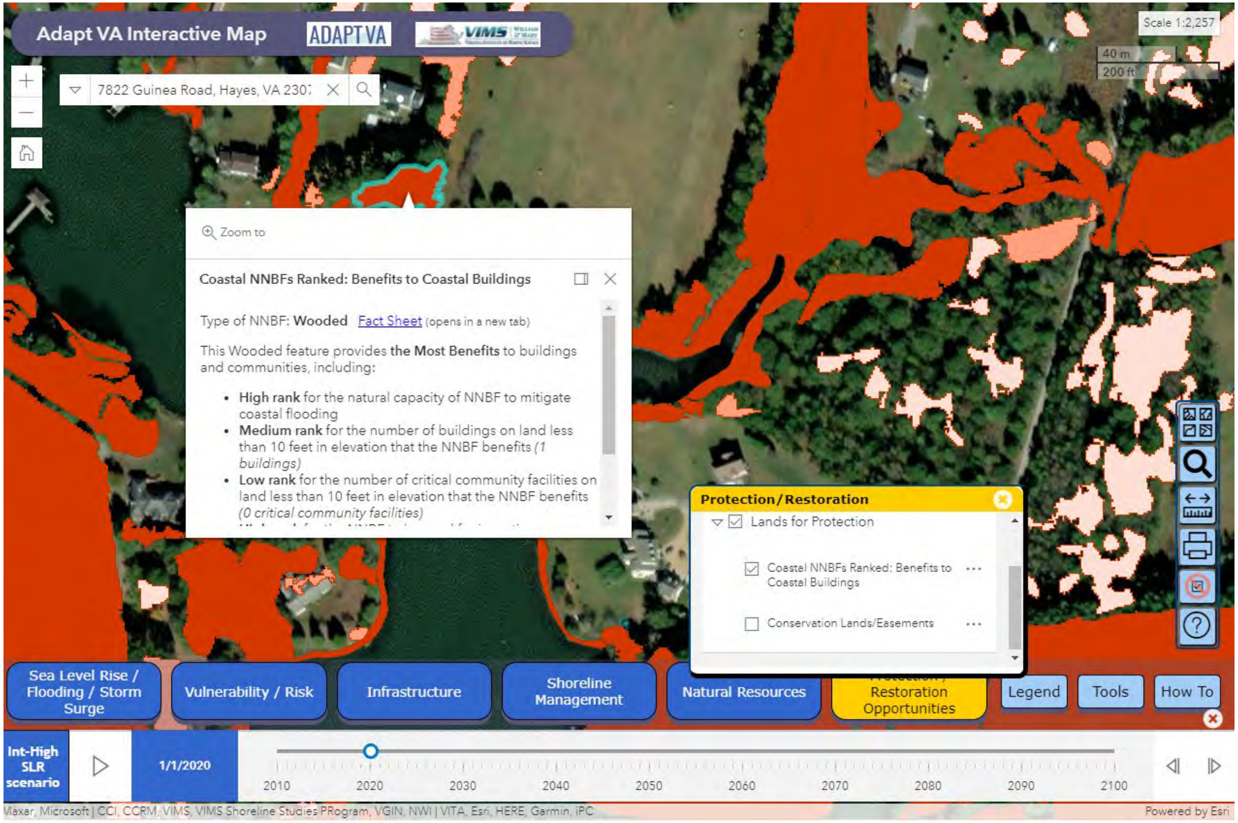
COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12**. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Wooded** Fact Sheet (opens in a new tab)

This Wooded feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **Medium rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(1 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*

Protection/Restoration

☑ Coastal NNBFs Ranked: Benefits to Coastal Buildings

☐ Conservation Lands/Easements

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, the Middle Peninsula PDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Gloucester County, which is local government, public schools, and the medical community.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, a proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Figure 13. Project Flood Hazard Area

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six-month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	M1	M2	M3	M4	M5	M6
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

<u>Long Term Planning</u>

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

A maintenance plan is not applicable in this application. The proposed project is to develop a

nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**

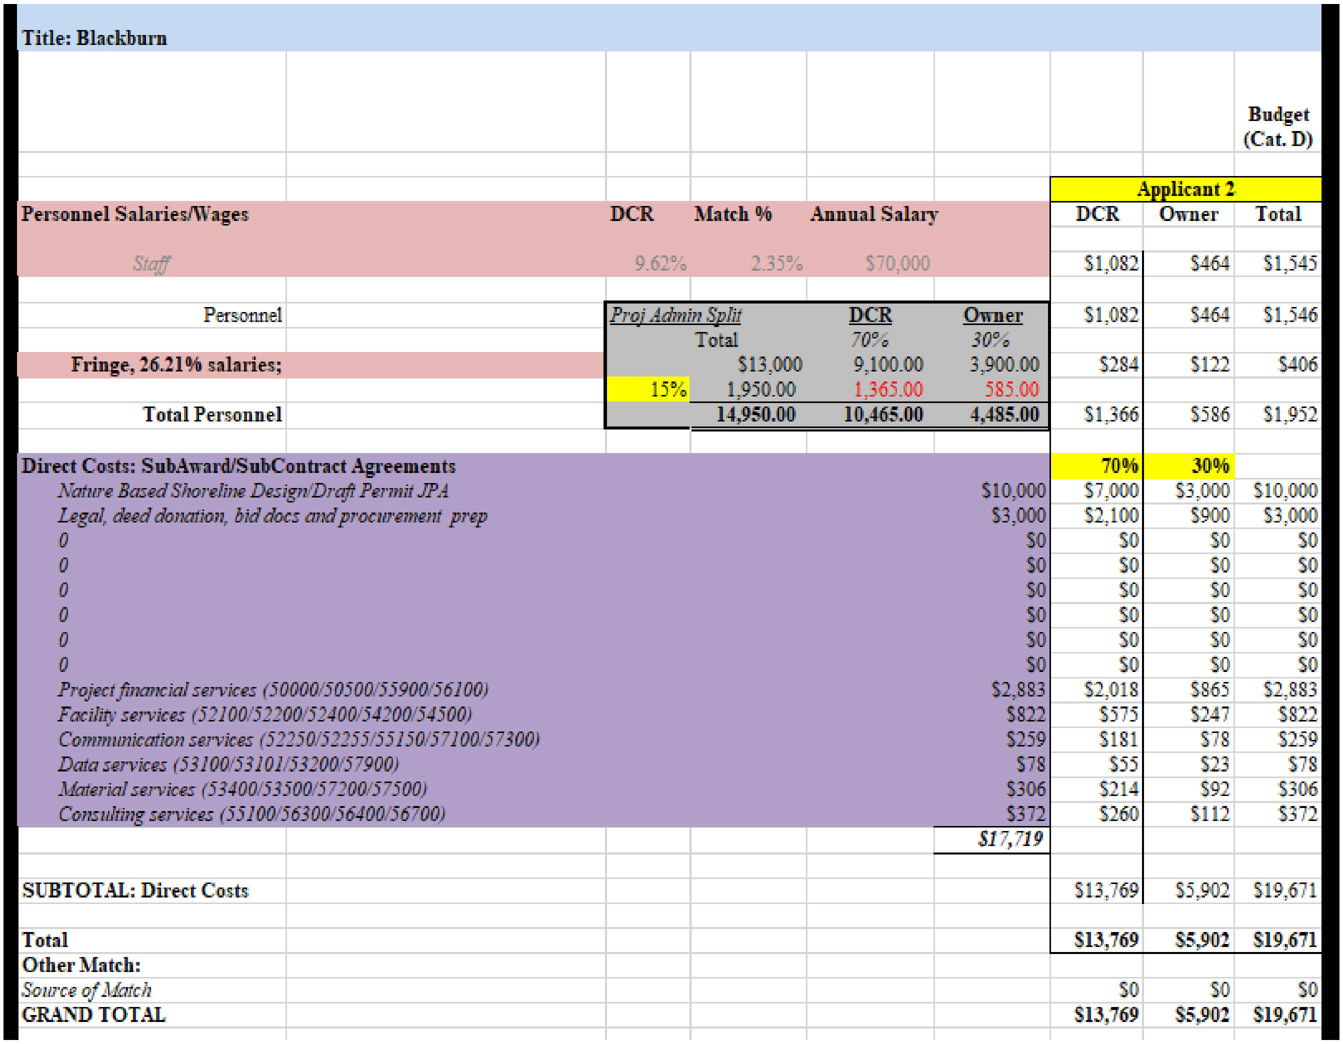
III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that reside in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not reside in a low-income area, then the following does not apply. For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

The proposed project budget is:
Estimated total project cost: $19,671
Amount of funds requested from the Fund: $13,769



Title: Blackburn

							Budget (Cat. D)
					Applicant 2

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

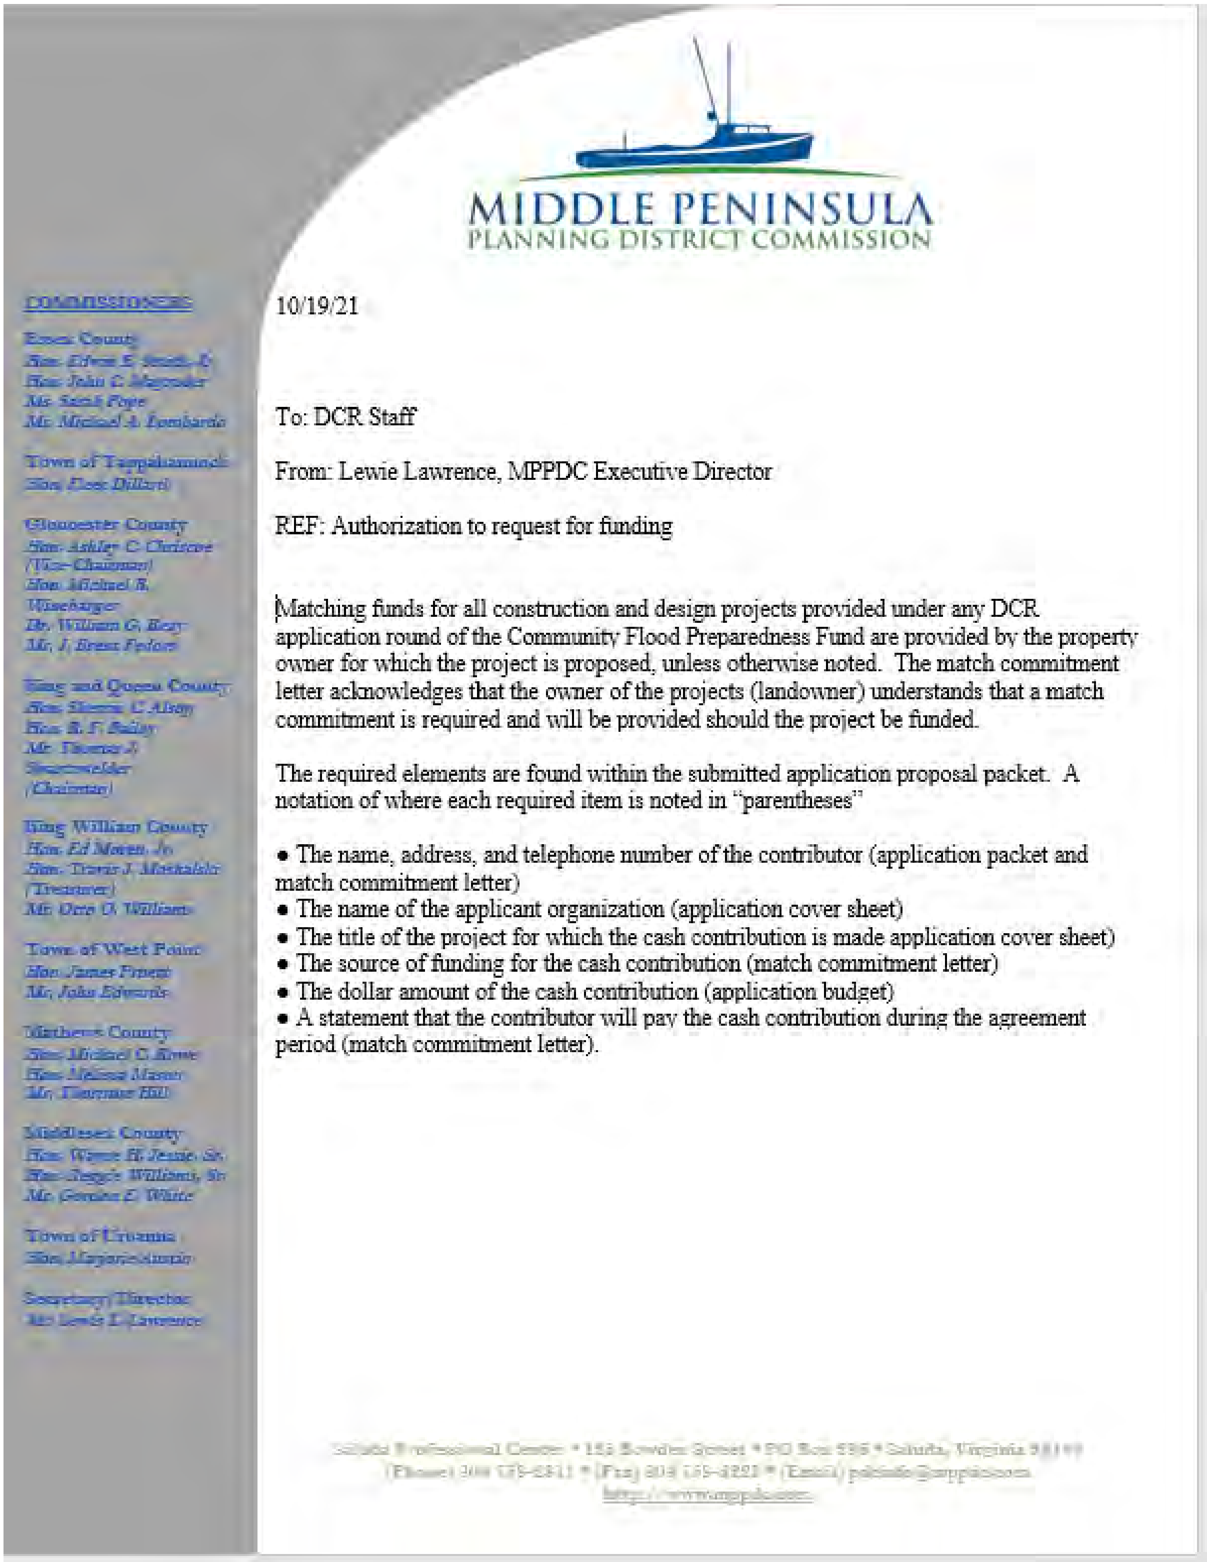
Authorization to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at (757)593-2972 or by email at fblackburncleaning60@hotmail.com
Sincerely,

Frances Blackburn

The applicant also owns a parcel on Monday creek in Gloucester County and is willing to donate the parcel to the Middle Peninsula Chesapeake Bay Public Access Authority for nature-based flood protection as part of the required match.

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

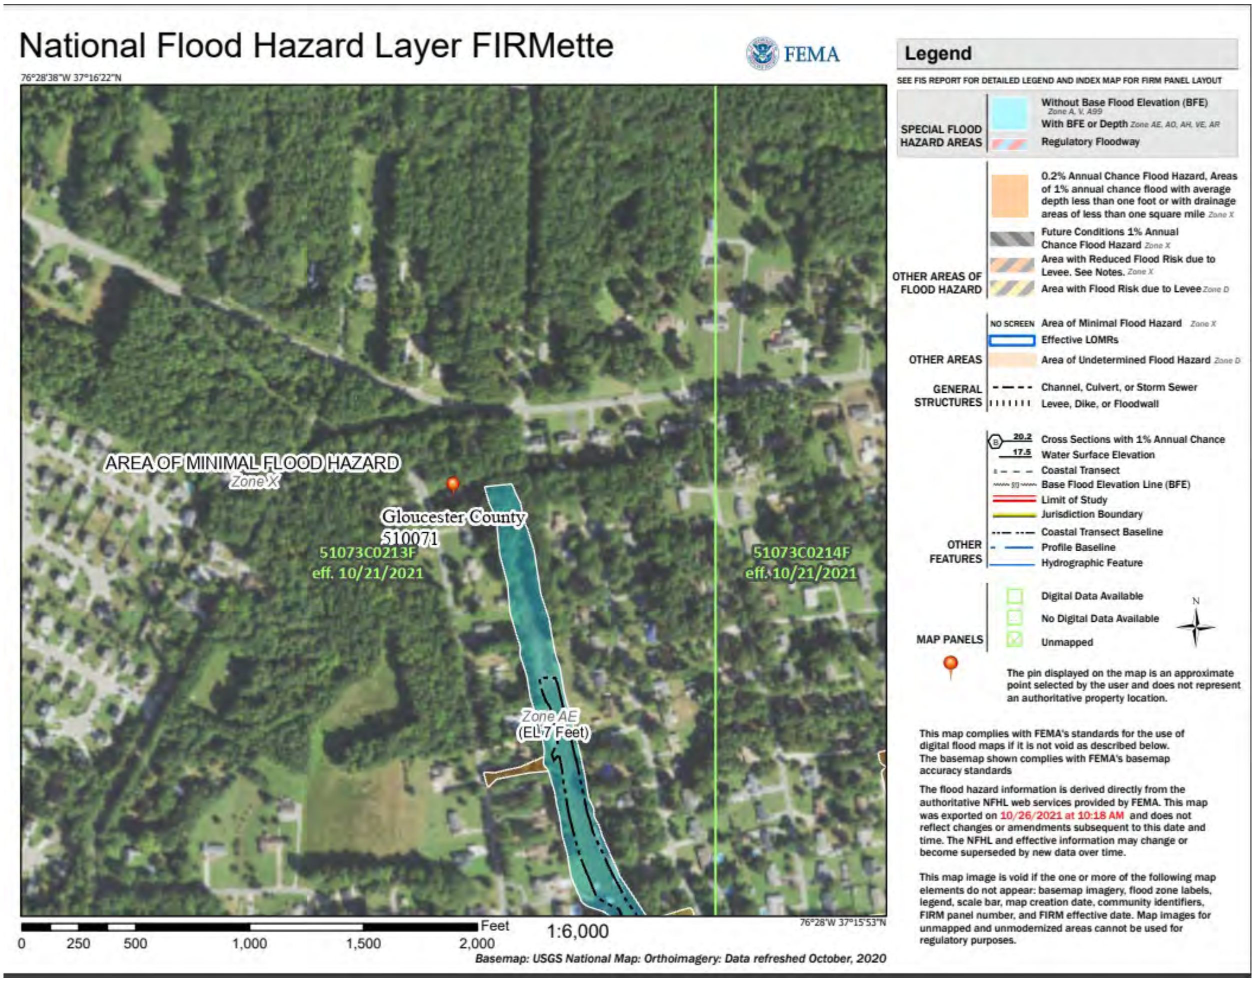
Project Location FIRMette

(FIRMette #: 51073C0213F)



The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 10/26/2021 at 10:18 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

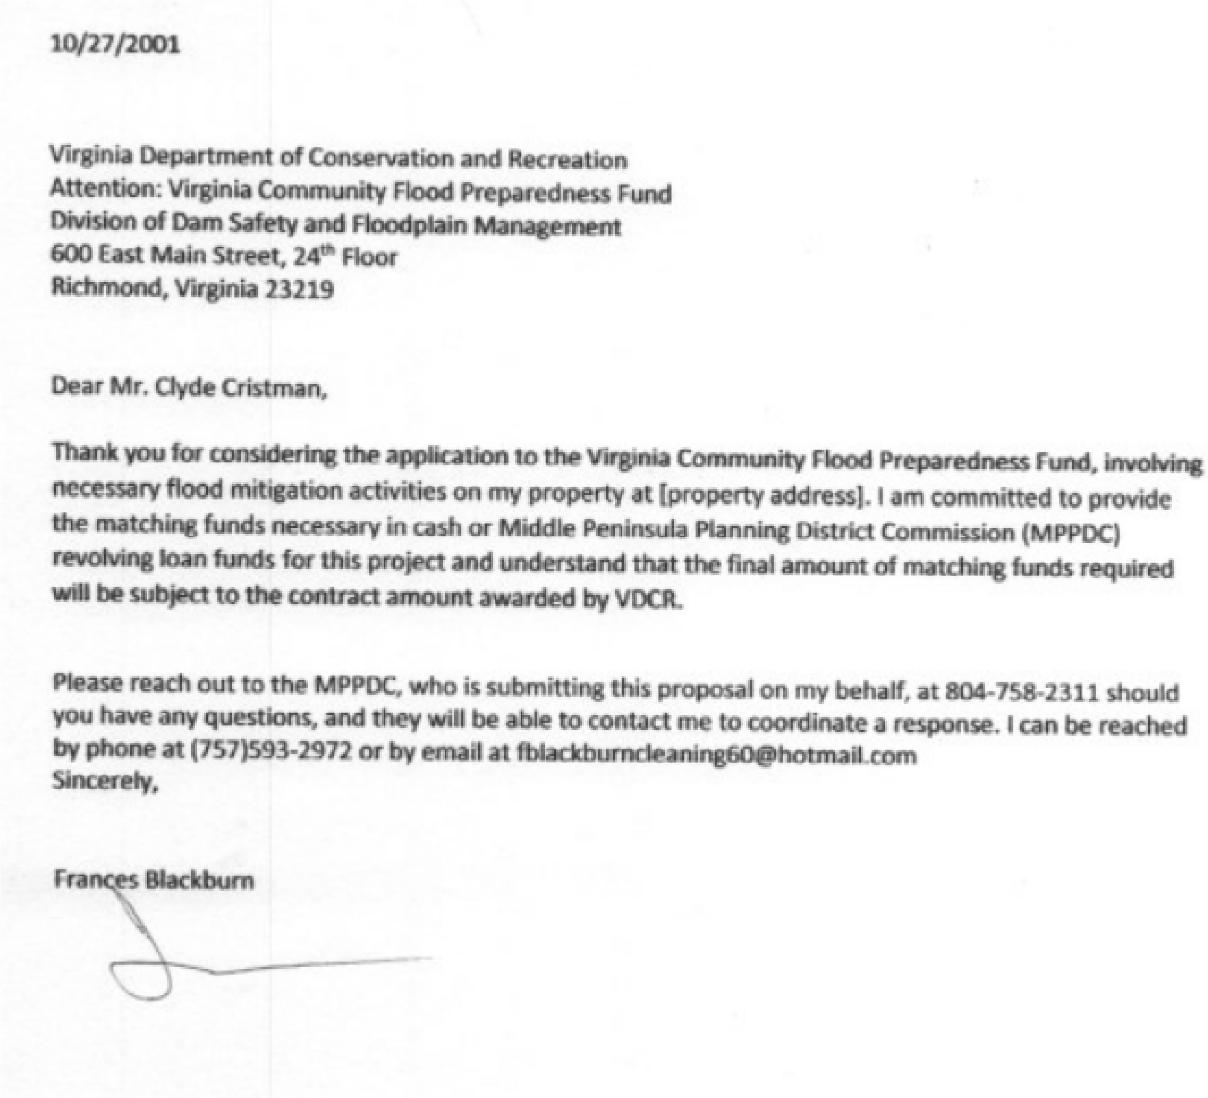
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



10/27/2001

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at (757)593-2972 or by email at fblackburncleaning60@hotmail.com
Sincerely,

Frances Blackburn

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Gloucester County **-** Please see the attached corresponding maps for this application.

Total Amount Requested: *$12,180*

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. The applicant is partnering with adjoining landowner who previously submitted a proposal during Round 1, creating a greater community-scale impact.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of "nature-based solutions", "ecosystem-based adaptation," "eco-DRR," or "green infrastructure" has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a shoreline on a private property located on Marshfield Lane in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

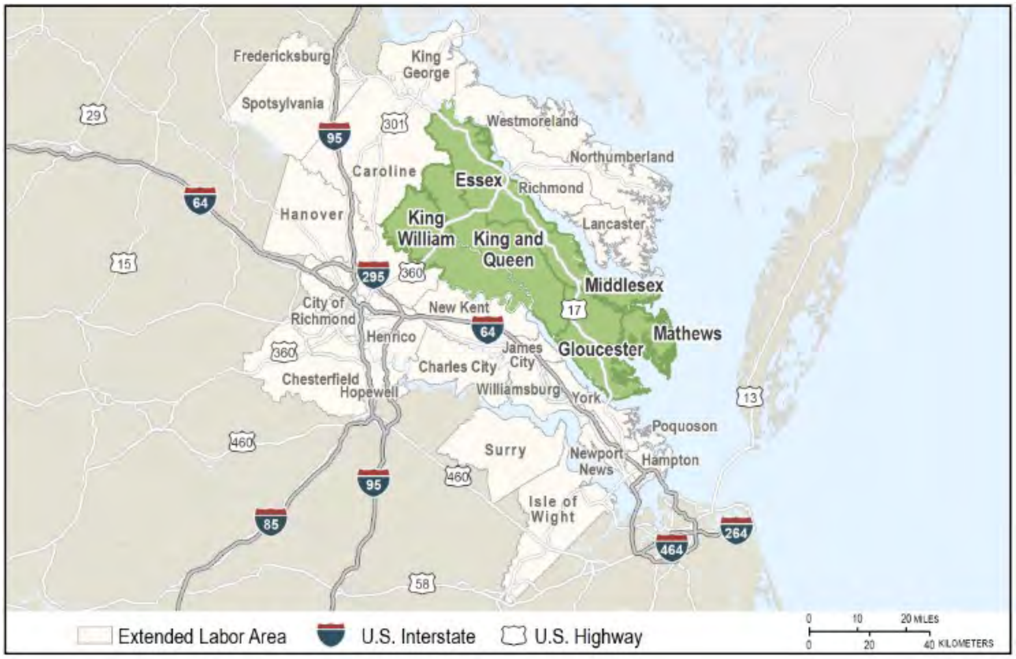

Figure 2. Middle Peninsula Population

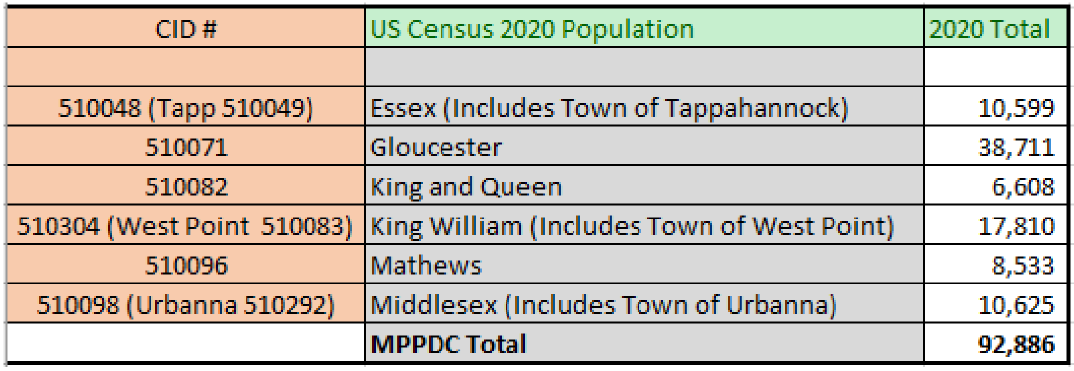
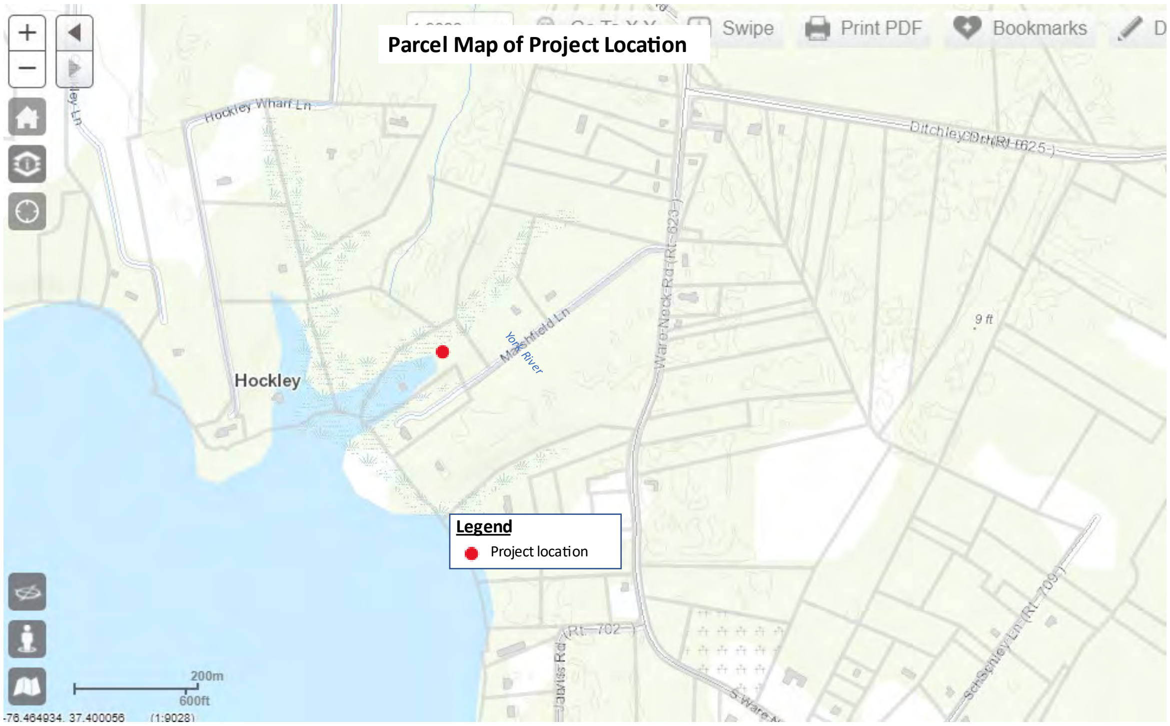


CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on Marshfield Lane in Gloucester County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

Figure 4. Parcel Map of Project Location



Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas

Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

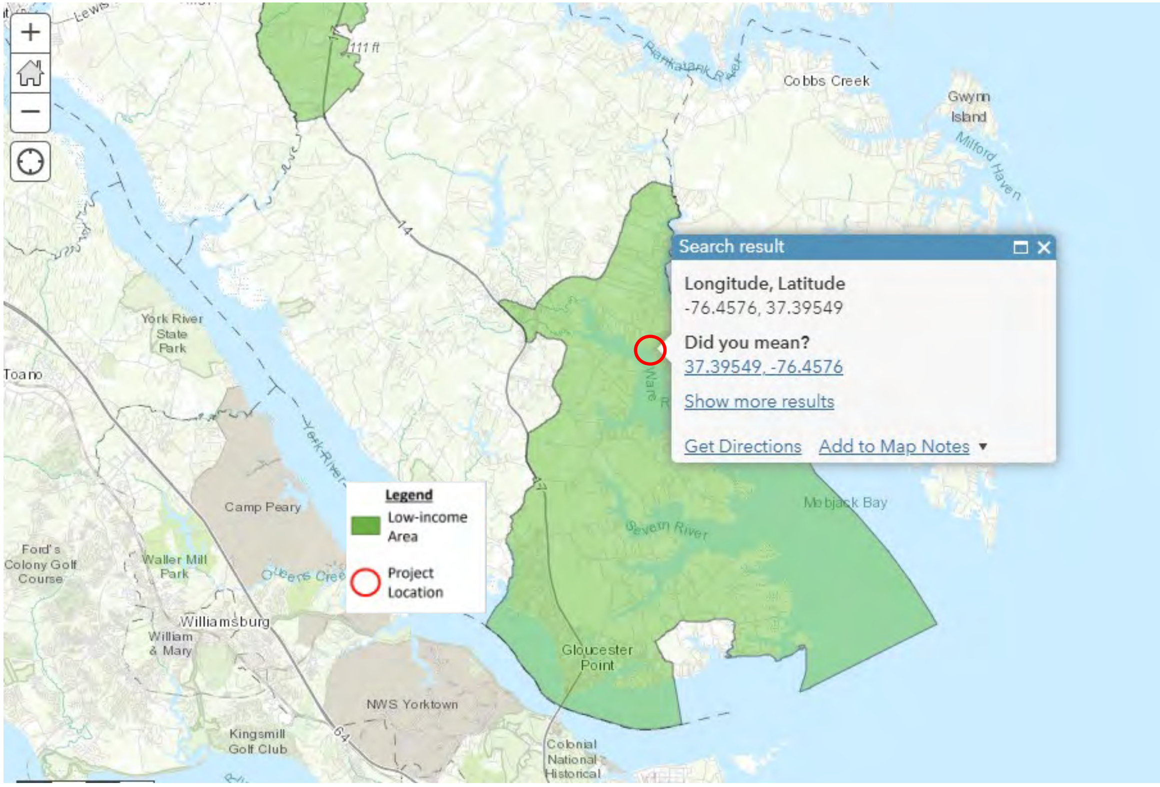
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

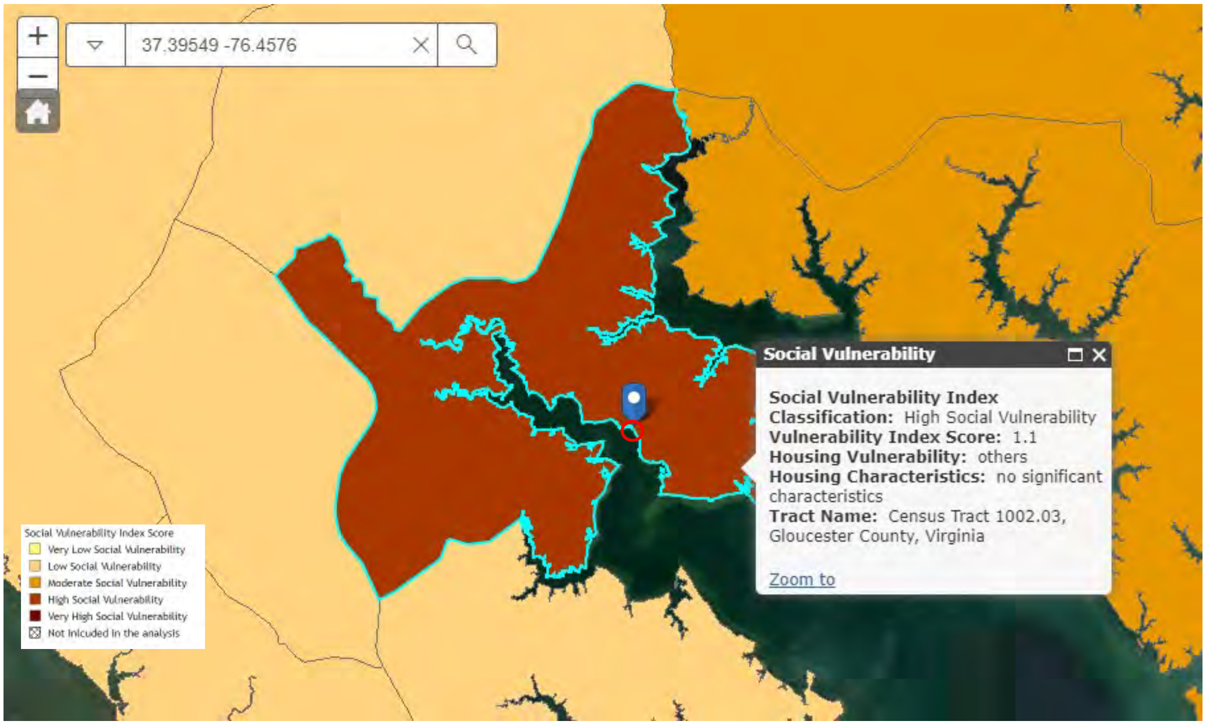
Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a high social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively low level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability

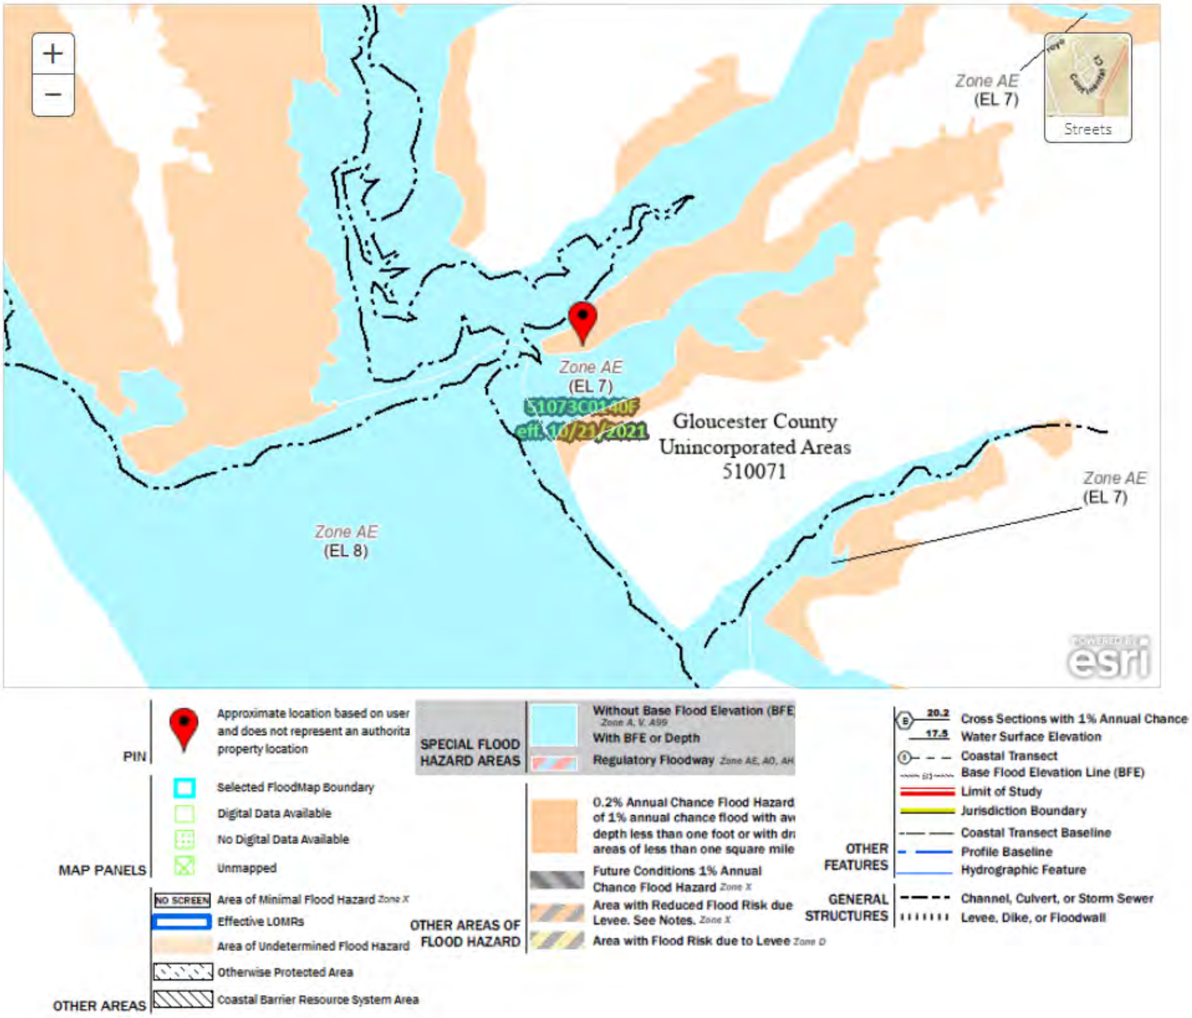
Create Report

The project is located at 8651 Marshfield Lane, Gloucester, VA 23061 (-76.4576, 37.39549). The property was purchased in 1994 and has experienced a number of issues over nearly three decades. There is significant erosion along the shoreline due to wave and wind action (length of shoreline is approximately 700 feet). Over the past few years, the bank began falling into the marsh. Because it is tidal, the bank is now a shear drop off. There are a number of large trees along the edge that could fall into the water, especially as erosion continues or if there is a direct impact from a strong storm. See accompanying pictures below.

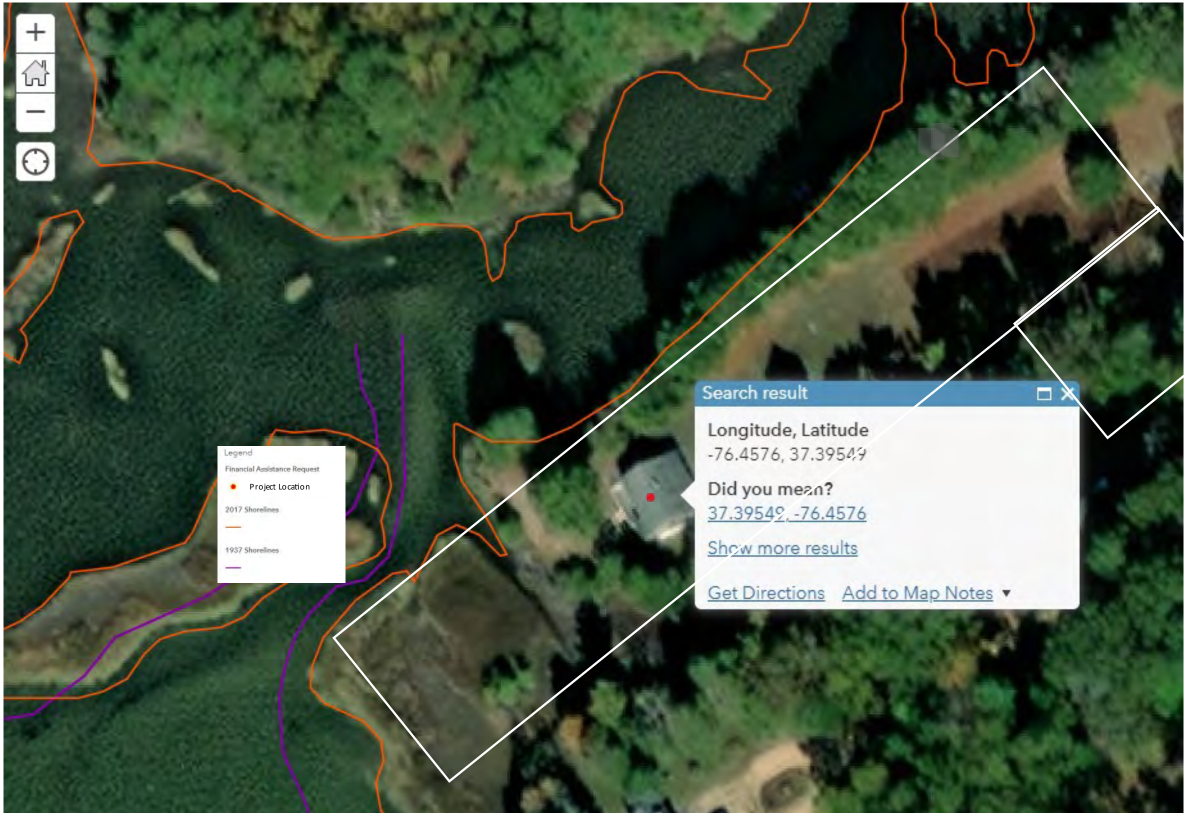
This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 2** for the FIRMettes (last mapped 5/18/2015).

Figure 9: Map of FEMA Flood Zones



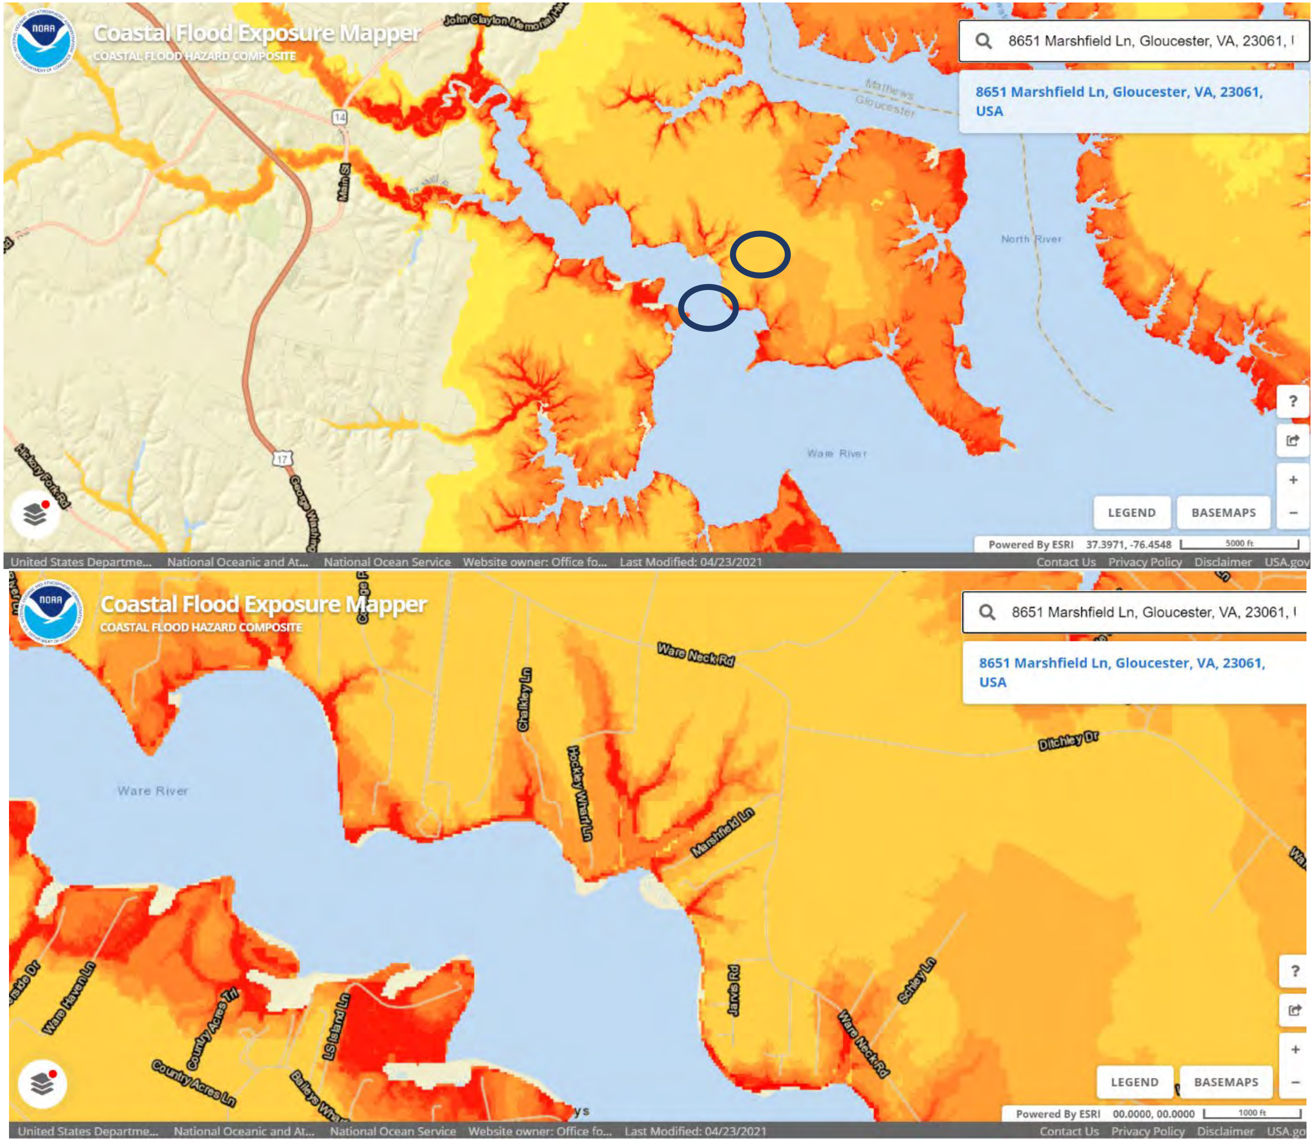
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 17,115.1 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 3** lists 79 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 and 2017



Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 11**.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Gloucester County's current floodplain ordinance can be found at: http://gloucestercounty-va.elaws.us/code/coor_ch8.5.*

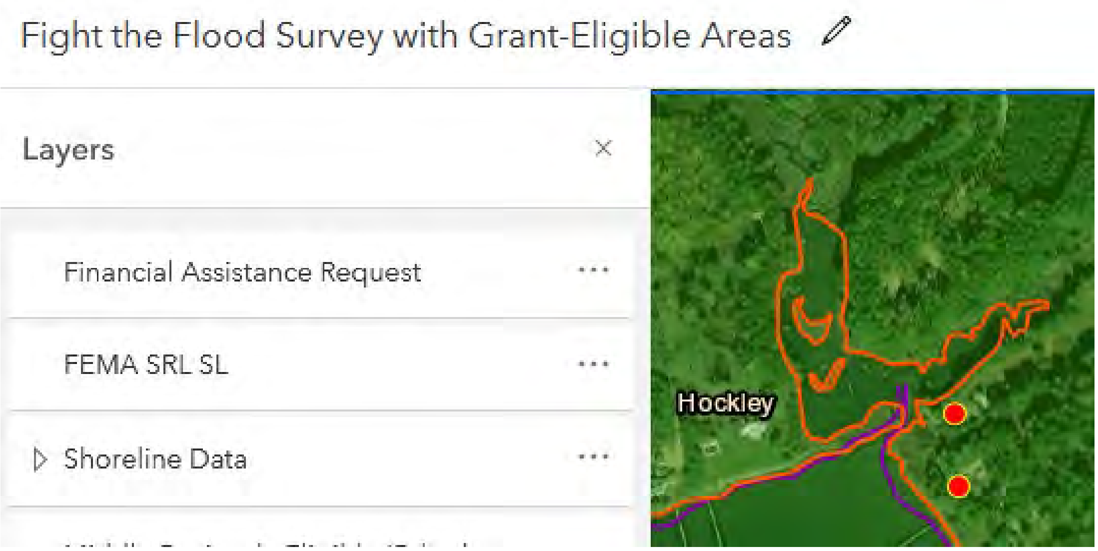
COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines “Community Scale project” which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving “demonstrable flood reduction” benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based “brick in the wall” and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

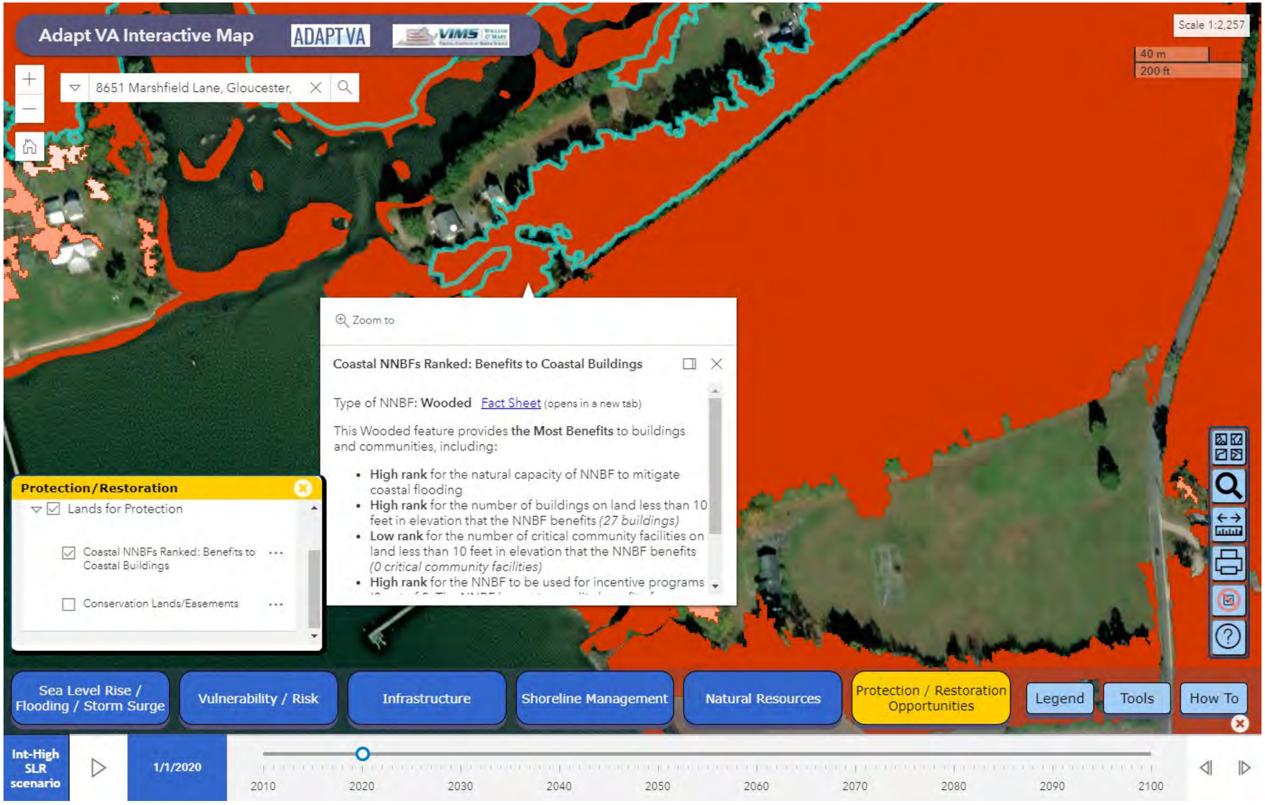
Figure 11A illustrates how Round 1 and Round 2 citizens are partnering for a larger community reach under Fight the Flood.

Figure 11A - FTF partnering applications



Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12**. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Wooded** Fact Sheet (opens in a new tab)

This Wooded feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(27 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **High rank** for the NNBF to be used for incentive programs

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, the Middle Peninsula PDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Gloucester County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, a proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year; therefore, as this proposed design with look to potentially design and eventually construct a 700 ft living shoreline this project will substantially increase the amount of nutrients and sediment. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Figure 13. Project Flood Hazard Area

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six-month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

<u>Long Term Planning</u>

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
  - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 4.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

A maintenance plan is not applicable in this application. The proposed project is to develop a

nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fighttheflоodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 5.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is not a town, city, or county, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index Score.)](#)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		83

SCOPE OF WORK CHECKLIST.

Signed pledge agreement from each contributing organization	☑Yes ☐ No ☐ N/A

III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that reside in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not reside in a low-income area, then the following does not apply. For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

The proposed project budget is:

- ***Estimated total project cost:*** *$17,399*
- ***Amount of funds requested from the Fund:*** *$12,180*

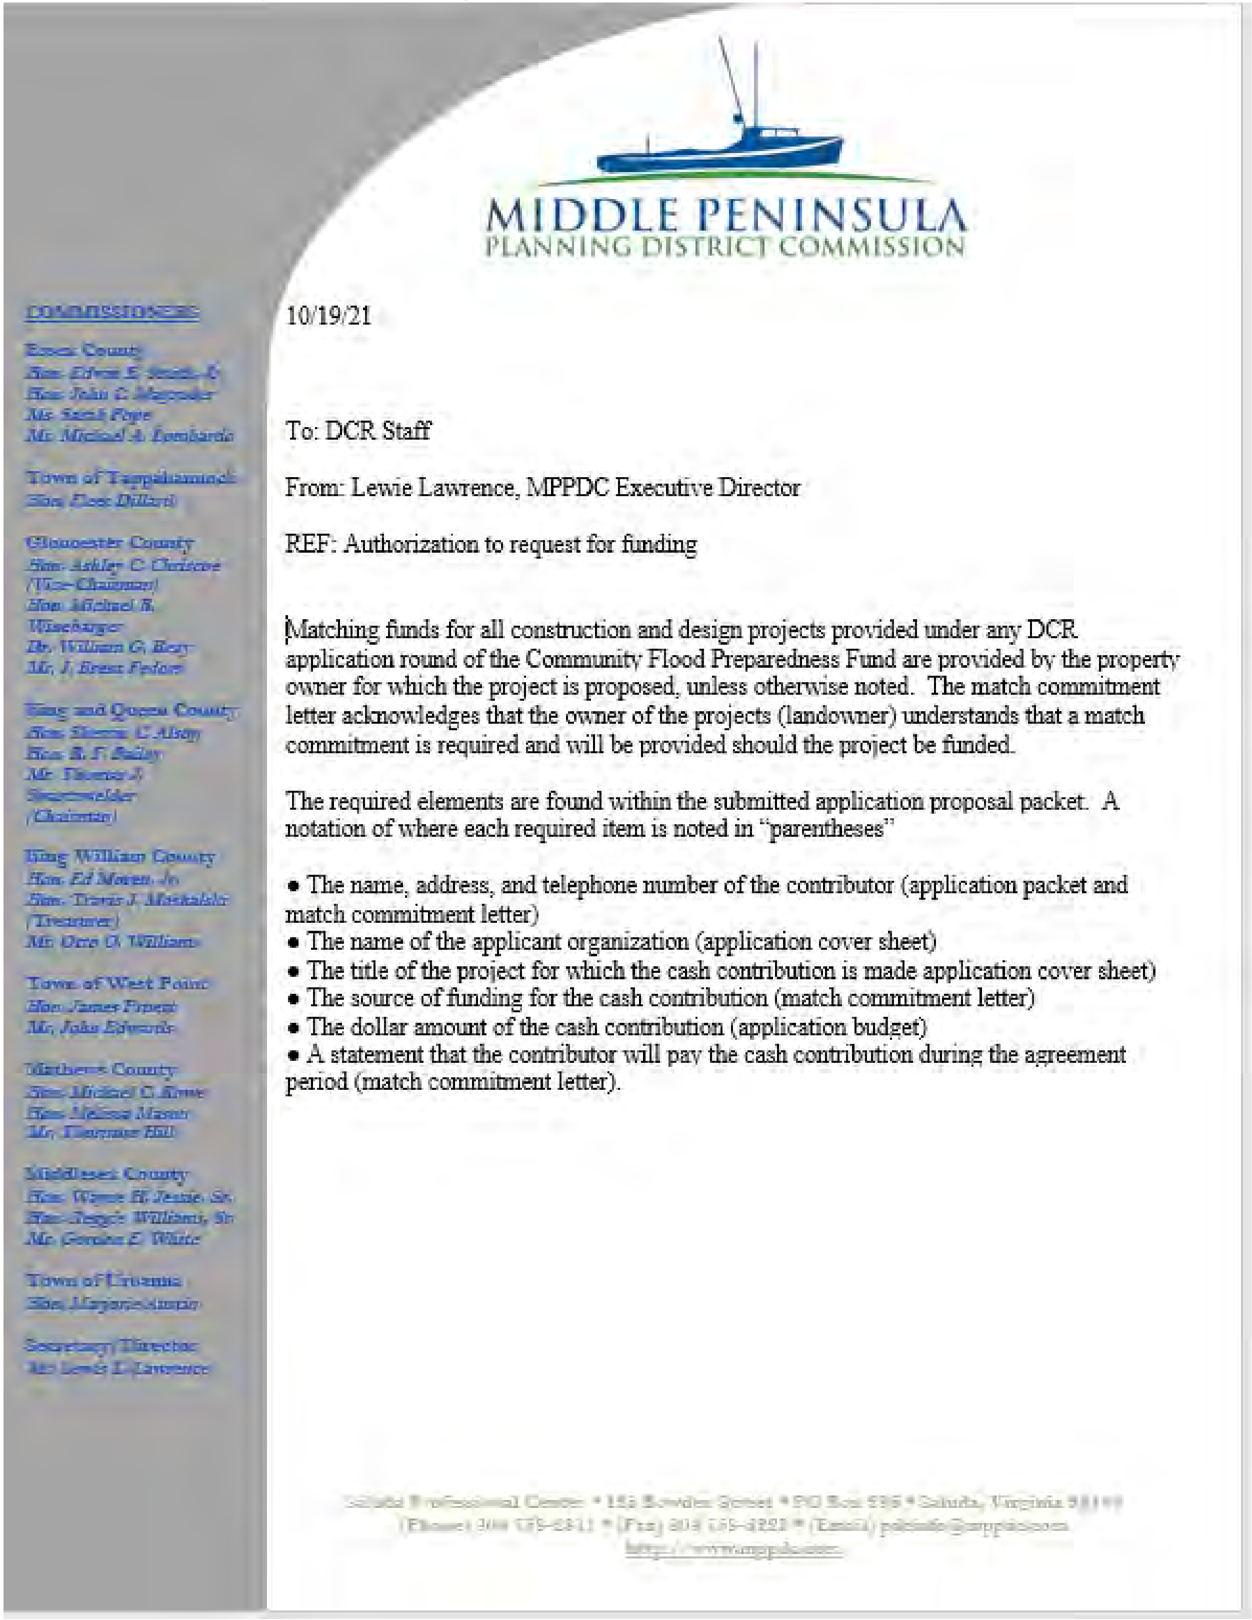
The Middle Peninsula PDC staff will manage and administer this project. The Middle Peninsula PDC staff will manage and administer this project. MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Authorization to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

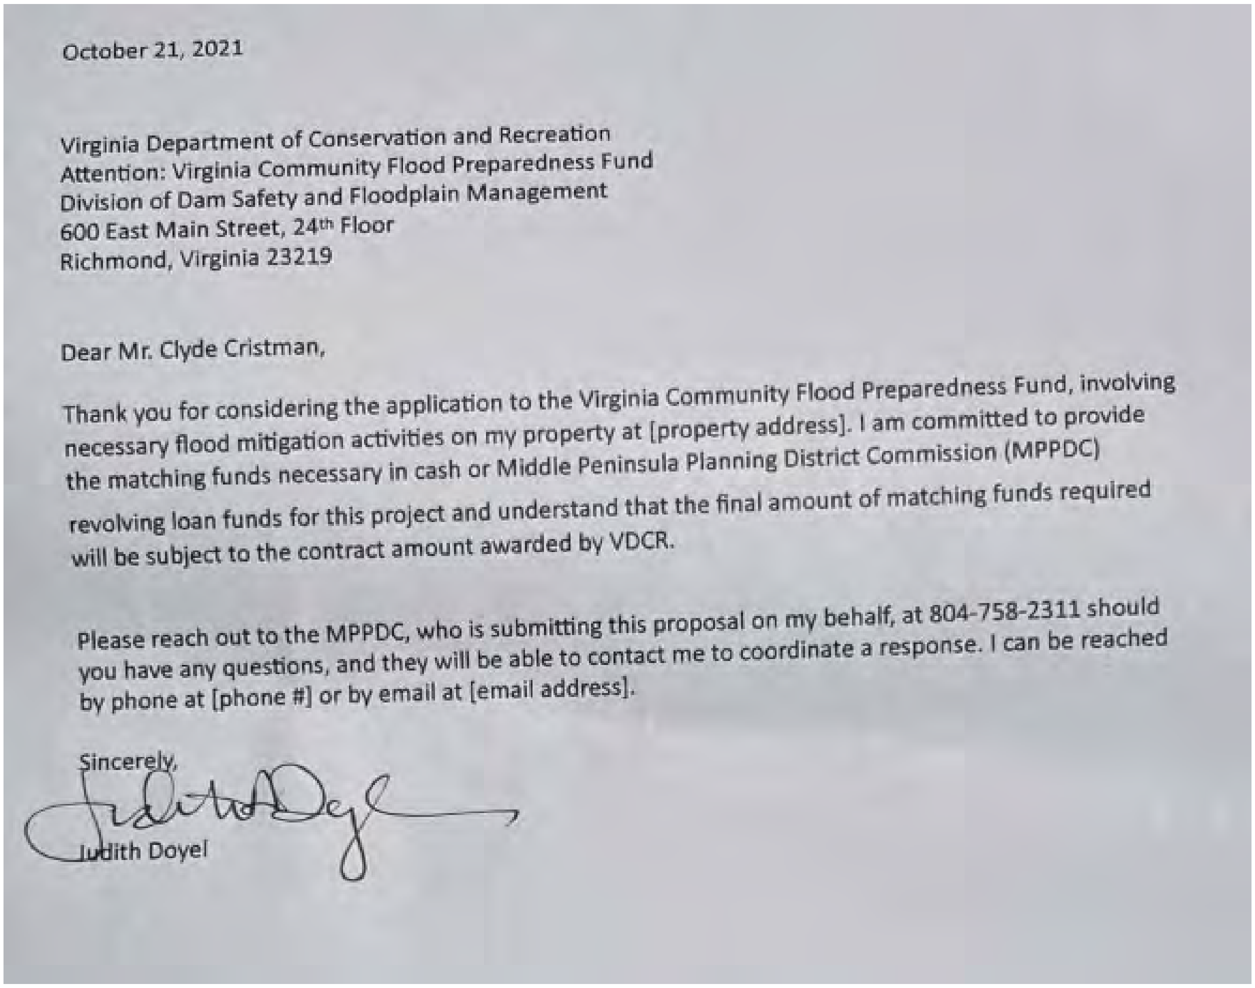
REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Signed pledge agreement from each contributing organization:



October 21, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at [phone #] or by email at [email address].

Sincerely,

Judith Doyel

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

APPENDIX 4

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

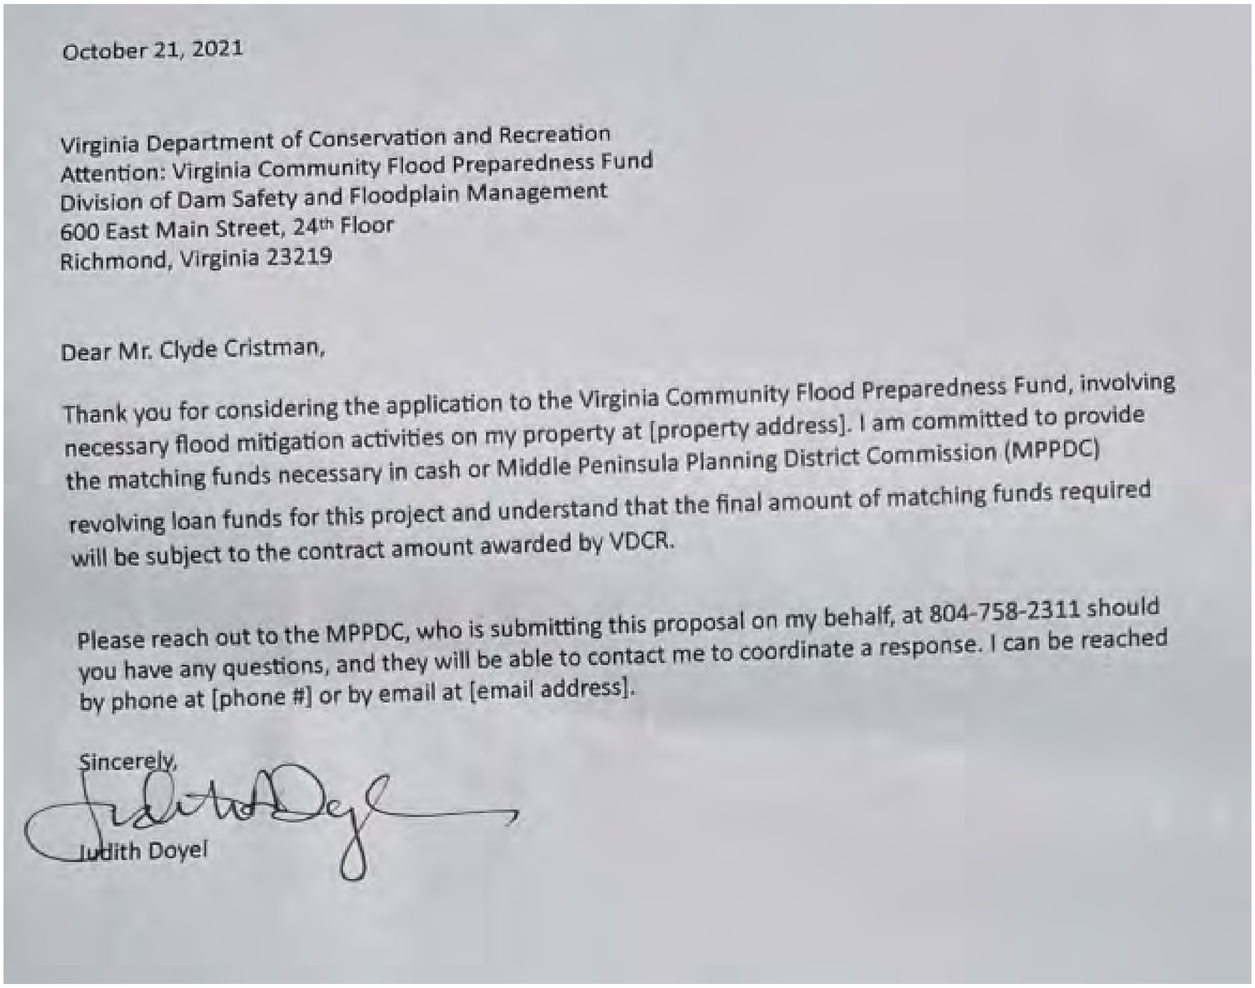
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 5

Match Commitment Letter



October 21, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at [phone #] or by email at [email address].

Sincerely,

Judith Doyel

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Total Cost of Project: $17,399

Total Amount Requested: $12,180

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss in a high energy, high erosion VE flood zone. The Fight the Flood program (Figure 11A) is already having an impact on driving community scale applications with greater reach. Within 700 yds of the project site four Round 1 and Round 2 applicants have applied to the Flood Fund for financial assistance.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of "nature-based solutions", "ecosystem-based adaptation," "eco-DRR," or "green infrastructure" has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely "green" (i.e., consisting of only ecosystem elements) or "hybrid" (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on White Hall Lane in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

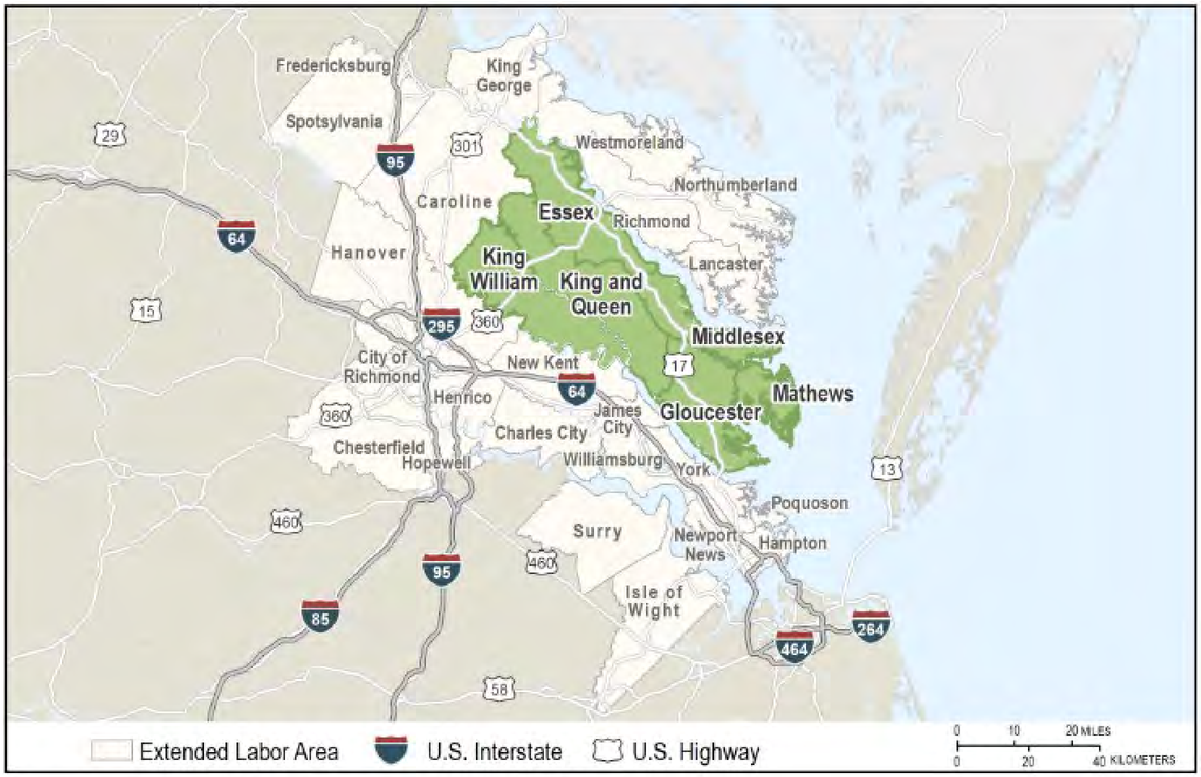

Figure 2. Middle Peninsula Population

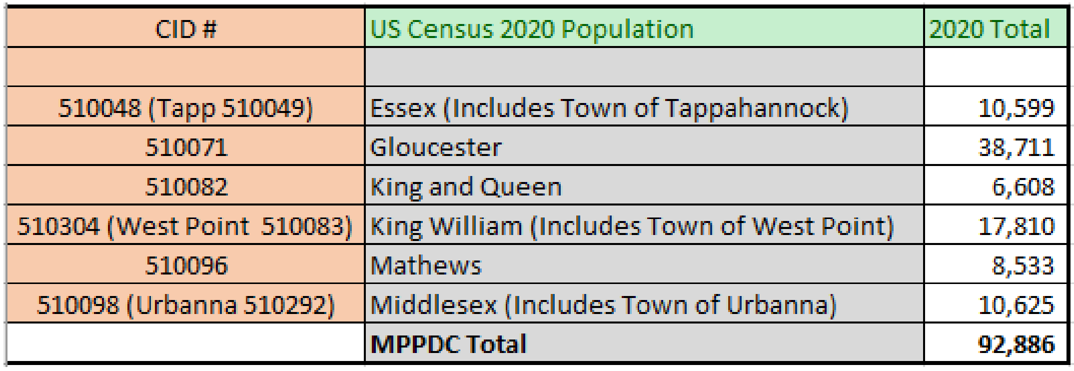

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810

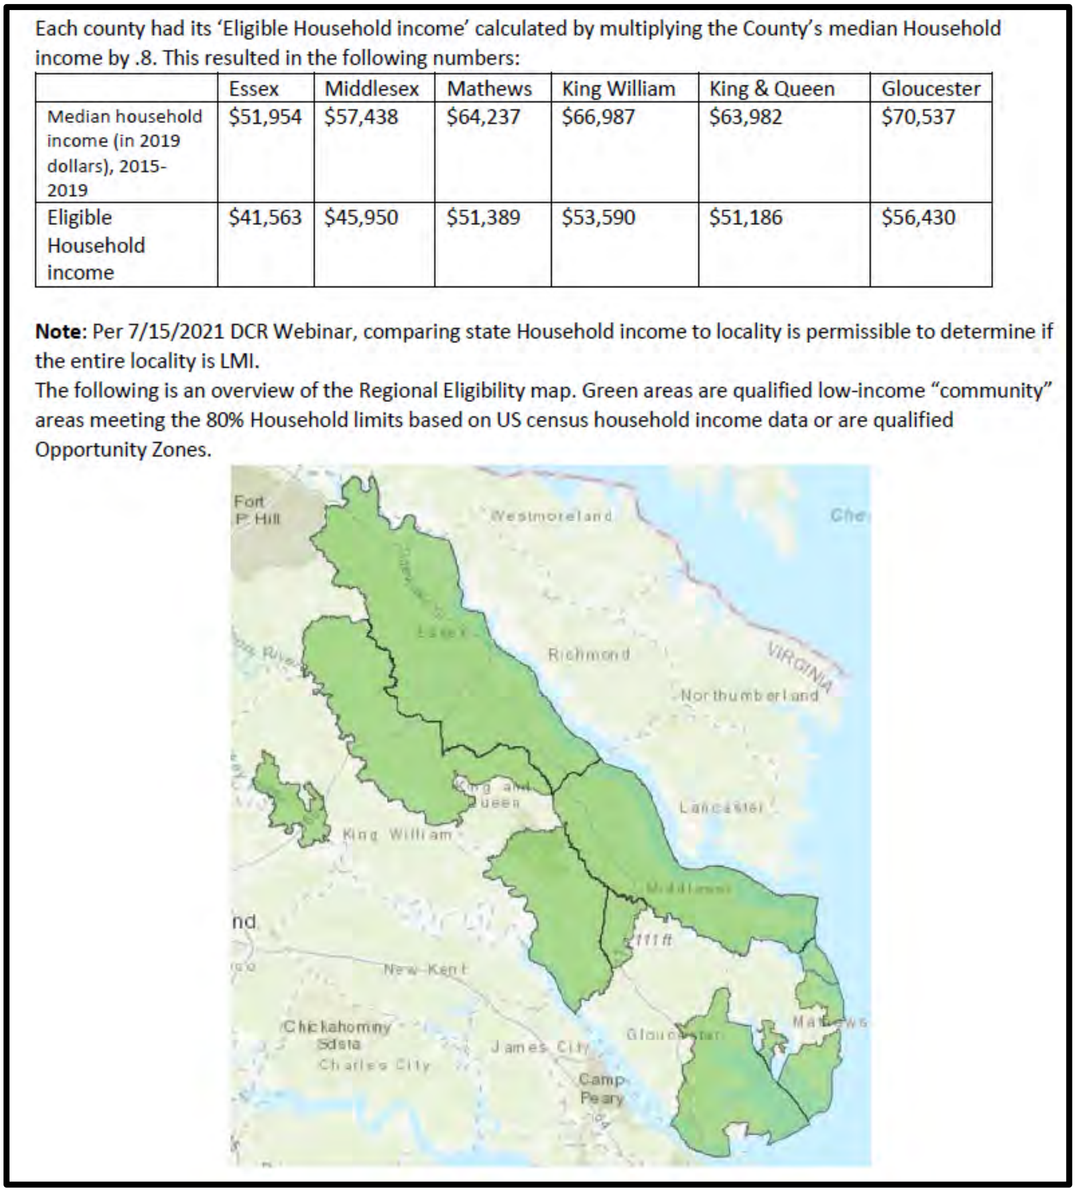
Tax Map Number: 40-172

Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

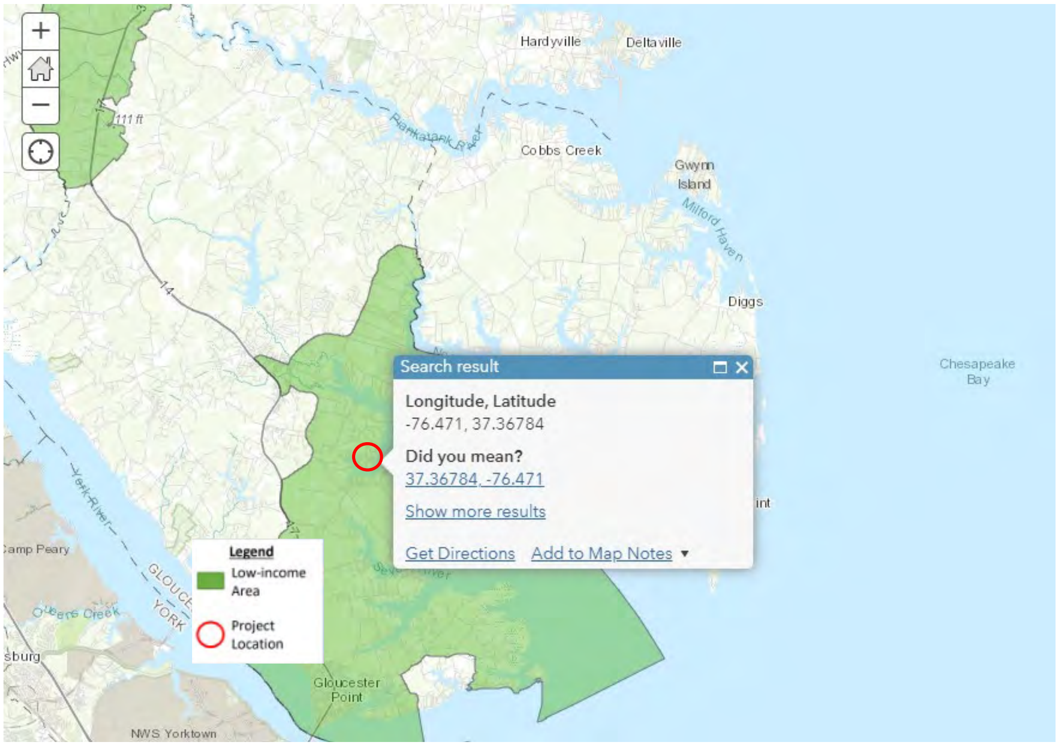
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

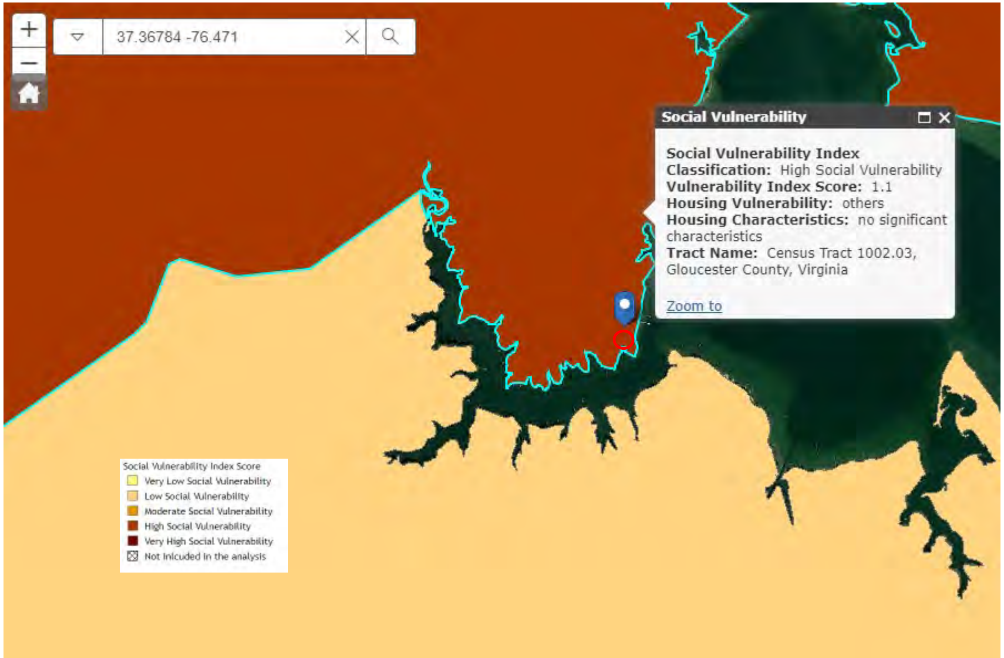
Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



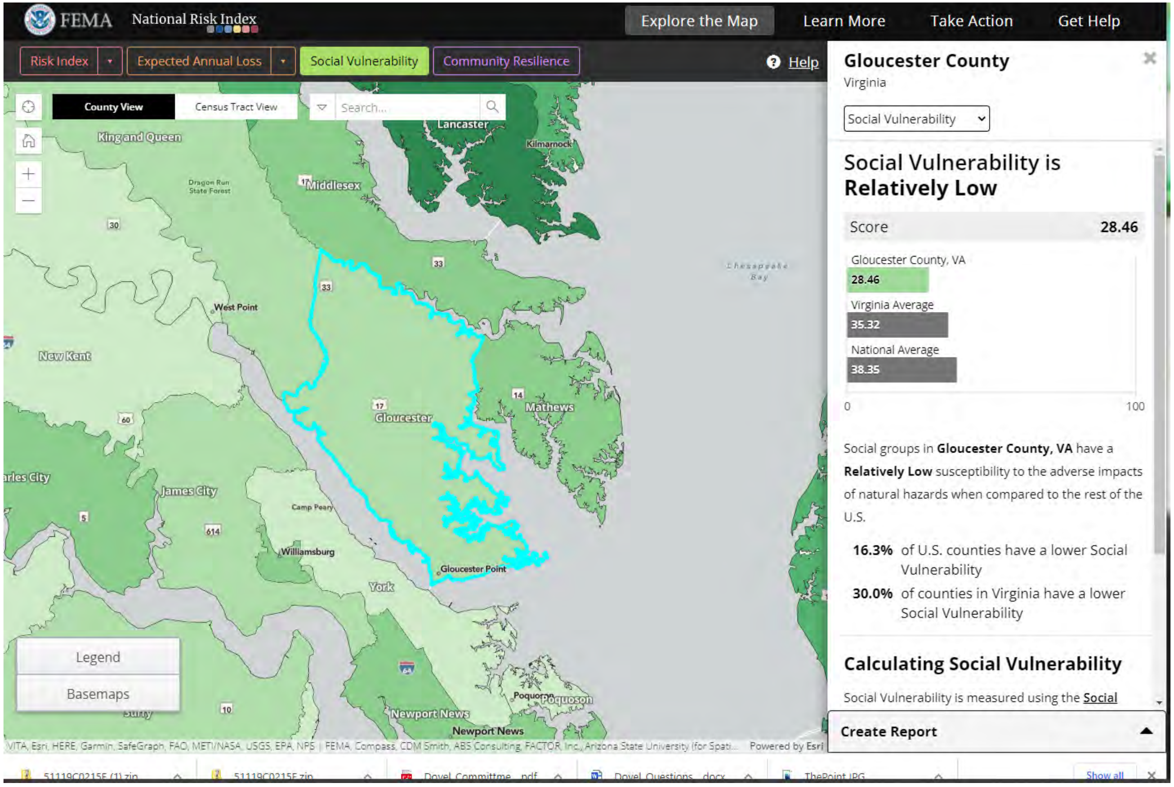
According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a high social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively low level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability Index
Classification: High Social Vulnerability
Vulnerability Index Score: 1.1
Housing Vulnerability: others
Housing Characteristics: no significant characteristics
Tract Name: Census Tract 1002.03, Gloucester County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Gloucester County
Virginia

Social Vulnerability is Relatively Low

Score	28.46
Gloucester County, VA	28.46
Virginia Average	35.32
National Average	38.35

0 100

Social groups in **Gloucester County, VA** have a **Relatively Low** susceptibility to the adverse impacts of natural hazards when compared to the rest of the U.S.

16.3%	of U.S. counties have a lower Social Vulnerability
30.0%	of counties in Virginia have a lower Social Vulnerability

Calculating Social Vulnerability

Social Vulnerability is measured using the Social

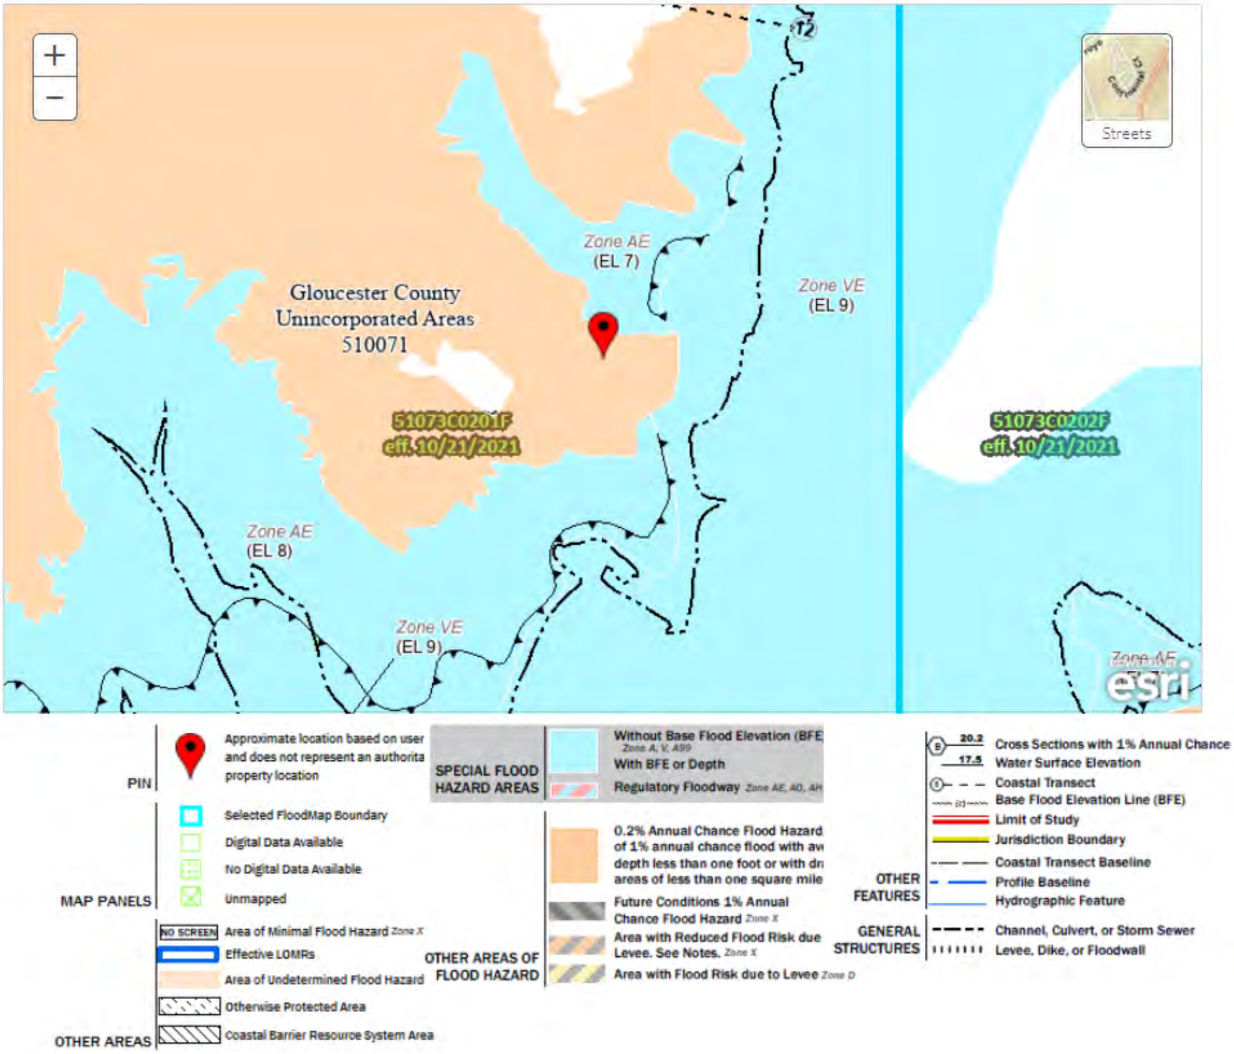
The project is located at 5583 White Hall Road, Gloucester VA 23061 (-76.471, 37.36784). The property was purchased in 1982 and has experienced a number of issues the past 40 years. Upon purchase of the property, there was once a reference stake of the edge of the loam in

1982. There was minor erosion at first, then occurring more rapidly in the past 10 years with significant changes in last three years, especially along south portion of shoreline where high tides reach the lawn and escarping areas (shoreline is approximately 425 feet). See accompanying pictures below.

Please see **Appendix 2** for additional property photos.

This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 3** for the FIRMettes (last mapped 10/21/2021).

Figure 9: Map of FEMA Flood Zones

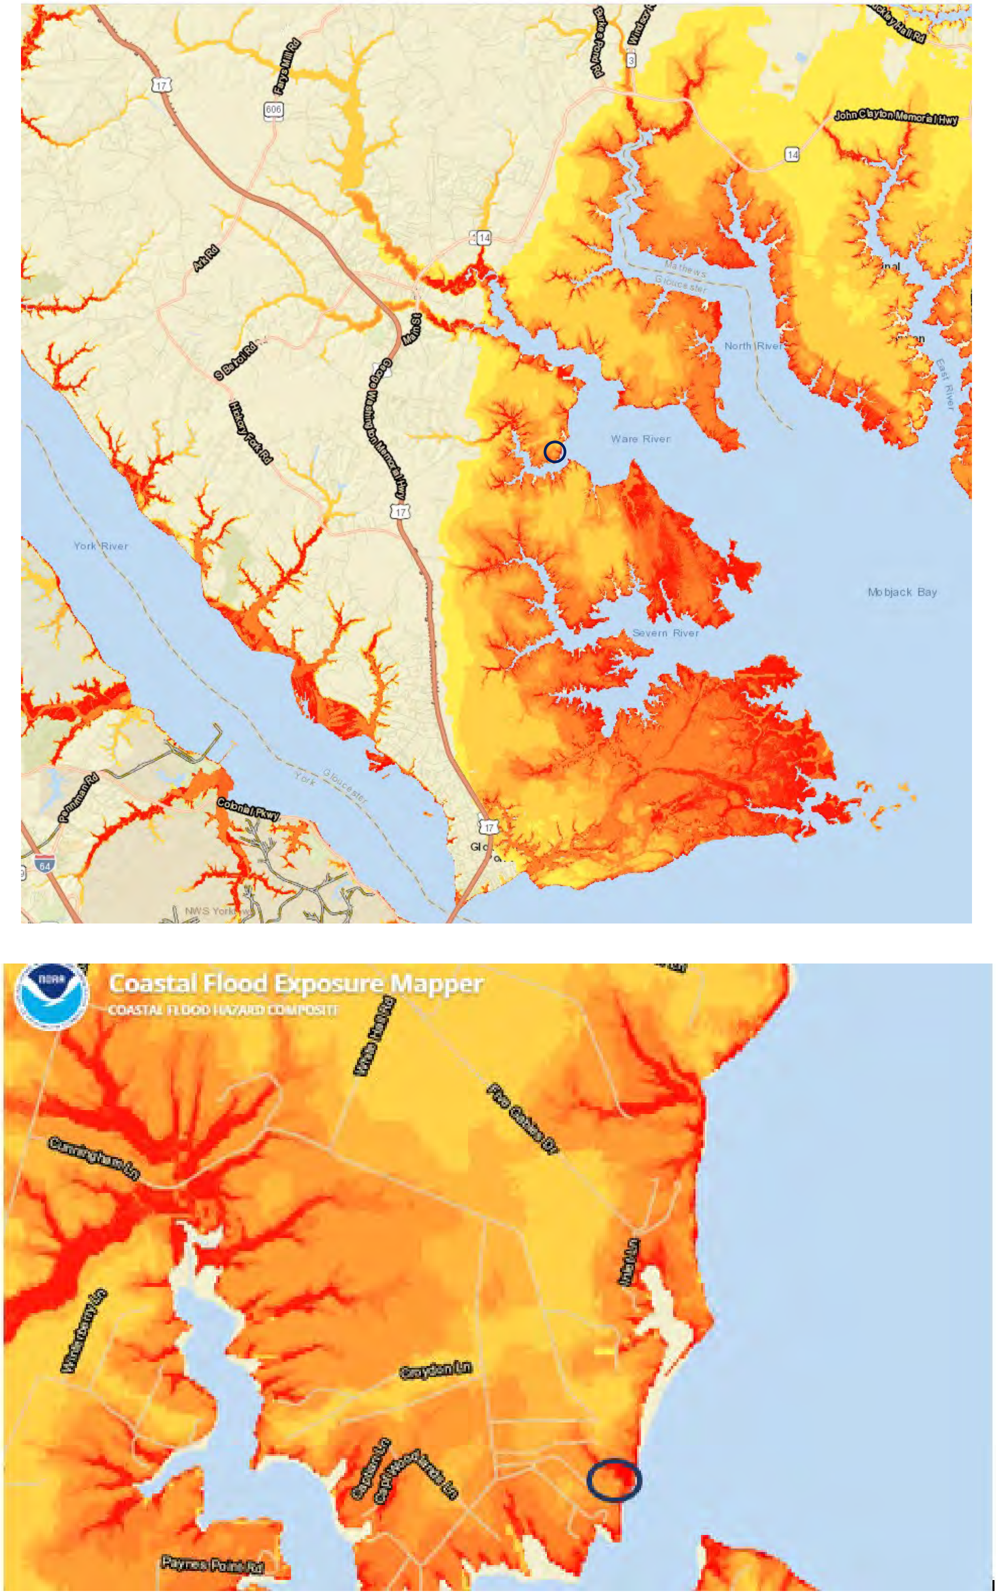


Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 26,983.1 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 82 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 (purple) and 2017 (red)

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 11**.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Gloucester County's current floodplain ordinance can be found at: http://gloucestercounty-va.elaws.us/code/coor_ch8.5.*

COMMUNITY SCALE BENFITES.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

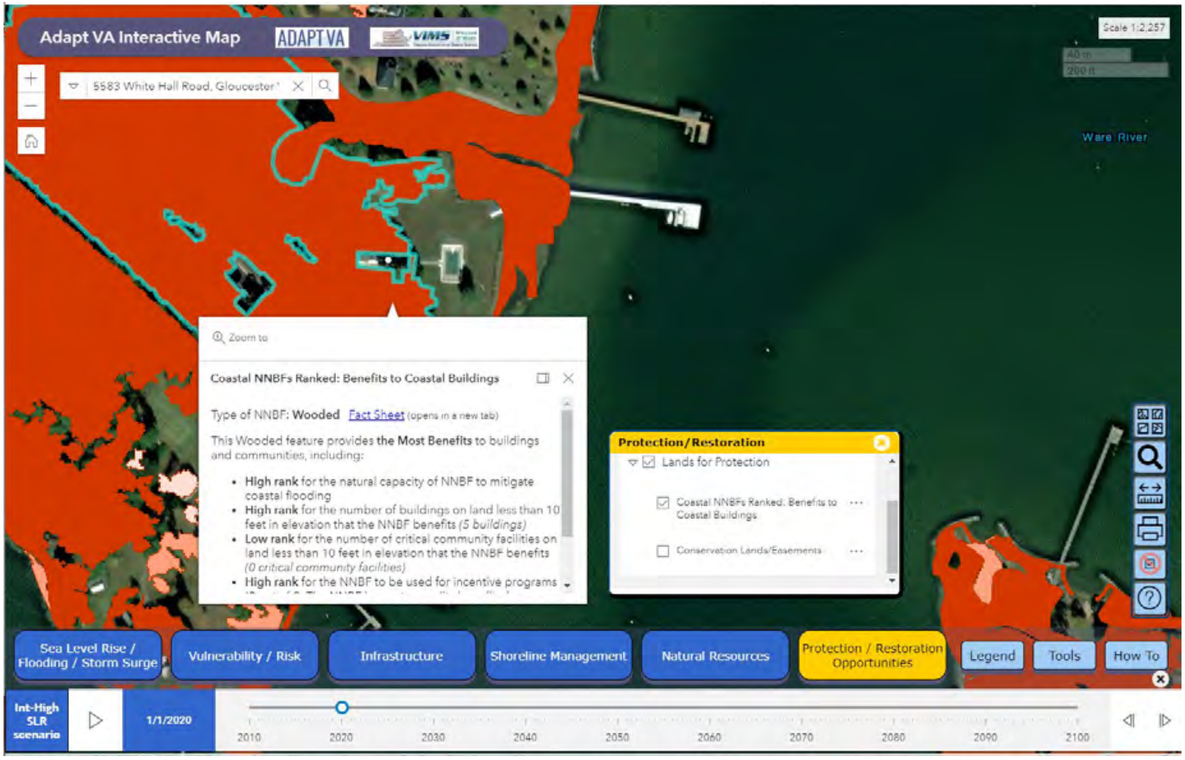
The Fight the Flood program (**Figure 11A**) is already having an impact on driving broader community scale applications. Within 700 yards of the project site, four Round 1 and Round 2 applicants have applied to the Flood Fund for financial assistance (red dots).

Figure 11a- Fight the Flood Wilson Creek Participants in Close Proximity

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based “brick in the wall” and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12**. All Round 2 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Wooded** Fact Sheet (opens in a new tab)

This Wooded feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(5 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **High rank** for the NNBF to be used for incentive programs

Protection/Restoration

☑ Lands for Protection
  ☑ Coastal NNBFs Ranked: Benefits to Coastal Buildings
  ☐ Conservation Lands/Easements

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, the Middle Peninsula PDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Gloucester County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, a proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Figure 13. Project Flood Hazard Area

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six-month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Hold administrative project close out meeting						X

RELATIONSHIP TO OTHER PROJECTS.

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula

PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fighttheflood va.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		83

Signed pledge agreement from each contributing organization	☑Yes ☐ No ☐ N/A

III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that reside in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not reside in a low-income area, then the following does not apply. For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

The proposed project budget is:

- ***Estimated total project cost: $17,399***
- ***Amount of funds requested from the Fund: $12,180***

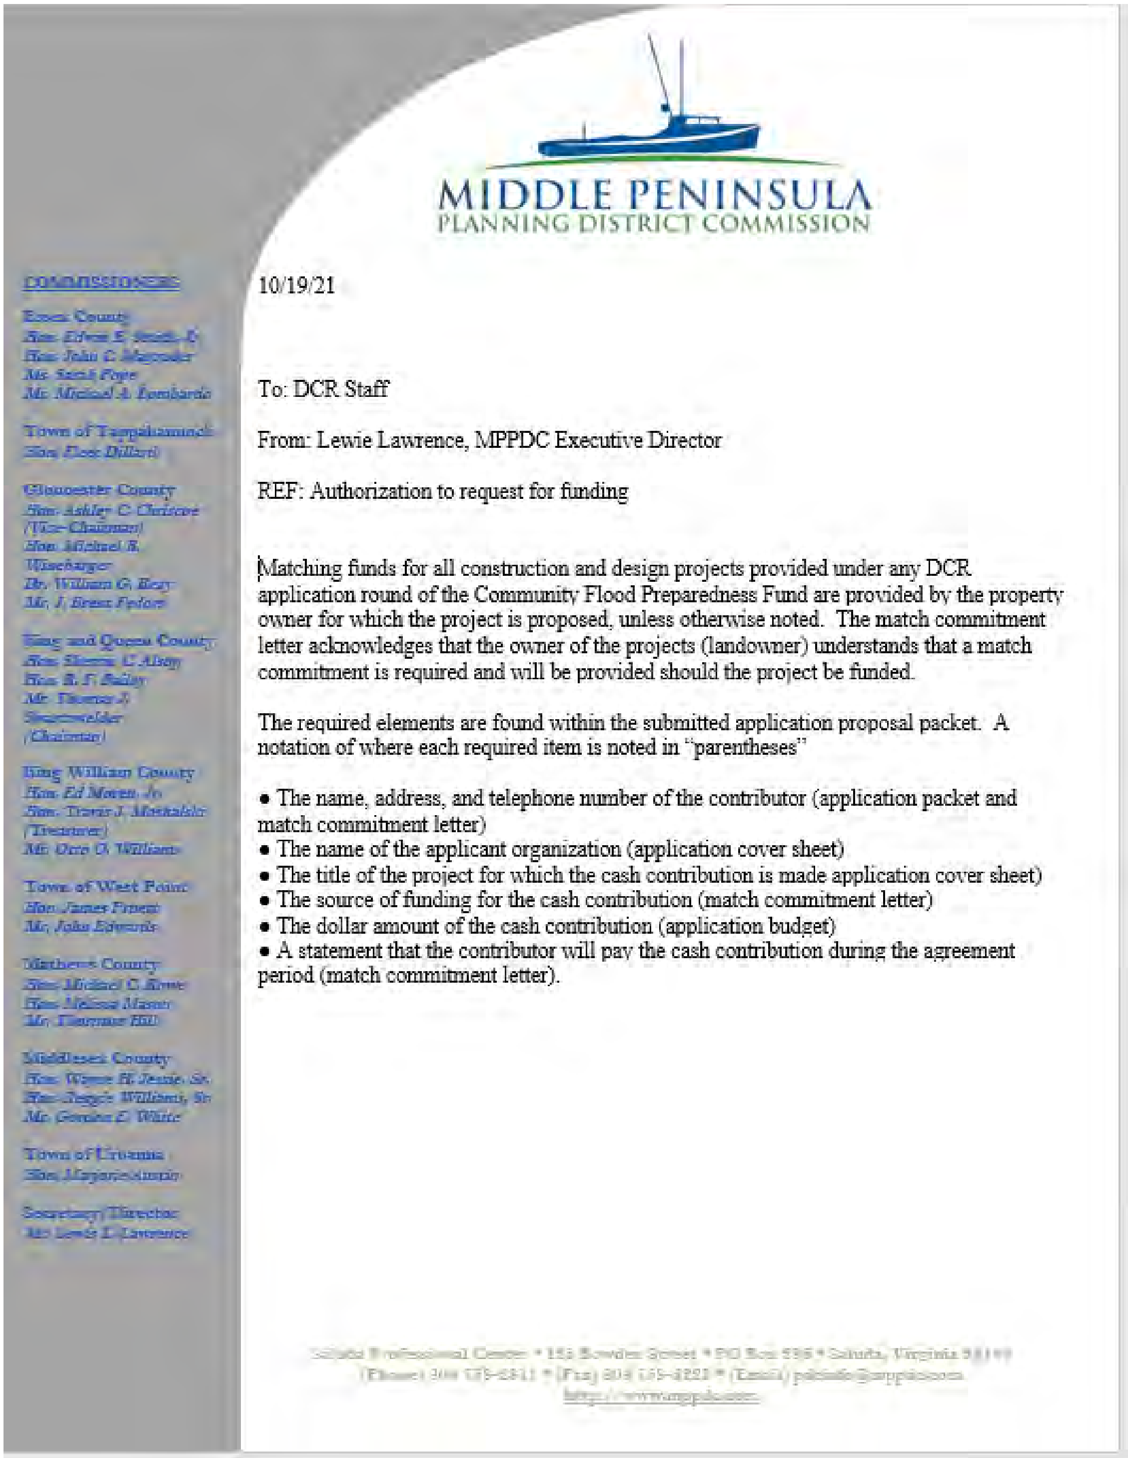
The Middle Peninsula PDC staff will manage and administer this project. MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Authorization to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Signed pledge agreement from each contributing organization:

OCT 21 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 5583 White Hall Rd., Gloucester, VA 23061. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 804.815.1225 or by email at DNMeeker@yahoo.com.

Sincerely,

Printed Name: David N. Meeker

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

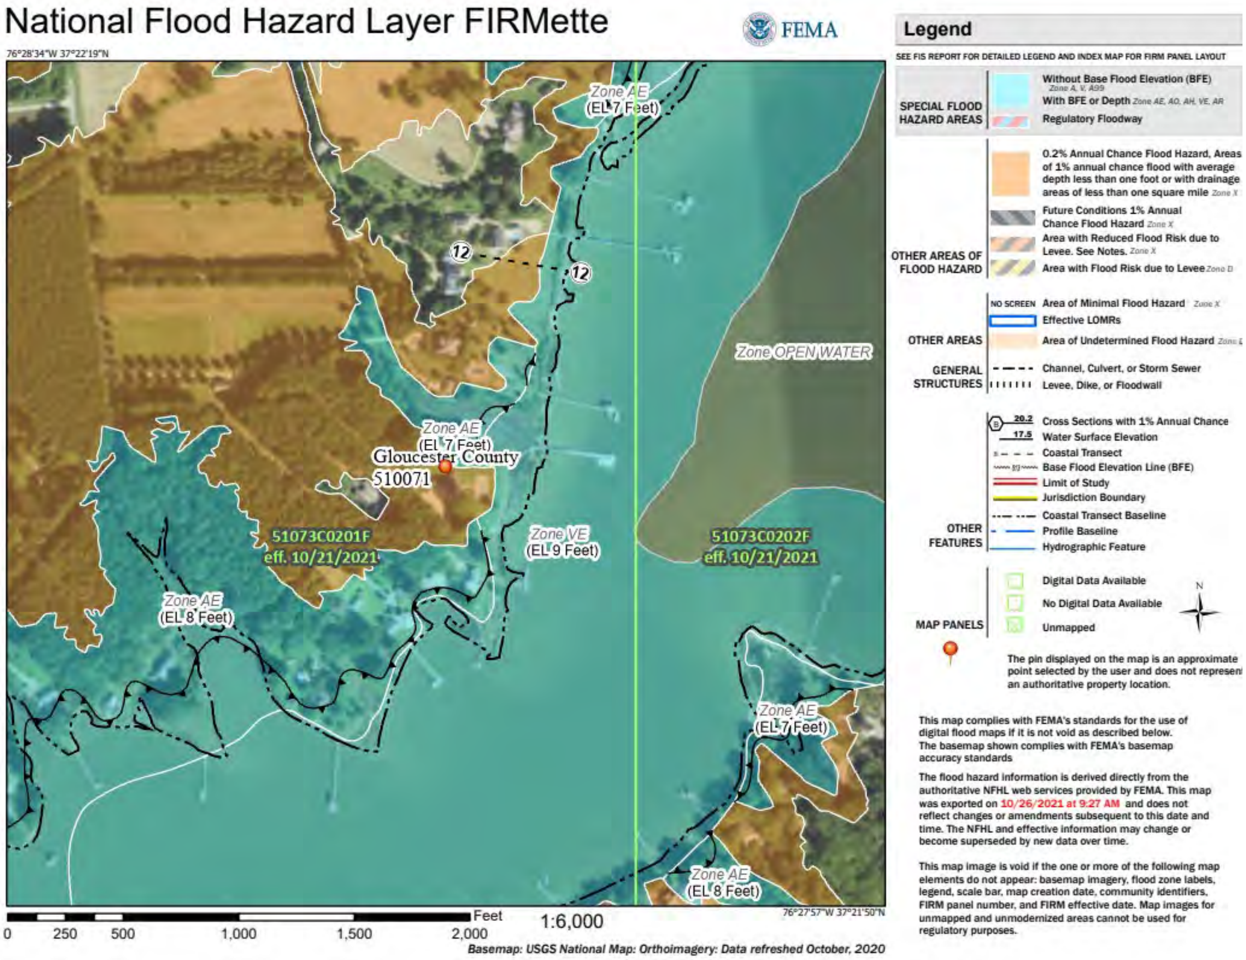
APPENDIX 3

Project Location FIRMette

(FIRMette #: 51073C0201F)



The pin displayed on the map is an approximate point selected by the user and does not represen an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 10/26/2021 at 9:27 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)

The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)

Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)

In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)

This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)

In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

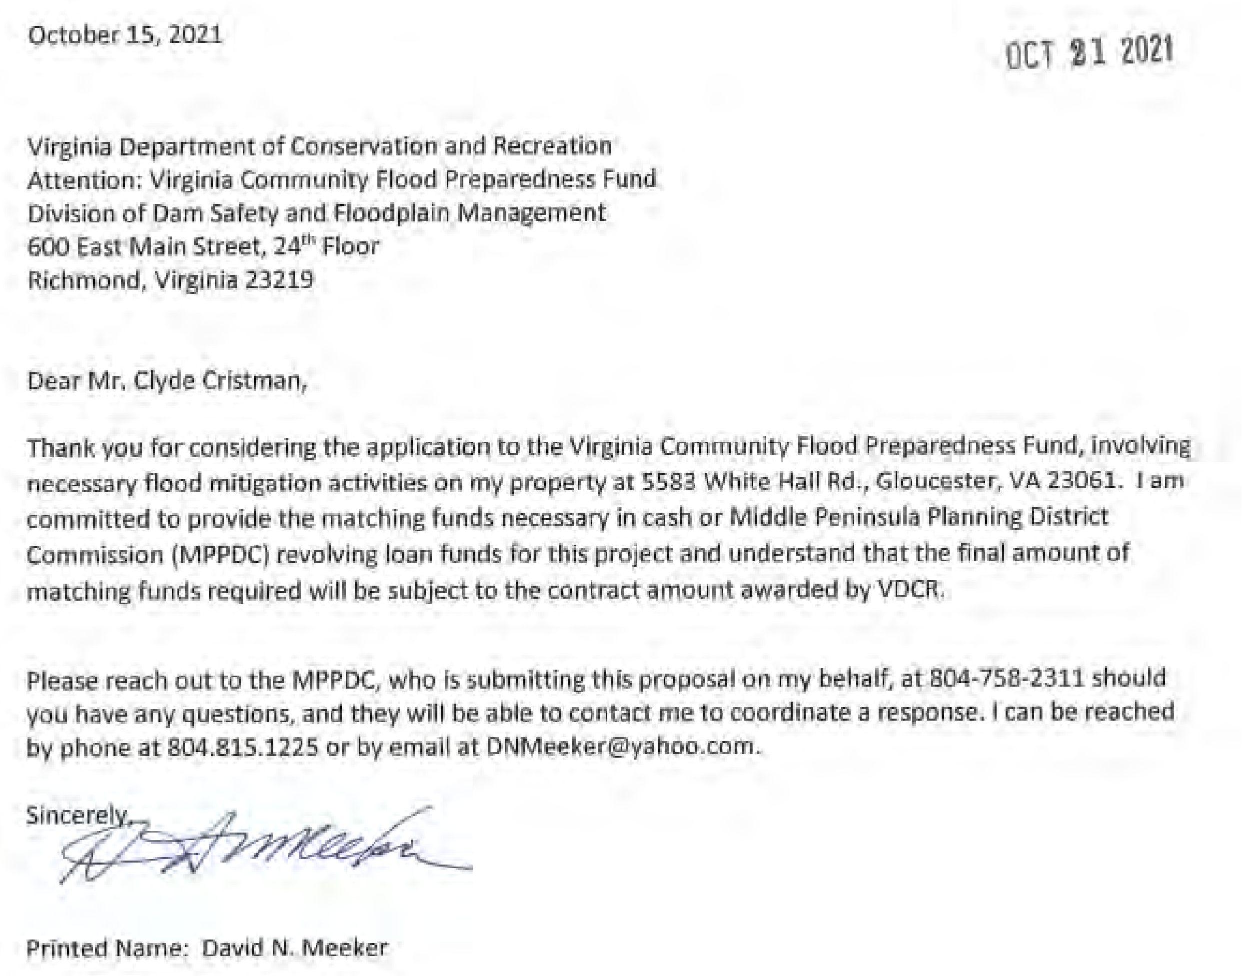
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



October 15, 2021

OCT 21 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 5583 White Hall Rd., Gloucester, VA 23061. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 804.815.1225 or by email at DNMeeker@yahoo.com.

Sincerely,

Printed Name: David N. Meeker

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- X Stream bank restoration or stabilization.
- X Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Gloucester County **-** Please see the attached corresponding maps for this application.

Total Cost of Project: ________$17,399_____________________

Total Amount Requested: _____$12,180_____________________

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft joint permit application to reduce the impacts of storm events, flooding, and wetland loss. The property owner has been seeking a solution for over 20 years for two contiguous parcels along the North River in Gloucester County; however, has not been in a position to support the funding necessary for construction of a nature-based solution which was designed in the late 1990s. This project will revisit and modify the existing design to incorporate nature-based features which protect further flooding and erosion of the shoreline and property to the greatest extent possible. The project site needs a more comprehensive design solution to achieve an effective level of flood protection.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on two private property parcels located on Ware Point Road in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

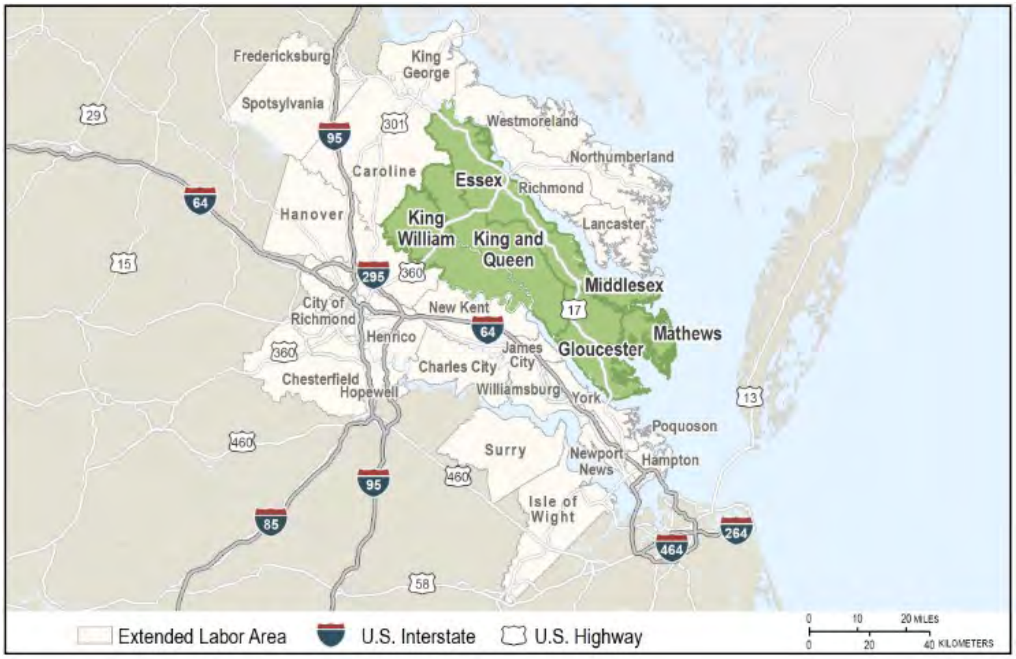

Figure 2. Middle Peninsula Population

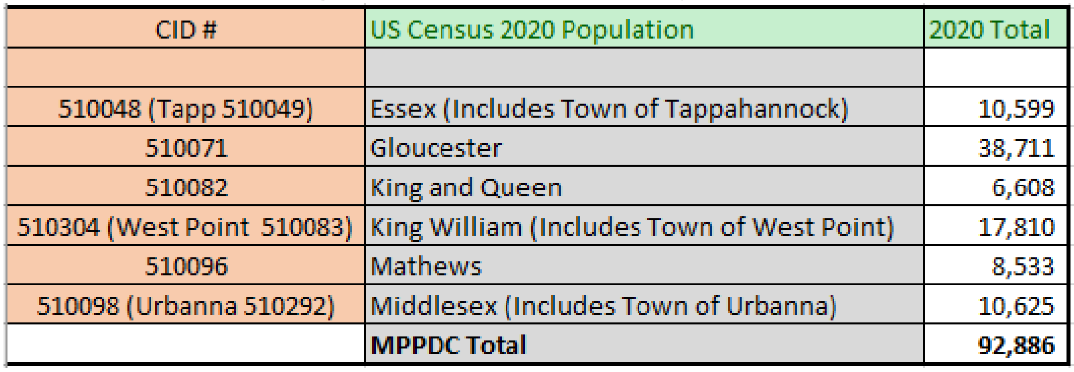
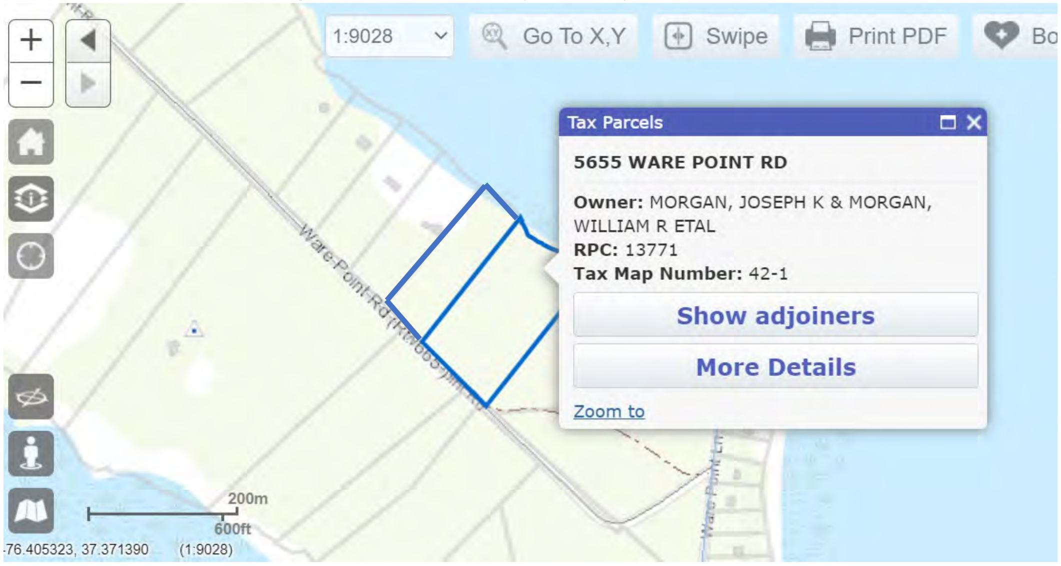


CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on Ware Point Road in Gloucester County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

Figure 4. Parcel Map of Project Location

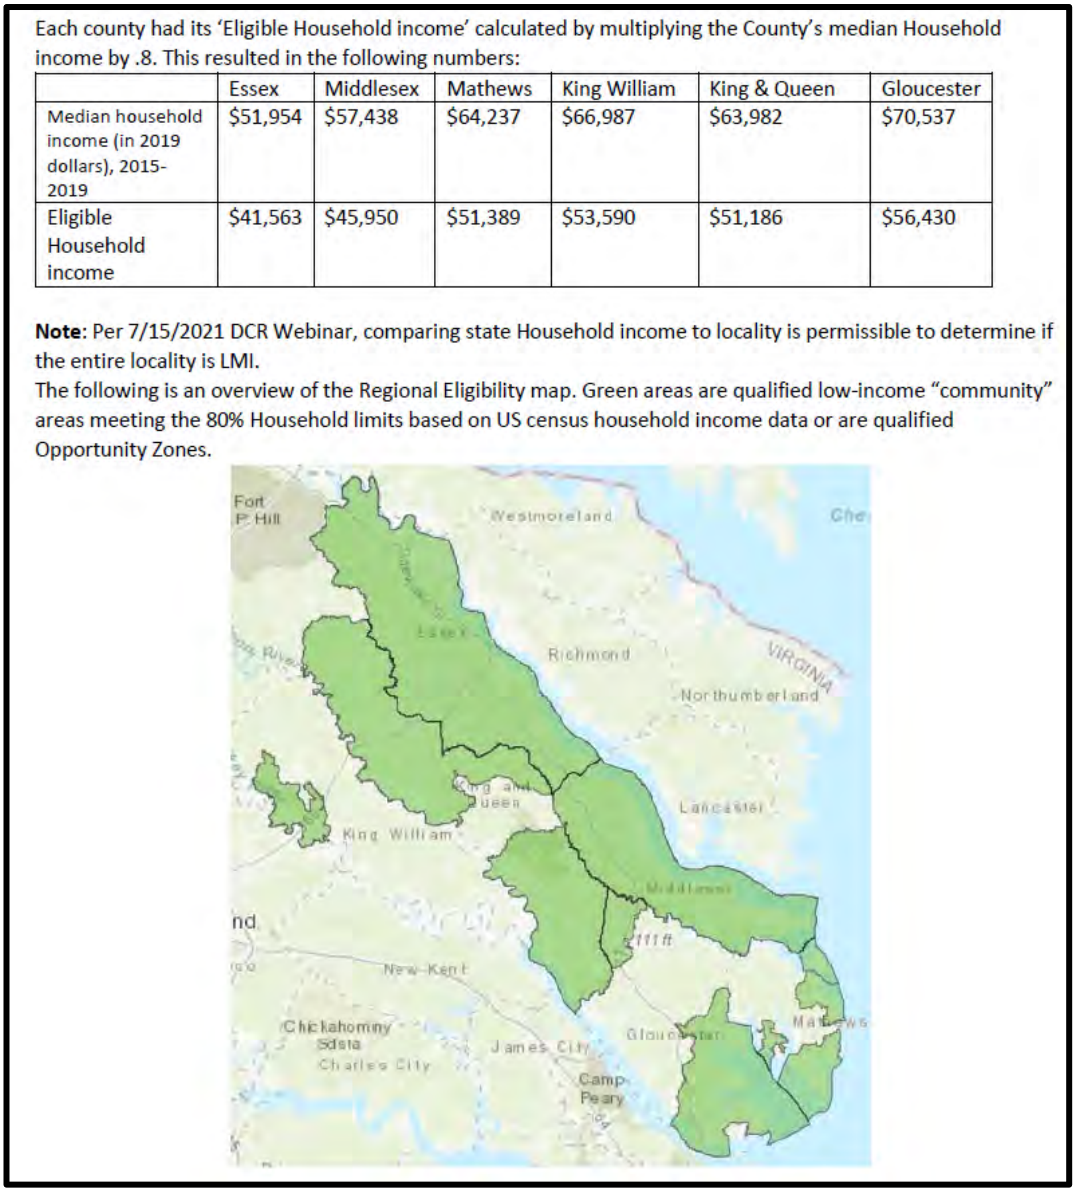


5655 WARE POINT RD

Owner: MORGAN, JOSEPH K & MORGAN, WILLIAM R ETAL
RPC: 13771
Tax Map Number: 42-1

Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area

According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a high social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively low level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

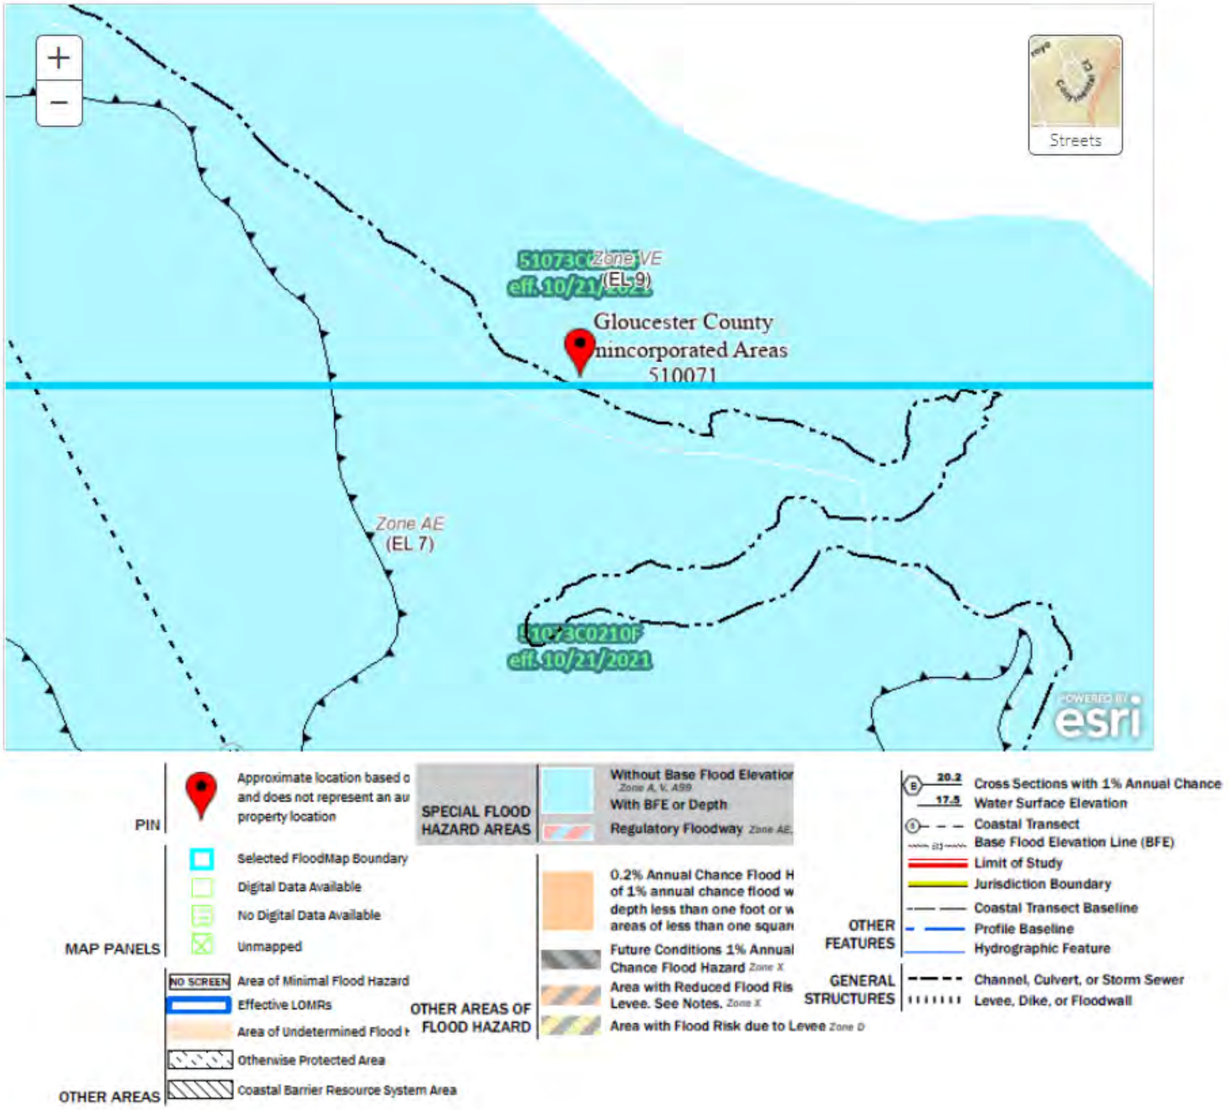
The project is located at 5655 Ware Point Road, Gloucester, VA 23061 (-76.4127, 37.37505). The shoreline faces north-northwest and has a large fetch across the North River to Mathews County. Winter storms are particularly problematic on the shoreline. Erosion of both beach, grass, and pine trees has occurred for many years (shoreline is approximately 600 feet). Two breakwaters 60’ to 70’ in length with sand fill are believed to be an ideal natural design solution based on previous design concepts proposed over 20 years ago. A design idea was proposed in 1999 from Coastal Design and Construction; however, it did not proceed due to the property owner’s inability to cover the costs associated with construction. Recently, the property owner has had preliminary discussions with Jeff Watkins. See accompanying pictures below and in **Appendix 2**.

This site is located within the VE flood zone as seen in **Figure 9**. Please see **Appendix 3** for the FIRMettes (last mapped 10/21/2021).

Figure 9: Map of FEMA Flood Zones



Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 66,968 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 87 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 11**.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)

- *A link to Gloucester County's current floodplain ordinance can be found at: http://gloucestercounty-va.elaws.us/code/coor_ch8.5*.

COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in Figure 12. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, the Middle Peninsula PDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

***ALTERNATIVES*.**

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

***GOALS AND OBJECTIVES*.**

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the Oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Gloucester County, which is local government, public schools, and the medical community.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

<u>Long Term Planning</u>

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a

nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	

Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		83

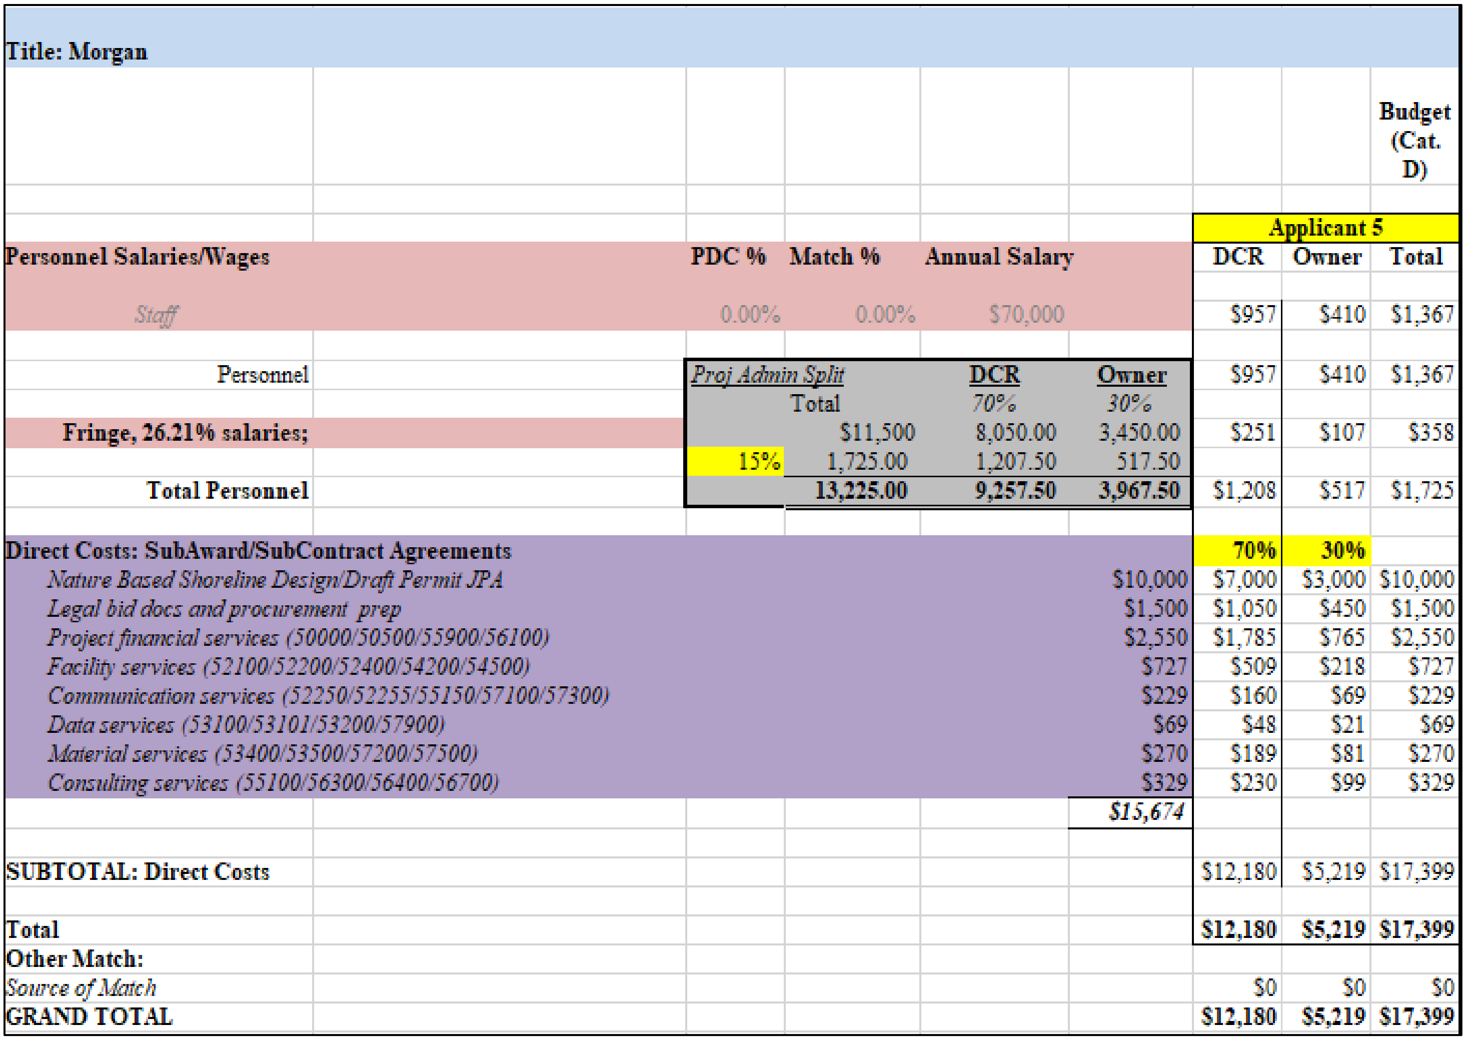
III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that reside in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not reside in a low-income area, then the following does not apply. For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

The project budget is:

- ***Estimated total project cost: $17,399***
- ***Amount of funds requested from the Fund 12,180***



Title: Morgan								
								Budget (Cat. D)

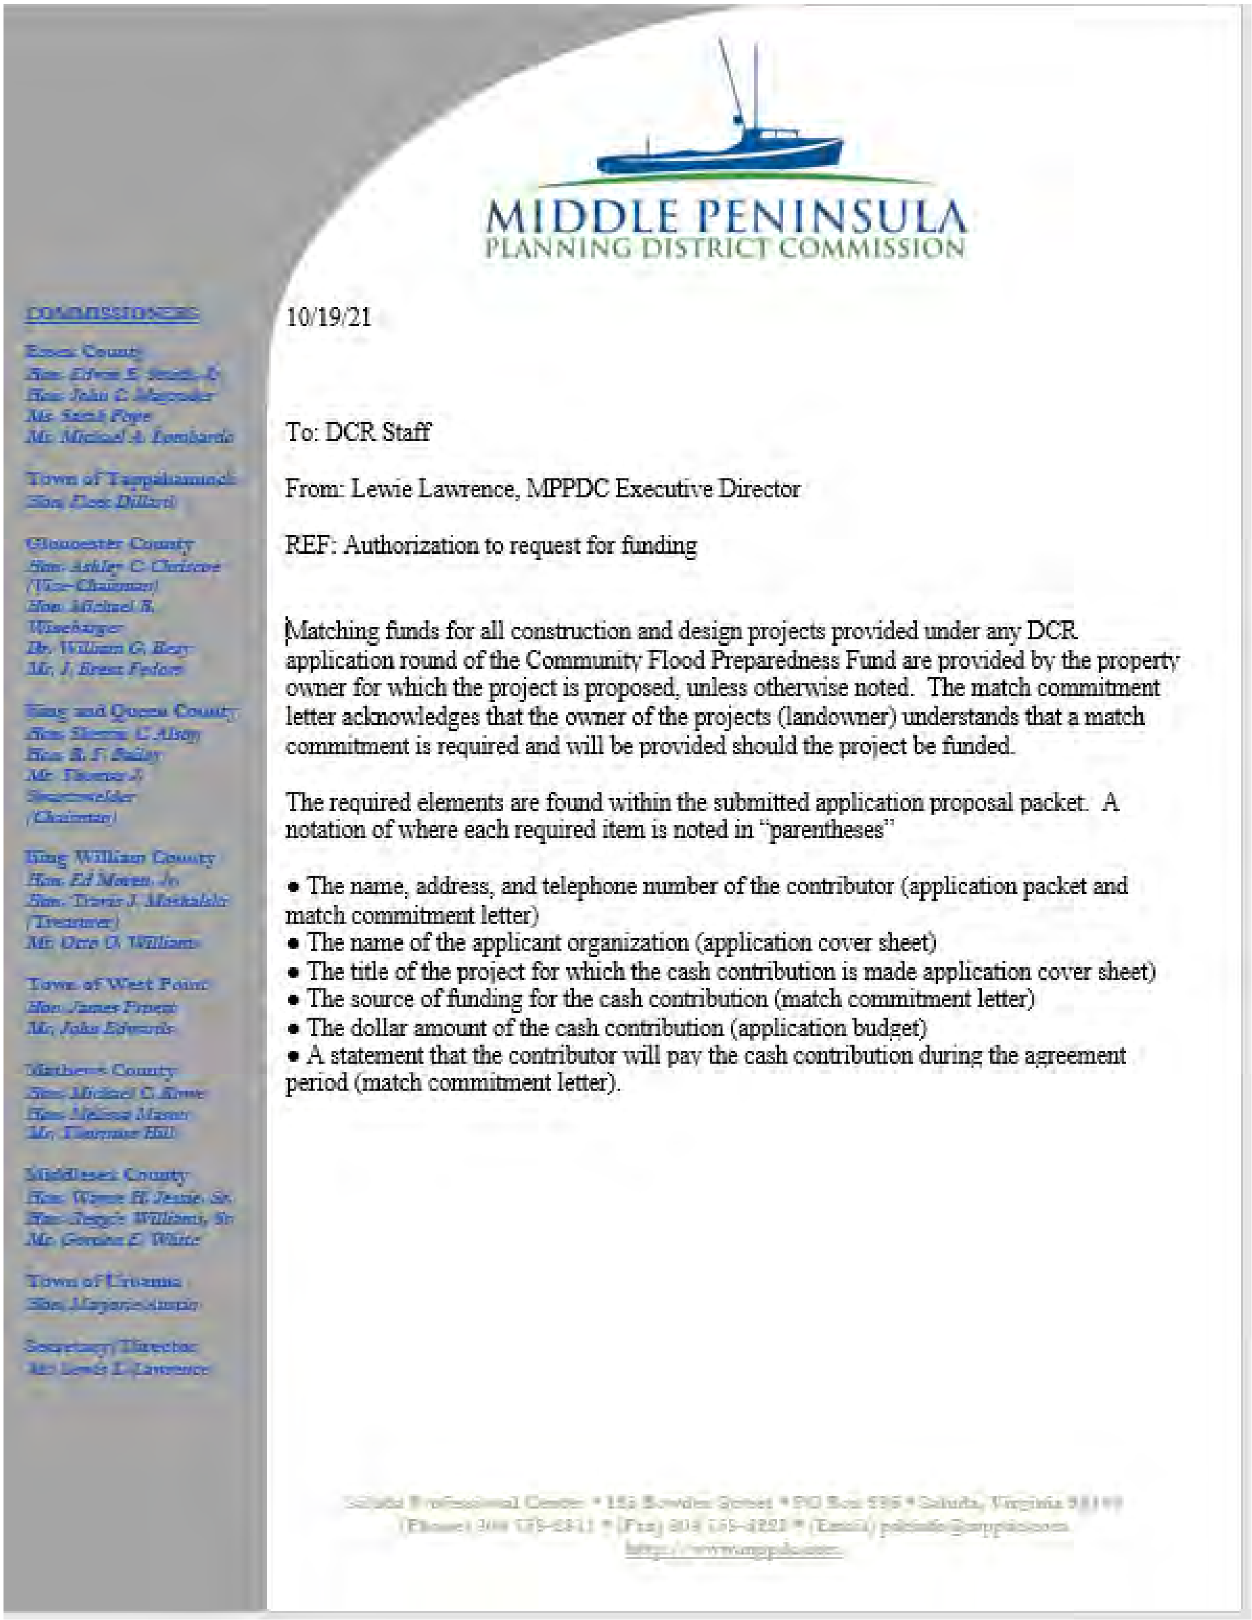
MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Authorization to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

November 3, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 757-903-8456 or by email at jkm.foxmill@gmail.com.

Sincerely,

Joseph K. Morgan

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

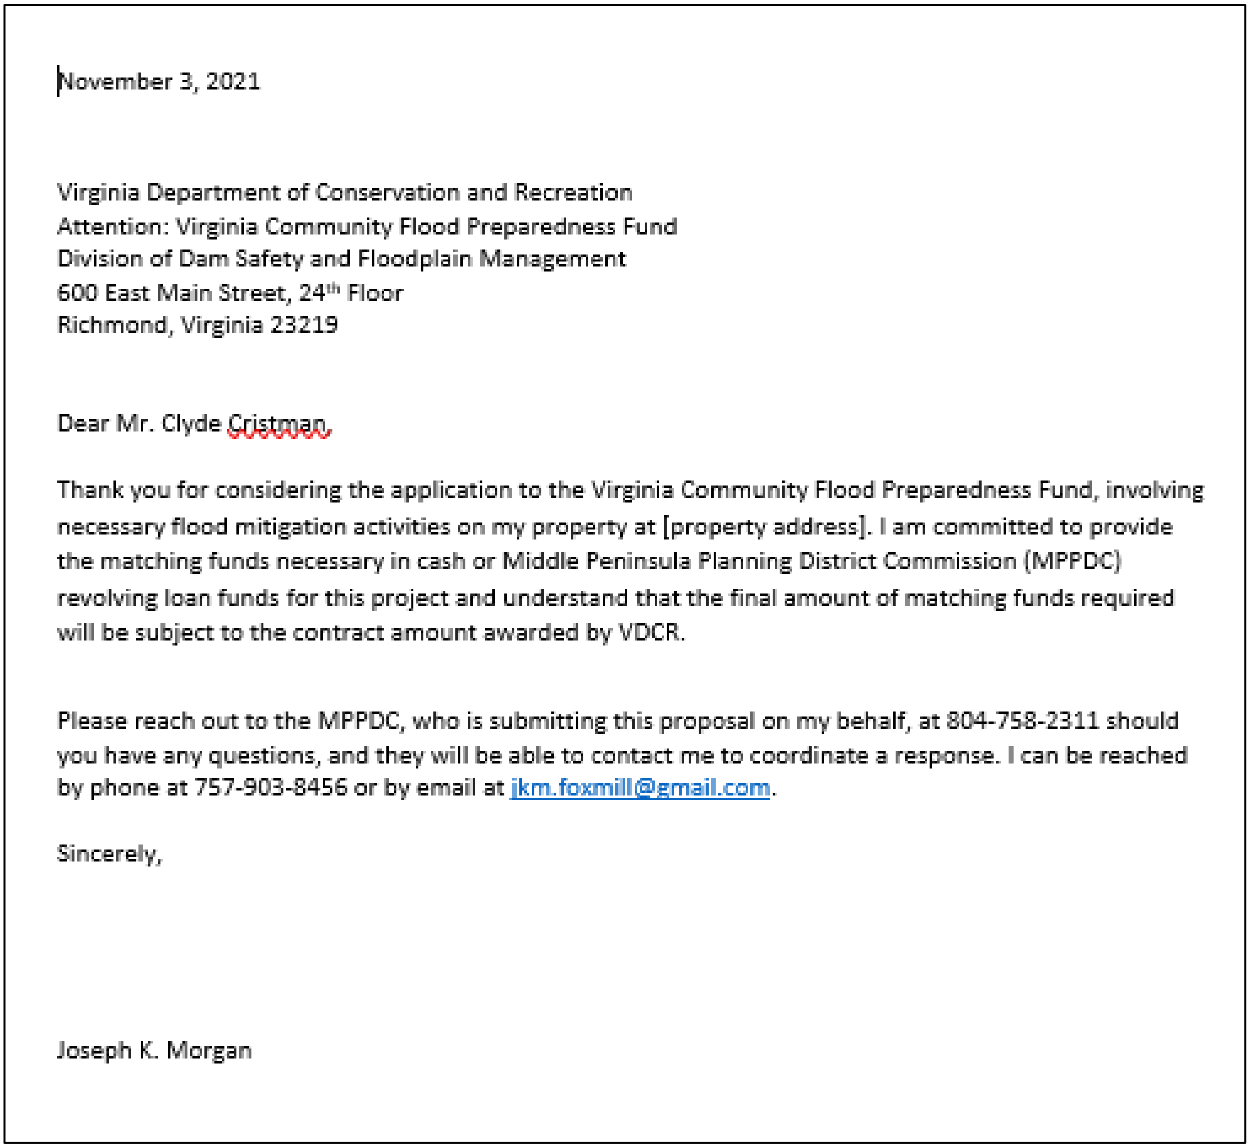
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



November 3, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 757-903-8456 or by email at jkm.foxmill@gmail.com.

Sincerely,

Joseph K. Morgan

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- ☐ Wetland restoration.
- ☐ Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- X Stream bank restoration or stabilization.
- X Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Gloucester County **-** Please see the attached corresponding maps for this application.

NFIP Community Identification Number (CID#) (See appendix F): 510071

Is Project Located in an NFIP Participating Community? ☑ Yes ☐ No

Is Project Located in a Special Flood Hazard Area? ☑ Yes ☐No

Flood Zone(s) (If Applicable): AE Zone

Flood Insurance Rate Map Number(s) (If Applicable): **51073C0140F**

Total Cost of Project: $16,089

Total Amount Requested: $11,263

V.SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution to prevent impacts of storm events, flooding and wetland loss to a private right of way (ROW) in Gloucester County. This project will also entail legal work associated with preparing for implementation/construction of the nature-based shoreline design as the solution may need to be implemented outside of the deeded ROW.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem-based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

The intent of the proposed project design is to incorporate flood protection measures which consider and mitigate any potential impacts to neighboring properties. However, the final designs ultimately will require approval by the permit issuing authority (Local Wetland Board on behalf of the VMRC, the Local Chesapeake Bay Preservation Act/Wetland Board on behalf of the VDEQ, and any agencies overseeing the Joint Permit Application process), and we will abide by the final design in the approved permits.

PROJECT INFORMATION.

This design proposal application will focus on utilizing a nature-based solution that incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise **is** lower cost than other nature-based infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions on a private property located at 7305 Griffin Road in Gloucester County. Additionally, as flooding issues impact the ROW at this project location, there may be a need to design a nature-based solution outside of the deed ROW. Therefore, legal services will be needed to satisfy the property owner and the applicant. This project will be a partnership between the Middle Peninsula PDC and is supported by Gloucester County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

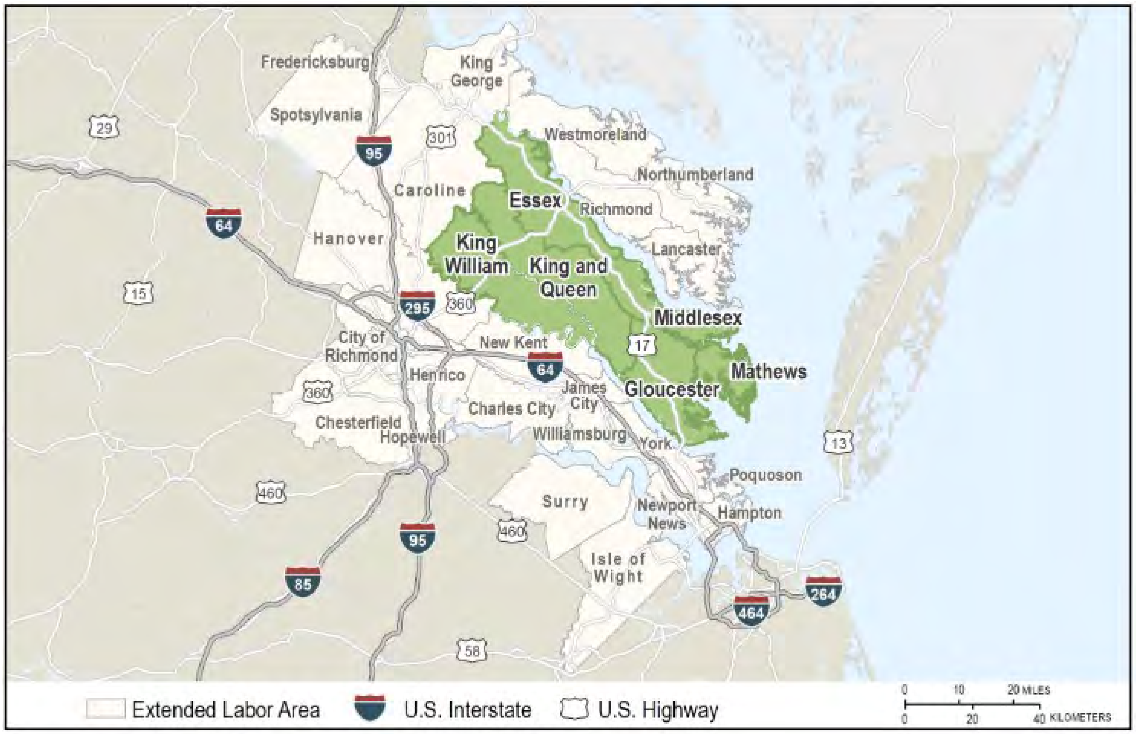

Figure 2. Middle Peninsula Population

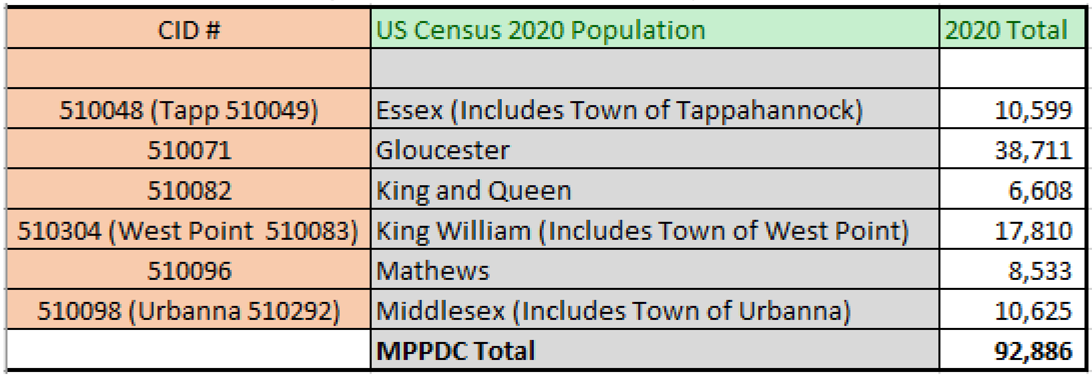

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

Figures 3 and 4 show the project location on private property at 7305 Griffin Road in Gloucester County.

Figure 3. County Map of Project Location

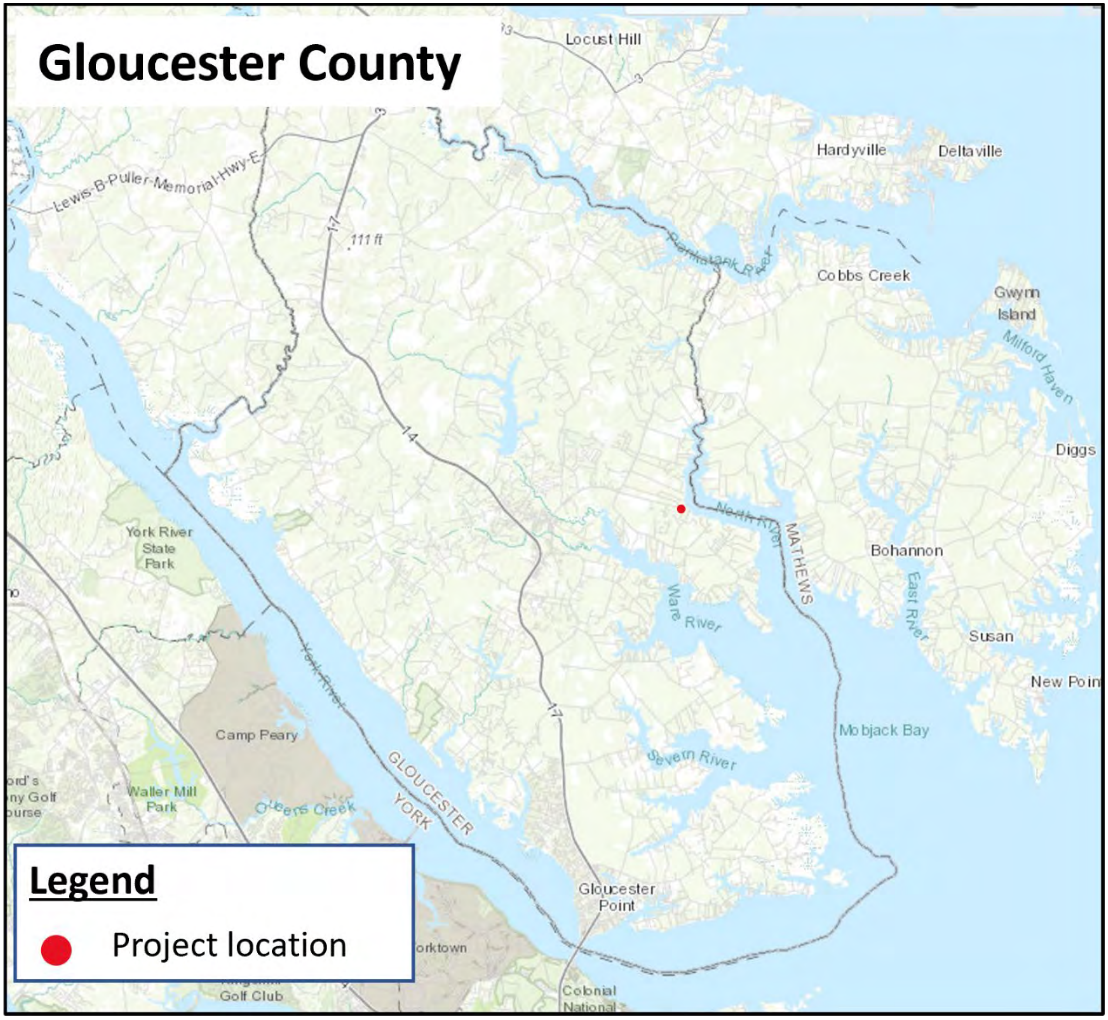

Figure 4. Parcel Map of Project Location

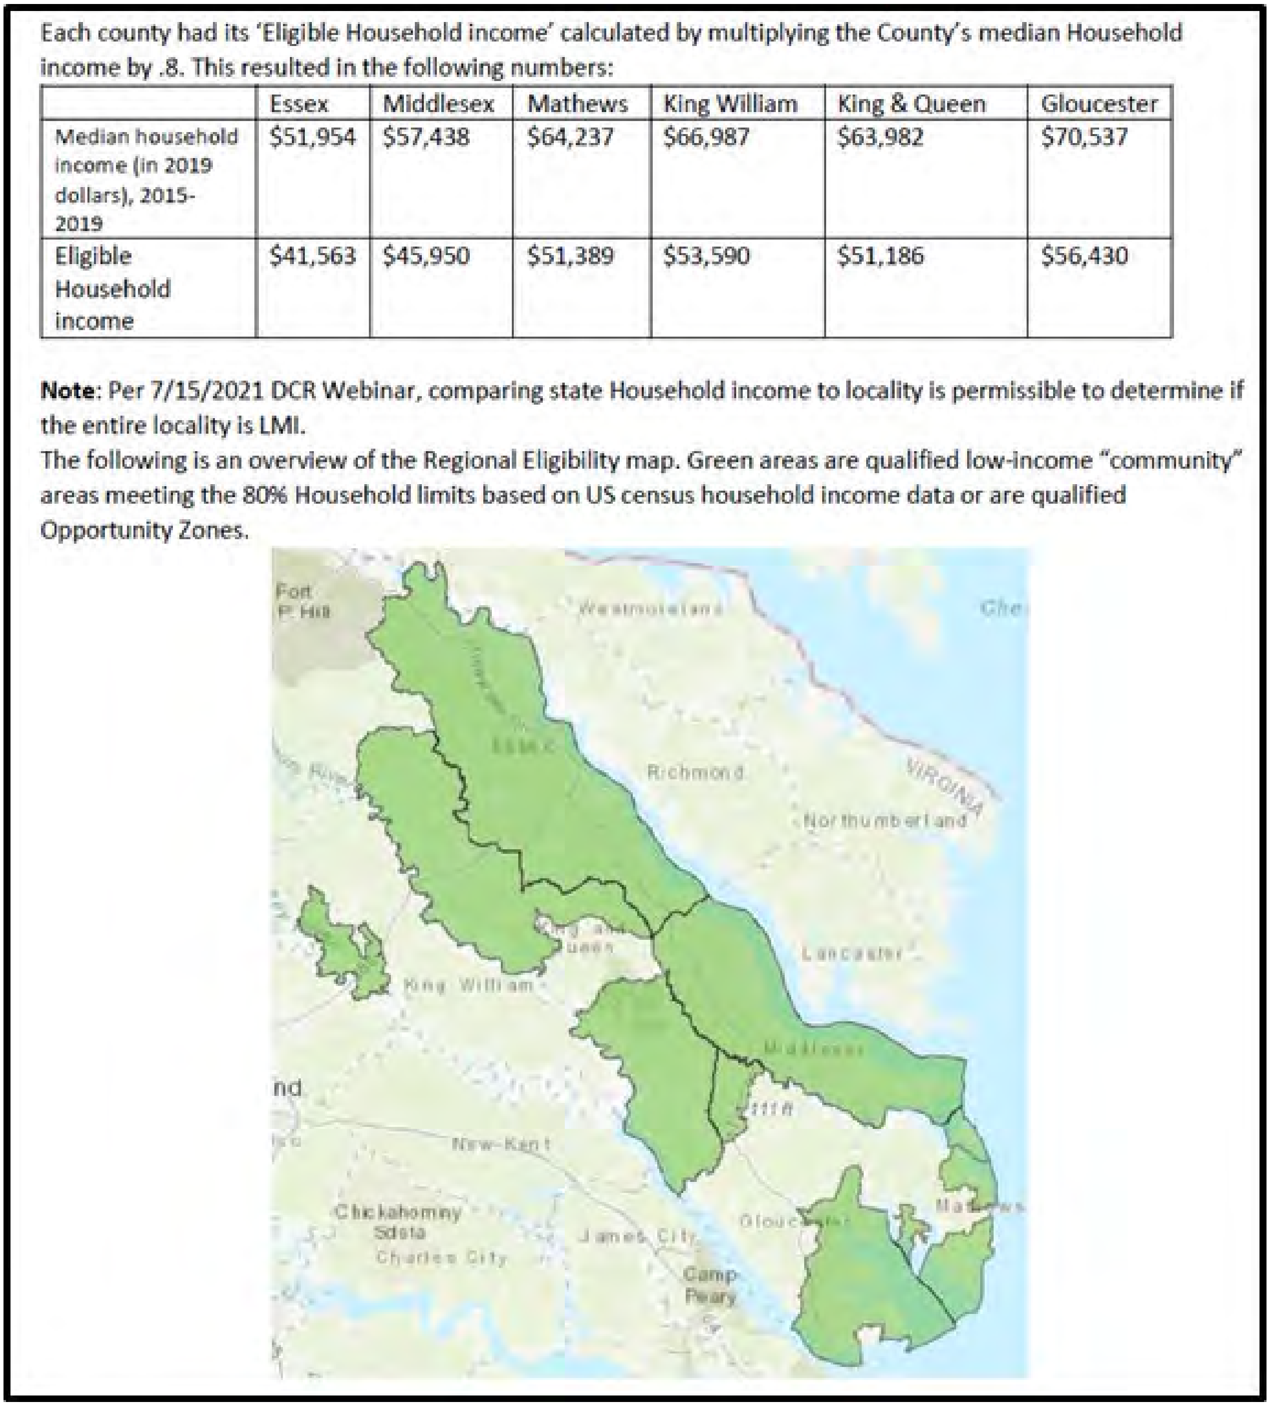
Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Low Income Qualifying Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Qualifying Low Income (Green) Area in Gloucester County

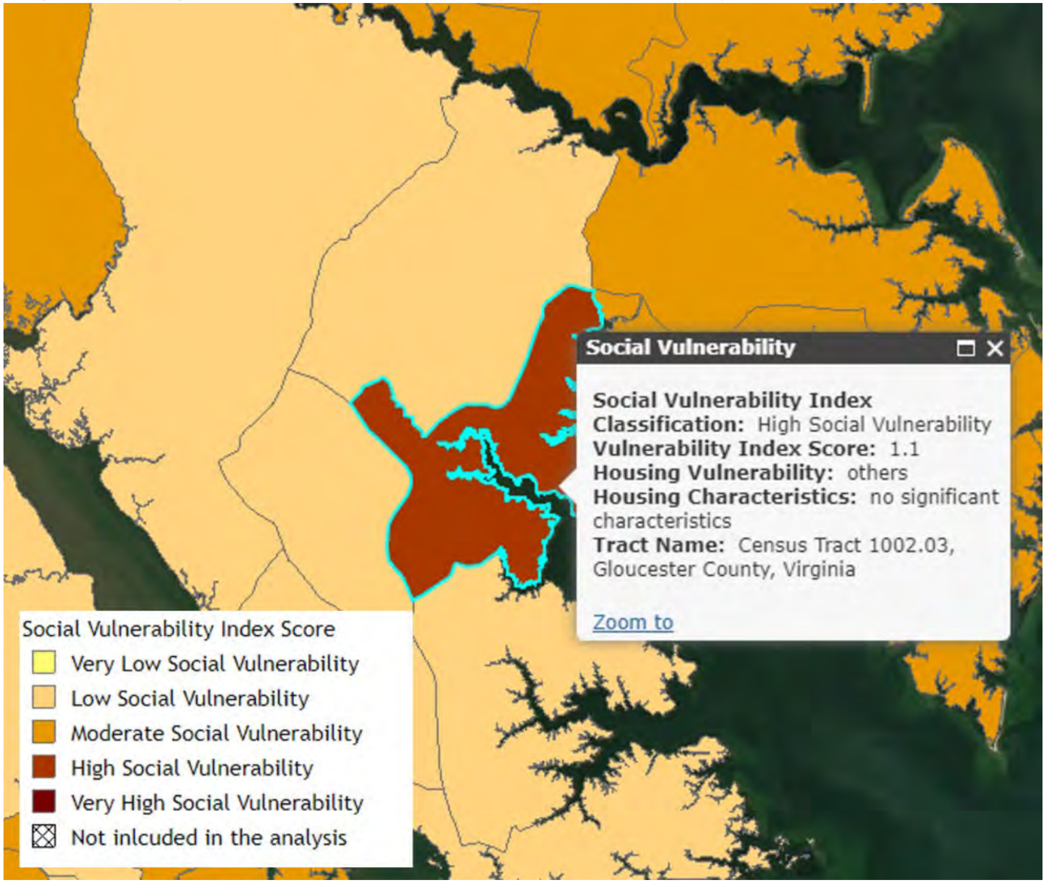
All areas denoted in Green fall below the 80% median household income threshold and serve as the "low-income community" per the guidelines

★ Project Site

Figure 6. Map of the Project Location within the Green Low-Income Area

According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a high social vulnerability score as seen in **Figure 7**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

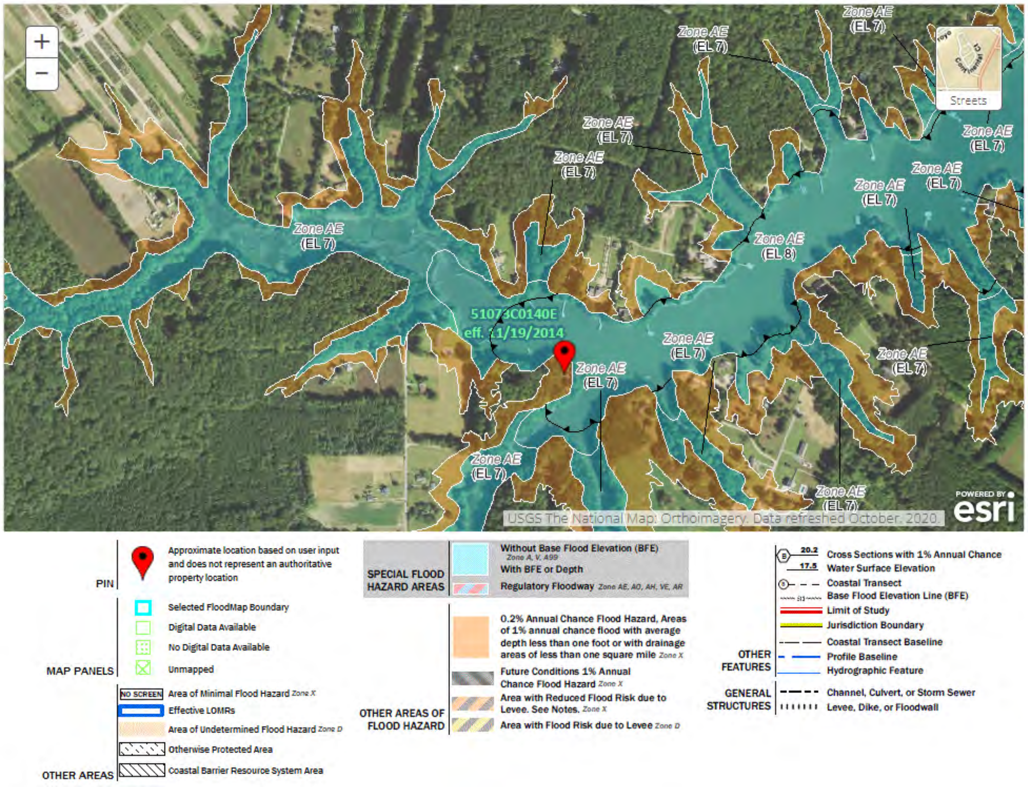


Social Vulnerability Index
Classification: High Social Vulnerability
Vulnerability Index Score: 1.1
Housing Vulnerability: others
Housing Characteristics: no significant characteristics
Tract Name: Census Tract 1002.03, Gloucester County, Virginia

The project is located at 7305 Griffin Road, Gloucester, VA 23061 (37.41339, -76.46447). Ms. Rhodes has owned the property since 1993 and has increasingly experienced more flooding inundation of her property. Ms. Rhodes has a 20 ft deeded ROW which runs parallel with Back Creek, a tributary of the North River and Mobjack Bay. Being in close proximity to Back Creek, the bank is slowly eroding and water from normal tidal and rain events is causing water to inundate her ROW. As this is occurring more frequently Ms. Rhodes explains that she is worried that the road will collapse into the creek and create a situation where her property would become inaccessible for a prolonged period of time, constituting a major problem regarding emergency situations.

This site is located within the AE flood zone as seen in **Figure 8**. Please see **Appendix 2** for the FIRMettes (last mapped 10/21/2021) and **Appendix 3** for additional property photos.

Figure 8: Map of FEMA Flood Zones of Project Location



Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 9** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of approximately 10,971.1 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 80 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 9:

Project Location and Map of the Shoreline Change between 1937 (purple) and 2017 (red).

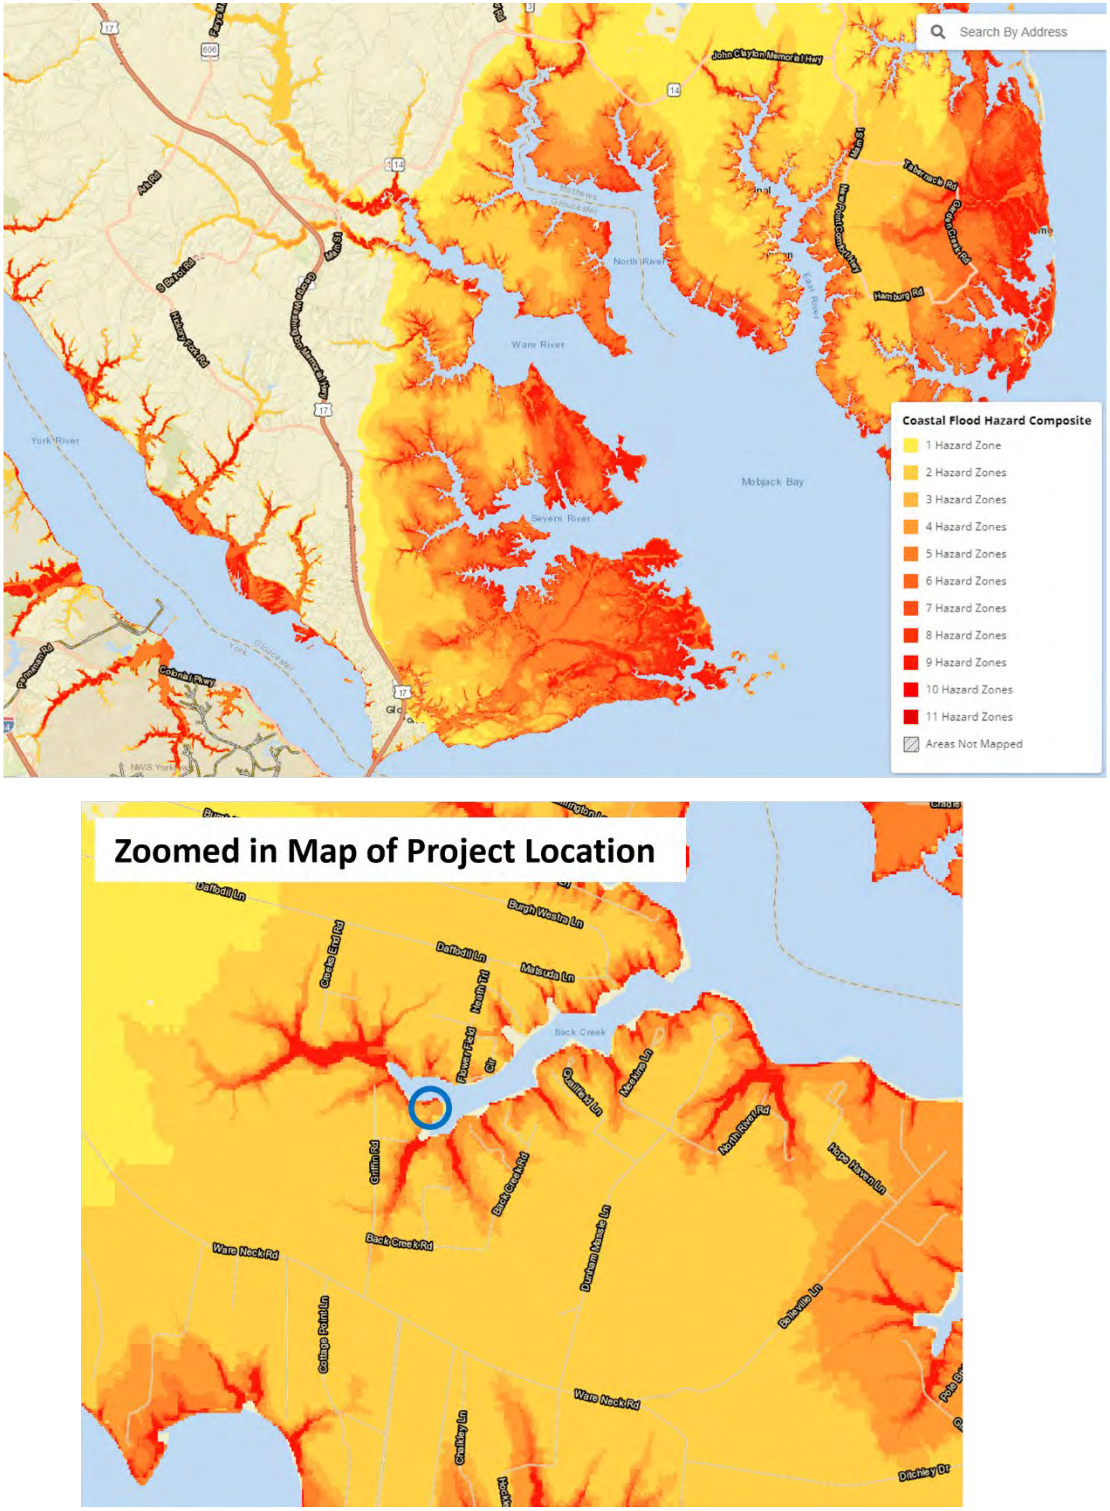
Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 10**.

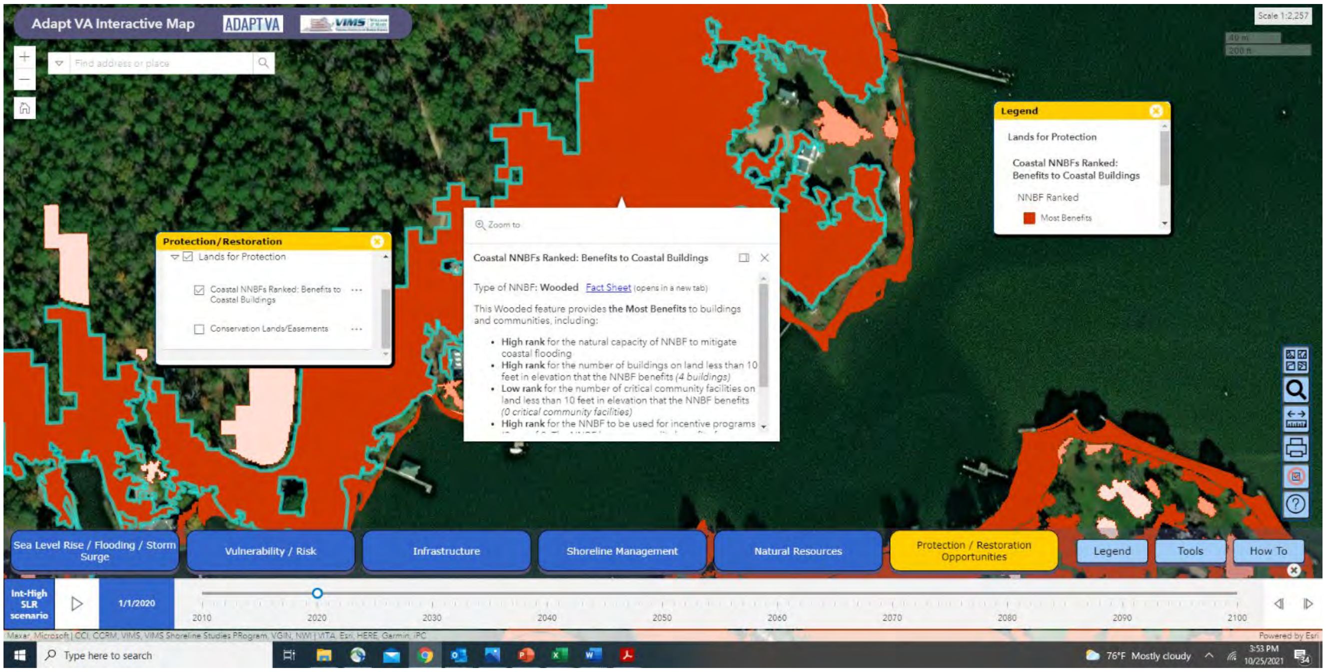
Figure 10. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021).



Community Scale Benefits - The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, “Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature-based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 & 2 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit.



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Wooded** Fact Sheet (opens in a new tab)

This Wooded feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(4 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **High rank** for the NNBF to be used for incentive programs

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

For more information about this project area please see:

- A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf
- A link to Gloucester County's current floodplain ordinance can be found at: http://gloucestercounty-va.elaws.us/code/coor_ch8.5

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA nature-based solutions are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of nature-based solutions will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

The design on this property will take into consider improving water quality with the reduction of sediment and nutrients. In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project will focus on developing designs for a nature-based solution to prevent flooding and damage to Ms. Rhodes deeded right of way. This project will also entail associated legal work to ensure that future construction is conductive and agreed to by the landowner and the applicant. Legal work will be necessary if the design to mitigate ROW flooding and erosion is outside of the 20 ft deeded ROW.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six-month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than one year. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence January 2022 and be completed no later than December 2022, as seen in **Table 1**.

Table 1. Project Milestone Schedule

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based design solutions with contractor and property owner		X	X			
Select which nature-based solution is most appropriate		X	X			
Engage legal services if proposed design is out of the 20ft ROW		X	X	X		
Have contractor develop selected nature-based design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based design solution with property owner					X	
Engage legal services as necessary. Will need to consider design and if it's within the deeded 20ft ROW					X	X
Discuss strategies in moving forward with implementing the nature-based design solution					X	X
Provide a digital close out report and copy of the completed nature-based design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program– Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based design solution and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. **Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?**
   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. **Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?**
   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. **For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?**
   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. **Has the applicant provided evidence of an ability to provide the required match fund?**
   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?**

Yes, nature-based solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?**
   Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ¨No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
• Wetland restoration, floodplain restoration • Living shorelines and vegetated buffers. • Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool • Dam removal • Stream bank restoration or stabilization. • Restoration of floodplains to natural and beneficial function. • Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. Any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	12
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and the Chesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices with a nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		92

SCOPE OF WORK CHECKLIST.

Scope of Work Narrative	
Supporting Documentation	**Included**

Supporting Documentation	**Included**
Authorization to request funding from the Fund from governing body or chief executive of the local government	☑Yes ☐ No ☐ N/A
Signed pledge agreement from each contributing organization	☑Yes ☐ No ☐ N/A

VI.**BUDGET NARRATIVE**

The proposed project has an estimated Total budget of $16,089

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

Budget for professional design services follows.
Total Project Cost: $16,089
DCR Request: $11,264

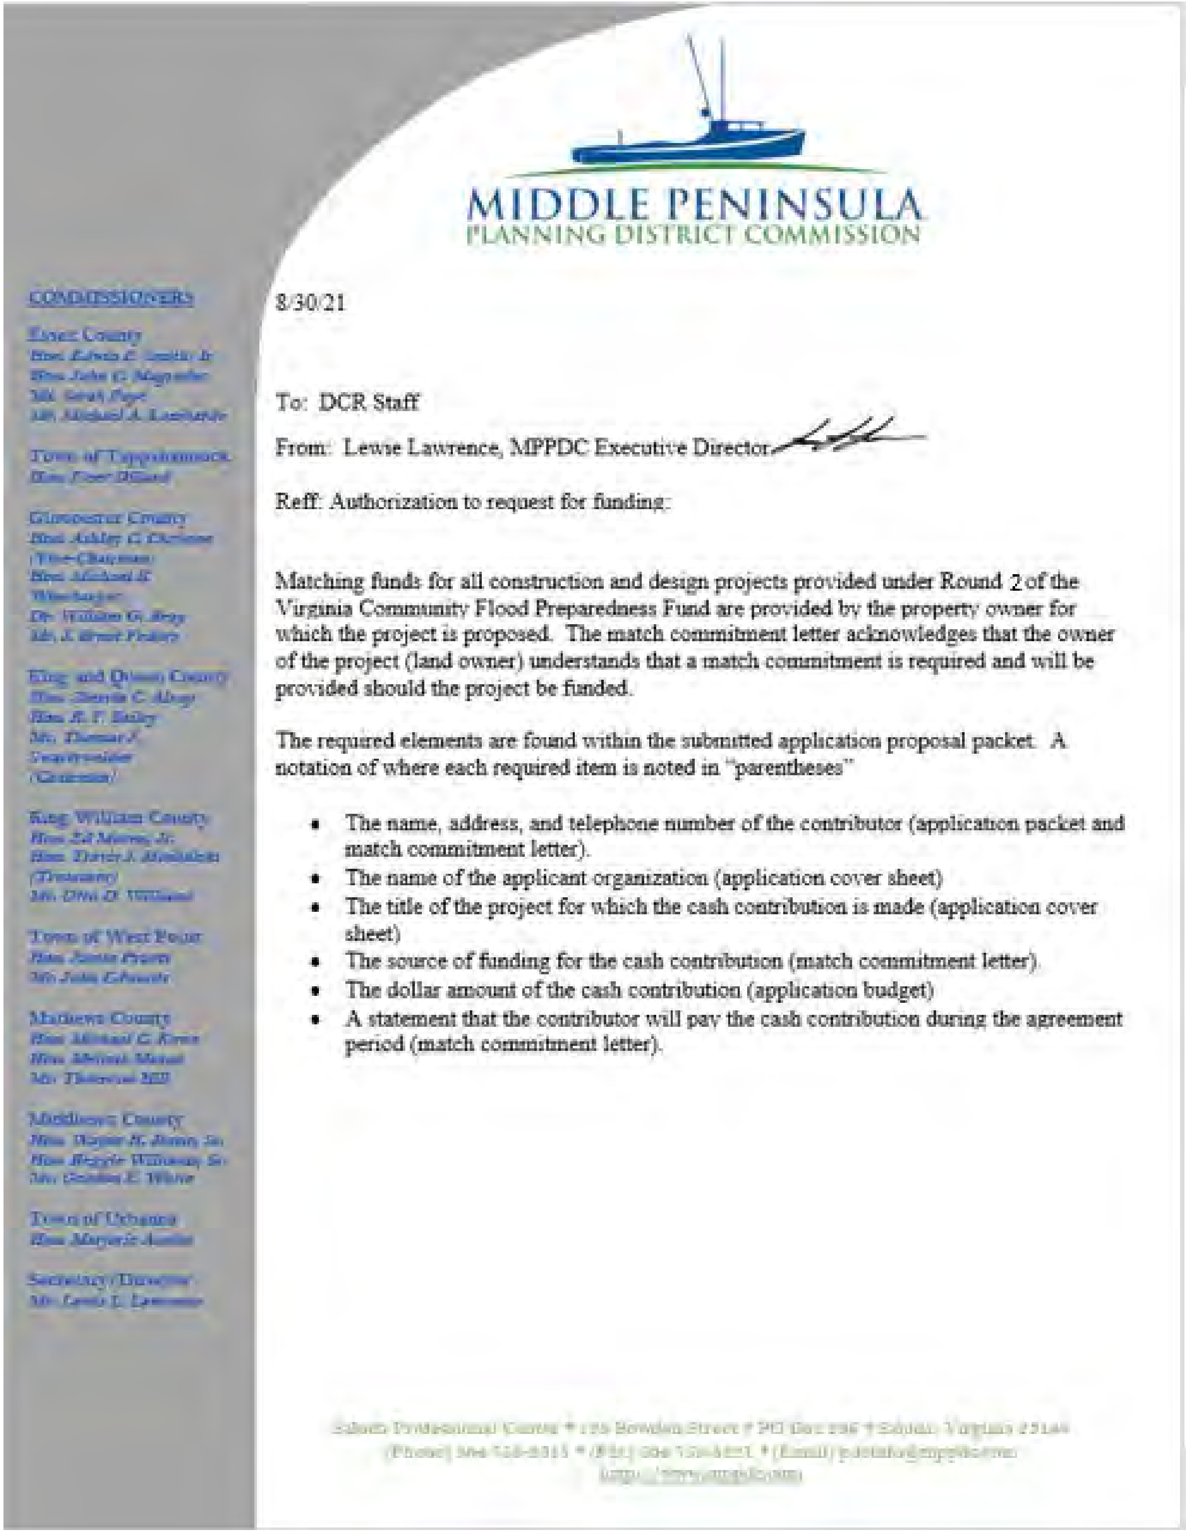
SUBTOTAL: Direct Costs					$11,263	$4,827	$16,089
Total					**$11,263**	**$4,827**	**$16,089**
Other Match:							
Source of Match					$0	$0	$0
GRAND TOTAL					**$11,263**	**$4,827**	**$16,089**

Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles

Authorization to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 2 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines

over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6
Match Commitment Letter

October 19, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities at 7305 Griffin Rd Gloucester, VA. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 804-832-2226 or by email at martha@vims.edu .

Sincerely,
Martha Rhodes
Martha Rhodes

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Bowditch Shoreline Design** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

Issue #2

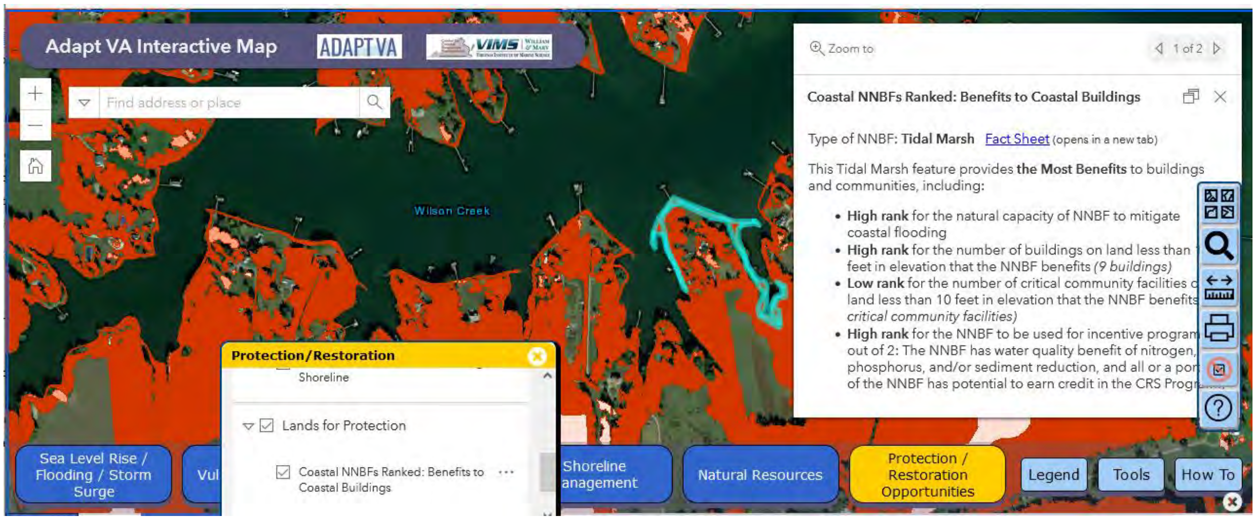
DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149
(Phone) 804 758-2311 ♦ (Fax) 804 758-3221 ♦ (Email) pdcinfo@mppdc.com
http://www.mppdc.com

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(9 buildings)*
- **Low rank** for the number of critical community facilities land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Prog

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:

To: Lewis Lawrence; Dawn Mantell
Cc: Peggy Bowditch
Subject: Re: LEwie- Flood Fund Round 1 Application - Status Update

Lewie,

Thanks to you and Dawn for the clarification. I believe I understand the objection to Mom's and other applications and we would be fine with being reclassified in the first choice you articulate above. I appreciate this means we would be eligible for a 70% not 80% grant.

Best of luck with the process that you are engaged in.

Sherwood Bowditch

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- **þ** Wetland restoration.
- ☑ Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- ☑ Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding and wetland loss.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought to be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional

purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located at 8303 Robins Neck Road in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in Appendix 1.

    - *Please see Section 4 (page 25), which includes historical hazard data within*

the region.

- *A link to the Gloucester County's Comprehensive Plan can be found at:* *https://www.gloucesterva.info/373/Comprehensive-Plan*.

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

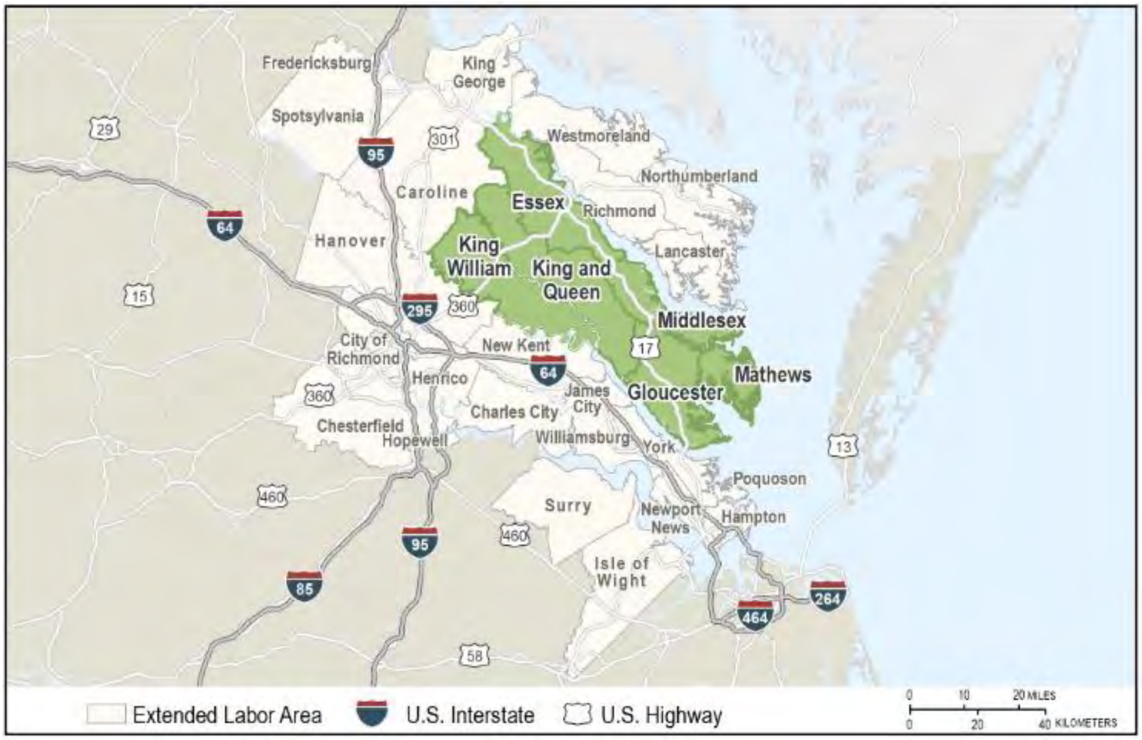

Figure 2. Middle Peninsula Population

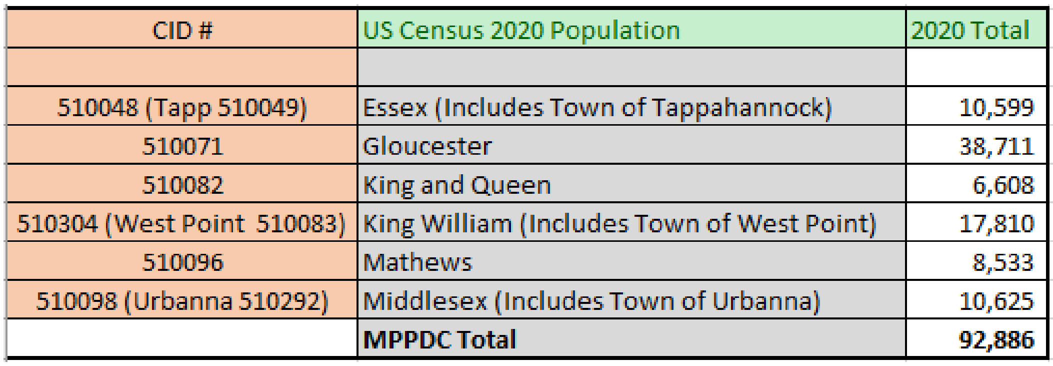
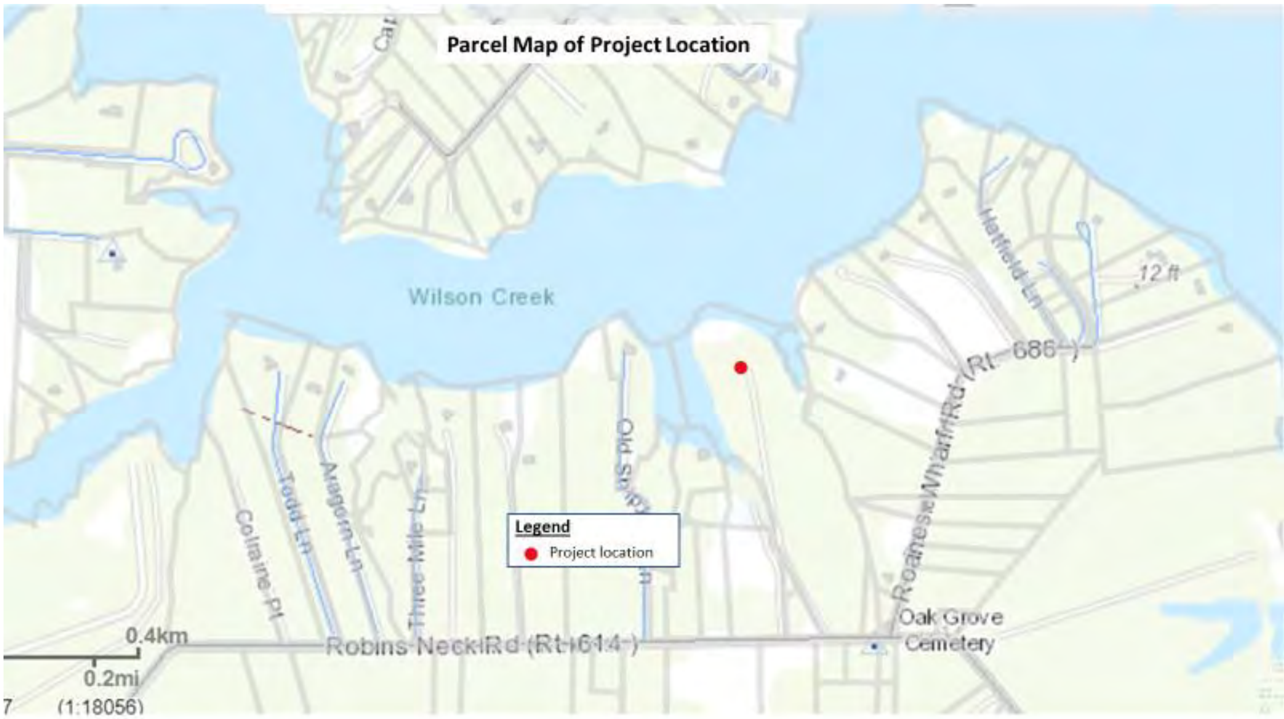


CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to design a nature-based shoreline protection solution on one private property on Robins Neck Road in Gloucester County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

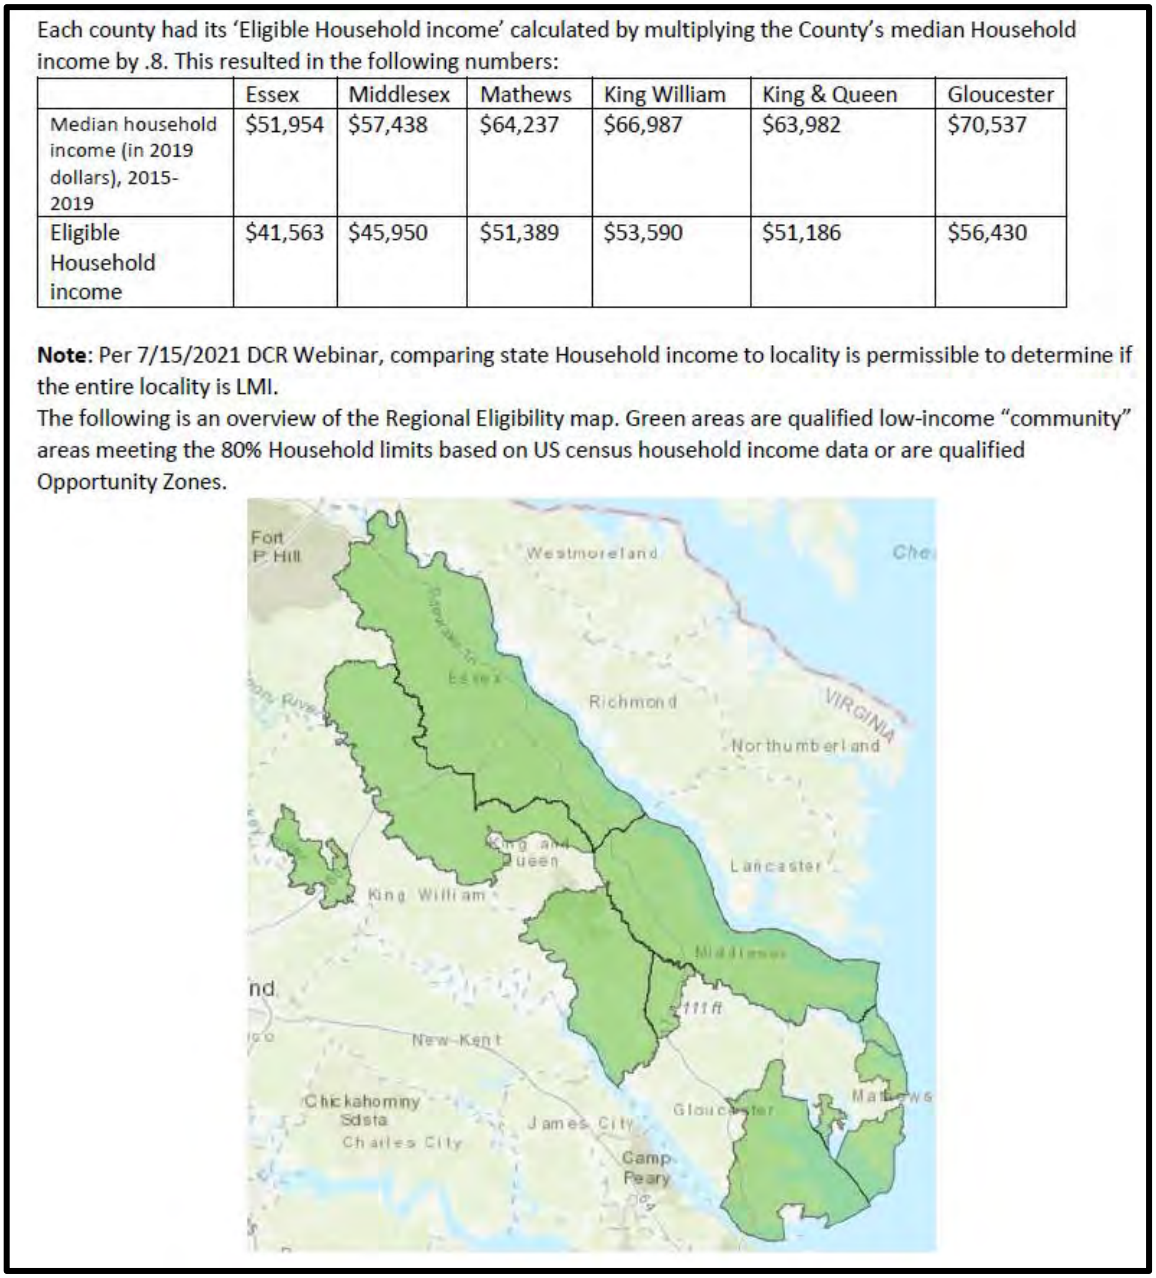
Figure 4. Parcel Map of Project Location



Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Low Income Qualifying Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

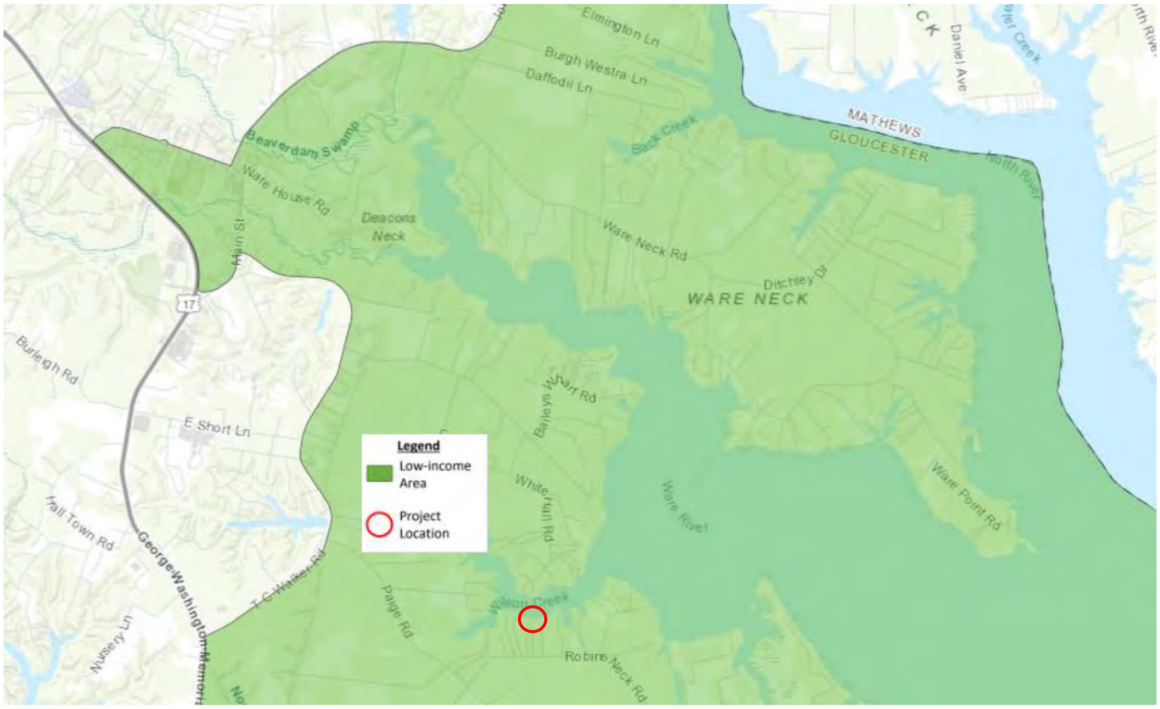
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

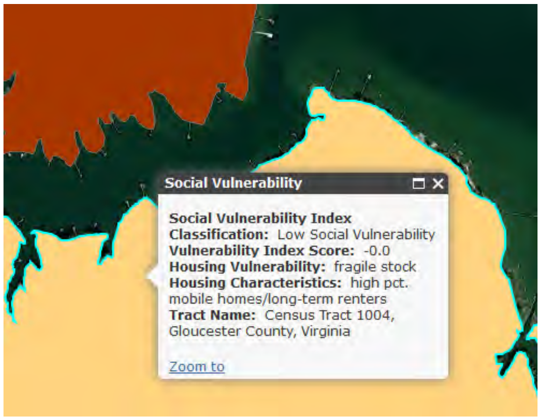
Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a low social vulnerability score as seen in **Figure 7.** Which appears to conflict with the low income area designation, but with mobile homes and renters?

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

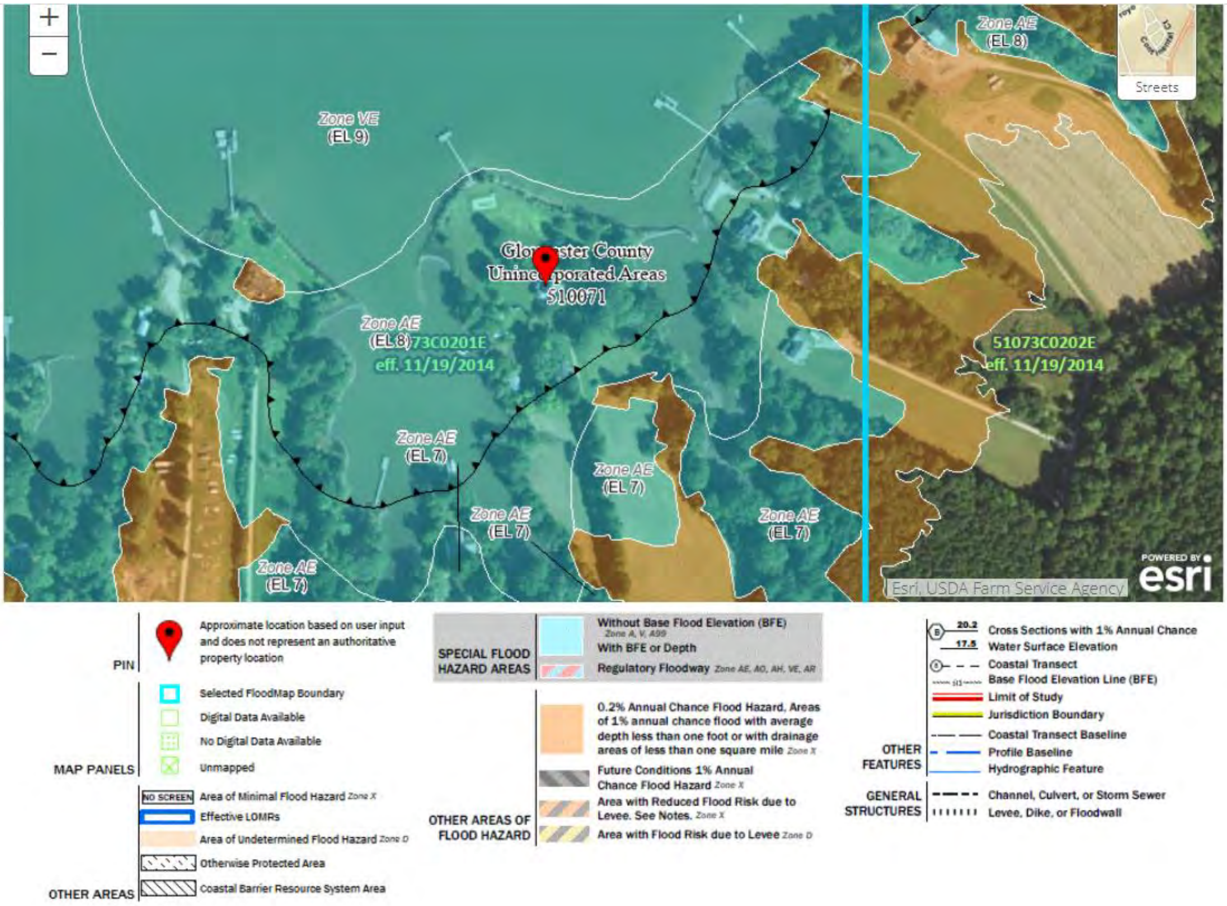


Social Vulnerability Index
Classification: Low Social Vulnerability
Vulnerability Index Score: -0.0
Housing Vulnerability: fragile stock
Housing Characteristics: high pct. mobile homes/long-term renters
Tract Name: Census Tract 1004, Gloucester County, Virginia

The project is located at 8303 Robins Neck Road, Gloucester VA 23061 (-76.47147898, 37.36228999). The property was purchased in 1972 by the current owner who has witnessed significant changes due to erosion. There is a lovely marsh grass area of 30 feet running from the land down a gentle slope into the creek. It serves as a great habitat for oysters, crabs, and eels. As children, the sons would fetch oysters but can no longer do so as adults. The northwest tip running southeast began to lose marsh grass in the 2000 timeframe, and that area has now expended to roughly 100 yards on the northeast facing of the property. A lot of marsh grass has been lost both in low and high lying areas. A few years ago, the property owners put down oyster shell grounds as a breakwater to provide a natural solution; unfortunately, it easily washed away as the scalable amount required was not feasible. Sea level has also risen to the point where it could not keep up. The natural habitat is being lost at an extreme rate along the quarter mile peninsula area that goes into two small coves. The property along the waterfront is also at risk from three large trees falling into the water; that is, two cedars and a pecan. They have been replacing lost trees with cypress trees to help absorb some of the water that is overly saturating the ground. If more continue to fall, it will negatively impact the pecan grove and daffodil garden.

This site is located within the AE flood zone as seen in **Figure 8**. Please see **Appendix 2** for the FIRMettes (last mapped 11/19/2014) and **Appendix 3** for additional property photos.

Figure 8: Map of FEMA Flood Zones of Project Location

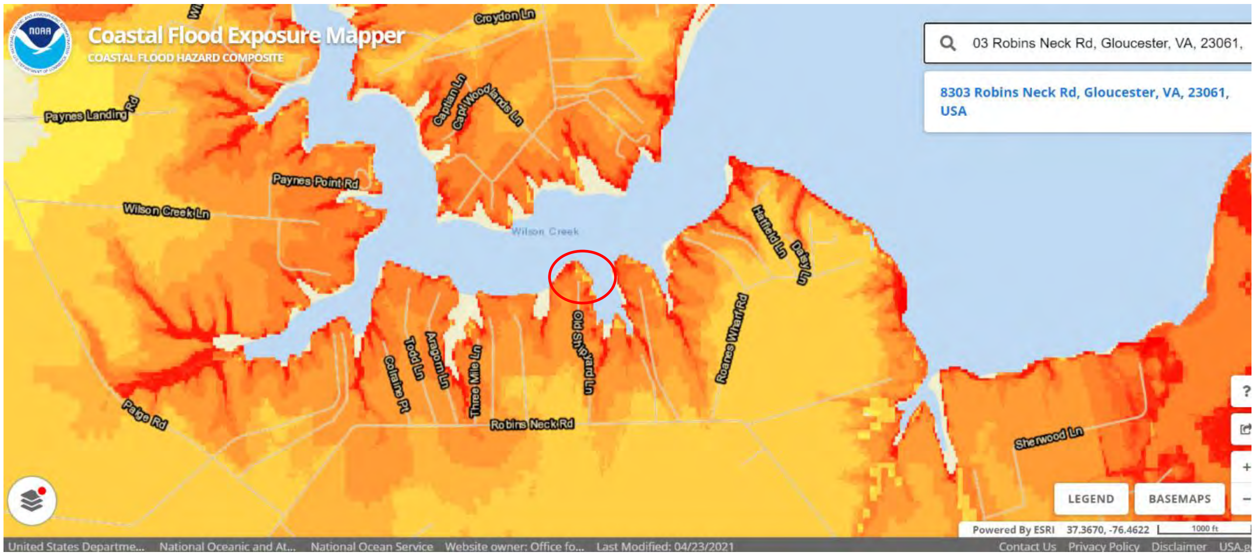


Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 9** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 86 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 9. Project Location and Map of the Shoreline Change between 1937 (purple) and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 10.

Figure 10. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



03 Robins Neck Rd, Gloucester, VA, 23061,

8303 Robins Neck Rd, Gloucester, VA, 23061, USA

- *A link to Gloucester County's current floodplain ordinance can be found at:* [*http://gloucestercounty-va.elaws.us/code/coor_ch8.5*](http://gloucestercounty-va.elaws.us/code/coor_ch8.5)

***ALTERNATIVES*.**

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

***GOALS AND OBJECTIVES*.**

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022, as seen in Table 1.

Table 1. Project Milestone Schedule

Hold administrative project close out meeting						X

RELATIONSHIP TO OTHER PROJECTS.

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
  - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine member jurisdictions including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is not a town, city, or county, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ¨No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index Score.)](#)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	0
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		75

SCOPE OF WORK CHECKLIST.

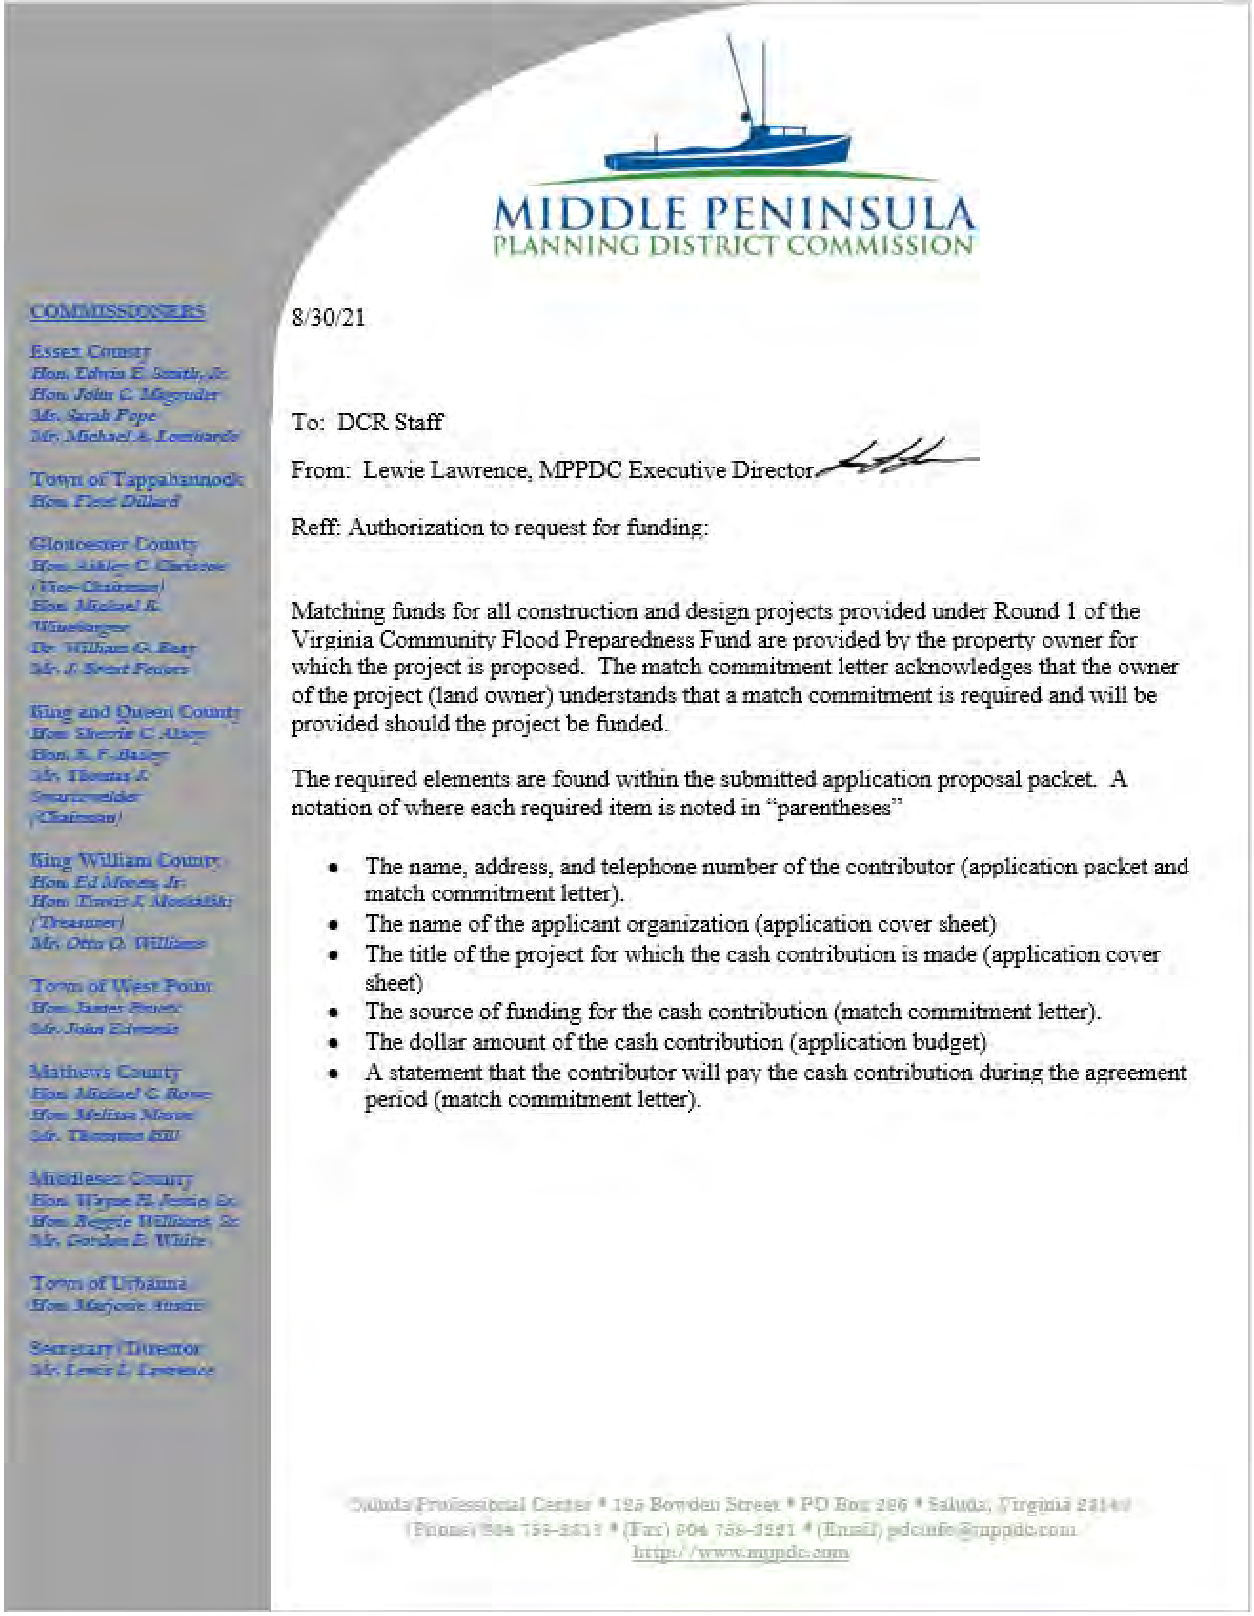
Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professionals who do shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

- *Authorization to request for funding*



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property 8303 Robins Neck Rd. Gloucester VA 23061 I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804-693-4811 or by email at peggyb72@gmail.com

Sincerely,

Margaret R. Bowditch

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

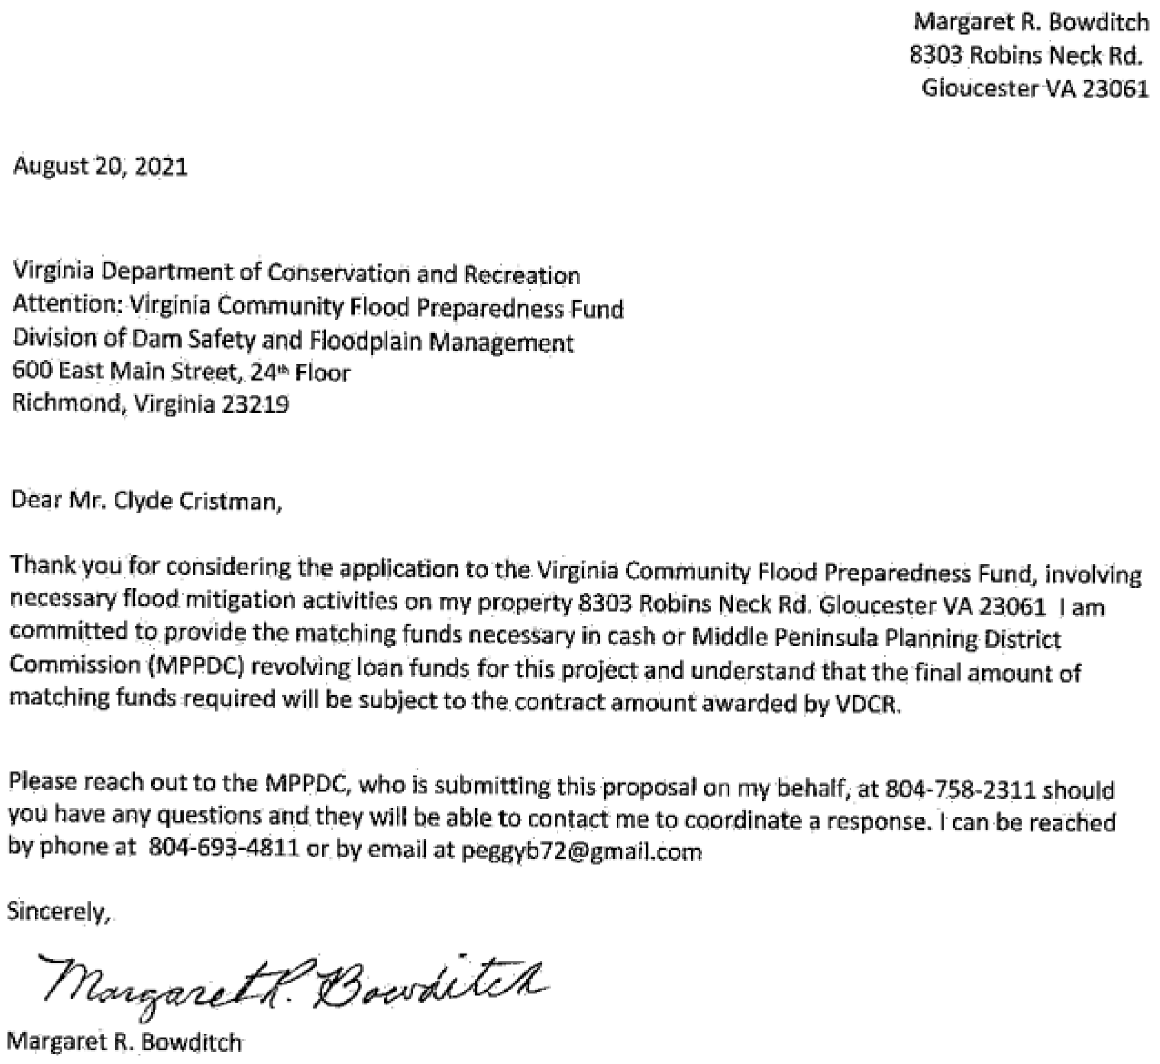
Match Commitment Letter



Margaret R. Bowditch
8303 Robins Neck Rd.
Gloucester VA 23061

August 20, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property 8303 Robins Neck Rd. Gloucester VA 23061 I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804-693-4811 or by email at peggyb72@gmail.com

Sincerely,

Margaret R. Bowditch

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Childress Shoreline Design** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

Issue #2

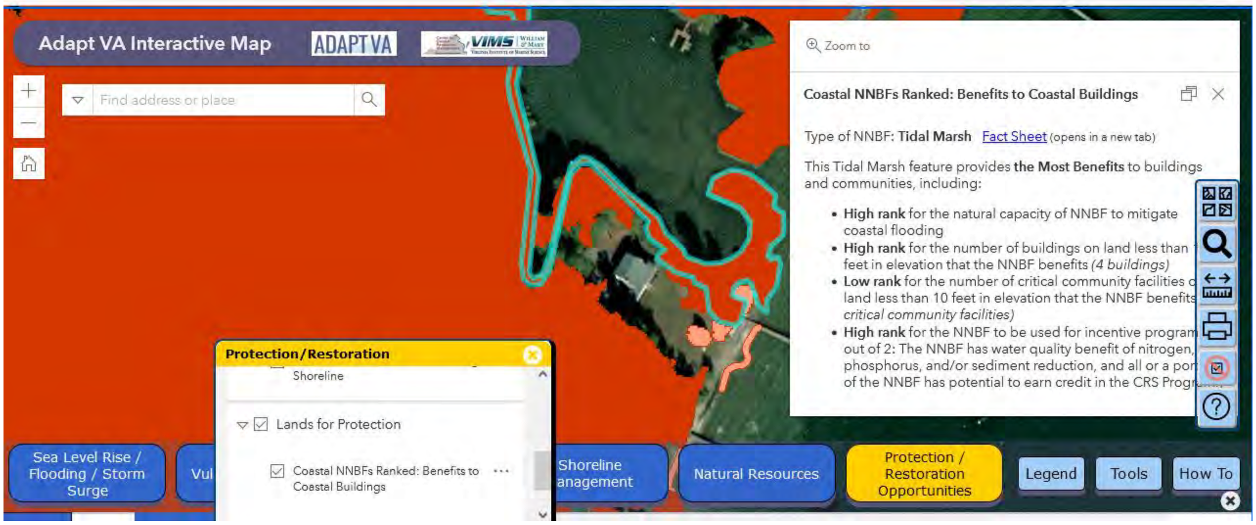
DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149
(Phone) 804 758-2311 ♦ (Fax) 804 758-3221 ♦ (Email) pdcinfo@mppdc.com
http://www.mppdc.com

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(4 buildings)*
- **Low rank** for the number of critical community facilities land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Prog

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:

Subject: RE: Flood Fund Round 1 Application - Status Update; (6374 Pinewold Lane, Gloucester, VA 23061)

Good afternoon, Lewie and Dawn ~

Per your email below, I am voluntarily electing to be reclassified as residing in a non-low-income area or Opportunity Zone as it relates to my Flood Fund Application through the Department of Conservation and Recreation's (DCR) Community Flood Preparedness Fund. I understand this designation will change the financial grant terms associated with my project.

Please make any necessary modifications to my proposal and resubmit my application prior to the 11/5/2021 deadline so it is considered during Round Two (2).

If you have any questions or require any additional information, please do not hesitate to contact me. Thanks in advance.

Best Regards,

Rob Childress
6374 Pinewold Lane

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- ☑ Wetland restoration.
- ☑ Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- ☑ Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Gloucester County **-** Please see the attached corresponding maps for this application.

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding and wetland loss.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional

purposes, such as decreasing flood risk or improving water quality. These interventions can be completely "green" (i.e., consisting of only ecosystem elements) or "hybrid" (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located at 6374 Pinewold Lane in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in Appendix 1.

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

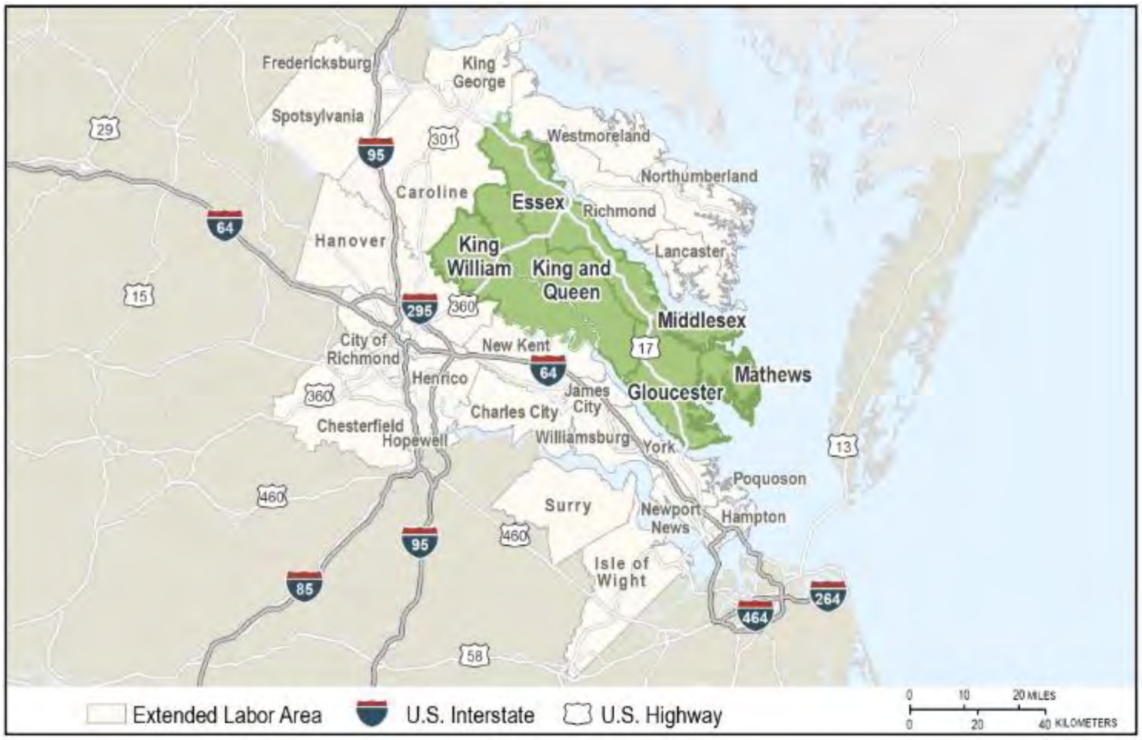

Figure 2. Middle Peninsula Population

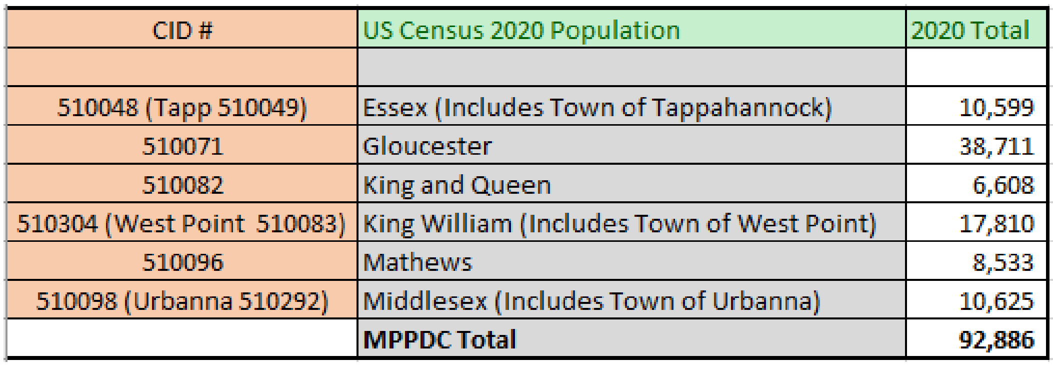
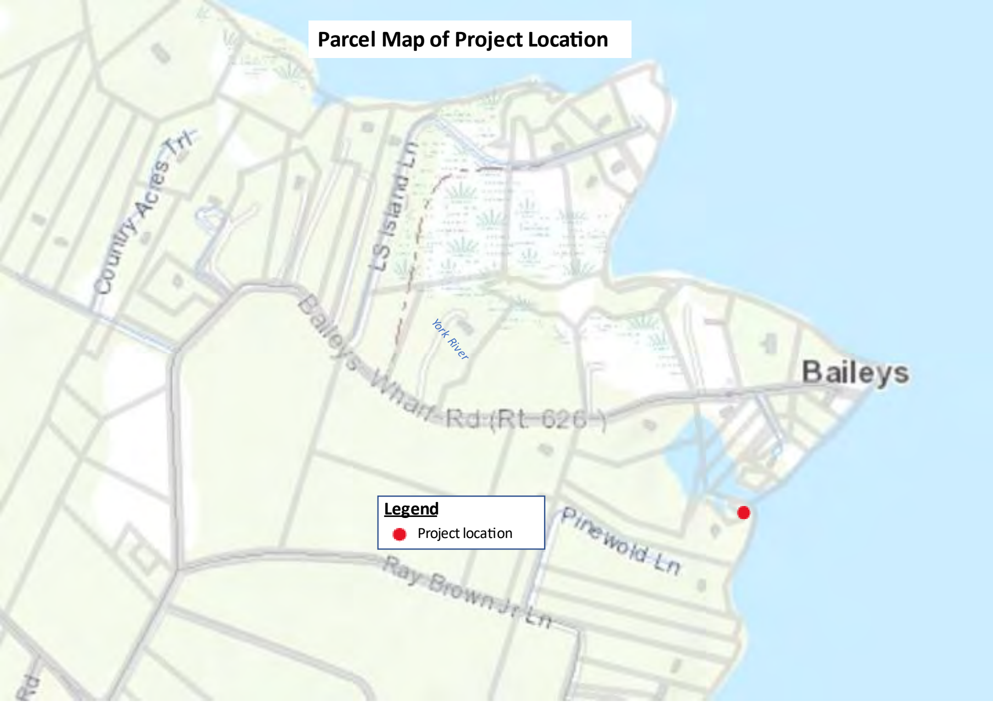


CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on Pinewold Lane in Gloucester County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

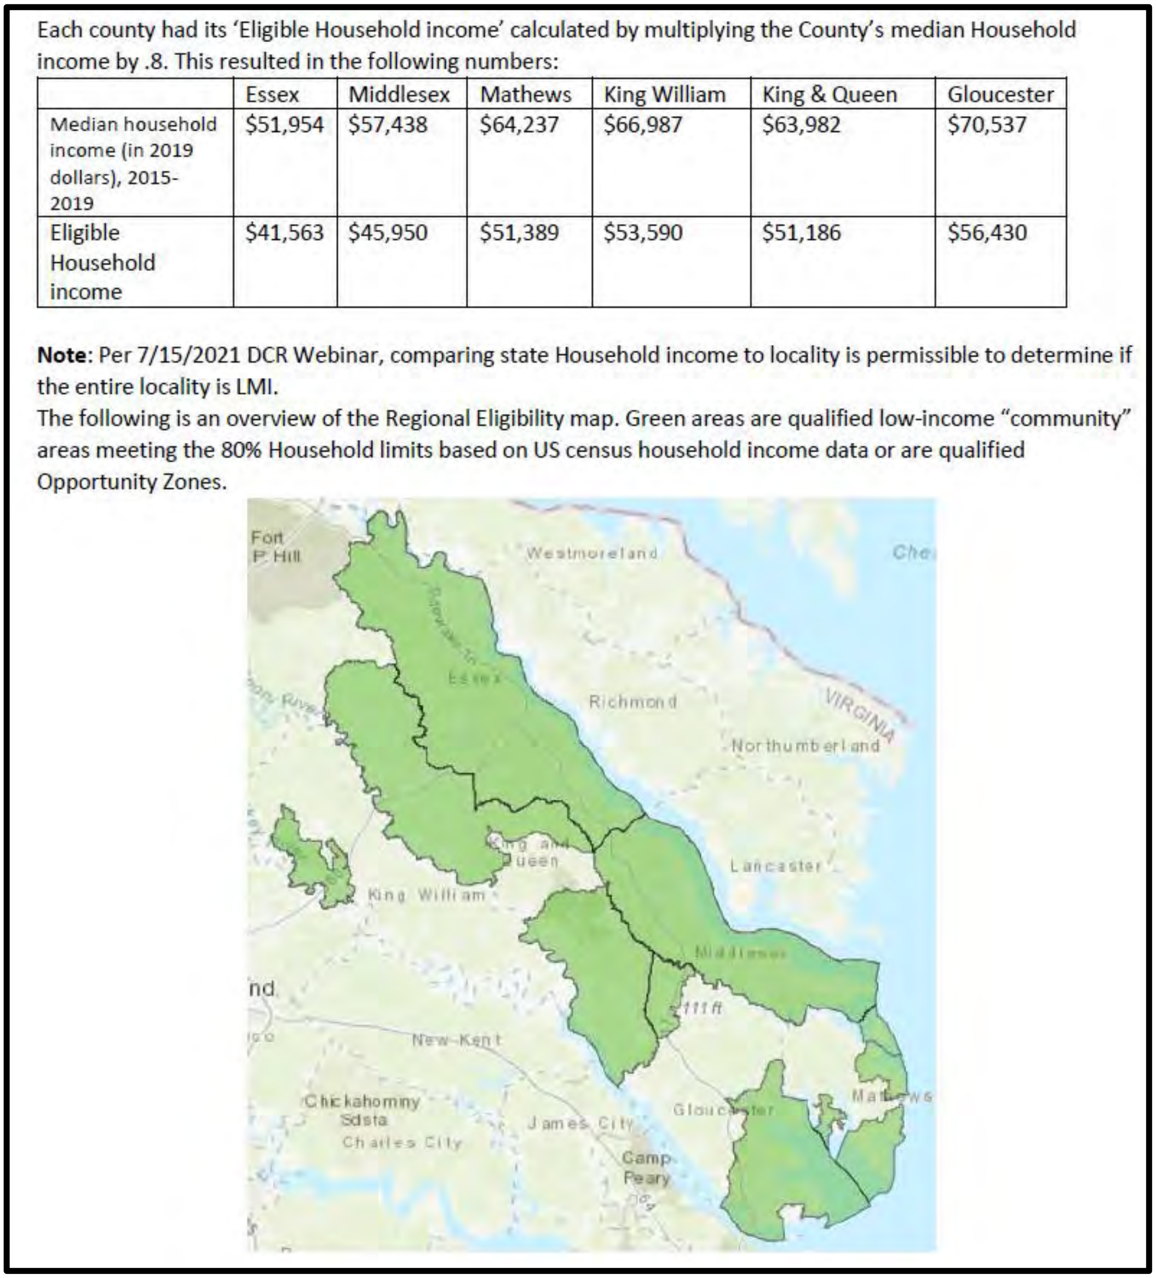
Figure 4. Parcel Map of Project Location



Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Low Income Qualifying Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

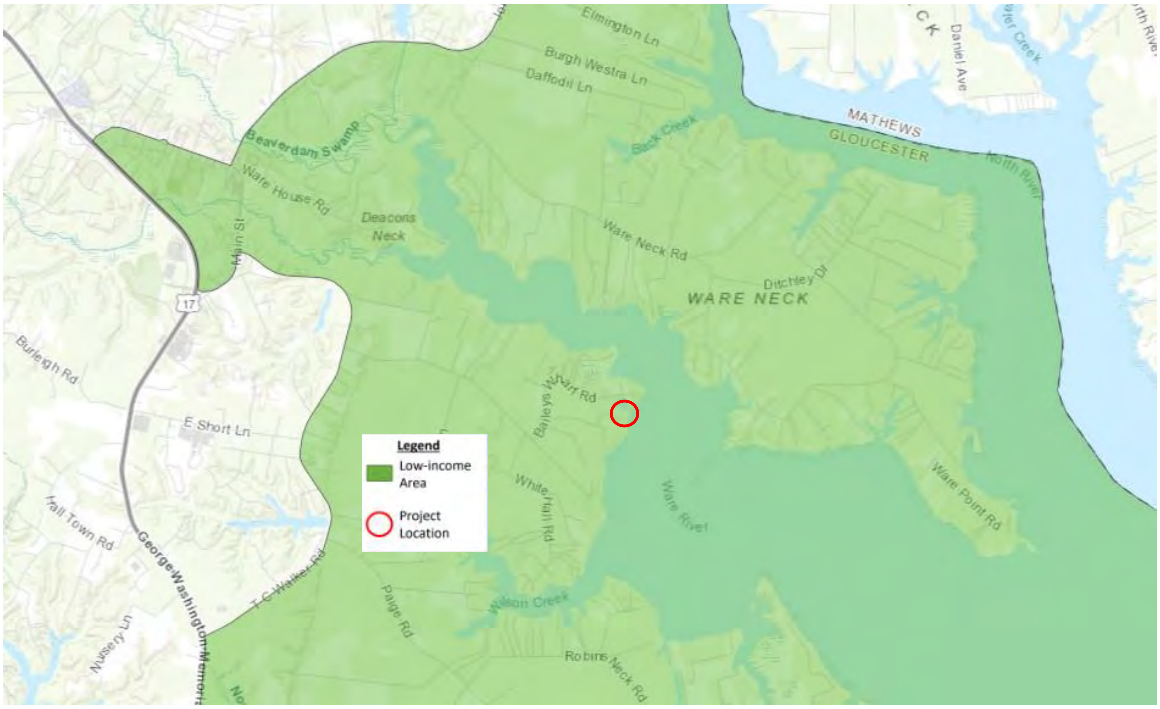
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

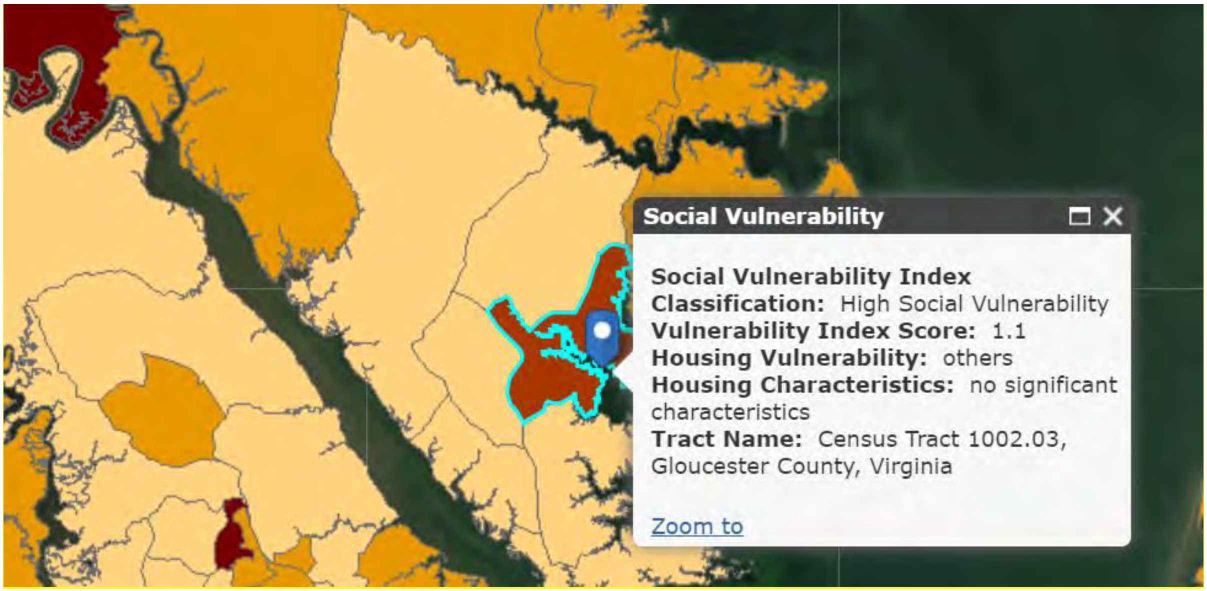
Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a high social vulnerability score as seen in **Figure 7.**

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability

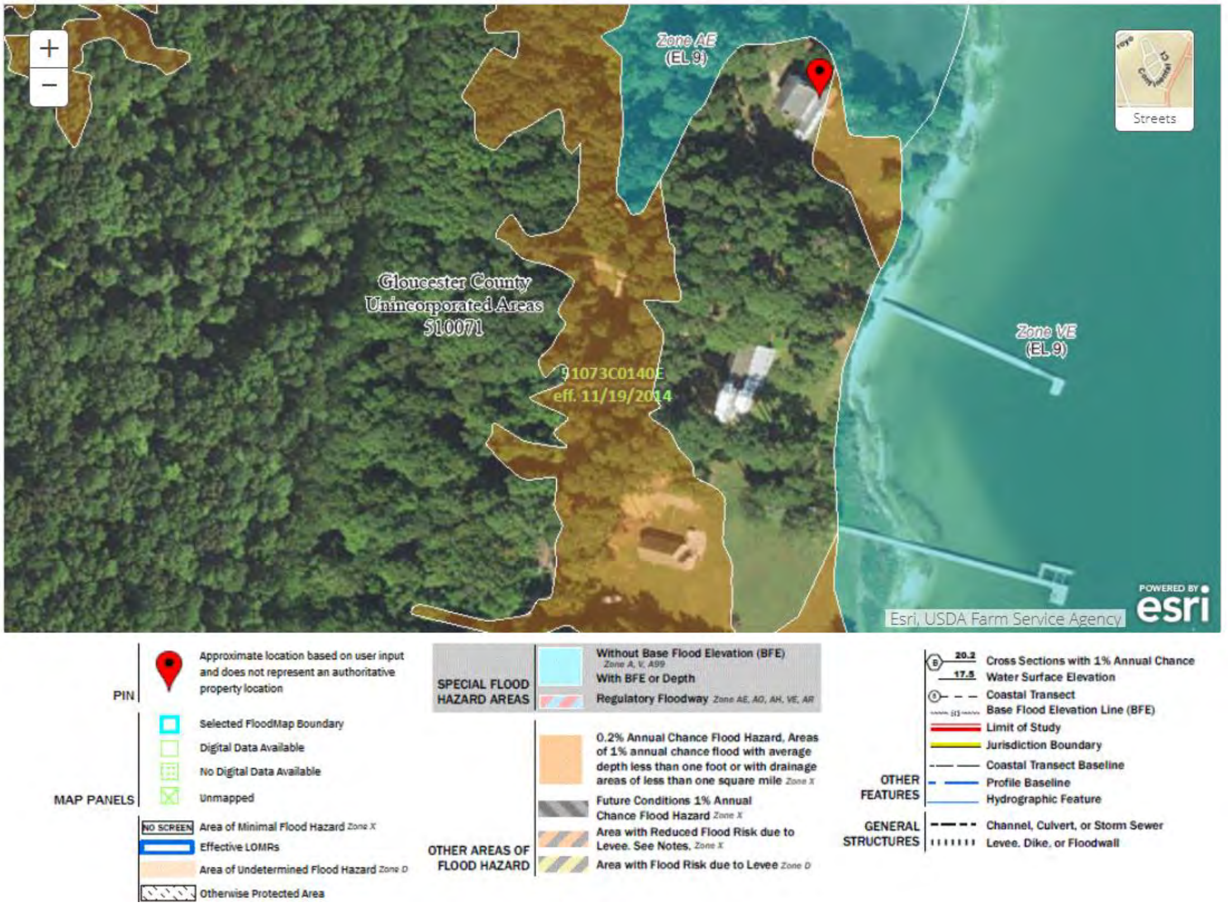
Social Vulnerability Index
Classification: High Social Vulnerability
Vulnerability Index Score: 1.1
Housing Vulnerability: others
Housing Characteristics: no significant characteristics
Tract Name: Census Tract 1002.03, Gloucester County, Virginia

Zoom to

The project is located at 6374 Pinewold Lane, Gloucester, VA 23061 (-76.464651 37.38443799). When the property was purchased, there was about 200 feet of riprap along part of the property. Because of the recent mild storm, the riprap is beginning to fail. As the waves overtake it, it has led to erosion problems, and this will only continue to worsen with sea level rise. Another 200 feet of the property has a beach area where there is significant loss of marsh grasses due to the wave energy coming off a Cape Charles (there is an open 30 mile shot between the property across the bay to Cape Charles). Additionally, the slope of the beach area is not angled correctly to protect the marsh grass, causing even more loss. There is an adjoining cove to the property, which results in additional erosion problems. During high tide, there is an extra four feet of water on the cove, which undercuts the bank and over saturates the ground. This destabilized the ground and causes many trees to fall in or near the waterfront. See the following pictures for more details.

This site is located within the VE and AE flood zone as seen in **Figure 8**. Please see **Appendix 2** for the FIRMettes (last mapped 11/19/2014) and **Appendix 3** for additional property photos.

Figure 8: Map of FEMA Flood Zones of Project Location

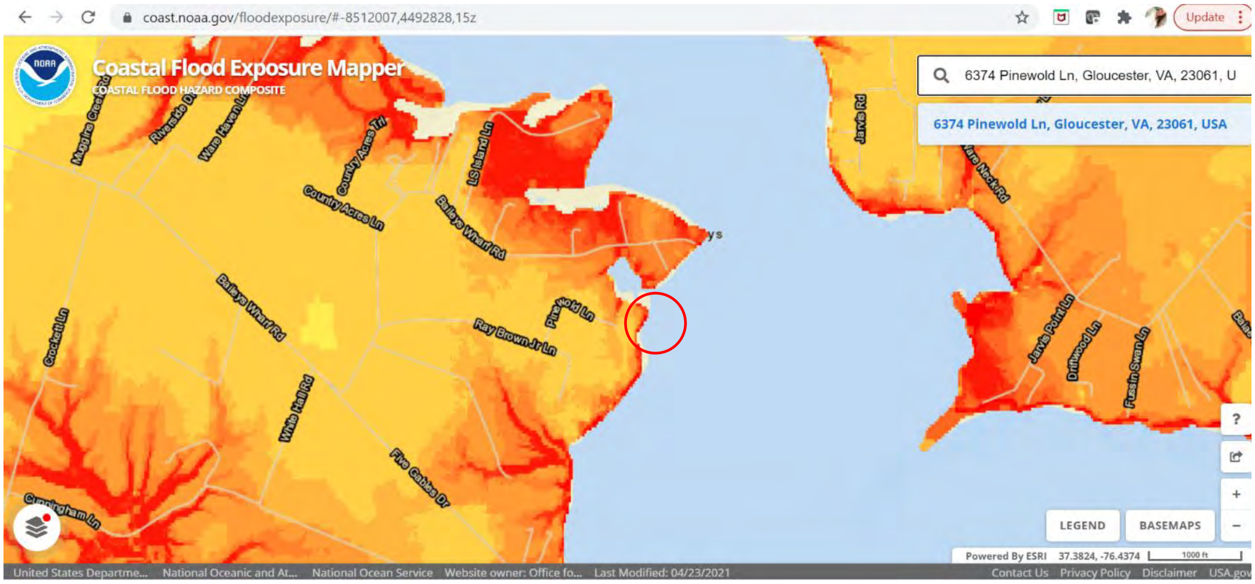


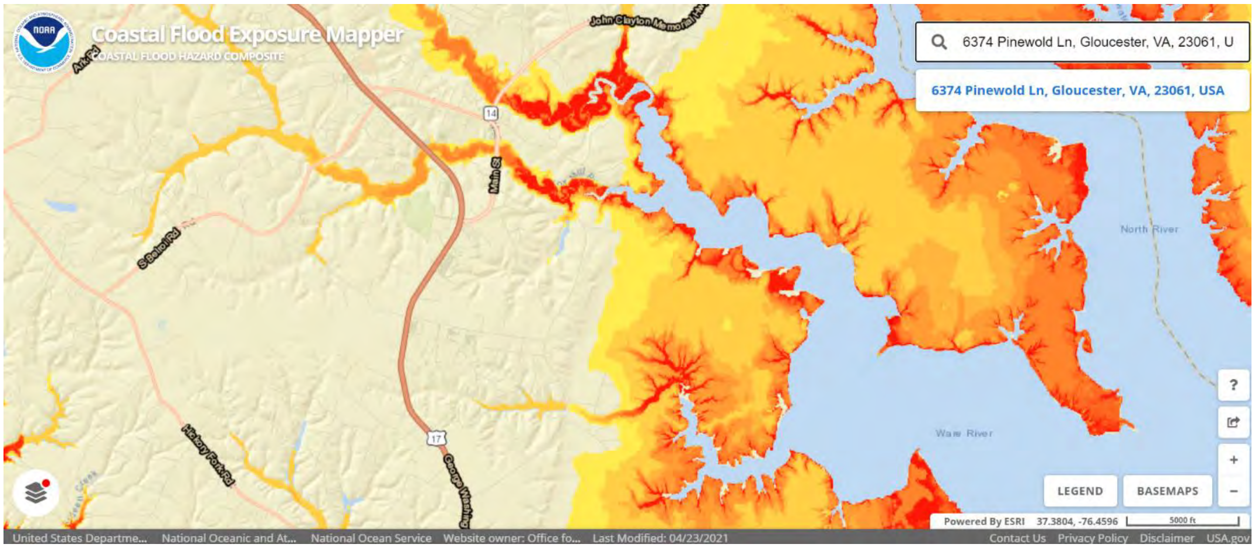
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 9** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 83 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 9. Project Location and Map of the Shoreline Change between 1937 (purple) and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 10.

Figure 10. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)





6374 Pinewold Ln, Gloucester, VA, 23061, U

6374 Pinewold Ln, Gloucester, VA, 23061, USA

For more information about this project area please see:

- *A link to Gloucester County's current floodplain ordinance can be found at: http://gloucestercounty-va.elaws.us/code/coor_ch8.5*

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022, as seen in Table 1.

Table 1. Project Milestone Schedule

Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

RELATIONSHIP TO OTHER PROJECTS.

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	12
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		87

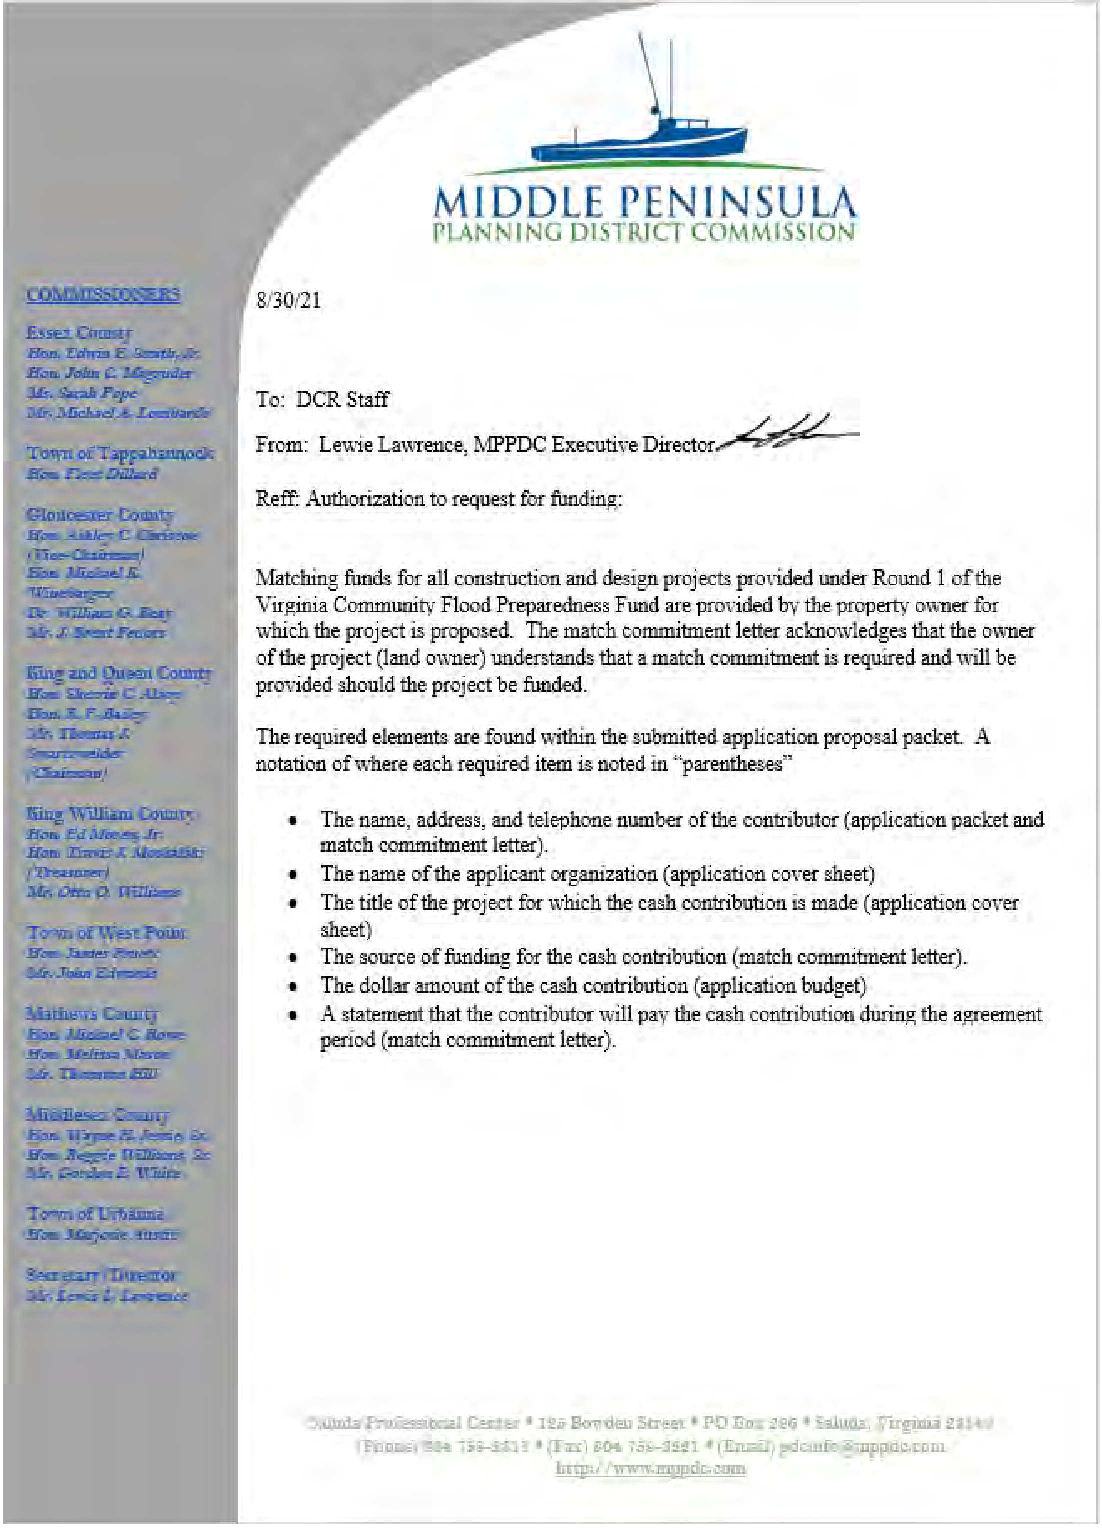
GRAND TOTAL						**$5,418**	**$1,355**	**$6,773**

Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

- *Authorization to request for funding*



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman:

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 6374 Pinewold Lane, Gloucester, VA 23061. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at (804) 317-3404 or by email at Rob.Childress@outlook.com.

Sincerely,

Robby A. Childress

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

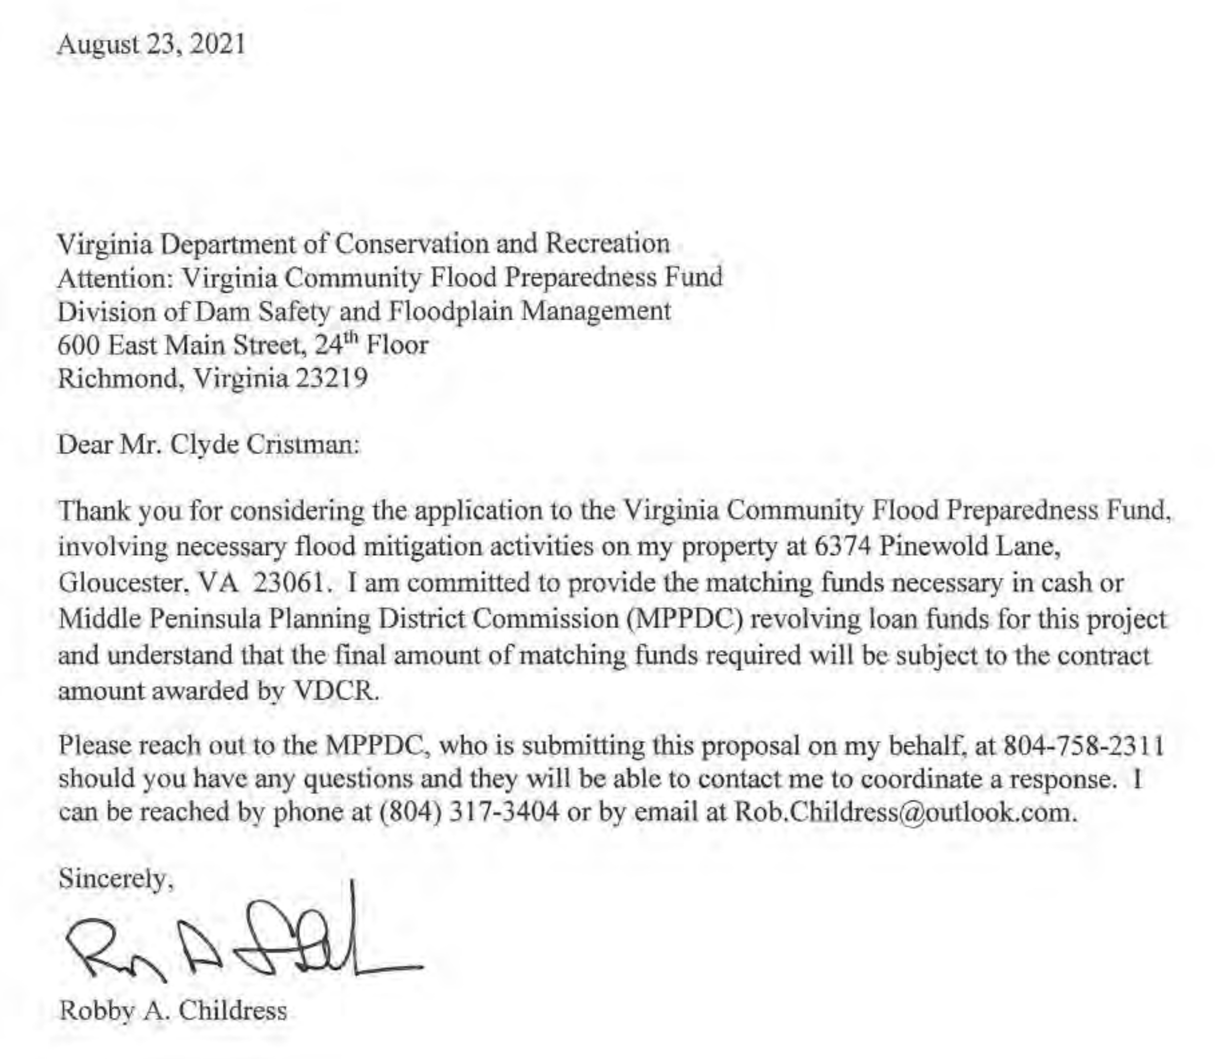
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



August 23, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman:

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 6374 Pinewold Lane, Gloucester, VA 23061. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at (804) 317-3404 or by email at Rob.Childress@outlook.com.

Sincerely,

Robby A. Childress

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Jones Shoreline Design** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As reported multiple times to DCR staff, the Jones application is not included in a low-income area nor is it in an opportunity zone. MPPDC does not know why this application is being held up and the applicant can't voluntarily elect out of something they are not included in to start with.

Issue #2

DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

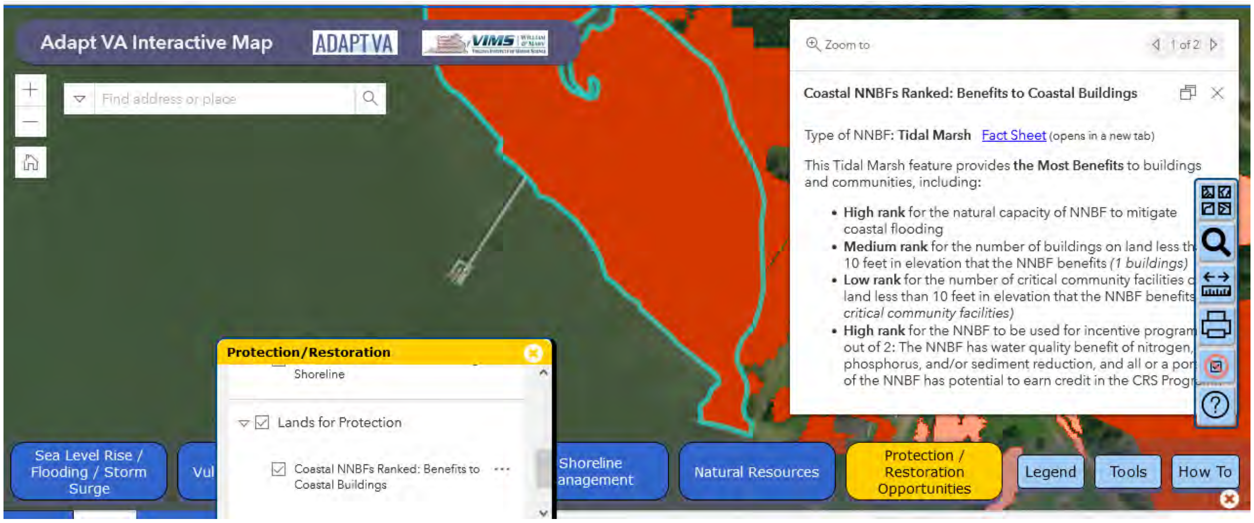
Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149
(Phone) 804 758-2311 ♦ (Fax) 804 758-3221 ♦ (Email) pdcinfo@mppdc.com
http://www.mppdc.com

means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection.   All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **Medium rank** for the number of buildings on land less th 10 feet in elevation that the NNBF benefits *(1 buildings)*
- **Low rank** for the number of critical community facilities o land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Progr

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the

Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:

The applicant was never included in a low-income area or an opportunity zone. The applicant cannot voluntarily opt out of something they were never included in. MPPDC staff does not understand why this application has issue with low income or opportunity zones?

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding and wetland loss.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional

purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal design application requests a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located at 3678 Briggs Cove Road in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in Appendix 1.

    - *Please see Section 4 (page 25), which includes historical hazard data within*

the region.

- *A link to the Gloucester County's Comprehensive Plan can be found at: https://www.gloucesterva.info/373/Comprehensive-Plan.*

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

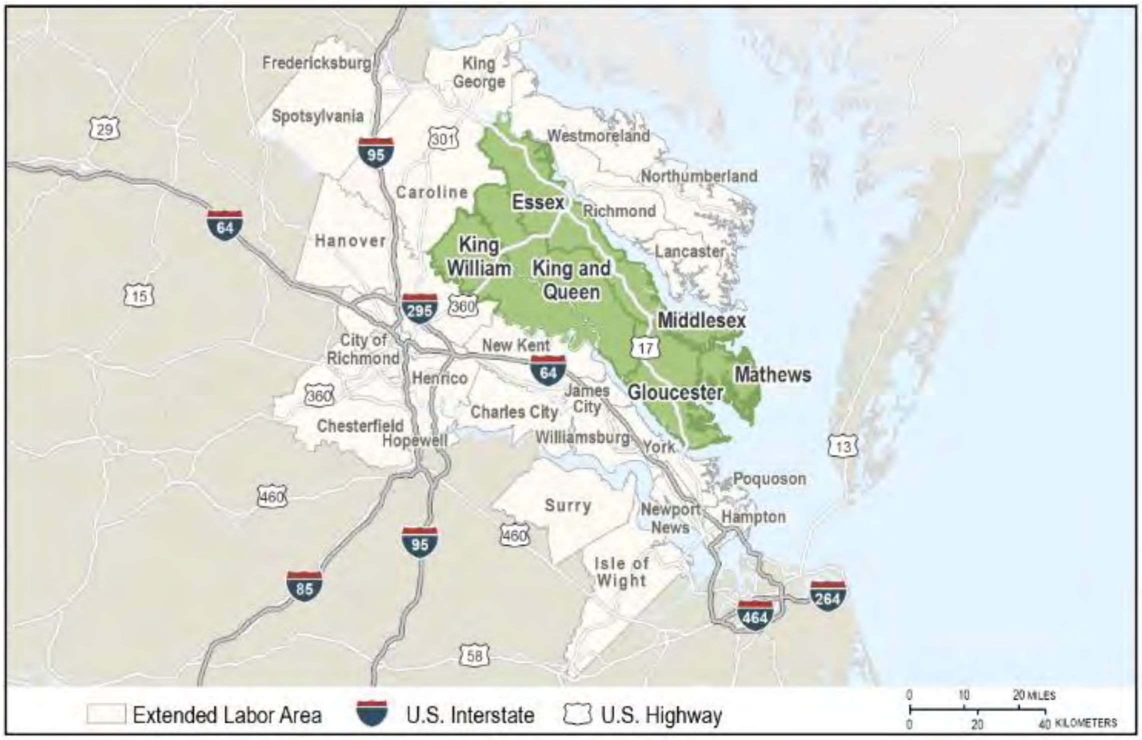

Figure 2. Middle Peninsula Population

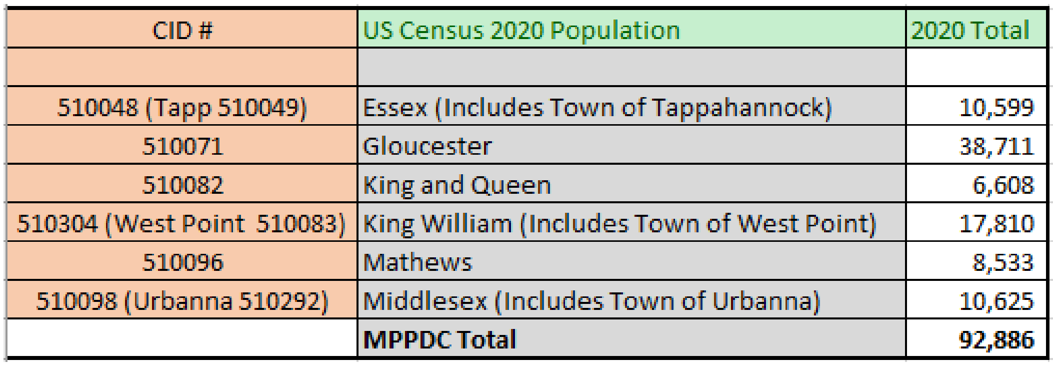
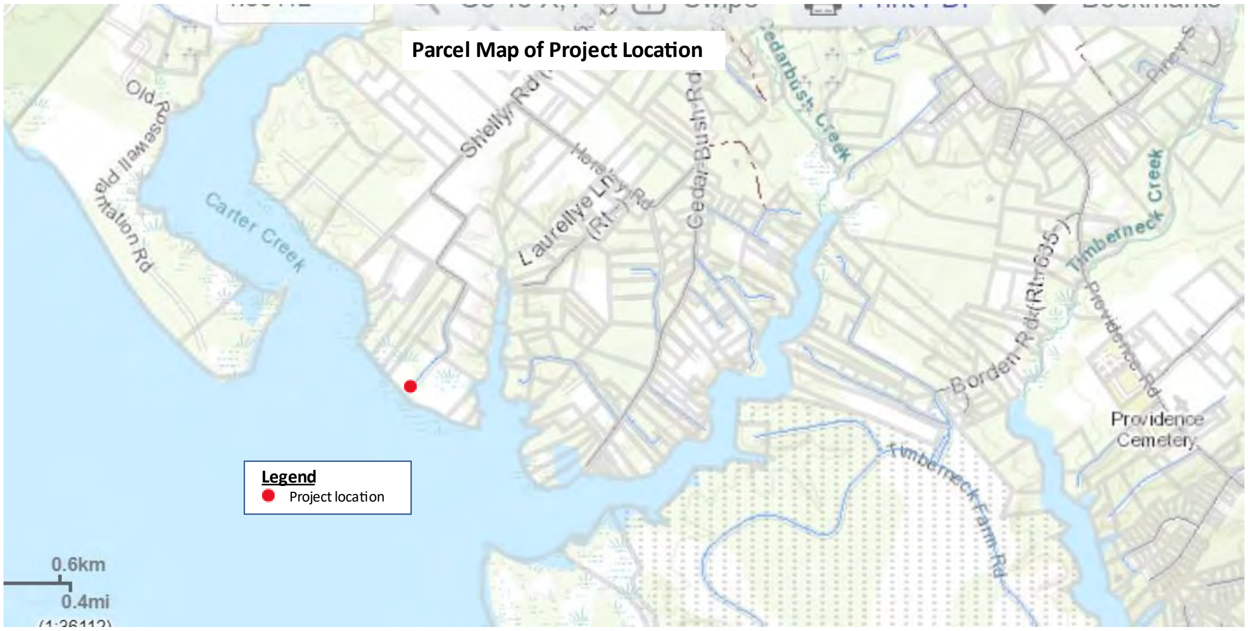


CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on Friends Road in Gloucester County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

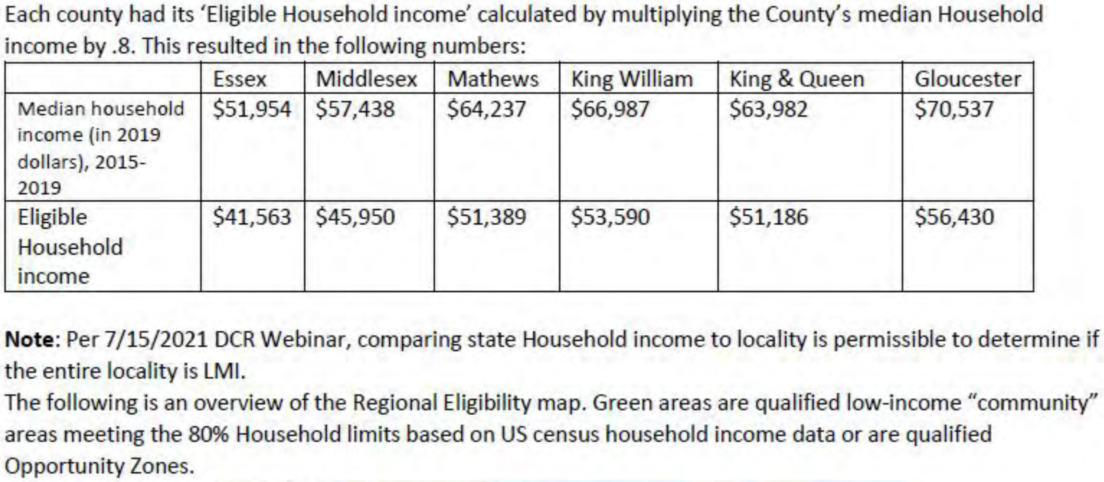
Figure 4. Parcel Map of Project Location



Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones. **This project falls outside of the low income comm**

Figure 5. Map of Middle Peninsula Low Income Qualifying Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

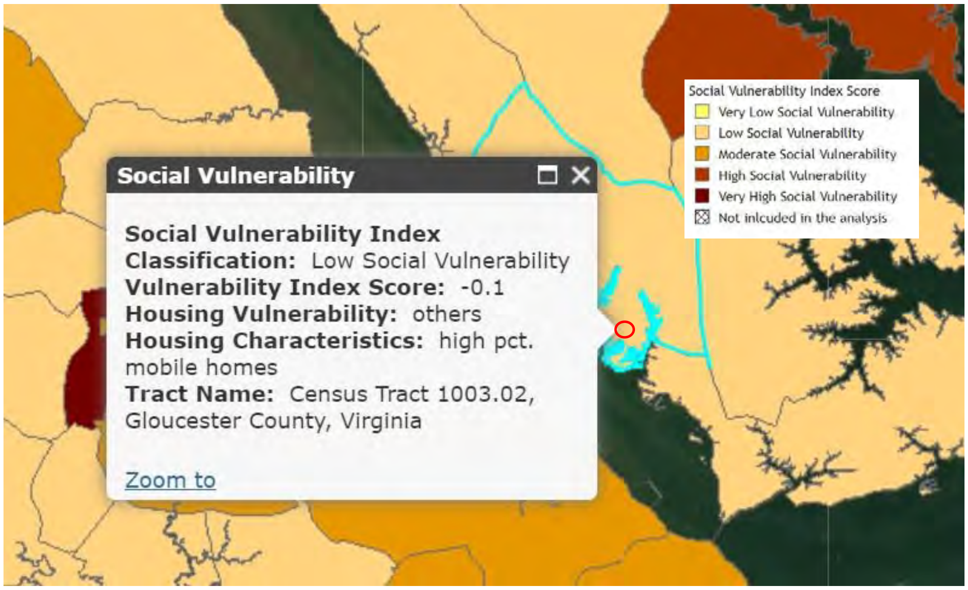
The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. **This shows that the project location is not shaded green and is, therefore, not within the low-income area community.**

Figure 6. Map of the Project Location within the Green Low-Income Area

According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a low social vulnerability score as seen in **Figure 7.**

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



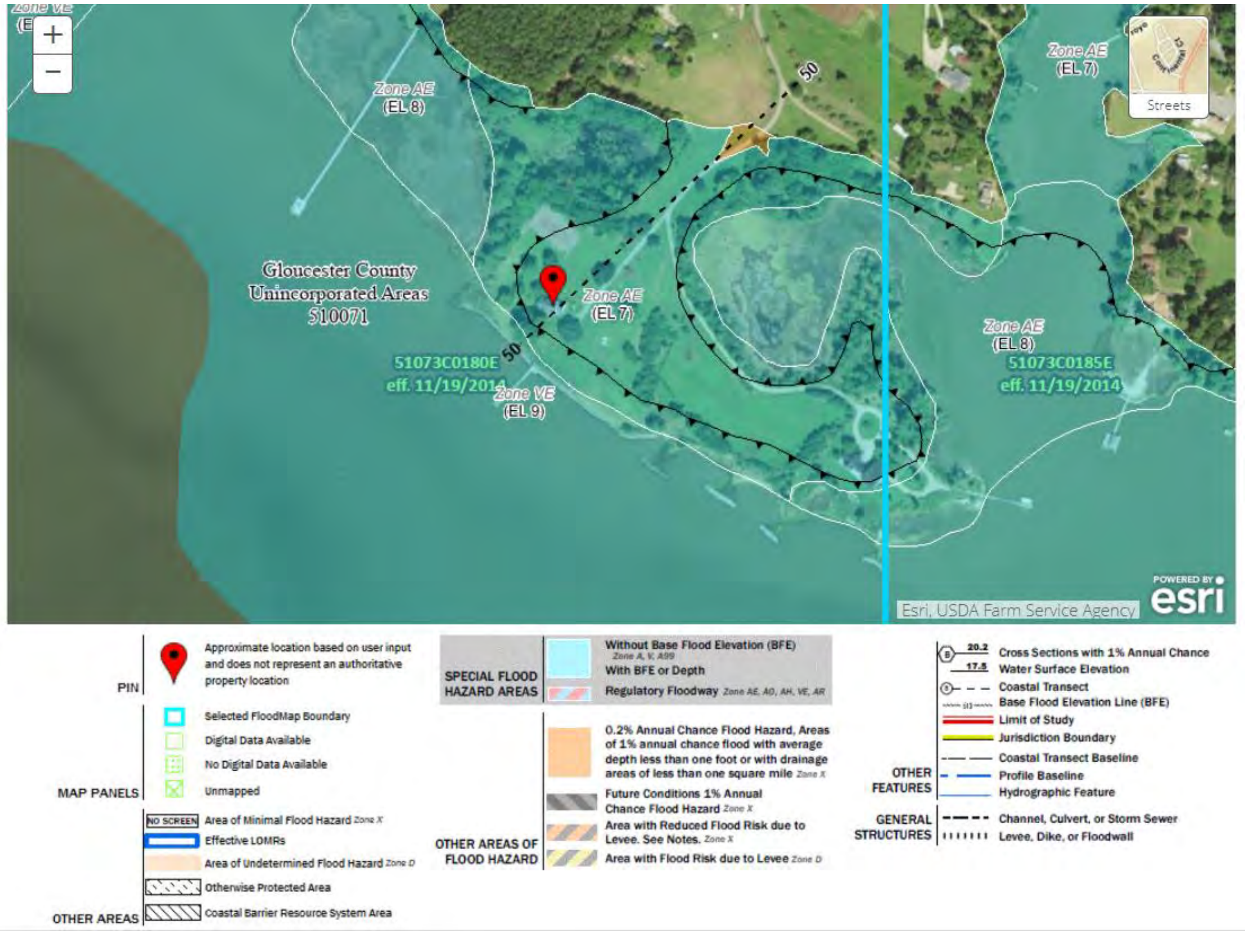
Social Vulnerability

Social Vulnerability Index Classification: Low Social Vulnerability
Vulnerability Index Score: -0.1
Housing Vulnerability: others
Housing Characteristics: high pct. mobile homes
Tract Name: Census Tract 1003.02, Gloucester County, Virginia

The project is located at 3678 Briggs Cove Road, Hayes, VA 23072 (-76.56530701, 37.31466699). It was acquired in 1964 by the property owner's parents and then was inherited upon their passing. The approximate 300 feet of shoreline have seen the challenges over the years with erosion and now it is occurring at an exponential rate. The hard marsh is also rapidly disappearing. There have been a number of mitigation efforts put into place over the years. It started with a installing a bulkhead and followed with building oyster beds. Has a far dock on the far side of the property. That, too, is being threatened.

This site is located within the VE/AE flood zone as seen in **Figure 8**. Please see **Appendix 2** for the FIRMettes (last mapped 11/19/2014) and **Appendix 3** for additional property photos.

Figure 8: Map of FEMA Flood Zones of Project Location

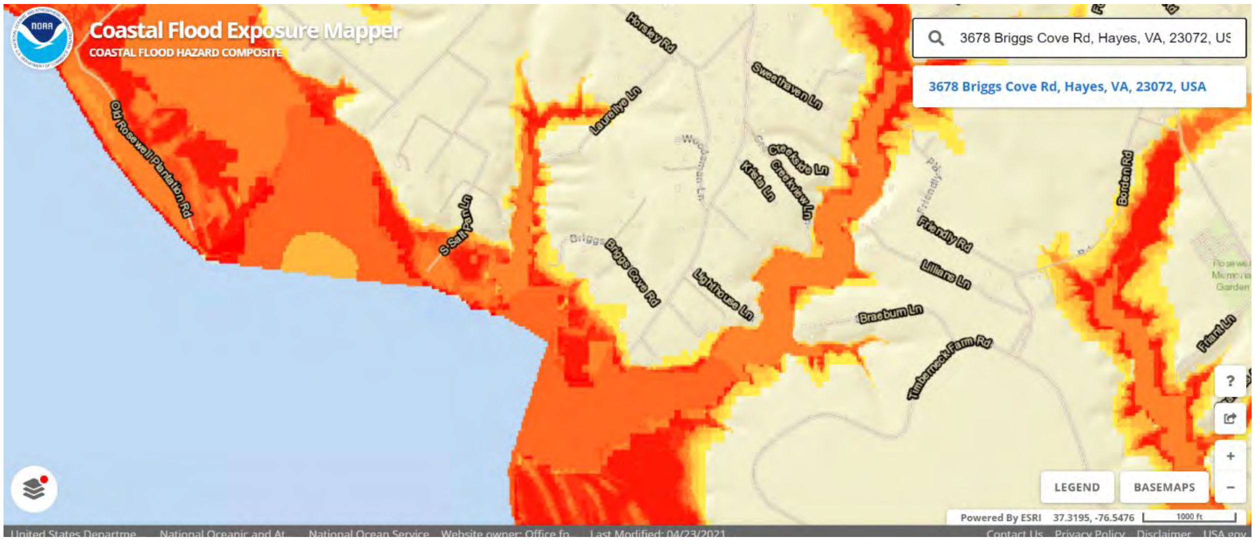


Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 9** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 84 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 9. Project Location and Map of the Shoreline Change between 1937 (purple) and 2017

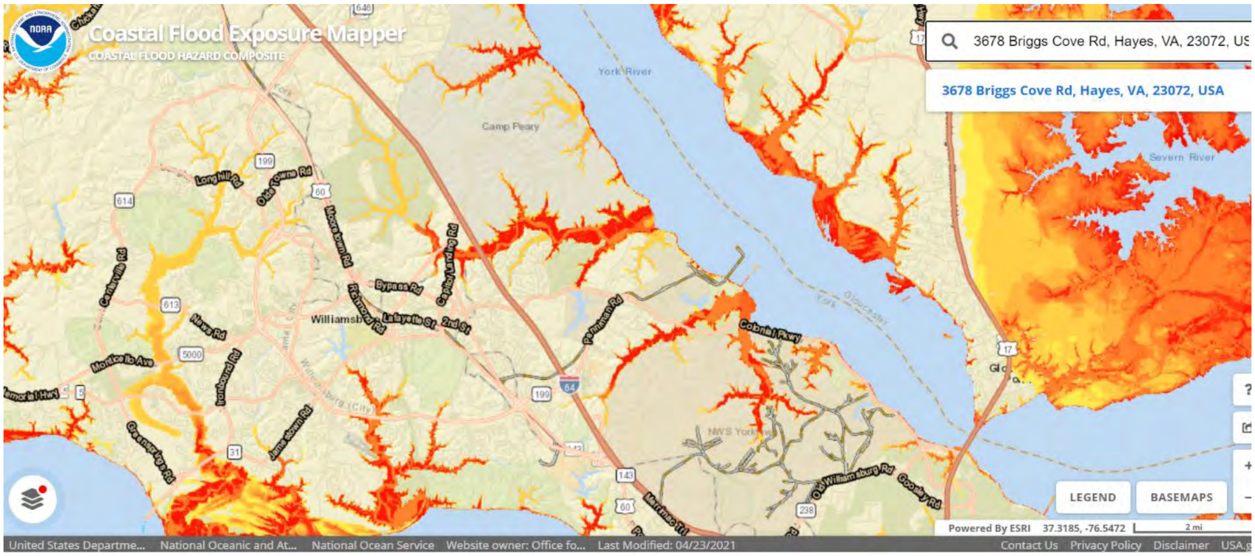
Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 10.

Figure 10. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



3678 Briggs Cove Rd, Hayes, VA, 23072, US

3678 Briggs Cove Rd, Hayes, VA, 23072, USA



For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Gloucester County's current floodplain ordinance can be found at: http://gloucestercounty-va.elaws.us/code/coor_ch8.5*

***ALTERNATIVES*.**

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

***GOALS AND OBJECTIVES*.**

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022, as seen in Table 1.

RELATIONSHIP TO OTHER PROJECTS.

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is not a town, city, or county, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	0
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	
No	**0**	0
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		65

SCOPE OF WORK CHECKLIST.

Scope of Work Narrative	
Supporting Documentation	**Included**
Detailed map of the project area(s) (Projects/Studies)	☑Yes ☐ No ☐ N/A
FIRMette of the project area(s) (Projects/Studies)	☑Yes ☐ No ☐ N/A
Historic flood damage data and/or images (Projects/Studies)	☑Yes ☐ No ☐ N/A
A link to or a copy of the current floodplain ordinance	☑Yes ☐ No ☐ N/A
Non-Fund financed maintenance and management plan forproject extending a minimum of 5 years from project close	☑Yes ☐ No ☐ N/A
A link to or a copy of the current hazard mitigation plan	☑Yes ☐ No ☐ N/A
A link to or a copy of the current comprehensive plan	☑Yes ☐ No ☐ N/A
Social vulnerability index score(s) for the project area from ADAPT VA's Virginia Vulnerability Viewer	☑Yes ☐ No ☐ N/A
If applicant is not a town, city, or county, letters of supportfrom affected communities	☑Yes ☐ No ☐ N/A
Completed Scoring Criteria Sheet in Appendix B, C, or D	☑Yes ☐ No ☐ N/A

SUBTOTAL: Direct Costs					$9,258	$3,968	$13,226
Indirect/IDC/Facilities & Administrative Costs			**27.31%**		$2,858	$1,225	$4,083
Total					**$12,116**	**$5,193**	**$17,309**
Other Match:							
Source of Match					$0	$0	$0
GRAND TOTAL					**$12,116**	**$5,193**	**$17,309**

Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 3678 Salt Pan Lane. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 202-255-6039 or by email at catesby.jones@gmail.com.

Sincerely,

Catesby B. Jones

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter

August 31, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 3678 Salt Pan Lane. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 202-255-6039 or by email at catesby.jones@gmail.com.

Sincerely,

Catesby B. Jones

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Lawrence Shoreline Design** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

Issue #2

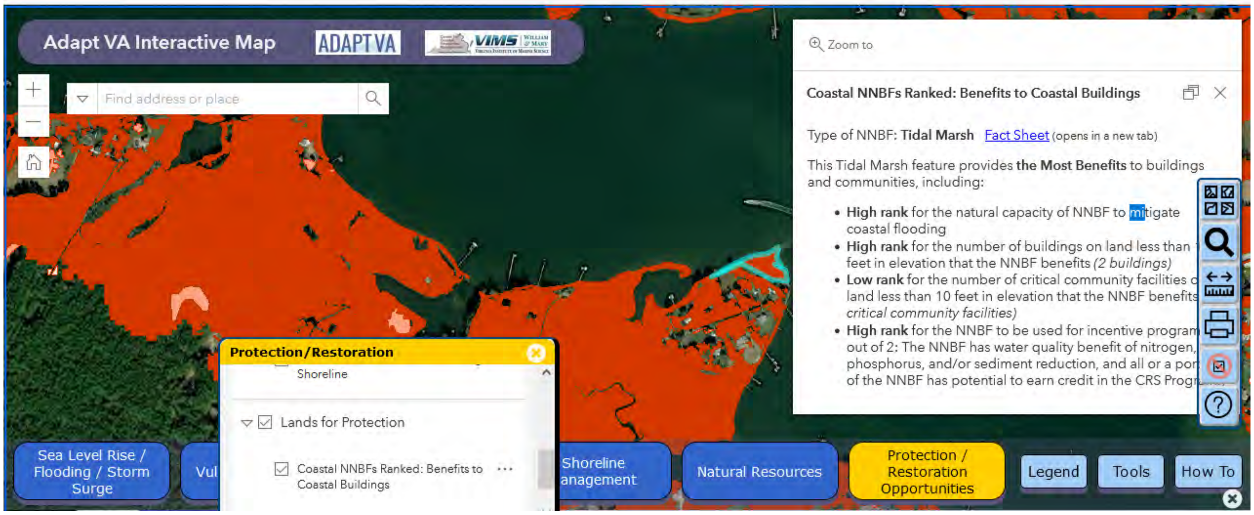
DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149
(Phone) 804 758-2311 ♦ (Fax) 804 758-3221 ♦ (Email) pdcinfo@mppdc.com
http://www.mppdc.com

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit



☑ Coastal NNBFs Ranked: Benefits to Coastal Buildings

Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(2 buildings)*
- **Low rank** for the number of critical community facilities o land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Progr

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding and wetland loss.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional

purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a **NATRX** nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, **NATRX is** lower cost than other nature based infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions for a **NATRX** based living shoreline on a private property located at 6688 L’s Island Lane in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in Appendix 1.

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

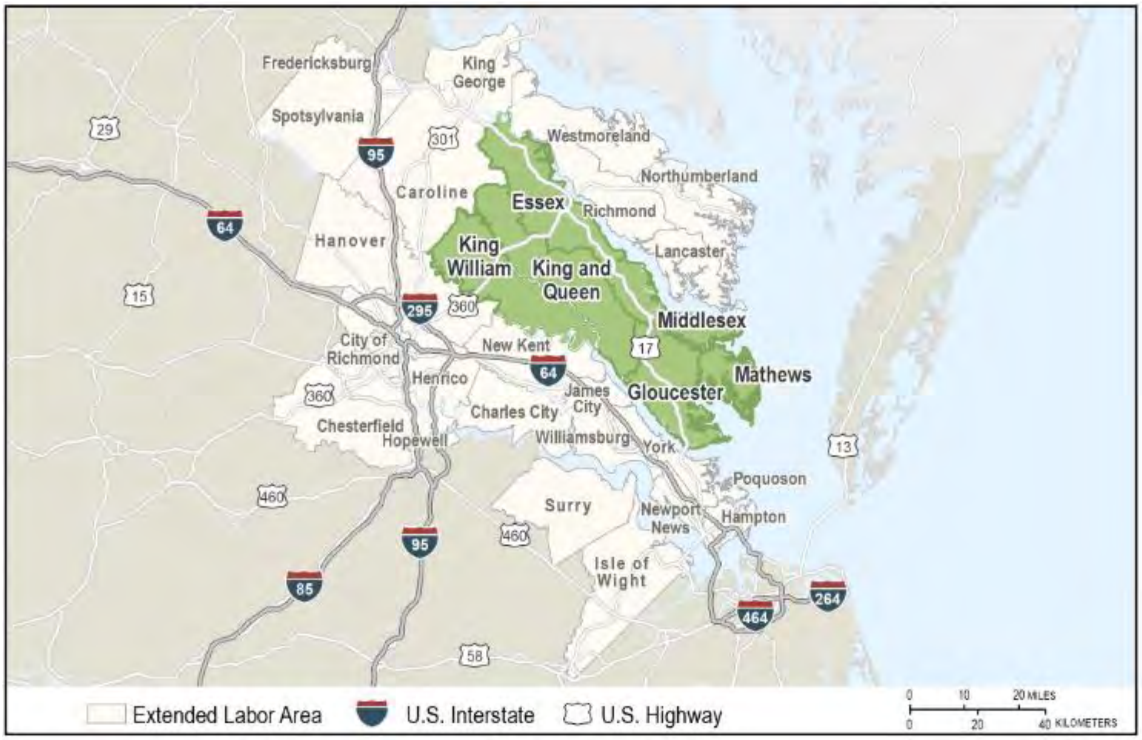

Figure 2. Middle Peninsula Population

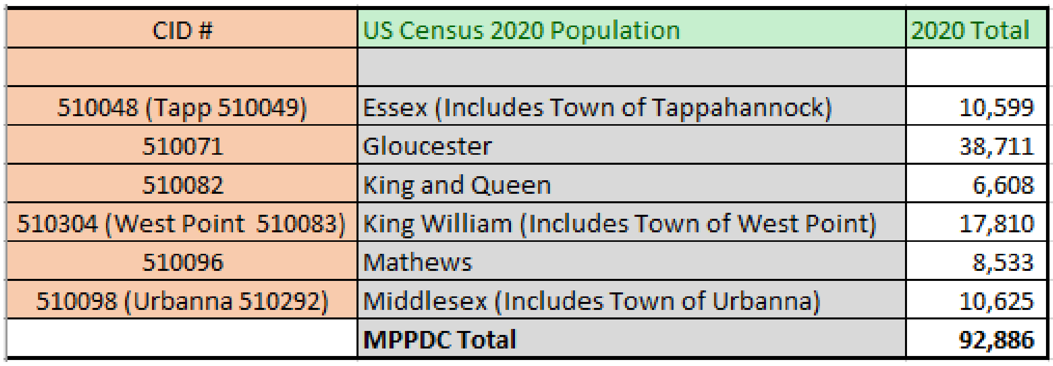
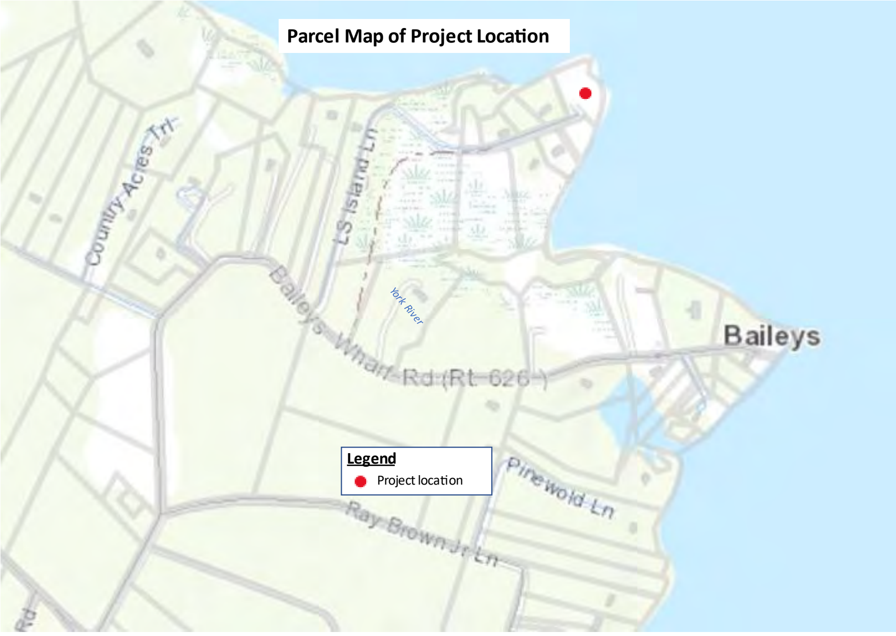


CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on L’s Island Lane in Gloucester County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

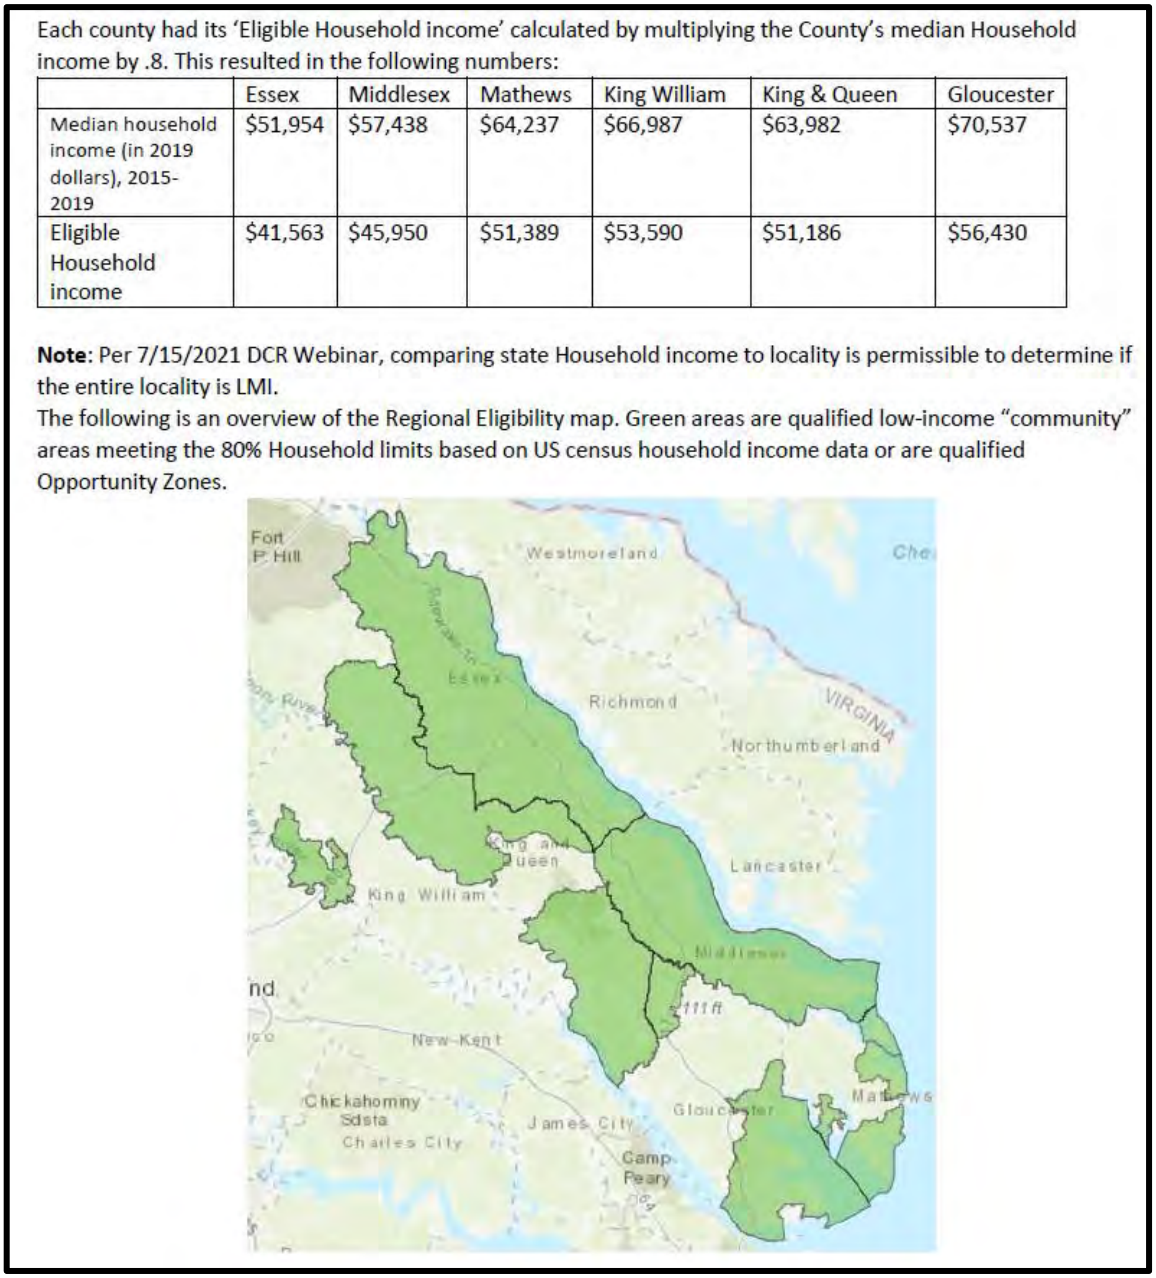
Figure 4. Parcel Map of Project Location



Gloucester County is located at the southern tip of Virginia’s Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County’s population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income “community” areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Low Income Qualifying Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

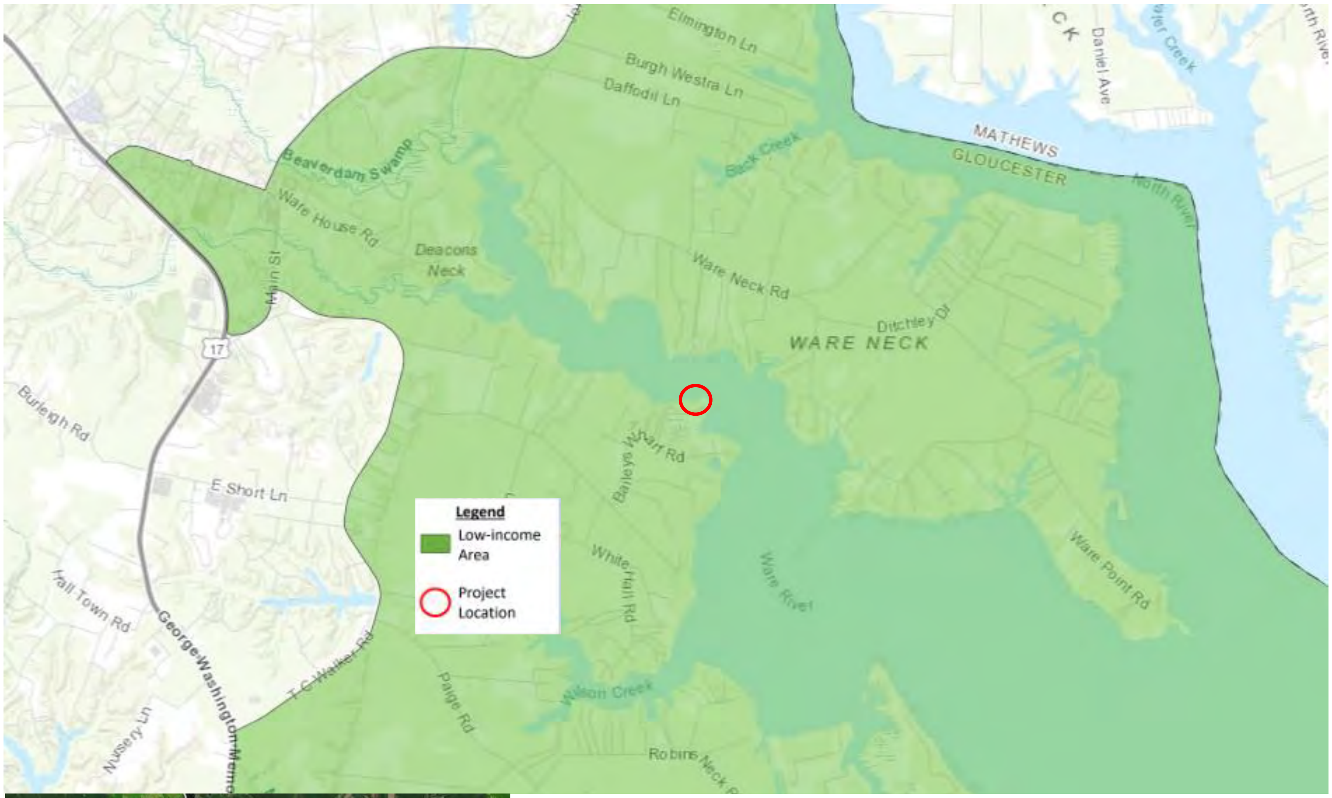
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



Qualifying Low Income Community (Green) in Gloucester County

All areas denoted in Green fall below the 80% median household income threshold and serve as the “low income “community” per the guidelines

★ Project Site

According to the VDAPT Virginia’s Social Vulnerability Index Score, this project location has a high social vulnerability score as seen in **Figure 7**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

The project is located at 6688 L's Island Lane, Gloucester, VA 23062 (37.391264, -76.46599697). This property has been in the Lawrence family since the 1880's, with five generations considering the island like areas their "home place." The street name is, therefore, appropriately labeled L's Island Lane. The property was also home to a family owned and operated oyster company from the 1880's until the 1960's when the seafood industry collapsed. Because of the longevity of this family's legacy, they have been able to provide countless witness to storm after storm literally and figuratively "chewing up" the shoreline, grain by grain. Losing (**in excess of 15,000 sq ft of tidal wetlands lost per VIMS**) protecting the remaining wetlands are very important which serve as nature-based buffer for storm protection that protects uplands existing structures and outbuildings but also the 1880 built home itself.

The loss history for this property is significant. Most recently, FEMA recorded a loss of approximately $136,000 in 2003 for Hurricane Isabel in 2003. Prior to that and pre-FEMA Flood Insurance Program, the property sustained significant damage from the Ash Wednesday Storm of 1962 and the Great Storm of 1933 for New Point Comfort Chesapeake Bay.

This site is located within the AE flood zone as seen in **Figure 8**. Please see **Appendix 2** for the FIRMettes (last mapped 11/19/2014) and **Appendix 3** for additional property photos.

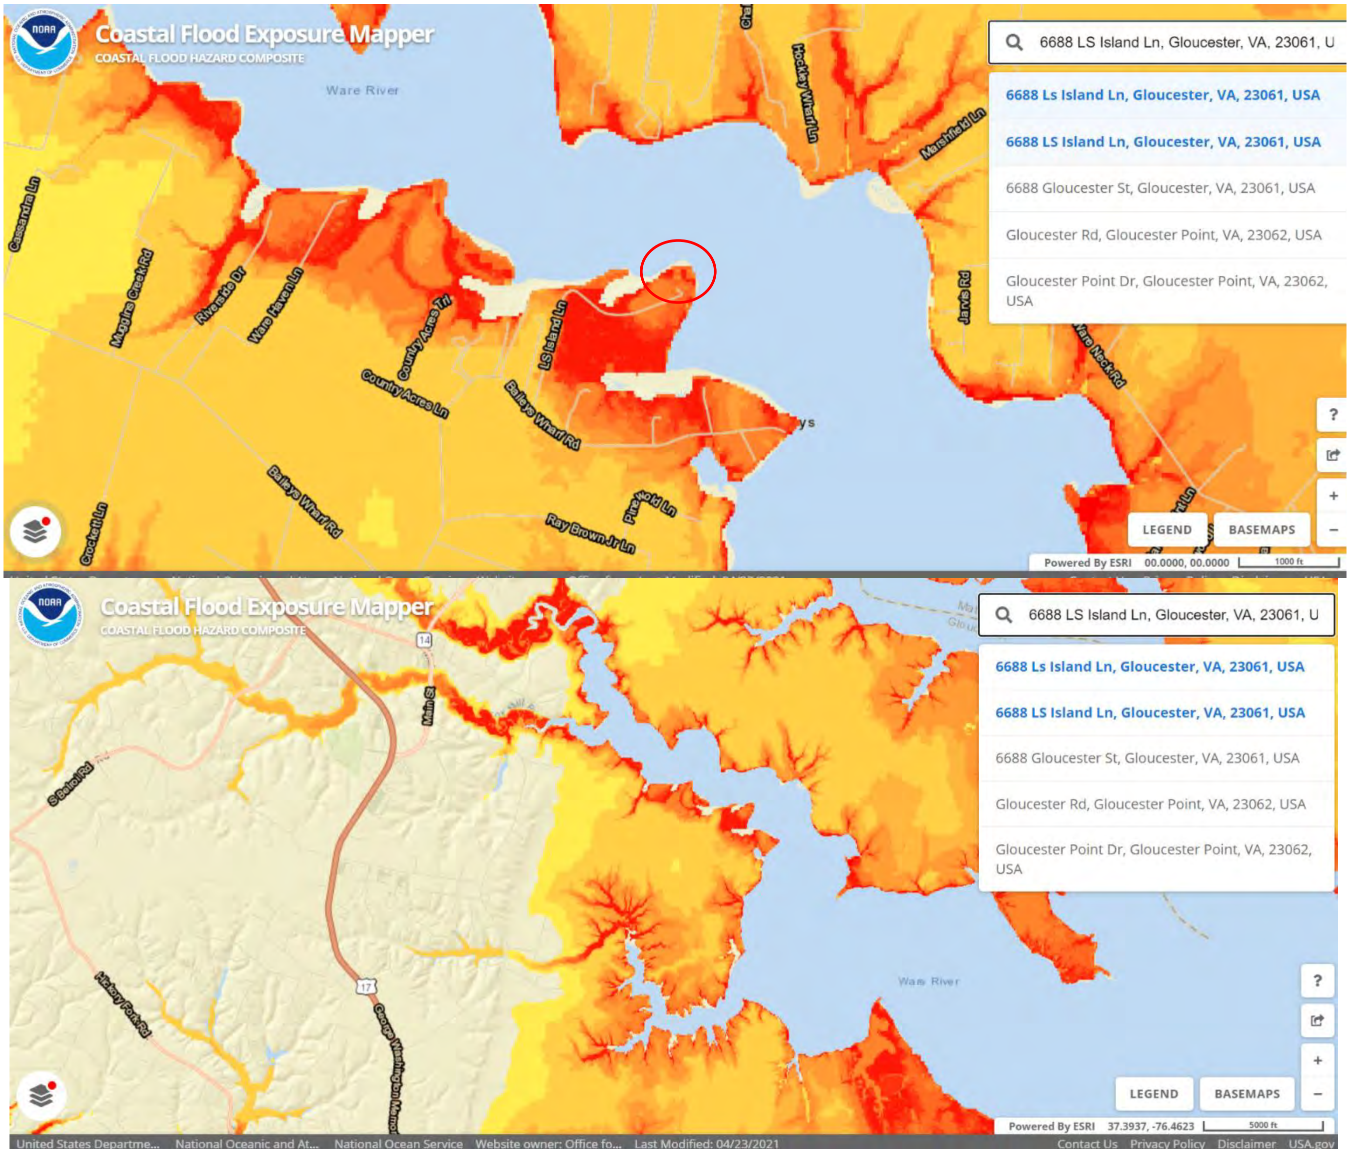
Figure 8: Map of FEMA Flood Zones of Project Location

Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 9** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 79 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 9. Project Location and Map of the Shoreline Change between 1937 (purple) and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 10.

Figure 10. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



6688 LS Island Ln, Gloucester, VA, 23061, U

that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based solution in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area seen in Figure 11.

4,329 Sq feet tidal wetlands lost due to erosion and storm surge

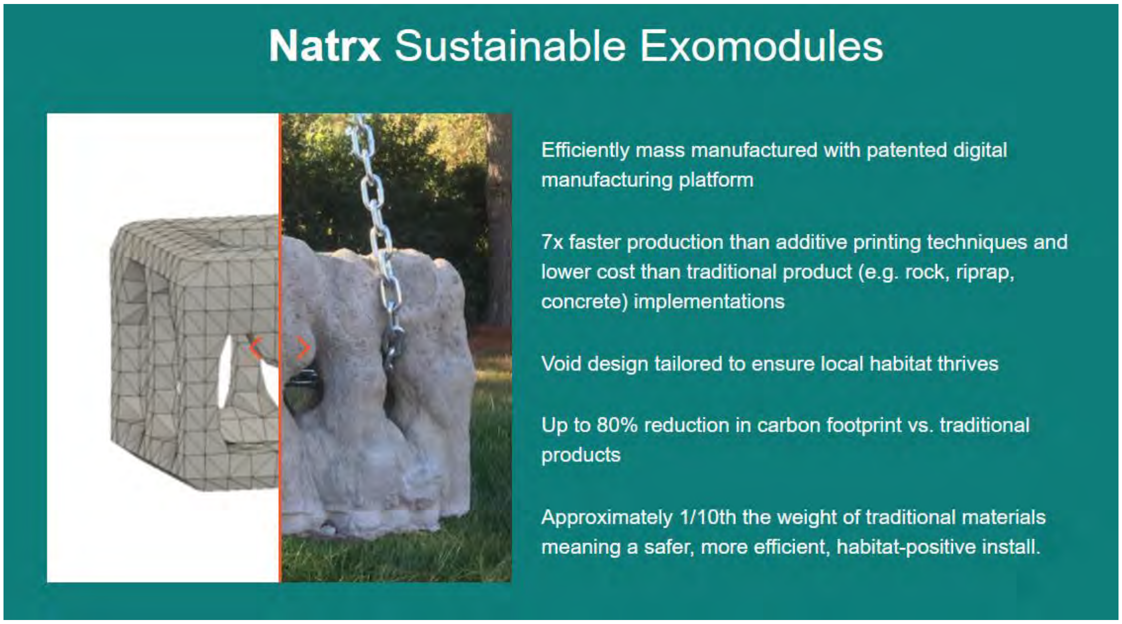
The proposed design solution will utilize NATRX living shoreline, up to 338 linear feet, as seen in Figure 14. Project site requires the use of (or will use) eXomodules, a nature-based shoreline protection solution, which are manufactured using a proprietary manufacturing system developed by Natrx. The eXomodules consist of nature based shoreline protection solution developed by Natrx. The eXomodules can be modified to suite the projects physical and environmental goals, such as size of structure, void space, surface area, and other physical attributes. The proprietary manufacturing system allows for the modification of design without the production of molds, which allows a new design to be produced immediately. This gives more flexibility and freedom for the designer to meet project specific goals. The structures can be manufactured in a variety of sizes that range from 1'x1'x1' to 3'x3'x3'.

Figure 14. Proposed NATRX Solution Idea

104.1 Feet

234.9 Feet

NATRX Living Shoreline Design Solution
Proposed for up to 338 Linear Feet



Natrx Sustainable Exomodules

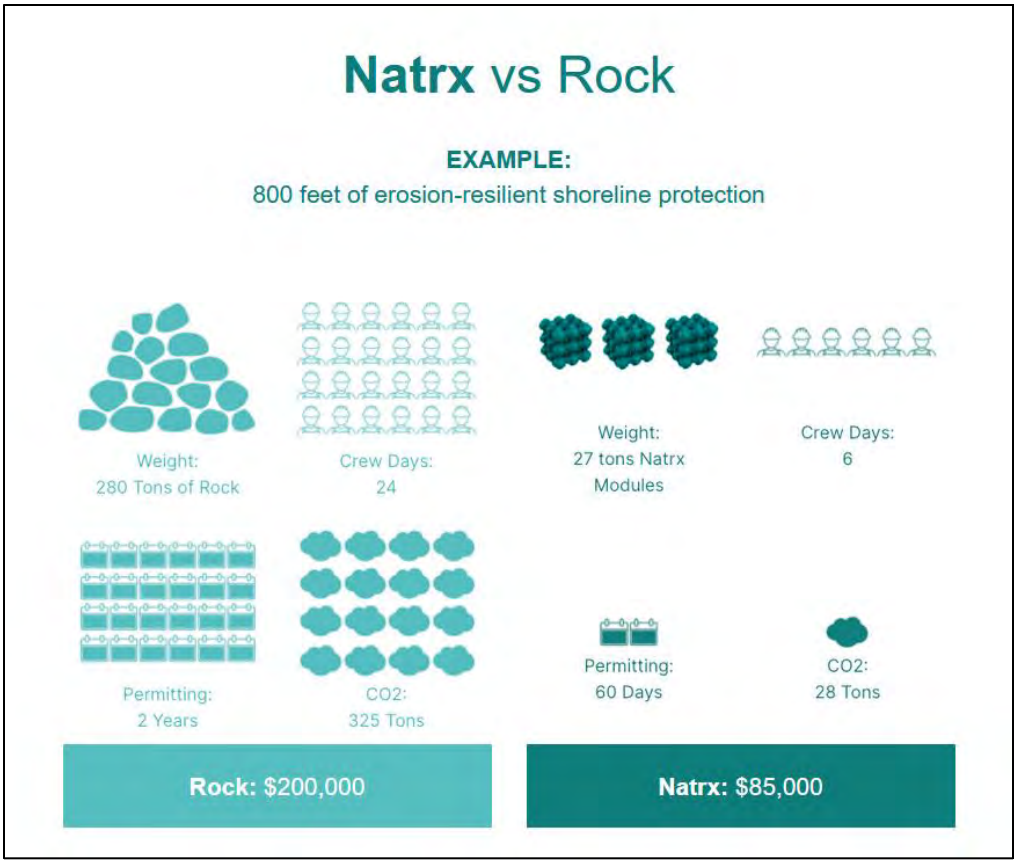
Efficiently mass manufactured with patented digital manufacturing platform

7x faster production than additive printing techniques and lower cost than traditional product (e.g. rock, riprap, concrete) implementations

Void design tailored to ensure local habitat thrives

Up to 80% reduction in carbon footprint vs. traditional products

Approximately 1/10th the weight of traditional materials meaning a safer, more efficient, habitat-positive install.



Natrx vs Rock

Rock: $200,000

Natrx: $85,000

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022, as seen in Table 1.

Table 1. Project Milestone Schedule

Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based design solutions with contractor and property owner		X	X			
Select which nature-based solution is most appropriate		X	X			
Have contractor develop selected nature-based design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based design solution					X	X
Provide a digital close out report and copy of the completed nature-based design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

RELATIONSHIP TO OTHER PROJECTS.

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based design solution and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	

No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**

Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index]		

Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	12
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		87

SCOPE OF WORK CHECKLIST.

Scope of Work Narrative

SUBTOTAL: Direct Costs						$5,980	$1,495	$7,475
Indirect/IDC/Facilities & Administrative Costs				**27.31%**		$1,846	$462	$2,308
Total						**$7,826**	**$1,957**	**$9,783**
Other Match:								
Source of Match						$0	$0	$0
GRAND TOTAL						**$7,826**	**$1,957**	**$9,783**

Cost estimates for Natrx shoreline nature-based design and draft joint permit application development was based on estimates provided by Natrx design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804-832-6747 or by email at llawrence@mppdc.com.

Sincerely,

Lewis Lawrence

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

Community Support Letter

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)
In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)

In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)

This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)

In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)

This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)

This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)

This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)

Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter

August 25, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804-832-6747 or by email at llawrence@mppdc.com.

Sincerely,

Lewis Lawrence

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Roddy Shoreline Design** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

Issue #2

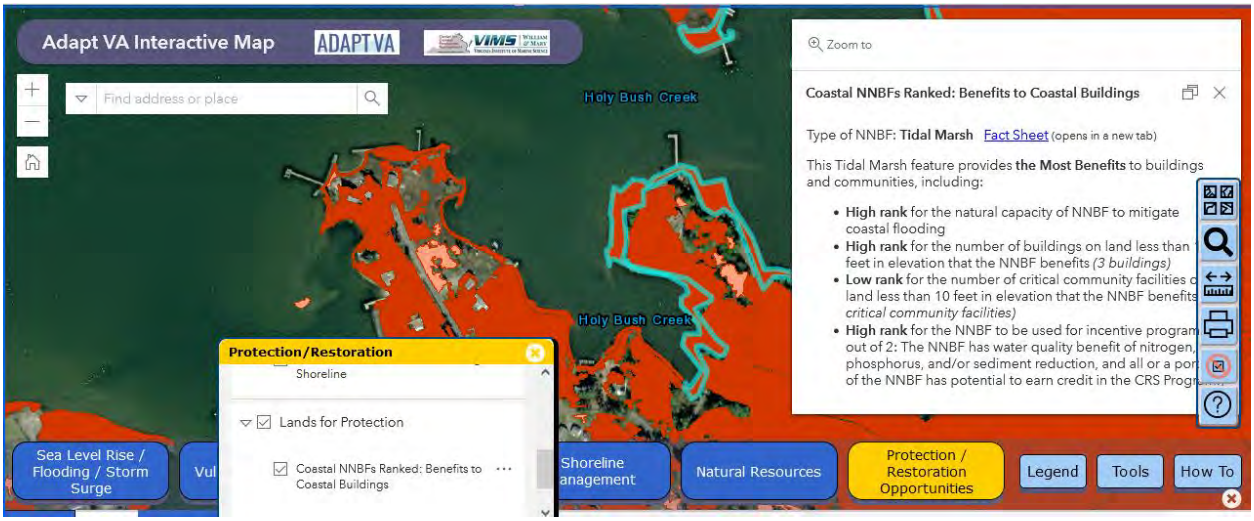
DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149
(Phone) 804 758-2311 ♦ (Fax) 804 758-3221 ♦ (Email) pdcinfo@mppdc.com
http://www.mppdc.com

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(3 buildings)*
- **Low rank** for the number of critical community facilities land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Progr

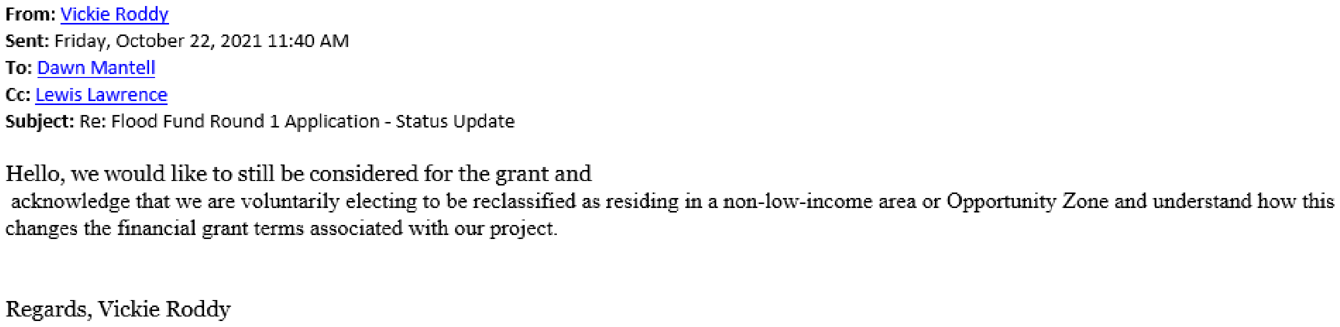
Shoreline

☑ Lands for Protection

☑ Coastal NNBFs Ranked: Benefits to Coastal Buildings

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:



From: Vickie Roddy

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- ☑ Wetland restoration.
- ☑ Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- ☑ Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Gloucester County **-** Please see the attached corresponding maps for this application.

NFIP Community Identification Number (CID#) (See appendix F): 510071

Is Project Located in an NFIP Participating Community? ☑ Yes ☐ No

Is Project Located in a Special Flood Hazard Area? ☑ Yes ☐ No

Flood Zone(s) (If Applicable): AE Zone

Flood Insurance Rate Map Number(s) (If Applicable): 51073C0212E

Total Cost of Project: __$17,309______________________________

Total Amount Requested: __$13,846_________________________

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding and wetland loss

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of "nature-based solutions", "ecosystem based adaptation," "eco-DRR," or "green infrastructure" has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal design application requests a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located at 3261 Friends Road in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in Appendix 1.

    - *Please see Section 4 (page 25), which includes historical hazard data within the region.*

- *A link to the Gloucester County's Comprehensive Plan can be found at: https://www.gloucesterva.info/373/Comprehensive-Plan.*

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

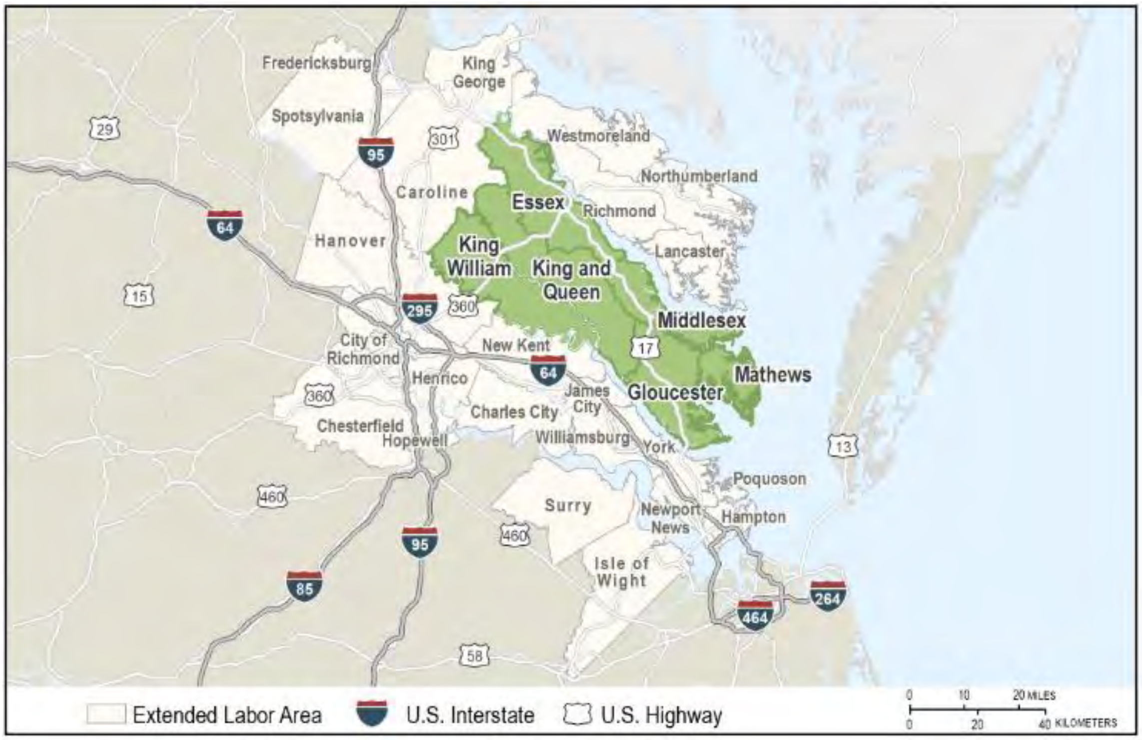

Figure 2. Middle Peninsula Population

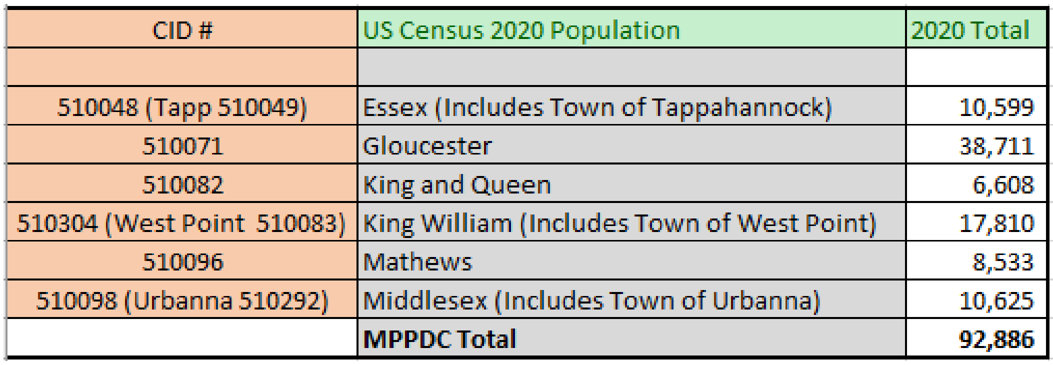
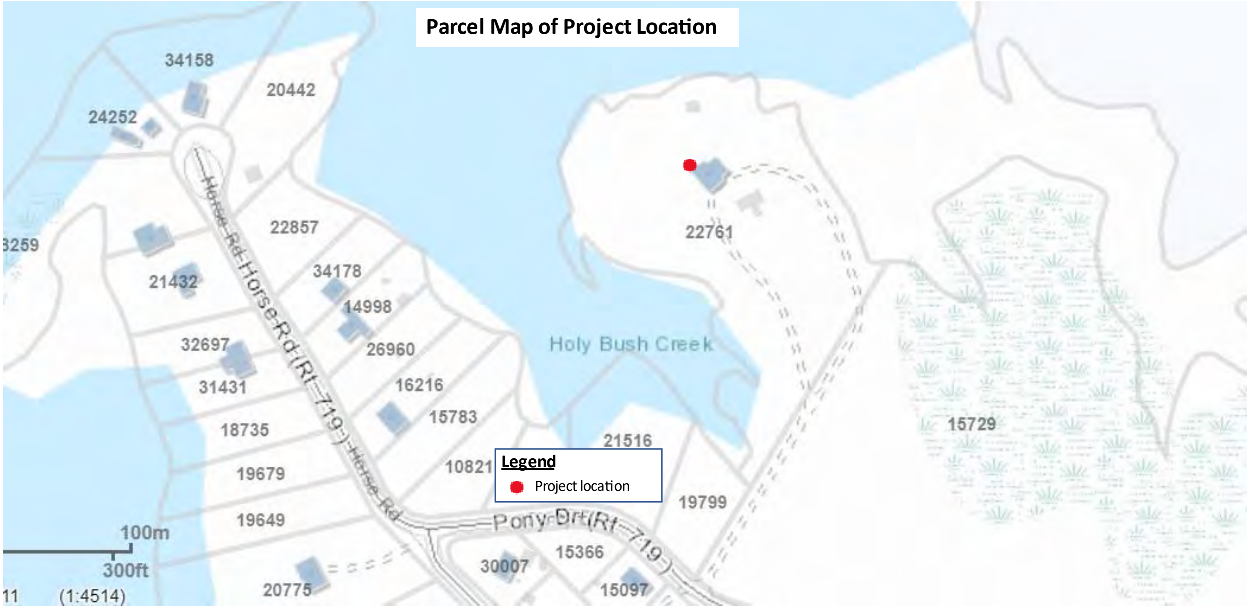


CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on Friends Road in Gloucester County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

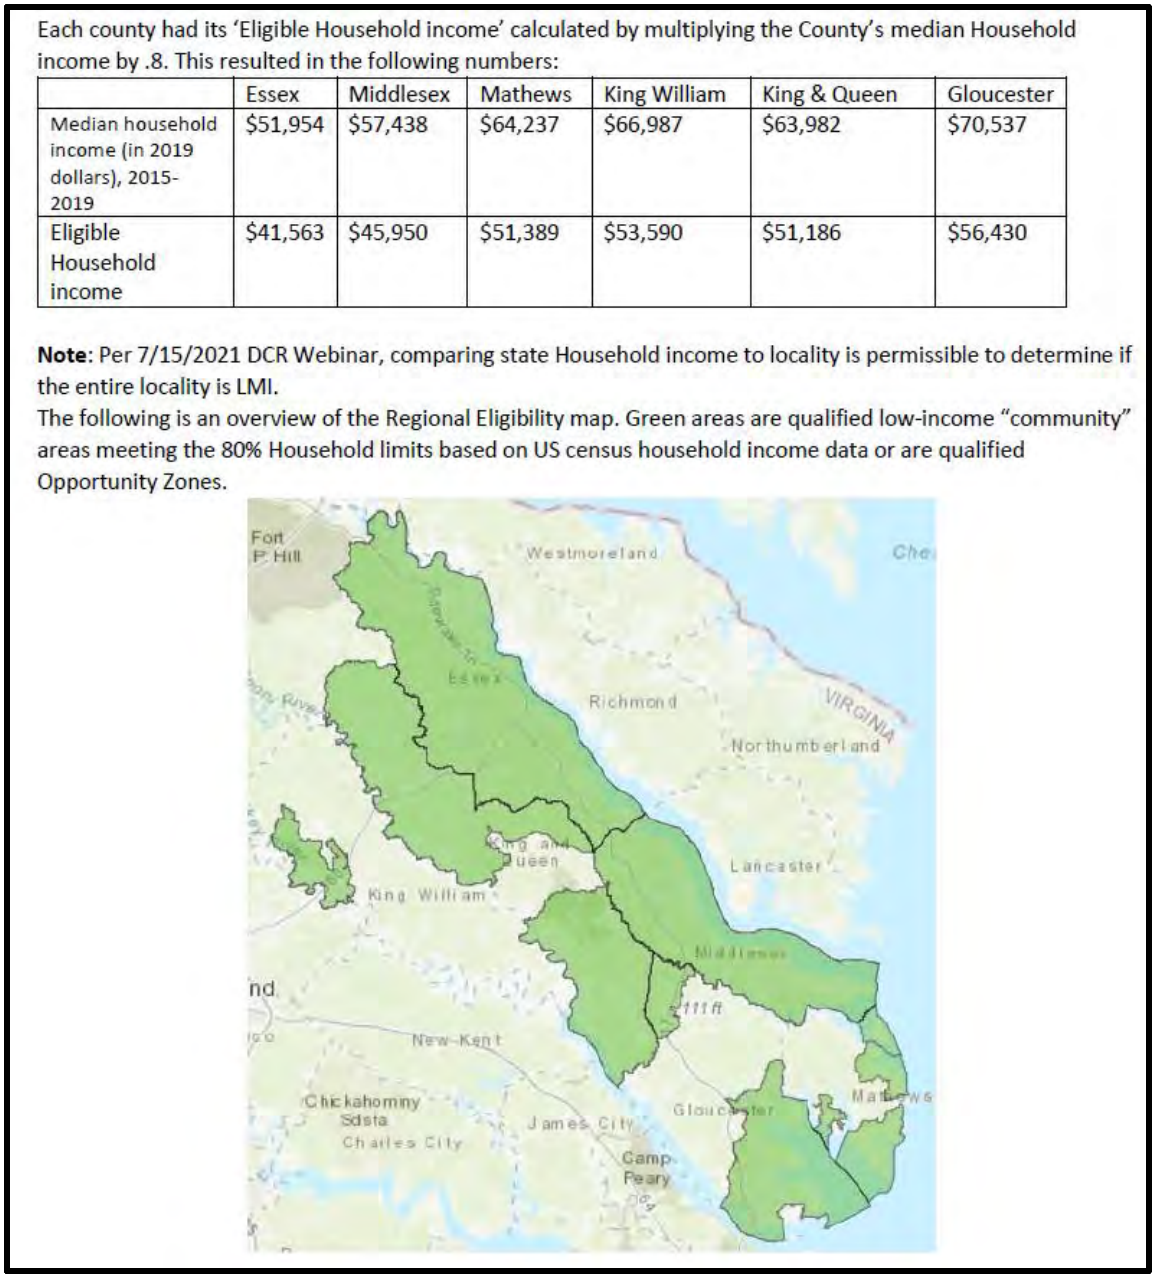
Figure 4. Parcel Map of Project Location



Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Low Income Qualifying Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

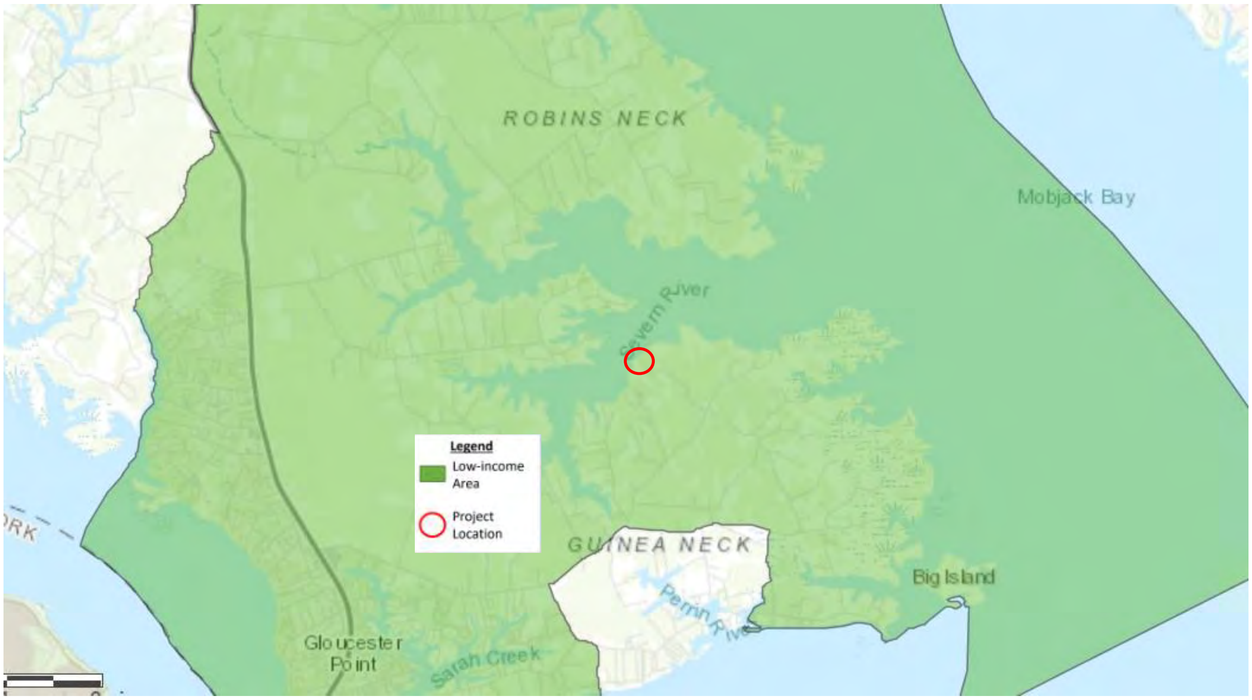
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a low social vulnerability score as seen in **Figure 7.** This designation is at odds with the known social economic conditions found in this part of Gloucester. It's a low-income community with subsistence watermen.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

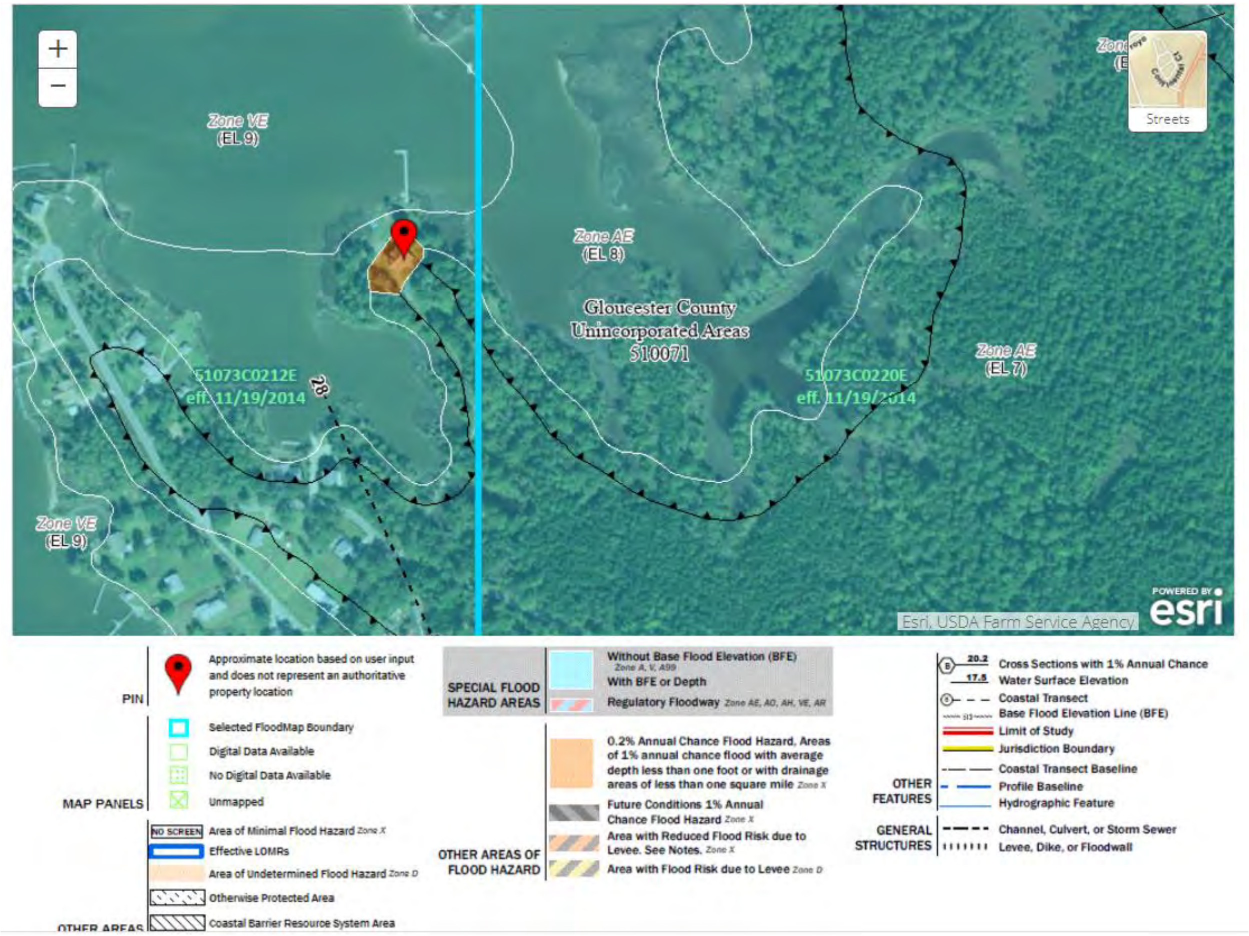
Social Vulnerability Index
Classification: Low Social Vulnerability
Vulnerability Index Score: -0.1
Housing Vulnerability: others
Housing Characteristics: high pct. mobile homes
Tract Name: Census Tract 1005, Gloucester County, Virginia

The project is located at 3261 Friends Road, Hayes, VA 23072 (-76.43813896, 37.30078199). It is situated on a small peninsula with natural grass all around except where the dock is. There is a 20x20 foot gazebo by the water's edge that is grandfathered into the property that needs to be protected as well as a small "crab shack." Unfortunately, the erosion over the past several years has been severe and there is only about two feet of solid shoreline.

Additionally, there is a small road that runs from the county road (Friends Road/Pony Road) down what is locally called the “causeway” to the main part of the peninsula where the house is located. There is considerable erosion surrounding a drainage ditch that goes horizontally from the main body of water, under the road, to the “marshy” water on the opposite side. Plus, many trees have blown over the past few years along the roadway so they've lost that natural barrier and the roots have pulled up portions of the road. The homeowners are concerned about the road washing away at this point which would prevent access to the house.

This site is located within the AE flood zone as seen in **Figure 8**. Please see **Appendix 2** for the FIRMettes (last mapped 11/19/2014) and **Appendix 3** for additional property photos.

Figure 8: Map of FEMA Flood Zones of Project Location

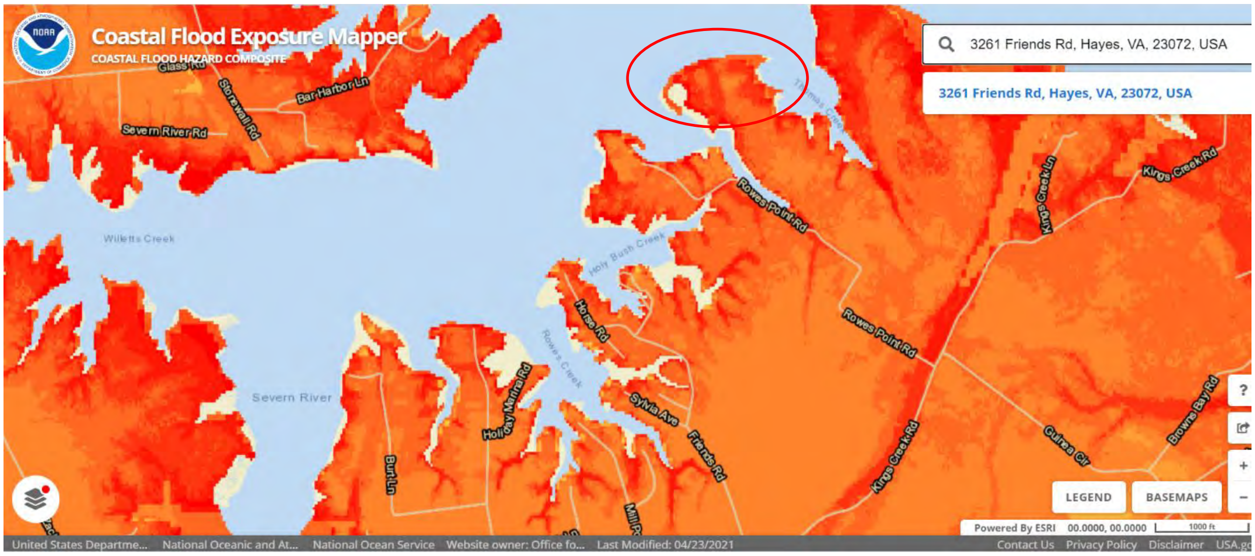


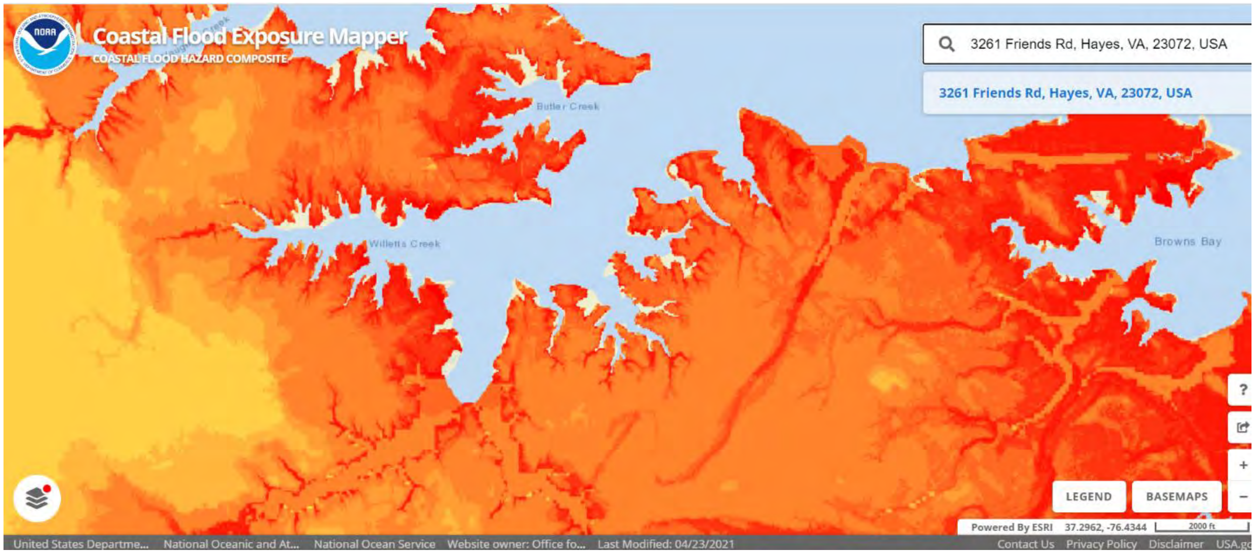
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 9** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 86 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 9. Project Location and Map of the Shoreline Change between 1937 (purple) and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 10.

Figure 10. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)





For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Gloucester County's current floodplain ordinance can be found at: http://gloucestercounty-va.elaws.us/code/coor_ch8.5*

***ALTERNATIVES*.**

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

***GOALS AND OBJECTIVES*.**

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022, as seen in Table 1.

Table 1. Project Milestone Schedule

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X

Discuss strategies in moving forward with					X	X

implementing the nature-based or hybrid design solution						
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

RELATIONSHIP TO OTHER PROJECTS.

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
  - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is not a town, city, or county, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	0
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		75

SCOPE OF WORK CHECKLIST.

Scope of Work Narrative	
Supporting Documentation	**Included**
Detailed map of the project area(s) (Projects/Studies)	☑Yes ☐ No ☐ N/A
FIRMette of the project area(s) (Projects/Studies)	☑Yes ☐ No ☐ N/A
Historic flood damage data and/or images (Projects/Studies)	☑Yes ☐ No ☐ N/A
A link to or a copy of the current floodplain ordinance	☑Yes ☐ No ☐ N/A
Non-Fund financed maintenance and management plan forproject extending a minimum of 5 years from project close	☑Yes ☐ No ☐ N/A
A link to or a copy of the current hazard mitigation plan	☑Yes ☐ No ☐ N/A
A link to or a copy of the current comprehensive plan	☑Yes ☐ No ☐ N/A
Social vulnerability index score(s) for the project area from ADAPT VA’s Virginia Vulnerability Viewer	☑Yes ☐ No ☐ N/A
If applicant is not a town, city, or county, letters of supportfrom affected communities	☑Yes ☐ No ☐ N/A

					$0	$0	$0	$0
					$0	$0	$0	$0
					$0	$0	$0	$0
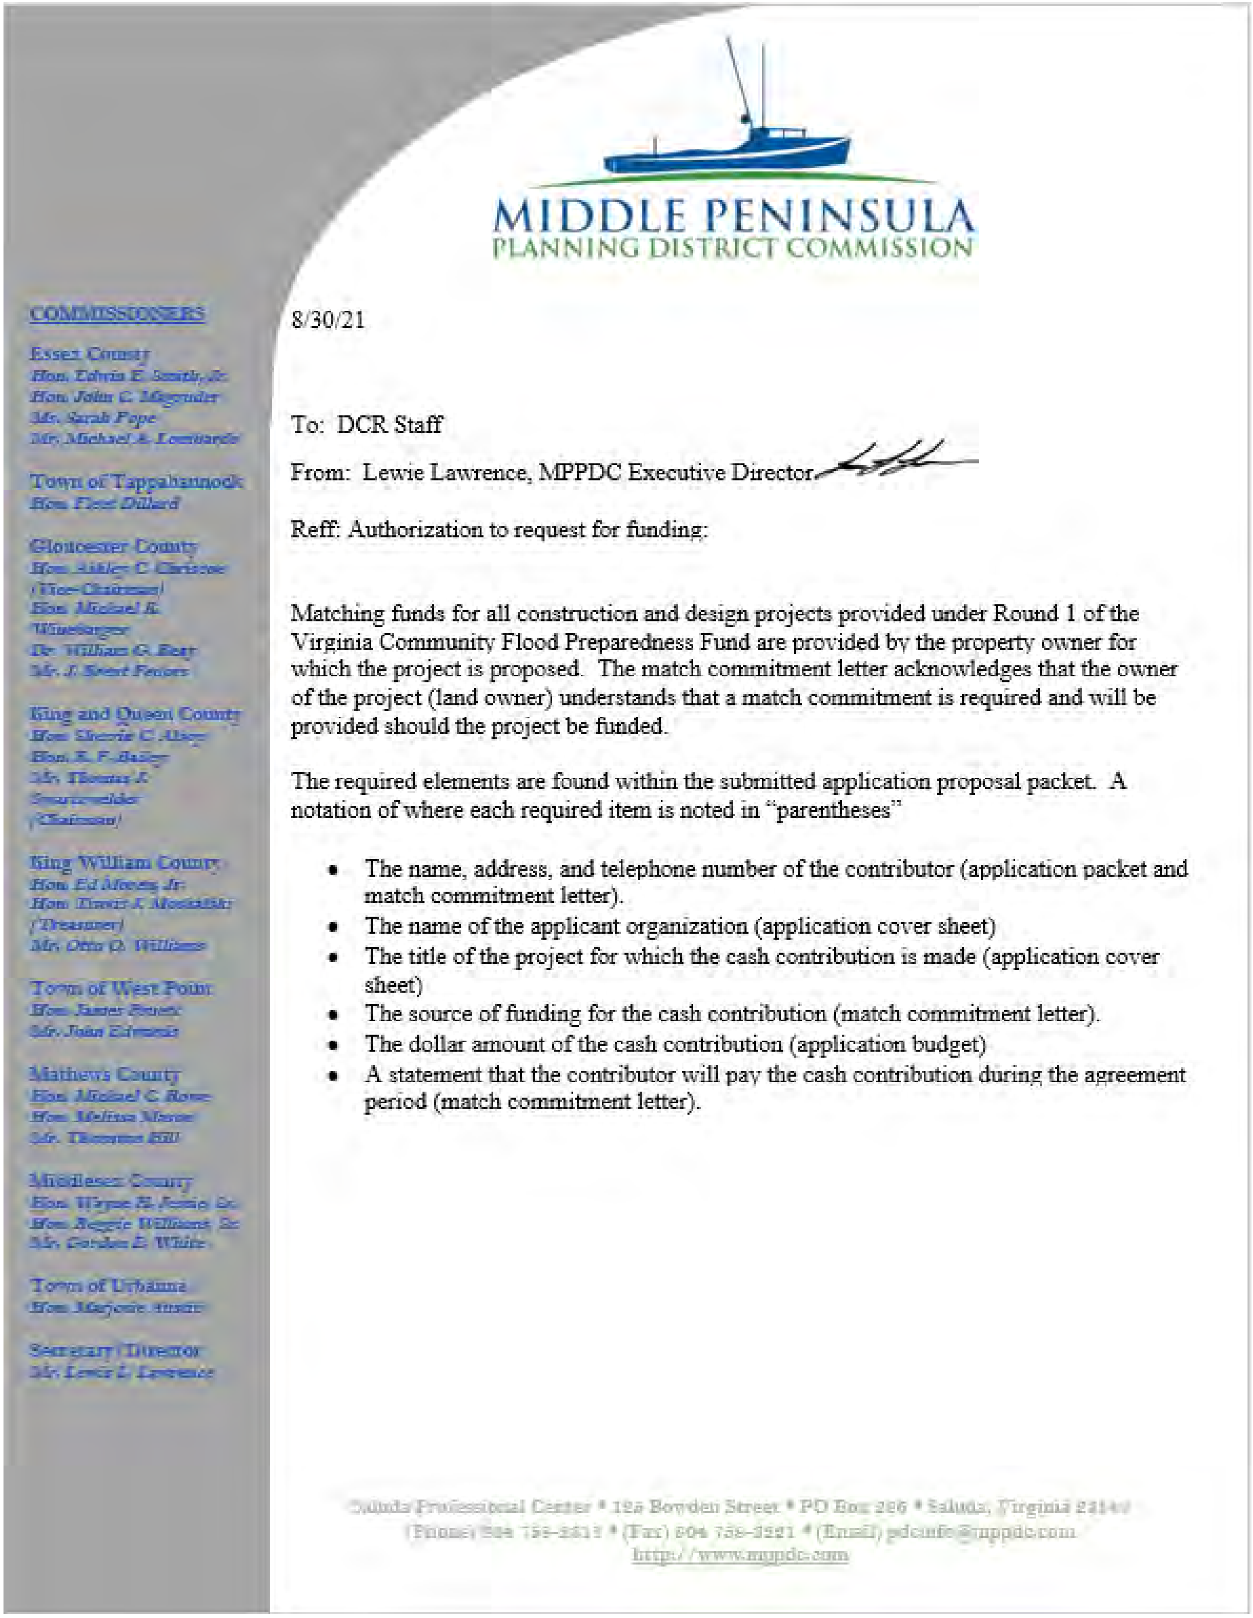
					$11,500			
SUBTOTAL: Direct Costs						$10,580	$2,646	$13,226
Indirect/IDC/Facilities & Administrative Costs				**27.31%**		$3,266	$817	$4,083
Total						**$13,846**	**$3,463**	**$17,309**
Other Match:								
Source of Match						$0	$0	$0
GRAND TOTAL						**$13,846**	**$3,463**	**$17,309**

Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

- *Authorization to request for funding:*



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at cell 703-470-7568 or by email at vroddy1@verizon.net.

Sincerely,

Vickie Roddy

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)

The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)

Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)

In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)

This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)

In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)

This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)

This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)

This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)

Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public

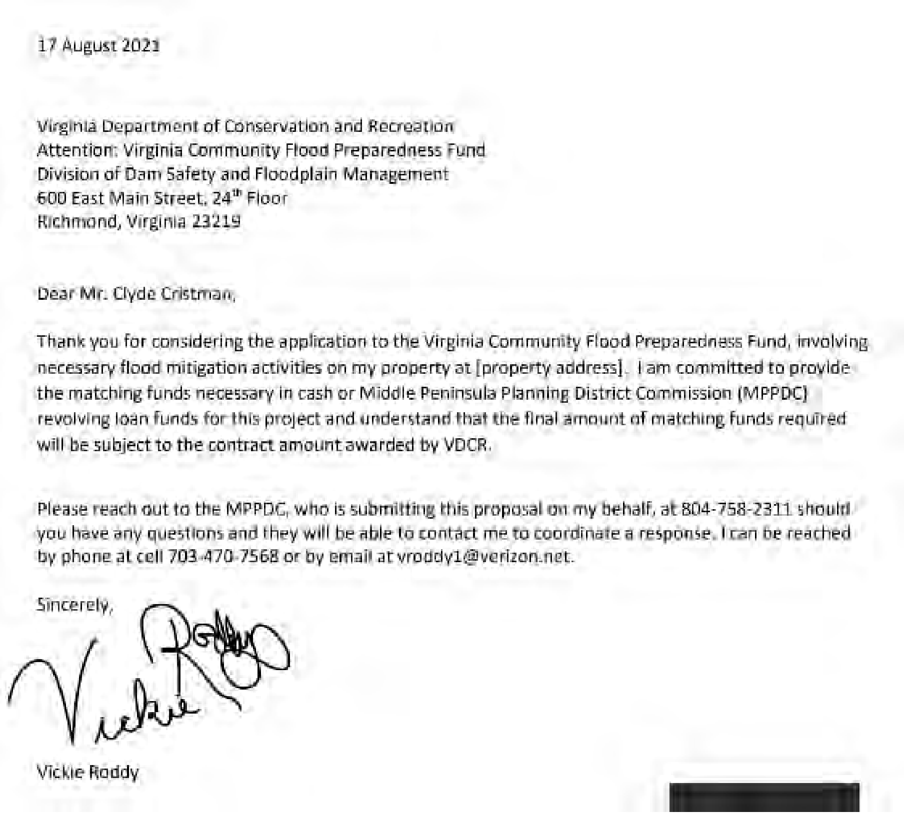
Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



17 August 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at cell 703-470-7568 or by email at vroddy1@verizon.net.

Sincerely,

Vickie Roddy

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Tabb** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

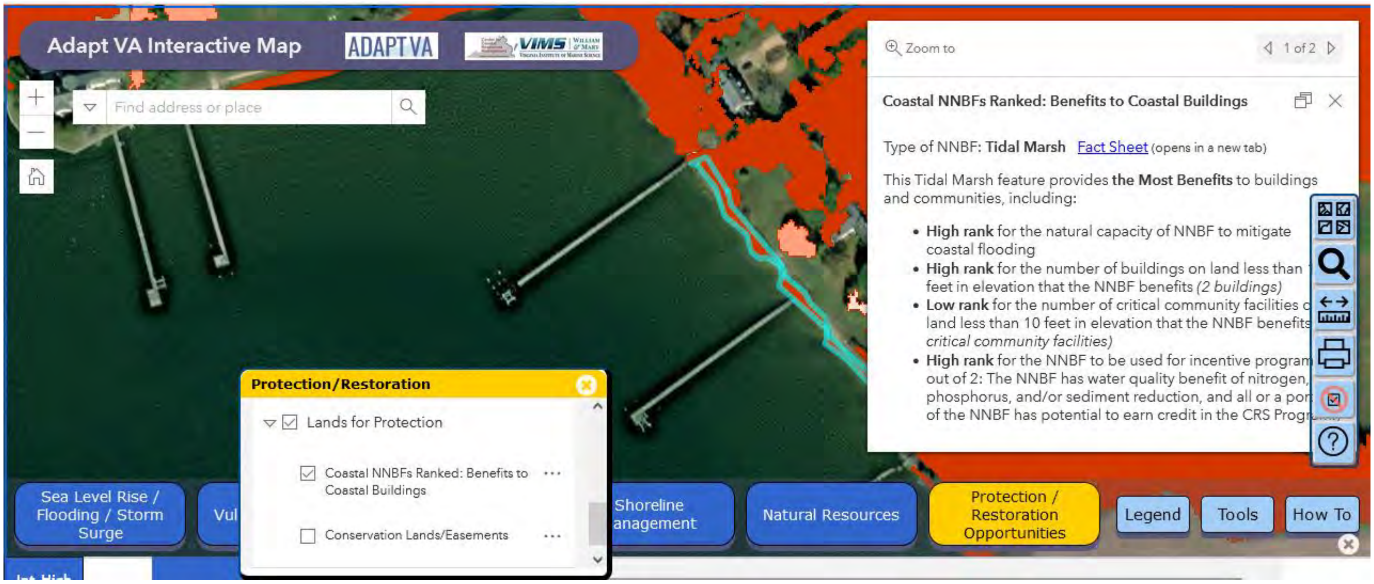
Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

Issue #2
DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit.



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(2 buildings)*
- **Low rank** for the number of critical community facilities land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Progr

Protection/Restoration

☑ Lands for Protection
  ☑ Coastal NNBFs Ranked: Benefits to Coastal Buildings
  ☐ Conservation Lands/Easements

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:
Mrs Tab called MPPDC on 10/25 and offered to voluntarely elected to be classified as 70% when she resides in an low income area and feels she should be processed at the 80% level. She expressed dismay related to delays as she continues to lose shoreline as weeks pass.

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional

that

purposes, such as decreasing flood risk or improving water quality. These interventions can be completely "green" (i.e., consisting of only ecosystem elements) or "hybrid" (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal application seeks a nature-based design solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal design seeks to incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located at 6102 Ware Neck Road in Gloucester County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Gloucester County. See the community support letter in Appendix 1.

that

the region.

- *A link to the Gloucester County's Comprehensive Plan can be found at: https://www.gloucesterva.info/373/Comprehensive-Plan.*

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

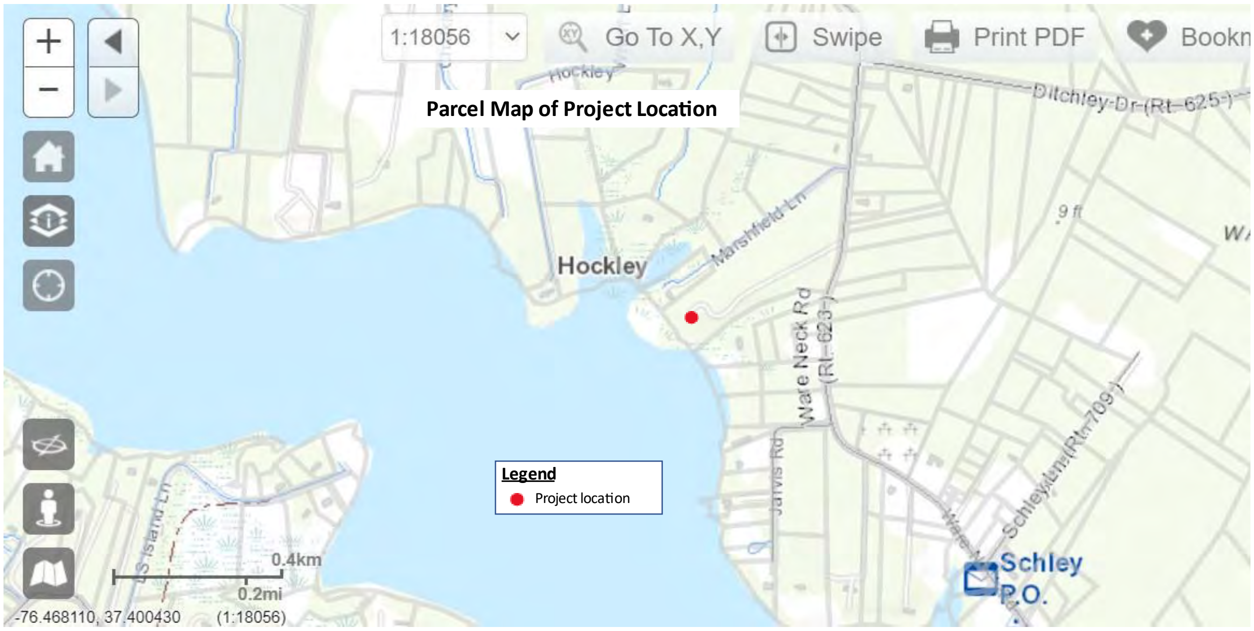
that

This project proposes to install living shorelines on one private property on a private road south of Marshfield Lane in Gloucester County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Locatio

Figure 4. Parcel Map of Project Location

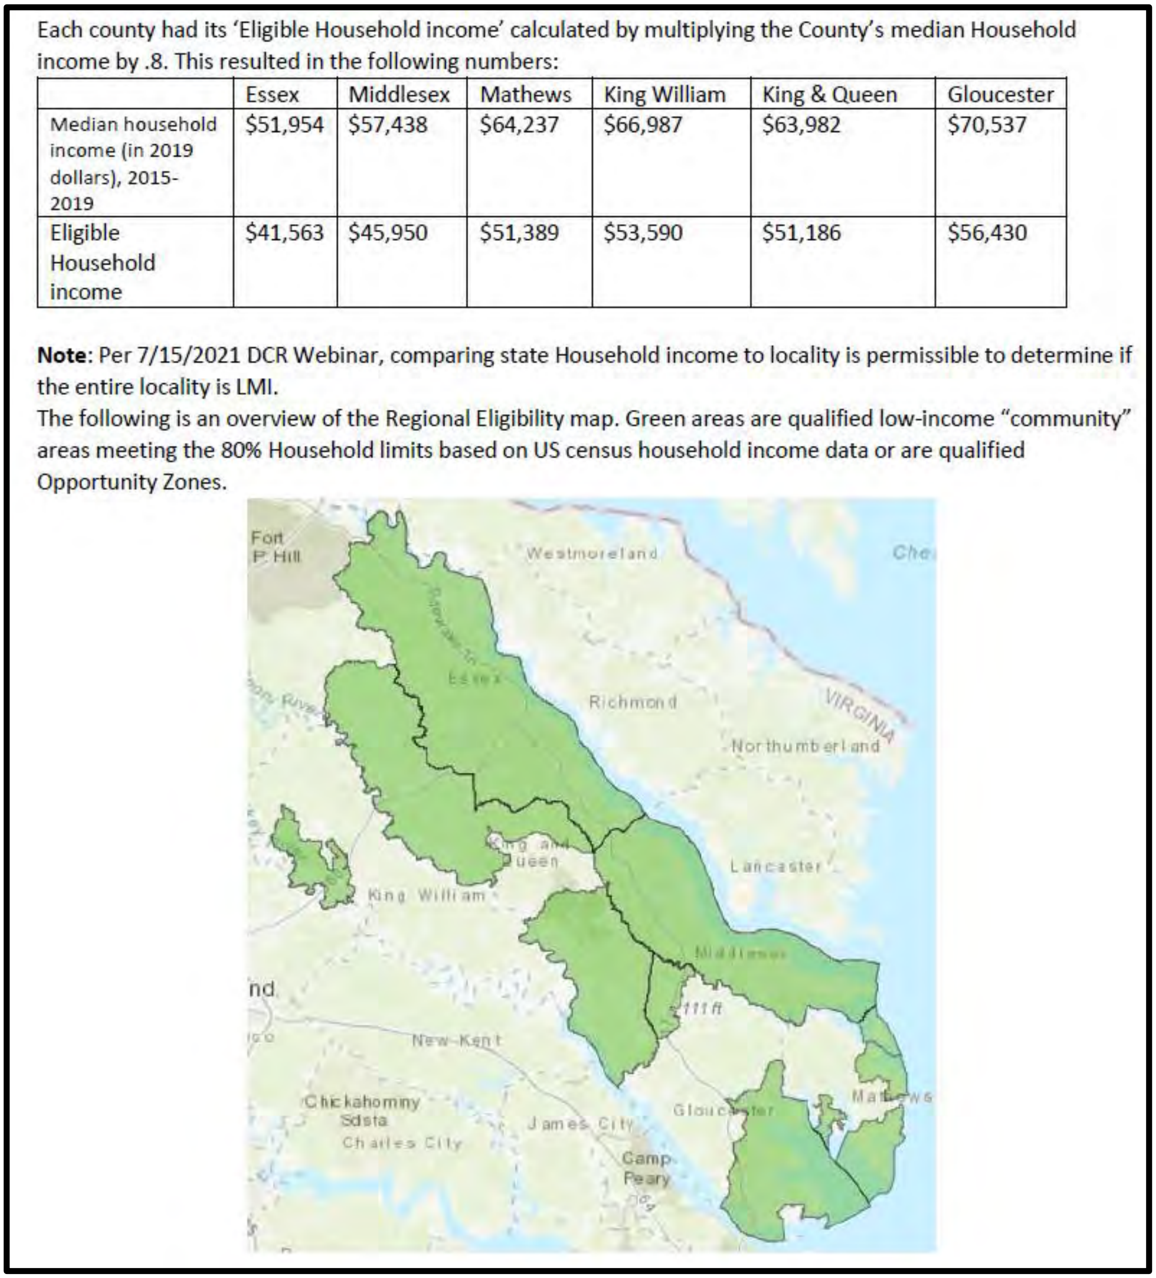


that

Gloucester County is located at the southern tip of Virginia’s Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County’s population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income “community” areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Low Income Qualifying Geographic Areas



Each county had its ‘Eligible Household income’ calculated by multiplying the County’s median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

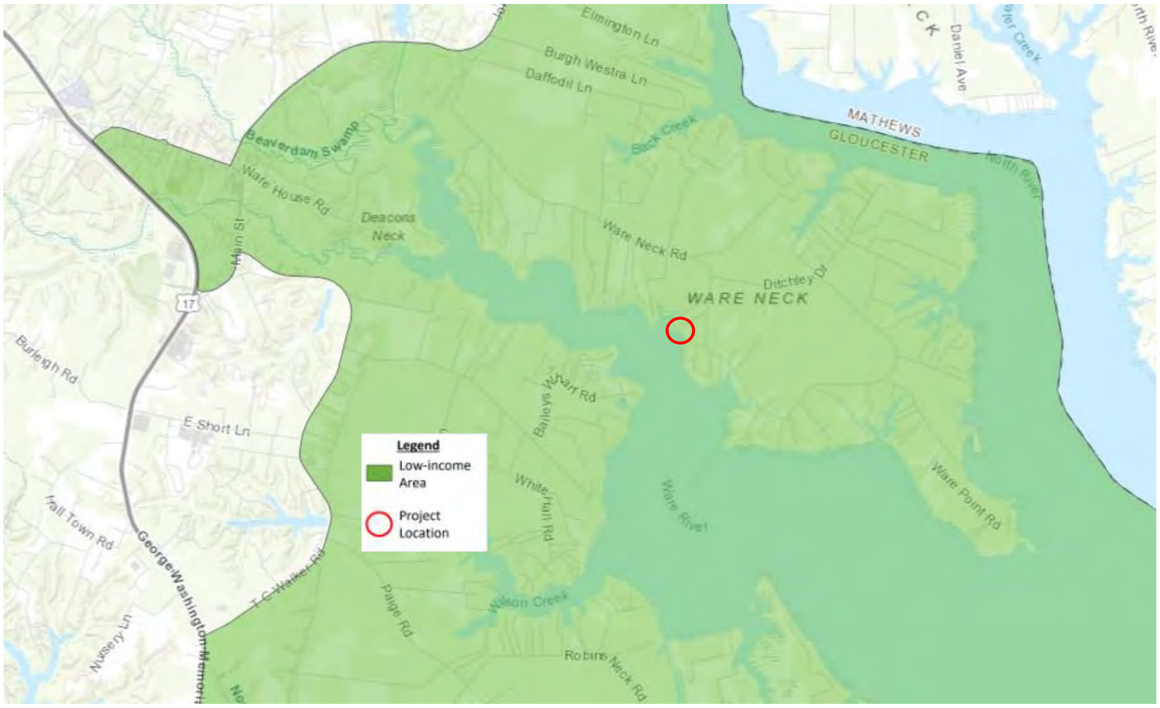
Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income “community” areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

that

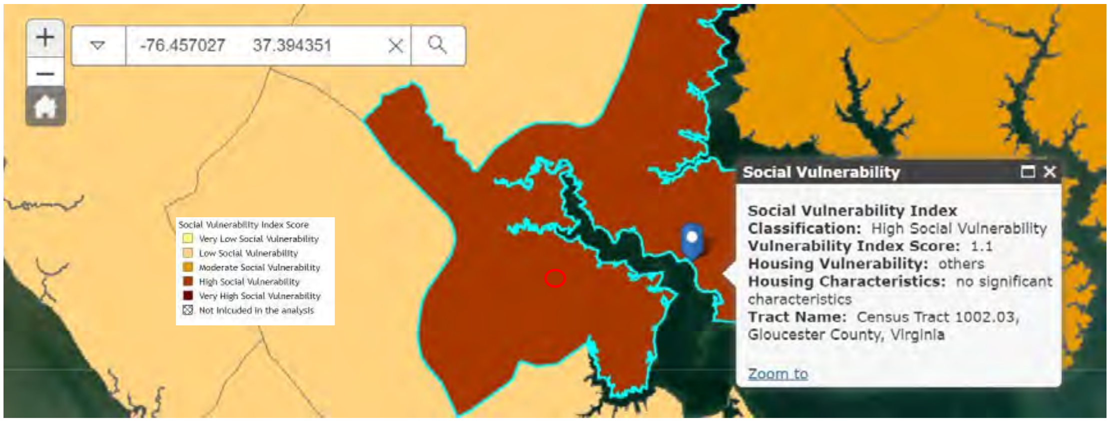
Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a high social vulnerability score as seen in **Figure 7.**

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability Index
Classification: High Social Vulnerability
Vulnerability Index Score: 1.1

Housing Characteristics: no significant characteristics
Tract Name: Census Tract 1002.03, Gloucester County, Virginia

that

The project is located at 6102 Ware Neck Road, Gloucester, VA (-76.457027, 37.394351). It has about 300 feet of shoreline. The entire 7 foot high bank is being undercut at high tide and storm surge. Where there is no shading from plants on the bank, the eroded sand component supports marsh grass, but the bank still is being assaulted. Where there are shading plants, there is no marsh grass or sand accumulation. There, the bank is being severely undercut with loss of soil. Estimate 1-1.5ft loss per year, based on historical Google Earth Satellite imaging.

that

This site is located within the AE flood zone as seen in **Figure 8**. Note the red circle below in the corresponding image represents the project property location. The image for this application could not be pulled as FEMA's Map Service System is down due to the overwhelming response efforts to Hurricane Ida. The Special Flood Hazard area has been used as a proxy in its place. Please see **Appendix 2** for the FIRMettes (last mapped 11/19/2014) and **Appendix 3** for additional property photos.

Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 9** shows the 1937 and the 2017 shorelines. From the photos and figure one can see the change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 81 storm events and provides a map with the project location. Without the flood protection

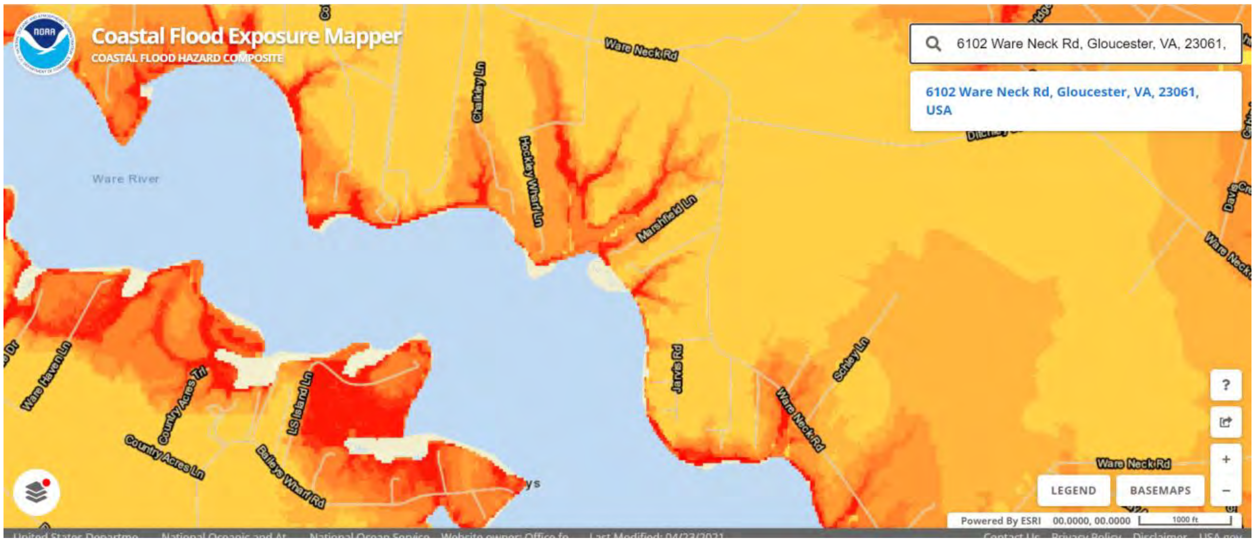
that

measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

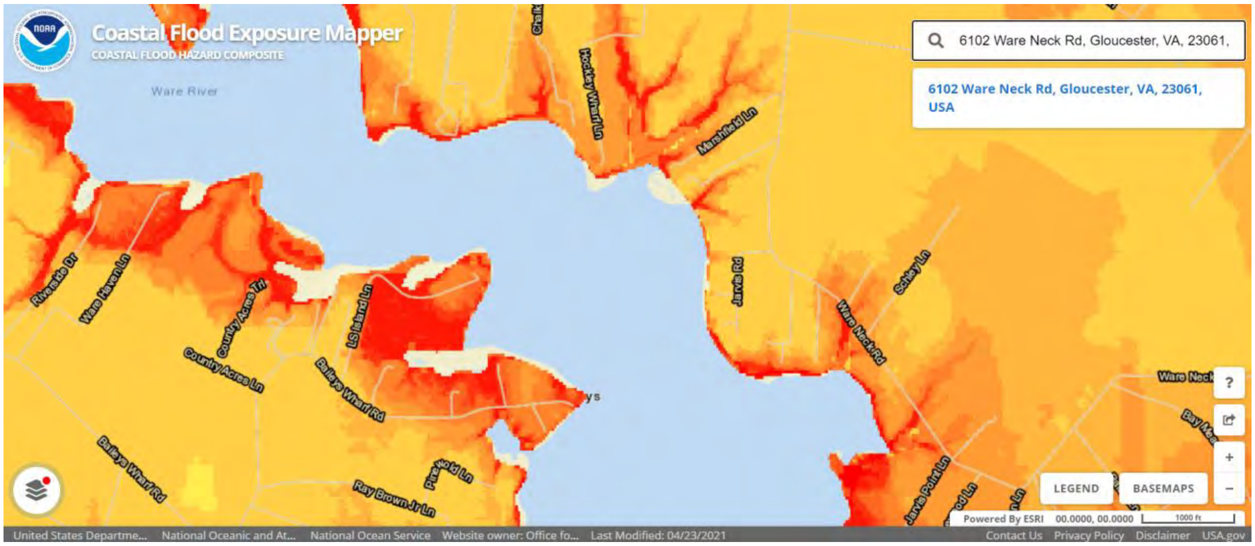
Figure 9. Project Location and Map of the Shoreline Change between 1937 and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 10.

Figure 10. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



that



For more information about this project area please see:

- *A link to Gloucester County's current floodplain ordinance can be found at: http://gloucestercounty-va.elaws.us/code/coor_ch8.5*

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

that

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a design for a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

that

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022, as seen in Table 1.

Table 1. Project Milestone Schedule

RELATIONSHIP TO OTHER PROJECTS.

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

that

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

that

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

that

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	12
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

that

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		88

Total						**$5,418**	**$1,355**	**$6,773**
Other Match:								
Source of Match						$0	$0	$0
GRAND TOTAL						**$5,418**	**$1,355**	**$6,773**

Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy,

that

research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)
The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)
Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)
In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

that

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living

that

shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)

This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)

This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)

This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)

Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

March 28, 2022

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Matthew Wells

Enclosed in this packet are three applications for flood protection and prevention projects that involve implementation of nature-based shoreline solutions.

Among the applications are projects which are currently at the construction stage. Construction projects are requesting funds to implement projects which have approved permits or are nearing permit approval prior to construction of a nature-based flood protection solution.

Below is short summary of proposed construction projects in Gloucester County:

A. **Ware River Phase III - Nature-based Construction Project**
(CID): 510071 Total Cost (from individual project application): $161,686
This project proposes to construct a 3rd phase to an ongoing multi-owner/multi-parcel nature-based solution on private property located on the Ware River in Gloucester County. The 3rd phase nature-based solution will involve the installation of 192 linear feet (LF) out of a multi-parcel project totaling 1,300 LF of living shoreline. The VIMS Shoreline Studies Program has designed shoreline plans and established cost estimates for the entire 1,300 LF.

B. **Wilsons Creek – Brednin-Karny and Harvey's Living Shoreline Construction Project**
(CID): 510071 Total Cost (from individual project application): $204,719
This project proposes to construct a nature-based shoreline management solution spanning two private properties located on Wilsons Creek in Gloucester County. The nature-based solution will involve the installation of a 485-feet-long rock sill with clean sand back fill and plantings of native vegetation and a 95 linear feet section of riprap revetment. This project will be apartnership between

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149

http://www.mppdc.com

the MPPDC and two private property owners and is supported by Gloucester County.

C. **Sarah's Creek – Parker's Nature-based Construction Project**
(CID): 510071 Total Cost (from individual project application): $93,569
This project proposes to construct a nature-based solution on a private property located on Sarah's Creek in Gloucester County. The nature-based solution will involve the installation of 115 linear feet of rock sills and 150 linear feet of living shoreline (i.e., clean sand nourishment and spartina plantings). This project will be a partnership between the MPPDC and one private property owners and is supported by Gloucester County.

The total project costs for Gloucester County Round 3 applications are **$459,974** and MPPDC staff are requesting **$323,224** from DCR to support this work.

We consider helping both public and private entities manage flooding a critical and essential function of government.

Thank you for considering the enclosed proposed projects. If you have any questions about the enclosed, please contact me by email at llawrence@mppdc.com or by phone at 804-758-2311.

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes __X__ No ____

Project Grants (Check All that Apply)

Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.

þ Wetland restoration.

Þ Floodplain restoration.

Construction of swales and settling ponds.

Þ Living shorelines and vegetated buffers.

Structural floodwalls, levees, berms, flood gates, structural conveyances.

Storm water system upgrades.

Medium and large-scale Low Impact Development (LID) in urban areas.

Permanent conservation of undeveloped lands identified as having flood resilience value by ConserveVirginia Floodplain and Flooding Resilience layer or a similar data driven analytic tool.

Dam restoration or removal.

☑ **Stream bank restoration or stabilization.**

Restoration of floodplains to natural and beneficial function.

Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Gloucester County
NFIP Community Identification Number (CID#) (See appendix F): 510071

Is Project Located in an NFIP Participating Community? þ Yes □ No
Is Project Located in a Special Flood Hazard Area? þ Yes □ No Flood Zone(s) (If Applicable): AE Zone
Flood Insurance Rate Map Number(s) (If Applicable): 51073C0140F

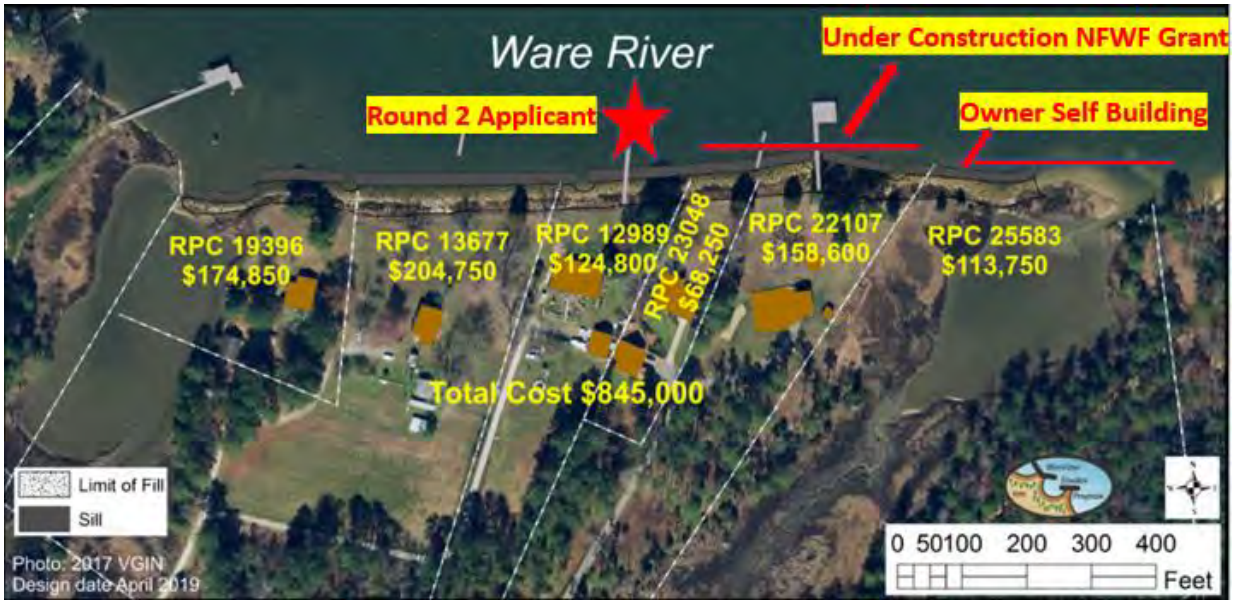
Total Cost of Project: **$ 161,686**

Total Amount Requested: **$ 114,422**

INTRODUCTION –

This project proposes to construct a 3rd phase to an ongoing multi-owner/multi-parcel nature-based solution on private property located on the Ware River in Gloucester County. The 3rd phase nature-based solution will involve the installation of 192 linear feet (LF) out of a multi-parcel project totaling 1,300 LF of living shoreline. The VIMS Shoreline Studies Program has designed shoreline plans and established cost estimates for the entire 1,300 LF.

FEMA, Virginia General Assembly, DCR's Floodplain Management Program, and the Middle Peninsula PDC all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes and territories and the citizens which reside and work there. These hazards include flooding, drought, hurricanes, landslides, wildfires and more. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program (www.FightTheFloodVA.com). This proposal is a Nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features or processes into the built environment to promote adaptation and resilience. Further, this proposal incorporates natural features and processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. These benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life (*FEMA Building Community Resilience with Nature Based Solutions,* June 2021).



This project will be a partnership between the MPPDC and one private property owner and is supported by Gloucester County (See the community support letter in Attachment 1).

PROJECT LOCATION INFORMATION –

In 2019, the MPPDC was funded through the National Fish Wildlife Foundation (NFWF) to engage local landowners in Living Shorelines and nature-based shoreline management solutions (NFWF Project ID:0603.18.062813). Upon funding MPPDC staff-initiated discussions with a community on the Ware River interested in implementing strategies to reduce/better manager chronic flooding issues associated flooding on and around FEMA Repetitive Loss parcels and adjoining parcels to offer “reach based”, multi parcel protection. The project consisted of one RL structure (6626 Ware Haven) with six contiguous waterfront parcels on the Ware River. Phase I of this project entailed the design cost estimation of nature-based living shorelines for all 6 properties, and the construction of nature-based living shoreline designed/ extrapolated to a FEMA year storm event. As MPPDC staff continue to work with this community to implement reach-based solution to chronic flooding issues along the Ware River, Phase II, as proposed in this application will construct living shorelines at 7903 Riverside Drive in Gloucester County. (**Figure 1 and 2**).

FIGURE 1: COUNTY MAP OF PROJECT LOCATION.

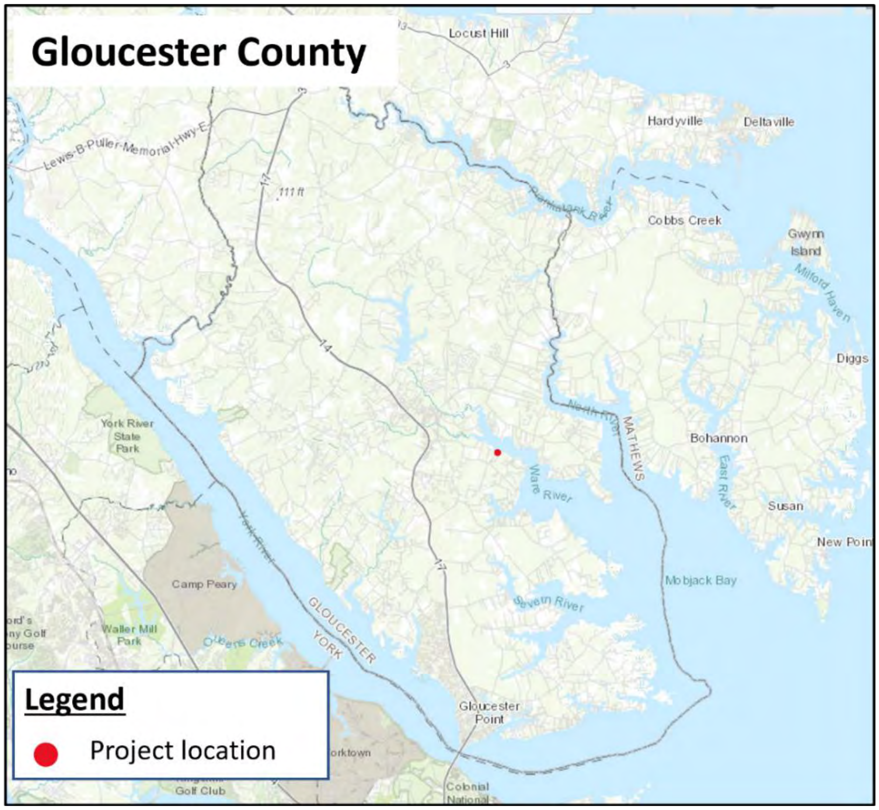

FIGURE 2: PARCEL MAP OF PROJECT LOCATION.

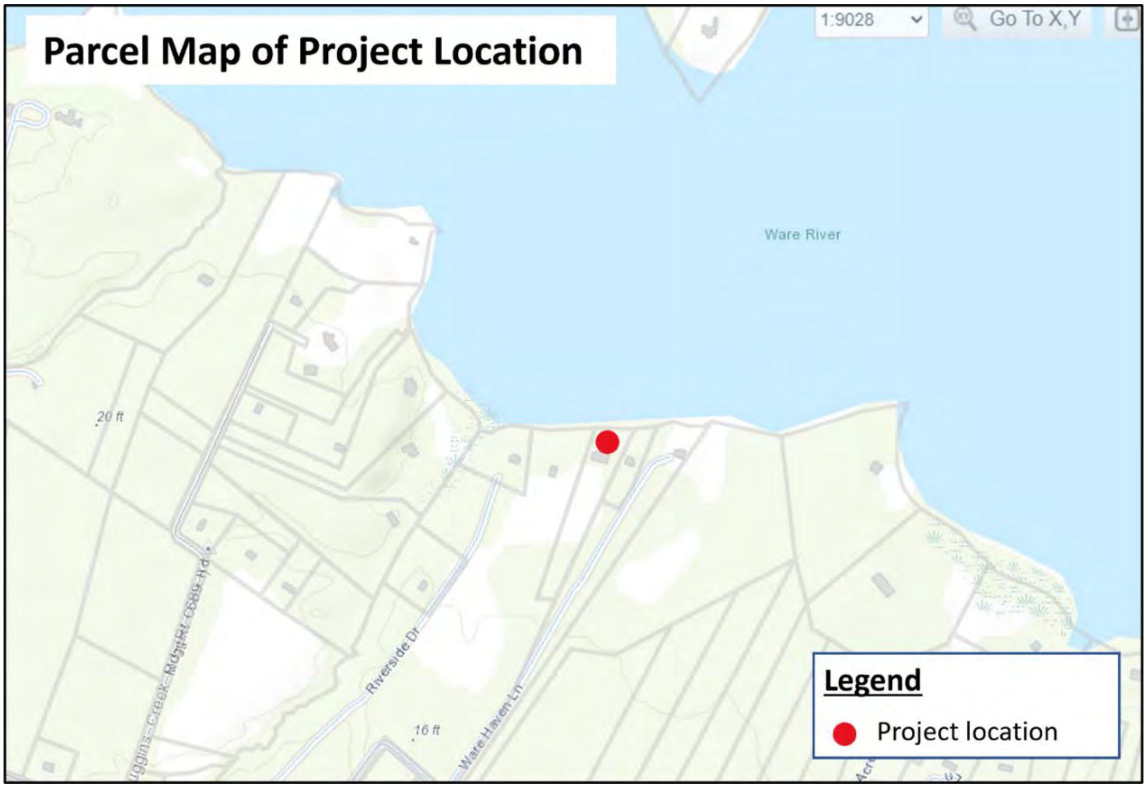
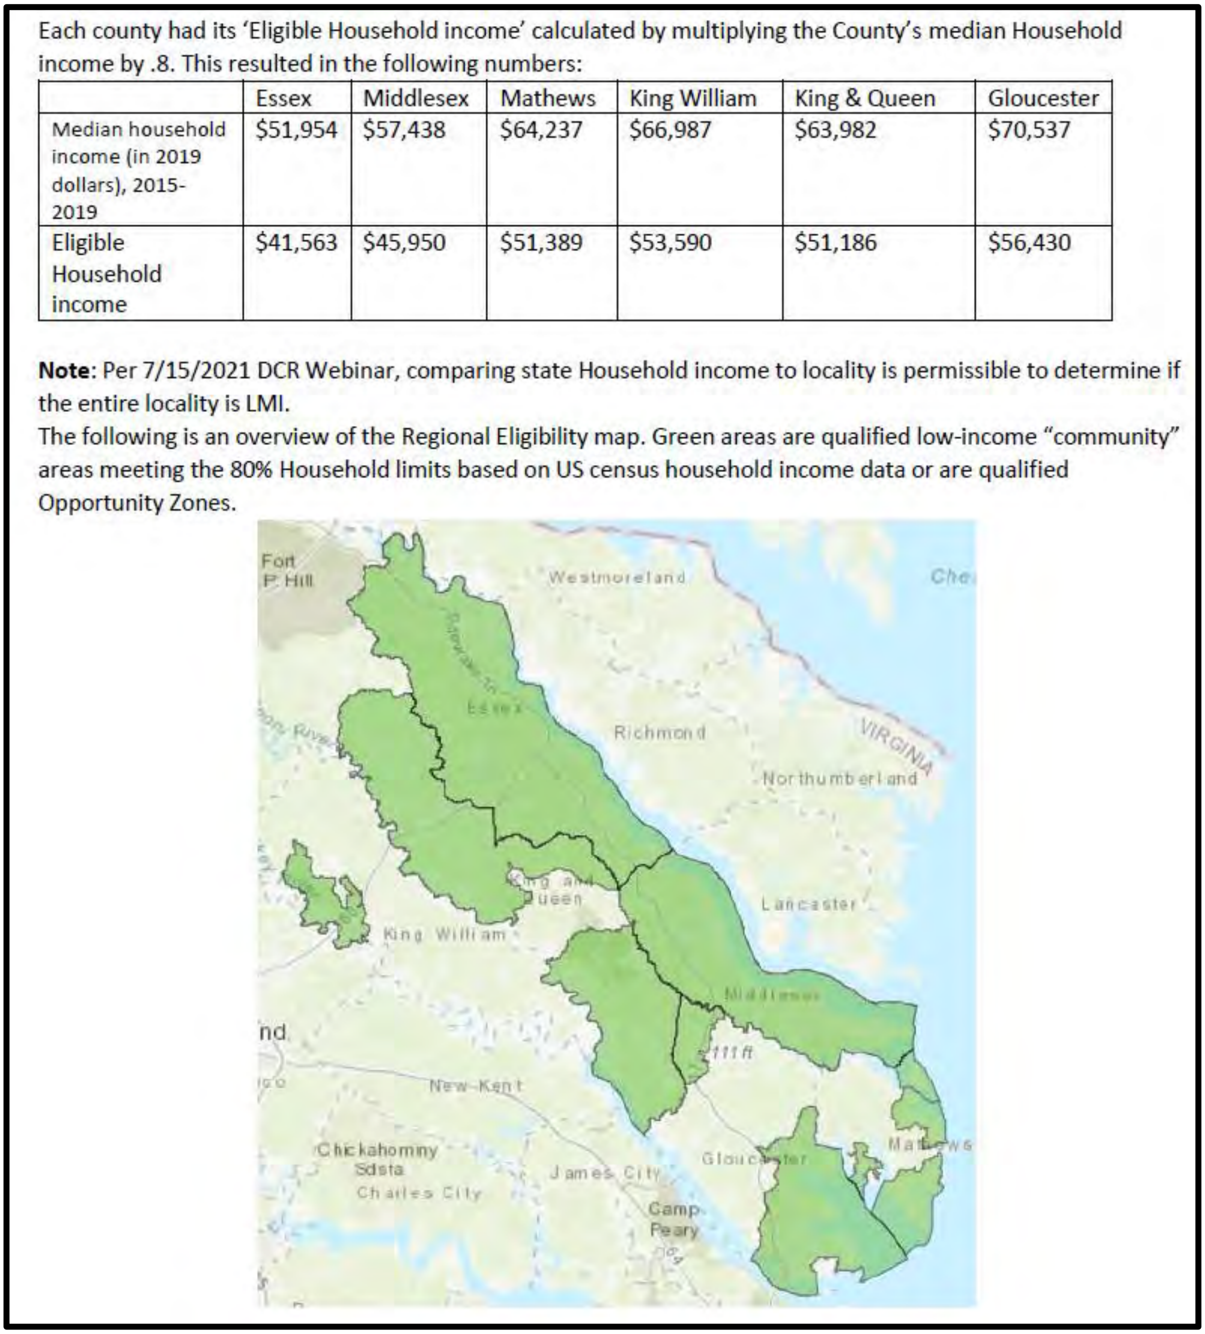


Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 3** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 3: Map of Middle Peninsulas Low Income Geographic Areas qualifying under DCR guidelines.



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

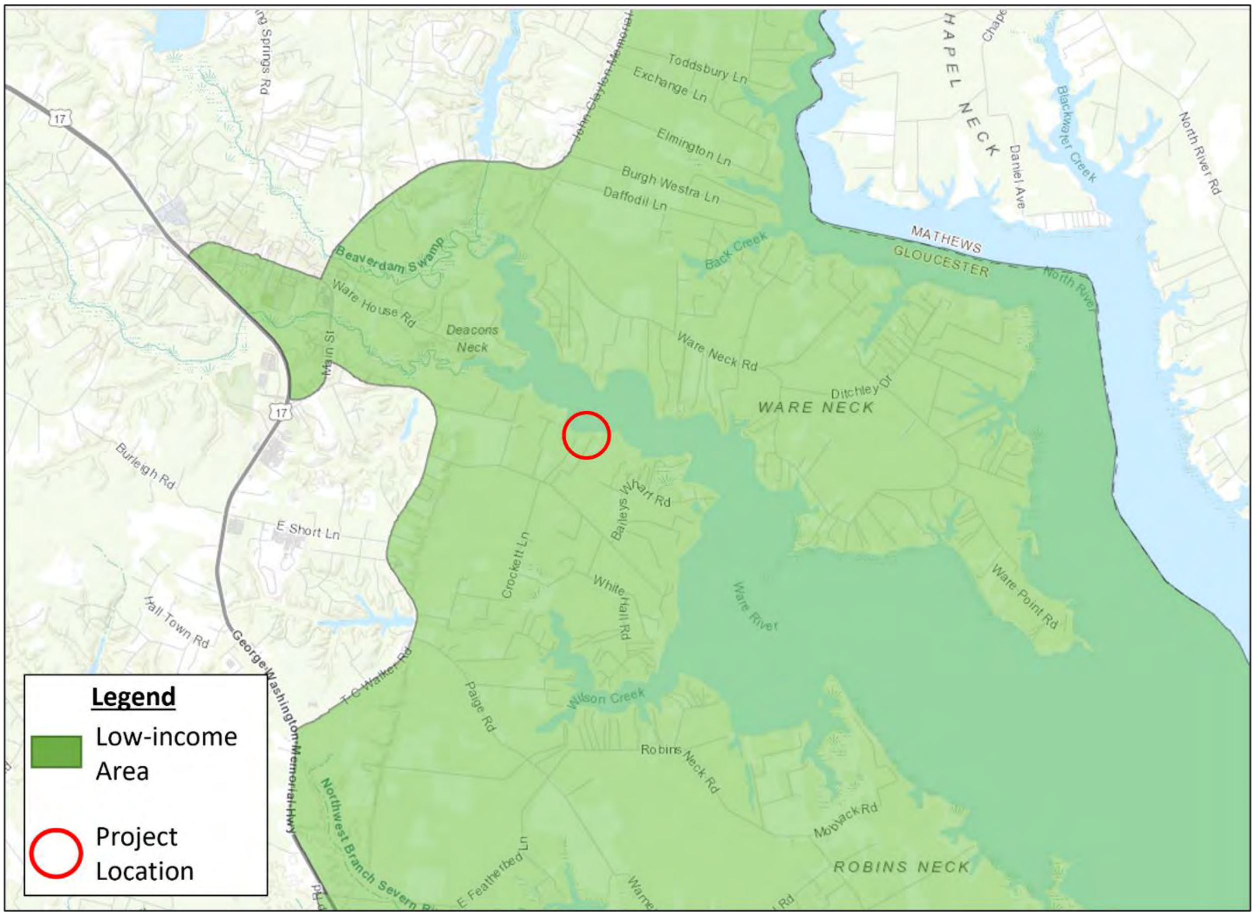
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

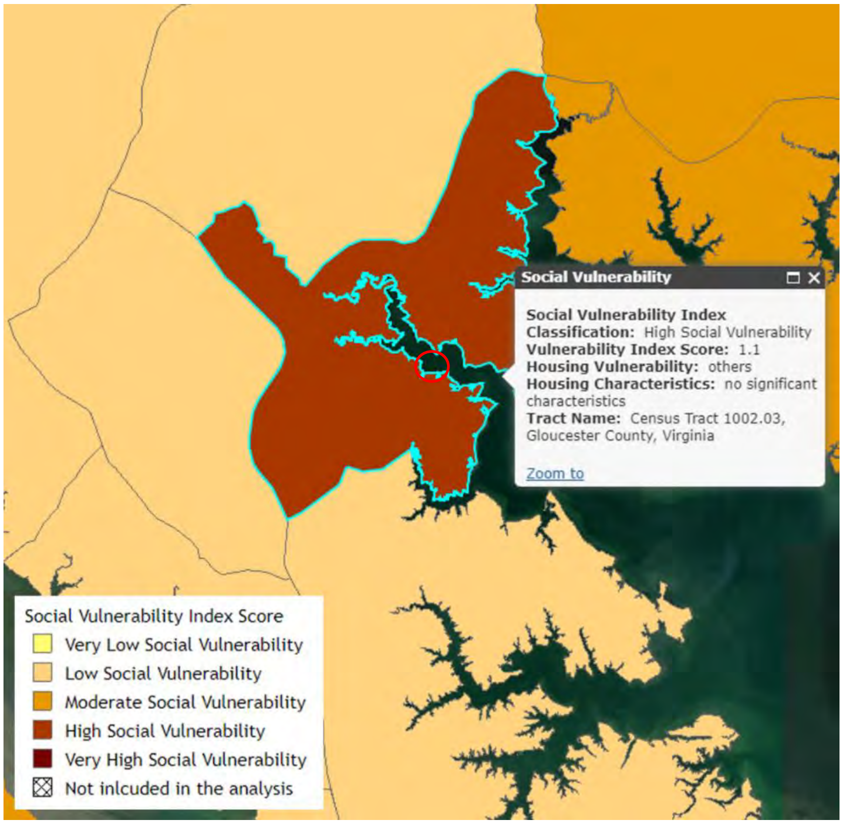
Please see **Figure 4** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

FIGURE 4: MAP OF THE PROJECT LOCATION WITHIN THE GREEN LOW-INCOME AREA.



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a high social vulnerability score (**Figure 5**).

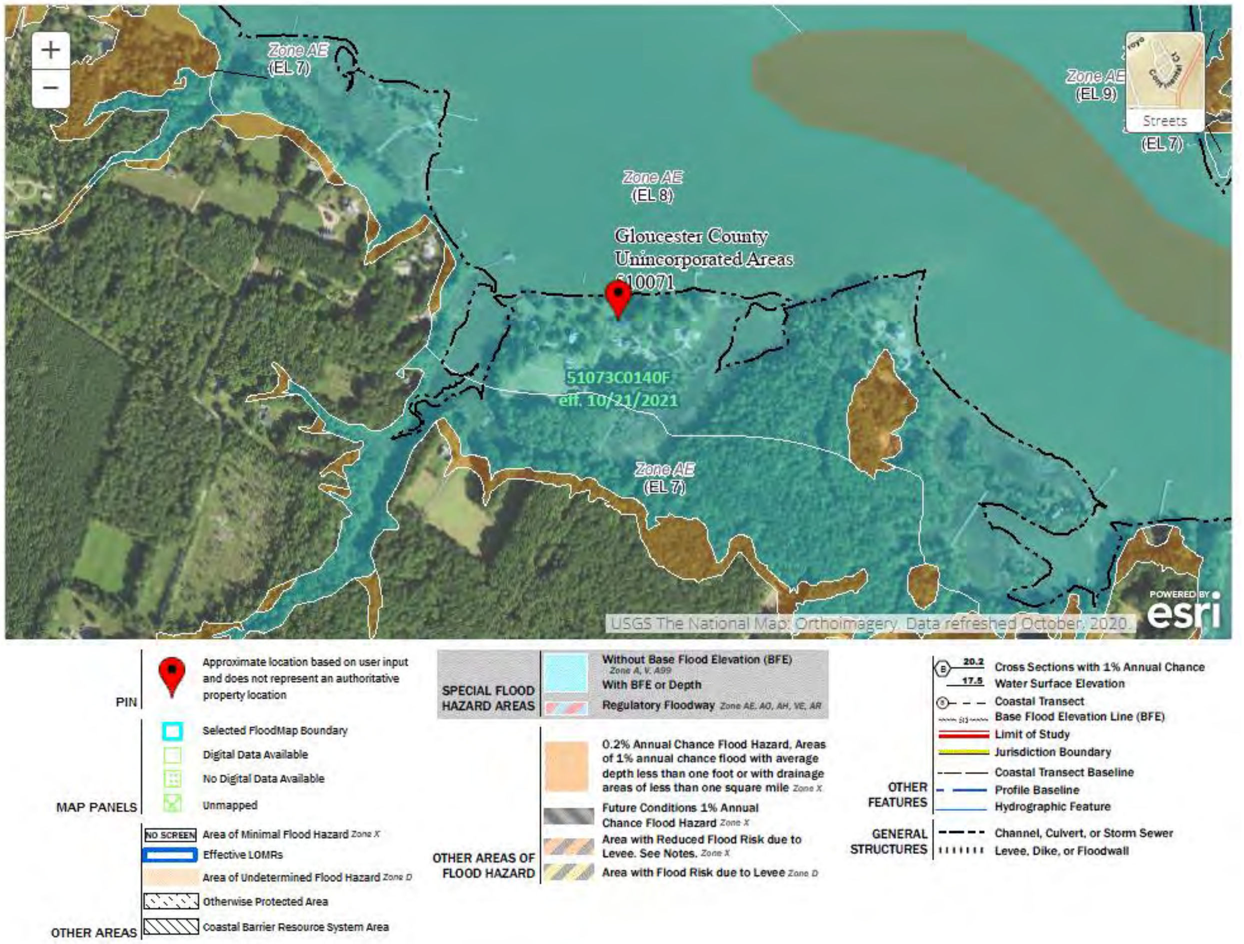
Figure 5: Virginia's Social Vulnerability Index Score Map for the project location.



Social Vulnerability Index
Classification: High Social Vulnerability
Vulnerability Index Score: 1.1
Housing Vulnerability: others
Housing Characteristics: no significant characteristics
Tract Name: Census Tract 1002.03, Gloucester County, Virginia

The project is located at 7903 Riverside Dr Gloucester, VA 23061 (37.39407, -76.48094). This project proposes to construct 1,300 linear feet of living shoreline. Within the project area there is 1 residential home, 1 detached garage and two septic systems. The structures are not identified as severe repetitive loss structure or repetitive loss structures. This site is located within the AE flood zone (**Figure 7**). Please see **Attachment 2** for the FIRMettes (last mapped 10/21/2021).

FIGURE 7: MAP OF FEMA FLOOD ZONES.



USGS The National Map: Orthoimagery. Data refreshed October, 2020.

Due to the project site’s proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 8** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 3,498.5 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor’easter events. **Attachment 3** lists 81 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

FIGURE 8: PROJECT LOCATION AND MAP OF THE SHORELINE CHANGE BETWEEN 1937 AND 2017. PLEASE NOTE THAT THE PROJECT AREA PARCEL IS OUTLINED IN WHITE.

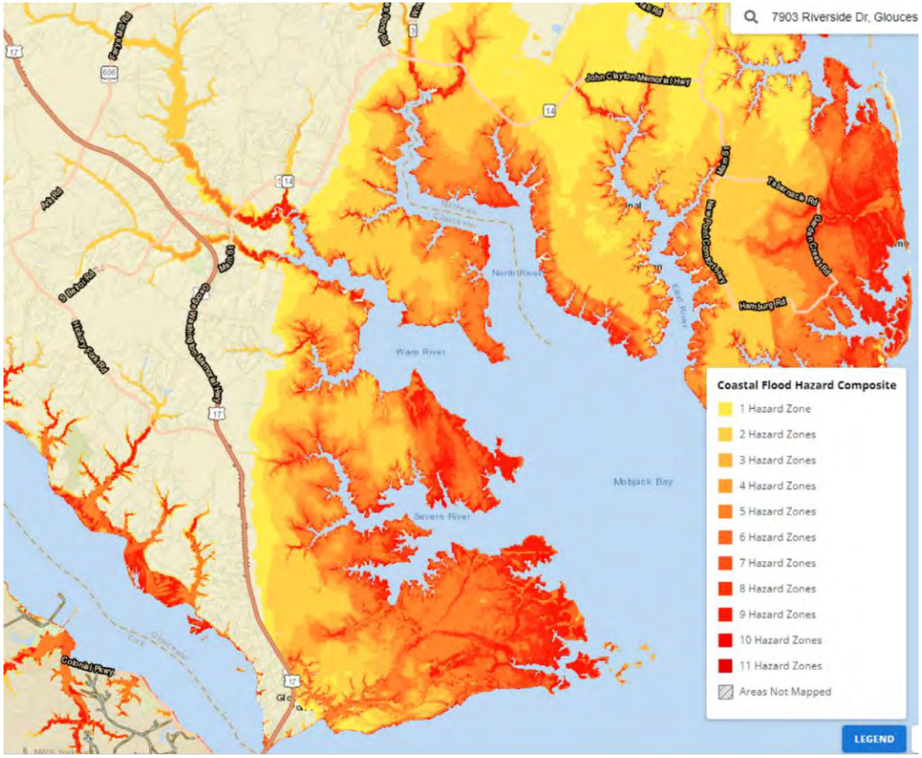
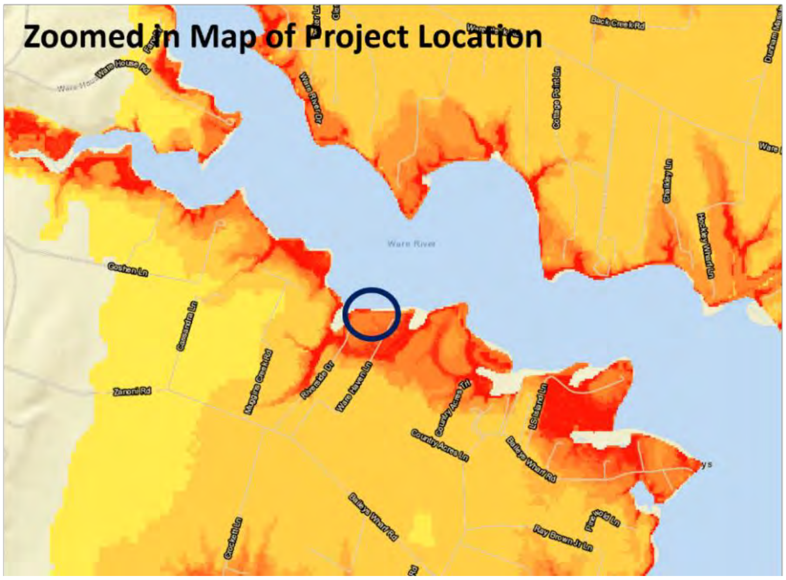
Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding (**Figure 9**).

Figure 9: Map of project location and risk of coastal flooding (NOAA, 2021).





For more information about this project area please see:

- The Middle Peninsula All Hazards Mitigation Plan identifies all hazards that impact the region - https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf .
- Gloucester County Building and Engineering Department administers the NFIP. Here is the link to the current floodplain ordinance: http://gloucestercounty-va.elaws.us/code/coor_ch8.5

NEED FOR ASSISTANCE –
The Middle Peninsula Planning District Commission (MPPDC) is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 to provide solutions to problems of greater than local significance and cost-savings through economies of scale. The MPPDC serves nine localities of the Middle Peninsula including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna.

MPPDC is staffed using multiple methods including co-operative procurement, hourly, and burdened staff. MPPDC staff consists of Executive Director, Deputy Director, Chief Financial Officer, Senior Project Planner, clerical support staff; co-operative procured Director of Planning, General Planner, Certified Flood Plain Manager, Transportation Planner, Emergency Planner; Hourly staff for Housing, Community Development Planner and Public relations.

The PDC staffing team assists localities with long-term and/or regional planning efforts. The MPPDC Executive Director, Deputy Director, and Chief Financial Officer have decades of experience in managing and administering project grants at multiple scale from grants in excess of $1,000,000 to very small grants. MPPDC is an entrepreneurial based government agency with an annual operating budget ranging from $750,000 to over $1,000,000. The MPPDC manages annually 25-30 concurrent federal and state grants utilizing industry standard Grants Management Software. Staff utilize GIS and all Microsoft software as well as other software as required by different grants. The MPPDC operates service centers in the topical areas of coastal zone management, emergency planning, housing, transportation planning and transportation demand management, economic development, social assistance, small business development, general planning and technical assistance and other areas as determined by the Commission. MPPDC has over 25 years of experience managing multiple revolving loan programs. In the 25 years that the Executive Director has been employed by the Commission no audit findings have occurred.

The need for assistance is two-fold.

First, as Gloucester County is near the Chesapeake Bay and numerous tidal rivers that create an area of high risk of coastal flooding, sea-level rise, and storm surge. Based on tidal gauge data from VIMS, relative sea- level rise rates ranging from 0.11-0.23 in./yr. (2.9-5.8 mm/yr.; period: 1976-2007; 10 stations) within the Chesapeake Bay region, which are the highest rates reported along the U.S. Atlantic coast (Boon et. al., 2010). In addition to sea-level rise, Gloucester County has a history of being impacted by hurricanes and tropical storms. As storms pass over or near the coast, the atmospheric pressure drops, causing a large volume of sea water to build up, eventually being pushed ashore by the storm's winds causing a storm surge. In Gloucester County, strong East and Northeast winds can push water from the Chesapeake Bay into the mouth of the York and Rappahannock Rivers and Mobjack Bay, flooding much of the county's low-lying areas (Middle Peninsula Planning District Commission, 2005). Additionally, when a storm makes landfall at high tide, the storm surge and the added water from the tidal fluctuation combine to create a "storm tide". In Gloucester County, tidal waters fluctuate twice daily from 1.2 feet above mean sea level to 1.2 feet below (FEMA 1987, 6). If a severe hurricane were to make landfall during high tide, and additional 1.2 feet of water would be added to the highest storm surge possible, which could create a storm tide of 16.2 feet (Rygel, 2005). Nor'easters, like hurricanes and tropical storms, can dump heavy amounts of rain and produce hurricane-force winds that push large amounts of sea water inland. According to a study conducted by the Center for Coastal Resources Management, a one-and-a-half-foot rise in sea level coupled with a three-foot storm surge, like what would be experienced in a strong tropical storm, would lead to 13% of Gloucester County's land mass being flooded – including 118 miles of roads. Only 3% of the projected flood area is currently developed. A strong indicator that Gloucester County is experiencing the impact of coastal hazards (i.e., flooding, hurricanes, sea-level rise, and storm surge) is the number of repetitive loss and severe repetitive loss claims submitted by residents and businesses to FEMA. As of 2015, the County had 147 repetitive loss properties with claims topping $3.3 Million and 13 severe repetitive loss properties with claims totaling nearly $1.9 Million. The County has implemented several preventative measures, property protection policies, public information activities, and emergency service measures to decrease impacts on communities. Therefore, this project will build on other local efforts move toward becoming a more resilient community.

Second, at this project location, the shoreline is experiencing sever erosion and frequent flooding. Currently the shoreline is tidal marsh grass, but with the shoreline quickly eroding and rising sea levels and more frequent storms, additional shoreline protection is needed. Additionally, there are mature trees on the property that help the soil and land in place and with without offering this shoreline some protection the trees will most certainly be lost. This will ultimately bring water closer to the structures on the property. Please see **Figure 10** for project location photos and **Attachment 4** for more photos.

FIGURE 10: PHOTOS OF THE ROBENS PROPERTY.
BELOW IS A PHOTO OF THE NATURAL SHORELINE ON THE PROPERTY.

THIS IS A PHOTO OF THE YARD WITH DURING AN ABOVE AVERAGE HIGH TIDE AND SOME WIND.

ALTERNATIVES –

Alternatives are not applicable to this project. A living shoreline is feasible at this location and therefore required per VMRC regulations. This project employs a nature-based solution, and this project cost is not greater than $3 Million.

GOALS AND OBJECTIVES –

This project will install a nature-based solution consisting of 1,300 linear feet of living shoreline (i.e., clean sand nourishment and spartina plantings). This project will reduce erosion and stabilize the shoreline. Through a previous grant a draft JPA has been completed but not yet sent to VMRC for approval. During this project the JPA will be submitted for permits and the living shoreline will be installed as designed within the approved JPA application. **Attachment 5** does not include the draft JPA because it will be developed as part of the project and submitted as a final deliverable.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.
Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based approach.
Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode.

Goal 2: Improve water quality
Objective A: Construct a living shoreline to capture nitrogen, phosphorus, and sediment.

Goal 3: Transferability to other communities.
Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

The MPPDC anticipates that the living shoreline installed at this project location will:

1. **Stabilize the shoreline and reduce the overall erosion rate at the project location**. According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

2. **Provide ecosystem services to the community.** Since this project is proposing the installation of living shorelines, this project will have nutrient and sediment reduction benefit to local waters. According to a report titled, <u>Removal Rates of Shoreline Management Project</u>, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb./lf./yr.) and a phosphorus removal rate of 0.00861 lbs./lf./yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb./lf./yr. Therefore, with a proposed project of 1300 linear feet of living shoreline this has the ability of

removing 15.834 pounds of nitrogen per year, 11.193 pounds of phosphorus per year and 54,600 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

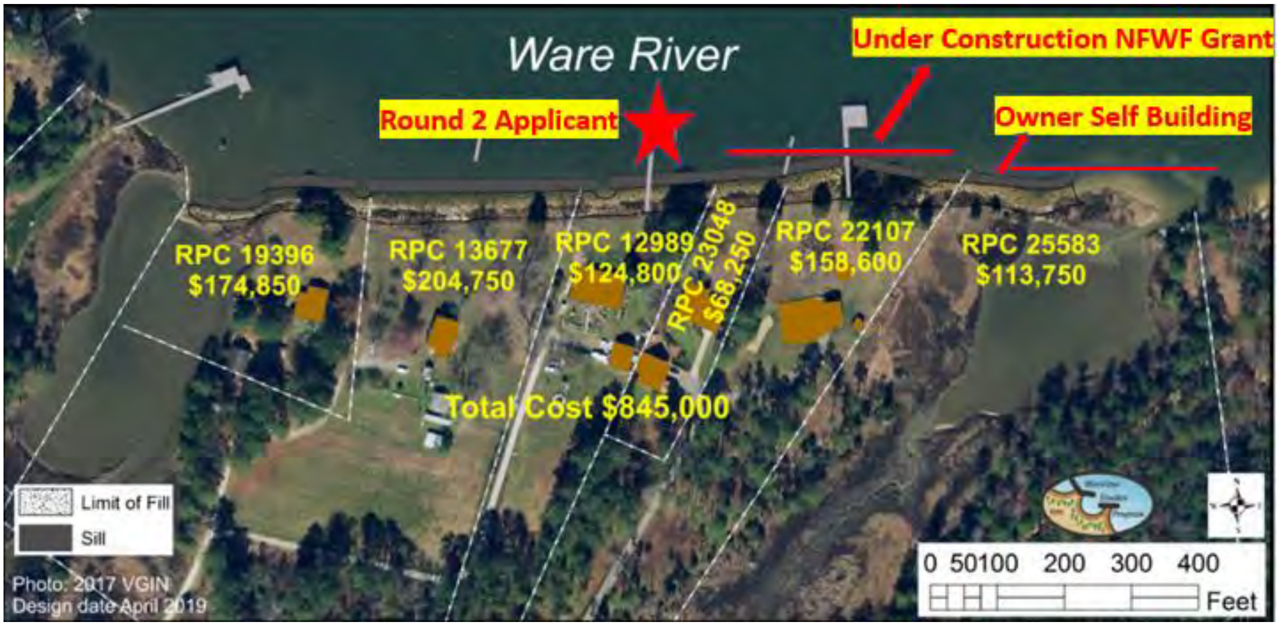
3. **Prevent loss of property and life.** As the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

APPROACH, MILESTONES, AND DELIVERABLES –

This project will follow the designs outlined in the draft Joint Permit Application. Upon issuance of the permits for this project, VMRC will analyze the upstream and downstream impacts of this project using the best available science, as per state law. Please see **Attachment 5** for the draft JPA application and designs. The below table outlines the components of the nature-based solution:

Phase 3 ★	**Total Project Location**
Living Shoreline	192 Linear Feet

The anticipated timeline for this project could be as quick as 1 year, but no more than two years. The timeline range is due to the potential delays in the construction industry or delays caused by COVID, including supply shortages. Having a two-year timeline will offer potential windows for planting the living shoreline - one in 2022 and one in 2023. To explain, the Chesapeake Bay Foundation recommends that perennials and grasses for living shorelines should be planted during peak growing season (in mid-to-late summer) to allow enough time for their root systems to become established before they go dormant in the late Fall. Trees and shrubs should be planted in Spring and Fall when there is adequate rainfall to help them develop strong roots and leafy growth.



Below is the project timeline and project milestones for this project.

Receive funding notice - December 2021
Coordinate with property owners and the project contractor to review project timeline and project expectations – January 2021
Initiate site preparation at the project location - January 2021 to July 2022
Construction of the living shoreline – June 2022 to September 2022
Project Close out – December 2022

RELATIONSHIP TO OTHER PROJECTS –

For over 40 years the Middle Peninsula Planning District Commission (MPPDC) and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

In 2019, Middle Peninsula Planning District Commission (MPPDC) targeted repetitive loss (RL) and severe repetitive loss (SRL) waterfront properties for nature-based flood mitigation projects across the Middle Peninsula. The MPPDC funded through National Fish Wildlife Foundation (NFWF) to engage local landowners in Living Shorelines and nature-based shoreline management solutions (NFWF Project ID:0603.18.062813). Upon funding MPPDC staff-initiated discussions with a community on the Ware River interested in implementing strategies to reduce/better manager chronic flooding issues associated flooding on and around a FEMA RL parcel and adjoining parcels to offer "reach based", multi parcel protection. This project consisted of one RL structure (6626 Ware Haven) with 6 contiguous waterfront parcels on the Ware River. Phase I of this project entailed the design cost estimation of nature-based living shorelines for all 6 properties, and the construction of nature-based living shoreline designed/ extrapolated to a FEMA year storm event on 2 properties 6626 (RL) and 6631 Ware Haven. The proposed project in this application will build on phase I and add more living shorelines to an adjacent property on the Ware River that will improve the community resiliency.

The proposed project is also a priority project generated from the Middle Peninsula Regional Flood Resilience Plan, which was approved by DCR during August 2021. The Flood Resiliency Plan serves as the MPPDC's guiding document for its flood resiliency programs and is comprised of two primary MPPDC-approved policy documents which form the implementation and foundation of the Middle Peninsula flood protection approach and are indirectly and directly supported by multiple specific regional planning documents, both approved by various required federal, regional, or local partners as required by statute.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan, FEMA and Middle Peninsula locality approved 2016 (MPPDC Website)
- The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy, MPPDC Approved March 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan - MPPDC Approved ~annually

Short Term Implementation

- Middle Peninsula Planning District Commission Fight the Flood Program Design MPPDC Commission (approved June 2020 Chairman approved 8/6/21 update)
- Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program-Virginia Revolving Loan Fund Program Design and Guidelines (approved 2015)

As the MPPDC has continuously worked on flooding and coastal resiliency topics, **Attachment 6** lists the projects and short description of relevant projects. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the MPPDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in

2020 was in response to emerging flood challenges. The MPPDC Commission authorized staff to develop the **Middle Peninsula Fight the Flood (FTF) Program.** This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula **FTF** program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, MPPDC staff have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline.

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN –

The approved VMRC permits does not require a maintenance plan; therefore, the maintenance of this construction project will be in accordance with the permit requirements.

CRITERIA –

Describe how the project meets each of the applicable scoring criteria containedin Appendix B and provide the required documentation where necessary. Documentationcan be incorporated into the Scope of Work Narrative or included as attachments to the application. Appendix B must be completed and submitted with the application.

For local governments that are not towns, cities, or counties, the documentation providedfor the criteria below should be based on the local government or local governments in which the project is located and/or directly impacts.

1. **Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?**
   YES.
2. **Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?**
   YES. Here’s the link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf
3. **For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?**
   YES. Please see Attachment 1
4. **Has the applicant provided evidence of an ability to provide the required match funds?**
   YES. Please see the match commitment letter in **Attachment 8**

5. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?**
   YES.

BUDGET NARRATIVE -
For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

Please see match commitment letters from the property owners in **Attachment 11**.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles

Also please note that the cost estimates for the construction of this project were supplied by the contractor, Shoreline Structures, LLC. Please see **Attachment 7**.

In summary:

Estimated total project cost:	$ 161,686
Amount of funds requested from the Fund:	$ 114,422

Finally, please see the authorization to request for funding in **Attachment 9.**

Appendix B: Scoring Criteria for Flood Prevention andProtection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Middle Peninsula Planning District Commission	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☑ **Yes** ☐ **No**
Applicant Name:	Middle Peninsula Planning District Commission

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		88

Saluda, VA 23149

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

LOCAL WETLANDS BOARD (LWB) CONTACT INFORMATION:

Links to LWB information on the Web can be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html
In addition, the phone numbers listed below can be used to contact the LWB. Please be advised that these phone numbers are subject to change at any time.

Accomack County (757) 787-5721, Cape Charles (757) 331-3259, Charles City County (804) 829-9296, Chesapeake (757) 382-6248, Colonial Heights (804) 520-9275, Essex County (804) 443-4951, Fairfax County (703) 324-1364, Fredericksburg (540) 372-1179, Gloucester County (804) 693-2744, Hampton (757) 727-6140, Hopewell (804) 541-2267, Isle of Wight County (757) 365-6211, James City County (757) 253-6673, King and Queen County (804) 769-4978, King George County (540) 775-7111, King William County (804) 769-4927, Lancaster County (804) 462-5220, Mathews County (804) 725-5025, Middlesex County (804) 758-0500, New Kent County (804) 966-9690, Newport News (757) 247-8437, Norfolk (757) 664-4368, Northampton County (757) 678-0442, Northumberland County (804) 580-8910, Poquoson (757) 868-3040, Portsmouth (757) 393-8836, Prince William County (703) 792-6984, Richmond County (804) 333-3415, Stafford County (540) 658-8668, Suffolk (757) 923-3650, Virginia Beach (757) 427-8246, Westmoreland County (804) 493-0120, West Point (804) 843-3330, Williamsburg (757) 220-6130, York County (757) 890-3538

Tidewater Joint Permit Application (JPA) For Projects Involving Tidal Waters, Tidal Wetlands and/or Dunes and Beaches in Virginia

This application may be used for most commercial and noncommercial projects involving **tidal waters, tidal wetlands and/or dunes and beaches in Virginia** which require review and/or authorization by Local Wetlands Boards (LWB), the Virginia Marine Resources Commission (VMRC), the Department of Environmental Quality (DEQ), and/or the U. S. Army Corps of Engineers (USACE). This application can be used for:

- **Access-related activities**, including piers, boathouses, boat ramps (without associated dredging or excavation*), moorings, marinas.
- **Shoreline stabilization projects** including living shorelines, riprap revetments, marsh toe stabilization, bulkheads, breakwaters, beach nourishment, groins, and jetties. It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1).
- **Crossings** over or under tidal waters and wetlands including bridges and utility lines (water, sewer, electric).
- **Aquaculture structures**, including cages and floats except "oyster gardening"**

***Note:** for all dredging, excavation, or surface water withdrawal projects you **MUST** use the Standard JPA form; for noncommercial, riparian shellfish aquaculture projects (i.e., "oyster gardening") you must use the abbreviated JPA found at https://mrc.virginia.gov/forms/2019/VGP3_Aquaculture_form_2019.pdf or call VMRC for a form.

The DEQ and the USACE use this form to determine whether projects qualify for certain General, Regional, and/or Nationwide permits. If your project does not qualify for these permits and you need a DEQ Virginia Water Protection permit or an individual USACE permit, you must submit the Standard Joint Permit application form. You can find this application at http://www.nao.usace.army.mil/Missions/Regulatory/JPA.aspx. Please note that some health departments and local agencies, such as local building officials and erosion and sediment control authorities, do not use the Joint Permit Application process or forms and may have different informational requirements. The applicant is responsible for contacting these agencies for information regarding those permitting requirements.

HOW TO APPLY

Submit one (1) completed copy of the Tidewater JPA to VMRC:

1. If by mail or courier, use the VMRC address provided on page 1.
2. If by electronic mail, address the package to: **JPA.permits@mrc.virginia.gov**. The application must be provided in the .pdf format and should not exceed 10 MB. If larger than 10 MB you may provide a file transfer protocol (ftp) site for download purposes.

The Tidewater JPA should include the following:

1. **Part 1** – General Information
2. **Part 2** – Signatures
3. **Part 3** - Appendices (A, B, C, and/or D as applicable to your project)
4. **Part 4** – Project Drawings.
   The drawings shall include the following for **ALL** projects:
   - Vicinity Map (USGS topographic map, road map or similar showing project location)
   - Plan View Drawing (overhead, to scale or with dimensions clearly marked)
   - Section View Drawing (side-view, to scale or with dimensions clearly marked)

Sample drawings are included at the end of Part 4 of this application to show examples of the information needed to consider your application complete and allow for the timely processing.

When completing this form, use the legal name of the applicant, agent, and/or property owner. For DEQ application purposes, *legal name* means the full legal name of an individual, business, or other organization. For an individual, the legal name is the first name, middle initial, last name, and suffix. For an entity authorized to do business in Virginia, the legal name is the exact name set forth in the entity's articles of incorporation, organization or trust, or formation agreement, as applicable. Also provide the name registered with the State Corporation Commission, if required to register. DEQ issues a permit or grants coverage to the so-named individual or business, who becomes the 'permittee'. Correspondence from some agencies, including permits, authorizations, and/or coverage, may be provided via electronic mail. If the applicant and/or agent wishes to receive their permit via electronic mail, please remember to include an e-mail address at the requested place in the application.

In order for projects requiring LWB authorization to be considered complete (Virginia Code § 28.2-1302); "The permit application shall include the following: the name and address of the applicant; a detailed description of the proposed activities; a map, drawn to an appropriate and uniform scale, showing the area of wetlands directly affected, the location of the proposed work thereon, the area of existing and proposed fill and excavation, the location, width, depth and length of any proposed channel and disposal area, and the location of all existing and proposed structures, sewage collection and treatment facilities, utility installations, roadways, and other related appurtenances of facilities, including those on the adjacent uplands; a description of the type of equipment to be used and the means of access to the activity site; the names and addresses of record of adjacent land and known claimants of water rights in or adjacent to the wetland of whom the applicant has notice; an estimate of cost; the primary purpose of the project; and secondary purpose of the proposed project; a complete description of measures to be taken during and after alteration to reduce detrimental offsite effects; the completion date of the proposed work, project, or structure; and such additional materials and documentation as the wetlands board may require."

You may include signed Adjacent Property Owner (APO) Acknowledgement Forms found at the end of this Short Form. You must provide these addresses in Part 1 whether or not you use the APO forms. VMRC will request comments from APOs for projects that require permits for encroachment over state-owned submerged lands. VMRC or your local wetlands board must notify all APO's of public hearings required for all proposals involving tidal wetlands and dunes/beaches that are not authorized by statute. This information will not be used by DEQ to meet the requirements of notifying riparian land owners.

Regional Permit 17 (RP-17), authorizes the installation and/or construction of open-pile piers, mooring structures/devices, fender piles, covered boathouses/boatslips, boatlifts, osprey pilings/platforms, accessory pier structures, and certain devices associated with shellfish gardening, for private use, subject to strict compliance with all conditions and limitations further set out in the RP-17 enclosure located at http://www.nao.usace.army.mil/Missions/Regulatory/RBregional/. In addition to the information required in this JPA, prospective permittees seeking authorization under RP-17 must complete and submit the 'Regional Permit 17 Checklist' with their JPA. A copy of the 'Regional Permit 17 Checklist' is found on pages 13 and 14 of this application package. If the prospective permittee answers "yes" (or "N/A", where applicable) to all of the questions on the 'Regional Permit 17 Checklist', the permittee is in compliance with RP-17 and will not receive any other written authorization from the Corps but may not proceed with construction until they have obtained all necessary state and local permits. ***Note: If the prospective permittee answers "no" to any of the questions on the 'Regional Permit 17 Checklist' then their proposed structure(s) does not meet the terms and conditions of RP-17 and written authorization from the Corps is required before commencement of any work.***

Note: Land disturbance (grading, filling, etc.) or removal of vegetation associated with projects located in Chesapeake Bay Preservation Areas will require approval from local governments. Certain localities utilize this application during their Bay Act review. Part 5 of this application is included to provide assistance for the applicant to comply with Bay Act /or Erosion and Sediment Control requirements concurrent with this application.

WHAT HAPPENS NEXT

Upon receipt of an application, VMRC will assign a permit application number to the JPA and will then distribute a copy of the application and any original plan copies submitted to the other regulatory agencies that are involved in the JPA process. All agencies will conduct separate but concurrent reviews of your project. Please be aware that each agency must issue a separate permit (or a notification that no permit is required). Note that in some cases, DEQ may be taking an action on behalf of the USACE, such as when the State Program General Permit (SPGP) applies. Make sure that you have received all necessary authorizations, or documentation that no permit is required, from each agency prior to beginning the proposed work.

During the JPA review process, site inspections may be necessary to evaluate a proposed project. Failure to allow an authorized representative of a regulatory agency to enter the property, or to take photographs of conditions at the project site, may result in either the withdrawal or denial of your permit application.

For certain federal and state permit applications, a public notice is published in a newspaper having circulation in the project area, is mailed to adjacent and/or riparian property owners, and/or is posted on the agency's web page. The public may comment on the project during a designated comment period, if applicable, which varies depending upon the type of permit being applied for and the issuing agency. In certain circumstances, the project may be heard by a governing board, such as a Local Wetlands Board, the State Water Control Board, or VMRC in cases where a locality does not have a wetlands board and with certain subaqueous cases. You may be responsible for bearing the costs for advertisement of public notices.

Public hearings that are held by VMRC occur at their regularly scheduled monthly commission meetings under the following situations: Protested applications for VMRC permits which cannot be resolved; projects costing over $500,000 involving encroachment over state-owned subaqueous land; and all projects affecting tidal wetlands and dunes/beaches in localities without a LWB. All interested parties will be officially notified regarding the date and time of the hearing and Commission meeting procedures. The Commission will usually make a decision on the project at the meeting unless a decision for continuance is made. If a proposed project is approved, a permit or similar agency correspondence is sent to the applicant. In some cases, notarized signatures, as well as processing fees and royalties, are required before the permit is validated. If the project is denied, the applicant will be notified in writing.

PERMIT APPLICATION OR OTHER FEES

Do not send any fees with the JPA. VMRC is not responsible for accounting for fees required by other agencies. Please consult agency websites or contact agencies directly for current fee information and submittal instructions.

- USACE: Permit application fees are required for USACE Individual (Standard) permits. A USACE project manager will contact you regarding the proper fee and submittal requirements.

- DEQ: Permit application fees required for Virginia Water Protection permits – while detailed in 9VAC25-20 – are conveyed to the applicant by the applicable DEQ office (http://www.deq.virginia.gov/Locations.aspx). Complete the Permit Application Fee Form and submit it per the instructions to the address listed on the form. Instructions for submitting any other fees will be provided to the applicant by DEQ staff.
- VMRC: An application fee of $300 may be required for projects impacting tidal wetlands, beaches and/or dunes when VMRC acts as the LWB. VMRC will notify the applicant in writing if the fee is required. Permit fees involving subaqueous lands are $25.00 for projects costing $10,000 or less and $100 for projects costing more than $10,000. Royalties may also be required for some projects. The proper permit fee and any required royalty is paid at the time of permit issuance by VMRC. VMRC staff will send the permittee a letter notifying him/her of the proper permit fees and submittal requirements.
- LWB: Permit fees vary by locality. Contact the LWB for your project area or their website for fee information and submittal requirements. Contact information for LWBs may be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html.

FOR AGENCY USE ONLY

APPLICANTS
Part 1 – General Information

PLEASE PRINT OR TYPE ALL ANSWERS: If a question does not apply to your project, please print N/A (not applicable) in the space provided. If additional space is needed, attach 8-1/2 x 11 inch sheets of paper.

Check all that apply		
Pre-Construction Notification (PCN) ☐ NWP # ____________________ (*For Nationwide Permits ONLY - No DEQ-VWP permit writer will be assigned*)	Regional Permit 17 (RP-17) ☐	

County or City in which the project is located: Gloucester

Waterway at project site: Ware River

PREVIOUS ACTIONS RELATED TO THE PROPOSED WORK (Include all federal, state, and local pre application coordination, site visits, previous permits, or applications whether issued, withdrawn, or denied)

Historical information for past permit submittals can be found online with VMRC - https://webapps.mrc.virginia.gov/public/habitat/ - or VIMS - http://ccrm.vims.edu/perms/newpermits.html

Agency	Action / Activity	Permit/Project number, including any non-reporting Nationwide permits previously used (e.g., NWP 13)	Date of Action	If denied, give reason for denial

Part 1 - General Information (continued)

1. Applicant's legal name* and complete mailing address: Contact Information:

   Robens

   Home (____)_____________
   Work (____)_____________
   Fax (____)_____________
   Cell (____)_____________
   e-mail __________________

   State Corporation Commission Name and ID Number (if applicable) _____________

2. Property owner(s) legal name* and complete address, if different from applicant: Contact Information:

   Robens

   Home (____)_____________
   Work (____)_____________
   Fax (____)_____________
   Cell (____)_____________
   e-mail __________________

   State Corporation Commission Name and ID Number (if applicable) _____________

3. Authorized agent name* and complete mailing address (if applicable): Contact Information:

   Home (____)_____________
   Work (____)_____________
   Fax (____)_____________
   Cell (____)_____________
   e-mail __________________

   State Corporation Commission Name and ID Number (if applicable) _____________

*** If multiple applicants, property owners, and/or agents, each must be listed and each must sign the applicant signature page.**

4. Provide a detailed description of the project in the space below, including the type of project, its dimensions, materials, and method of construction. Be sure to include how the construction site will be accessed and whether tree clearing and/or grading will be required, including the total acreage. If the project requires pilings, please be sure to include the total number, type (e.g. wood, steel, etc), diameter, and method of installation (e.g. hammer, vibratory, jetted, etc). If additional space is needed, provide a separate sheet of paper with the project description.

   The project is located on the upper Ware River in Gloucester County. The low bank shoreline faces north-northwest and has an average fetch of 0.7 miles with a long fetch to the northwest of 1.3 miles. The tide range is 2.5 ft. A marsh fringe with an eroding edge exists along the shoreline. To increase the level of shore protection and longer-term coastal resiliency, a living shoreline project was designed with 1 rock sill, sand fill, and Spartina patens and Spartina alterniflora marsh grass plantings. The structure (sill 4A) is part of a system designed for an overall living shoreline project on adjacent properties to provide shore protection with a reach approach. Coastal resiliency is enhanced by the reach approach because adjacent systems work together to provide an enhanced level of shore and habitat protection. Along the Robens properties, approximately 7,600 square feet of marsh will be created along about 200 ft of shoreline. For construction, the site will be accessed by land with materials being delivered by truck. No tree clearing or grading will occur.

Part 1 - General Information (continued)

5. Have you obtained a contractor for the project? ___ Yes* ___ No. *If your answer is "Yes" complete the remainder of this question and submit the Applicant's and Contractor's Acknowledgment Form (enclosed)

Contractor's name* and complete mailing address:

Contact Information:
Home (____)_____________
Work (____)_____________
Fax (____)_____________
Cell (____)_____________
email __________________

State Corporation Commission Name and ID Number (if applicable) _____________________

* If multiple contractors, each must be listed and each must sign the applicant signature page.

6. List the name, address and telephone number of the newspaper having general circulation in the area of the project. Failure to complete this question may delay local and State processing.

Name and complete mailing address:	Telephone number
Gloucester-Mathews Gazette-Journal P.O. Box 2060 Gloucester, Va. 23061	(804) 693-3101

7. Give the following project location information:

Street Address (911 address if available) 7903 Riverside Dr.
Lot/Block/Parcel# RPC 12989, Tax map #33-230
Subdivision______________________________
City / County Gloucester County ZIP Code 23061
Latitude and Longitude at Center Point of Project Site (Decimal Degrees):
37.394333° / - -76.480857° (Example: 36.41600/-76.30733)

If the project is located in a rural area, please provide driving directions giving distances from the best and nearest visible landmarks or major intersections. *Note: if the project is in an undeveloped subdivision or property, clearly stake and identify property lines and location of the proposed project. A supplemental map showing how the property is to be subdivided should also be provided.*

From Rt. 17 take TC Walker Rd (Rt 629). Turn onto Zanoni Rd (Rt 626). Turn onto Riverside Dr.

8. What are the *primary and secondary purposes of and the need for* the project? For example, the primary purpose may be "to protect property from erosion due to boat wakes" and the secondary purpose may be "to provide safer access to a pier."

The primary purpose of the project is shore protection. The existing marsh and the upland, where exposed, is eroding. A stable marsh will be create to protect the upland property through the installation of a living shoreline. A secondary purpose is to provide coastal resiliency for the affected shoreline from flooding and sea-level rise.

Part 1 - General Information (continued)

9. Proposed use (check one):
   X Single user (private, non-commercial, residential)
   ___ Multi-user (community, commercial, industrial, government)

10. Describe alternatives considered and the measures that will be taken to avoid and minimize impacts, to the maximum extent practicable, to wetlands, surface waters, submerged lands, and buffer areas associated with any disturbance (clearing, grading, excavating) during and after project construction. *Please be advised that unavoidable losses of tidal wetlands and/or aquatic resources may require compensatory mitigation.*

    Although 5,400 square feet of subaqueous land will be covered, the sills need to be slightly farther offshore to accommodate the beach fill that provides a level of protection. Bringing the structures closer to the shore would steepen the fill and reduce wetland plantings. No clearing, grading or excavating will occur. No SAV occurs in the area.

11. Is this application being submitted for after-the-fact authorization for work which has already begun or been completed? ___Yes X No. If yes, be sure to clearly depict the portions of the project which are already complete in the project drawings.

12. Approximate cost of the entire project (materials, labor, etc.): $ 139,500
    Approximate cost of that portion of the project that is channelward of mean low water:
    $ 90,300

13. Completion date of the proposed work:________________________________-_____________

14. Adjacent Property Owner Information: List the name and complete **mailing address**, including zip code, of each adjacent property owner to the project. (NOTE: If you own the adjacent lot, provide the requested information for the first adjacent parcel beyond your property line.) Failure to provide this information may result in a delay in the processing of your application by VMRC.

    1) Shannon and Robert Elrod
    7919 Riverside Dr.
    Gloucester, VA 23061

    2) Lanning Living Trust
    6626 Ware Haven Ln
    Gloucester, VA 23061

Part 2 - Signatures

1. Applicants and property owners (if different from applicant). NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, USACE, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.

In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Part 2 – Signatures (continued)

2. Applicants having agents (if applicable)

CERTIFICATION OF AUTHORIZATION

I (we),____________________, hereby certify that I (we) have authorized ___________________________
(Applicant's legal name(s)) (Agent's name(s))
to act on my behalf and take all actions necessary to the processing, issuance and acceptance of this permit and any and all standard and special conditions attached.

We hereby certify that the information submitted in this application is true and accurate to the best of our knowledge.

____________________________________ (Agent's Signature)	_________________________________ (Use if more than one agent)
____________________________________ (Date)	
____________________________________ (Applicant's Signature)	_________________________________ (Use if more than one applicant)
____________________________________ (Date)	

3. Applicant's having contractors (if applicable)

CONTRACTOR ACKNOWLEDGEMENT

I (we), ______________________, have contracted____
(Applicant's legal name(s)) (Contractor's name(s))
to perform the work described in this Joint Permit Application, signed and dated________________________.

We will read and abide by all conditions set forth in all Federal, State and Local permits as required for this project. We understand that failure to follow the conditions of the permits may constitute a violation of applicable Federal, state and local statutes and that we will be liable for any civil and/or criminal penalties imposed by these statutes. In addition, we agree to make available a copy of any permit to any regulatory representative visiting the project to ensure permit compliance. If we fail to provide the applicable permit upon request, we understand that the representative will have the option of stopping our operation until it has been determined that we have a properly signed and executed permit and are in full compliance with all terms and conditions.

Note: If you object to the proposal, the reason(s) you oppose the project must be submitted in writing to VMRC. An objection will not necessarily result in denial of the project; however, valid complaints will be given full consideration during the permit review process.

Part 3 – Appendices (continued)

Appendix B: Projects for Shoreline Stabilization in tidal wetlands, tidal waters and dunes/beaches including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, and living shoreline projects. Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service or VIMS**.**

NOTE: It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1). **Information on non-structural, vegetative alternatives (i.e., Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html.**

1. Describe each **revetment, bulkhead, marsh toe, breakwater, groin, jetty, other structure, or living shoreline project** separately in the space below. Include the overall length in linear feet, the amount of impacts in acres, and volume of associated backfill below mean high water and/or ordinary high water in cubic yards, as applicable:

   The living shoreline project covers a total of about 200 linear feet along the Ware River. It consists of 1 rock sill that is 193 ft long. Clean sand fill will be placed behind each structure and planted with Spartina alterniflora and Spartina patens. About of 0.17 acres of wetlands will be created (1865 sq.ft S. alterniflora; 5700 sq.ft S. patens).

2. What is the maximum encroachment channelward of mean high water? 50 feet.
   Channelward of mean low water? 30 feet.
   Channelward of the back edge of the dune or beach? NA feet.

3. Please calculate the square footage of encroachment over:
   - Vegetated wetlands 3,700 square feet
   - Non-vegetated wetlands 1,865 square feet
   - Subaqueous bottom 5,407 square feet
   - Dune and/or beach NA square feet

4. For bulkheads, is any part of the project maintenance or replacement of a previously authorized, currently serviceable, existing structure? ____ Yes____ No.

   If yes, will the construction of the new bulkhead be no further than two (2) feet channelward of the existing bulkhead? _____Yes ____No.

   If no, please provide an explanation for the purpose and need for the additional encroachment.

Part 3 – Appendices (continued)

5. Describe the type of construction and **all** materials to be used, including source of backfill material, if applicable (e.g., vinyl sheet-pile bulkhead, timber stringers and butt piles, 100% sand backfill from upland source; broken concrete core material with Class II quarry stone armor over filter cloth).
NOTE: Drawings must include construction details, including dimensions, design and all materials, including fittings if used.

Project will be constructed from the land side. The low bank allows direct access along the shoreline. It is anticipated that material will be placed with excavator. The project consists of clean sand and Class II armor.

6. If using stone, broken concrete, etc. for your structure(s), what is the average weight of the:
Core (inner layer) material 25 pounds per stone Class size 1A
Armor (outer layer) material 325 pounds per stone Class size II

7. For **beach nourishment**, including that associated with breakwaters, groins or other structures, provide the following:

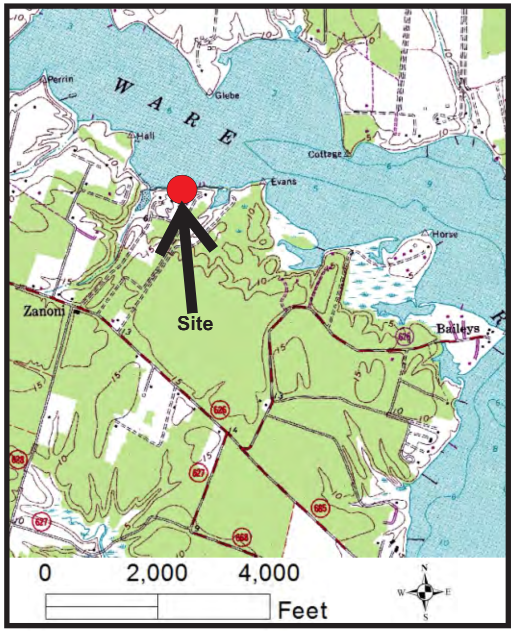
- Volume of material
31 cubic yards channelward of mean low water
500 cubic yards landward of mean low water
91 cubic yards channelward of mean high water
441 cubic yards landward of mean high water

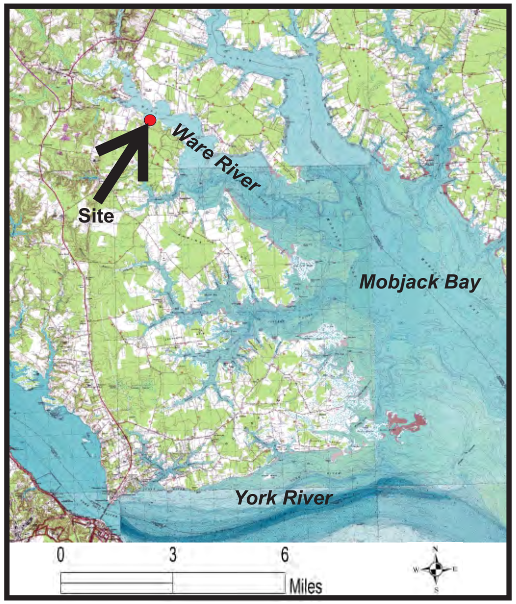
- Area to be covered
1,832 square feet channelward of mean low water
5,322 square feet landward of mean low water
91 cubic yards channelward of mean high water
441 cubic yards landward of mean high water

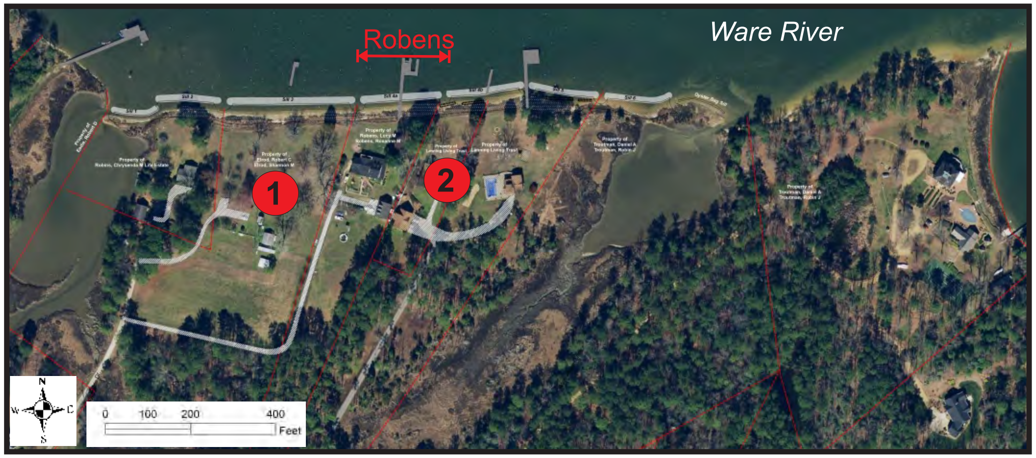
- Source of material, composition (e.g. 90% sand, 10% clay): Local borrow pit
- Method of transportation and placement:
Truck haul
- Describe any proposed vegetative stabilization measures to be used, including planting schedule, spacing, monitoring, etc. Additional guidance is available at http://www.vims.edu/about/search/index.php?q=planting+guidelines:

Vegetative stabilization of the sand substrate will be with Spartina alterniflora and Spartina patens. Each species will be planted on a 1.5’ x 1.5’ grid spacing with 0.5 oz of slow release fertilizer per plant. Survival of 80% of the planting is required for one year.

Ware River Living Shoreline Project: Robens







Adjacent Property Owners:
1) Robert & Shannon Elrod
2) Lanning Living Trust

GENERAL NOTES

1. Mean tide range is 2.5 ft (1983-2001)
2. Horizontal control was established by Real Time Kinematic Global Positioning System (RTK-GPS) and is shown in UTM, zone 18, NAD83, ift and Latitude/Longitude.
3. Vertical control is MLW. MLW (1983-2001) was determined to be 1.5 ft below NAVD88 at Ware River Living Shoreline Project.
4. Topographic data obtained on 18 Dec 2019 using RTK-GPS.
5. All dimensions and coordinates are given in feet.
6. Plans were created in Esri ArcGIS.

CONSTRUCTION SCHEDULE FOR SEDIMENT AND EROSION CONTROL

1. Contractor is to notify MPPDC of the date construction is to begin at least seven (7) days prior to the date (Time Frame = 1 day).
2. Install silt fences, erosion and sediment control measures and turbidity curtain, as needed (1 day).
3. Remove all debris interfering with shoreline construction as construction proceeds (continuous). Clear trees and underbrush within designated areas as construction proceeds.
4. Structure installation (60 days).
    1. Install stone sills.
    2. Place sand as a vegetative terrace.
    3. Plant vegetative planting terrace as specified
5. Stabilize and seed all upland disturbed areas as specified
6. Remove turbidity curtain (1 day).
7. After establishment of vegetative cover on site, remove silt fence and other erosion and sediment control measures.

Attachment 6: Flood Prevention Project and its Relevance to Other Projects

MPPDC staff have worked throughout the years to understand the policy, research and impacts of flooding (ie. stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change & Sea Level Rise (2009 to 2012)

The MPPDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, MPPDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally Phase 3 focused on developing adaptation public policies in response to the assessments.

Phase 1: Middle Peninsula Climate Change Adaptation: Facilitation of Presentations and Discussions of Climate Change Issues with Local Elected Officials and the General Public
Phase 2: Climate Change III: Initiating Adaptation Public Policy Development
Phase 3: Phase 3 Climate Change: Initiating Adaptation Public Policy Development

Emergency Management - Hazard Mitigation Planning (2009 to Present): Since 2009, the Middle Peninsula Planning District Commission has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. *The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise* (ie. Mean High Higher Water and the NOAA 2060 intermediate-high scenario), *and flooding (coastal and riverine flooding) that estimates losses from each hazard.* The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014): In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, OSDS management, storm water management, TMDLs, etc, staff from the Middle Peninsula Planning District Commission (MPPDC) will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and Onsite Sewage Disposal System (OSDS) and

community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The Virginia Department of Conservation and Recreation requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the MPPDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The MPPDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014): MPPDC staff and Draper Aden Associates worked with localities (i.e. Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional VSMP.

Mathews County Rural Ditch Enhancement Study (2015): In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015): This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical

assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the MPPDC developed the MPPDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the MPPDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in VRA loan funding and ~$400,000 in NFWF grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. MPPDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project - VCPC White Papers (2017): This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017): This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018): This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

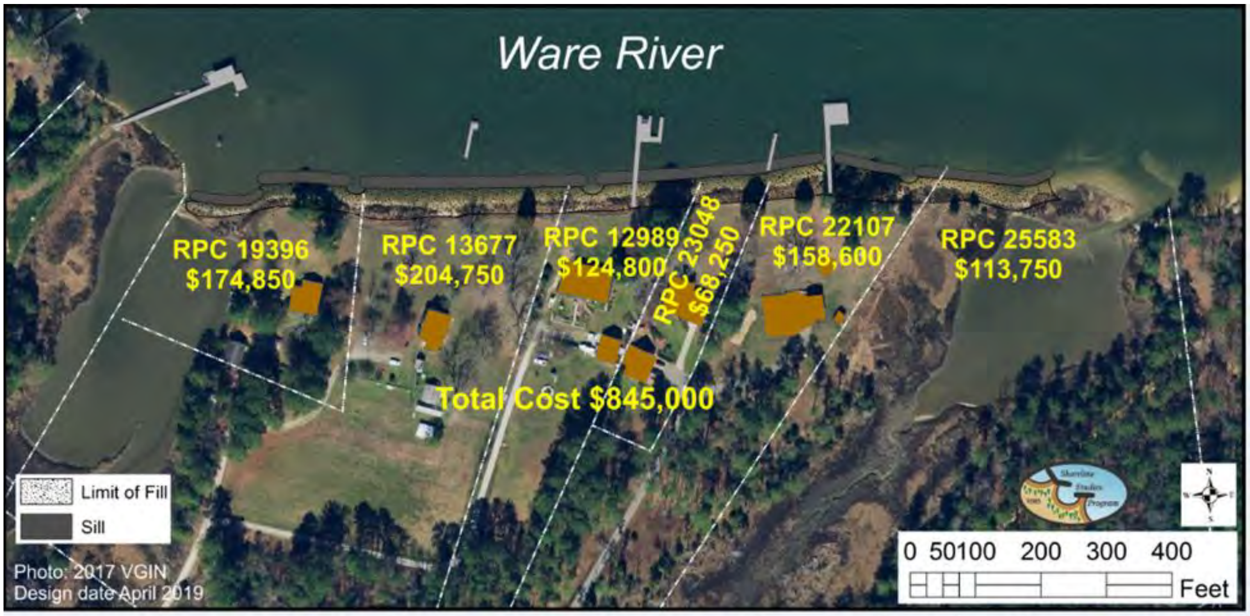
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018): VIMS Shoreline Studies Program worked with the PAA to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020): The Fight the Flood was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic

Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

Attachment 7: Project cost estimates

The below image is a map of the 6 contiguous property owners that were interested in participating in the original NFWF grant. From this project Virginia Institute of Marine Science developed a cost estimate for each parcel to install living shorelines. For the Robens property (RPC 12989) the cost for living shorelines would be $124,800.



Approximate cost per parcel for the Ware River Living Shoreline based on the average cost of $650 per linear foot calculated for this project. The total includes rock, sand, plants, and 20% mob/demob .

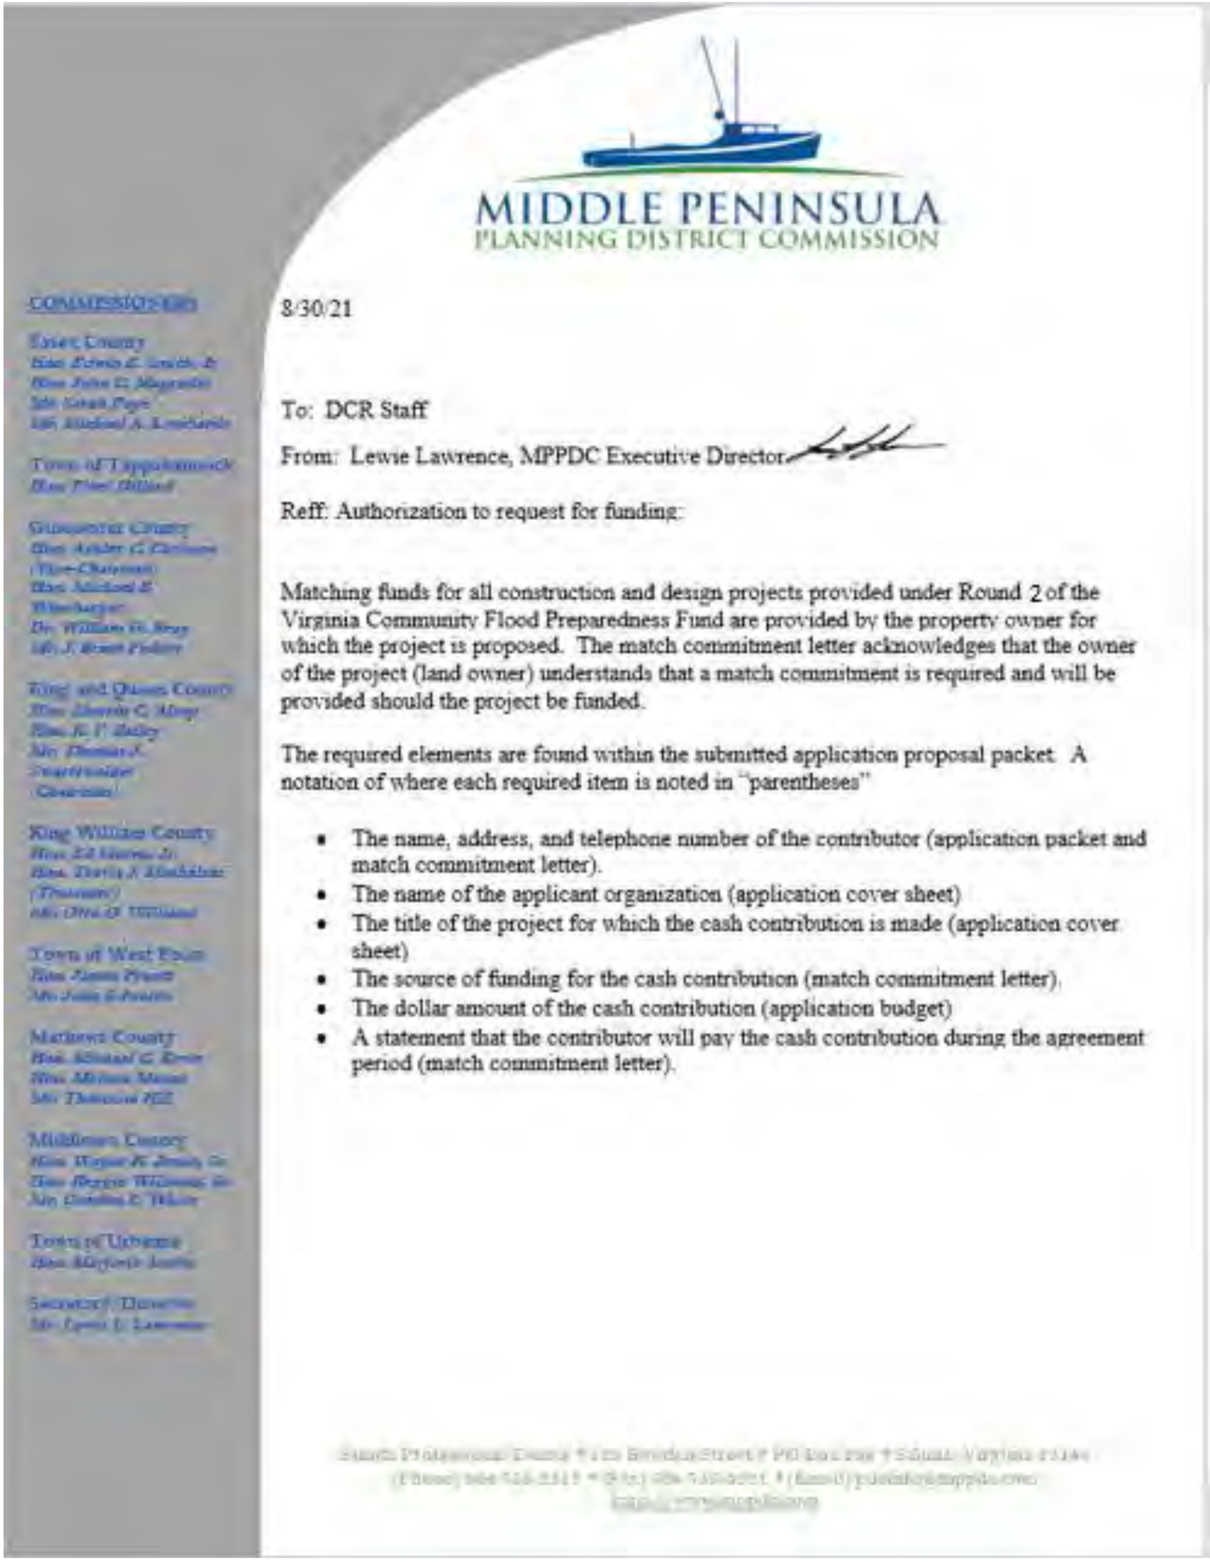
Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman
,
Thank you for considering the application to the Virginia Community Flood Preparedness Fund,
involving necessary flood mitigation activities on my property at 7903 Riverside Drive Gloucester Va 23061.
I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.
Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311
should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 757-871-7776 or by email at marlinntide@cox.net.

Sincerely,

Roxanne Powers

Attachment 9: Authorization to request for funding



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 2 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Karny-Harvey Shoreline Construction** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

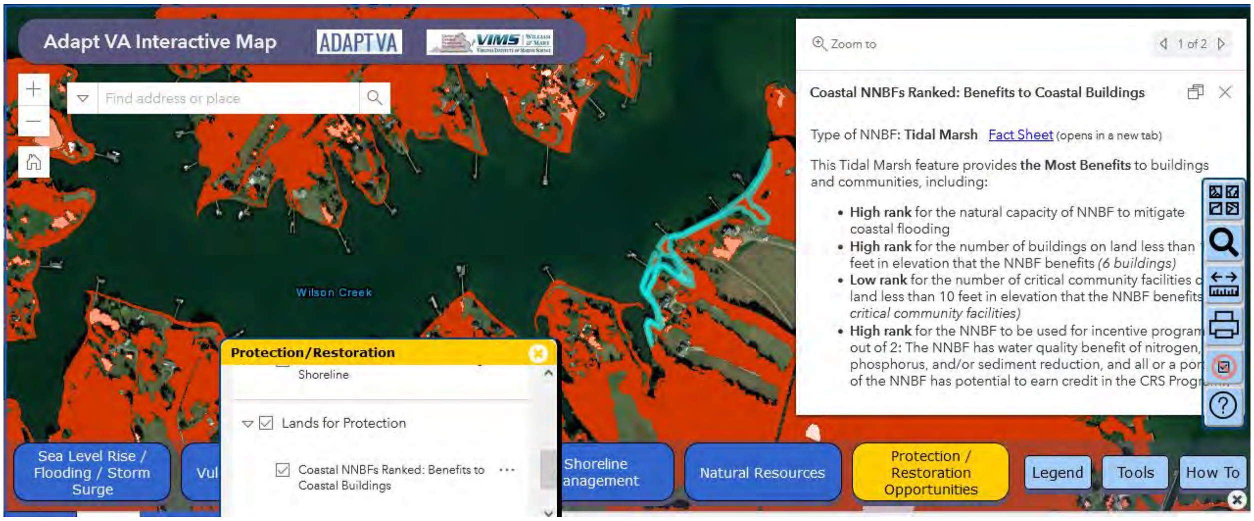
Issue #2

DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, “Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines “Community Scale project” which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving “demonstrable flood reduction” benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based “brick in the wall” and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(6 buildings)*
- **Low rank** for the number of critical community facilities land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Progr

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

To: Dawn Mantell <Dmantell@mppdc.com>
Subject: Re: Flood Fund Round 1 Application - Status Update

Hello Lewie,

I am responding to your email about the 'reclassification' for the anticipated Grant. Of course I would accept and reapply for a 70% Grant as opposed to the original 80% Grant. ANY money is most welcomed to help me financially offset this severe erosion problem on my waterfront. Therefore, I am voluntarily electing to be reclassified as residing in a non-low income area and recognize how this changes the financial Grant terms from 80% to 70% funding.

I have to say that while I heartily welcome any financial assistance, this news has deeply upset me. I am a retired school teacher on a set income and paying the 30% remainder will be a hardship. I also find it interesting how this area is not considered a low income area. First of all, I HAVE A LOW INCOME since being on a state pension! Secondly, when I drive to my home, I am reminded daily of the low income properties I have to pass with old trailers and broken vehicles strewn about the yard. It is a FAR CRY from living in Fairfax, where I moved from. two years ago. However, I chose to retire here due to the waterfront. And with that, comes waterfront maintenance and the associated expenses of it. My first reaction was, I admit, was to put my property on the market immediately and move to Williamsburg- off from the water. However, I love my property and can't envision going through another move. Therefore, I am willing to work with any financial assistance available.

If there is anything else I need to do, please let me know.

Dissappointed, yet hopeful,
Alice Bredin-Karny

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes __X__ **No ____**

Project Grants (Check All that Apply)

☐ **Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.**

☑ **Wetland restoration.**

☑Floodplain restoration.

☐ Construction of swales and settling ponds.

☑Living shorelines and vegetated buffers.

☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.

☐ Storm water system upgrades.

☐ Medium and large-scale Low Impact Development (LID) in urban areas.

☐ Permanent conservation of undeveloped lands identified as having flood resilience value by ConserveVirginia Floodplain and Flooding Resilience layer or a similar data driven analytic tool.

☐ Dam restoration or removal.

☑ Stream bank restoration or stabilization.

☑ Restoration of floodplains to natural and beneficial function.

☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Gloucester County
NFIP Community Identification Number (CID#) (See appendix F): 510071

Is Project Located in an NFIP Participating Community? ☑ Yes ☐ No
Is Project Located in a Special Flood Hazard Area? ☑ Yes ☐ No Flood Zone(s) (If Applicable): AE Zone
Flood Insurance Rate Map Number(s) (If Applicable): 51073C0201E and 51073C0202E

Total Cost of Project: **<u>$202,629</u>**

Total Amount Requested: **<u>$162,103</u>**

INTRODUCTION –

FEMA, Virginia General Assembly, DCR's Floodplain Management Program, and the Middle Peninsula PDC all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes and territories and the citizens which reside and work there. These hazards include flooding, drought, hurricanes, landslides, wildfires and more. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program (www.FightTheFloodVA.com). This proposal is a Nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features or processes into the built environment to promote adaptation and resilience. Further, this proposal incorporates natural features and processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. These benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life (*FEMA Building Community Resilience with Nature Based Solutions*, June 2021).

Specifically, this project proposes to construct a nature-based shoreline management solution on two private properties located on Wilsons Creek in Gloucester County. The nature-based solution will involve the installation of a 485-feet-long rock sill with clean sand back fill and plantings of native vegetation and a 95 linear feet section of riprap revetment. This project will be a partnership between the MPPDC and two private property owners and is supported by Gloucester County (See the community support letter in Attachment 1).

PROJECT LOCATION INFORMATION –

This project proposes to install living shorelines on two private properties on Wilson Creek in Gloucester County (**Figure 1 and 2**).

Figure 1: County map of project location.

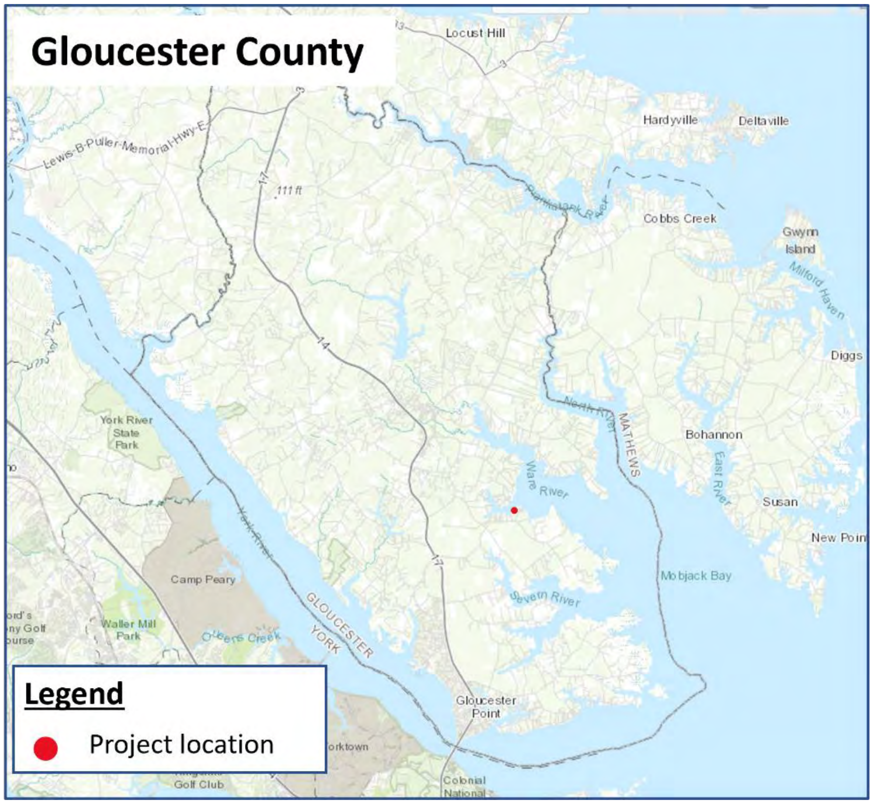

Figure 2: Parcel map of project location.

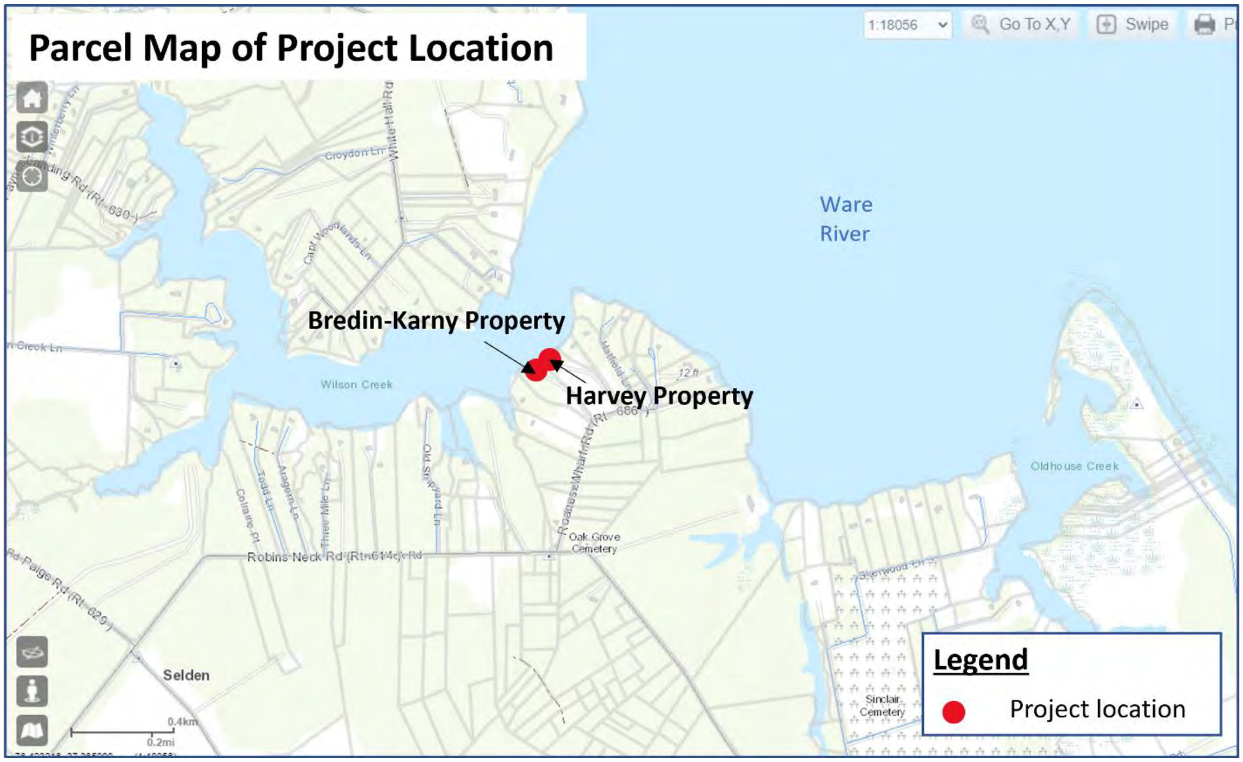
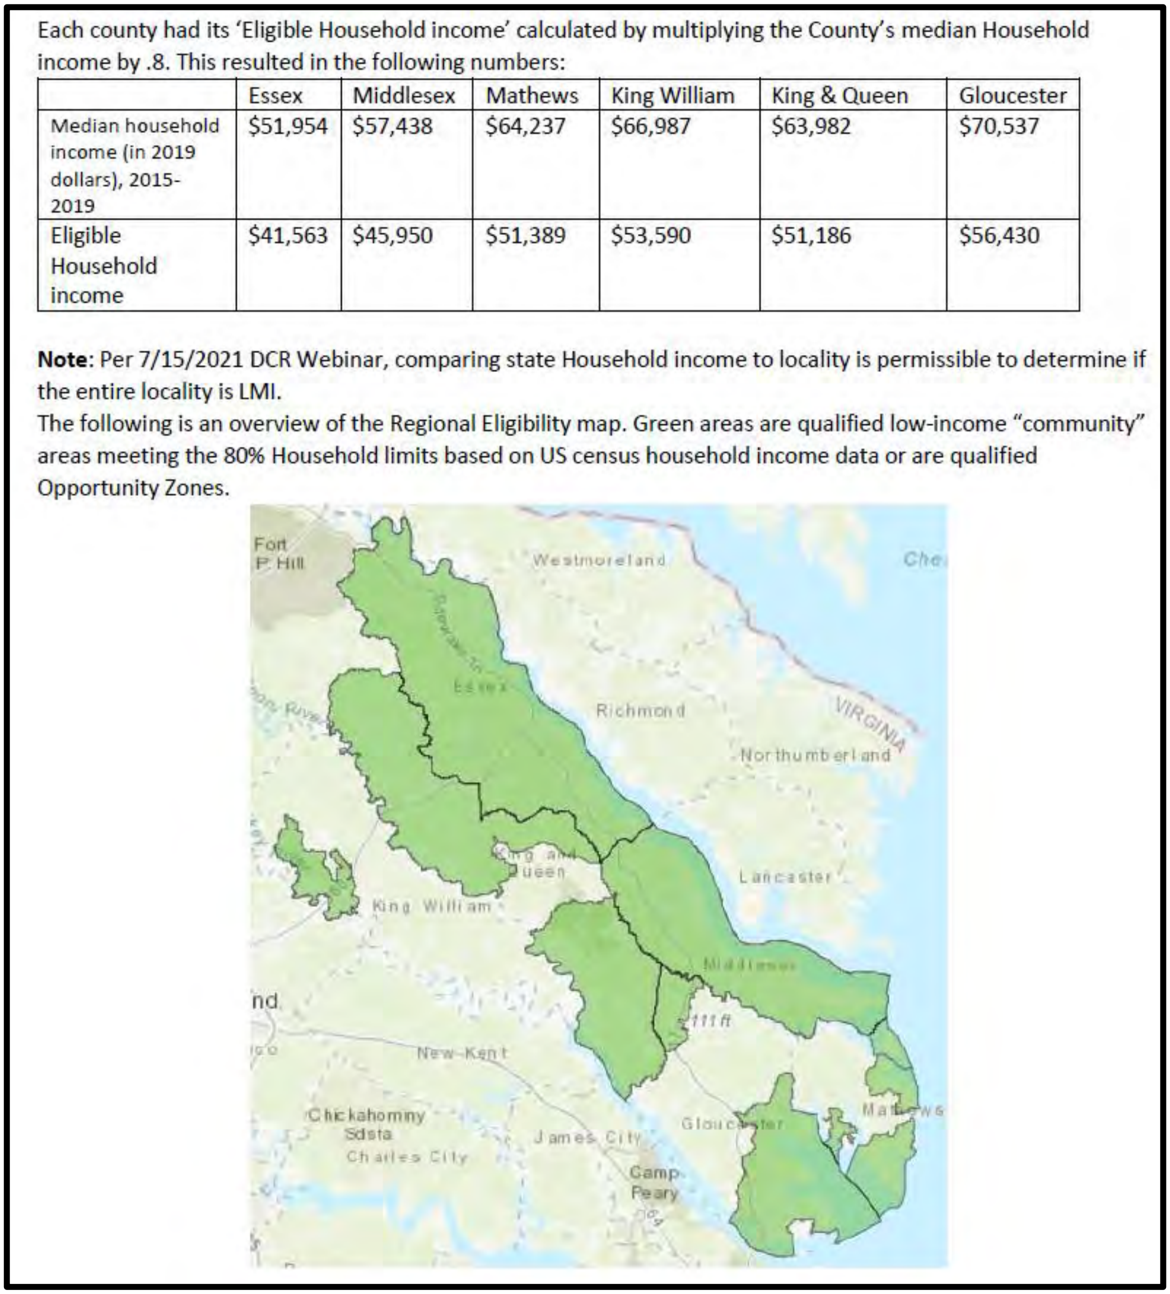


Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land and 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the most populous Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 3** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

FIGURE 3: MAP OF MIDDLE PENINSULAS LOW INCOME GEOGRAPHIC AREAS QUALIFYING UNDER DCR GUIDELINES.



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

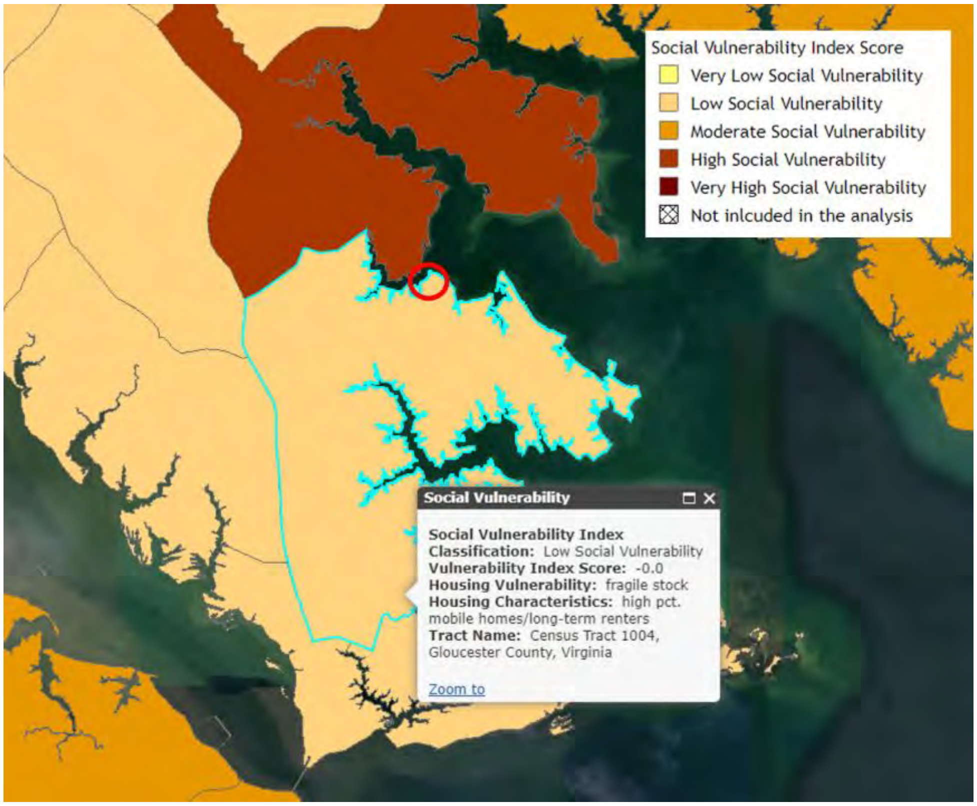
Please see **Figure 4** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 4: Map of the project location within the green low-income area.

According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a low social vulnerability score (**Figure 5**); however, it is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area.

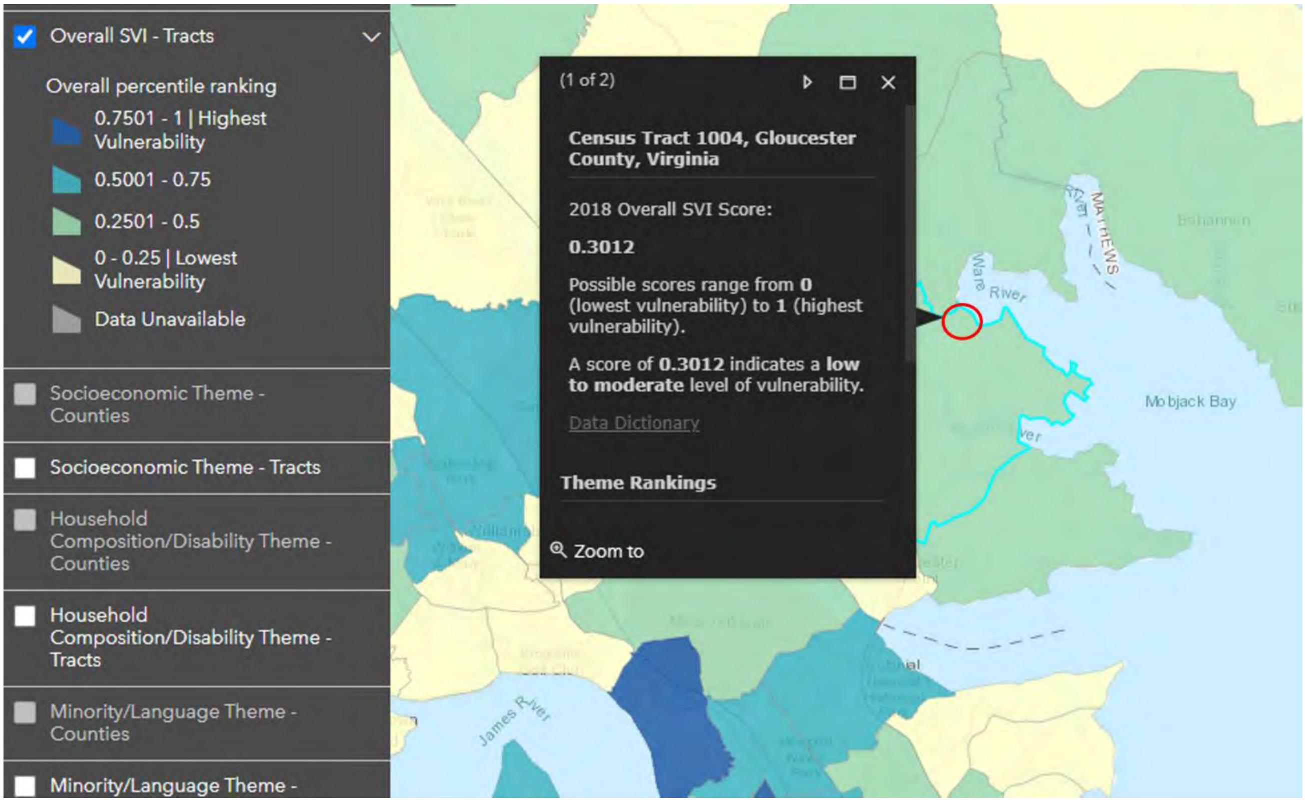
For instance, according to the CDC's Social Vulnerability Index (SVI) (https://svi.cdc.gov/map.html), which assesses vulnerability at a census track level, the social vulnerability is considered low to moderate level of vulnerability (**Figure 6**). The SVI is a database that helps emergency response planners and public health officials identify, map, and plan support for communities that will most likely need support before, during, and after a public health emergency. Please see **Attachment 2** for another model outcome.

FIGURE 5: VIRGINIA'S SOCIAL VULNERABILITY INDEX SCORE MAP FOR THE PROJECT LOCATION.



Social Vulnerability Index
Classification: Low Social Vulnerability
Vulnerability Index Score: -0.0
Housing Vulnerability: fragile stock
Housing Characteristics: high pct. mobile homes/long-term renters
Tract Name: Census Tract 1004, Gloucester County, Virginia

FIGURE 6: SVI OF CENSUS TRACK WHERE THE PROJECT LOCATION.



Census Tract 1004, Gloucester County, Virginia

2018 Overall SVI Score:

0.3012

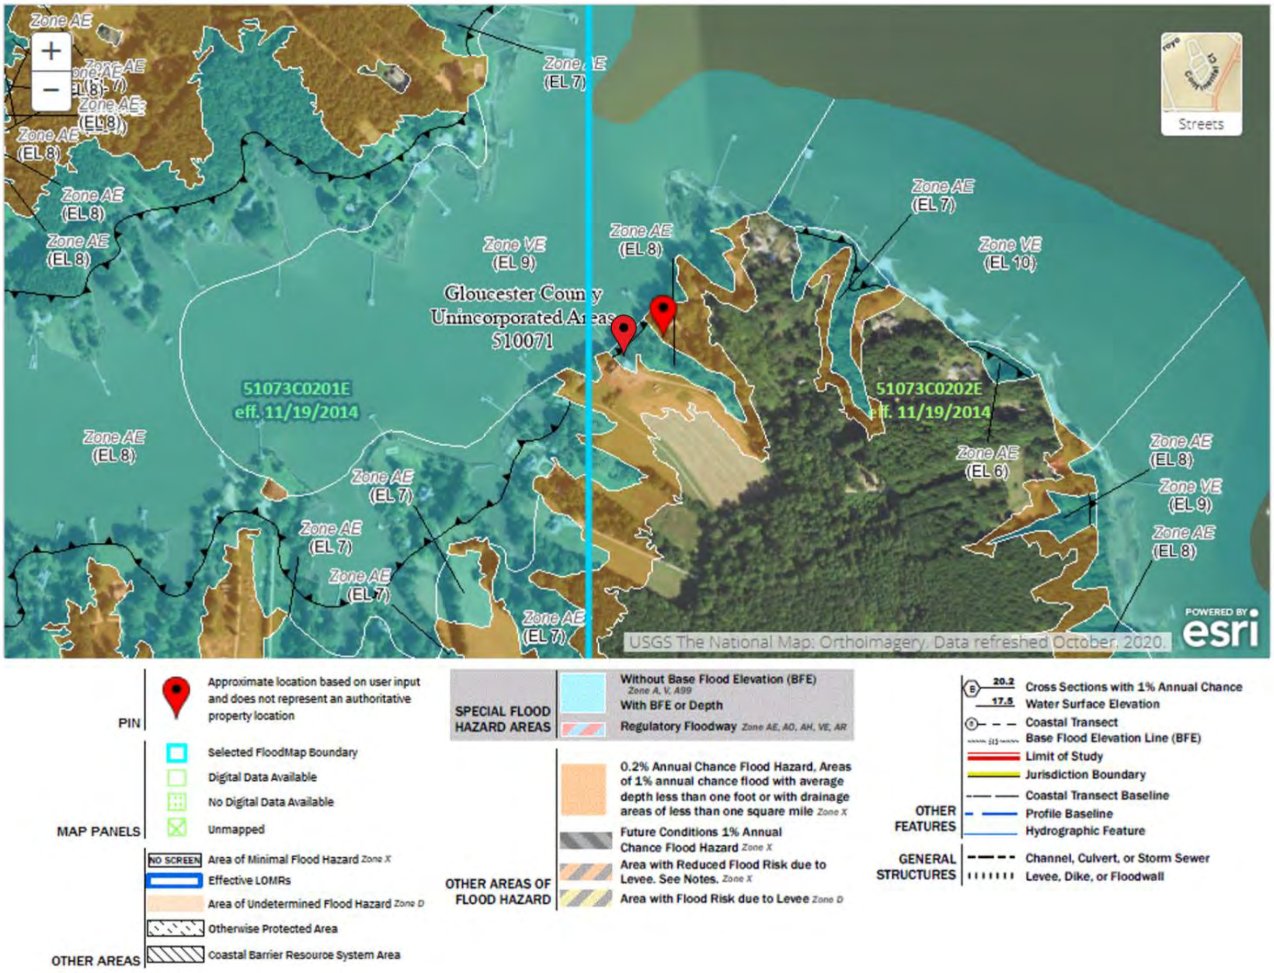
Possible scores range from **0** (lowest vulnerability) to **1** (highest vulnerability).

A score of **0.3012** indicates a **low to moderate** level of vulnerability.

The project location consists of two residential sites.

First, the Bredin-Karny property is located at 5514 Roane's Wharf Rd, Gloucester, Virginia (37.3638633, -76.469438). A 240-ft living shoreline will be constructed at this site. Second, a 245-ft. living shoreline will be constructed at the Harvey property located at 5518 Roane's Wharf Rd, Gloucester, Virginia (37.3643316, -76.46846). Within the project area there are 8 structures which will be protected from current and future flooding, including 2 residential homes, 1 smoke house, 2 barns, and 2 sheds. They are not severe repetitive loss structures or repetitive loss structures. Both sites are located within the AE flood zone (Figure 6). Please see **Attachment 3** for the FIRMettes (last mapped 11/19/2014).

FIGURE 7: MAP OF FEMA FLOOD ZONES.

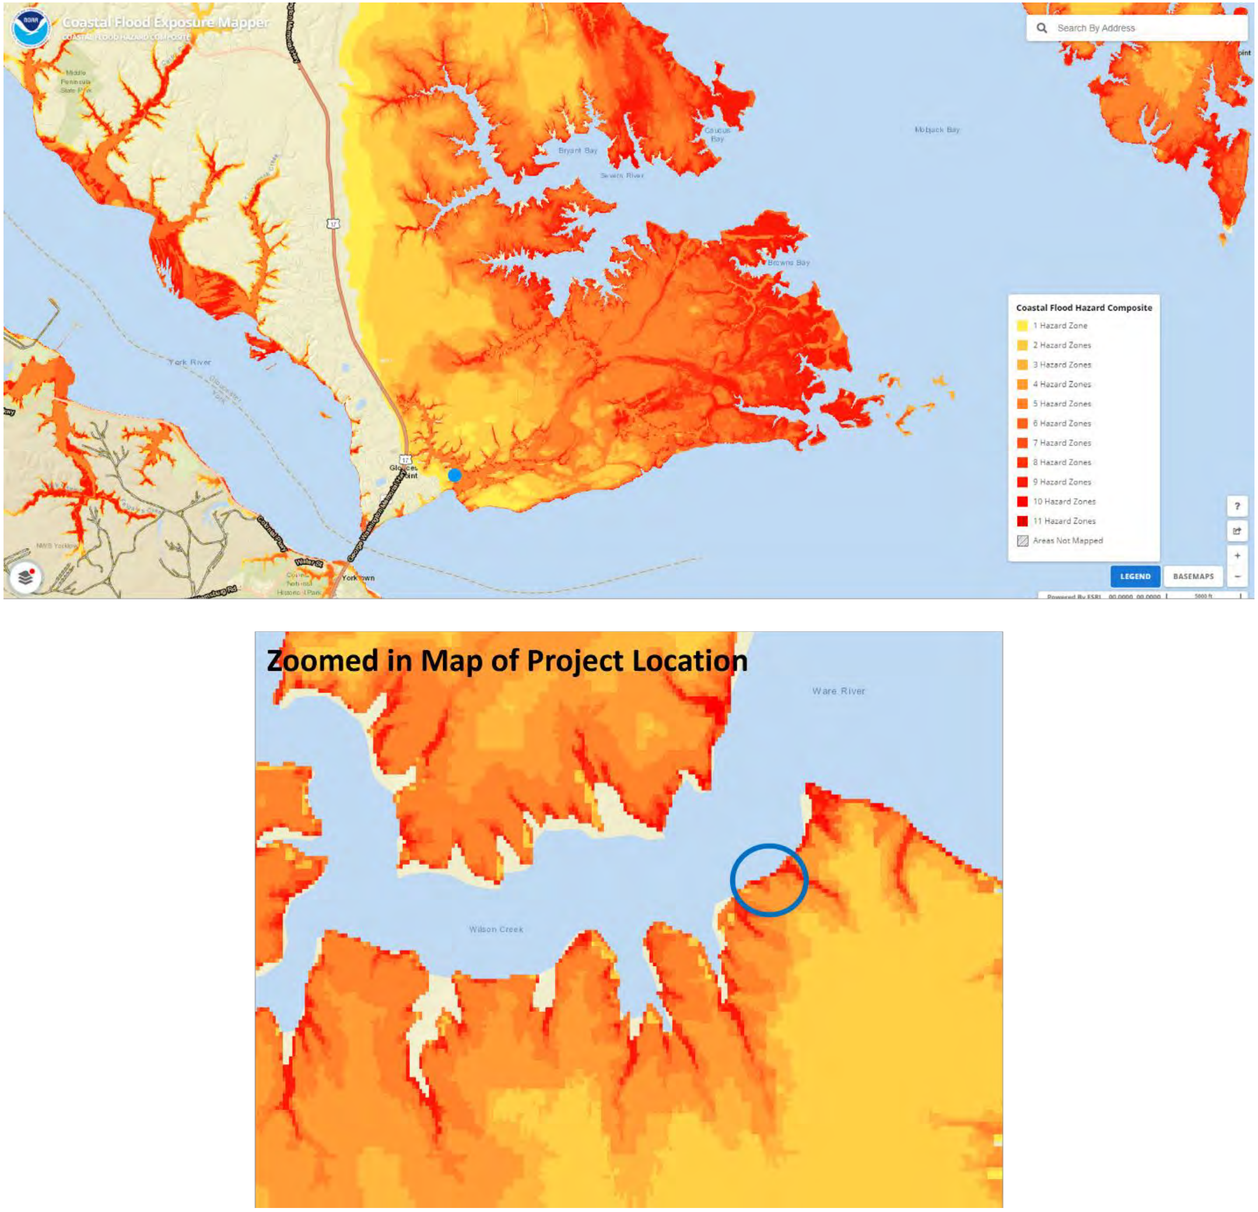


Due to the project site's proximity to the water, exposure to an expansive fetch to the mouth of Wilson Creek and Mobjack Bay, and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 8** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 9,327 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Attachment 4** lists 84 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

FIGURE 8: PROJECT LOCATION AND MAP OF THE SHORELINE CHANGE BETWEEN 1937 AND 2017.

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding (**Figure 9**).

FIGURE 9: MAP OF PROJECT LOCATION AND RISK OF COASTAL FLOODING (NOAA, 2021).



For more information about this project area please see:

- Gloucester County Building and Engineering Department administers the NFIP. Here is the link to the current floodplain ordinance: http://gloucestercounty-va.elaws.us/code/coor_ch8.5

NEED FOR ASSISTANCE –

The Middle Peninsula Planning District Commission (MPPDC) is a political subdivision of the

Commonwealth of Virginia formed under VA Code §15.2-4203 to provide solutions to problems of greater than local significance and cost-savings through economies of scale. The MPPDC serves nine localities of the Middle Peninsula including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna.

MPPDC is staffed using multiple methods including co-operative procurement, hourly, and burdened staff. MPPDC staff consists of Executive Director, Deputy Director, Chief Financial Officer, Senior Project Planner, clerical support staff; co-operative procured Director of Planning, General Planner, Certified Flood Plain Manager, Transportation Planner, Emergency Planner; Hourly staff for Housing, Community Development Planner and Public relations.

The PDC staffing team assists localities with long-term and/or regional planning efforts. The MPPDC Executive Director, Deputy Director, and Chief Financial Officer have decades of experience in managing and administering project grants at multiple scale from grants in excess of $1,000,000 to very small grants. MPPDC is an entrepreneurial based government agency with an annual operating budget ranging from $750,000 to over $1,000,000. The MPPDC manages annually 25-30 concurrent federal and state grants utilizing industry standard Grants Management Software. Staff utilize GIS and all Microsoft software as well as other software as required by different grants. The MPPDC operates service centers in the topical areas of coastal zone management, emergency planning, housing, transportation planning and transportation demand management, economic development, social assistance, small business development, general planning and technical assistance and other areas as determined by the Commission. MPPDC has over 25 years of experience managing multiple revolving loan programs. In the 25 years that the Executive Director has been employed by the Commission no audit findings have occurred.

The need for assistance is two-fold.

First, as Gloucester County is near the Chesapeake Bay and numerous tidal rivers that create an area of high risk of coastal flooding, sea-level rise, and storm surge. Based on tidal gauge data from VIMS, relative sea- level rise rates ranging from 0.11-0.23 in./yr. (2.9-5.8 mm/yr.; period: 1976-2007; 10 stations) within the Chesapeake Bay region, which are the highest rates reported along the U.S. Atlantic coast (Boon et. al., 2010). In addition to sea-level rise, Gloucester County has a history of being impacted by hurricanes and tropical storms. As storms pass over or near the coast, the atmospheric pressure drops, causing a large volume of sea water to build up, eventually being pushed ashore by the storm's winds causing a storm surge. In Gloucester County, strong East and Northeast winds can push water from the Chesapeake Bay into the mouth of the York and Rappahannock Rivers and Mobjack Bay, flooding much of the county's low-lying areas (Middle Peninsula Planning District Commission, 2005). Additionally, when a storm makes landfall at high tide, the storm surge and the added water from the tidal fluctuation combine to create a "storm tide". In Gloucester County, tidal waters fluctuate twice daily from 1.2 feet above mean sea level to 1.2 feet below (FEMA 1987, 6). If a severe hurricane were to make landfall during high tide, and additional 1.2 feet of water would be added to the highest storm surge possible, which could create a storm tide of 16.2 feet (Rygel, 2005). Nor'easters, like hurricanes and tropical storms, can dump heavy amounts of rain and produce hurricane-force winds that push large amounts of sea water inland. According to a study conducted by the Center for Coastal Resources Management, a one-and-a-half-foot rise in sea level coupled with a three-foot storm surge, like what would be experienced in a strong tropical storm, would lead to 13% of Gloucester County's land mass being flooded – including 118 miles of roads. Only 3% of the projected flood area is currently developed. A strong indicator that Gloucester County is experiencing the impact of coastal hazards (i.e., flooding, hurricanes, sea-level rise, and storm surge) is the number of repetitive loss and severe repetitive loss claims submitted by residents and businesses to FEMA. As of 2015, the County had 147 repetitive loss properties with claims topping $3.3 Million and 13 severe repetitive loss properties with claims totaling nearly $1.9 Million. The County has implemented several preventative measures, property protection policies, public information activities, and emergency service measures to decrease impacts on communities. Therefore, this project will build on other local efforts move toward becoming a more resilient community.

Second, at this project location, the shoreline is unstable and quickly eroding. At the Bredin-Karny property the existing bulkhead has underperformed and is severely damaged. As boards are coming off the bulkhead the soil is being washed away from the roots of an old cedar tree that sits in the RPA. This tree provides a lot of shade on the property and is critical for holding the soil and the bank with its roots. If a living shoreline is not installed this tree will most certainly be lost in the very near future. This will ultimately bring water closer to the house as the soil and bank will continue to erode. Please see **Figure 10** for project location photos and **Attachment 5** for more photos. At the Harvey property all the marsh grasses that used to be on the shoreline have drowned over the course of a year and now the shoreline is an eroded beach area. The shoreline is steadily and quickly eroding. Also, big cedar trees lining the shoreline will be affected next by flooding and the eroding bank if not mitigated. Please see **Figure 11** for project location photos and **Attachment 6** for more photos.

FIGURE 10: PHOTOS OF THE BREDIN-KARNY PROPERTY.

FIGURE 11: PHOTOS OF THE HARVEY PROPERTY.

ALTERNATIVES –

Alternatives are not applicable to this project. A living shoreline is feasible at this location and therefore required per VMRC regulations. This project employs a nature-based solution, and this project cost is not greater than $3 Million.

GOALS AND OBJECTIVES –

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

This project will install a total of 485 ft. of living shorelines at the project location including 240 ft. on the Bredin-Karny property and 245 ft. on the Harvey property. These adjoining neighbors are taking a collaborative approach to reduce erosion and stabilize their shoreline. The installation of living shorelines will also help to protect 4 red cedar trees and one pine tree that line the shoreline and hold a lot of the soil and bank in place. The living shoreline will be installed as designed and permitted through the JPA process. Please see the permit package for each site within the project area in **Attachment 7 and 8**.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.
Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based approach.
Objective B: Stabilize the shoreline to ensure that the County’s tax base does not erode.

Goal 2: Improve water quality
Objective A: Construct a living shoreline to capture nitrogen, phosphorus, and sediment.

Goal 3: Transferability to other communities.
Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

The MPPDC anticipates that the living shoreline installed at this project location will:

1. **Stabilize the shoreline and reduce the overall erosion rate at the project location**. According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the red cedars on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

2. **Provide ecosystem services to the community.** Since this project is proposing the installation of living shorelines, this project will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb./lf./yr.) and a phosphorus removal rate of 0.00861 lbs./lf./yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb./lf./yr. Therefore, with a proposed project of 485 linear feet of living shoreline this has the ability of removing 5.9073 pounds of nitrogen per year, 4.17585 pounds of phosphorus per year and 20,370 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

   In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

3. **Prevent loss of property and life.** As the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

APPROACH, MILESTONES, AND DELIVERABLES –

This project will follow the designs outlined and approved in the Joint Permit Application. Please see **Attachment 7 & 8** for the JPA application, Design, and Permit Package. The below table outlines the components of the living shoreline and what will be installed at the project location.

	Bredin-Karny property	**Harvey Property**	**Total Project Location**
Tall Rock Sills	160 linear feet (LF)	155 LF	315 LF
Short Rock Sills	60 LF	95 LF	155 LF
Rock Revetment	95 LF	0 LF	95 LF
Sand Nourishment	550 cubic yards	550 cubic yards	1100 cubic yards
Spartina Plantings	1,660 square feet	1,200 square feet	2,860 square feet

The anticipated timeline for this project could be as quick as 1 year, but no more than two years. The timeline range is due to the potential delays in the construction industry or delays caused by COVID, including supply shortages. Having a two-year timeline will offer potential windows for planting the living shoreline - one in 2022 and one in 2023. To explain, the Chesapeake Bay Foundation recommends that perennials and grasses for living shorelines should be planted during peak growing season (in mid-to-late summer) to allow enough time for their root systems to become established before they go dormant in the late Fall. Trees and shrubs should be planted in Spring and Fall when there is adequate rainfall to help them develop strong roots and leafy growth.

Below is the project timeline and project milestones for this project.

Receive funding notice - October 2021
Coordinate with property owners and the project contractor Shoreline Structures, LLC to review project timeline and project expectations – October 2021
Initiate site preparation at the project location - November 2021 to May 2022
Construction of the living shoreline – June 2022 to September 2022
Project Close out – November 2022

RELATIONSHIP TO OTHER PROJECTS –

For over 40 years the Middle Peninsula Planning District Commission (MPPDC) and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea-level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

The proposed project is a priority project generated from the Middle Peninsula Regional Flood Resilience Plan, which was approved by DCR during August 2021. The Flood Resiliency Plan serves as the MPPDC's guiding document for its flood resiliency programs and is comprised of two primary MPPDC-approved policy documents which form the implementation and foundation of the Middle Peninsula flood protection approach and are indirectly and directly supported by multiple specific regional planning documents, both approved by various required federal, regional, or local partners as required by statute.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:
Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan, FEMA and Middle Peninsula locality approved 2016 (MPPDC Website)
- The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy, MPPDC Approved March 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan - MPPDC Approved ~annually

Short Term Implementation

- Middle Peninsula Planning District Commission Fight the Flood Program Design MPPDC Commission (approved June 2020 Chairman approved 8/6/21 update)
- Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program-Virginia Revolving Loan Fund Program Design and Guidelines (approved 2015)

As the MPPDC has continuously worked on flooding and coastal resiliency topics, **Attachment 9** lists the projects and short description of relevant projects. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the MPPDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The MPPDC Commission authorized staff to develop the **Middle Peninsula Fight the Flood (FTF) Program.** This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula **FTF** program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, MPPDC staff have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline.

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN –

The approved VMRC permits does not require a maintenance plan; therefore, the maintenance of this construction project will be in accordance with the permit requirements.

CRITERIA –

Describe how the project meets each of the applicable scoring criteria containedin Appendix B and provide the required documentation where necessary. Documentationcan be incorporated into the Scope of Work Narrative or included as attachments to the application. Appendix B must be completed and submitted with the application.

For local governments that are not towns, cities, or counties, the documentation providedfor the criteria below should be based on the local government or local governments in which the project is located and/or directly impacts.

1. **Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?**
   YES.
2. **Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?**
   YES. Here's the link: Approved-8_19_DCR-packet_letterandplan.pdf (fightthefloodva.com)
3. **For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?**
   YES. Please see Attachment 1
4. **Has the applicant provided evidence of an ability to provide the required match funds?**
   YES. Please see the match commitment letter in **Attachment 11.**
5. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?**
   YES.

BUDGET NARRATIVE -

Below is the estimated budget for the proposed flood prevention and protection construction project that will result in a nature-based solution located in a low-income geographic area. Therefore, MPPDC staff is requesting 80% funding from DCR and will provide 20% match. Please see match commitment letters from the property owners in **Attachment 11**.

			DCR (80%)	Match from Owner (20%)	Project Total
Project Management Costs					
	Personnel		$ 15,586	$ 3,896	$ 19,482
	Fringe (26.58% on Salaries)		$ 4,143	$ 1,036	$ 5,179
SubAward/SubContract Agreement					
	Karny - 5514	*60 LF Short Sill*	$ 7,600	$ 1,900	$ 9,500
	Karny - 5514	*160 LF Tall Sill*	$ 31,096	$ 7,774	$ 38,870

Project totals			$ 162,103	$ 40,526	$ 202,629

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment.

Also please note that the cost estimates for the construction of this project were supplied by the contractor, Shoreline Structures, LLC. Please see **Attachment 10**.

In summary:

***Estimated total project cost*:**	$202,629
***Amount of funds requested from the Fund (80% project total)*:**	$162,103
***Amount of cash funds available (20% project total)*:**	$40,526

Finally, please see the authorization to request for funding in **Attachment 12.**

Appendix B: Scoring Criteria for Flood Prevention andProtection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Middle Peninsula Planning District Commission	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☑ **Yes** ☐ **No**
Applicant Name:	Middle Peninsula Planning District Commission

Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	0
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		120

P.O. Box 286
Saluda, VA 23149

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

Attachment 2: Other Social Vulnerability Models to Consider

Social vulnerability refers to the resilience of communities when confronted by external stresses on human health, stresses such as natural or human-caused disasters, or disease outbreaks. Reducing social vulnerability can decrease both human suffering and economic loss. When considering the social vulnerability of this project location a variety of social vulnerability models were considered and based on the differences between the methodology and scale of the model, the project area ranged from being classified as having low social vulnerability to average social vulnerability.

Below is another model considered to determine social vulnerability within the project area.

When considering the Virginia Department of Health (VDH) – Office of Health Equity Health Opportunity Index a group of indicators provide broad insight into the overall opportunity for Virginians to live long and healthy lives based on the Social Determinants of Health. It is a hierarchical index that allows users to examine social determinants of health at multiple levels of detail in Virginia. It is made up of over 30 variables, combined into 13 indicators (i.e., Air quality, population churning, population density, walkability, affordability, education, food accessibility, material deprivation, employment accessibility, income inequality, job participation, access to care, segregation), grouped into four profiles (i.e. community environment, consumer opportunity, economic opportunity, and wellness disparity), which are aggregated into a single Health Opportunity Index (HOI). The HOI is reported on a Census Tract level and is defined as the opportunity to live a long and healthy life in each area. Therefore, as the HOI is low for the project location this means that opportunity to live a long and healthy life is low due to Social Determinants of Health. (Figure 22).

Figure 22: HOI for the project location. The red circle shows the project location.

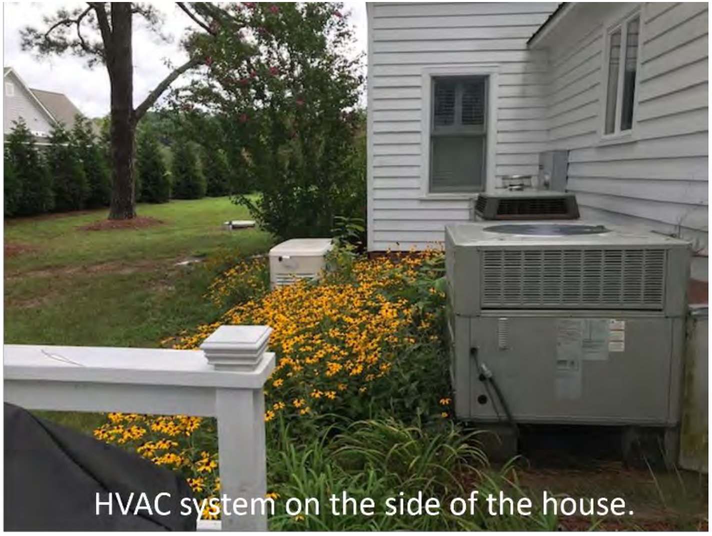
Attachment 5: Photos of the Bredin-Karny property shoreline.

Photo of failing bulkhead.

Photo of dead shrub on the shoreline.

Drowning marsh grasses on shoreline.

The house and HVAC system are about 30 feet from the water's edge. Also, the corner of one of the barns on the property is only feet from flooding waters. Without the installation of a nature-based solution all structures are at risk of flooding and damage.



HVAC system on the side of the house.

Corner of barn is within feet of the rising waters. This threatens the foundation of this structure.

Attachment 6: Photos of the Harvey property shoreline.

Exposed beach with little vegetation to protect it from erosion or rising waters.

This is the beach at high tide.

Harvey is seeing changes in the wetland grass. Instead of this section being full of marsh grasses the grasses in the middle have died and have increased flooding in this area of the property.

This is flooding around the pine trees. The photos below show the proximity to the house, and it also shows that the pine trees and grass around the are being impacted.

Received by VMRC May 3, 2021 /blh

- DEQ: Permit application fees required for Virginia Water Protection permits – while detailed in 9VAC25-20 – are conveyed to the applicant by the applicable DEQ office (http://www.deq.virginia.gov/Locations.aspx). Complete the Permit Application Fee Form and submit it per the instructions to the address listed on the form. Instructions for submitting any other fees will be provided to the applicant by DEQ staff.
- VMRC: An application fee of $300 may be required for projects impacting tidal wetlands, beaches and/or dunes when VMRC acts as the LWB. VMRC will notify the applicant in writing if the fee is required. Permit fees involving subaqueous lands are $25.00 for projects costing $10,000 or less and $100 for projects costing more than $10,000. Royalties may also be required for some projects. The proper permit fee and any required royalty is paid at the time of permit issuance by VMRC. VMRC staff will send the permittee a letter notifying him/her of the proper permit fees and submittal requirements.
- LWB: Permit fees vary by locality. Contact the LWB for your project area or their website for fee information and submittal requirements. Contact information for LWBs may be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html.

Pre-Construction Notification (PCN) ☐ NWP # ______	Regional Permit 17 (RP-17) ☐	

County or City in which the project is located: Gloucester

Waterway at project site: Wilson Creek

[redacted]

Part 1 - General Information (continued)

1. Applicant's legal name* and complete mailing address:

Alice Bredin-Karny
5514 Roane's Wharf Rd.
Gloucester, VA 23061

Contact Information:
Home (____)____________
Work (____)____________
Fax (____)____________
Cell (____)____________
e-mail ________________

State Corporation Commission Name and ID Number (if applicable) ____________

2. Property owner(s) legal name* and complete address, if different from applicant:

Contact Information:
Home (____)____________
Work (____)____________
Fax (____)____________
Cell (____)____________
e-mail ________________

State Corporation Commission Name and ID Number (if applicable) ____________

3. Authorized agent name* and complete mailing address (if applicable):

Jeff Watkins, Shoreline Structures, LLC
P.O. Box 515
Gloucester VA 23061

Contact Information:
Home (____)____________
Work (____)____________
Fax (____)____________
Cell (____)804-815-0813
e-mail ________________

State Corporation Commission Name and ID Number (if applicable) ____________

*** If multiple applicants, property owners, and/or agents, each must be listed and each must sign the applicant signature page.**

4. Provide a detailed description of the project in the space below, including the type of project, its dimensions, materials, and method of construction. Be sure to include how the construction site will be accessed and whether tree clearing and/or grading will be required, including the total acreage. If the project requires pilings, please be sure to include the total number, type (e.g. wood, steel, etc), diameter, and method of installation (e.g. hammer, vibratory, jetted, etc). If additional space is needed, provide a separate sheet of paper with the project description.

Shoreline Erosion control project:
Rock sills = 240 L.F.
Revetment = 95 L.F.
Sand Nourishment = 750 c.yds.
Spartina plantings = 1660 s.f.

Private pier replacement: 6' x 210', 400 s.f. L head, finger pier & boatlift.
↳ 5'x57'

Part 1 - General Information (continued)

5. Have you obtained a contractor for the project? ✓ Yes* ___ No. *If your answer is "Yes" complete the remainder of this question and submit the Applicant's and Contractor's Acknowledgment Form (enclosed)

Contractor's name* and complete mailing address:

Jeff Watkins
P.O. Box 515
Gloucester, Va. 23061

Contact Information:

Home ( )
Work (804) 815-0813
Fax ( )
Cell ( )
email jwatkins49@cox.net

State Corporation Commission Name and ID Number (if applicable) __________

*** If multiple contractors, each must be listed and each must sign the applicant signature page.**

6. List the name, address and telephone number of the newspaper having general circulation in the area of the project. Failure to complete this question may delay local and State processing.

Name and complete mailing address:

Gazette-Journal
6625 Main Street
Gloucester, Va. 23061

Telephone number (804) 693-3101

7. Give the following project location information:

Street Address (911 address if available) 5514 Roanes Wharf Rd.
Lot/Block/Parcel# RP11844 40-167
Subdivision Selden
City / County Gloucester, Va. ZIP Code 23061
Latitude and Longitude at Center Point of Project Site (Decimal Degrees):
__________ / - __________ (Example: 36.41600/-76.30733)

If the project is located in a rural area, please provide driving directions giving distances from the best and nearest visible landmarks or major intersections. *Note: if the project is in an undeveloped subdivision or property, clearly stake and identify property lines and location of the proposed project. A supplemental map showing how the property is to be subdivided should also be provided.*

- from rt 17N to Featherbed Lane, past Paige Rd + Warner Hall Rd on Robins Neck Rd.
- turn left onto Roanes Wharf Rd
- turn left into Magnolia Farm property on Roanes Wharf Rd # 5514

8. What are the *primary and secondary purposes of and the need for* the project? For example, the primary purpose may be "to protect property from erosion due to boat wakes" and the secondary purpose may be "to provide safer access to a pier."

First - to prevent further erosion to front of property
Second - to stablize waterfront to prevent old trees from uprooting (three trees on very edge)

Part 1 - General Information (continued)

9. Proposed use (check one):
   ✓ Single user (private, non-commercial, residential)
   ___ Multi-user (community, commercial, industrial, government)

10. Describe alternatives considered and the measures that will be taken to avoid and minimize impacts, to the maximum extent practicable, to wetlands, surface waters, submerged lands, and buffer areas associated with any disturbance (clearing, grading, excavating) during and after project construction. *Please be advised that unavoidable losses of tidal wetlands and/or aquatic resources may require compensatory mitigation.*

There will need to be careful excavating during project construction because there is a narrow piece of land in the front between house and water. The most serious area is a very narrow strip of land.

11. Is this application being submitted for after-the-fact authorization for work which has already begun or been completed? ___Yes ✓ No. If yes, be sure to clearly depict the portions of the project which are already complete in the project drawings.

12. Approximate cost of the entire project (materials, labor, etc.): $97,000.00 +/-
Approximate cost of that portion of the project that is channelward of mean low water:
$____________

13. Completion date of the proposed work:______________________________-____________

14. Adjacent Property Owner Information: List the name and complete **mailing address**, including zip code, of each adjacent property owner to the project. (NOTE: If you own the adjacent lot, provide the requested information for the first adjacent parcel beyond your property line.) Failure to provide this information may result in a delay in the processing of your application by VMRC.

John and Margaret Singleton
5488 Roanes Wharf Rd
Gloucester, Va. 23061

Mark and JoElle Harvey
5518 Roanes Wharf Rd.
Gloucester, Va. 23061

Part 2 - Signatures

1. **Applicants and property owners (if different from applicant).**
   NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.
CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, USACE, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit. **In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.**

CERTIFICATION OF AUTHORIZATION

Lewie Lawrence

I (we), Alice Bredin-Karny, hereby certify that I (we) have authorized Jeff Watkins
(Applicant's legal name(s)) (Agent's name(s))
to act on my behalf and take all actions necessary to the processing, issuance and acceptance of this permit and any and all standard and special conditions attached.

We hereby certify that the information submitted in this application is true and accurate to the best of our knowledge.

CONTRACTOR ACKNOWLEDGEMENT

I (we), Alice Bredin-Karny, have contracted Jeff Watkins / Shoreline Structures LLC
(Applicant's legal name(s)) (Contractor's name(s))
to perform the work described in this Joint Permit Application, signed and dated 4-20-21.

We will read and abide by all conditions set forth in all Federal, State and Local permits as required for this project. We understand that failure to follow the conditions of the permits may constitute a violation of applicable Federal, state and local statutes and that we will be liable for any civil and/or criminal penalties imposed by these statutes. In addition, we agree to make available a copy of any permit to any regulatory representative visiting the project to ensure permit compliance. If we fail to provide the applicable permit upon request, we understand that the representative will have the option of stopping our operation until it has been determined that we have a properly signed and executed permit and are in full compliance with all terms and conditions.

REGIONAL PERMIT 17 CHECKLIST

Please review the 18-RP-17 enclosure before completing this form and note 18-RP-17 can only be used for proposed <u>PRIVATE USE</u> structures that comply with the terms and conditions of 18-RP-17. Copies can be obtained online at http://www.nao.usace.army.mil/Missions/Regulatory/RBregional/.

YES☑ NO☐	**(1)** Has the permittee reviewed the 18-RP-17 enclosure and verified that the proposed structure(s) is in compliance with all the terms, conditions, and limitations of 18-RP-17?
YES☑ NO☐	**(2)** Does the proposed structure(s) extend no more than one-fourth of the distance across the waterway measured from either mean high water (MHW) to MHW (including all channelward wetlands) or ordinary high water (OHW) to OHW (including all channelward wetlands)?
YES☑ NO☐	**(3)** Does the proposed structure(s) extend no more than 300 feet from MHW or OHW (including all channelward wetlands)?
YES☑ NO☐ N/A☐	**(4)** Does the proposed structure(s) attach to the upland at a point landward of MHW or OHW (including all channelward wetlands)?
YES☑ NO☐ N/A☐	**(5)** If the proposed structure(s) crosses wetland vegetation, is it an open-pile design that has a <u>maximum</u> width of five (5) feet and a <u>minimum</u> height of four (4) feet between the decking and the wetland substrate?
YES☑ NO☐ N/A☐	**(6)** Does the proposed structure(s) include no more than two (2) boatlifts and no more than two (2) boat slips?
YES☑ NO☐ N/A☐	**(7)** Is the open-sided roof structure designed to shelter a boat ≤ 700 square feet and/or is the open sided roof structure or gazebo structure designed to shelter a pier ≤ 400 square feet?
YES☑ NO☐ N/A☐	**(8)** Are all piles associated with the proposed structure(s) non-steel, less than or equal to 12" in diameter, and will less than or equal to 25 piles be installed channelward of MHW?
YES☑ NO☐ N/A☐	**(9)** Is all work occurring behind cofferdams, turbidity curtains, or other methods to control turbidity being utilized when operationally feasible and federally listed threatened or endangered species may be present?
YES☑ NO☐ N/A☐	**(10)** If the proposed structure(s) is to be located within an anadromous fish use area, will the prospective permittee adhere to the anadromous fish use area time of year restriction (TOYR) prohibiting in-water work from occurring between February 15 through June 30 of any given year if (1) piles are to be installed with a cushioned impact hammer and there is less than 492 feet between the most channelward pile and mean low water (MLW) on the opposite shoreline or (2) piles are to be installed with a vibratory hammer and there is less than 384 feet between the most channelward pile and MLW on the opposite shoreline?
YES☑ NO☐	**(11)** Is all work occurring outside of submerged aquatic vegetation (SAV) mapped by the Virginia Institute of Marine Sciences[1] (VIMS) most recent survey year and 5 year composite?
YES☑ NO☐	**(12)** Has the permittee ensured the construction and/or installation of the proposed structure(s) will not affect federally listed threatened or endangered species or designated critical habitat?
YES☑ NO☐	**(13)** Will the proposed structure be located outside of Broad Creek in Middlesex County, Fisherman's Cove in Norfolk, or the Salt Ponds in Hampton?
YES☑ NO☐	**(14)** Will the proposed structure(s) be located outside of the waterways containing a Federal Navigation Project listed in Permit Specific Condition 12 of 18-RP-17 and/or will all portions of the proposed structure(s) be located more than 85 feet from the Federal Navigation Project?

YES☒ NO☐	**(15)** Will the proposed structure(s) be located outside a USACE Navigation and Flood Risk Management project area?
YES☒ NO☐	**(16)** Will the proposed structure(s) be located outside of any Designated Trout Waters?
YES☒ NO☐ N/A☐	**(17)** If the proposed structure(s) includes flotation units, will the units be made of materials that will not become waterlogged or sink if punctured?
YES☒ NO☐ N/A☐	**(18)** If the proposed structure(s) includes flotation units, will the floating sections be braced so they will not rest on the bottom during periods of low water?
YES☒ NO☐	**(19)** Is the proposed structure(s) made of suitable materials and practical design so as to reasonably ensure a safe and sound structure?
YES☒ NO☐	**(20)** Will the proposed structure(s) be located on the property in accordance with the local zoning requirements?
YES☒ NO☐ N/A☐	**(21)** If the proposed structure(s) includes a device used for shellfish gardening, will the device be attached directly to a pier and limited to a total of 160 square feet?
YES☒ NO☐ N/A☐	**(22)** If the proposed structure(s) includes a device used for shellfish gardening, does the permittee recognize this RP does not negate their responsibility to obtain an oyster gardening permit (General Permit #3) from Virginia Marina Resources Commission (VMRC)'s Habitat Management Division? Please refer to Appendix D of the Tidewater JPA for more details on VMRC's aquaculture requirements.
YES☒ NO☐	**(23)** Does the permittee recognize this RP does not authorize any dredging or filling of waters the United States (including wetlands) and does not imply that future dredging proposals will be approved by the Corps?
YES☒ NO☐	**(24)** Does the permittee understand that by accepting 18-RP-17, the permittee accepts all of the terms and conditions of the permit, including the limits of Federal liability contained in the 18-RP-17 enclosure? Does the permittee acknowledge that the structures permitted under 18-RP-17 may be exposed to waves caused by passing vessels and that the permittee is solely responsible for the integrity of the structures permitted under 18-RP-17 and the exposure of such structures and vessels moored to such structures to damage from waves? Does the permittee accept that the United States is not liable in any way for such damage and that it shall not seek to involve the United States in any actions or claims regarding such damage?

IF YOU HAVE ANSWERED "NO" TO ANY OF THE QUESTIONS ABOVE, REGIONAL PERMIT 17 (18-RP-17) DOES NOT APPLY AND YOU ARE REQUIRED TO OBTAIN WRITTEN AUTHORIZATION FROM THE CORPS PRIOR TO PERFORMING THE WORK.

IF YOU HAVE ANSWERED "YES" (OR "N/A", WHERE APPLICABLE) TO ALL OF THE QUESTIONS ABOVE, YOU ARE IN COMPLIANCE WITH REGIONAL PERMIT 17 (18-RP-17). PLEASE SIGN BELOW, ATTACH, AND SUBMIT THIS CHECKLIST WITH YOUR COMPLETED JOINT PERMIT APPLICATION (JPA). THIS SIGNED CERTIFICATE SERVES AS YOUR LETTER OF AUTHORIZATION FROM THE CORPS. YOU WILL NOT RECEIVE ANY OTHER WRITTEN AUTHORIZATION FROM THE CORPS; HOWEVER, YOU MAY NOT PROCEED WITH CONSTRUCTION UNTIL YOU HAVE OBTAINED ALL OTHER NECESSARY STATE AND LOCAL PERMITS.

I CERTIFY THAT I HAVE READ AND UNDERSTAND ALL CONDITIONS OF THE REGIONAL PERMIT 17 (18-RP-17), DATED SEPTEMBER 2018, ISSUED BY THE US ARMY CORPS OF ENGINEERS, NORFOLK DISTRICT REGULATORY BRANCH (CENAO-WRR), NORFOLK, VIRGINIA.

Signature of Property Owner(s) or Agent

Date 4-1-21

Proposed work to be located at:

5514
Roane's Wharf R.
Glo. VA 23061

Part 3 – Appendices

Please complete and submit the appendix questions applicable to your project, and attach the required vicinity map(s) and drawings to your application. If an item does not apply to your project, please write "N/A" in the space provided.

Appendix A: **Projects for Access** to the water such as private and community piers, boathouses, marinas, moorings, and boat ramps. Answer all questions that apply.

1. **Briefly describe your proposed project.**

Replace pier: 6' x 210', 400 S.F. L head
finger pier & BoatLift

2. **For private, noncommercial piers:**

Do you have an existing pier on your property? ✓ Yes ___ No
If yes, will it be removed? ✓ Yes ___ No
Is your lot platted to the mean low water shoreline? ✓ Yes ___ No
What is the overall length of the proposed structure? 210 feet.
Channelward of Mean High Water? 205 feet.
Channelward of Mean Low Water? 200 feet.
What is the area of the piers and platforms that will be constructed over
Tidal non-vegetated wetlands __________ square feet.
Tidal vegetated wetlands _________ square feet.
Submerged lands __________ square feet.
What is the total size of any and all L- or T-head platforms? 400 sq. ft.
For boathouses, what is the overall size of the roof structure? ________ sq. ft.
Will your boathouse have sides? _____ Yes ____ No.

NOTE: All proposals for piers, boathouses and shelter roofs must be reviewed by the Virginia Marine Resources Commission (Commission or VMRC), however, pursuant to § 28.2-1203 A 5 of the Code of Virginia a VMRC permit may not be required for such structures (except as required by subsection D of § 28.2-1205 for piers greater than 100 feet in length involving commercially productive leased oyster or clam grounds), provided that (i) the piers do not extend beyond the navigation line or private pier lines established by the Commission or the United States Army Corps of Engineers (USACE), (ii) the piers do not exceed six feet in width and finger piers do not exceed five feet in width, (iii) any L or T head platforms and appurtenant floating docking platforms do not exceed, in the aggregate, 400 square feet, (iv) if prohibited by local ordinance open-sided shelter roofs or gazebo-type structures shall not be placed on platforms as described in clause (iii), but may be placed on such platforms if not prohibited by local ordinance, and (v) the piers are determined not to be a navigational hazard by the Commission. Subject to any applicable local ordinances, such piers may include an attached boat lift and an open-sided roof designed to shelter a single boat slip or boat lift. In cases in which open-sided roofs designed to shelter a single boat, boat slip or boat lift will exceed 700 square feet in coverage or the open-sided shelter roofs or gazebo structures exceed 400 square feet, and in cases in which an adjoining property owner objects to a proposed roof structure, permits shall be required as provided in § 28.2-1204.

Part 3 – Appendices (continued)

Appendix B: Projects for Shoreline Stabilization in tidal wetlands, tidal waters and dunes/beaches including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, and living shoreline projects. Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service or VIMS.

NOTE: It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1). **Information on non-structural, vegetative alternatives (i.e., Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html.**

1. Describe each **revetment, bulkhead, marsh toe, breakwater, groin, jetty, other structure, or living shoreline project** separately in the space below. Include the overall length in linear feet, the amount of impacts in acres, and volume of associated backfill below mean high water and/or ordinary high water in cubic yards, as applicable:

- Rock Revetment, 95L.F. Class II over Core & F.C.
- Rock sills = 240 L.F. Class II & I over Core
- Sand Nourishment = 750 cyds
- Spartina plantings = 1660 S.F.

2. What is the maximum encroachment channelward of mean high water? 40 feet.
Channelward of mean low water? 25 feet.
Channelward of the back edge of the dune or beach? NA feet.

3. Please calculate the square footage of encroachment over:
   - Vegetated wetlands 0 square feet
   - Non-vegetated wetlands [illegible] square feet — Rock REVT. = 950, Sand = 1200
   - Subaqueous bottom → square feet — Rock = 3080, SAND = 1120
   - Dune and/or beach NA square feet

4. For bulkheads, is any part of the project maintenance or replacement of a previously authorized, currently serviceable, existing structure? ____ Yes ____ No.

If yes, will the construction of the new bulkhead be no further than two (2) feet channelward of the existing bulkhead? _____ Yes ____ No.

If no, please provide an explanation for the purpose and need for the additional encroachment.

Part 3 – Appendices (continued)

5. Describe the type of construction and **all** materials to be used, including source of backfill material, if applicable (e.g., vinyl sheet-pile bulkhead, timber stringers and butt piles, 100% sand backfill from upland source; broken concrete core material with Class II quarry stone armor over filter cloth).
NOTE: Drawings must include construction details, including dimensions, design and all materials, including fittings if used.

6. If using stone, broken concrete, etc. for your structure(s), what is the average weight of the:
Core (inner layer) material 20 pounds per stone Class size Small
Armor (outer layer) material 500/1,500 pounds per stone Class size II

7. For **beach nourishment**, including that associated with breakwaters, groins or other structures, provide the following:

- Volume of material
  250 cubic yards channelward of mean low water
  500 cubic yards landward of mean low water
  750 cubic yards channelward of mean high water
  0 cubic yards landward of mean high water
- Area to be covered
  1120 square feet channelward of mean low water
  1200 square feet landward of mean low water
  ___________ cubic yards channelward of mean high water
  ___________ cubic yards landward of mean high water
- Source of material, composition (e.g. 90% sand, 10% clay): 90
- Method of transportation and placement:
  ____
- Describe any proposed vegetative stabilization measures to be used, including planting schedule, spacing, monitoring, etc. Additional guidance is available at http://www.vims.edu/about/search/index.php?q=planting+guidelines:

DEPARTMENT OF THE ARMY
US ARMY CORPS OF ENGINEERS
NORFOLK DISTRICT
FORT NORFOLK
803 FRONT STREET
NORFOLK VA 23510-1011

August 13, 2021

Northern Virginia Regulatory Section
NAO-2021-0161, VMRC #21-1009 (Wilson Creek)

Alice Bredin- Karny
5514 Roane's Wharf Rd
Gloucester, VA 23061

Ms. Karny:

This is in reference to the Department of the Army application NAO-2021-0161, VMRC #21-1009 you have submitted to create a living shoreline by installing a 240-foot-long rock sill with clean sand back fill and plantings of native vegetation and repair 95-linear feet of riprap revetment. You submitted the RP17 checklist correctly filled out and signed. The signed checklist serves as your permit verification for the proposed pier. Therefore, you will not receive any further authorization from the ACOE for the proposed pier. All work will be completed at 5514 Roane's Wharf Rd, Gloucester, Virginia (37.3638633, -76.469438). Your proposed project as described above and depicted on attached drawings entitled "Proposed Project" in three sheets dated and stamped as received by our office on June 9, 2021 satisfies the terms and conditions of Norfolk District's Regional Permit 19 (18-RP-19). Provided that you follow the general and permit specific conditions of 18-RP-19, as well as any additional special conditions that have been included below, no further authorization will be required from the Corps.

The permittee understands and agrees that, if future operations by the United States require the removal, relocation, or other alteration, of the structure or work herein authorized, or if, in the opinion of the Secretary of the Army or his authorized representative, said structure or work shall cause unreasonable obstruction to the free navigation of the navigable waters, the permittee will be required, upon due notice from the Corps of Engineers, to remove, relocate, or alter the structural work or obstructions caused thereby, without expense to the United States. No claim shall be made against the United States on account of any such removal or alteration.

Incidents where any individuals of sea turtles, Atlantic sturgeon, or any species listed by NOAA Fisheries under the Endangered Species Act appear to be injured or killed as a result of discharges of dredged or fill material into waters of the United States or structures or work in navigable waters of the United States authorized by this RP shall be reported to NOAA Fisheries, Office of Protected Resources at (301) 713-1401 and the Regulatory Office of the Norfolk District of the U.S. Army Corps of Engineers at 757-201-7652. The finder should leave the animal alone, make note of any circumstances likely causing the death or injury, note the location and number of individuals involved and, if possible, take photographs. Adult animals should not be disturbed unless circumstances arise where they are obviously injured or killed by discharge exposure, or some unnatural cause. The finder may be asked to carry out instructions provided by NOAA Fisheries, Office of Protected Resources, to collect specimens or take other measures to ensure that evidence intrinsic to the specimen is preserved.

Enclosed is a "compliance certification" form, which must be signed and returned within 30 days of completion of the project. Your signature on this form certifies that you have completed the work in accordance with the regional permit terms and conditions.

This verification is valid until the RP is modified, reissued, or revoked. RPs 2, 15, 17, 18, 19 and 22, are scheduled to be modified, reissued, or revoked on September 5, 2023. Activities which have commenced (i.e. under construction) or are under contract to commence in reliance upon this RP will remain authorized provided the activity is completed within twelve (12) months of the date of the RP's expiration, modification, or revocation, unless discretionary authority has been exercised on a case-by-case basis to modify, suspend, or revoke the authorization. Activities completed under the authorization of the RP which was in effect at the time the activity was completed continue to be authorized by that RP.

The State Water Control Board provided unconditional §401 Water Quality Certification for this RP. Therefore, the activities that qualify for this RP meet the requirements of the Department of Environmental Quality's (DEQ) Virginia Water Protection Permit Regulation, provided that the permittee abides by the conditions of this RP. You will not be required to obtain a separate §401 Water Quality Certification from DEQ. This authorization does not relieve your responsibility to comply with local requirements pursuant to the Chesapeake Bay Preservation Act (CBPA), nor does it supersede local government authority and responsibilities pursuant to the Act. You should contact your local government before you begin work to find out how the CBPA applies to your project.

Pursuant to the Coastal Zone Management Act (CZMA) of 1972, the Virginia Department of Environmental Quality Virginia Coastal Zone Management Program (VCP) completed its review of the Federal Consistency Determination (FCD) for this RP on August 16, 2018, and provided concurrence that this RP is consistent with the VCP. Therefore, no further coordination with the VCP is required. Authorizations under this RP do not supersede State or local government authority or responsibilities pursuant to any State or local laws or regulations.

In granting an authorization pursuant to this permit, the Norfolk District has relied on the information and data provided by the permittee. If, subsequent to notification by the Corps that a project qualifies for this permit, such information and data prove to be materially false or materially incomplete, the authorization may be suspended or revoked, in whole or in part, and/or the Government may institute appropriate legal proceedings. Please note that you should obtain all required State and local authorizations before you proceed with the project.

If you have any questions and/or concerns about this permit authorization, please contact Jaime Longo via phone at 757-201-7551 or email at jaime.garello@usace.army.mil.

Sincerely,

Jaime P. Longo

MRC 30-317

VMRC# 2021-1009
Applicant: Alice Bredin-Karny

COMMONWEALTH OF VIRGINIA
MARINE RESOURCES COMMISSION
PERMIT

The Commonwealth of Virginia, Marine Resources Commission, hereinafter referred to as the Commission, on this 30th day of July 2021 hereby grants unto:

Alice Bredin-Karny
5514 Roanes Wharf Road
Gloucester, VA 23061

hereinafter referred to as the Permittee, permission to:

X Encroach in, on, or over State-owned subaqueous bottoms pursuant to Chapter 12, Subtitle III, of Title 28.2 of the Code of Virginia.

___ Use or develop tidal wetlands pursuant to Chapter 13, Subtitle III, of Title 28.2 of the Code of Virginia.

Permittee is hereby authorized to install 220 linear feet of rock sill with clean sand backfill and plantings of native wetland vegetation along Wilson Creek at 5514 Roanes Wharf Road in Gloucester County. All activities authorized herein shall be accomplished in conformance with the plans and drawings dated received May 3, 2021, and revised drawings dated received June 7, 2021, which are attached and made a part of this permit.

This permit is granted subject to the following conditions:

(1) The work authorized by this permit is to be completed by **July 31st, 2024.** The Permittee shall notify the Commission when the project is completed. The completion date may be extended by the Commission in its discretion. Any such application for extension of time shall be in writing prior to the above completion date and shall specify the reason for such extension and the expected date of completion of construction. All other conditions remain in effect until revoked by the Commission or the General Assembly.

(2) This permit grants no authority to the Permittee to encroach upon the property rights, including riparian rights, of others.

(3) The duly authorized agents of the Commission shall have the right to enter upon the premises at reasonable times, for the purpose of inspecting the work being done pursuant to this permit.

(4) The Permittee shall comply with the water quality standards as established by the Department of Environmental Quality, Water Division, and all other applicable laws, ordinances, rules and regulations affecting the conduct of the project. The granting of this permit shall not relieve the Permittee of the responsibility of obtaining any and all other permits or authority for the projects.

(5) This permit shall not be transferred without written consent of the Commissioner.

(6) This permit shall not affect or interfere with the right vouchsafed to the people of Virginia concerning fishing, fowling and the catching of and taking of oysters and other shellfish in and from the bottom of acres and waters not included within the terms of this permit.

(7) The Permittee shall, to the greatest extent practicable, minimize the adverse effects of the project upon adjacent properties and wetlands and upon the natural resources of the Commonwealth.

(8) This permit may be revoked at any time by the Commission upon the failure of the Permittee to comply with any of the terms and conditions hereof or at the will of the General Assembly of Virginia.

(9) There is expressly excluded from the permit any portion of the waters within the boundaries of the Baylor Survey.

(10) This permit is subject to any lease of oyster planting ground in effect on the date of this permit. Nothing in this permit shall be construed as allowing the Permittee to encroach on any lease without the consent of the leaseholder. The Permittee shall be liable for any damages to such lease.

(11) The issuance of this permit does not confer upon the Permittee any interest or title to the beds of the waters.

(12) All structures authorized by this permit, which are not maintained in good repair, shall be completely removed from State-owned bottom within three (3) months after notification by the Commission.

(13) The Permittee agrees to comply with all of the terms and conditions as set forth in this permit and that the project will be accomplished within the boundaries as outlined in the plans attached hereto. Any encroachment beyond the limits of this permit shall constitute a Class 1 misdemeanor.

(14) This permit authorizes no claim to archaeological artifacts that may be encountered during the course of construction. If, however, archaeological remains are encountered, the Permittee agrees to notify the Commission, who will, in turn notify the Department of Historic Resources. The Permittee further agrees to cooperate with agencies of the Commonwealth in the recovery of archaeological remains if deemed necessary.

(15) The Permittee agrees to indemnify and save harmless the Commonwealth of Virginia from any liability arising from the establishment, operation or maintenance of said project.

The following special conditions are imposed on this permit:

(16) The placard accompanying this permit document must be conspicuously displayed at the work site.

(17) Permittee agrees to notify the Commission upon the start of the activities authorized by this permit.

Description of Fees	Amount	Unit of Measure	Rate	Total	Frequency	After-The-Fact
Permit Fee				$300.00	One-Time	
Total Permit Fees				**$300.00**

Received by VMRC May 3, 2021 /blh

- DEQ: Permit application fees required for Virginia Water Protection permits – while detailed in 9VAC25-20 – are conveyed to the applicant by the applicable DEQ office (http://www.deq.virginia.gov/Locations.aspx). Complete the Permit Application Fee Form and submit it per the instructions to the address listed on the form. Instructions for submitting any other fees will be provided to the applicant by DEQ staff.
- VMRC: An application fee of $300 may be required for projects impacting tidal wetlands, beaches and/or dunes when VMRC acts as the LWB. VMRC will notify the applicant in writing if the fee is required. Permit fees involving subaqueous lands are $25.00 for projects costing $10,000 or less and $100 for projects costing more than $10,000. Royalties may also be required for some projects. The proper permit fee and any required royalty is paid at the time of permit issuance by VMRC. VMRC staff will send the permittee a letter notifying him/her of the proper permit fees and submittal requirements.
- LWB: Permit fees vary by locality. Contact the LWB for your project area or their website for fee information and submittal requirements. Contact information for LWBs may be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html.

email JWatkins49@cox.Net

State Corporation Commission Name and ID Number (if applicable) ________

*** If multiple contractors, each must be listed and each must sign the applicant signature page.**

6. List the name, address and telephone number of the newspaper having general circulation in the area of the project. Failure to complete this question may delay local and State processing.

Name and complete mailing address:

Telephone number
(___) ________

7. Give the following project location information:

Street Address (911 address if available) 5518 Roanes Wharf Rd
Lot/Block/Parcel# 40-169 Selden, Parcel 2
Subdivision ________
City / County Gloucester ZIP Code 23061
Latitude and Longitude at Center Point of Project Site (Decimal Degrees):
________ / -________ (Example: 36.41600/-76.30733)

If the project is located in a rural area, please provide driving directions giving distances from the best and nearest visible landmarks or major intersections. *Note: if the project is in an undeveloped subdivision or property, clearly stake and identify property lines and location of the proposed project. A supplemental map showing how the property is to be subdivided should also be provided.*

Rt 17 N. Right on Featherbed Lane. Right on Robins Neck Rd. Left on Roanes Wharf Rd. House will be on the left.

8. What are the *primary and secondary purposes of and the need for* the project? For example, the primary purpose may be "to protect property from erosion due to boat wakes" and the secondary purpose may be "to provide safer access to a pier."

Control erosion

Part 1 - General Information (continued)

9. Proposed use (check one):
   ✓ Single user (private, non-commercial, residential)
   ___ Multi-user (community, commercial, industrial, government)

10. Describe alternatives considered and the measures that will be taken to avoid and minimize impacts, to the maximum extent practicable, to wetlands, surface waters, submerged lands, and buffer areas associated with any disturbance (clearing, grading, excavating) during and after project construction. *Please be advised that unavoidable losses of tidal wetlands and/or aquatic resources may require compensatory mitigation.*

11. Is this application being submitted for after-the-fact authorization for work which has already begun or been completed? ___Yes ✓ No. If yes, be sure to clearly depict the portions of the project which are already complete in the project drawings.

12. Approximate cost of the entire project (materials, labor, etc.): $ 95,000
    Approximate cost of that portion of the project that is channelward of mean low water:
    $____________

13. Completion date of the proposed work:______________________-____________

14. Adjacent Property Owner Information: List the name and complete **mailing address**, including zip code, of each adjacent property owner to the project. (NOTE: If you own the adjacent lot, provide the requested information for the first adjacent parcel beyond your property line.) Failure to provide this information may result in a delay in the processing of your application by VMRC.

Part 2 - Signatures

1. Applicants and property owners (if different from applicant). NOTE: REQUIRED FOR ALL PROJECTS

<u>PRIVACY ACT STATEMENT</u>: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, USACE, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.
In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

CONTRACTOR ACKNOWLEDGEMENT

I (we), Harvey have contracted Shoreline Structures LLC
(Applicant's legal name(s)) (Contractor's name(s))
to perform the work described in this Joint Permit Application, signed and dated 4/20/21.

We will read and abide by all conditions set forth in all Federal, State and Local permits as required for this project. We understand that failure to follow the conditions of the permits may constitute a violation of applicable Federal, state and local statutes and that we will be liable for any civil and/or criminal penalties imposed by these statutes. In addition, we agree to make available a copy of any permit to any regulatory representative visiting the project to ensure permit compliance. If we fail to provide the applicable permit upon request, we understand that the representative will have the option of stopping our operation until it has been determined that we have a properly signed and executed permit and are in full compliance with all terms and conditions.

Part 3 – Appendices (continued)

Appendix B: **Projects for Shoreline Stabilization** in tidal wetlands, tidal waters and dunes/beaches including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, and living shoreline projects. Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service or VIMS.

NOTE: It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1). **Information on non-structural, vegetative alternatives (i.e., Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html.**

1. Describe each **revetment, bulkhead, marsh toe, breakwater, groin, jetty, other structure, or living shoreline project** separately in the space below. Include the overall length in linear feet, the amount of impacts in acres, and volume of associated backfill below mean high water and/or ordinary high water in cubic yards, as applicable:

Rock Sills : 245 L.F. Class I & II
over core
Sand Nourishment : 500 cyds.
Spartina plantings : 1200 S.F.

2. What is the maximum encroachment channelward of mean high water? 40 feet.
Channelward of mean low water? 22 feet.
Channelward of the back edge of the dune or beach? NA feet.

3. Please calculate the square footage of encroachment over:
- Vegetated wetlands 0 square feet
- Non-vegetated wetlands ____ square feet — Rock = 700, Sand = 950
- Subaqueous bottom ____ square feet — Rock = 1320
- Dune and/or beach NA square feet — Sand = 250

4. For bulkheads, is any part of the project maintenance or replacement of a previously authorized, currently serviceable, existing structure? ____ Yes____ No.

Part 3 – Appendices (continued)

5. Describe the type of construction and **all** materials to be used, including source of backfill material, if applicable (e.g., vinyl sheet-pile bulkhead, timber stringers and butt piles, 100% sand backfill from upland source; broken concrete core material with Class II quarry stone armor over filter cloth).
NOTE: Drawings must include construction details, including dimensions, design and all materials, including fittings if used.

quary Stone

6. If using stone, broken concrete, etc. for your structure(s), what is the average weight of the:
Core (inner layer) material 10~20 pounds per stone Class size 6~12''
Armor (outer layer) material 150 – 1500 pounds per stone Class size I & II

7. For **beach nourishment**, including that associated with breakwaters, groins or other structures, provide the following:

- Volume of material 50 cubic yards channelward of mean low water
450 cubic yards landward of mean low water
500 cubic yards channelward of mean high water
0 cubic yards landward of mean high water
- Area to be covered 250 square feet channelward of mean low water
950 square feet landward of mean low water
__________ cubic yards channelward of mean high water
__________ cubic yards landward of mean high water
- Source of material, composition (e.g. 90% sand, 10% clay): 90% sand
- Method of transportation and placement:
____
- Describe any proposed vegetative stabilization measures to be used, including planting schedule, spacing, monitoring, etc. Additional guidance is available at http://www.vims.edu/about/search/index.php?q=planting+guidelines:

Sand Nourishment = 750 c.yds.
Spartina plantings = 1660 s.f.

Private pier replacement: 6' x 210', 400 s.f. L head, finger pier & boatlift.
↳ 5'x57'

Part 1 - General Information (continued)

5. Have you obtained a contractor for the project? ✓ Yes* ___ No. *If your answer is "Yes" complete the remainder of this question and submit the Applicant's and Contractor's Acknowledgment Form (enclosed)

Contractor's name* and complete mailing address:

Jeff Watkins
P.O. Box 515
Gloucester, Va. 23061

Contact Information:

Home ( )
Work (804) 815-0813
Fax ( )
Cell ( )
email jwatkins49@cox.net

State Corporation Commission Name and ID Number (if applicable) __________

<u>* If multiple contractors, each must be listed and each must sign the applicant signature page.</u>

6. List the name, address and telephone number of the newspaper having general circulation in the area of the project. Failure to complete this question may delay local and State processing.

Name and complete mailing address:

Gazette-Journal
6625 Main Street
Gloucester, Va. 23061

Telephone number
(804) 693-3101

7. Give the following project location information:

Street Address (911 address if available) 5514 Roanes Wharf Rd.
Lot/Block/Parcel# RP11844 40-167
Subdivision Selden
City / County Gloucester, Va. ZIP Code 23061
Latitude and Longitude at Center Point of Project Site (Decimal Degrees):
__________ / -__________ (Example: 36.41600/-76.30733)

If the project is located in a rural area, please provide driving directions giving distances from the best and nearest visible landmarks or major intersections. *Note: if the project is in an undeveloped subdivision or property, clearly stake and identify property lines and location of the proposed project. A supplemental map showing how the property is to be subdivided should also be provided.*

- from rt 17N to Featherbed Lane, past Paige Rd + Warner Hall Rd on Robins Neck Rd.
- turn left onto Roanes Wharf Rd
- turn left into Magnolia Farm property on Roanes Wharf Rd # 5514

8. What are the *primary and secondary purposes of and the need for* the project? For example, the primary purpose <u>may</u> be "to protect property from erosion due to boat wakes" and the secondary purpose <u>may</u> be "to provide safer access to a pier."

<u>First</u> - to prevent <u>further</u> erosion to front of property
<u>Second</u> - to stablize waterfront to prevent old trees from uprooting (three trees on very edge)

Part 1 - General Information (continued)

9. Proposed use (check one):
   ✓ Single user (private, non-commercial, residential)
   ___ Multi-user (community, commercial, industrial, government)

10. Describe alternatives considered and the measures that will be taken to avoid and minimize impacts, to the maximum extent practicable, to wetlands, surface waters, submerged lands, and buffer areas associated with any disturbance (clearing, grading, excavating) during and after project construction. *Please be advised that unavoidable losses of tidal wetlands and/or aquatic resources may require compensatory mitigation.*

    There will need to be careful excavating during project construction because there is a narrow piece of land in the front between house and water. The most serious area is a very narrow strip of land.

11. Is this application being submitted for after-the-fact authorization for work which has already begun or been completed? ___Yes ✓No. If yes, be sure to clearly depict the portions of the project which are already complete in the project drawings.

12. Approximate cost of the entire project (materials, labor, etc.): $97,000.00 +/-
    Approximate cost of that portion of the project that is channelward of mean low water:
    $____________

13. Completion date of the proposed work:______________________________-____________

14. Adjacent Property Owner Information: List the name and complete **mailing address**, including zip code, of each adjacent property owner to the project. (NOTE: If you own the adjacent lot, provide the requested information for the first adjacent parcel beyond your property line.) Failure to provide this information may result in a delay in the processing of your application by VMRC.

    John and Margaret Singleton
    5488 Roanes Wharf Rd
    Gloucester, Va. 23061

    Mark and JoElle Harvey
    5518 Roanes Wharf Rd.
    Gloucester, Va. 23061

Part 2 - Signatures

1. **Applicants and property owners (if different from applicant).**
   NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, USACE, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.

In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

CONTRACTOR ACKNOWLEDGEMENT

I (we), Alice Bredin-Karny, have contracted Jeff Watkins / Shoreline Structures LLC
(Applicant's legal name(s)) (Contractor's name(s))
to perform the work described in this Joint Permit Application, signed and dated 4-20-21.

We will read and abide by all conditions set forth in all Federal, State and Local permits as required for this project. We understand that failure to follow the conditions of the permits may constitute a violation of applicable Federal, state and local statutes and that we will be liable for any civil and/or criminal penalties imposed by these statutes. In addition, we agree to make available a copy of any permit to any regulatory representative visiting the project to ensure permit compliance. If we fail to provide the applicable permit upon request, we understand that the representative will have the option of stopping our operation until it has been determined that we have a properly signed and executed permit and are in full compliance with all terms and conditions.

REGIONAL PERMIT 17 CHECKLIST

Please review the 18-RP-17 enclosure before completing this form and note 18-RP-17 can only be used for proposed PRIVATE USE structures that comply with the terms and conditions of 18-RP-17. Copies can be obtained online at http://www.nao.usace.army.mil/Missions/Regulatory/RBregional/.

YES☑ NO☐	**(1)** Has the permittee reviewed the 18-RP-17 enclosure and verified that the proposed structure(s) is in compliance with all the terms, conditions, and limitations of 18-RP-17?
YES☐ NO☐	**(2)** Does the proposed structure(s) extend no more than one-fourth of the distance across the waterway measured from either mean high water (MHW) to MHW (including all channelward wetlands) or ordinary high water (OHW) to OHW (including all channelward wetlands)?
YES☐ NO☐	**(3)** Does the proposed structure(s) extend no more than 300 feet from MHW or OHW (including all channelward wetlands)?
YES☐ NO☐ N/A☐	**(4)** Does the proposed structure(s) attach to the upland at a point landward of MHW or OHW (including all channelward wetlands)?
YES☐ NO☐ N/A☐	**(5)** If the proposed structure(s) crosses wetland vegetation, is it an open-pile design that has a maximum width of five (5) feet and a minimum height of four (4) feet between the decking and the wetland substrate?
YES☐ NO☐ N/A☐	**(6)** Does the proposed structure(s) include no more than two (2) boatlifts and no more than two (2) boat slips?
YES☑ NO☐ N/A☐	**(7)** Is the open-sided roof structure designed to shelter a boat ≤ 700 square feet and/or is the open sided roof structure or gazebo structure designed to shelter a pier ≤ 400 square feet?
YES☑ NO☐ N/A☐	**(8)** Are all piles associated with the proposed structure(s) non-steel, less than or equal to 12" in diameter, and will less than or equal to 25 piles be installed channelward of MHW?
YES☐ NO☐ N/A☐	**(9)** Is all work occurring behind cofferdams, turbidity curtains, or other methods to control turbidity being utilized when operationally feasible and federally listed threatened or endangered species may be present?
YES☑ NO☐ N/A☐	**(10)** If the proposed structure(s) is to be located within an anadromous fish use area, will the prospective permittee adhere to the anadromous fish use area time of year restriction (TOYR) prohibiting in-water work from occurring between February 15 through June 30 of any given year if (1) piles are to be installed with a cushioned impact hammer and there is less than 492 feet between the most channelward pile and mean low water (MLW) on the opposite shoreline or (2) piles are to be installed with a vibratory hammer and there is less than 384 feet between the most channelward pile and MLW on the opposite shoreline?
YES☑ NO☐	**(11)** Is all work occurring outside of submerged aquatic vegetation (SAV) mapped by the Virginia Institute of Marine Sciences[1] (VIMS) most recent survey year and 5 year composite?
YES☑ NO☐	**(12)** Has the permittee ensured the construction and/or installation of the proposed structure(s) will not affect federally listed threatened or endangered species or designated critical habitat?
YES☑ NO☐	**(13)** Will the proposed structure be located outside of Broad Creek in Middlesex County, Fisherman's Cove in Norfolk, or the Salt Ponds in Hampton?
YES☑ NO☐	**(14)** Will the proposed structure(s) be located outside of the waterways containing a Federal Navigation Project listed in Permit Specific Condition 12 of 18-RP-17 and/or will all portions of the proposed structure(s) be located more than 85 feet from the Federal Navigation Project?

YES☒ NO☐ **(15)** Will the proposed structure(s) be located outside a USACE Navigation and Flood Risk Management project area?

YES☒ NO☐ **(16)** Will the proposed structure(s) be located outside of any Designated Trout Waters?

YES☒ NO☐ N/A☐ **(17)** If the proposed structure(s) includes flotation units, will the units be made of materials that will not become waterlogged or sink if punctured?

YES☒ NO☐ N/A☐ **(18)** If the proposed structure(s) includes flotation units, will the floating sections be braced so they will not rest on the bottom during periods of low water?

YES☒ NO☐ **(19)** Is the proposed structure(s) made of suitable materials and practical design so as to reasonably ensure a safe and sound structure?

YES☒ NO☐ **(20)** Will the proposed structure(s) be located on the property in accordance with the local zoning requirements?

YES☒ NO☐ N/A☐ **(21)** If the proposed structure(s) includes a device used for shellfish gardening, will the device be attached directly to a pier and limited to a total of 160 square feet?

YES☒ NO☐ N/A☐ **(22)** If the proposed structure(s) includes a device used for shellfish gardening, does the permittee recognize this RP does not negate their responsibility to obtain an oyster gardening permit (General Permit #3) from Virginia Marina Resources Commission (VMRC)'s Habitat Management Division? Please refer to Appendix D of the Tidewater JPA for more details on VMRC's aquaculture requirements.

YES☒ NO☐ **(23)** Does the permittee recognize this RP does not authorize any dredging or filling of waters the United States (including wetlands) and does not imply that future dredging proposals will be approved by the Corps?

YES☒ NO☐ **(24)** Does the permittee understand that by accepting 18-RP-17, the permittee accepts all of the terms and conditions of the permit, including the limits of Federal liability contained in the 18-RP-17 enclosure? Does the permittee acknowledge that the structures permitted under 18-RP-17 may be exposed to waves caused by passing vessels and that the permittee is solely responsible for the integrity of the structures permitted under 18-RP-17 and the exposure of such structures and vessels moored to such structures to damage from waves? Does the permittee accept that the United States is not liable in any way for such damage and that it shall not seek to involve the United States in any actions or claims regarding such damage?

IF YOU HAVE ANSWERED "NO" TO ANY OF THE QUESTIONS ABOVE, REGIONAL PERMIT 17 (18-RP-17) DOES NOT APPLY AND YOU ARE REQUIRED TO OBTAIN WRITTEN AUTHORIZATION FROM THE CORPS PRIOR TO PERFORMING THE WORK.

IF YOU HAVE ANSWERED "YES" (OR "N/A", WHERE APPLICABLE) TO ALL OF THE QUESTIONS ABOVE, YOU ARE IN COMPLIANCE WITH REGIONAL PERMIT 17 (18-RP-17). PLEASE SIGN BELOW, ATTACH, AND SUBMIT THIS CHECKLIST WITH YOUR COMPLETED JOINT PERMIT APPLICATION (JPA). THIS SIGNED CERTIFICATE SERVES AS YOUR LETTER OF AUTHORIZATION FROM THE CORPS. YOU WILL NOT RECEIVE ANY OTHER WRITTEN AUTHORIZATION FROM THE CORPS; HOWEVER, YOU MAY NOT PROCEED WITH CONSTRUCTION UNTIL YOU HAVE OBTAINED ALL OTHER NECESSARY STATE AND LOCAL PERMITS.

I CERTIFY THAT I HAVE READ AND UNDERSTAND ALL CONDITIONS OF THE REGIONAL PERMIT 17 (18-RP-17), DATED SEPTEMBER 2018, ISSUED BY THE US ARMY CORPS OF ENGINEERS, NORFOLK DISTRICT REGULATORY BRANCH (CENAO-WRR), NORFOLK, VIRGINIA.

Signature of Property Owner(s) or Agent

Date 4-1-21

Proposed work to be located at:

5514
Roane's Wharf R.
Glo. VA 23061

Received by VMRC May 3, 2021 /blh

Part 3 – Appendices

Please complete and submit the appendix questions applicable to your project, and attach the required vicinity map(s) and drawings to your application. If an item does not apply to your project, please write "N/A" in the space provided.

Appendix A: Projects for Access to the water such as private and community piers, boathouses, marinas, moorings, and boat ramps. Answer all questions that apply.

1. **Briefly describe your proposed project.**

Replace pier: 6' x 210', 400 S.F. L head, finger pier & Boatlift

2. **For private, noncommercial piers:**

Do you have an existing pier on your property? ✓ Yes____ No
If yes, will it be removed? ✓ Yes ____No
Is your lot platted to the mean low water shoreline? ✓ Yes ____No
What is the overall length of the proposed structure? 210 feet.
Channelward of Mean High Water? 205 feet.
Channelward of Mean Low Water? 200 feet.
What is the area of the piers and platforms that will be constructed over
Tidal non-vegetated wetlands __________ square feet.
Tidal vegetated wetlands _________ square feet.
Submerged lands __________square feet.
What is the total size of any and all L- or T-head platforms? 400 sq. ft.
For boathouses, what is the overall size of the roof structure? ________sq. ft.
Will your boathouse have sides?_____Yes____ No.

NOTE: All proposals for piers, boathouses and shelter roofs must be reviewed by the Virginia Marine Resources Commission (Commission or VMRC), however, pursuant to § 28.2-1203 A 5 of the Code of Virginia a VMRC permit may not be required for such structures (except as required by subsection D of § 28.2-1205 for piers greater than 100 feet in length involving commercially productive leased oyster or clam grounds), provided that (i) the piers do not extend beyond the navigation line or private pier lines established by the Commission or the United States Army Corps of Engineers (USACE), (ii) the piers do not exceed six feet in width and finger piers do not exceed five feet in width, (iii) any L or T head platforms and appurtenant floating docking platforms do not exceed, in the aggregate, 400 square feet, (iv) if prohibited by local ordinance open-sided shelter roofs or gazebo-type structures shall not be placed on platforms as described in clause (iii), but may be placed on such platforms if not prohibited by local ordinance, and (v) the piers are determined not to be a navigational hazard by the Commission. Subject to any applicable local ordinances, such piers may include an attached boat lift and an open-sided roof designed to shelter a single boat slip or boat lift. In cases in which open-sided roofs designed to shelter a single boat, boat slip or boat lift will exceed 700 square feet in coverage or the open-sided shelter roofs or gazebo structures exceed 400 square feet, and in cases in which an adjoining property owner objects to a proposed roof structure, permits shall be required as provided in § 28.2-1204.

Part 3 – Appendices (continued)

Appendix B: Projects for Shoreline Stabilization in tidal wetlands, tidal waters and dunes/beaches including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, and living shoreline projects. Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service or VIMS.

NOTE: It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1). **Information on non-structural, vegetative alternatives (i.e., Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html.**

1. Describe each **revetment, bulkhead, marsh toe, breakwater, groin, jetty, other structure, or living shoreline project** separately in the space below. Include the overall length in linear feet, the amount of impacts in acres, and volume of associated backfill below mean high water and/or ordinary high water in cubic yards, as applicable:

- Rock Revetment, 95 L.F. Class II over Core & F.C.
- Rock sills = 240 L.F. Class II & I over Core
- Sand Nourishment = 750 cyds
- Spartina plantings = 1660 S.F.

2. What is the maximum encroachment channelward of mean high water? 40 feet.
Channelward of mean low water? 25 feet.
Channelward of the back edge of the dune or beach? NA feet.

3. Please calculate the square footage of encroachment over:
   - Vegetated wetlands 0 square feet
   - Non-vegetated wetlands ~~[illegible]~~ square feet
   - Subaqueous bottom → square feet
   - Dune and/or beach NA square feet

Rock REVT. = 950
Sand = 1200

Rock = 3080
Sand = 1120

4. For bulkheads, is any part of the project maintenance or replacement of a previously authorized, currently serviceable, existing structure? ____ Yes____ No.

If yes, will the construction of the new bulkhead be no further than two (2) feet channelward of the existing bulkhead? _____Yes ____No.

If no, please provide an explanation for the purpose and need for the additional encroachment.

Part 3 – Appendices (continued)

5. Describe the type of construction and **all** materials to be used, including source of backfill material, if applicable (e.g., vinyl sheet-pile bulkhead, timber stringers and butt piles, 100% sand backfill from upland source; broken concrete core material with Class II quarry stone armor over filter cloth).
NOTE: Drawings must include construction details, including dimensions, design and all materials, including fittings if used.

6. If using stone, broken concrete, etc. for your structure(s), what is the average weight of the:
   Core (inner layer) material 20 pounds per stone Class size Sungl
   Armor (outer layer) material 500/1,500 pounds per stone Class size II

7. For **beach nourishment**, including that associated with breakwaters, groins or other structures, provide the following:

- Volume of material 250 cubic yards channelward of mean low water
  500 cubic yards landward of mean low water
  750 cubic yards channelward of mean high water
  0 cubic yards landward of mean high water

- Area to be covered 1120 square feet channelward of mean low water
  1200 square feet landward of mean low water
  ___________ cubic yards channelward of mean high water
  ___________ cubic yards landward of mean high water

- Source of material, composition (e.g. 90% sand, 10% clay): 90
- Method of transportation and placement:
  ____
- Describe any proposed vegetative stabilization measures to be used, including planting schedule, spacing, monitoring, etc. Additional guidance is available at http://www.vims.edu/about/search/index.php?q=planting+guidelines:

DEPARTMENT OF THE ARMY
US ARMY CORPS OF ENGINEERS
NORFOLK DISTRICT
FORT NORFOLK
803 FRONT STREET
NORFOLK VA 23510-1011

August 13, 2021

Northern Virginia Regulatory Section
NAO-2020-01525/VMRC #21-1008 (Wilson Creek)

Mark & Joelle Harvey
PO Box 376
White Marsh, VA 23183

Mr. & Mrs. Harvey:

This is in reference to the Department of the Army application NAO-2020-01525/ VMRC #21-1008 you have submitted to create a living shoreline by installing a 245-foot-long rock sill with clean sand back fill and plantings of native vegetation. All work will be completed at 5518 Roane's Wharf Rd., Gloucester, Virginia (37.3643316, -76.46846). Your proposed project as described above and depicted on attached drawings entitled "Proposed Project" in two sheets dated and stamped as received by our office on June 9, 2021 satisfies the terms and conditions of Norfolk District's Regional Permit 19 (18-RP-19). Provided that you follow the general and permit specific conditions of 18-RP-19, as well as any additional special conditions that have been included below, no further authorization will be required from the Corps.

The permittee understands and agrees that, if future operations by the United States require the removal, relocation, or other alteration, of the structure or work herein authorized, or if, in the opinion of the Secretary of the Army or his authorized representative, said structure or work shall cause unreasonable obstruction to the free navigation of the navigable waters, the permittee will be required, upon due notice from the Corps of Engineers, to remove, relocate, or alter the structural work or obstructions caused thereby, without expense to the United States. No claim shall be made against the United States on account of any such removal or alteration.

Incidents where any individuals of sea turtles, Atlantic sturgeon, or any species listed by NOAA Fisheries under the Endangered Species Act appear to be injured or killed as a result of discharges of dredged or fill material into waters of the United States or structures or work in navigable waters of the United States authorized by this RP shall be reported to NOAA Fisheries, Office of Protected Resources at (301) 713-1401 and the Regulatory Office of the Norfolk District of the U.S. Army Corps of Engineers at 757-201-7652. The finder should leave the animal alone, make note of any circumstances likely causing the death or injury, note the location and number of individuals involved and, if possible, take photographs. Adult animals should not be disturbed unless circumstances arise where they are obviously injured or killed by discharge exposure, or some unnatural cause. The finder may be asked to carry out instructions provided by NOAA Fisheries, Office of Protected Resources, to collect specimens or take other measures to ensure that evidence intrinsic to the specimen is preserved.

Enclosed is a "compliance certification" form, which must be signed and returned within 30 days of completion of the project. Your signature on this form certifies that you have completed the work in accordance with the regional permit terms and conditions.

This verification is valid until the RP is modified, reissued, or revoked. RPs 2, 15, 17, 18, 19 and 22 are scheduled to be modified, reissued, or revoked on September 5, 2023. Activities which have commenced (i.e. under construction) or are under contract to commence in reliance upon this RP will remain authorized provided the activity is completed within twelve (12) months of the date of the RP's expiration, modification, or revocation, unless discretionary authority has been exercised on a case-by-case basis to modify, suspend, or revoke the authorization. Activities completed under the authorization of the RP which was in effect at the time the activity was completed continue to be authorized by that RP.

The State Water Control Board provided unconditional §401 Water Quality Certification for this RP. Therefore, the activities that qualify for this RP meet the requirements of the Department of Environmental Quality's (DEQ) Virginia Water Protection Permit Regulation, provided that the permittee abides by the conditions of this RP. You will not be required to obtain a separate §401 Water Quality Certification from DEQ. This authorization does not relieve your responsibility to comply with local requirements pursuant to the Chesapeake Bay Preservation Act (CBPA), nor does it supersede local government authority and responsibilities pursuant to the Act. You should contact your local government before you begin work to find out how the CBPA applies to your project.

Pursuant to the Coastal Zone Management Act (CZMA) of 1972, the Virginia Department of Environmental Quality Virginia Coastal Zone Management Program (VCP) completed its review of the Federal Consistency Determination (FCD) for this RP on August 16, 2018, and provided concurrence that this RP is consistent with the VCP. Therefore, no further coordination with the VCP is required. Authorizations under this RP do not supersede State or local government authority or responsibilities pursuant to any State or local laws or regulations.

In granting an authorization pursuant to this permit, the Norfolk District has relied on the information and data provided by the permittee. If, subsequent to notification by the Corps that a project qualifies for this permit, such information and data prove to be materially false or materially incomplete, the authorization may be suspended or revoked, in whole or in part, and/or the government may institute appropriate legal proceedings. Please note that you should obtain all required State and local authorizations before you proceed with the project.

If you have any questions and/or concerns about this permit authorization, please contact Jaime Longo via phone at 757-201-7551 or email at jaime.□are□o@usace.army.mil.

Sincerely,

Jaime P. Longo

CERTIFICATE OF COMPLIANCE
WITH
ARMY CORPS OF ENGINEERS PERMIT

Permit Number: NAO-2020-01525

VMRC Number: 21-1008

Corps Contact: □aime □. □on□o

Name of Permittee: Mark □ □oe□□e Harvey

Date of Issuance: August 13, 2021

Permit Type: Norfolk District's Regional Permit 19 (18-RP-19)

<u>Within 30 days of completion of the activity authorized by this permit and any mitigation required by the permit, sign this certification and return it to the following address:</u>

US Army Corps of Engineers - Norfolk District
CENAO-WR-R
Attn: □aime □. □on□o
803 Front Street
Norfolk, VA 23510-1096

Or scan and send via email to <u>□aime.□are□□o@usace.army.mil</u>

Please note that your permitted activity is subject to a compliance inspection by a U.S. Army Corps of Engineers representative. If you fail to comply with this permit you are subject to permit suspension, modification or revocation.

I hereby certify that the work authorized by the above referenced permit has been completed in accordance with the terms and conditions of the said permit, and required mitigation has been completed in accordance with the permit conditions.

Signature of Permittee Date

COMMONWEALTH OF VIRGINIA
MARINE RESOURCES COMMISSION
PERMIT

The Commonwealth of Virginia, Marine Resources Commission, hereinafter referred to as the Commission, on this 23rd day of July 2021 hereby grants unto:

Mark S. Harvey
Post Office Box 376
White Marsh, VA 23183

Joelle K. Harvey
Post Office Box 376
White Marsh, VA 23183

hereinafter referred to as the Permittee, permission to:

_X_ Encroach in, on, or over State-owned subaqueous bottoms pursuant to Chapter 12, Subtitle III, of Title 28.2 of the Code of Virginia.

___ Use or develop tidal wetlands pursuant to Chapter 13, Subtitle III, of Title 28.2 of the Code of Virginia.

Permittee is hereby authorized to install 245 linear feet of rock sill with clean sand fill and plantings of native wetland vegetation along Wilson creek at 5518 Roanes Wharf Road in Gloucester County. All activities authorized herein shall be accomplished in conformance with the plans and drawings dated received May 3, 2021, and revised drawings dated received June 7, 2021, which are attached and made a part of this permit.

This permit is granted subject to the following conditions:

(1) The work authorized by this permit is to be completed by **June 30th, 2024.** The Permittee shall notify the Commission when the project is completed. The completion date may be extended by the Commission in its discretion. Any such application for extension of time shall be in writing prior to the above completion date and shall specify the reason for such extension and the expected date of completion of construction. All other conditions remain in effect until revoked by the Commission or the General Assembly.

(2) This permit grants no authority to the Permittee to encroach upon the property rights, including riparian rights, of others.

(3) The duly authorized agents of the Commission shall have the right to enter upon the premises at reasonable times, for the purpose of inspecting the work being done pursuant to this permit.

(4) The Permittee shall comply with the water quality standards as established by the Department of Environmental Quality, Water Division, and all other applicable laws, ordinances, rules and regulations affecting the conduct of the project. The granting of this permit shall not relieve the Permittee of the responsibility of obtaining any and all other permits or authority for the projects.

(5) This permit shall not be transferred without written consent of the Commissioner.

(6) This permit shall not affect or interfere with the right vouchsafed to the people of Virginia concerning fishing, fowling and the catching of and taking of oysters and other shellfish in and from the bottom of acres and waters not included within the terms of this permit.

(7) The Permittee shall, to the greatest extent practicable, minimize the adverse effects of the project upon adjacent properties and wetlands and upon the natural resources of the Commonwealth.

(8) This permit may be revoked at any time by the Commission upon the failure of the Permittee to comply with any of the terms and conditions hereof or at the will of the General Assembly of Virginia.

(9) There is expressly excluded from the permit any portion of the waters within the boundaries of the Baylor Survey.

(10) This permit is subject to any lease of oyster planting ground in effect on the date of this permit. Nothing in this permit shall be construed as allowing the Permittee to encroach on any lease without the consent of the leaseholder. The Permittee shall be liable for any damages to such lease.

(11) The issuance of this permit does not confer upon the Permittee any interest or title to the beds of the waters.

(12) All structures authorized by this permit, which are not maintained in good repair, shall be completely removed from State-owned bottom within three (3) months after notification by the Commission.

(13) The Permittee agrees to comply with all of the terms and conditions as set forth in this permit and that the project will be accomplished within the boundaries as outlined in the plans attached hereto. Any encroachment beyond the limits of this permit shall constitute a Class 1 misdemeanor.

(14) This permit authorizes no claim to archaeological artifacts that may be encountered during the course of construction. If, however, archaeological remains are encountered, the Permittee agrees to notify the Commission, who will, in turn notify the Department of Historic Resources. The Permittee further agrees to cooperate with agencies of the Commonwealth in the recovery of archaeological remains if deemed necessary.

(15) The Permittee agrees to indemnify and save harmless the Commonwealth of Virginia from any liability arising from the establishment, operation or maintenance of said project.

The following special conditions are imposed on this permit:

(16) The placard accompanying this permit document must be conspicuously displayed at the work site.

(17) Permittee agrees to notify the Commission upon the start of the activities authorized by this permit.

Description of Fees	Amount	Unit of Measure	Rate	Total	Frequency	After-The-Fact
Permit Fee				$300.00	One-Time	
Total Permit Fees				**$300.00**		

This permit consists of 8 Pages

PERMITTEE(S)

☒ BY CHECKING THIS BOX, I certify that I am the Permittee OR the certified agent acting on behalf of all Permittees, that I have read and understood the permit as drafted and accept all of the terms and conditions herein. I agree and understand that checking the box has the same legal authority as a written signature. The provisions of the permit authorization shall be binding on any assignee or successor in interest of the original Permittee(s). In cases where the Permittee is a corporation, agency or political jurisdiction, I certify I have proper authorization to bind the organization to the financial and performance obligations which result from activity authorized by this permit.

COMMISSION

This permit is executed on behalf of the Commonwealth of Virginia, Marine Resources Commission by the undersigned:

Randy Owen
Chief, Habitat Management Division

DATE SIGNED
23rd day of July 2021

Attachment 9: Flood Prevention Project and its Relevance to Other Projects

MPPDC staff have worked throughout the years to understand the policy, research and impacts of flooding (ie. stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change & Sea Level Rise (2009 to 2012)
The MPPDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, MPPDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally Phase 3 focused on developing adaptation public policies in response to the assessments.

Phase 1: Middle Peninsula Climate Change Adaptation: Facilitation of Presentations and Discussions of Climate Change Issues with Local Elected Officials and the General Public
Phase 2: Climate Change III: Initiating Adaptation Public Policy Development
Phase 3: Phase 3 Climate Change: Initiating Adaptation Public Policy Development

Emergency Management - Hazard Mitigation Planning (2009 to Present): Since 2009, the Middle Peninsula Planning District Commission has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. *The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise* (ie. Mean High Higher Water and the NOAA 2060 intermediate-high scenario), *and flooding (coastal and riverine flooding) that estimates losses from each hazard.* The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014): In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, OSDS management, storm water management, TMDLs, etc, staff from the Middle Peninsula Planning District Commission (MPPDC) will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and Onsite Sewage Disposal System (OSDS) and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The Virginia Department of Conservation and Recreation requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the MPPDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The MPPDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014): MPPDC staff and Draper Aden Associates worked with localities (i.e. Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional VSMP.

Mathews County Rural Ditch Enhancement Study (2015): In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015): This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the MPPDC developed the MPPDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the MPPDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in VRA loan funding and ~$400,000 in NFWF grant funding. Living Shoreline construction cost to date range per job $14,000-$180,000. MPPDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project - VCPC White Papers (2017): This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017): This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018): This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018): VIMS Shoreline Studies Program worked with the PAA to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020): The Fight the Flood was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

August 14, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 5514 Roanes Wharf Road, Gloucester, Va. 23061. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 703-989-8882 or by email at artkarny@gmail.com.

Sincerely,

Alice Bredin Karny

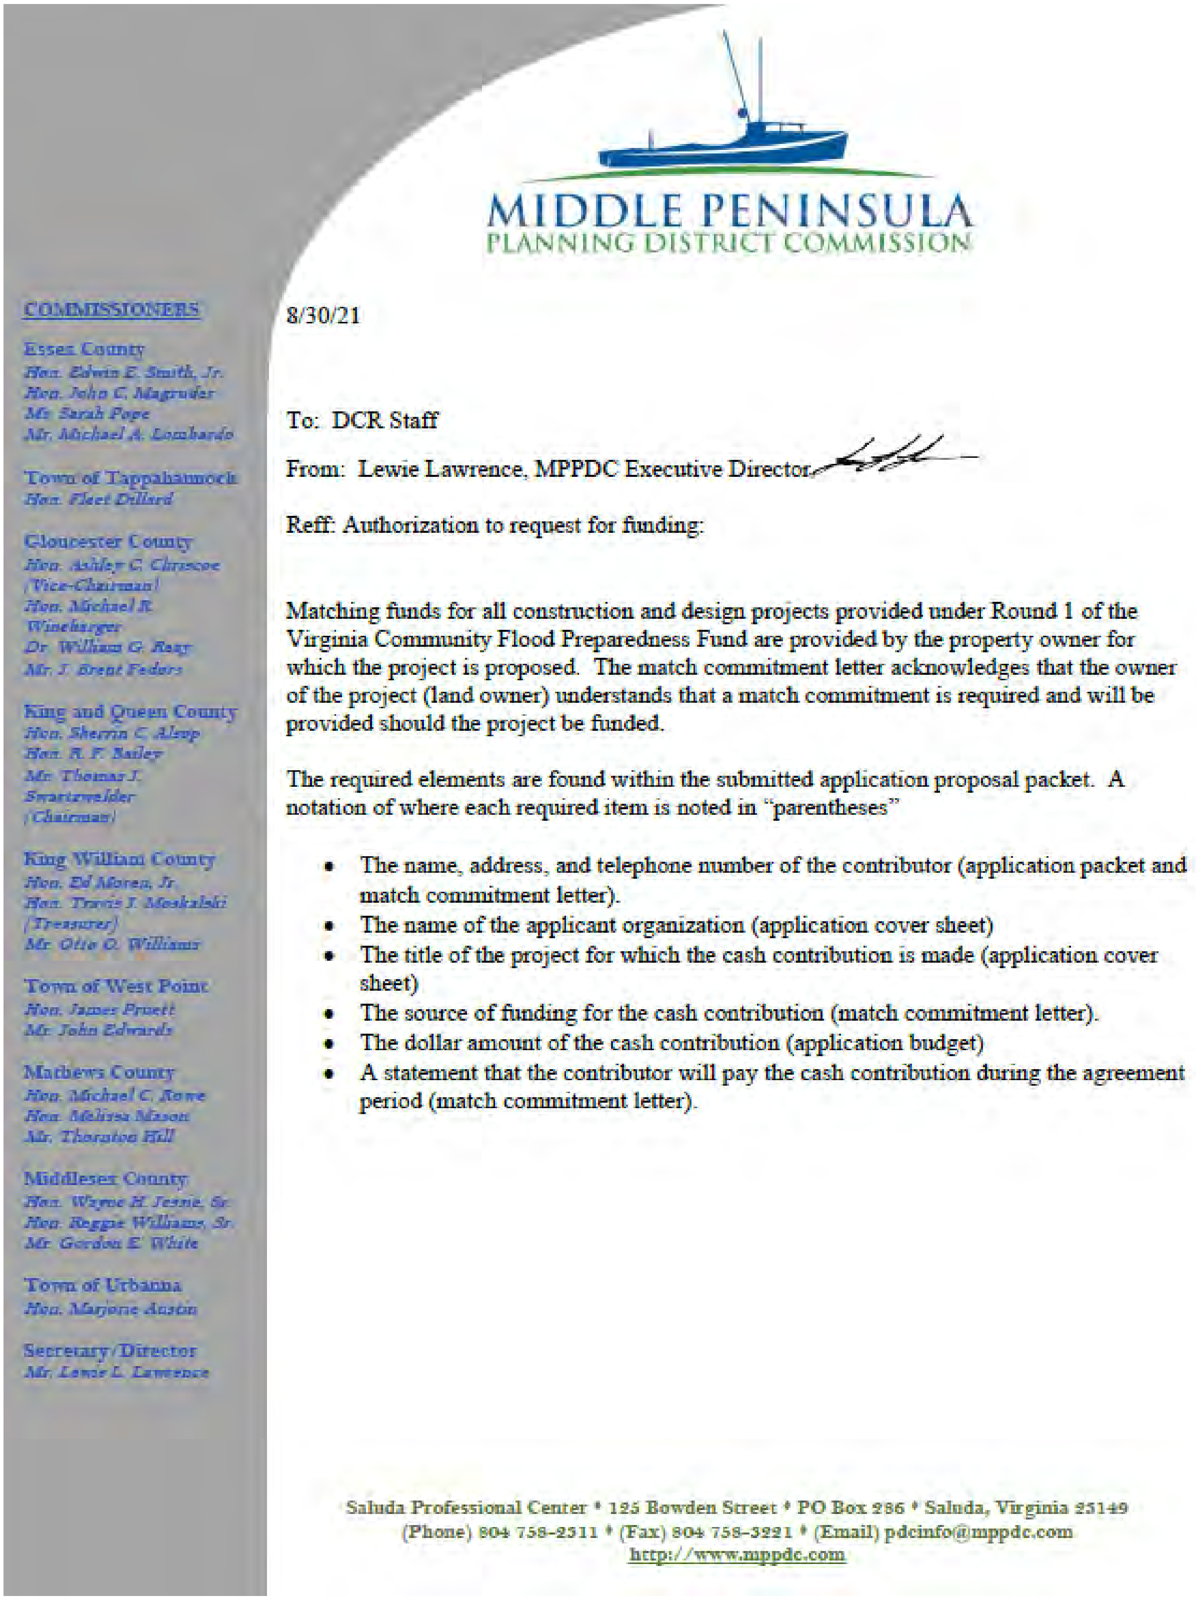
Attachment 12: Authorization to request for funding



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Parker Shoreline Construction** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

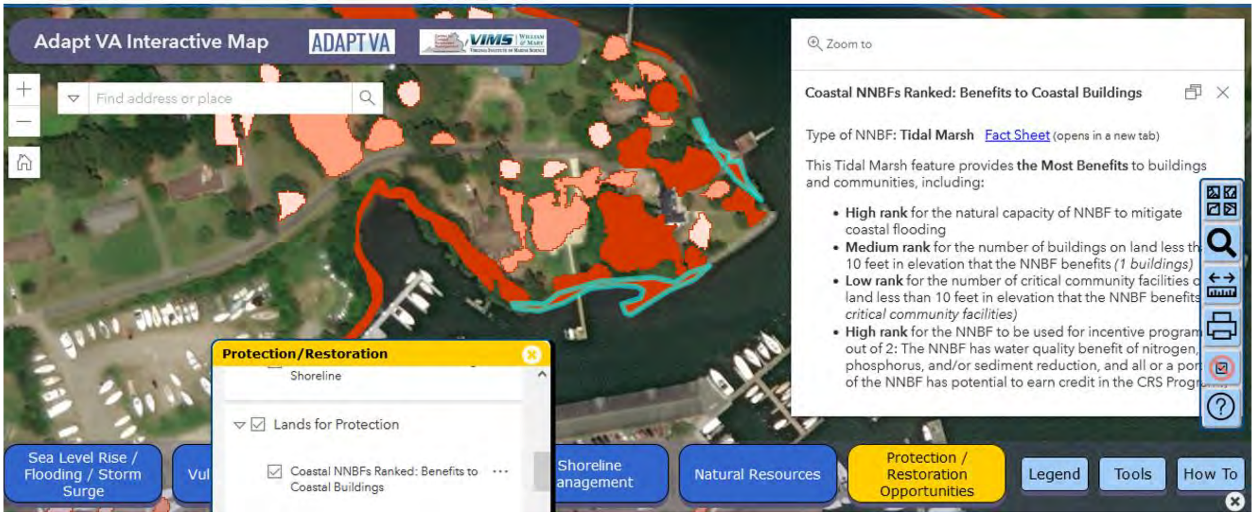
Issue #2

DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, “Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines “Community Scale project” which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving “demonstrable flood reduction” benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based “brick in the wall” and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit. The owner mentions the following as well. The property is adjacent to the last navigational aid on this branch of the creek -Green Day mark “11”. This location is a choke point for the remainder of the creek . Continued erosion of the shoreline from flooding ,sea level rise and storms will impact the navigability of this creek . The channel is on the project side of the creek . The channel will continue to silt in . This has some major impact to the remaining property owners on the creek



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **Medium rank** for the number of buildings on land less th 10 feet in elevation that the NNBF benefits *(1 buildings)*
- **Low rank** for the number of critical community facilities c land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Progr

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes __X__ **No** ____

Project Grants (Check All that Apply)

☐ **Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.**

☑ **Wetland restoration.**

☑**Floodplain restoration.**

☐ Construction of swales and settling ponds.

☑Living shorelines and vegetated buffers.

☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.

☐ Storm water system upgrades.

☐ Medium and large-scale Low Impact Development (LID) in urban areas.

☐ Permanent conservation of undeveloped lands identified as having flood resilience value by ConserveVirginia Floodplain and Flooding Resilience layer or a similar data driven analytic tool.

☐ Dam restoration or removal.

☑ Stream bank restoration or stabilization.

☐ Restoration of floodplains to natural and beneficial function.

☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Gloucester County
NFIP Community Identification Number (CID#) (See appendix F): 510071

Is Project Located in an NFIP Participating Community? ☑ Yes ☐ No
Is Project Located in a Special Flood Hazard Area? ☑ Yes ☐ No Flood Zone(s) (If Applicable): AE Zone
Flood Insurance Rate Map Number(s) (If Applicable): 51073C0213E

Total Cost of Project: **$91,564**

Total Amount Requested: **$73,252**

INTRODUCTION –
FEMA, Virginia General Assembly, DCR's Floodplain Management Program, and the Middle Peninsula PDC all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes and territories and the citizens which reside and work there. These hazards include flooding, drought, hurricanes, landslides, wildfires and more. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program (www.FightTheFloodVA.com). This proposal is a Nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features or processes into the built environment to promote adaptation and resilience. Further, this proposal incorporates natural features and processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. These benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life (*FEMA Building Community Resilience with Nature Based Solutions,* June 2021).

Specifically, this project proposes to construct a nature-based solution on a private property located on Sarah's Creek in Gloucester County. The nature-based solution will involve the installation of 115 linear feet of rock sills and 150 linear feet of living shoreline (i.e., clean sand nourishment and spartina plantings). This project will be a partnership between the MPPDC and one private property owner and is supported by Gloucester County (See the community support letter in Attachment 1).

PROJECT LOCATION INFORMATION – This project proposes to install living shorelines on one private property on Sarah's Creek in Gloucester County (**Figure 1 and 2**).

FIGURE 1: COUNTY MAP OF PROJECT LOCATION.

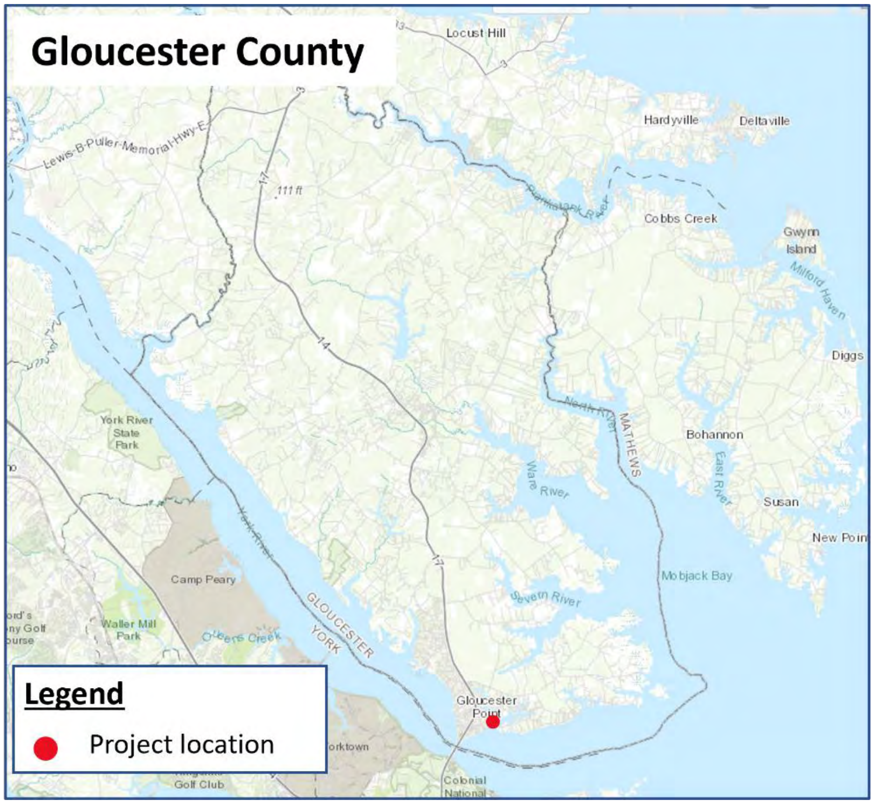

FIGURE 2: PARCEL MAP OF PROJECT LOCATION.

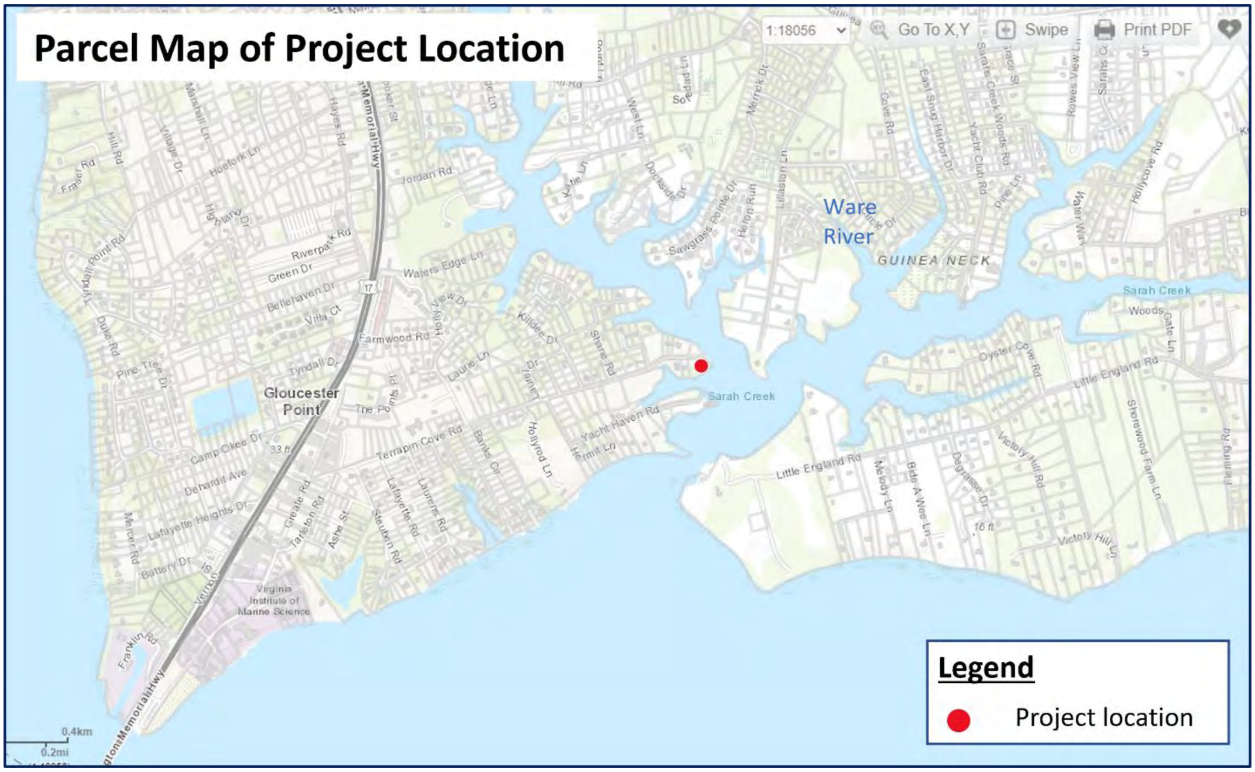
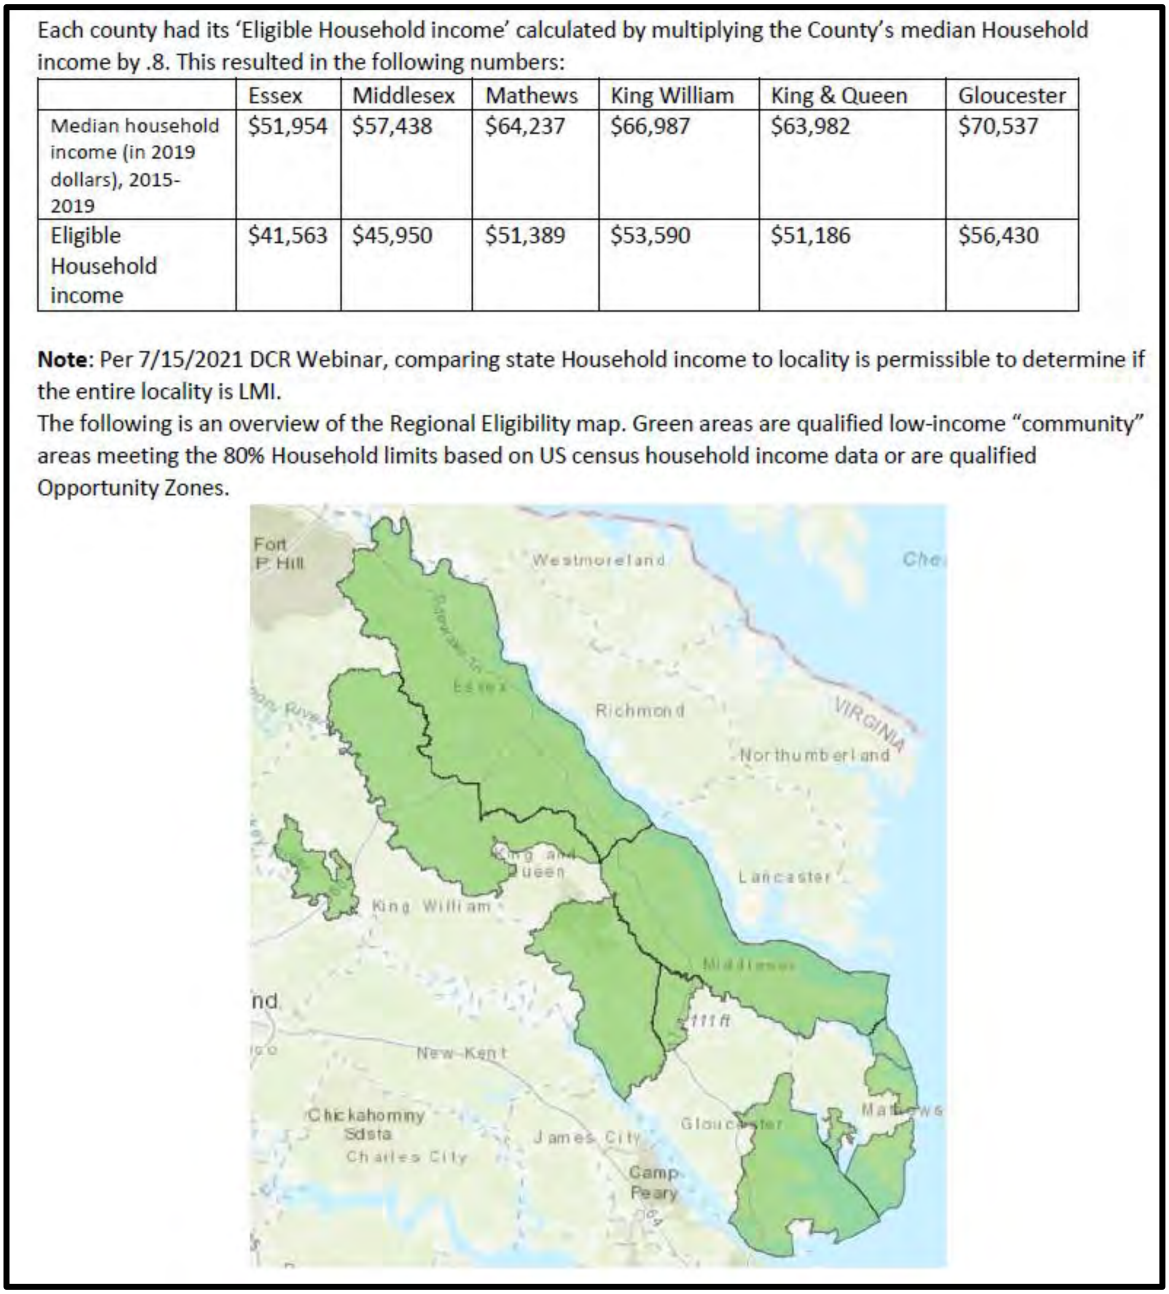


Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 3** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

FIGURE 3: MAP OF MIDDLE PENINSULAS LOW INCOME GEOGRAPHIC AREAS QUALIFYING UNDER DCR GUIDELINES.



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

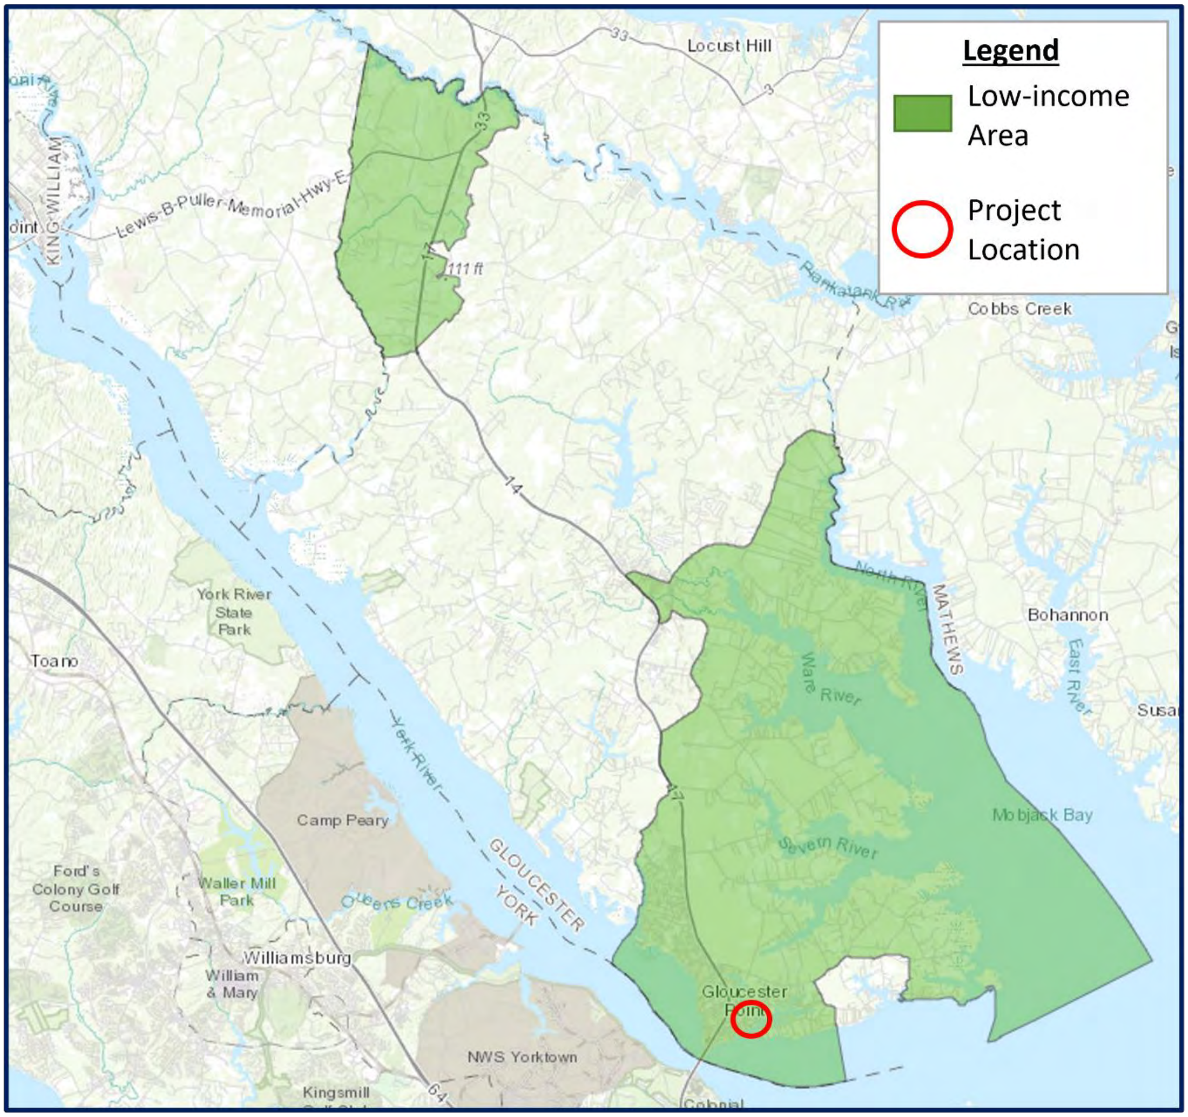
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

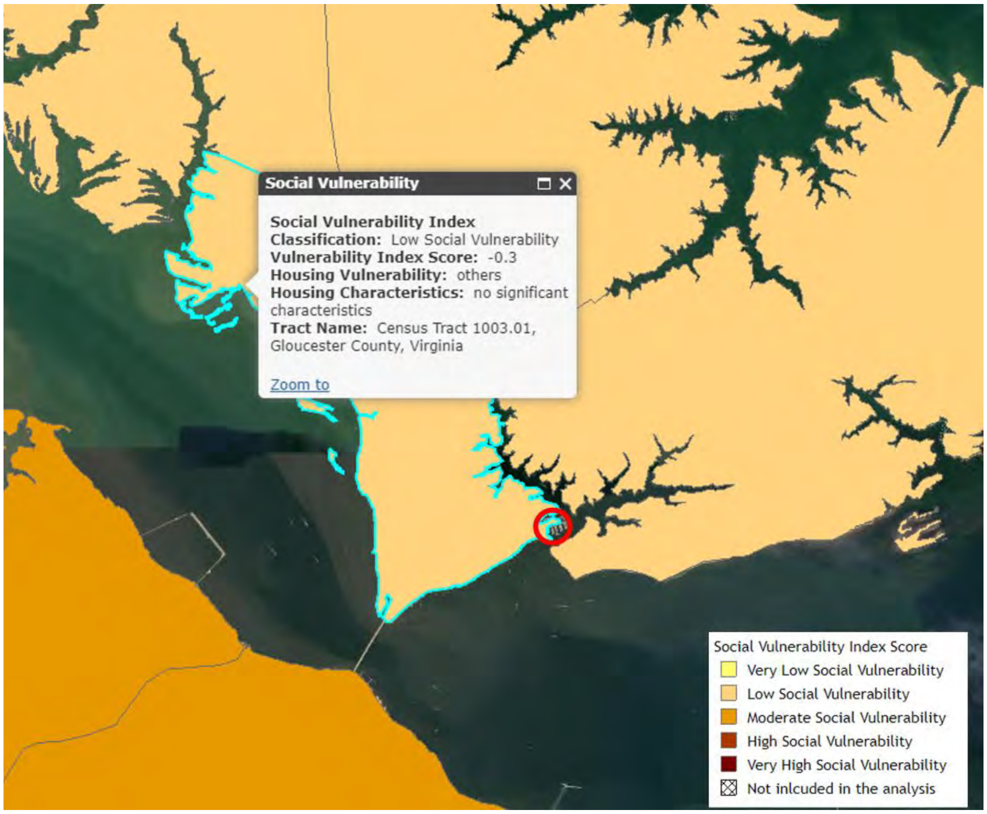
Please see **Figure 4** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

FIGURE 4: MAP OF THE PROJECT LOCATION WITHIN THE GREEN LOW-INCOME AREA.



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a low social vulnerability score (**Figure 5**). MPPDC is perplexed by the designation of the project area being automatically recognized as low income under the Community Flood Preparedness Fund Guidelines as an Opportunity Zone (**Figure 6**), identifying census tracts in the most in need, economically distressed and low-income communities while simultaneously the VA Social Vulnerability score of the exact same area reports a low social vulnerability score of -.03. MPPDC assumes the Opportunity Zone designation trumps the VA Social Vulnerability score in this case.

FIGURE 5: VIRGINIA'S SOCIAL VULNERABILITY INDEX SCORE MAP FOR THE PROJECT LOCATION.



Social Vulnerability

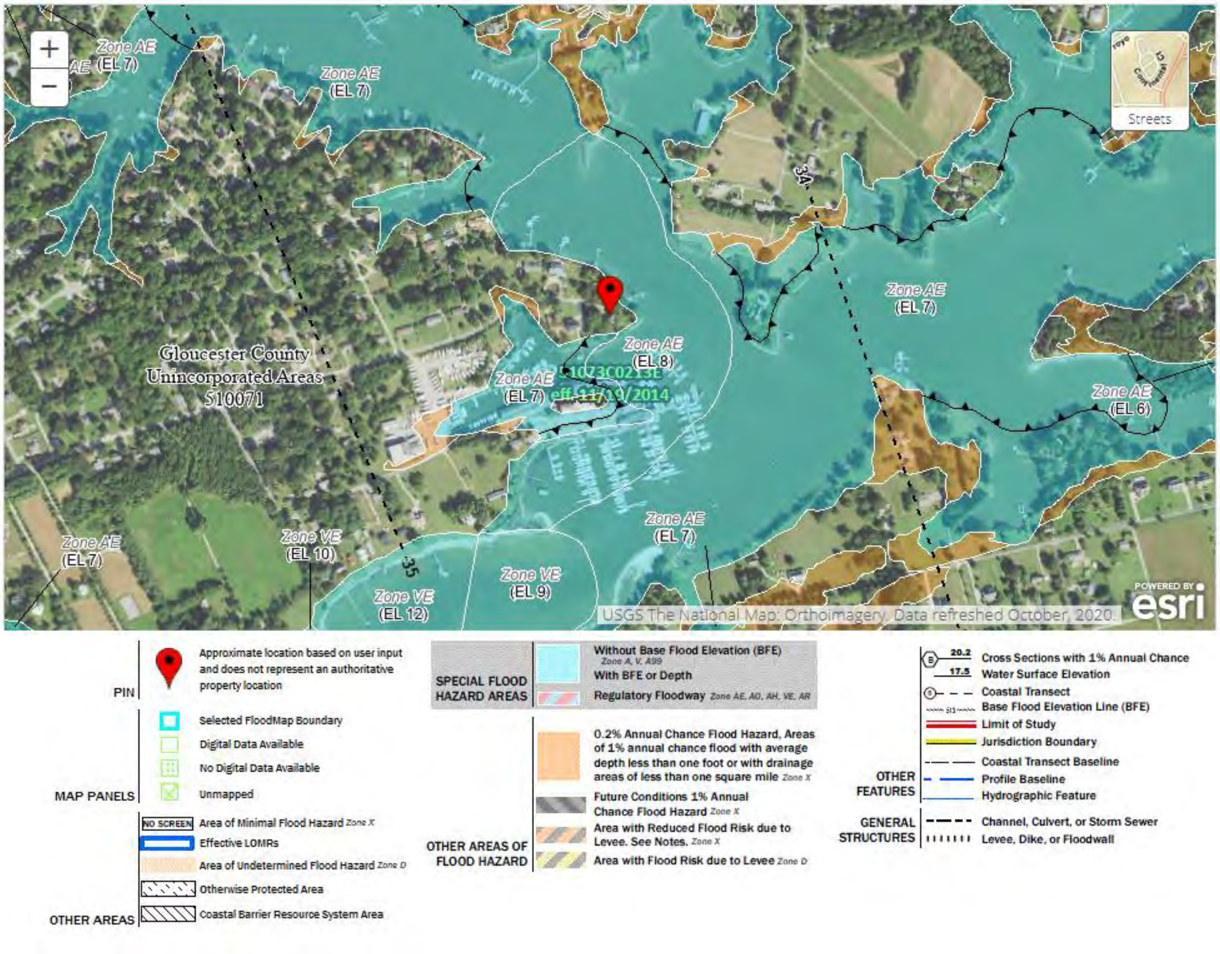
Layer List

Layers

☑ Designated Qualified Opportunity Zone
☐ Roads over Aerial
☐ Aerials

The project is located at 8106 Terrapin Cove Road Gloucester Point, VA 23062 (37.258058, -76.479883). A 115-linear feet sill and 150 linear feet of living shoreline, including sand nourishment and plantings will be constructed. Within the project area there are 2 structures on the property including 1 residential home and 1 detached garage. The structures are not identified as severe repetitive loss structure or repetitive loss structures. This site is located within the AE flood zone (**Figure 7**). Please see **Attachment 2** for the FIRMettes (last mapped 11/19/2014).

FIGURE 7: MAP OF FEMA FLOOD ZONES.

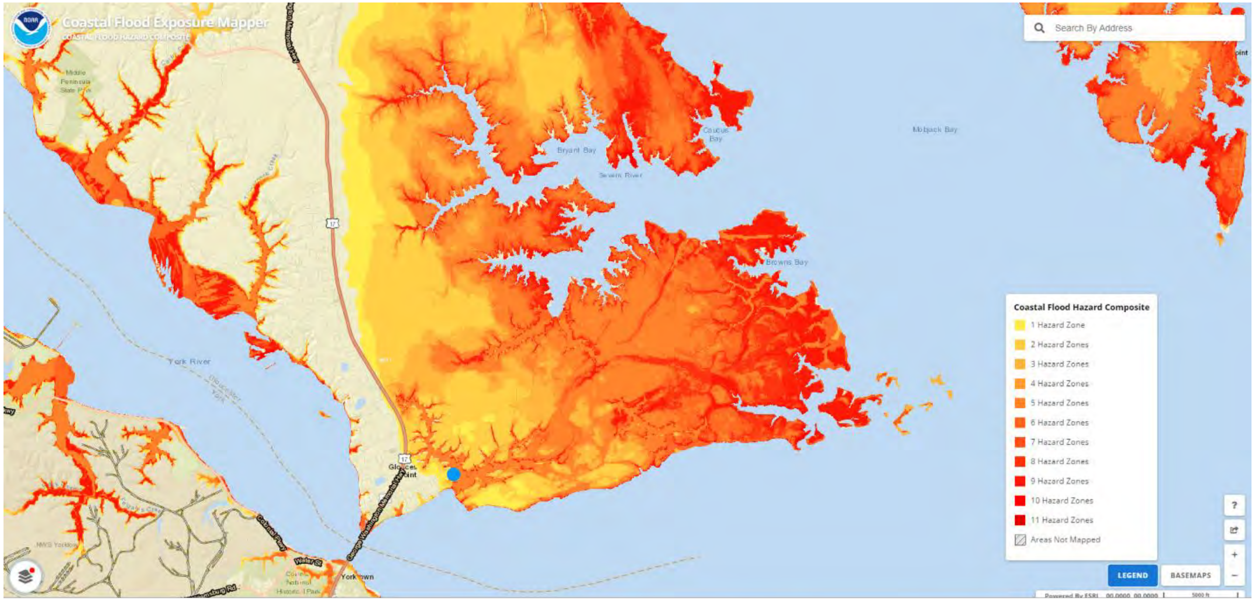


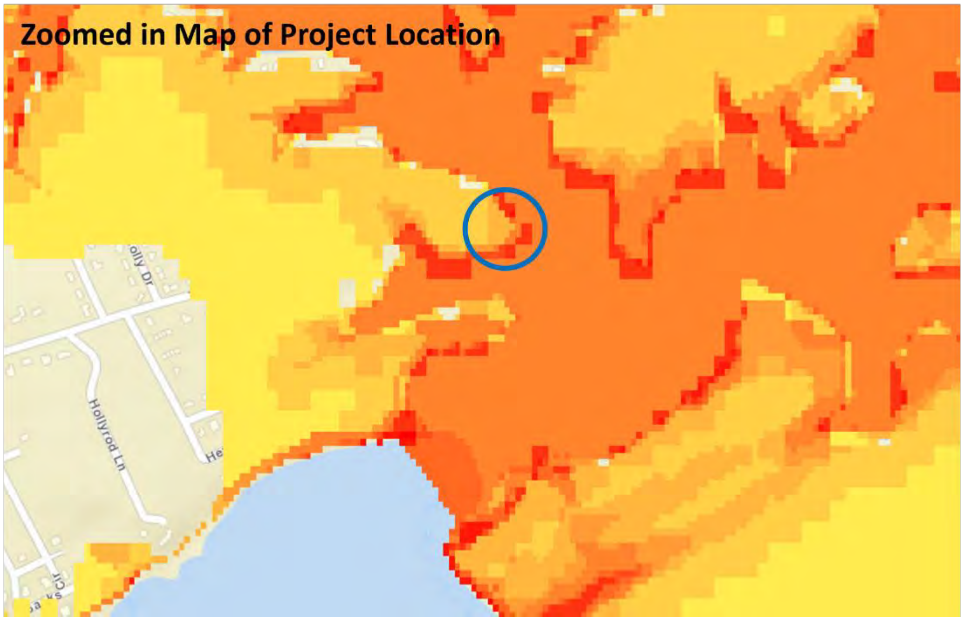
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 8** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 6,345.5 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Attachment 3** lists 87 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

FIGURE 8: PROJECT LOCATION AND MAP OF THE SHORELINE CHANGE BETWEEN 1937 AND 2017. PLEASE NOTE THAT THE PROJECT AREA PARCEL IS OUTLINED IN WHITE.

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding (**Figure 9**).

FIGURE 9: MAP OF PROJECT LOCATION AND RISK OF COASTAL FLOODING (NOAA, 2021).





For more information about this project area please see:

- The Middle Peninsula All Hazards Mitigation Plan identifies all hazards that impact the region - https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf .
- Gloucester County Building and Engineering Department administers the NFIP. Here is the link to the current floodplain ordinance: http://gloucestercounty-va.elaws.us/code/coor_ch8.5

NEED FOR ASSISTANCE –
The Middle Peninsula Planning District Commission (MPPDC) is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 to provide solutions to problems of greater than local significance and cost-savings through economies of scale. The MPPDC serves nine localities of the Middle Peninsula including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna.

MPPDC is staffed using multiple methods including co-operative procurement, hourly, and burdened staff. MPPDC staff consists of Executive Director, Deputy Director, Chief Financial Officer, Senior Project Planner, clerical support staff; co-operative procured Director of Planning, General Planner, Certified Flood Plain Manager, Transportation Planner, Emergency Planner; Hourly staff for Housing, Community Development Planner and Public relations.

The PDC staffing team assists localities with long-term and/or regional planning efforts. The MPPDC Executive Director, Deputy Director, and Chief Financial Officer have decades of experience in managing and administering project grants at multiple scale from grants in excess of $1,000,000 to very small grants. MPPDC is an entrepreneurial based government agency with an annual operating budget ranging from $750,000 to over $1,000,000. The MPPDC manages annually 25-30 concurrent federal and state grants utilizing industry standard Grants Management Software. Staff utilize GIS and all Microsoft software as well as other software as required by different grants. The MPPDC operates service centers in the topical areas of coastal zone management, emergency planning, housing, transportation planning and transportation demand management, economic development, social assistance, small business development, general planning and technical assistance and other areas as determined by the Commission. MPPDC has over 25 years of experience managing multiple revolving loan programs. In the 25 years that the Executive Director has been employed by the Commission no audit findings have occurred.

The need for assistance is two-fold.

First, as Gloucester County is near the Chesapeake Bay and numerous tidal rivers that create an area of high risk of coastal flooding, sea-level rise, and storm surge. Based on tidal gauge data from VIMS, relative sea- level rise rates ranging from 0.11-0.23 in./yr. (2.9-5.8 mm/yr.; period: 1976-2007; 10 stations) within the Chesapeake Bay region, which are the highest rates reported along the U.S. Atlantic coast (Boon et. al., 2010). In addition to sea-level rise, Gloucester County has a history of being impacted by hurricanes and tropical storms. As storms pass over or near the coast, the atmospheric pressure drops, causing a large volume of sea water to build up, eventually being pushed ashore by the storm's winds causing a storm surge. In Gloucester County, strong East and Northeast winds can push water from the Chesapeake Bay into the mouth of the York and Rappahannock Rivers and Mobjack Bay, flooding much of the county's low-lying areas (Middle Peninsula Planning District Commission, 2005). Additionally, when a storm makes landfall at high tide, the storm surge and the added water from the tidal fluctuation combine to create a "storm tide". In Gloucester County, tidal waters fluctuate twice daily from 1.2 feet above mean sea level to 1.2 feet below (FEMA 1987, 6). If a severe hurricane were to make landfall during high tide, and additional 1.2 feet of water would be added to the highest storm surge possible, which could create a storm tide of 16.2 feet (Rygel, 2005). Nor'easters, like hurricanes and tropical storms, can dump heavy amounts of rain and produce hurricane-force winds that push large amounts of sea water inland. According to a study conducted by the Center for Coastal Resources Management, a one-and-a-half-foot rise in sea level coupled with a three-foot storm surge, like what would be experienced in a strong tropical storm, would lead to 13% of Gloucester County's land mass being flooded – including 118 miles of roads. Only 3% of the projected flood area is currently developed. A strong indicator that Gloucester County is experiencing the impact of coastal hazards (i.e., flooding, hurricanes, sea-level rise, and storm surge) is the number of repetitive loss and severe repetitive loss claims submitted by residents and businesses to FEMA. As of 2015, the County had 147 repetitive loss properties with claims topping $3.3 Million and 13 severe repetitive loss properties with claims totaling nearly $1.9 Million. The County has implemented several preventative measures, property protection policies, public information activities, and emergency service measures to decrease impacts on communities. Therefore, this project will build on other local efforts move toward becoming a more resilient community.

Second, at this project location, the shoreline is experiencing erosion and undercutting of the bank. This threatens mature oak trees on the shoreline. At the Parker property the bulkhead is severely damaged and the beach in front of the bulkhead is eroding due to rising sea levels and flooding events. This area was once vegetated with marsh grasses, but with excessive and recurrent flooding the grasses have died. This has reduced habitat for wildlife and has created an unstable shoreline. Additionally, large oak trees sit on top of the bulkhead and in the RPA. They help hold the soil and land in place. Without offering this section of shoreline some protection with the installation of a nature-based shoreline protection solution the trees will most certainly be lost in the very near future. This will ultimately bring water closer to the structures on the property. Please see **Figure 10** for project location photos and **Attachment 4** for more photos.

FIGURE 10: PHOTOS OF THE PARKER PROPERTY.

Exposed and eroding beach

Damaged bulkhead and exposed beach

ALTERNATIVES –

Alternatives are not applicable to this project. A living shoreline is feasible at this location and therefore required per VMRC regulations. This project employs a nature-based solution, and this project cost is not greater than $3 Million.

GOALS AND OBJECTIVES –

This project will install a nature-based solution consisting of 115 linear Feet of rock sills and 150 linear feet of living shoreline (i.e., clean sand nourishment and spartina plantings). This project will reduce erosion and stabilize the shoreline. The installation of a nature-based solution will also help to protect the large oak trees that hold the soil and bank in place. The nature-based solution will be installed as designed and permitted through the JPA process. Please see the permit package for each site within the project area in **Attachment 5**.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.
Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based approach.
Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode.

Goal 2: Improve water quality
Objective A: Construct a living shoreline to capture nitrogen, phosphorus, and sediment.

Goal 3: Transferability to other communities.
Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

The MPPDC anticipates that the living shoreline installed at this project location will:

1. **Stabilize the shoreline and reduce the overall erosion rate at the project location**. According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

2. **Provide ecosystem services to the community.** Since this project is proposing the installation of living shorelines, this project will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year

(lb./lf./yr.) and a phosphorus removal rate of 0.00861 lbs./lf./yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb./lf./yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

3. **Prevent loss of property and life.** As the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

APPROACH, MILESTONES, AND DELIVERABLES –

This project will follow the designs outlined and approved in the Joint Permit Application. Please see **Attachment 5** for the JPA application, Design, and Permit Package. The below table outlines the components of the nature-based solution and what will be installed at the project location, as permitted by Virginia Marine Resource Commission (VMRC).

	Total Project Location
Rock Sills	115 Linear Feet (LF)
Sand Nourishment	250 cubic yards
Spartina Plantings	1,500 square feet

The anticipated timeline for this project could be as quick as 1 year, but no more than two years. The timeline range is due to the potential delays in the construction industry or delays caused by COVID, including supply shortages. Having a two-year timeline will offer potential windows for planting the living shoreline - one in 2022 and one in 2023. To explain, the Chesapeake Bay Foundation recommends that perennials and grasses for living shorelines should be planted during peak growing season (in mid-to-late summer) to allow enough time for their root systems to become established before they go dormant in the late Fall. Trees and shrubs should be planted in Spring and Fall when there is adequate rainfall to help them develop strong roots and leafy growth.

Below is the project timeline and project milestones for this project.

Receive funding notice - October 2021
Coordinate with property owners and the project contractor Shoreline Structures, LLC to review project timeline and project expectations – October 2021

Initiate site preparation at the project location - November 2021 to May 2022
Construction of the living shoreline – June 2022 to September 2022
Project Close out – November 2022

RELATIONSHIP TO OTHER PROJECTS –

For over 40 years the Middle Peninsula Planning District Commission (MPPDC) and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e. hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

The proposed project is a priority project generated from the Middle Peninsula Regional Flood Resilience Plan, which was approved by DCR during August 2021. The Flood Resiliency Plan serves as the MPPDC's guiding document for its flood resiliency programs and is comprised of two primary MPPDC-approved policy documents which form the implementation and foundation of the Middle Peninsula flood protection approach and are indirectly and directly supported by multiple specific regional planning documents, both approved by various required federal, regional, or local partners as required by statute.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan, FEMA and Middle Peninsula locality approved 2016 (MPPDC Website)
- The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy, MPPDC Approved March 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan - MPPDC Approved ~annually

Short Term Implementation

- Middle Peninsula Planning District Commission Fight the Flood Program Design MPPDC Commission (approved June 2020 Chairman approved 8/6/21 update)
- Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program-Virginia Revolving Loan Fund Program Design and Guidelines (approved 2015)

As the MPPDC has continuously worked on flooding and coastal resiliency topics, **Attachment 6** lists the projects and short description of relevant projects. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the MPPDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The MPPDC Commission authorized staff to develop the **Middle Peninsula Fight the Flood (FTF) Program.** This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula **FTF** program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, MPPDC staff have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline.

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN –

The approved VMRC permits does not require a maintenance plan; therefore, the maintenance of this construction project will be in accordance with the permit requirements.

CRITERIA –

Describe how the project meets each of the applicable scoring criteria containedin Appendix B and provide the required documentation where necessary. Documentationcan be incorporated into the Scope of Work Narrative or included as attachments to the application. Appendix B must be completed and submitted with the application.

For local governments that are not towns, cities, or counties, the documentation providedfor the criteria below should be based on the local government or local governments in which the project is located and/or directly impacts.

1. **Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?**
   YES.
2. **Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?**
   YES. Here’s the link: https://fighttheflood va.com/wp-

content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf

3. **For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?**
   YES. Please see Attachment 1
4. **Has the applicant provided evidence of an ability to provide the required match funds?**
   YES. Please see the match commitment letter in **Attachment 8**
5. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?**
   YES.

BUDGET NARRATIVE -

Below is the estimated budget for the proposed flood prevention and protection construction project that will result in a nature-based solution located in a low-income geographic area. Therefore, MPPDC staff is requesting 80% funding from DCR and will provide 20% match. Please see match commitment letters from the property owners in **Attachment 11**.

			DCR (80%)	Match from Owner (20%)	Project Total
Project Management Costs					
	Personnel		$ 6,745	$ 1,686	$ 8,431
	Fringe (26.58% on Salaries)		$ 1,793	$ 448	$ 2,241
SubAward/SubContract Agreement					
	Parker	*115 LF rock Sill*	$ 29,440	$ 7,360	$ 36,800
	Parker	*Sand Nourishment 250 cyds*	$ 15,000	$ 3,750	$ 18,750
	Parker	*Filter Fabric*	$ 2,240	$ 560	$ 2,800
	Parker	*Marsh Access. Timber Mats*	$ 2,000	$ 500	$ 2,500
	Parker	*Spartina Plantings*	$ 2,600	$ 650	$ 3,250
	Parker	*Site Access. Tree Removal, Sand Access Road to Water*	$ 2,800	$ 700	$ 3,500
	Parker	*Remove Access road and restore yard*	$ 2,240	$ 560	$ 2,800
	Parker	*Permits*	$ 600	$ 150	$ 750
Indirect/IDC/Facilities & Administrative Costs (27.31%)			$ 7,794	$ 1,948	$ 9,742
Project totals			$ 73,252	$ 18,312	$ 91,564

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment.

Also please note that the cost estimates for the construction of this project were supplied by the contractor, Shoreline Structures, LLC. Please see **Attachment 7**.

In summary:
Estimated total project cost: $91,564
Amount of funds requested from the Fund (80% project total): $73,252
Amount of cash funds available (20% project total): $18,312

Finally, please see the authorization to request for funding in **Attachment 9.**

Appendix B: Scoring Criteria for Flood Prevention andProtection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Middle Peninsula Planning District Commission	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		☑ **Yes** ☐ **No**
Applicant Name:	Middle Peninsula Planning District Commission	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	0
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		120

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

7. Give the following project location information:
Street Address (911 address if available) 8106 Terrapin Cove Rd.
Lot/Block/Parcel# 51-71
Subdivision Lot E Newbill Subdivision
City / County Gloucester Point Zipcode 23062
Latitude and Longitude at Center of Project Site (Decimal Degrees):
If the project is located in a rural area, please provide driving directions.

Rt 17 @ Gloucester Point, Terrapin Cove Rd.
To dead end, 8106 straight ahead.

Note: if the project is in an undeveloped subdivision or property, clearly stake and identify property lines and location of the proposed project. A supplemental map showing how the property is to be subdivided should also be provided.

Part 1 - General Information (continued)

12. Is this application being submitted for after-the-fact authorization for work which has already begun or been completed? ___Yes [✓ No]. If yes, be sure to clearly depict the portions of the project which are already complete in the project drawings.

13. Approximate cost of the entire project (materials, labor, etc.): $ [redacted]. TBD
Approximate cost of that portion of the project which is below mean low water: $ [redacted]. TBD

14. Completion date of the proposed work: Sumer 2020 -

15. Adjacent Property Owner Information: List the name and complete mailing address, including zip code, of each adjacent property owner to the project. (NOTE: a property owner/applicant cannot be their own adjacent property owner. You must give the next owner down the river, creek, etc).

Left side: David J. Newcomber, 8105, Terrapin Cove road., Gloucester point, va 23062.

Right side: Jon and Rachel Sgroi, 8090 Terrapin Cove Road, Gloucester Point, Va 23062

Part 2 - Signatures

1. Applicants and property owners (if different from applicant).
NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, USACE, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.
In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

CONTRACTOR ACKNOWLEDGEMENT

I (we), PARKER, have contracted Shoreline Structures, LLC
(Applicant's legal name(s)) (Contractor's name(s))
to perform the work described in this Joint Permit Application, signed and dated 2-23-21.

We will read and abide by all conditions set forth in all Federal, State and Local permits as required for this project. We understand that failure to follow the conditions of the permits may constitute a violation of applicable Federal, state and local statutes and that we will be liable for any civil and/or criminal penalties imposed by these statutes. In addition, we agree to make available a copy of any permit to any regulatory representative visiting the project to ensure permit compliance. If we fail to provide the applicable permit upon request, we understand that the representative will have the option of stopping our operation until it has been determined that we have a properly signed and executed permit and are in full compliance with all terms and conditions.

Part 3 – Appendices (continued)

Appendix B: Projects for Shoreline Stabilization in tidal wetlands, tidal waters and dunes/beaches (including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, etc). Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service.

NOTE: Information on non-structural, vegetative alternatives (i.e. Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html .

1. For **riprap, bulkheads, marsh toe, breakwaters, groins, jetties**: What is the overall length of the structure(s)? 115 linear feet. If applicable, what is the volume of the associated backfill? Na cubic yards.

2. What is the maximum encroachment channelward of mean high water? 21 feet.
channelward of mean low water? 13 feet.
channelward of the back edge of the dune or beach? Na feet.

3. Please calculate the square footage of encroachment over:
   - Vegetated wetlands 0 square feet
   - Nonvegetated wetlands 1250 square feet
   - Subaqueous bottom 680 square feet
   - Dune and/or beach Na square feet

B.N. = 400
sill = 850 — 1250

sill = 530
BN = 150 — 680

4. For bulkheads, is any part of the project maintenance or replacement of a previously authorized, currently serviceable, existing structure? ____ Yes ____ No.

   If yes, will the construction of the new bulkhead be no further than two (2) feet channelward of the existing bulkhead? _____Yes ____No.

   If no, please provide an explanation for the purpose and need for the additional encroachment.

5. Describe the type of construction and **all** materials to be used, including source of backfill material, if applicable (e.g. vinyl sheet-pile bulkhead, timber stringers and butt piles, 100% sand backfill from upland source; broken concrete core material with Class II quarry stone armor over filter cloth). **NOTE: Drawings must include construction details, including dimensions, design and all materials, including fittings if used.**

   Quarry stone sills
   Coarse, clean beach grade sand as nourishment

6. If using stone, broken concrete, etc., for your structure(s), what is the average weight of the:
   Core (inner layer) material 1-25 pounds per stone Class size surge &A1
   Armor (outer layer) material 50-500 pounds per stone Class size 1 & 2

Part 3 – Appendices (continued)

7. For **beach nourishment**, including that associated with breakwaters, groins or other structures, provide the following:

- Volume of material 75 cubic yards channelward of mean low water
  175 cubic yards landward of mean low water
- Area to be covered 150 square feet channelward of mean low water
  400 square feet landward of mean low water
- Source of material, composition (e.g. 90% sand, 10% clay): Local pit,
- Method of transportation and placement: Truck, heavy equipment
- Describe any proposed vegetative stabilization measures to be used, including planting schedule, spacing, monitoring, etc.:
  Spartina pattens & alternaflora 18" o.c. Where appropriate

COMMONWEALTH OF VIRGINIA
MARINE RESOURCES COMMISSION
PERMIT

The Commonwealth of Virginia, Marine Resources Commission, hereinafter referred to as the Commission, on this 29th day of April 2021 hereby grants unto:

Todd Parker
8100 Terrapin Cove Road
Gloucester Point, VA 23062

hereinafter referred to as the Permittee, permission to:

X Encroach in, on, or over State-owned subaqueous bottoms pursuant to Chapter 12, Subtitle III, of Title 28.2 of the Code of Virginia.

___ Use or develop tidal wetlands pursuant to Chapter 13, Subtitle III, of Title 28.2 of the Code of Virginia.

Permittee is hereby authorized to install two (2) rock sills, 35 and 80 feet in length, with clean sand fill and plantings along Sarah's Creek at 8106 Terrapin Cove Road in Gloucester County. All activities authorized herein shall be accomplished in conformance with the plans and drawings dated received February 24, 2021, which are attached and made a part of this permit.

This permit is granted subject to the following conditions:

(1) The work authorized by this permit is to be completed by **April 30th, 2024.** The Permittee shall notify the Commission when the project is completed. The completion date may be extended by the Commission in its discretion. Any such application for extension of time shall be in writing prior to the above completion date and shall specify the reason for such extension and the expected date of completion of construction. All other conditions remain in effect until revoked by the Commission or the General Assembly.

(2) This permit grants no authority to the Permittee to encroach upon the property rights, including riparian rights, of others.

(3) The duly authorized agents of the Commission shall have the right to enter upon the premises at reasonable times, for the purpose of inspecting the work being done pursuant to this permit.

(4) The Permittee shall comply with the water quality standards as established by the Department of Environmental Quality, Water Division, and all other applicable laws, ordinances, rules and regulations affecting the conduct of the project. The granting of this permit shall not relieve the Permittee of the responsibility of obtaining any and all other permits or authority for the projects.

(5) This permit shall not be transferred without written consent of the Commissioner.

(6) This permit shall not affect or interfere with the right vouchsafed to the people of Virginia concerning fishing, fowling and the catching of and taking of oysters and other shellfish in and from the bottom of acres and waters not included within the terms of this permit.

(7) The Permittee shall, to the greatest extent practicable, minimize the adverse effects of the project upon adjacent properties and wetlands and upon the natural resources of the Commonwealth.

(8) This permit may be revoked at any time by the Commission upon the failure of the Permittee to comply with any of the terms and conditions hereof or at the will of the General Assembly of Virginia.

(9) There is expressly excluded from the permit any portion of the waters within the boundaries of the Baylor Survey.

(10) This permit is subject to any lease of oyster planting ground in effect on the date of this permit. Nothing in this permit shall be construed as allowing the Permittee to encroach on any lease without the consent of the leaseholder. The Permittee shall be liable for any damages to such lease.

(11) The issuance of this permit does not confer upon the Permittee any interest or title to the beds of the waters.

(12) All structures authorized by this permit, which are not maintained in good repair, shall be completely removed from State-owned bottom within three (3) months after notification by the Commission.

(13) The Permittee agrees to comply with all of the terms and conditions as set forth in this permit and that the project will be accomplished within the boundaries as outlined in the plans attached hereto. Any encroachment beyond the limits of this permit shall constitute a Class 1 misdemeanor.

(14) This permit authorizes no claim to archaeological artifacts that may be encountered during the course of construction. If, however, archaeological remains are encountered, the Permittee agrees to notify the Commission, who will, in turn notify the Department of Historic Resources. The Permittee further agrees to cooperate with agencies of the Commonwealth in the recovery of archaeological remains if deemed necessary.

(15) The Permittee agrees to indemnify and save harmless the Commonwealth of Virginia from any liability arising from the establishment, operation or maintenance of said project.

The following special conditions are imposed on this permit:

(16) The placard accompanying this permit document must be conspicuously displayed at the work site.

(17) Permittee agrees to notify the Commission upon the start of the activities authorized by this permit.

Description of Fees	Amount	Unit of Measure	Rate	Total	Frequency	After-The-Fact

RE: **VMRC #21-0440**

Dear Mr. Parker:

On April 14, 2021, the Gloucester County Wetlands Board approved your joint permit application as submitted granting authorization to install 115 LF rock sills, 250 cubic yards beach grade sand nourishment and spartina plantings at 8106 Terrapin Cove Road Gloucester, VA 23062.

Your Wetland Permit will be available to your agent/contractor at the Office of Environmental Programs, unless an appeal of the Board's decision or other delaying actions are filed with or by the Virginia Marine Resources Commission within ten (10) days.

If you have any questions concerning this letter you may contact Ron Owens at 804-693-1217 during our regular office hours, Monday – Friday from 8 a.m. to 4:30 p.m.

Respectfully,
Walter Priest

Cost Estimate:

Living Shore Line project, VMRC: 21-0440

Project Description & Costs:

1.	115L.F. of Rock Sill, 12' base	$ 36,800.
2.	250 c.yds. of sand nourishment	$ 18,750.
3.	Filter fabric if desired	$ 2,800.
4.	Marsh access, timber mats	$ 2,500.
5.	Spartina plantings: pattens & alternaflora	$ 3,250.
6.	Site access, tree removal, construct sand access road down bank	$ 3,500.
7.	Remove access road, restore site/yard	$ 2,800.
8.	Permits	$ 750.
	Job Total =	$ 71,150.

Project material list/quantities

1. (Armor) stone, class 1 & 2 : 225 tons combined.
2. (Core)stone: 80 tons
3. Beach grade sand/nourishment: 250 cubic yards
4. Spartina plants: #1500

These material cost are good for 90 days.
20% deposit to hold spot on our construction calendar.

Gloucester County Wetlands Board
Gloucester County, Virginia
Wetlands Permit

VMRC # 2021-0440

Pursuant to Chapter 13 of Title 28.2, as amended, of the *Code of Virginia* the County of Gloucester, Wetlands Board, hereinafter referred to as the Board, on this 14th day of April, 2021 hereby grants unto **Todd Parker** hereinafter referred to as the permittee(s) permission to: install 115 LF rock sills, 250 cubic yards beach grade sand nourishment and spartina plantings at 8106 Terrapin Cove Road Gloucester, VA 23062.

In conformance with attached drawings dated February 24, 2021.

This permit is granted subject to the following terms and conditions: **approved as submitted.**

The work authorized by this permit shall be completed by **April 14, 2024** after which time this permit shall become null and void.

1. Permittee shall comply with the applicable laws, ordinance rules and regulations affecting the conduct of the project. The granting of this permit shall not relieve the Permittee of the responsibility of obtaining other permits of authority required for the project.
2. Except as specifically authorized herein, the Permittee agrees not to undertake any activity which would impair the natural function of the wetlands; physically alter the contours of the wetlands; or, destroy vegetation growing thereon as listed in the Wetlands Guidelines promulgated by the Virginia Marine Resources Commission. The duly authorized agents of the Wetlands Board and Marine Resources Commission shall have the right to enter upon the premises at reasonable times, for the purpose of inspecting the work being done pursuant to this permit.
3. This permit shall not be transferred without the prior written approval of the Board.
4. The Permittee or Authorized Agent **shall contact the Office of Environmental Programs at 804-693-1217** at least 48 hours prior to the start of the project. Failure to notify will constitute a permit violation and may subject the Permittee to an assessment of civil charges of up to **$10,000**.
5. This permit may be revoked at any time by the Board upon the failure of the Permittee to comply with any of the terms and conditions herein.

Attachment 6: Flood Prevention Project and its Relevance to Other Projects

MPPDC staff have worked throughout the years to understand the policy, research and impacts of flooding (ie. stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change & Sea Level Rise (2009 to 2012)

The MPPDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, MPPDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally Phase 3 focused on developing adaptation public policies in response to the assessments.

Phase 1: Middle Peninsula Climate Change Adaptation: Facilitation of Presentations and Discussions of Climate Change Issues with Local Elected Officials and the General Public
Phase 2: Climate Change III: Initiating Adaptation Public Policy Development
Phase 3: Phase 3 Climate Change: Initiating Adaptation Public Policy Development

Emergency Management - Hazard Mitigation Planning (2009 to Present): Since 2009, the Middle Peninsula Planning District Commission has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. *The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise* (ie. Mean High Higher Water and the NOAA 2060 intermediate-high scenario), *and flooding (coastal and riverine flooding) that estimates losses from each hazard.* The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014): In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, OSDS management, storm water management, TMDLs, etc, staff from the Middle Peninsula Planning District Commission (MPPDC) will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal

land use management/water quality and Onsite Sewage Disposal System (OSDS) and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The Virginia Department of Conservation and Recreation requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the MPPDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The MPPDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014): MPPDC staff and Draper Aden Associates worked with localities (i.e. Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional VSMP.

Mathews County Rural Ditch Enhancement Study (2015): In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015): This report explored the enabling mechanism in
which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in

cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the MPPDC developed the MPPDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the MPPDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in VRA loan funding and ~$400,000 in NFWF grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. MPPDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project - VCPC White Papers (2017): This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017): This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018): This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018): VIMS Shoreline Studies Program worked with the PAA to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020): The Fight the Flood was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

1.	115L.F. of Rock Sill, 12' base	$ 36,800.
2.	250 c.yds. of sand nourishment	$ 18,750.
3.	Filter fabric if desired	$ 2,800.
4.	Marsh access, timber mats	$ 2,500.
5.	Spartina plantings: pattens & alternaflora	$ 3,250.
6.	Site access, tree removal, construct sand access road down bank	$ 3,500.
7.	Remove access road, restore site/yard	$ 2,800.
8.	Permits	$ 750.
	Job Total =	$ 71,150.

Project material list/quantities

1. (Armor) stone, class 1 & 2 : 225 tons combined.
2. (Core)stone: 80 tons
3. Beach grade sand/nourishment: 250 cubic yards
4. Spartina plants: #1500

These material cost are good for 90 days.
20% deposit to hold spot on our construction calendar.

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at [phone #] or by email at [email address].

Sincerely,

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

March 28, 2022

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Matthew Wells,

Enclosed in this packet is one applications for flood protection and prevention projects that involve implementation of nature-based shoreline solutions on a public property.

This application is in the design stage. Design projects are requesting funds for professional designs and development of Joint Permit Applications which are needed before the property owner can move to construction of a nature-based flood protection solution.

Below is short summary of proposed projects in Gloucester County:

A. **Captain Sinclair's Recreation Area - Comprehensive Flood Mitigation for Improved Public Safety, Flood Management and Related Co-Benefits**
(CID): 510071 Total Cost (from individual project application): $180,993
This proposal focuses on wholeness of flood management for a compound of publicly owned land (9430 Whittaker Drive) and buildings located within feet of the Severn River in Gloucester, Virginia. This proximity places low lying publicly owned, multipurpose buildings, parking, wells, septic and the public unpaved dirt roads owned by Gloucester County at significant flood (tidal and stormwater) risk. The public dirt road (~6,000 ft) is a statutory dedication meaning the road is not under VDOT ownership and Gloucester has no legal responsibility over the road except by statutory deed ownership. The public dirt road is orphaned and suffers from flooding of multiple types. Multiple applications for FEMA funding under the Flood Mitigation Assistance (FMA) and Pre-Disaster Mitigation (PDM) programs have been submitted to date to mitigate flooding impacts on the public buildings at the property, but the public buildings do not score with enough need and the applications have proven unsuccessful. The public waterfront site remains at flood risk with no option for flood mitigation until recent action by the State Water Control Board authorizing flood management inside the Bay Act RPA area by using nature-based mitigation designs. This project will utilize and incorporate sustainable

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes __X__ No ____

Project Grants (Check All that Apply)

Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from

further development.

☐ Wetland restoration.

☐Floodplain restoration.

☐ Construction of swales and settling ponds.

☑ Living shorelines and vegetated buffers.

☑ Structural floodwalls, levees, berms, flood gates, structural conveyances.

☑ Storm water system upgrades.

☐ Medium and large-scale Low Impact Development (LID) in urban areas.

☐ Permanent conservation of undeveloped lands identified as having flood resilience value by Conserve Virginia Floodplain and Flooding Resilience layer or a similar data driven analytic tool.

☐ Dam restoration or removal.

☐Stream bank restoration or stabilization.

☐ Restoration of floodplains to natural and beneficial function.

☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Gloucester County
NFIP Community Identification Number (CID#) (See appendix F): 510071

Is Project Located in an NFIP Participating Community? ☑ Yes ☐ No
Is Project Located in a Special Flood Hazard Area? ☑ Yes ☐ No Flood Zone(s) (If Applicable): AE Zone
Flood Insurance Rate Map Number(s) (If Applicable): 51073C0213E

Total Cost of Project: **$180,993**

Total Amount Requested: **$144,795**

INTRODUCTION –

This proposal focuses on wholeness of flood management for a compound of publicly owned land (9430 Whittaker Drive) and buildings located within feet of the Severn River in Gloucester, Virginia. This proximity places low lying publicly owned, multipurpose buildings, parking, wells, septic and the public unpaved dirt roads owned by Gloucester County at significant flood (tidal and stormwater) risk. The public dirt road (~6,000 ft) is a statutory dedication meaning the road is not under VDOT ownership and Gloucester has no legal responsibility over the road except by statutory deed ownership. The public dirt road is orphaned and suffers from flooding of multiple types. Multiple applications for FEMA funding under the Flood Mitigation Assistance (FMA) and Pre-Disaster Mitigation (PDM) programs have been submitted to date to mitigate flooding impacts on the public buildings at the property, but the public buildings do not score with enough need and the applications have proven unsuccessful. The public waterfront site remains at flood risk with no option for flood mitigation until recent action by the State Water Control Board authorizing flood management inside the Bay Act RPA area by using nature-based mitigation designs. This project will utilize and incorporate sustainable planning, design, environmental management and engineering practices that weave natural features together and allow for floodwater inundation and stormwater flow to reduce the exposure to public facilities while promoting adaptation and resilience.

FEMA, the Virginia General Assembly, DCR's Floodplain Management Program, and the Middle Peninsula Planning District Commission (MPPDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes and territories and the citizens which reside and work there. These hazards include flooding, drought, hurricanes, landslides, wildfires and more. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program (www.FightTheFloodVA.com).

Specifically, this project proposes to:

1. Facilitate public access to this point of interest with road drainage improvements using stormwater management techniques such as crown and gravel for a 6,000 feet segment of public dirt road which has no flood management. The primary purpose of a road drainage system is to remove storm and flood water from the road and its surroundings. The road drainage system consists of two parts: dewatering and drainage. "Dewatering" means the removal of rainwater from the surface of the road. "Drainage" on the other hand covers all the different infrastructural elements to keep the road structure dry.
2. Design and build ~1,200 curve linear feet of nature-based flood berms around the Resource Protection Area as a landscape flood modification to mitigate sunny day flooding.

This project will be a partnership between the Middle Peninsula Public Access Authority, MPPDC and Gloucester County (see Community Support Letter, **Attachment 1**).

- A link or copy to the approved MPPDC resilience plan: https://fighttheflood va.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf

- Gloucester County Comprehensive Plan: https://www.gloucesterva.info/DocumentCenter/View/5777/2016-Gloucester-County-Comprehensive-Plan

This project is consistent with multiple objectives and strategies outlined within the Regional All-Hazards Mitigation Plan. Relevant strategies include the following:

- Objective 1.1: Provide protection for future development to the greatest extent possible.
    - Strategy 1.1.1: Reduce or eliminate flood damage to residential/business structures that are highly vulnerable for continual flood damage.
    - Strategy 1.1.3: Protect public buildings and public infrastructure from flood waters resulting from 100-year flood storm events.
    - Strategy 1.3.1: Mitigation projects that will result in protection of public or private property from natural hazards.

PROJECT LOCATION INFORMATION –

Project implementation would take place along the Severn River in an area of Gloucester County, Virginia known as Naxera (**Figures 1 and 2**).

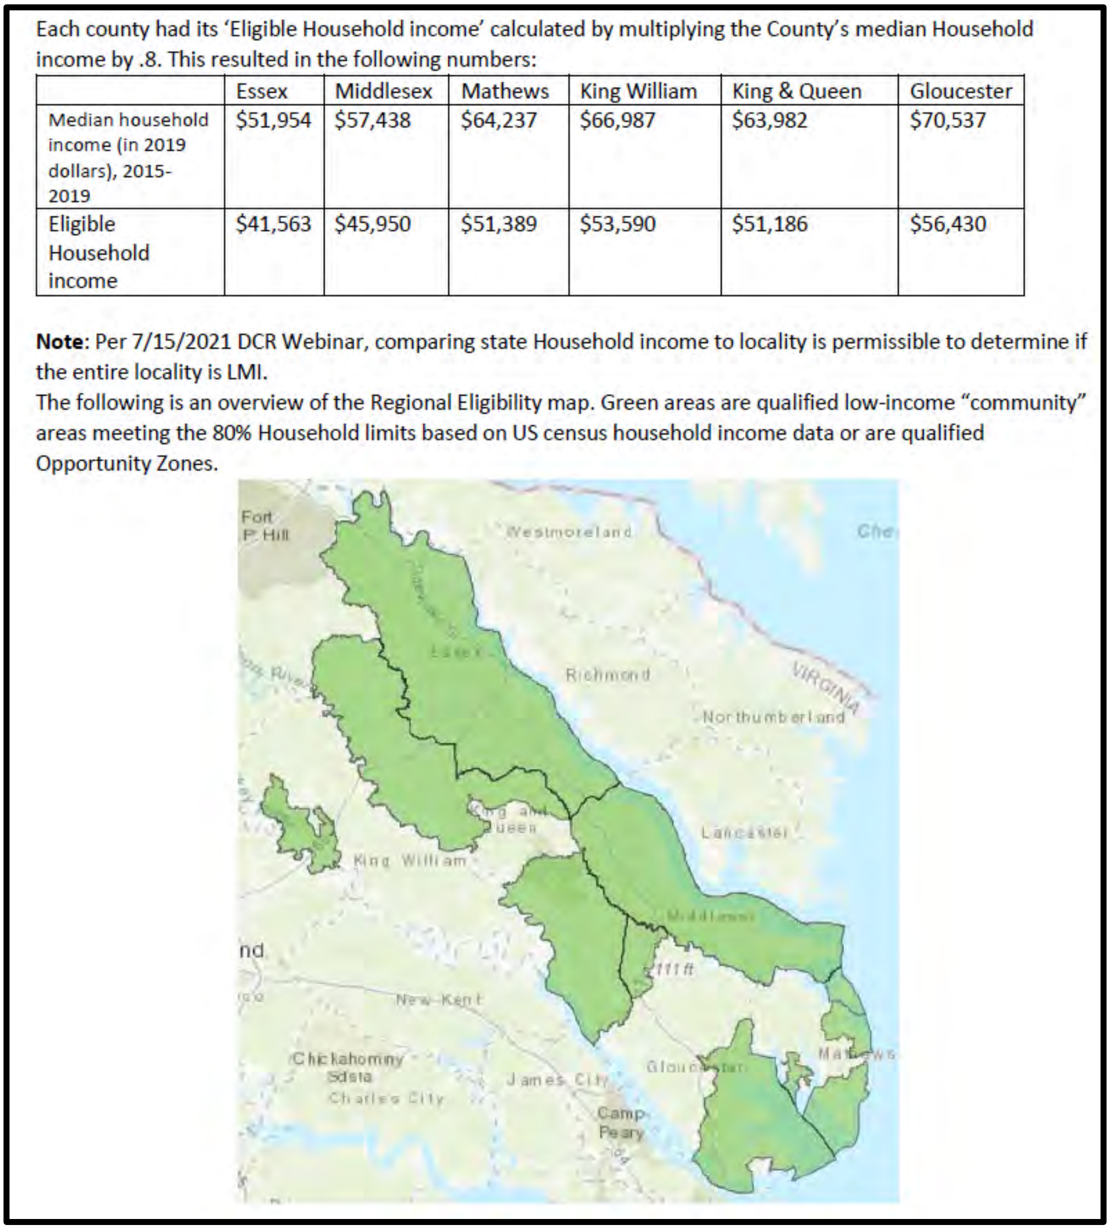
Gloucester County is located at the southern tip of Virginia's Middle Peninsula and is an agriculture, forestry and water-based economy. The county is comprised of 218 square miles of land 296 miles of shorelines. Based on 2020 Census Data, Gloucester County's population totals 38,711, making it the largest of six Middle Peninsula localities. According to DCR guidelines, a portion of the county is considered a low-income geographic area. In **Figure 3,** the green areas depict qualified low-income "community" areas meeting the 80% Household limits

FIGURE 3: MAP OF MIDDLE PENINSULAS LOW INCOME GEOGRAPHIC AREAS QUALIFYING UNDER DCR GUIDELINES.



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

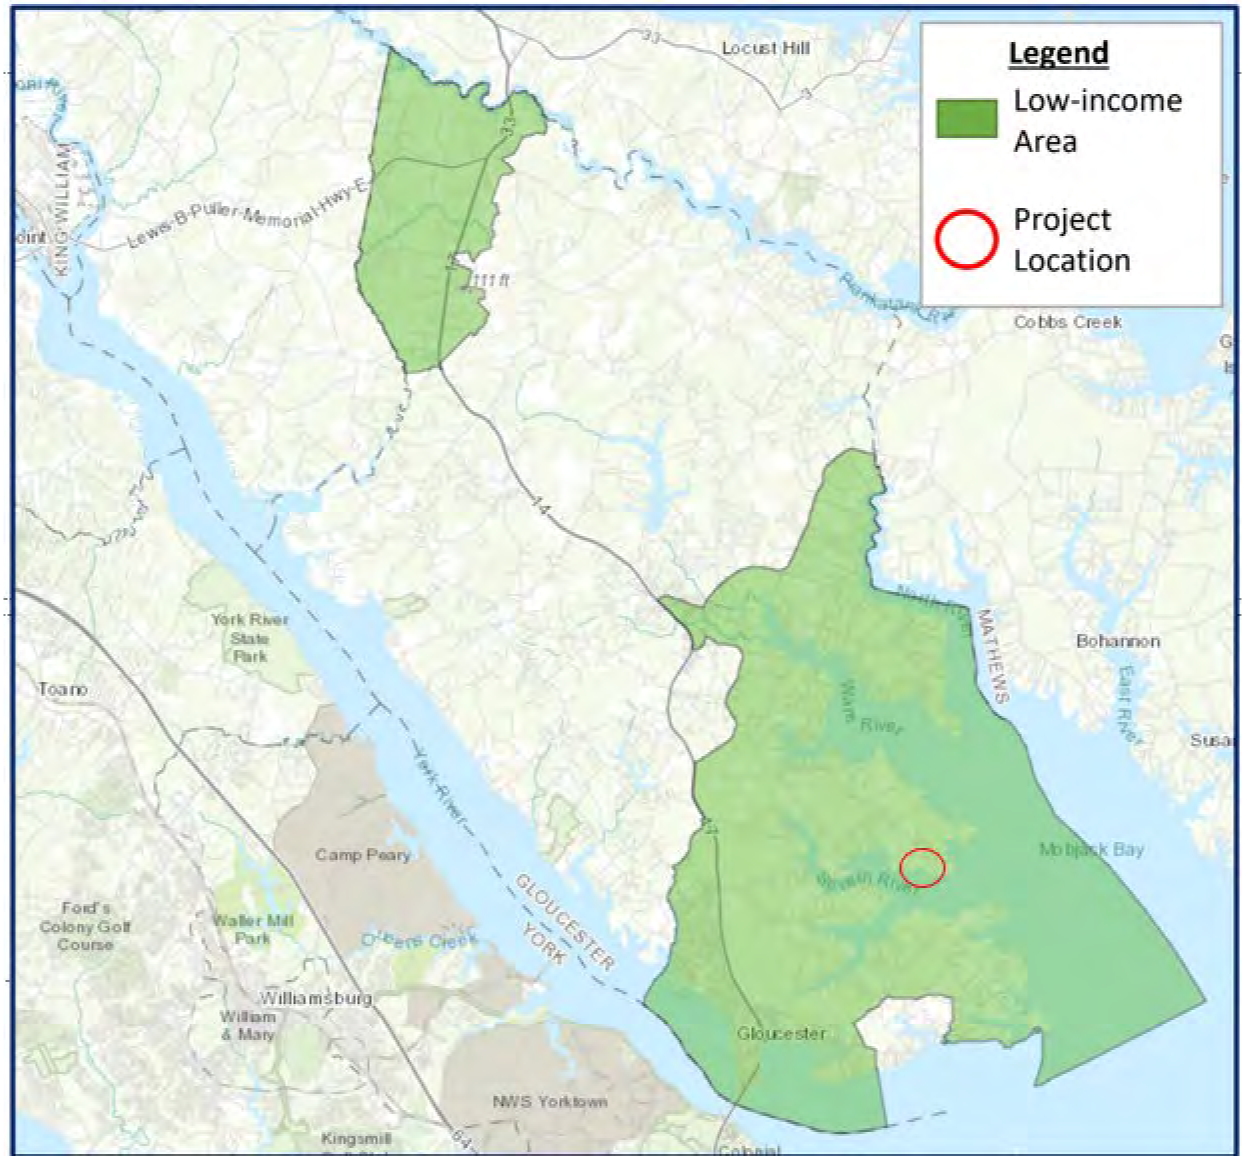
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 4** for a detailed map of the project location and the green low-income area overlay; this figure demonstrates that the project location is within the low-income area.

FIGURE 4: MAP OF THE PROJECT LOCATION WITHIN THE GREEN LOW-INCOME AREA.



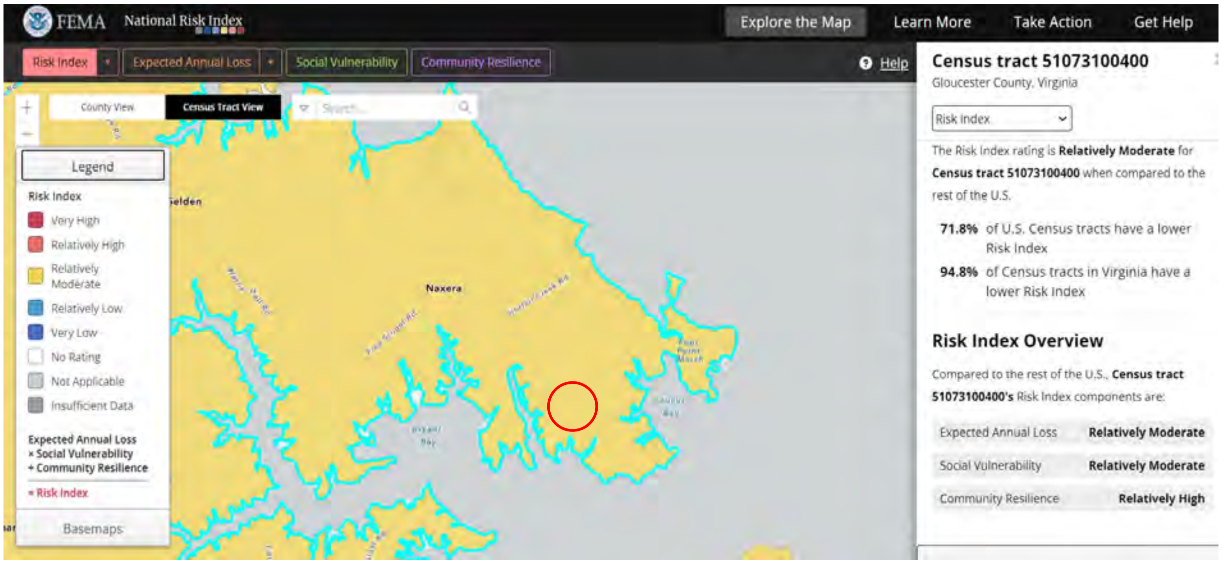
According to ADAPTVA's Social Vulnerability Index Score, this project location has a low social vulnerability score (**Figure 5**)

FIGURE 5: VIRGINIA’S SOCIAL VULNERABILITY INDEX SCORE MAP FOR THE PROJECT LOCATION.

Social Vulnerability Index

Social Vulnerability Index Classification: Low Social Vulnerability
Vulnerability Index Score: -0.0
Housing Vulnerability: fragile stock
Housing Characteristics: high pct. mobile homes/long-term renters
Tract Name: Census Tract 1004, Gloucester County, Virginia

FIGURE 5: FEMA NATIONAL RISK INDEX OF CENSUS TRACT WHERE THE PROJECT IS LOCATED.



Census tract 51073100400
Gloucester County, Virginia

Risk Index

The Risk Index rating is **Relatively Moderate** for **Census tract 51073100400** when compared to the rest of the U.S.

71.8% of U.S. Census tracts have a lower Risk Index

94.8% of Census tracts in Virginia have a lower Risk Index

Risk Index Overview

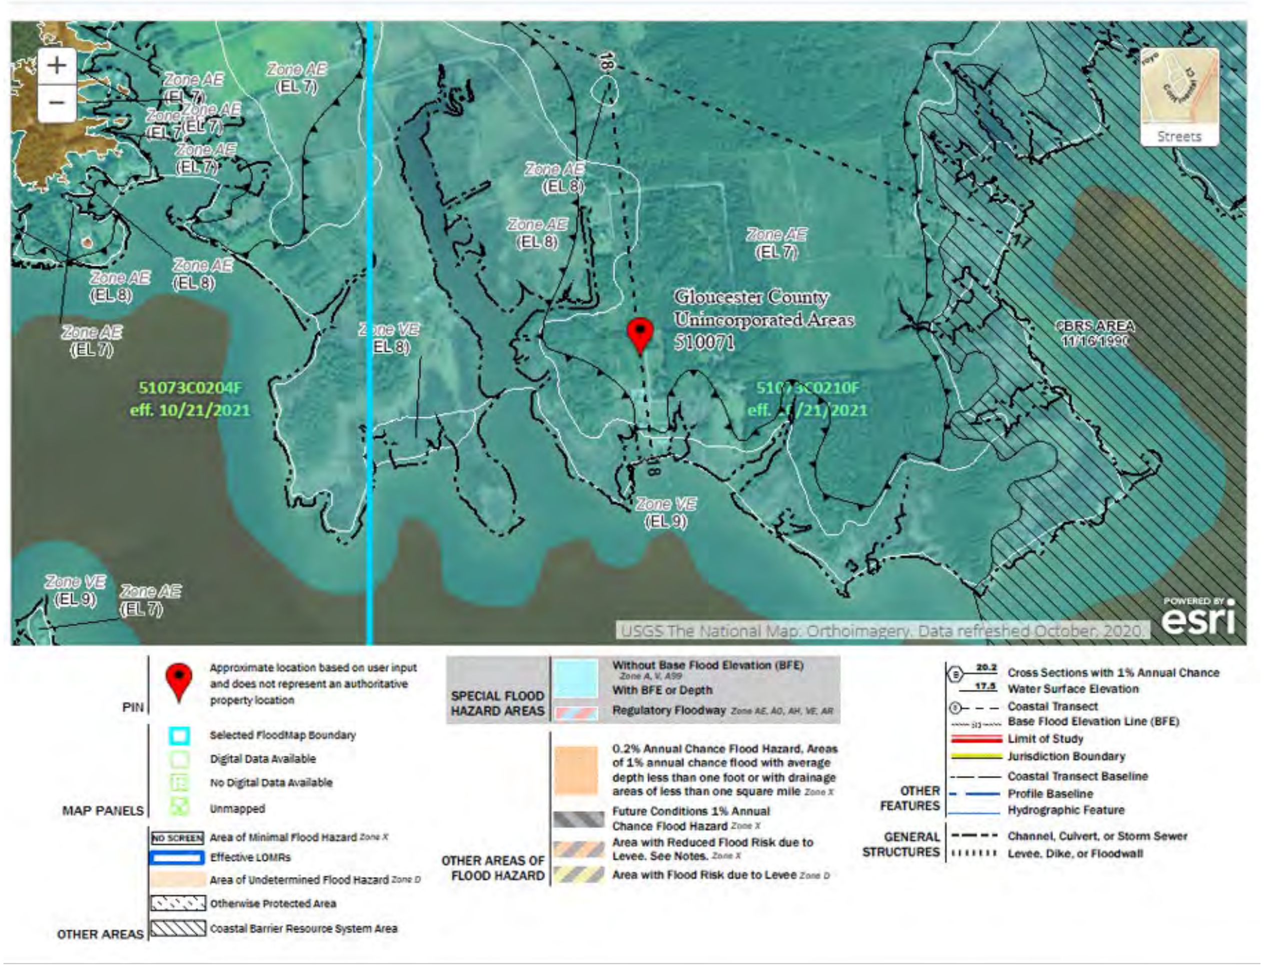
Compared to the rest of the U.S., **Census tract 51073100400's** Risk Index components are:

Expected Annual Loss	**Relatively Moderate**
Social Vulnerability	**Relatively Moderate**
Community Resilience	**Relatively High**

FEMA designates the site as a relatively moderate risk

Specifically, the project is located at 9430 Whittaker Drive Gloucester, VA 23061 (37.325513, -76.427268) – a site located within the AE FEMA Flood Zone (**Figure 6**). Please see **Attachment 2** for the FIRMettes (last mapped 11/19/2014).

Figure 6: Map of FEMA flood zones.



Due to the project site's proximity to the water and relatively low elevation (**Figure 7**), the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. For example, the project location has long been, and continues to be, impacted by tropical, sub-tropical, and Nor'easter events. **Attachment 3** lists 87 storm events dating to 1851 in the project location. According to NOAA's Coastal Flood Mapper, this project location is at the highest risk of coastal flooding (**Figure 8**). Collectively, these reoccurring and storm-related events have contributed to shoreline loss at site. **Figure 9** depicts the shoreline in 1937 and the 2017, based on historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program; illustrated are an approximate loss of 90,000 square feet of shoreline at the site location over an eighty-year period.

FIGURE 7: SITE TOPOGRAPHY (VCU CURA, 2015)

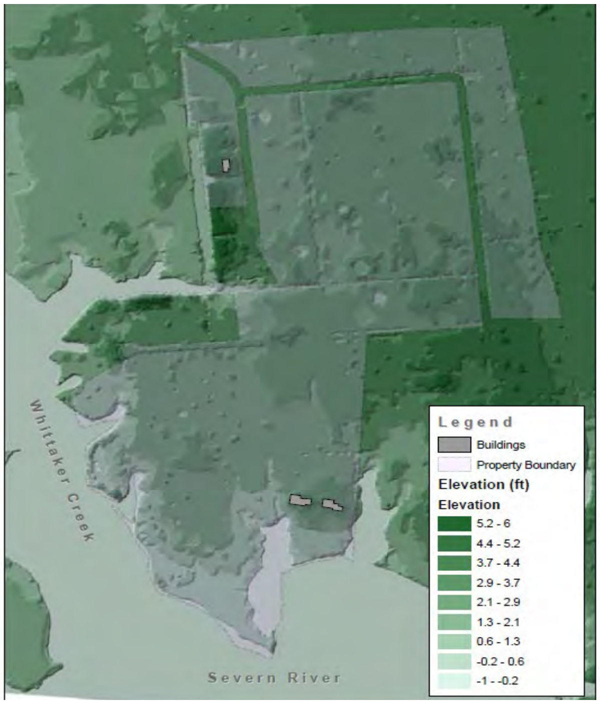


FIGURE 8. MAP OF PROJECT LOCATION AND RISK OF COASTAL FLOODING (NOAA, 2021).

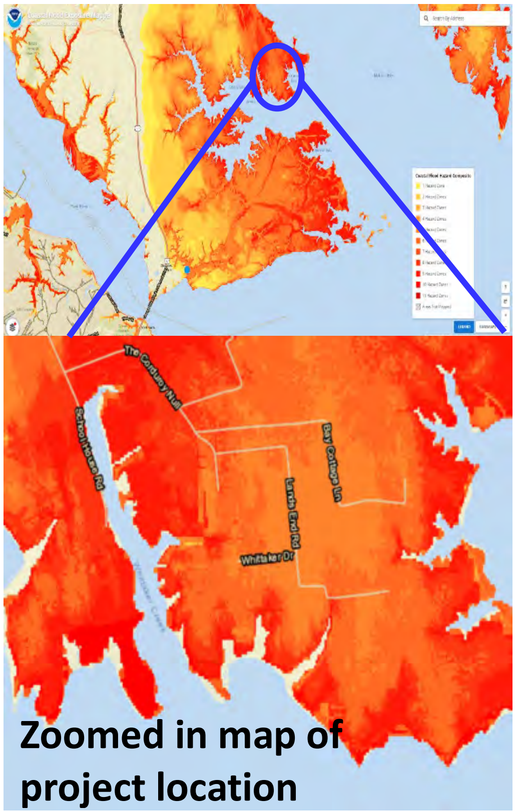

FIGURE 9: PROJECT LOCATION AND MAP OF ASSOCIATED SHORELINE CHANGE BETWEEN 1937 AND 2017.

BACKGROUND -

The Middle Peninsula Planning District Commission (MPPDC) is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 to provide solutions to problems of greater than local significance and cost-savings through economies of scale. The MPPDC serves nine localities of the Middle Peninsula including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex counties, as well as the Towns of Tappahannock, West Point, and Urbanna.

MPPDC is staffed using multiple methods including co-operative procurement, hourly, and burdened FTE staff. MPPDC staff consists of an Executive Director, Deputy Director, Chief Financial Officer, Senior Project Planner, and clerical support staff; a Director of Planning, General Planner, Certified Flood Plain Manager, Transportation Planner, and Emergency Planner are co-operative procured; Housing, Community Development Planner and Public Relations staff are hourly.

The planning district staffing team assist localities with long-term and/or regional planning efforts. The MPPDC Executive Director, Deputy Director, and Chief Financial Officer have decades of experience in managing and administering project grants at multiple scales - from grants in excess of $1,000,000 to small grants. MPPDC is an entrepreneurial-based government agency with an annual operating budget ranging from $750,000 to more than $1,000,000. Annually, the MPPDC manages 25-30 concurrent federal and state grants utilizing industry standard Grants Management Software and other software (e.g. GIS, Microsoft Office) as required and/or necessitated by different grants. The MPPDC operates service centers in the topical areas of: coastal zone management, emergency planning, housing, transportation planning and transportation demand management, economic development, social assistance, small business development, general planning and technical assistance, as well as other areas determined by the Commission. MPPDC has more than 25 years of experience managing multiple revolving loan programs. In the 25 years that the Executive Director has been employed by the Commission, no audit findings have occurred.

Facilitating the transition and enhancement of private lands in the interest of public access, is accomplished in the Middle Peninsula through the **Middle Peninsula Chesapeake Bay Public Access Authority (MPCBPAA)**. Created in 2002 by the Virginia General Assembly as another political subdivision of the Commonwealth, MPCBPAA works to increase public water access to the waterways of the Middle Peninsula through access protection and creation in its nine member jurisdictions: the counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex, and the towns of Tappahannock, Urbanna, and West Point. The MPCBPAA's roles are to:

- identify land to be secured as a public access site;
- research the ownership of those lands;
- determine appropriate uses, develop mechanisms for transferring title to the MPPAA;
- develop acquisition and site management plans for public usage;
- determine which holdings should be sold; and

- perform other duties to fulfill their mission.

Presently, MPCBPPA's public facing operations are manifested through the Virginia's Coastal Wilds website.

The project site is the **Captain Sinclair's Recreational Area**, with approximately one mile of waterfront on the Severn River in Gloucester County, Virginia, was a gift to MPCBPAA in 2013 from a private landowner. The property, consisting of approximately 100 acres donated for public use, included a large main house (more than 7,000 sq. ft.), a pool house, a smaller ranch house (2,000 sq. ft.), numerous outbuildings (including a two-bay garage with workshop, an open-bay barn for horses or farm vehicles, and an enclosed barn), a dock, and more than one mile of waterfront; it is located adjacent to Land's End, the historic home of Revolutionary War hero Captain John Sinclair. A figure of importance to Gloucester County, Captain Sinclair rose to fame for being charged to carry dispatches to de Barras, the commander of the French fleet stationed in Newport, Rhode Island. This mission allowed the rendezvous of the colonial and allied navies near Yorktown which resulted in the defeat of Lord Cornwallis.

Following a request and subsequent use of the property by the Gloucester Rowing Association in the Spring of 2013, the need to improve boat launch access at the site became apparent; access at the time was inconvenient and unsafe, as well as potentially damaging to the coastal landscape and marsh. **The MPCBPAA thus partnered with the Middle Peninsula Planning District Commission (MPPDC) to develop an overall use plan for the property** compatible with the existing natural coastal landscape.

Despite the improvements, safe and well drained public access road to this site and its amenities remains a priority issue.

FIGURE 10: PHOTOS OF PUBLIC ACCESS ROAD LEADING TO CAPTAIN SINCLAIR'S.

The public unpaved gravel road owned by Gloucester County ranges from two to four feet above sea level and is the only land based access route to the site. Its low elevation makes the road susceptible to stormwater flooding and coastal flooding from high tides as well as category one and higher storm surges; flooding here makes the Sinclair site inaccessible and unsafe for unsuspecting visitors. During the rainy season, as illustrated in the photos, precipitation makes the road virtually impassable due to poor design and lack of a road crown. US Postal Mail is suspended for weeks or months at a time.

In December 2008, VDOT assessed a road-raising project in Gloucester County to mitigate flooding. A half mile segment of the road was to be raised ten inches; the cost of this project would have been $320,000 for materials and labor alone, a figure nearly 20% of Gloucester's road budget. While dimensions and location would be different for this project the cost would be a significant portion of the VDOT secondary Gloucester road budget if VDOT could work on the Captain Sinclair's road, which they cannot by law; therefore the "orphaned" status of this road has remained. **Figure 10** illustrates present road conditions.

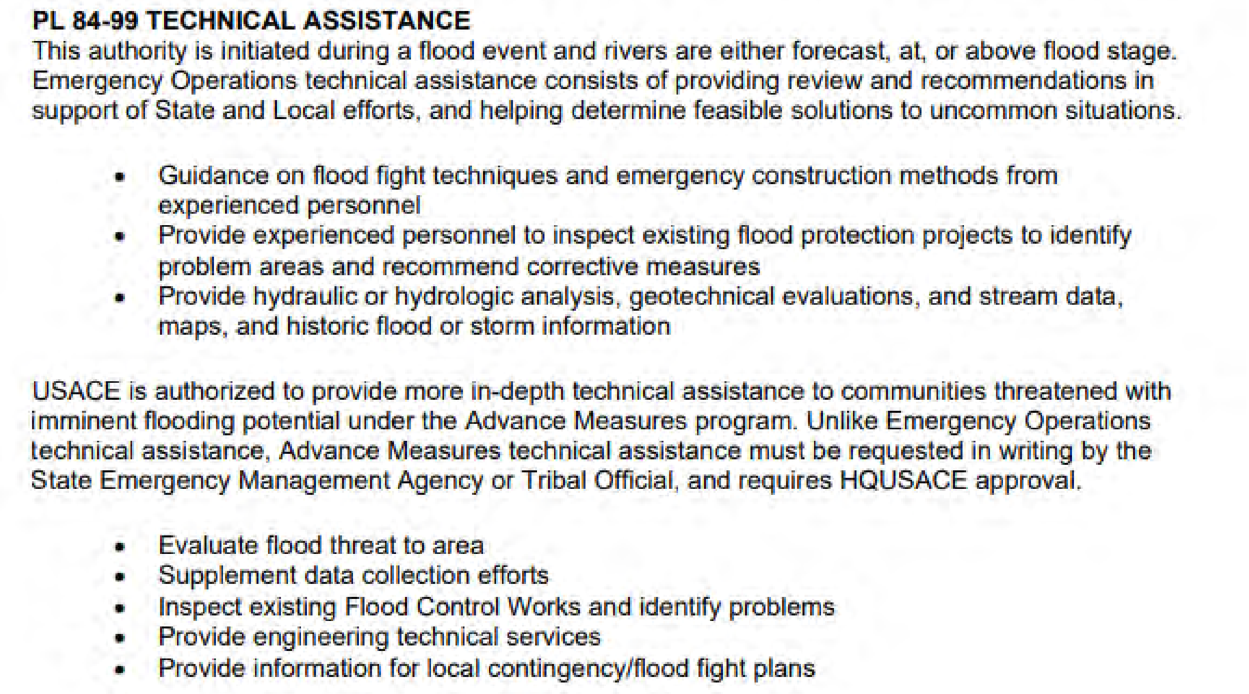
Access x Flooding

Without the flood protection measures proposed, the land, habitat and public infrastructure will be compromised, resulting in degradation of the environment and loss of public assets. Flooding propensity remains the biggest weakness of the Sinclair site – characterized as such in the CURA study. The area around the Sinclair site is prone to frequent flooding and lies within the floodplain of the Severn River. Any category of storm surge will hit the Sinclair site, flooding the property and soil and washing out the road, precluding any access. In their 2014 community outreach meetings, the CURA team discovered that while Gloucester County residents value the natural beauty, solitude, and waterfront access of the Captain Sinclair site, they recognize that the site faces the challenge of limited accessibility due to flooding.

Moreover, rising sea levels will have a negative impact on the property, inching the water closer to the public assets including houses, barns, roads, parking, wells, septic systems etc., increasing the likelihood of significant flooding. With ~1,200 linear feet of the Resource Protection Area running curve linear around the public assets, sunny day flooding further lessens the public's ability to use the facility. A design to manage sunny day flooding using a small ~6-12-inch-high nature-based flood berm is proposed (concept **Fig 10A**).

FIGURE 10-A: CONCEPT BERM

Given that this area contains tidal and non-tidal wetlands, it is anticipated that the public facility will require coordinating with the Army Corps of Engineers, possibly under Public Law (PL 84-99).



PL 84-99 TECHNICAL ASSISTANCE

This authority is initiated during a flood event and rivers are either forecast, at, or above flood stage. Emergency Operations technical assistance consists of providing review and recommendations in support of State and Local efforts, and helping determine feasible solutions to uncommon situations.

- Guidance on flood fight techniques and emergency construction methods from experienced personnel
- Provide experienced personnel to inspect existing flood protection projects to identify problem areas and recommend corrective measures
- Provide hydraulic or hydrologic analysis, geotechnical evaluations, and stream data, maps, and historic flood or storm information

USACE is authorized to provide more in-depth technical assistance to communities threatened with imminent flooding potential under the Advance Measures program. Unlike Emergency Operations technical assistance, Advance Measures technical assistance must be requested in writing by the State Emergency Management Agency or Tribal Official, and requires HQUSACE approval.

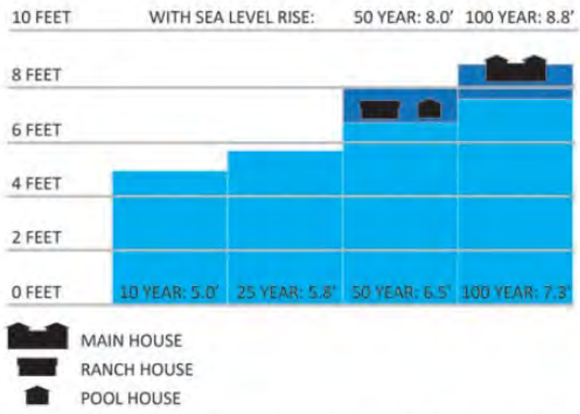
- Evaluate flood threat to area
- Supplement data collection efforts
- Inspect existing Flood Control Works and identify problems
- Provide engineering technical services
- Provide information for local contingency/flood fight plans

There are two public residential structures on the site, but these are not identified as severe repetitive loss or repetitive loss structures as the last owner self-insured. However, both structures were flooded during Hurricane Isabel in 2003 and this was a heavily weighted consideration of the owner when the site was donated for public use. Presently, flood insurance premiums are becoming cost prohibitive.

Figure 11 illustrates flood levels combined with sea-level rise and their effects on inhabitable structures on site. Notably, floods in 50 years pose an issue to the two structures on site; key construction techniques will need to be employed to retrofit each structure in order to mitigate the effects of exceptional floods and sea level rise 50 years and out.

FIGURE 11: SEA LEVEL AND FLOOD ELEVATION

(VCU CURA, 2015).



NEED FOR ASSISTANCE -

The need for assistance is two-fold. **First, Gloucester County is near the Chesapeake Bay and numerous tidal rivers that contribute to the area's high risk to coastal flooding, sea-level rise, and storm surge.** Based on tidal gauge data from the Virginia Institute of Marine Science (VIMS), relative sea-level rise rates ranging from 0.11-0.23 in./yr. (2.9-5.8 mm/yr.; period: 1976-2007; 10 stations) within the Chesapeake Bay region, which are the highest rates reported along the U.S. Atlantic coast (Boon et. al., 2010). In addition to sea-level rise, Gloucester County has a history of being impacted by hurricanes and tropical storms. As storms pass over or near the coast, the atmospheric pressure drops, causing a large volume of sea water to build up, eventually being pushed ashore by the storm's winds as storm surge. Strong East and Northeast winds in Gloucester County can push water from the Chesapeake Bay into the mouth of the York and Rappahannock rivers, as well as Mobjack Bay, flooding much of the county's low-lying areas (MPPDC, 2005). When a storm makes landfall at high tide, the storm surge and the added water from the tidal fluctuation combine to create a "storm tide". In Gloucester County, tidal waters fluctuate twice daily from 1.2 feet above mean sea level to 1.2 feet below (FEMA 1987, 6). If a severe hurricane were to make landfall during high tide, an additional 1.2 feet of water would be added to the highest storm surge possible, potentially creating a storm tide of 16.2 feet (Rygel, 2005).

Nor'easters, like hurricanes and tropical storms, can dump heavy amounts of rain and produce hurricane-force winds that push large amounts of seawater inland. According to a recent study conducted by the Center for Coastal Resources Management, a one-and-a-half-foot rise in sea level coupled with a three-foot storm surge - similar to what would be experienced in a strong tropical storm - would lead to 13% of Gloucester County's land mass being flooded – including 118 miles of roads. Notably, only 3% of this projected flood area is currently developed.

A strong indicator that Gloucester County is experiencing the impact of coastal hazards (i.e., flooding, hurricanes, sea-level rise, and storm surge) is the number of repetitive loss and severe repetitive loss claims submitted by residents and businesses to FEMA. As of 2015, Gloucester County had 147 repetitive loss properties with claims topping $3.3 Million and 13 severe repetitive loss properties with claims totaling nearly $1.9 Million. The county has implemented several preventative measures, property protection policies, public information activities, and emergency service measures to decrease impacts on its communities. This project will therefore build on local efforts moving toward a more resilient community.

Second, this project location is primed for co-benefits derived from flood mitigation efforts. While the proposed application of gravel will facilitate the flow of stormwater toward lateral ditches, providing increased public access to the infrastructure at this point of interest, secure public access and the sustainability of site infrastructure has implications that will reverberate throughout the community and a flood berm will help to protect public assets. Strategic protection of the infrastructure and landscape at this point of interest will, for example, facilitate multiple, simultaneous activities that will contribute to economic growth in the area while fostering innovation.

Innovative Research
As it stands, Sinclair's promises to be a central hub for fostering, implementing and evaluating innovative ideas providing solutions to the coastal zone's most pressing challenges. Complementing this vision is the recent Virginia Sea Grant GO Virginia Water Management economy program grant, established to cultivate resilient economies by fostering innovative and marketable solutions through small business grants targeting topics like septic systems, stormwater flooding, and beneficial use of dredge material. Research desired at the national level (and therefore, likely to receive funding) would make this facility revenue-generating. Notably, demonstration of innovative coastal practices on site would continue with the implementation of the proposed berm associated with this project, an application designed to mitigate infrastructure flooding. These research efforts will occur on the Captain Sinclair's site, furthering the need to protect the public assets.

GO VIRGINIA APPROVES $2.9 MILLION COLLABORATIVE COASTAL RESILIENCE AND ADAPTATION ECONOMY INITIATIVE

A $2.9 million grant was recently awarded to the Coastal Resilience and Adaptation Economy initiative that will foster innovation and growth in Virginia's water economy. The project will launch a resilience entrepreneurship competition and establish a business-focused network to engage businesses and facilitate resilient practices.

The project is a collaboration between **Virginia Sea Grant**, the nonprofit **RISE**, the **Middle Peninsula Chesapeake Bay Public Access Authority**, and **Old Dominion University**.

https://vaseagrant.org/go-virginia-adaptation-economy/

Next Generation Coastal Housing- Capital Sinclair's
With development centers to the south extending into Gloucester County, the county's population has been increasing more rapidly in recent years, and with it, a rising demand for housing. Proximity to recreational areas increases this demand; as an asset of the Sinclair's property is public waterfront access, it has the potential to increase the value of nearby residences. Ultimately, this may increase county tax revenue in a county where real estate taxes and personal property taxes are by far the two largest sources of revenue in the general fund.

Moreover, to address next generation resiliency and support beneficial uses receiving flood protection, rental housing would be leveraged as a market-based strategy primed to address the increasing threat of rising waters. Specifically, VA Housing has provided the MPPDC a $1 million grant for resilient public housing design and construction to be located at Captain Sinclairs site that will be used to develop affordable workforce housing units. The idea here being that watermen can live and work on mixed use property, closest to the natural resources to which they have historical ties – and now affordable access. Likewise, the site staff who work to maintain and sustain this public infrastructure, and who are perhaps engaged in low-wage seasonal work through planned oyster gardening or a native plant nursery, can live on waterfront property at a reasonable rate, enjoying in their down time the proximity to the coastal resources they work to protect and share. This housing may also serve to provide what could be in effect, low income AirBnB opportunities creating accessible recreation and tourism opportunities for the geography's target audience. Such an effort would leverage the Sinclair site and its amenities, returning every possible dollar to communities with the understanding that the operation would be mobile as needed – physically and figuratively; an application designed to provide a market-based solution based on a 2050 design horizon.

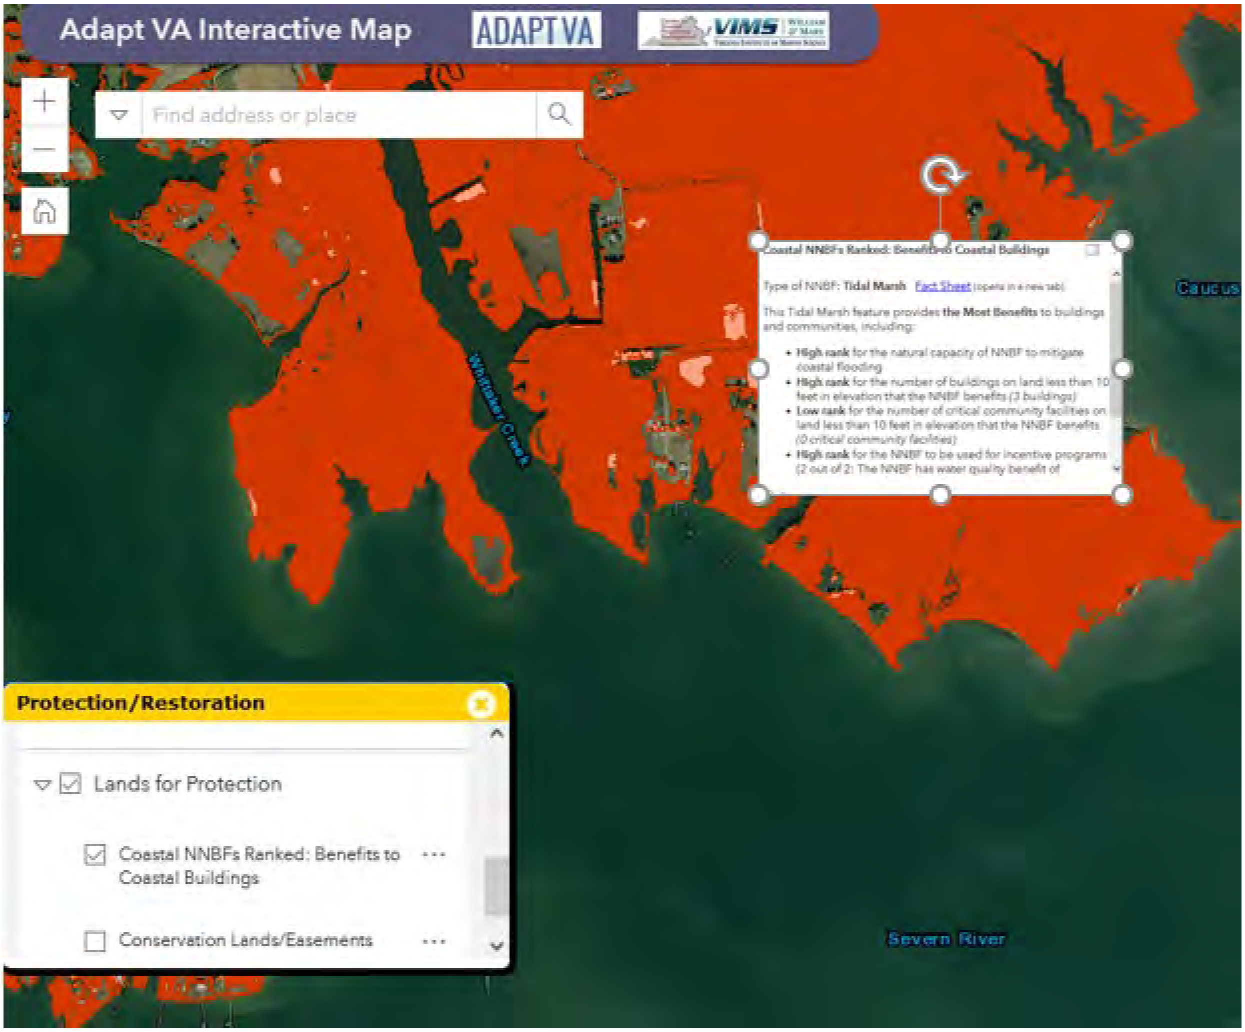
Business Development
The potential of increased tourism drawn to the recreational site is significant. Visitors seeking a variety of outdoor activities could be drawn to activities available at Captain Sinclair's, supporting the local economy with outside revenue in their pursuits. Close proximity to recreational opportunities has increasingly become a factor in where businesses decide to locate. The provision of a public access site with enhanced amenities thus has the potential to drive continued economic growth through business development in the area. Moreover, VIMS' faculty endeavors offer the potential for research and development on site leading to new start-up businesses within the county. Notably, the Gloucester County Economic Development Authority is identifying Virginia Institute of Marine Science (VIMS)-related businesses as a strategy to actively expand existing businesses and recruit new ones to the county.

Community Scale Benefits
Due to the multitude of public investment for flood research and innovation, we believe this site meets the test of "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk." The Captain Sinclair's site serves as one of the Commonwealth's best chances to innovate flood projects in "live time" so that all of coastal Virginia can benefit.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels.

Benefit of Natural Based solutions
Adapt VA contains a data layer illustrating areas of less than ten feet in elevation that show locations in the Middle Peninsula offering benefits of NNBF to coastal buildings, habitat, and community protection (see **Figure 12**). The project site offers multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit.

FIGURE 12: NATURAL AND NATURE-BASED FEATURES AT THE PROJECT SITE.



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits (3 buildings)
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits (0 critical community facilities)
- **High rank** for the NNBF to be used for incentive programs (2 out of 2): The NNBF has water quality benefit of

ALTERNATIVES –

Alternatives are not applicable according to the grant manual guidelines.

GOALS AND OBJECTIVES –

This proposal in effect, will develop a comprehensive strategy to mitigate multiple flooding inputs while providing co-benefits that foster resilience at the Captain Sinclair's Recreational Area.

There are two main components of this proposal:

- Facilitated public access to this point of interest through road flooding improvements.
- Design and construction of a nature-based flood mitigation berm of approximate ~1,200 curve linear feet around the Resource Protection Area to limit sunny day flooding

The goals and objectives of this project are as follows:

Goal 1: Improve public access to local coastal waterways.

- Objective A: Increase public access to the Severn River with improved road conditions and mitigation of recurrent and repetitive flooding using NNBF on site.
- Objective B: Enhance quality of life for local residents and visitors alike through recreation, education and cultural opportunities at the point of interest.
- Objective C: Leverage improved public access and coastal resiliency for economic growth within Gloucester County.

Goal 2: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Mitigate recurrent and repetitive flooding alongside storm surge and sea level rise using natural and nature-based solutions that benefit people and the economy as well as the environment.

Goal 3: Transferability to other communities.

- Objective A: Model natural and nature-based solutions for coastal sites exploring development potential.
- Objective B: Foster innovative research and solutions-oriented studies on site focused on coastal adaptation and mitigation for external transfer.
- Objective C: Improve the implementation of Fight the Flood as a model program to be replicated in other communities within the region and/or Commonwealth.

The MPPDC anticipates that these comprehensive enhancements on site will:

1. **Foster economic growth in the area over the useful life of site infrastructure and most likely, beyond. at the project location**. Enabling public access to this county asset while ensuring its sustainability will protect and enhance the area’s recreational economies and has the potential to positively impact related commercial endeavors.

2. **Prevent loss of property without cementing an alternative.** Mitigating flood risk at the project site as outlined will help prevent loss of property and property value, while capitalizing on the useful life of the site as much as possible.

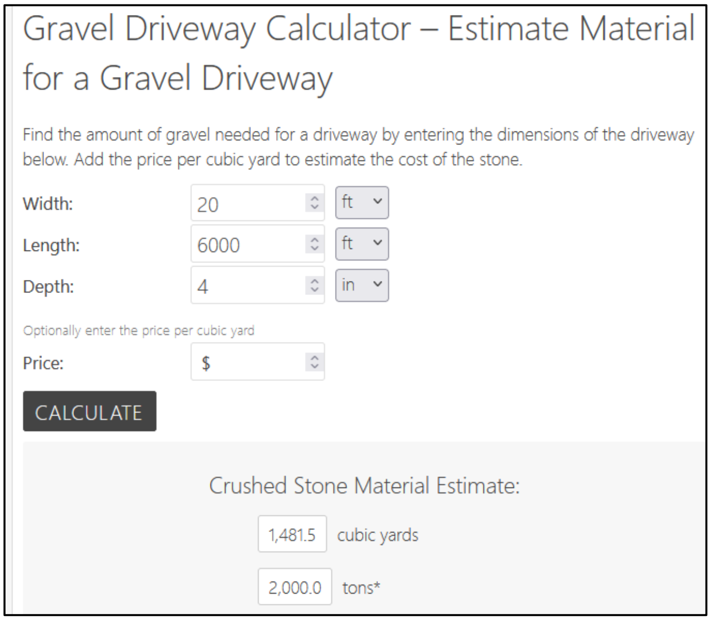
3. **Provide ecosystem services to the community toward increased quality of life.** Increased public access to recreational, educational and cultural opportunities leverage the provisioning and cultural services associated with the site’s natural resources, services that provide benefits to safety, health and well-being for all visitors.

APPROACH, MILESTONES, AND DELIVERABLES –

Each aspect of this multi-pronged plan will include nature-based mitigation designs where possible, and will utilize and integrate sustainable planning, design, environmental management and engineering practices that capitalize on natural features while allowing for floodwater inundation and reducing the exposure to public facilities, promoting adaptation and resilience in the process. Ultimately, the site will provide the public with access to a natural space designed to let flood water pass over, under and through the public facility. All construction on site will follow required permitting process that address best practices for construction in vulnerable coastal locations.

Facilitation of public access to this point of interest through road improvements. Beginning at the end of VDOT maintained road, a 4" base of gravel (**Figure 13**) would be added to the existing publicly owned dirt road with a crown to better direct the rain flood water off the road. Ideally, (per 2015 CURA report), the road should be elevated to the 8.8' above sea level standard adopted by this plan to account for both flooding and sea level rise.

Figure 13: Calculation for Material Estimate for Gravel Road



Gravel Driveway Calculator – Estimate Material for a Gravel Driveway

Find the amount of gravel needed for a driveway by entering the dimensions of the driveway below. Add the price per cubic yard to estimate the cost of the stone.

Width: 20 ft

Length: 6000 ft

Depth: 4 in

Optionally enter the price per cubic yard

Price: $

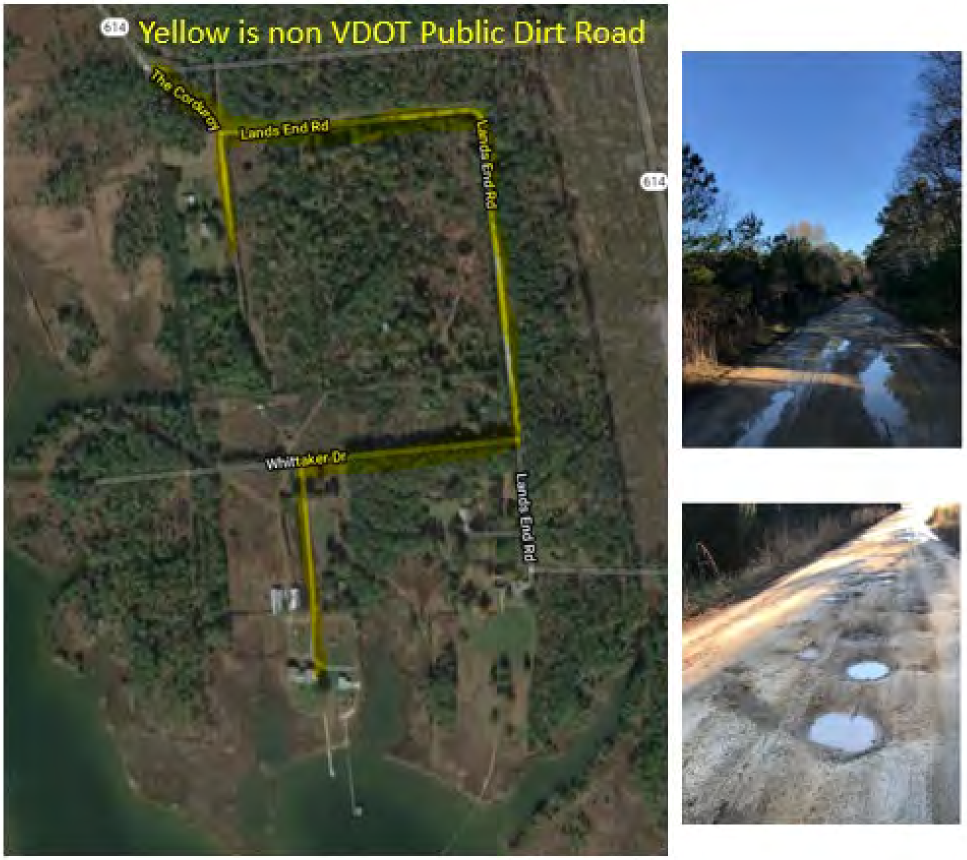
Crushed Stone Material Estimate:

1,481.5 cubic yards

2,000.0 tons*

Recognizing that the road should be elevated as high as practical for the improvements programmed for the site, and that significant active development of the site warrants an elevated access road be constructed as close as feasible to 8.8' (the national flood protection standard), alternative engineering designs should be prepared comparing cost and future flood risk and presented for public discussion. The MPCBPAA recognized the cost of flood mitigation and is comfortable with a 4-inch base (**Figure 14**).

FIGURE 14: GRAVEL ROAD LOCATION AND PHOTOS



Design plan and construction of a berm around the Resource Protection Area.

Approximately 1,200 curve linear feet of nature-based flood berms are to be designed and built around the Resource Protection Area as a landscape flood modification to combat current sunny day flooding and future sea level rise. If possible, innovative and resilient designs will be encouraged, and connections related to VA Sea Grant Go VA projects and materials (e.g., dredge spoils) could be used to facilitate and complement the project. Berm construction would be authorized under the newly enacted regulations promulgated by the State Water Control Board. It is estimated that 200 cubic yards of supplemental sediments will be needed (**Figure 15**).

Figure 15: Berm location and Material Estimate Calculation

200.00 cu yds

Length: 1200 feet

Width: 3 feet

Height: 1.5 feet

Concerning Adverse Impacts

MPPDC and the MPCBPAA recognize the complexity of permitting a project in and around sensitive environmental sites and will work with all permitting entities as required by law. MPPDC and MPCBPAA also proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design solution to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted are lessened to a degree that is satisfactory by DCR.

Enabling legislation

- Codes relevant to the Middle Peninsula Chesapeake Bay Public Access Authority can be found in Title 15.2 Chapter 66
- This project will follow the designs outlined and approved in the Joint Permit Application and or local CBPA regulations.

Deliverables and timeline

The below table outlines the four components of the project and what will be installed at the project location,

Action Item	M1	M2	M3	M4	M5	M6
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits- advance forward any construction aspects when ready	X	X	X	X	X	X
Phase 2 – Solution Design						
Discuss nature-based design solutions with contractor and property owner		X	X			
Select which nature-based solution is most appropriate		X	X			
Have contractor develop selected nature-based design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based design solution.					X	X
Provide a digital close out report and copy of the completed nature-based design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

For the holistic schedule of projects to be completed, the anticipated timeline could span three years. The timeline range is due to the potential delays in the construction industry and/or delays caused by COVID, including supply shortages. Having a three-year timeline will ensure that 1) adequate exploration of the site is informing the design of quality, innovative and resilient solutions to mitigate flooding; 2) that the most effective iteration is selected for subsequent implementation; and 3) that the contractor selected to construct the project is the best fit for the job.

RELATIONSHIP TO OTHER PROJECTS –

For more than 40 years, the Middle Peninsula Planning District Commission (MPPDC) and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (e.g. hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

The proposed project is a priority project generated from the Middle Peninsula Regional Flood Resilience Plan, which was approved by DCR in August of 2021. This Flood Resiliency Plan serves as the MPPDC's guiding document for its flood resiliency programs and is comprised of two primary MPPDC-approved policy documents. These documents frame the foundation and implementation of the Middle Peninsula flood protection approach, and are indirectly and directly supported by specific regional planning documents each approved by federal, regional, and/or local partners as required by statute.

Other plans and resources integral to the implementation of the Flood Resiliency Plan include:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan - FEMA and Middle Peninsula locality, approved 2016 (MPPDC Website)
    - This overarching project provides updates every five years on the hazards within the region; it identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – MPPDC, approved March 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – MPPDC, approved ~annually

Short Term Implementation

- Middle Peninsula Planning District Commission Fight the Flood Program Design - MPPDC Commission, approved June 2020; Chairman approved update 8/6/21
- Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program - Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

The MPPDC has a history of continuous work on flooding and coastal resiliency topics; **Attachment 6** described relevant projects. These projects have built upon each other to establish within the MPPDC a solid foundation of regional expertise in flooding and coastal resiliency. Now, given this history of accumulated information and knowledge, the MPPDC can move beyond research and studies to begin implementing projects on the ground. One such effort, launched in 2020 following the Commission's authorization, was developed in response to emerging flood challenges. This effort, the **Middle Peninsula Fight the Flood (FTF) Program**, leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built and natural environments with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula **FTF** program helps property owners gain access to programs and services to better manage challenges posed by flood water. MPPDC staff have partnered with private property owners registered for the FTF program to assist them in finding funding for their shoreline.

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that their outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN –

Maintenance requirements are not anticipated for the types of flood mitigation solutions proposed.

CRITERIA –

Describe how the project meets each of the applicable scoring criteria contained in ***Appendix B*** *and provide the required documentation where necessary. Documentation can be incorporated into the Scope of Work Narrative or included as attachments to the application.* ***Appendix B*** *must be completed and submitted with the application.*

For local governments that are not towns, cities, or counties, the documentation provided for the criteria below should be based on the local government or local governments in which the project is located and/or directly impacts.

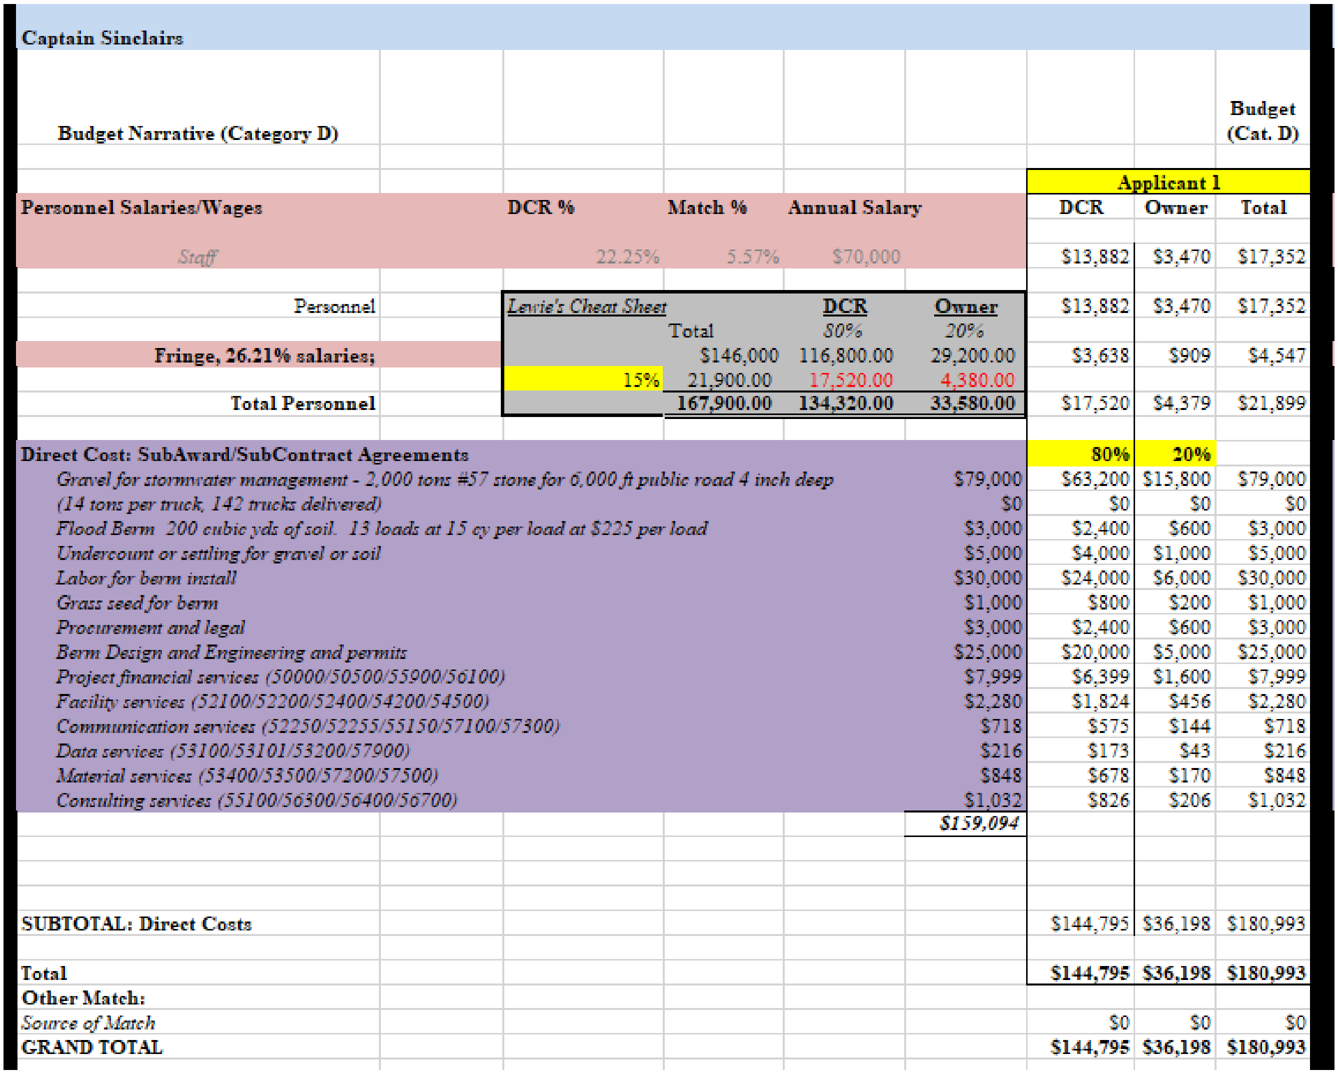
1. **Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?**
    - YES.
2. **Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?**
    - YES.
    - Link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf
3. **For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?**
    - YES. Please see **Attachment 1**

4. **Has the applicant provided evidence of an ability to provide the required match funds?**
    - YES. Please see the match commitment letter in **Attachment 8**
5. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?**
    - YES.

BUDGET NARRATIVE –

Below is the estimated budget for the proposed flood prevention and construction projects resulting in nature-based solutions supporting quality of life and safety in a low-income geographic area. MPPDC staff request 80% funding from DCR and will provide 20% match. Please see match commitment letters from the property owners in **Attachment 8**.

Estimated total project cost: $180,993
Amount of funds requested from the Fund (80% project total): $144,795
Amount of match funds available (20% project total): $ 36,198



Captain Sinclairs

Other Match:								
Source of Match						$0	$0	$0
GRAND TOTAL						**$144,795**	**$36,198**	**$180,993**

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles. This project involves many different funding partners contributing cash to many different flooding and related resiliency aspects. Match will be provided from a single or multiple combination of participating partners including MPPDC loan funds, Gloucester County cash, Public Access Authority cash, Virginia Housing cash, and other cash sources

Finally, please see the authorization to request for funding in **Attachment 9.**

Appendix B: Scoring Criteria for Flood Prevention andProtection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Middle Peninsula Planning District Commission	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	X

No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		☑ **Yes** ☐ **No**
Applicant Name:	Middle Peninsula Planning District Commission	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45

1.b. any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (**Based on** **ADAPT VA's Social Vulnerability Index Score.)**		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	0
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		120

RE: Support Letter for Applications Submitted by the MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Virginia Department of Conservation and Recreation (DCR) Flood Preparedness Fund. Proposals submitted by the MPPDC on behalf of our constituents are a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially the MPPDC Fight the Flood program, recognize the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types. They also recognize the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exist to help flood-prone property owners access programs and services to better manage challenges posed by flood water and direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC providing such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purposes for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
Acting County Administrator

Attachment 5: Sinclair JPA, Design, and Permit Package

To be developed as part of the project.

Attachment 6: Flood Prevention Project and its Relevance to Other Projects

MPPDC staff have worked throughout the years to understand the policy, research and impacts of flooding (ie. stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change & Sea Level Rise (2009 to 2012)
The MPPDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, MPPDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally Phase 3 focused on developing adaptation public policies in response to the assessments.

Phase 1: Middle Peninsula Climate Change Adaptation: Facilitation of Presentations and Discussions of Climate Change Issues with Local Elected Officials and the General Public
Phase 2: Climate Change III: Initiating Adaptation Public Policy Development
Phase 3: Phase 3 Climate Change: Initiating Adaptation Public Policy Development

Emergency Management - Hazard Mitigation Planning (2009 to Present): Since 2009, the Middle Peninsula Planning District Commission has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. *The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise* (i.e., Mean High Higher Water and the NOAA 2060 intermediate-high scenario), *and flooding (coastal and riverine flooding) that estimates losses from each hazard.* The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014): In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, OSDS management, storm water management, TMDLs, etc., staff from the Middle Peninsula Planning District Commission (MPPDC) will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and Onsite Sewage Disposal System (OSDS) and

community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)

The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The Virginia Department of Conservation and Recreation requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the MPPDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The MPPDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014): MPPDC staff and Draper Aden Associates worked with localities (i.e. Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional VSMP.

Mathews County Rural Ditch Enhancement Study (2015): In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015): This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)

In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the MPPDC developed the MPPDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the MPPDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in VRA loan funding and ~$400,000 in NFWF grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. MPPDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project - VCPC White Papers (2017): This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017): This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018): This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018): VIMS Shoreline Studies Program worked with the PAA to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020): The Fight the Flood was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines

Attachment 8: Match Commitment Letters

MIDDLE PENINSULA CHESAPEAKE BAY PUBLIC ACCESS AUTHORITY

10/29/21

To: DCR Flood Fund Program Staff

From: Middle Peninsula Chesapeake Bay Public Access Authority

Reff: Match Funds

The Middle Peninsula Chesapeake Bay Public Access Authority owns a 125+ acre waterfront complex offering the public recreational access opportunities. The site is subject to recurrent flooding from both storms and rain. The public dirt road serving the facility is owned by Gloucester County as a statutory dedicated road, a complex legal issue originating from the late 1960's. This is the only public access road to the facility.

The facility also has a current multimillion dollar resiliency design build grant from Go Virginia to Virginia Sea Grant/VIMS as well as a one million resiliency housing grant concurrently underway at the facility. Both grants are impacted by the site flooding conditions.

The Authority and its resiliency partners working on resiliency solutions at Captain Sinclairs are committed to providing the match to improve Captain Sinclairs to better manage flooding at the site and for the Commonwealth to benefit and learn from

Gloucester County $5,000 cash committed.

Subject: FW: Road Improvement Money

Good morning,

I wanted to touch base on getting this $5,000 payment processed. After discussions with our finance department, we found it was not necessary to have the Board approve an appropriation for the change in funding, we just need to have a request to submit with the payment.

Heather, if you can generate a letter requesting the funds for the PAA for road improvement, that will give me the basis to process. We do not have the PAA set up as a vendor in our system for me to issue the payment directly. If that is the preferred method, I will need a W9 to set up a vendor account. Alternatively, we can issue the check to the MPPDC as we do for the annual payments. I'm not sure if that is more work on your side for processing the payment to the PAA.

Thanks and sorry for the delay,

Trish

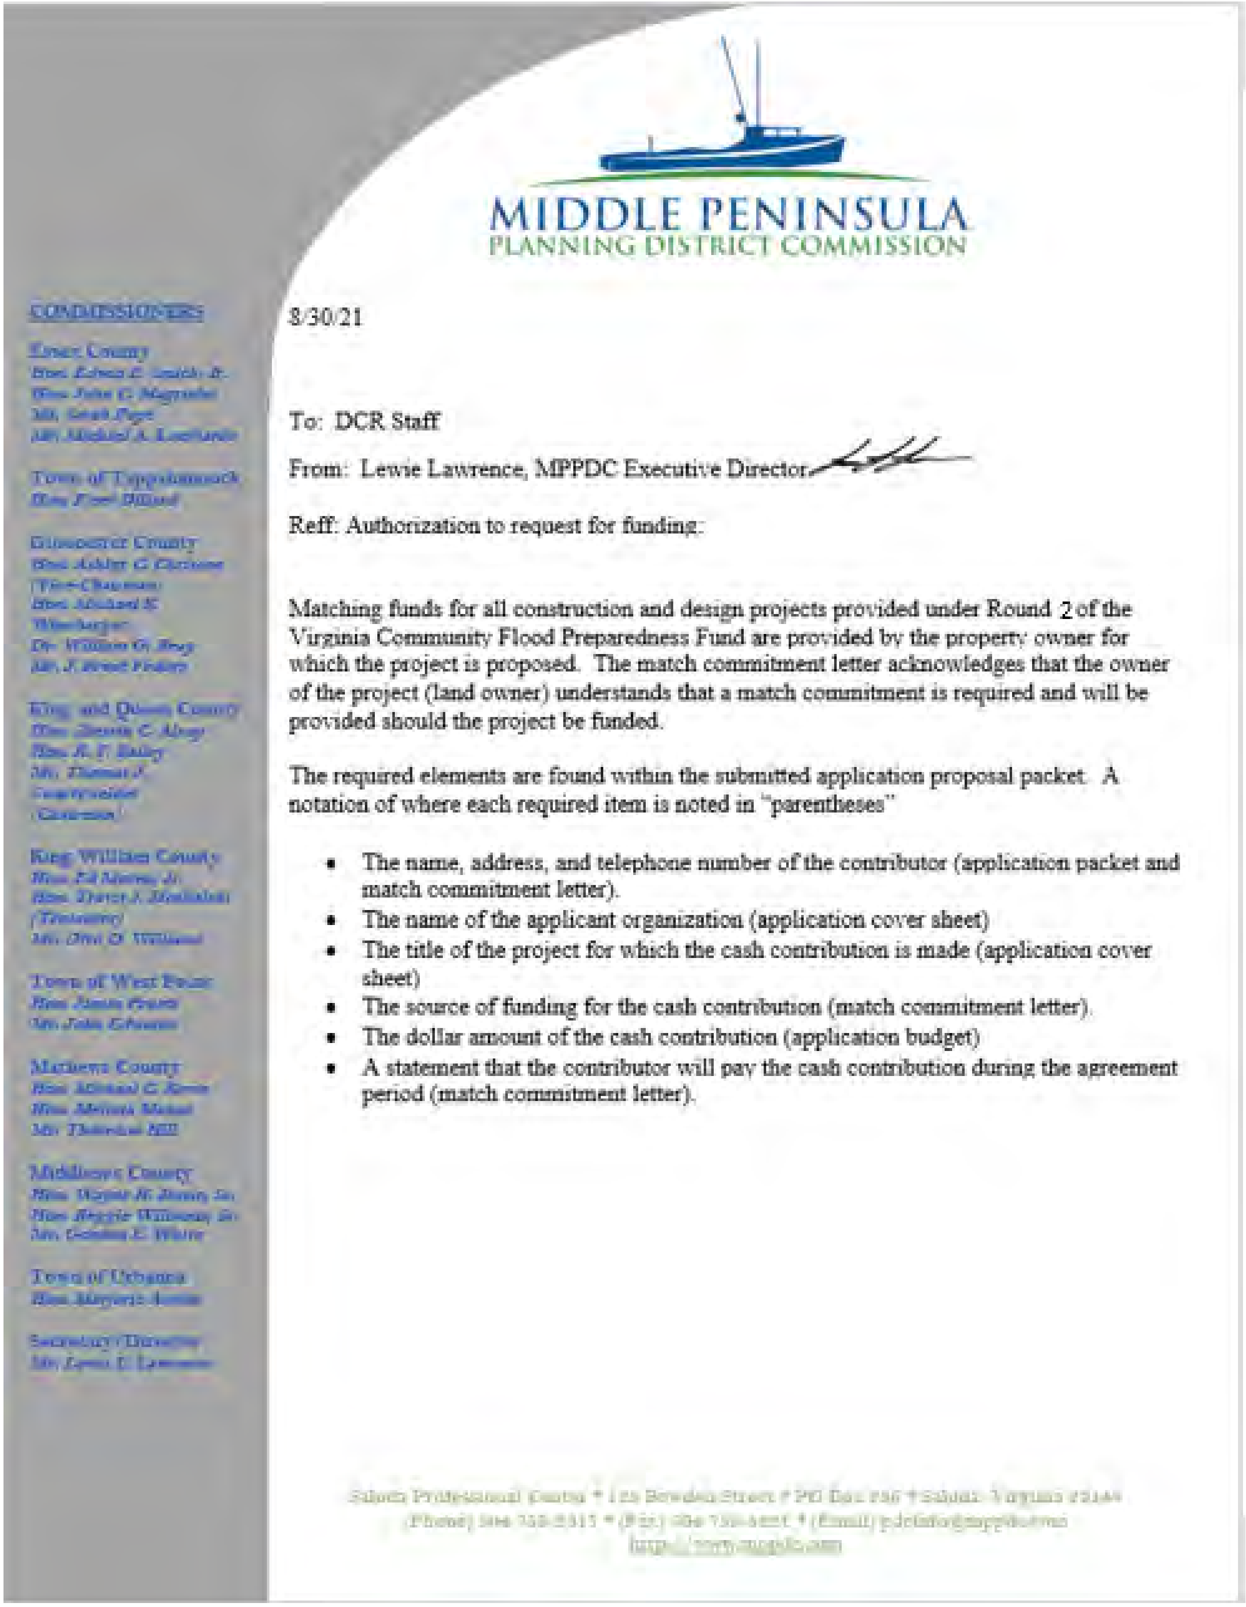
Attachment 9: Authorization to request for funding



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 2 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

March 28, 2022

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Matthew Wells,

Enclosed in this packet are nine applications for flood protection and prevention projects that involve implementation of nature-based shoreline solutions.

Among the applications are projects which are currently at the design stage. Design projects are requesting funds for professional designs and development of Joint Permit Applications which are needed before the property owner can move to construction of a nature-based flood protection solution.

Below is short summary of proposed flood protection and prevention design projects in Mathews County:

A. **Flood Prevention and Protection for Rigby Lane for Abbassi**
(CID): 510096 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. This applicant is part of a series of adjoining parcels requesting funding. There is one SRL/RL structure south of the site. DCR SEAS recommendation for the project is included.

B. **Flood Prevention and Protection for Queens Creek Road for Fletcher**
(CID): 510096 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. Significant erosion is now occurring along the bottom of the bank and undercutting the bank. With the recent Nor-easter, the bank is caving and close to collapse if nothing is done. The length of the shoreline is approximately 100 feet. Additionally, the septic system is 35 yards from the water's edge. The well about six yards away from the bank. The

applicant would like to install a nature-based design solution of a living shoreline to mitigate these immediate issues.

C. **Flood Prevention and Protection for Diggs Wharf Road for Morley**
(CID): 510096 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. The applicant has lost ~17,000 square feet of shoreline according to VIMS Shoreline Studies Program historical shoreline data. The site is a significantly high erosion shoreline warranting immediate mitigation.

D. **Flood Prevention and Protection for Chesapeake Shore Road for Stanley**
(CID): 510096 Total Cost (from individual project application): $24,963
This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. This project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, on private property located on Chesapeake Shore Road in Mathews County. The applicant is one of 6 applicants joining together to submit Flood Fund applications under Round 1 and 2 within the Chesapeake Shores community to make a demonstrable impact on shoreline protection.

E. **Flood Prevention and Protection for Chesapeake Bay Road for Carr**
(CID): 510096 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a naturae based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. This project proposes to investigate nature-based design solutions or, if necessary, hybrid designs solutions when nature-based design solutions are not preferable to a living shoreline on a private property located on Chesapeake Bay Road in Mathews County.

F. **Flood Prevention and Protection for Chesapeake Bay Road for Gray**
(CID): 510096 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a naturae based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. This property is currently experiencing high erosion rates.

G. **Flood Prevention and Protection for Green Plains**
(CID): 510096 Total Cost (from individual project application): $24,963
This proposal request funding for a shoreline site evaluation and recommendation and development of an appropriate nature-based shoreline design or hybrid solution if nature based isn't possible and draft JPA permit application for up to two miles of shoreline. The design is intended to reduce the impacts of storm events, flooding, and wetland loss. The site is a large waterfront estate with several parcels suffering from flooding and storm damage

causing failure to the bulkhead which holds the septic drain field and tank in place, hundred-year-old trees, and loss of tidal wetlands protecting the road.

H. Flood Prevention and Protection for Bayshore Avenue
(CID): 510096 Total Cost (from individual project application): $6,807
This proposal requests funding for the development of a naturae based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. This project will take place on a private property located on Bayshore Road in Mathews County experiencing significant erosion behind the bulkhead.

I. Flood Prevention and Protection for Chesapeake Shore Road for Vida
(CID): 510096 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a naturae based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. This project design will address the escalating erosion issues that threaten the land and several large trees along the shoreline.

The total project costs for Mathews County Round 3 design applications are **$161,127** and MPPDC staff are requesting **$112,795** from DCR to support this work.

We consider helping both public and private entities manage flooding a critical and essential function of government.

Thank you for considering the enclosed proposed projects. If you have any questions about the enclosed, please contact me by email at llawrence@mppdc.com or by phone at 804-758-2311.

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Mathews County **-** Please see the attached corresponding maps for this application.

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. This applicant is part of a series of adjoining parcels requesting funding. There is one SRL/RL structure south of the site. DCR SEAS recommendation for the project is included.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Rigby Lane in Mathews County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Mathews County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

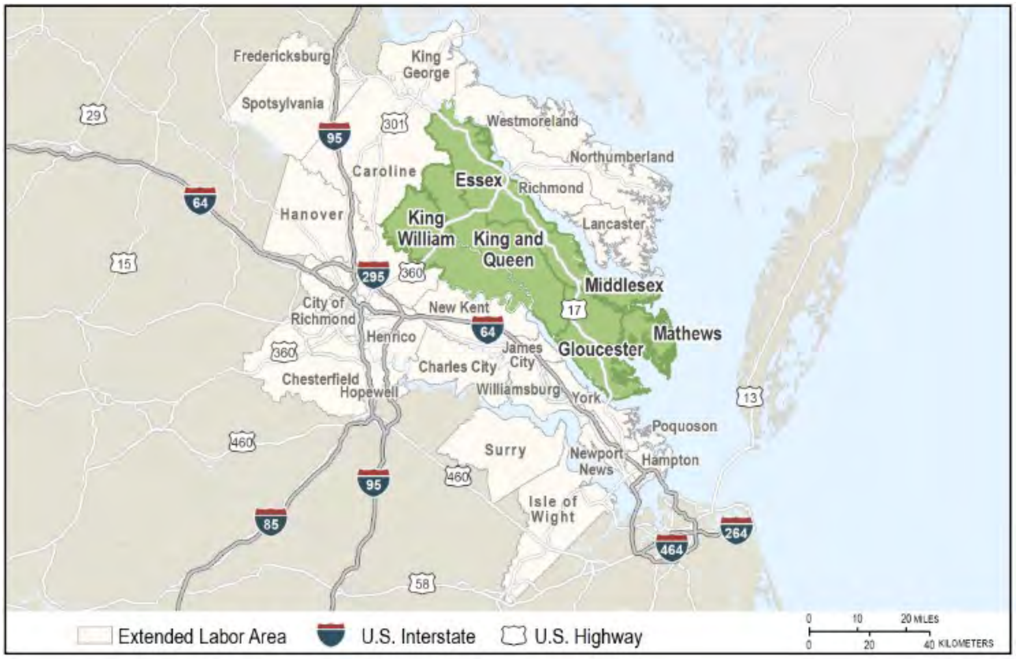

Figure 2. Middle Peninsula Population

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to design a nature-based shoreline solution on one private property on Rigsby Lane in Mathews County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

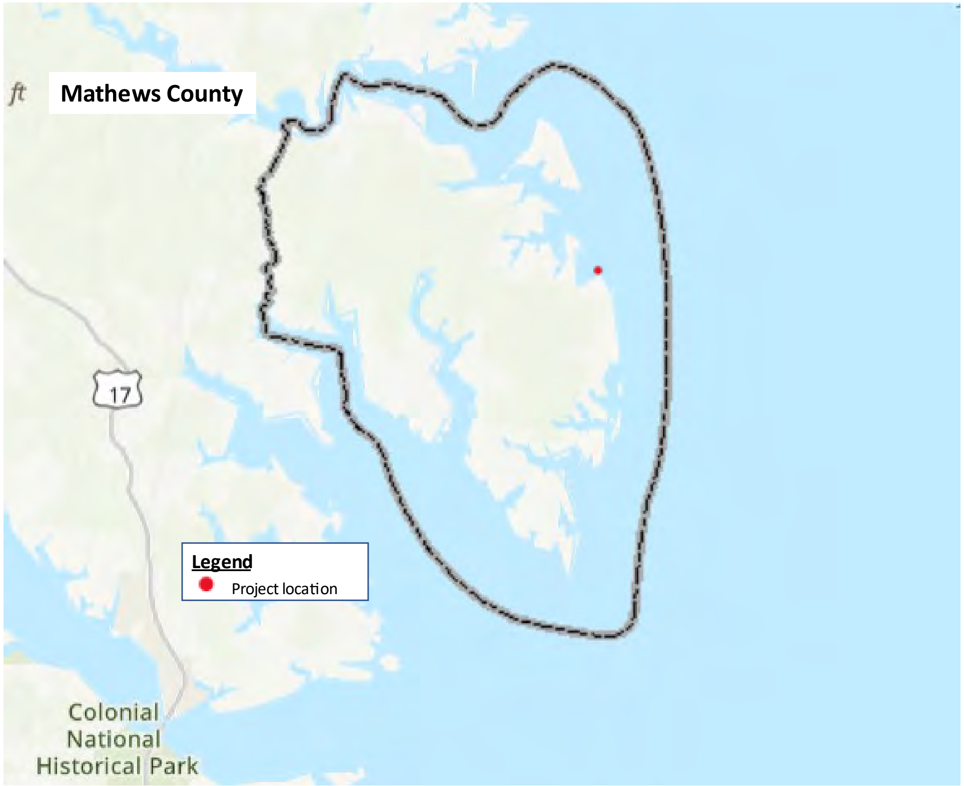

Figure 4. Parcel Map of Project Location

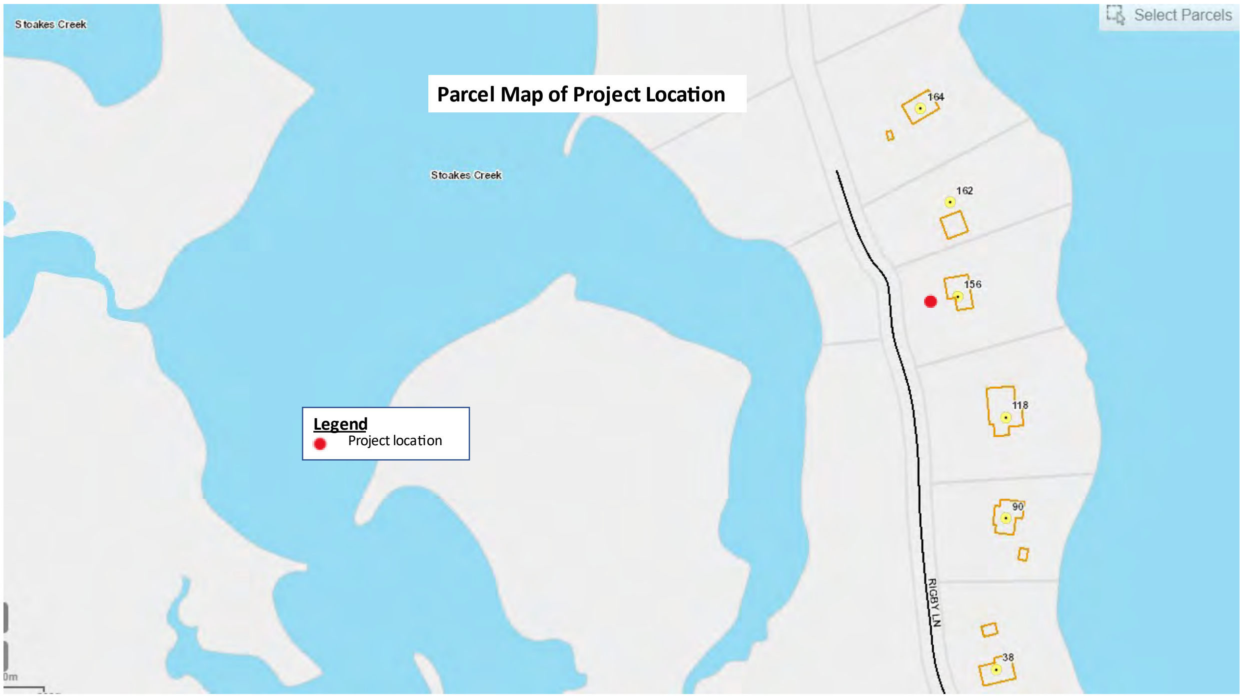

Mathews County is located on Virginia’s Middle Peninsula and has an economy based upon agriculture, forestry, and the water. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County’s population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income “community” areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas

Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area

According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively moderate level of vulnerability as seen in **Figure 8**.

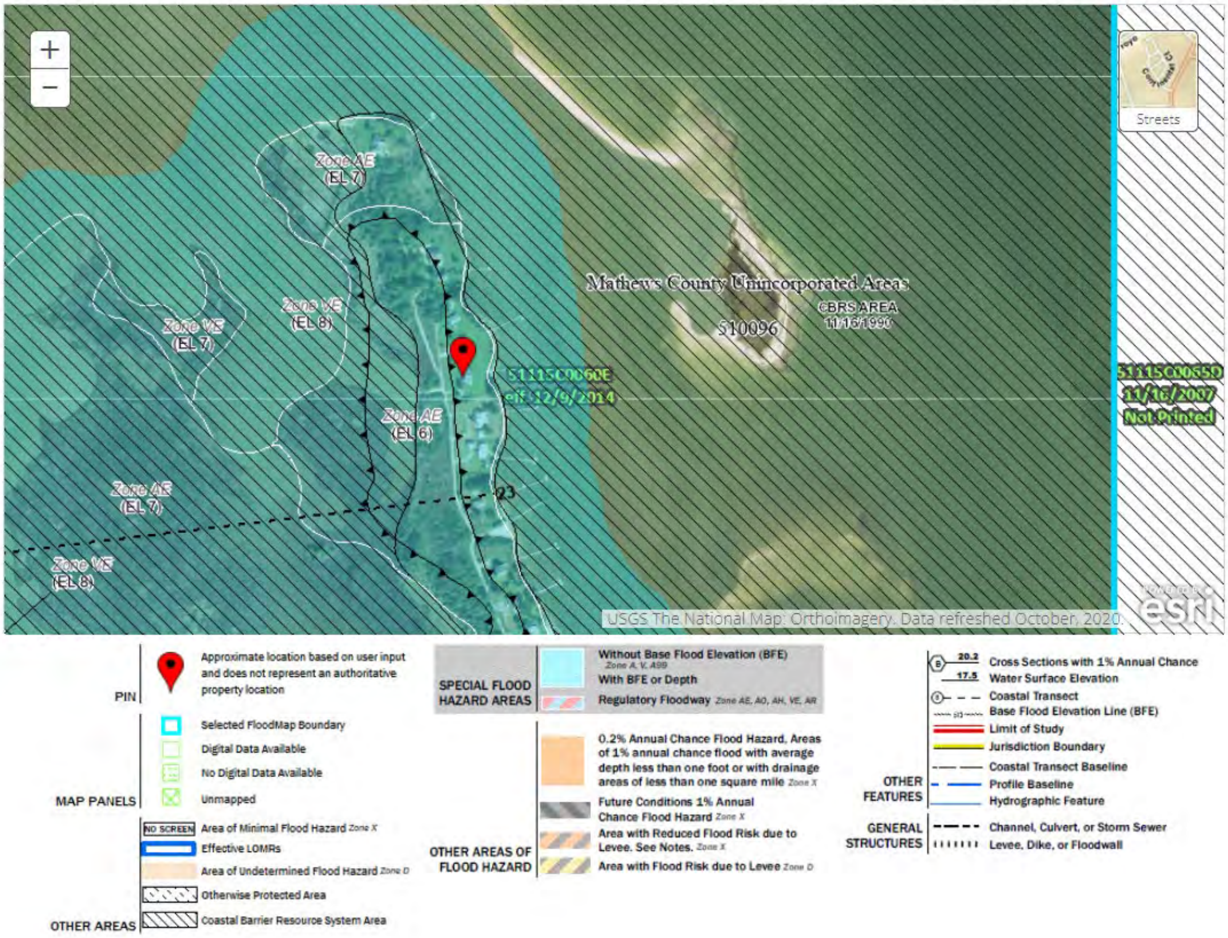
Create Report

The project is located at 156 Rigby Lane, Diggs VA 23045 (-76.2611, 37.44896). The property was purchased in 2000 and has experienced a number of issues. The historical erosion rate of the shoreline, formerly on White's Creek, is less than 1 foot per year (length of shoreline is 189.41 feet). **However, the erosion rate for the Rigby Island project site shoreline is 5 to 10 feet per year**. It is reasonable to assume the historic erosion rate of the shoreline will increase as the island continues to erode. Erosion on the property appears to be caused by elevated water levels and wave action associated with storms. Across from the property is Rigby Island – the island is now disappearing, and wave action is causing more damage. Live trees are very close to the water, with roots exposed to salt water, increasing the chances of these trees dying and the trees being lost in the near future. The septic tank and distributions are all close to the shoreline and the additional impact of erosion is very concerning, with the possibility of sewage effluent entering the Bay. On the water side of the property, there is water and wind erosion. As with many other properties, the last year has been more damaging than in the past decade. Mr. Michael L. Vanlandingham, the Shoreline Engineer with the Department of Conservation and Recreation Division of Soil and Water Conservation, Eastern Area Regional Office, has visited the property and his letter of recommendation is included as **Appendix 2**. This recommendation is valued highly, especially the permitting process in following the recommendation of the Shoreline Engineer to construct a riprap marsh sill and breakwater. See accompanying pictures.

Please see **Appendix 3** for additional property photos.

This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 4** for the FIRMettes (last mapped 12/9/2014).

Figure 9: Map of FEMA Flood Zones

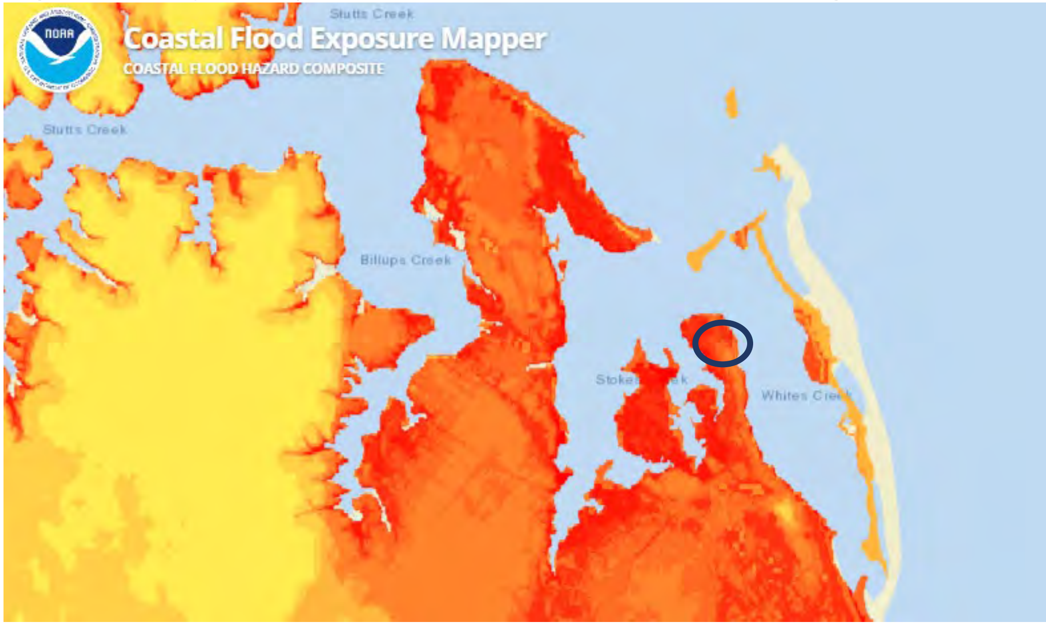


Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate change of 4,001.9 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 5** lists 82 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 11.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



For more information about this project area please see:

- *A link to Mathews County's current floodplain ordinance can be found at: https://www.mathewscountyva.gov/172/National-Flood-Insurance-Program-NFIP*

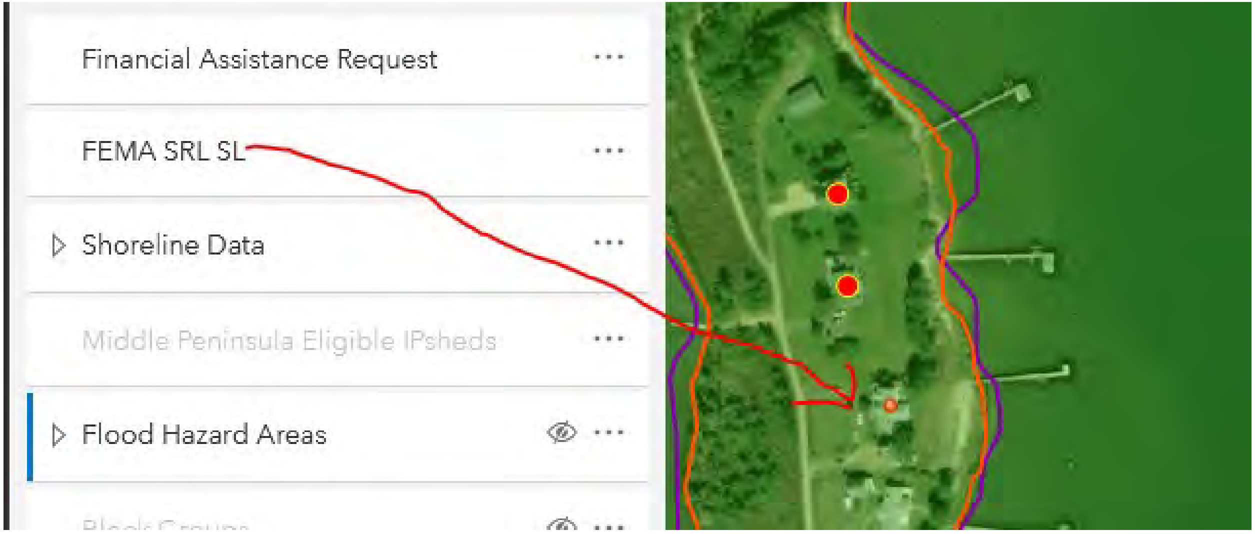
COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

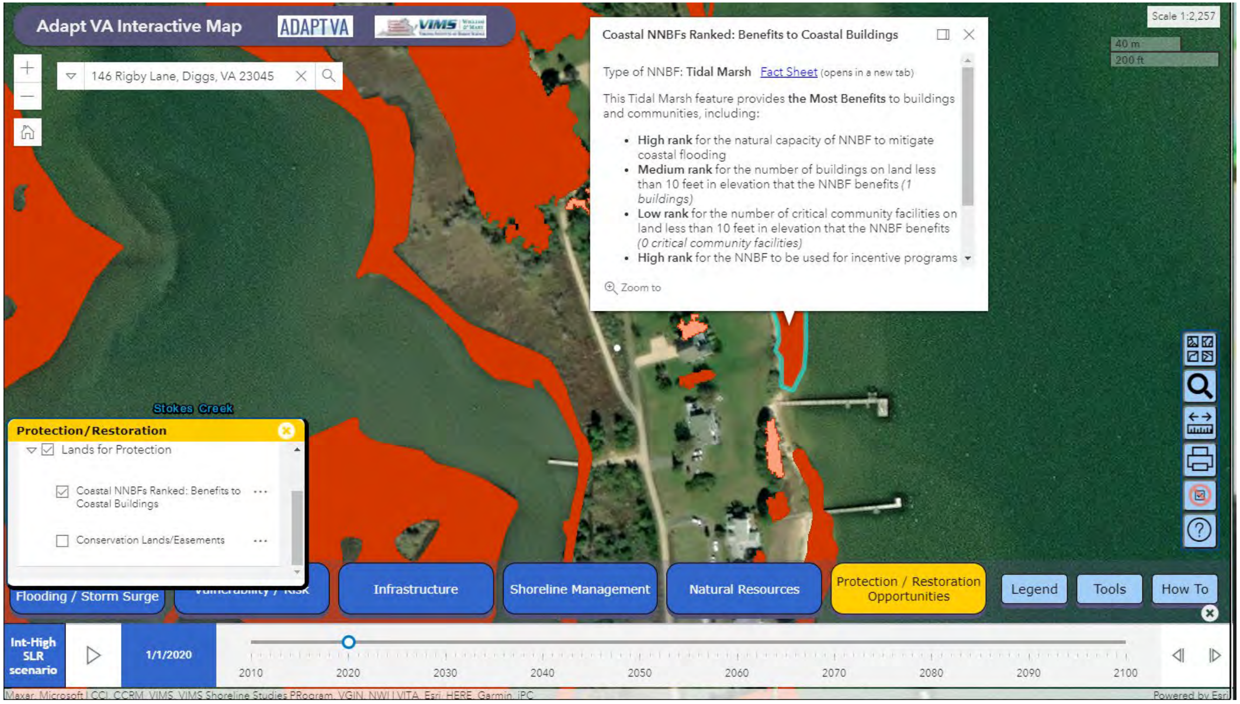
Fig 11a shows Round 1 and 2 applicants partnering and the downstream SRL/RL home location.

Fig 11A- Location of applicants



Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12**. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **Medium rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(1 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **High rank** for the NNBF to be used for incentive programs

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants,* *stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Mathews County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, a proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

RELATIONSHIP TO OTHER PROJECTS.

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 6.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 7.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	

Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index Score.)]		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		83

SCOPE OF WORK CHECKLIST.

III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply. For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being located in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

The proposed project budget is:

- **Estimated total project cost*: $17,399***
- ***Amount of funds requested from the Fund: $12,180***

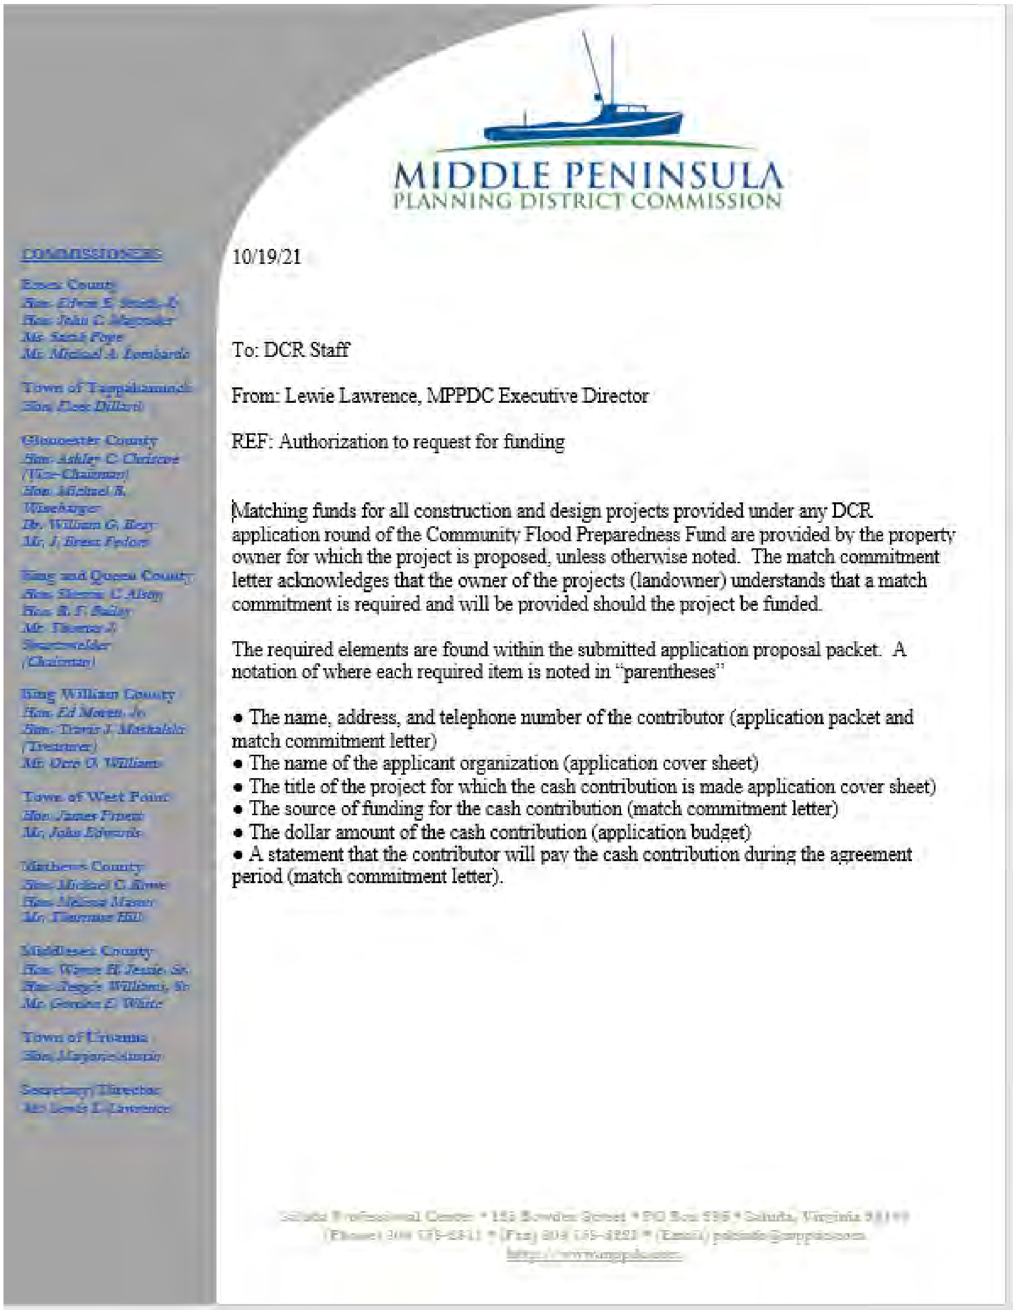
MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Authorization to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Signed pledge agreement from each contributing organization:

10/4/2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at [804-852-4444] or by email at ali23060@yahoo.com.

Sincerely,

[Signature]
Ali Abbasi

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

DocuSigned by:

RE: SEAS# T20082

Dear Mr. Abbasi:

On February 20, 2020, I visited your property, on the Chesapeake Bay in Mathews County. The site visit was in response to your request for advisory assistance concerning a shoreline erosion problem.

The Shoreline Studies Program, at the Virginia Institute of Marine Science, has created a Shoreline Evolution Map for tidal localities in Virginia. The map was created using aerial photography from 1937 to 20017. The map shows shoreline change over time. Based upon that map, the historical erosion rate for your shoreline, formerly on White's Creek, is less than 1 foot per year. However, the erosion rate for the Rigby Island shoreline is 5 to 10 feet per year. It is reasonable to assume the historic erosion rate for your shoreline will increase as the island continues to erode. The erosion on your property appears to be caused by elevated water levels and waves associated with storms. The following recommendations are made as a result of the site visit and subsequent analysis of the problem:

1. The marsh grasses growing on your shore dissipate wave energy and bind the soil with their roots. We recommend you begin a periodic maintenance program for the grasses. Tidal debris should be periodically removed to prevent smothering of the grasses. The encroachment of trees and shrubs into the grasses should be prohibited. The program should increase plant vigor and promote growth.

2. In all segments where the marsh grasses are sparse or absent, we recommend establishment of marsh fringe. The establishment of the marsh fringe would involve planting smooth cordgrass and saltmeadow hay. The grasses may be purchased or transplanted from neighboring areas with permission.

   Smooth cordgrass grows between the mean low and mean high tide elevations. Saltmeadow hay grows above the mean high tide elevation. Smooth cordgrass and saltmeadow hay should be planted from late April through June. Care should be taken to plant the grasses within the proper zone.

To transplant the grasses, dig healthy plants and be sure to obtain an adequate root mass. Plant the grasses on an 18-inch by 18-inch grid. We recommend fertilization at the time of planting. A slow release fertilizer such as Osmocote can be placed in the hole with the plant. You should use approximately one ounce per plant. An alternative to Osmocote is any available fertilizer such as 10-10-10. Approximately two ounces of the alternate fertilizer should be side-dressed about six inches from the plant. To prevent damage to the source area, do not remove large numbers of plants from one section. The source area should be fertilized after plugging. If you wish to purchase plants or have someone do the planting for you, see the enclosed list of suppliers and contractors. See the enclosed information concerning descriptions of the grasses.

3. Along with enhancing the existing marsh fringe, you may consider the construction of a riprap marsh sill. The structure should have a trapezoidal cross section with 2:1 side slopes. It should have a top elevation at least 2-foot above the mean high water elevation. A minimum of two layers of armor rock should be used. Each armor rock should weigh a minimum of 500 pounds. Install the rock so that a "V" notch is placed about every 100 feet along the improved section to allow tidal flushing to occur. A layer of filter cloth should be used under the riprap. See the enclosed cross-sectional view of a typical riprap breakwater (modified).

   Immediately following construction, we recommend filling the area landward of the sill with good-quality, medium to coarse grain sand. The height of the sand fill against the bank should be such that mean high water no longer reaches the base of the bank. The slope of the sand nourishment should be 10:1 (horizontal:vertical). This slope will help promote positive drainage and mimics natural fringe marsh elevations. Moving mean high water off the base of the bank will should greatly reduce the under cutting of the bank. This sand will also provide an excellent planting media for marsh grasses.

4. An alternative to constructing a sill to stabilize the eroding marsh fringe is a properly designed and constructed riprap (large rock) wedge. The riprap should be constructed on a 2:1 (horizontal/vertical) slope or flatter. The wedge should be installed against the eroding scarp. Care should be taken not to build the wedge higher than the marsh peat surface. A minimum of two layers of armor rock should be used. Each armor rock should weigh a minimum of 150 pounds. Installation of the wedge may be difficult due to the dimensions of the recommended rock size. The toe of the riprap should be buried a minimum of 2 foot below the mean low water elevation. An alternative to the buried toe is a riprap apron. The apron consists of 2 layers of armor rock extending a minimum of 4 feet onto the bottom. A layer of filter cloth should be used under and behind the riprap. The riprap should be extended inland or properly connected to neighboring structures to prevent erosional flanking. The lists for filter cloth and riprap suppliers have been enclosed for your use. See the enclosed cross-sectional view of a typical riprap wedge for an eroding marsh fringe.

5. To protect the beach area of your shoreline you should consider a nearshore breakwater system that includes beach nourishment. The breakwaters provide protection for the beach by reducing the wave energy reaching the shoreline. Additionally, breakwaters will interrupt the along shore transport of sand causing it to be deposited in the lee of the

structures. This process helps maintain the beach over time. The height, length and placement of the structures can vary depending on the desired results. In general, the structures are placed parallel to the shoreline. Angular quarry stone is the most commonly used material for breakwater construction. The breakwaters should be constructed with a trapezoidal cross section. The side slopes should be 2:1 (horizontal:vertical) or flatter. A minimum of two layers of armor stone should be used. Each armor stone should weigh a minimum of 1,500 pounds. A layer of filter cloth should be used under the breakwater. See the enclosed cross-sectional view of a typical riprap breakwater.

The above recommendations are made in my capacity as an advisory agent in shoreline erosion control matters. The suggestions should not be considered as binding you to any particular course of action, as they are intended to indicate what we think would be the best solution in terms of cost and effectiveness. Our examination of the site or this report does not constitute permission by the Commonwealth, or its agencies, to proceed with implementation of control measures. Permits from State and Federal agencies are generally required for shoreline modification.

You should also be aware that success in shoreline erosion control cannot be guaranteed, as there are many variables involved. In this regard, we suggest care in selecting a contractor. Our comments concerning construction are intended as guidelines developed from our experience in viewing structures that have been successful or have failed.

If you decide to construct a control measure, an assessment of the impacts of the project on the environment will be given by the regulatory agencies. Our advice is given with the idea of reducing environmental impacts associated with our recommendations. Although this has been considered in our recommendations, the permit reviewing agencies may desire additional information or measures.

Services available through this office include: review of the permit application; review of design and construction plans; and inspection of structures under construction when plans have been reviewed by this office. We recommend that a copy of this report be attached to the permit application.

If we may be of further assistance or if you have any questions, please let me know.

Sincerely,

Michael L. Vanlandingham

APPENDIX 6

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 7

Match Commitment Letter

10/4/2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at [804-852-4444] or by email at ali23060@yahoo.com.

Sincerely,

[Signature]
Ali Abbasi

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes ____ No X___

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Mathews County **-** Please see the attached corresponding maps for this application.

NFIP Community Identification Number (CID#): 510096

Total Cost of Project: _____________$17,399_____________________________________

Total Amount Requested: __________$12,180_________________

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. Significant erosion is now occurring along the bottom of the bank and undercutting the bank. With the recent Nor-easter, the bank is caving and close to collapse if nothing is done. The length of the shoreline is approximately 100 feet. Additionally, the septic system is 35 yards from the water's edge. The well about six yards away from the bank. The applicant would like to install a nature-based design solution of a living shoreline to mitigate these immediate issues.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Queens Creek Road in Mathews County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Mathews County. See the community support letter in **Appendix 1**.

  - *Please see Section 4 (page 25), which includes historical hazard data within the region.*
- *A link to the County of Mathews' Comprehensive Plan can be found at: https://www.mathewscountyva.gov/196/Comprehensive-Plan.*

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

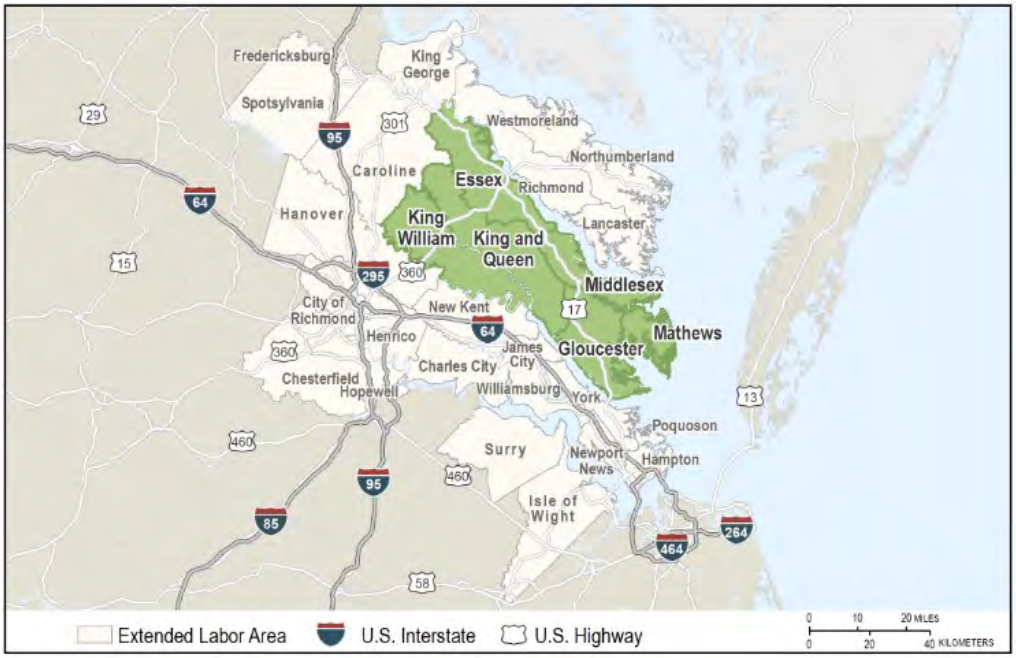

Figure 2. Middle Peninsula Population

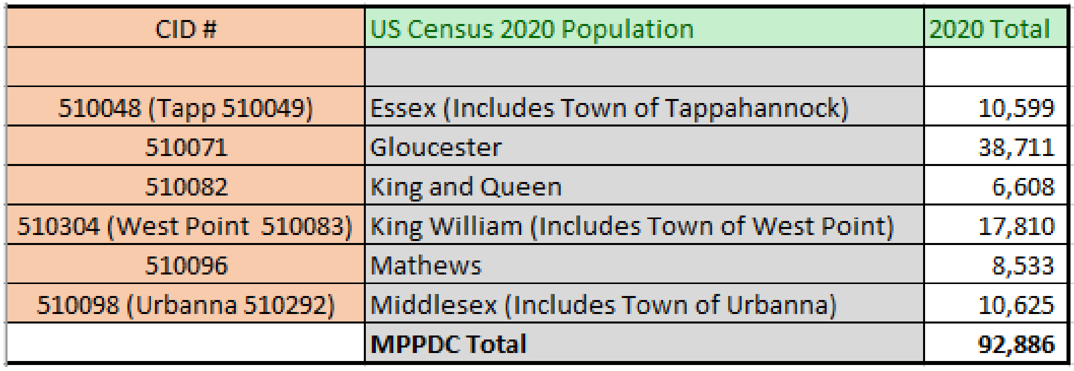

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to design a nature-based shoreline solution on one private property on Queens Creek Road in Mathews County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

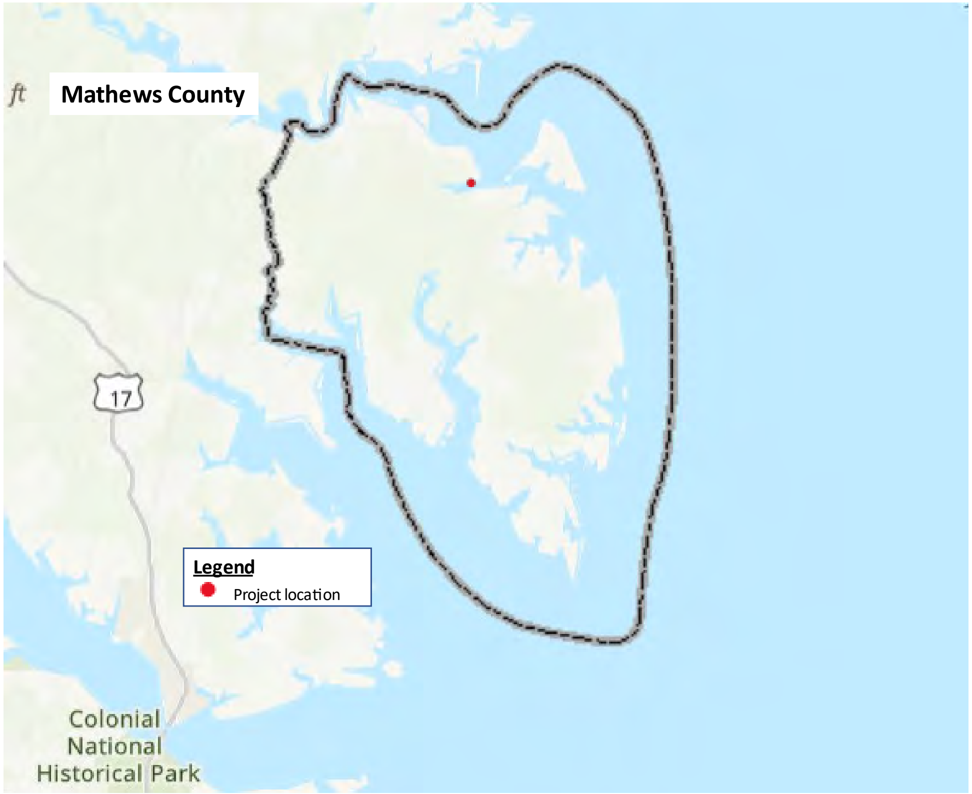

Figure 4. Parcel Map of Project Location

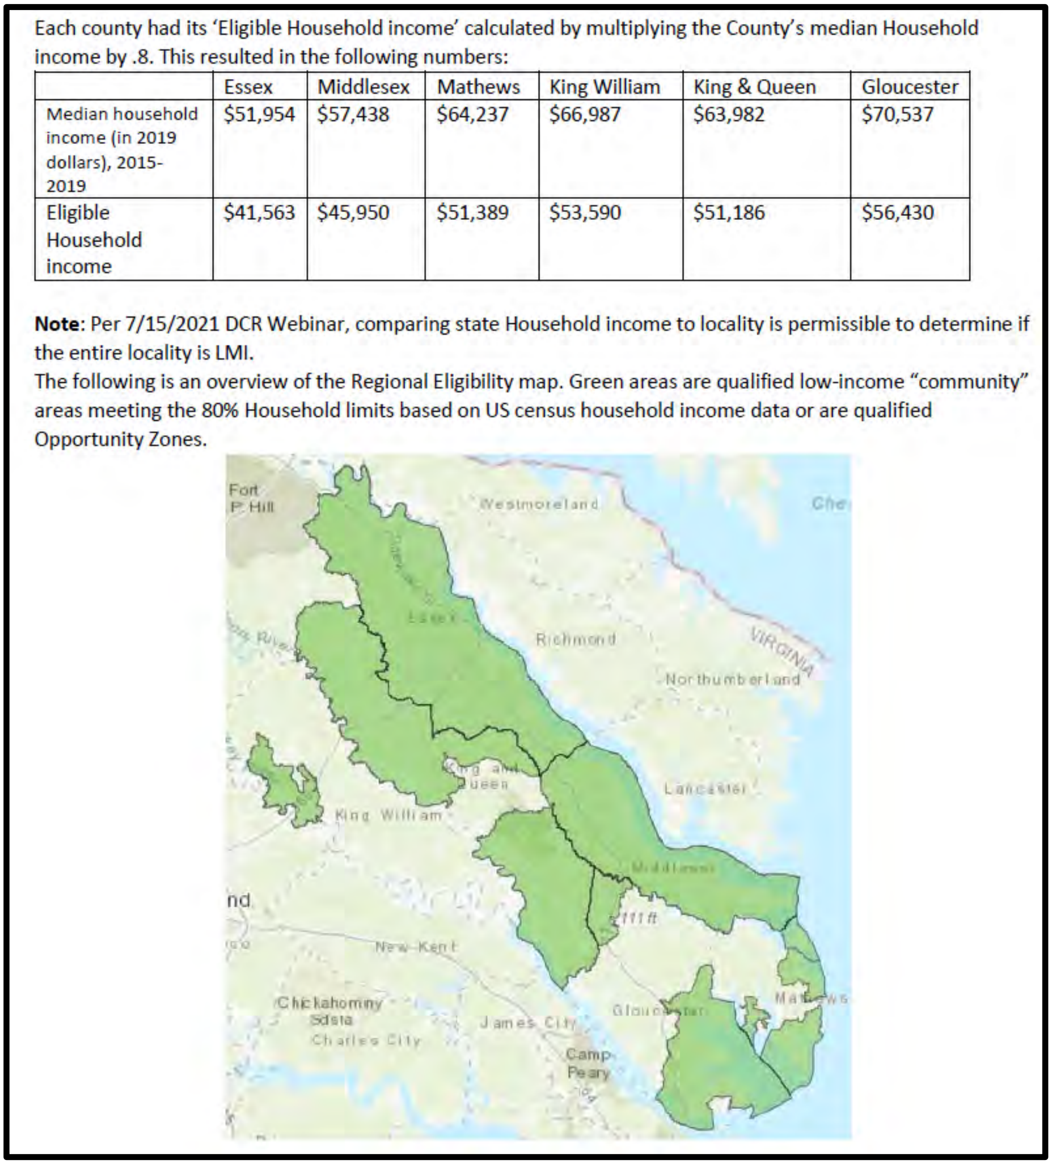
Mathews County is located on Virginia’s Middle Peninsula and has an economy based upon agriculture, forestry, and the water. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County’s population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income “community” areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

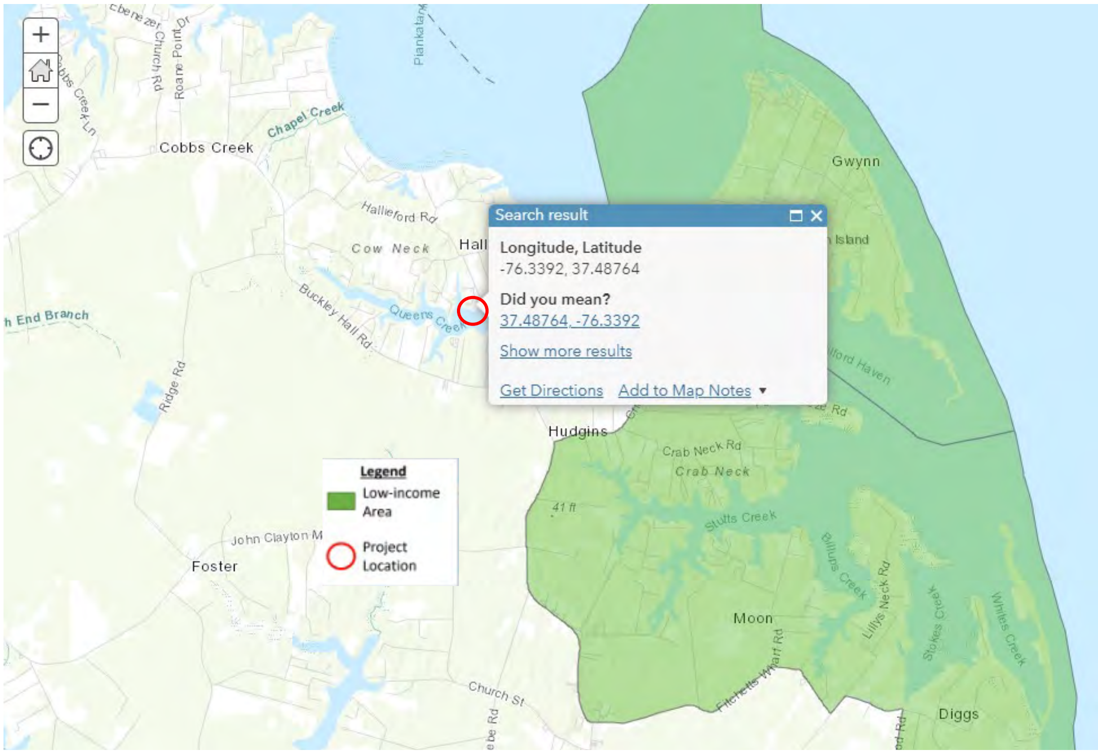
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is not within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.1
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9513, Mathews County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location

Virginia

Social Vulnerability

Social Vulnerability is Relatively Moderate

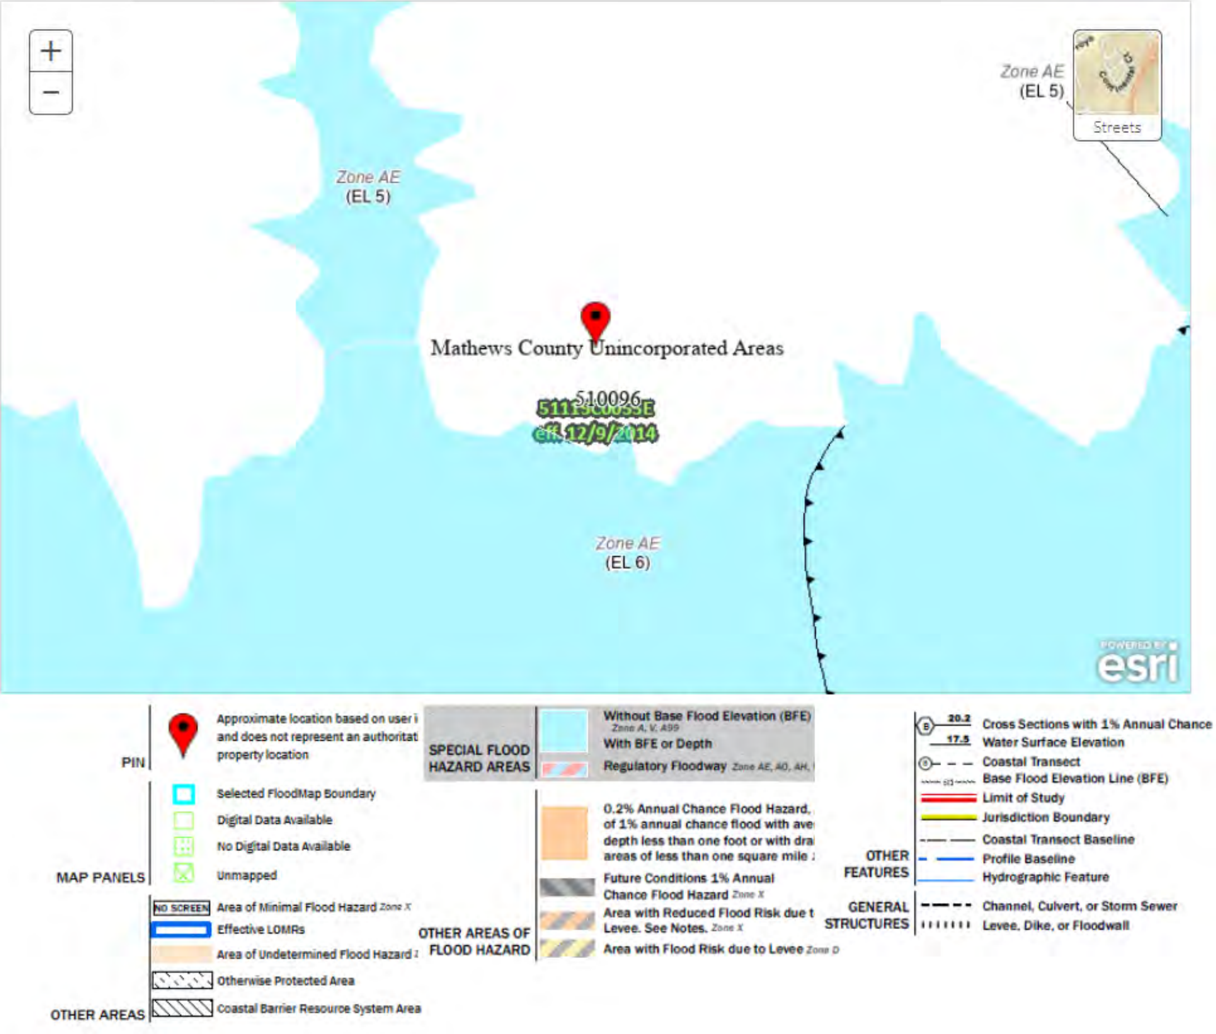
Score	43.99
Mathews County, VA	43.99
Virginia Average	35.32
National Average	38.35

When the property was purchased in 2017, the owners found several trees that had fallen into the water from the bank. The bank had many other trees on it, and they were pulling the bank down. They removed the other trees except for two that were standing upright and felt the root structure was helping the bank. There was a very small area where the bank was being undercut and almost no seagrass growing due to the shade from the many trees. The property owners now have more seagrass growing but the undercut is getting noticeably worse by the year. It is now running along the bottom of the bank and expanding each month. Now, the bank is caving in and every few months it becomes drastically more noticeable. It will eventually collapse if nothing is done. The length of the shoreline is approximately 100 feet. Additionally, the septic system is located just 35 yards from the bank. The well is very close and just about six yards away from the bank. The property owner would like to install a nature-based solution of a living shoreline including seagrass where feasible, as it is the best for the environment and for the bank. Seagrass is now growing but it is not helping mitigate erosion to the extent which is desperately needed. See accompanying pictures below.

Please see **Appendix 2** for additional property photos.

This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 3** for the FIRMettes (last mapped 12/9/2014).

Figure 9: Map of FEMA Flood Zones

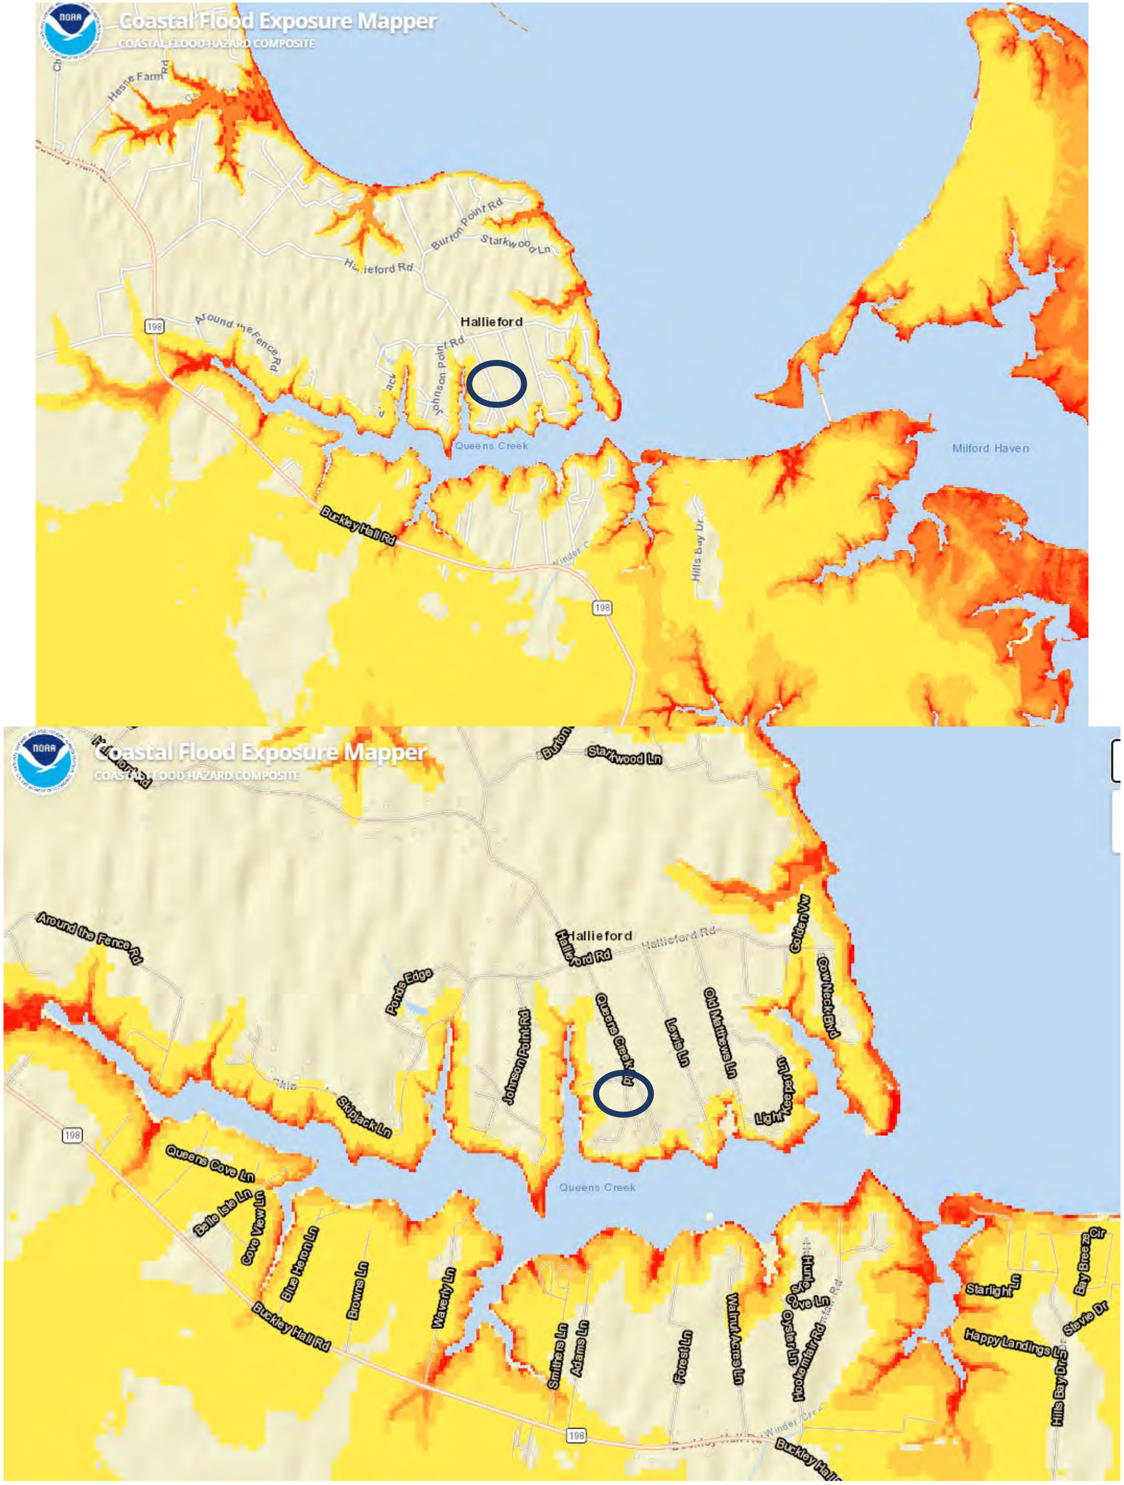


Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 5,641.8 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 80 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 11**.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*

- *A link to Mathews County's current floodplain ordinance can be found at: https://www.mathewscountyva.gov/172/National-Flood-Insurance-Program-NFIP*

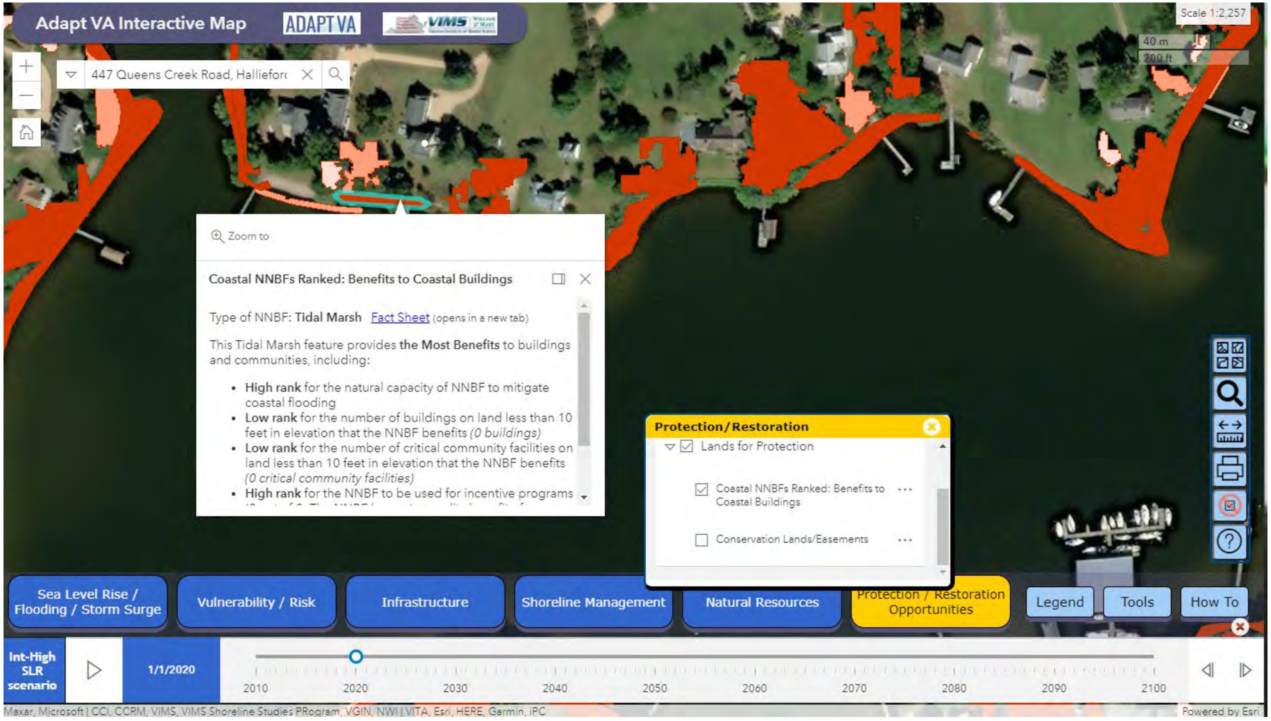
COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12.** All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **Low rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(0 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **High rank** for the NNBF to be used for incentive programs

Protection/Restoration

☑ Lands for Protection

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural*

shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Mathews County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, <u>Removal Rates of Shoreline Management Project</u>, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, a proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six-month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a

nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fighttheffloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?
   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	
No	**0**	0
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**

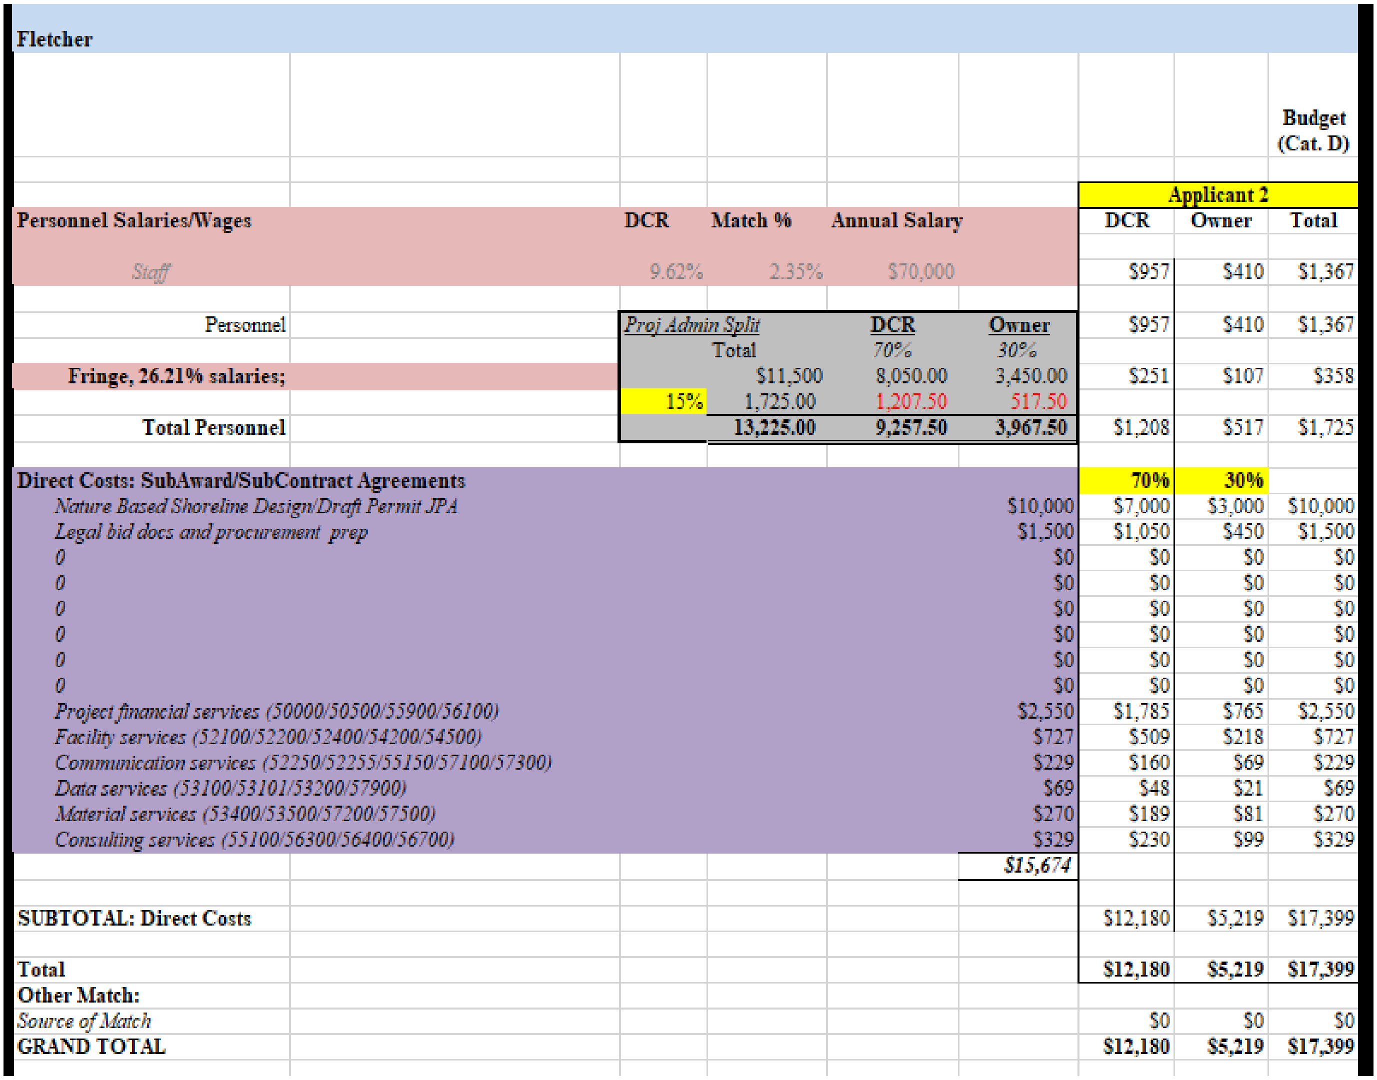
III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

The proposed project budget is:

- ***Estimated total project cost:*** *$17,399*
- ***Amount of funds requested from the Fund: $12,180***



Fletcher

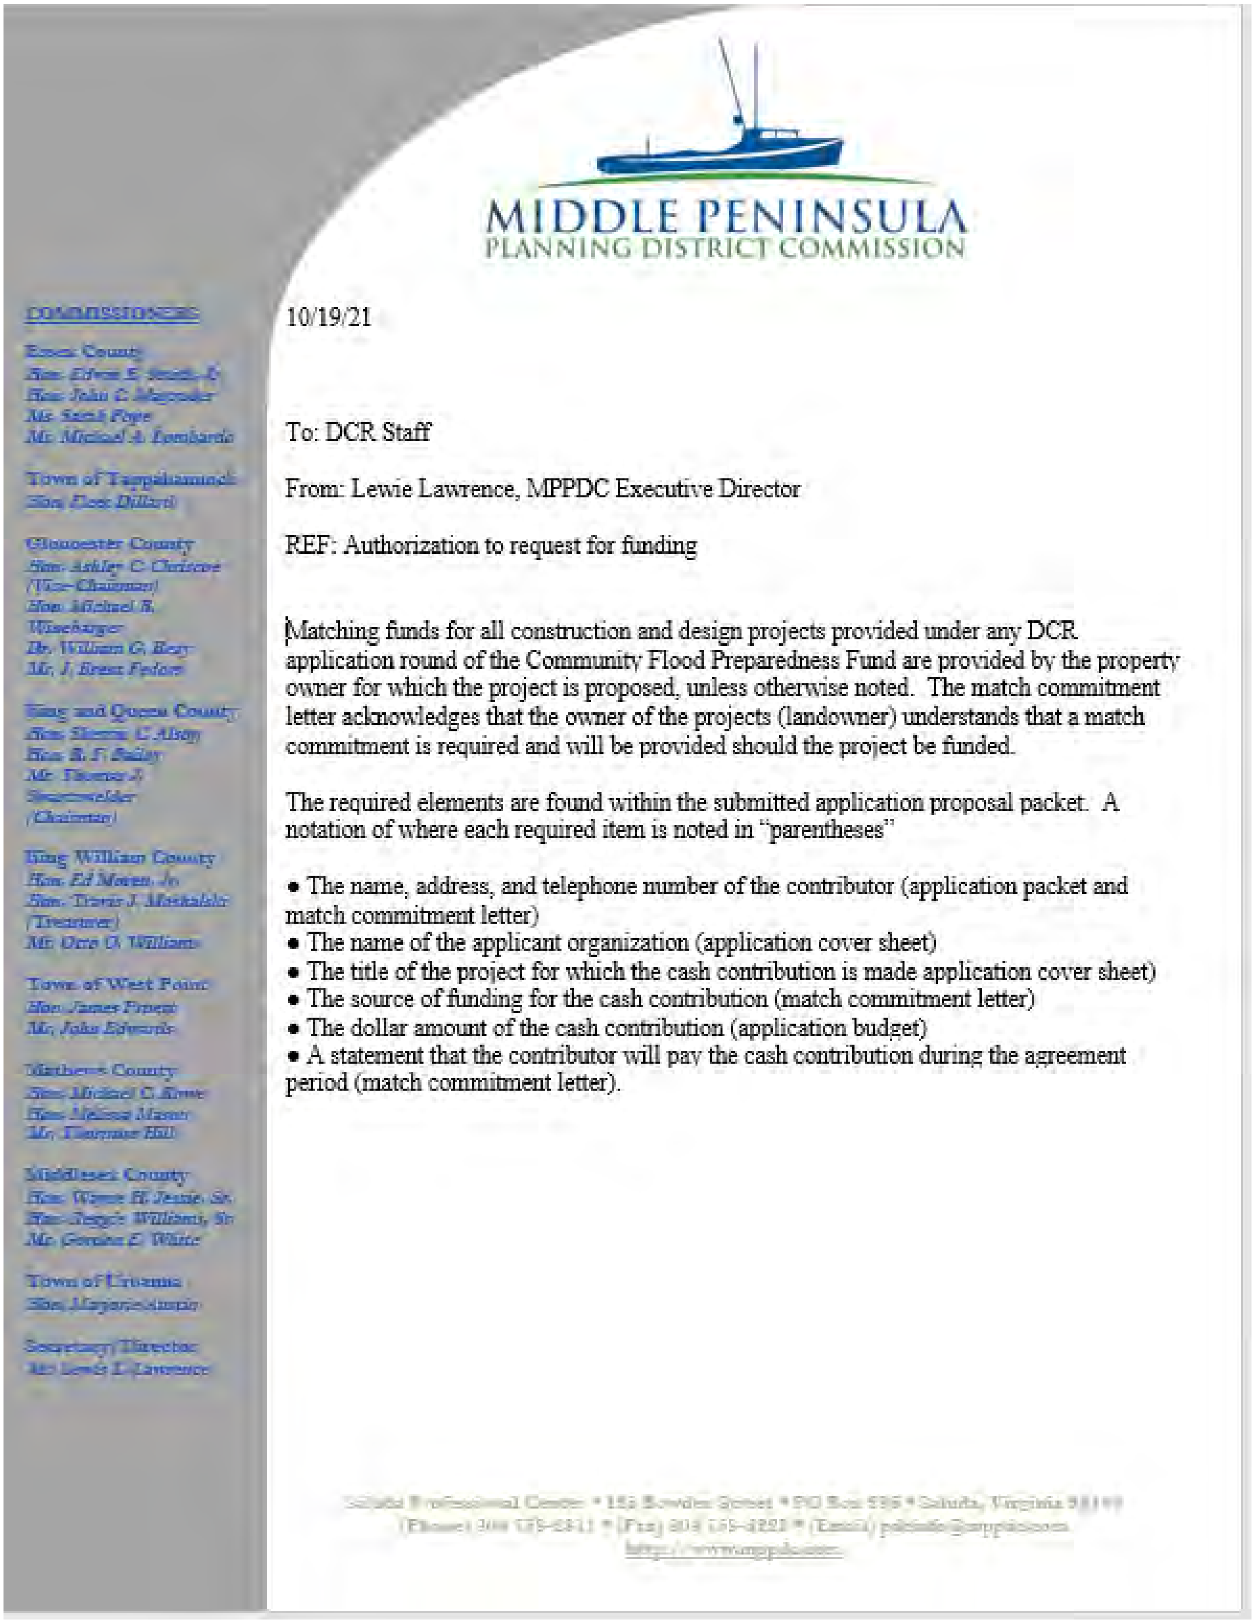
MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Authorization to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Signed pledge agreement from each contributing organization:

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 447 Queens Creek Road, Hallieford, Virginia. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 703-626-4601or by email at jfletcher@winningwaysinc.com.

Sincerely,

Joan Fletcher

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

DocuSigned by:

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)
The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)
Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)
In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

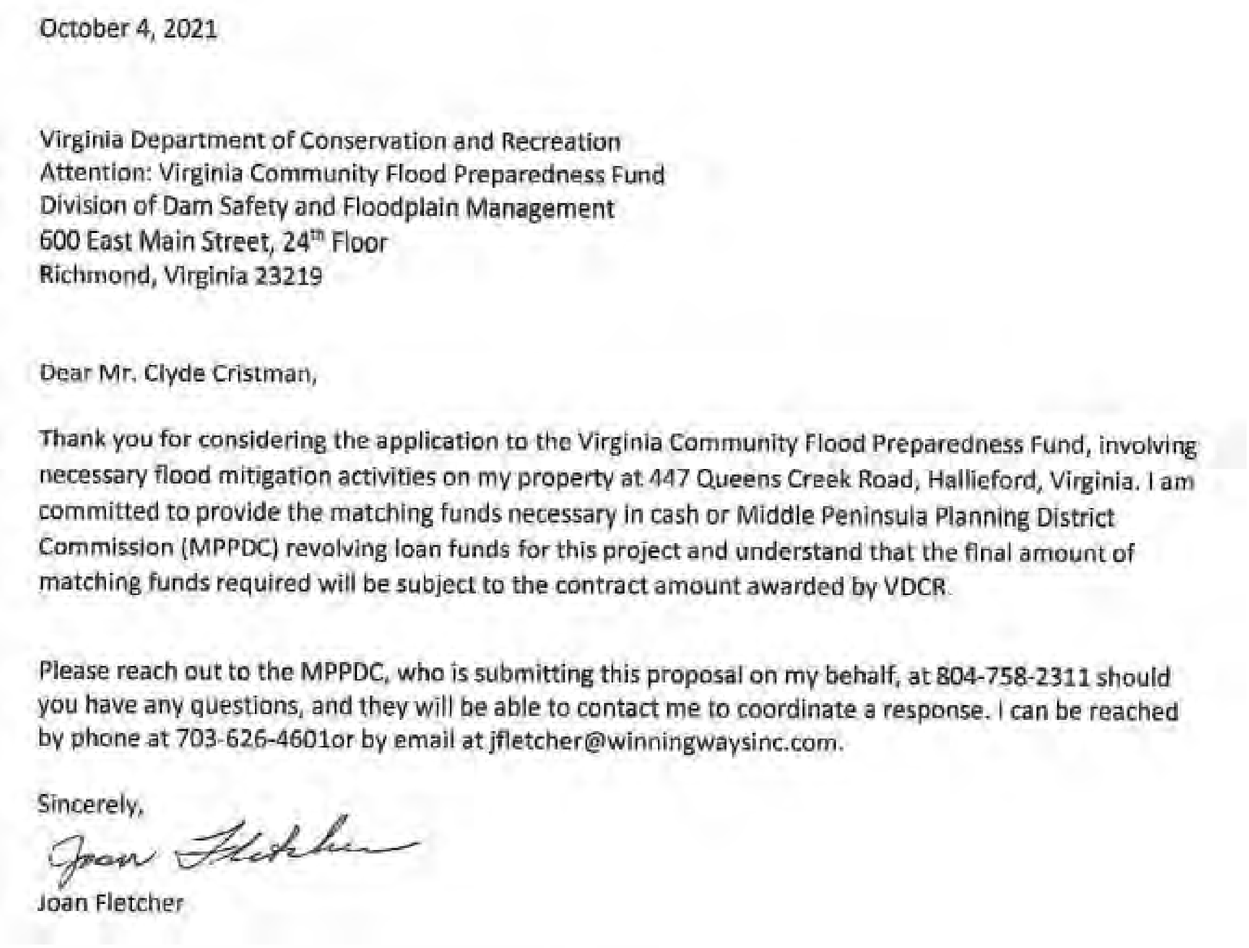
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



October 4, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 447 Queens Creek Road, Hallieford, Virginia. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 703-626-4601or by email at jfletcher@winningwaysinc.com.

Sincerely,

Joan Fletcher

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Mathews County **-** Please see the attached corresponding maps for this application.

Total Amount Requested: _________$12,180__________________

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. The applicant has lost ~17,000 square feet of shoreline according to VIMS Shoreline Studies Program historical shoreline data. The site is a significantly high erosion shoreline warranting immediate mitigation.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of "nature-based solutions", "ecosystem-based adaptation," "eco-DRR," or "green infrastructure" has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Diggs Wharf Road in Mathews County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Mathews County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

This project proposes to install living shorelines on one private property on Diggs Wharf Road in Mathews County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

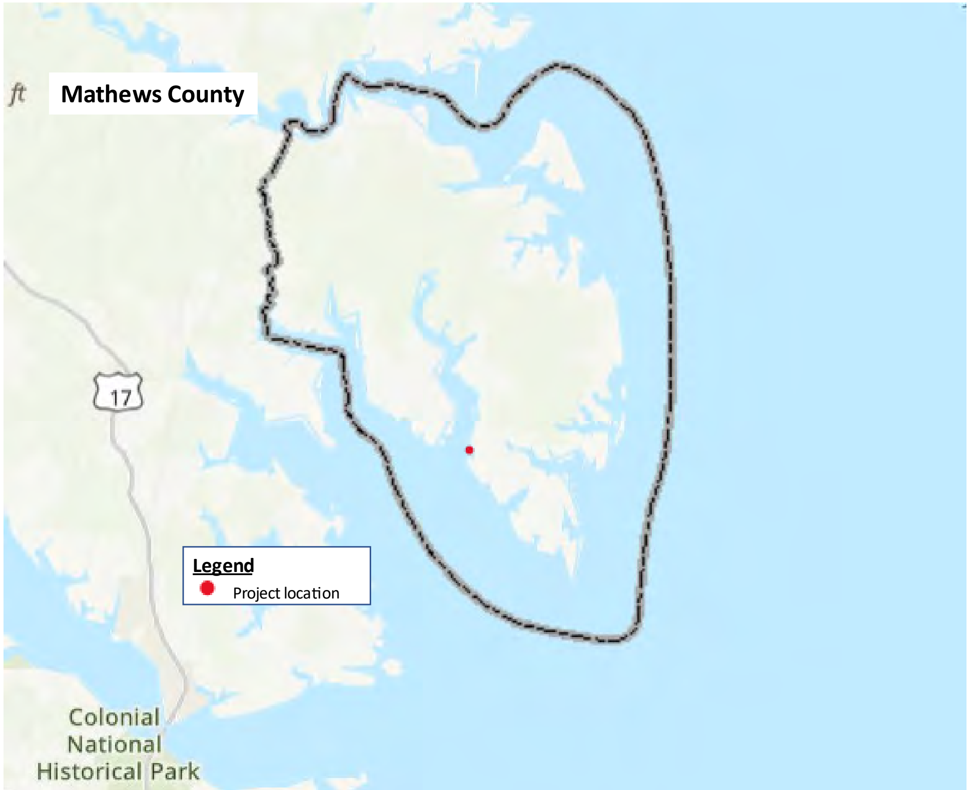

Figure 4. Parcel Map of Project Location

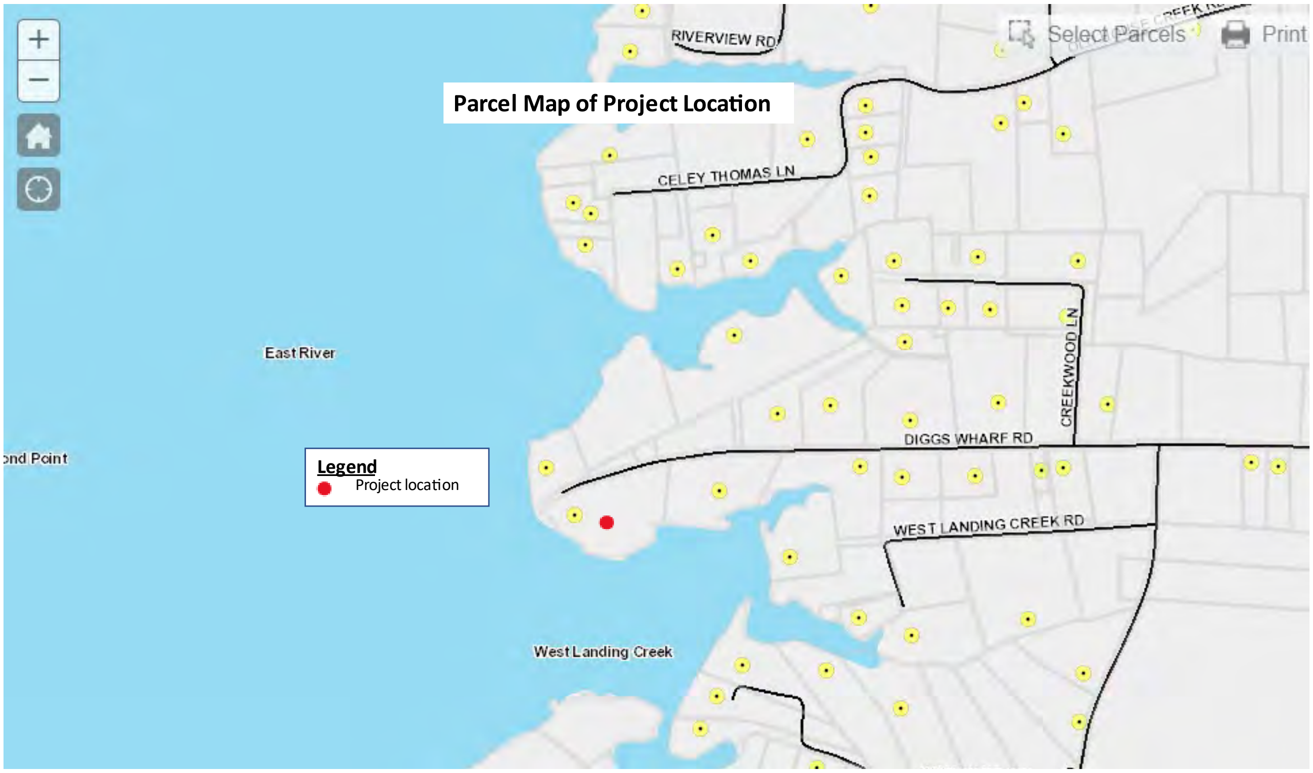

Mathews County is located on Virginia's Middle Peninsula and has an economy based upon agriculture, forestry, and the water. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County's population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas

Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is not within the low-income area.

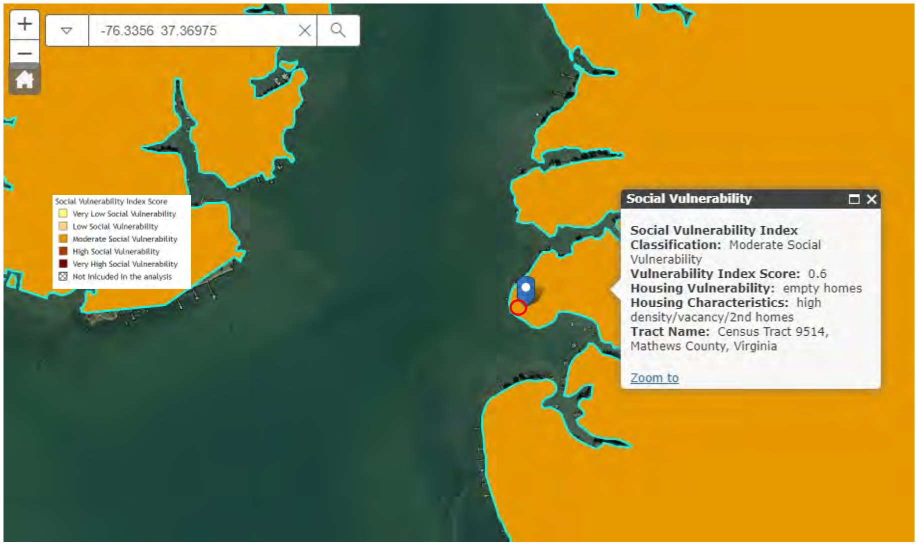
According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability

Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.6
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9514, Mathews County, Virginia

Virginia Average	35.32
National Average	38.35

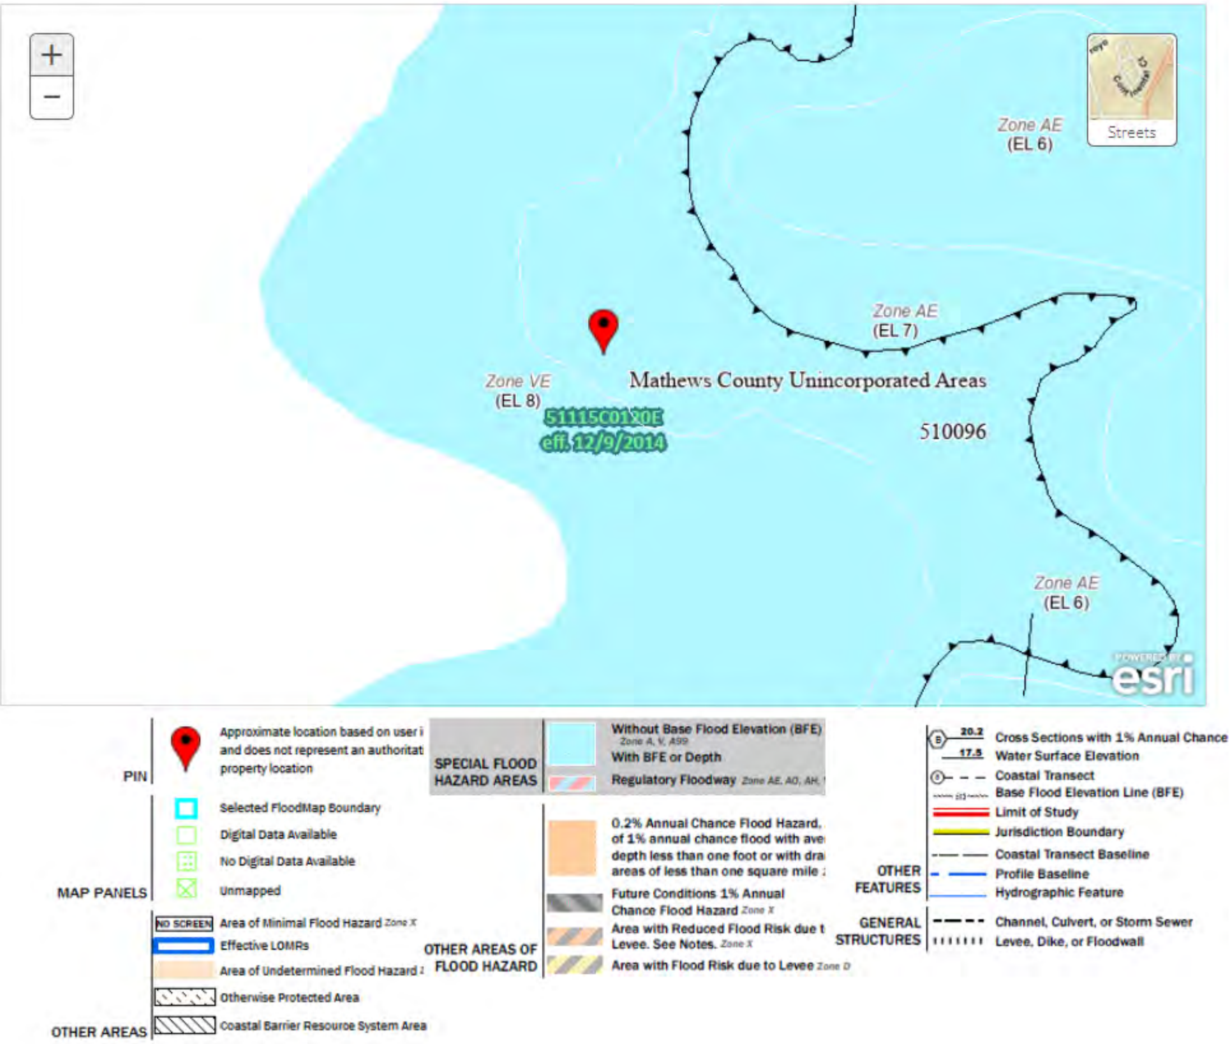
Create Report

The property was purchased in 1987 and has experienced significant erosion of the shoreline. The length of the shoreline is approximately 400 feet along the creek plus approximately 350 feet along the East River and Mobjack Bay, for a total of approximately 750 feet or ~17,000 sq ft of historic shoreline loss. The Oak Trees are dying from saltwater intrusion and at least one is severely leaning. There has been prior and/or current contact with contractor/engineer for solution design work. Two bids have been received from two different contractors in December 2020, one of which has expired and the other is still active. They do not include actual designs, just construction ideas. See accompanying pictures below. The house is elevated on concrete pilings thus the high angle of photos. They are not typical as they were taken at high tide during a flash flood watch, but they do show shoreline erosion.

Please see **Appendix 2** for additional property photos.

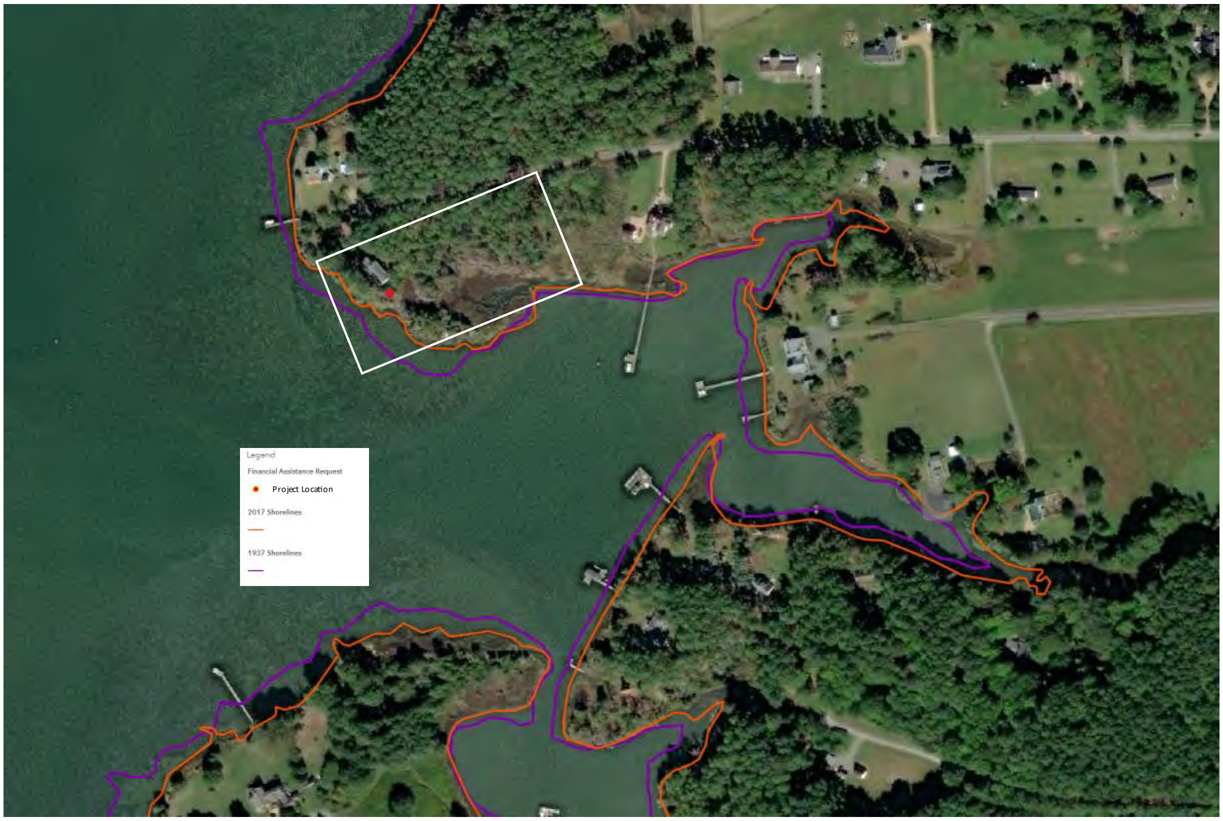
This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 3** for the FIRMettes (last mapped 12/9/2014).

Figure 9: Map of FEMA Flood Zones



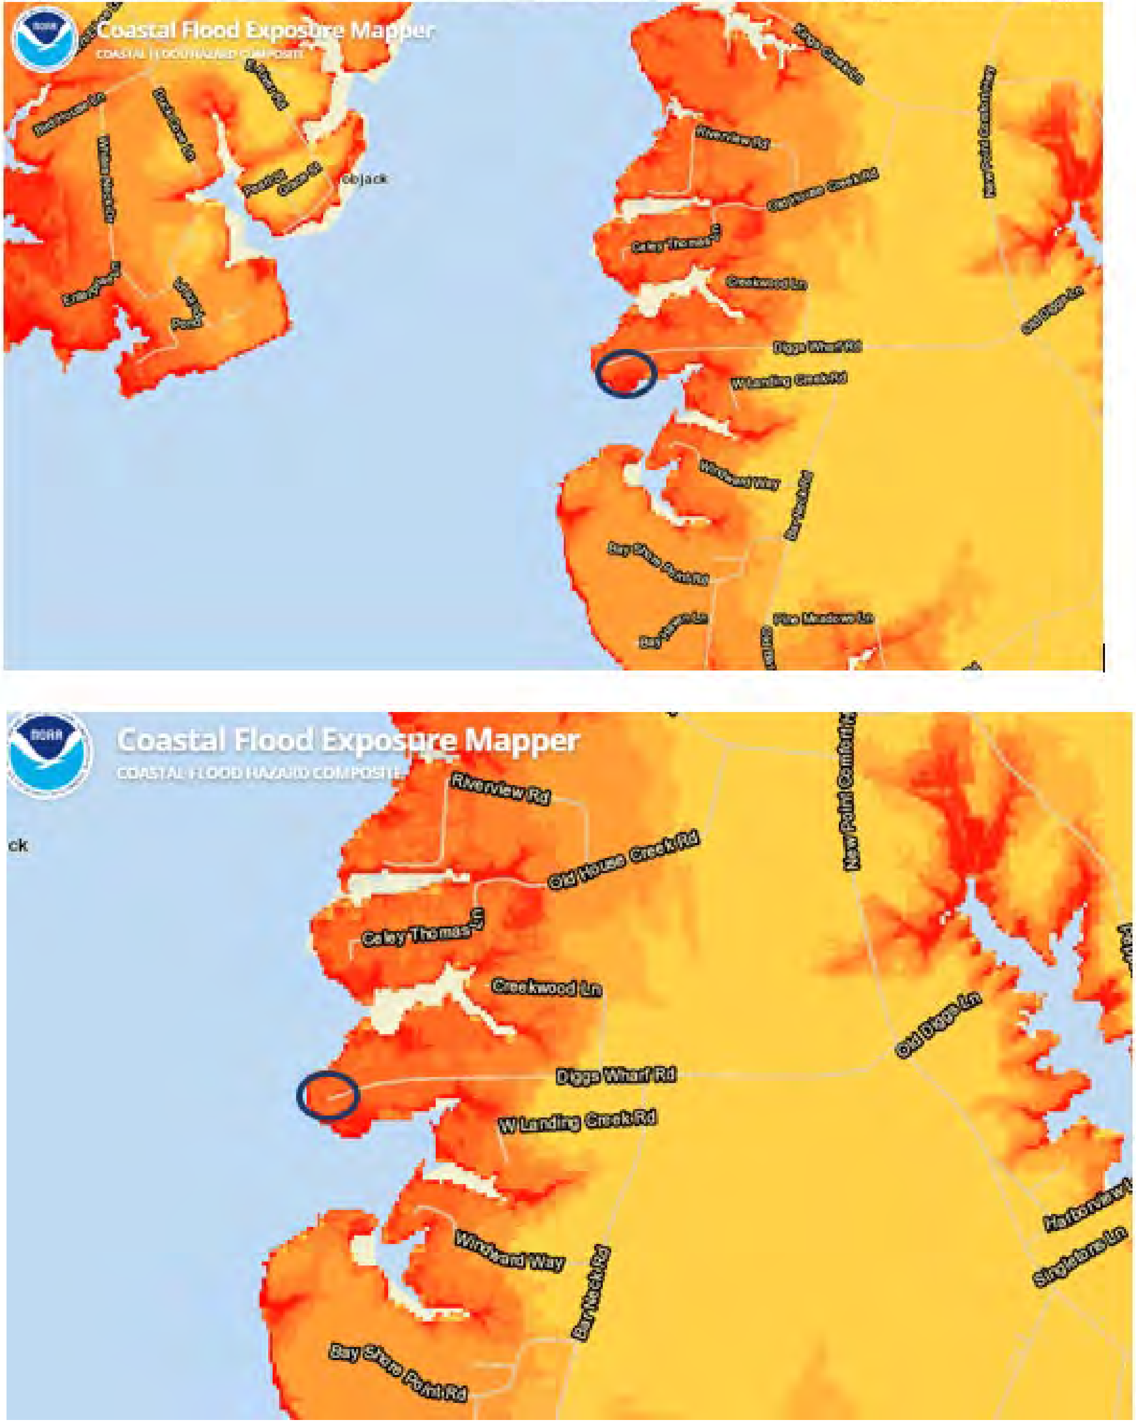
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shoreline with 17,000 sq feet of loss. From the figure one can see the change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 81 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 (purple) and 2017



Finally, according to NOAA’s Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 11.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



For more information about this project area please see:

- *A link to Mathews County's current floodplain ordinance can be found at: https://www.mathewscountyva.gov/172/National-Flood-Insurance-Program-NFIP*

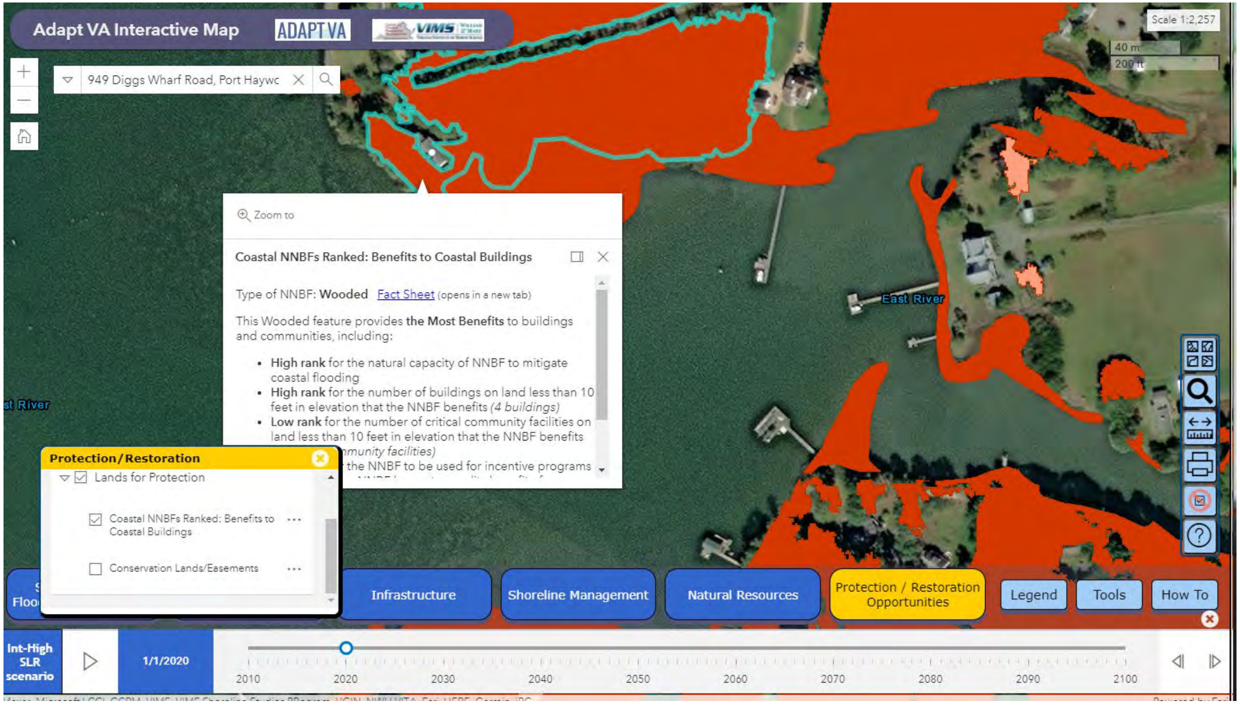
COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, “Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines “Community Scale project” which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving “demonstrable flood reduction” benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based “brick in the wall” and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12.** All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Wooded** Fact Sheet (opens in a new tab)

This Wooded feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(4 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *mmunity facilities)*
- the NNBF to be used for incentive programs

Protection/Restoration

☑ Lands for Protection

☑ Coastal NNBFs Ranked: Benefits to Coastal Buildings

☐ Conservation Lands/Easements

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural*

shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the Oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Mathews County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, <u>Removal Rates of Shoreline Management Project</u>, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300

pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	M1	M2	M3	M4	M5	M6
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

RELATIONSHIP TO OTHER PROJECTS**.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.
Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

A maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?
   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of

the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration X Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. Any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	10
No	**0**	

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	
No	**0**	0
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		88

III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

Estimated total project cost: $17,399
Amount of funds requested from the Fund: $12,180

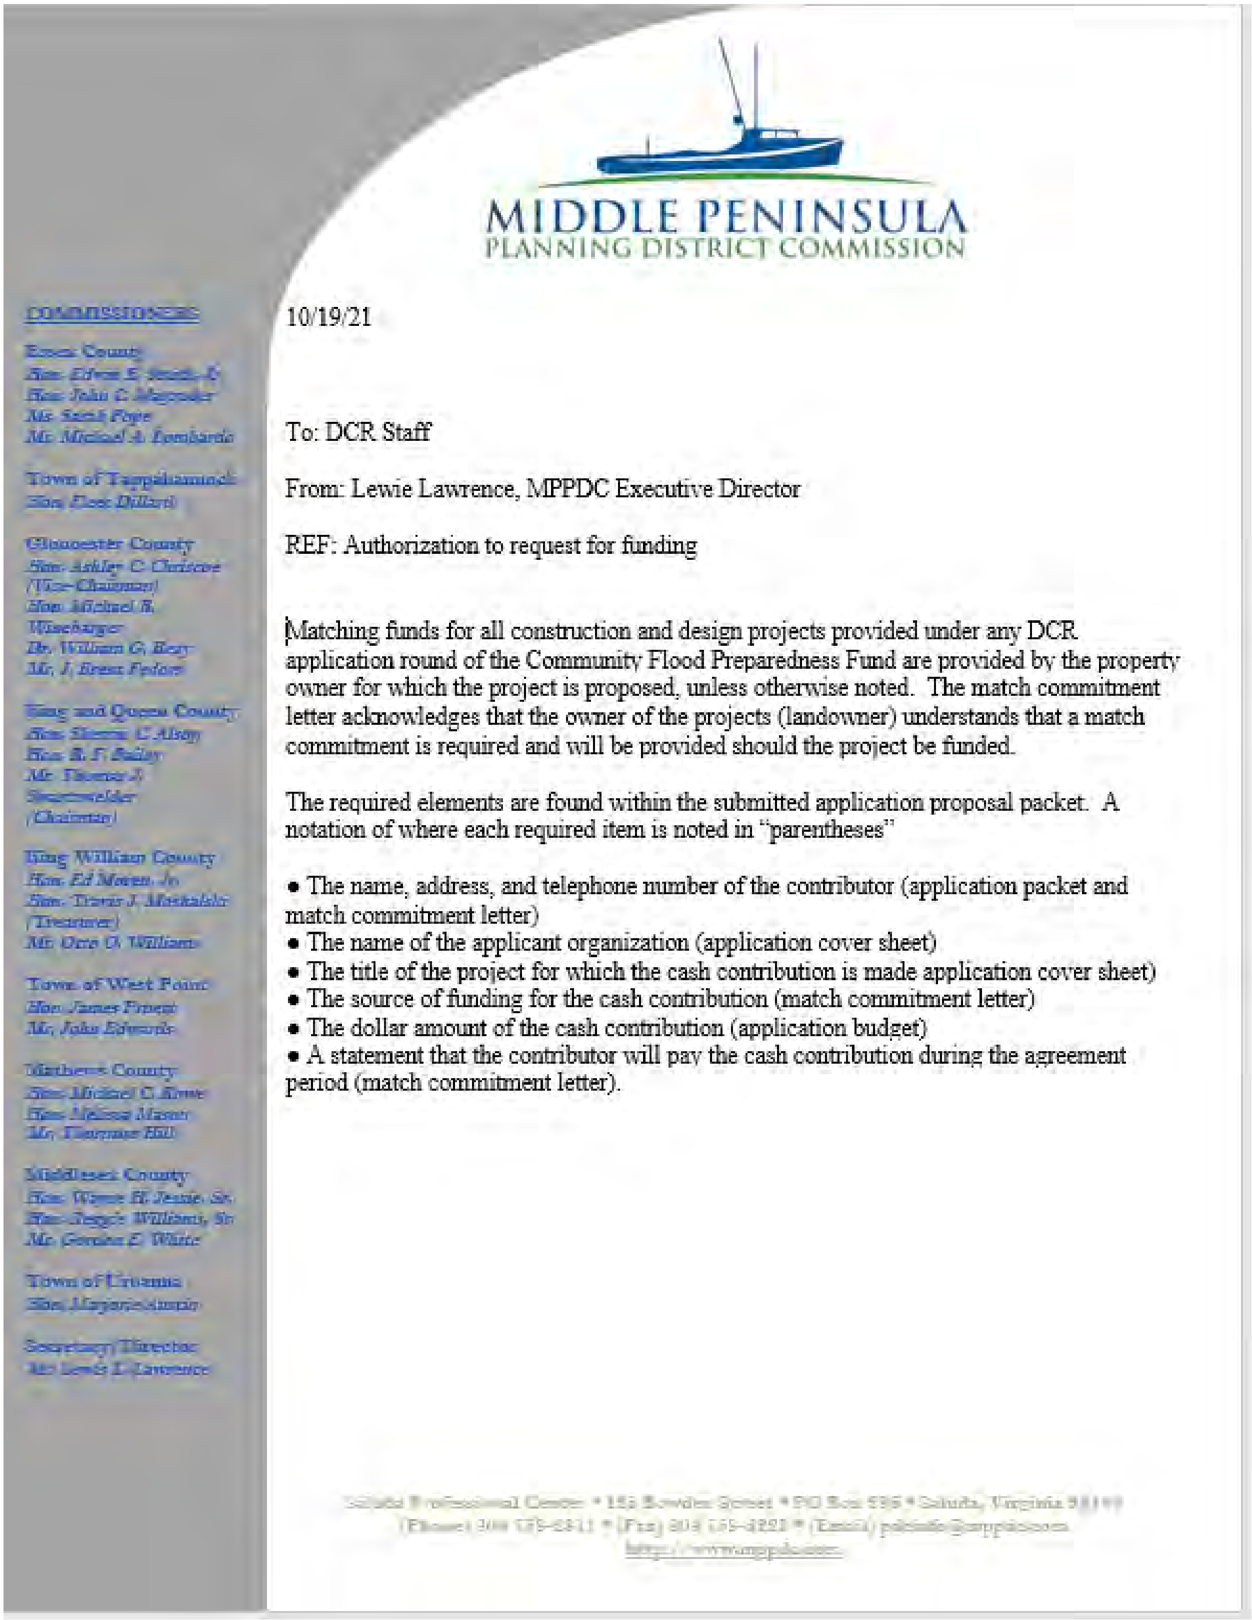
MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Authorization to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

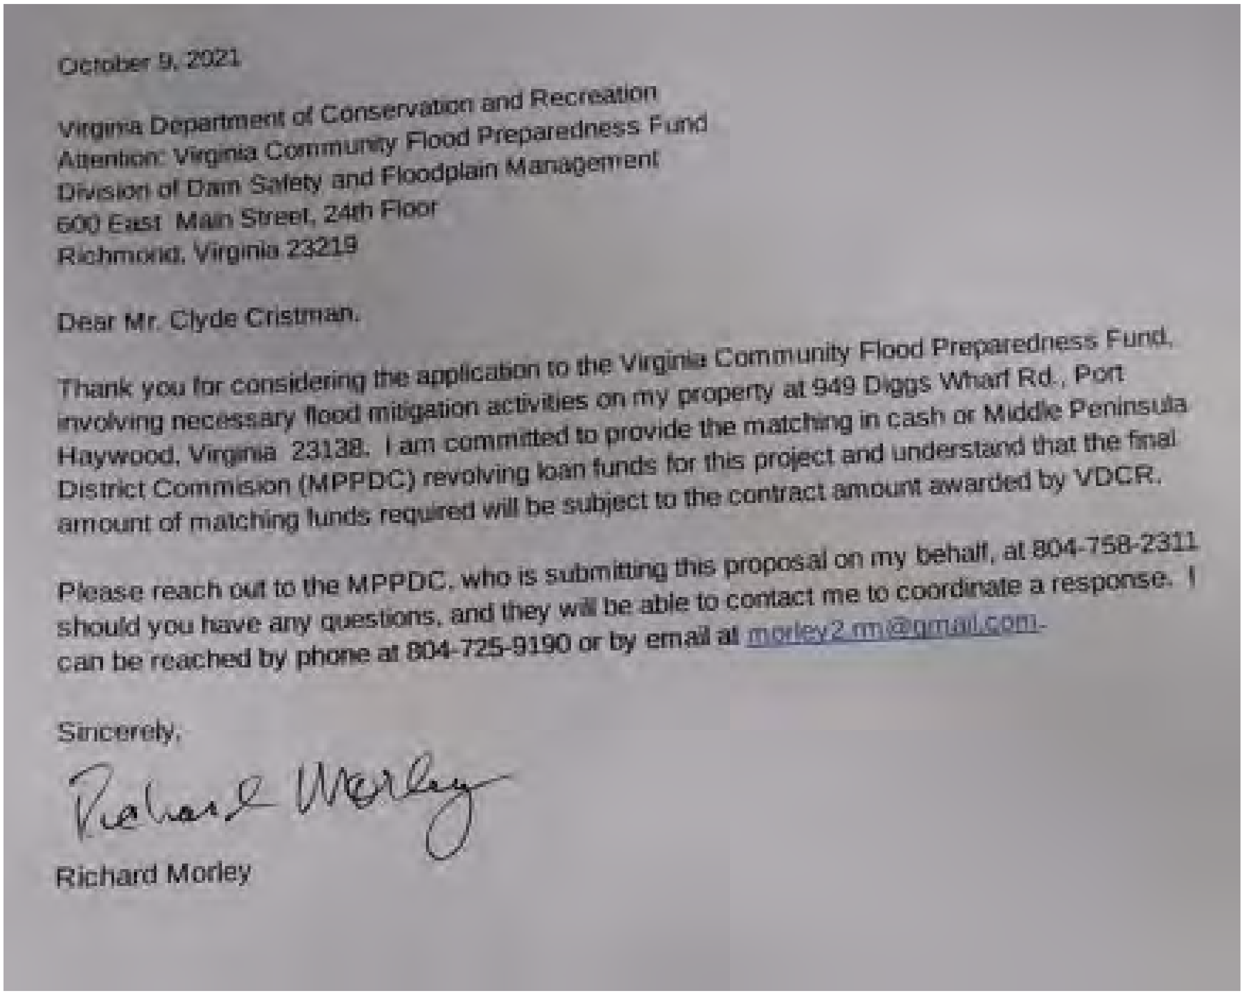
REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Signed pledge agreement from each contributing organization:



October 9, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 949 Diggs Wharf Rd., Port Haywood, Virginia 23138. I am committed to provide the matching in cash or Middle Peninsula District Commision (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 804-725-9190 or by email at morley2.rm@gmail.com.

Sincerely,

Richard Morley

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

DocuSigned by:

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

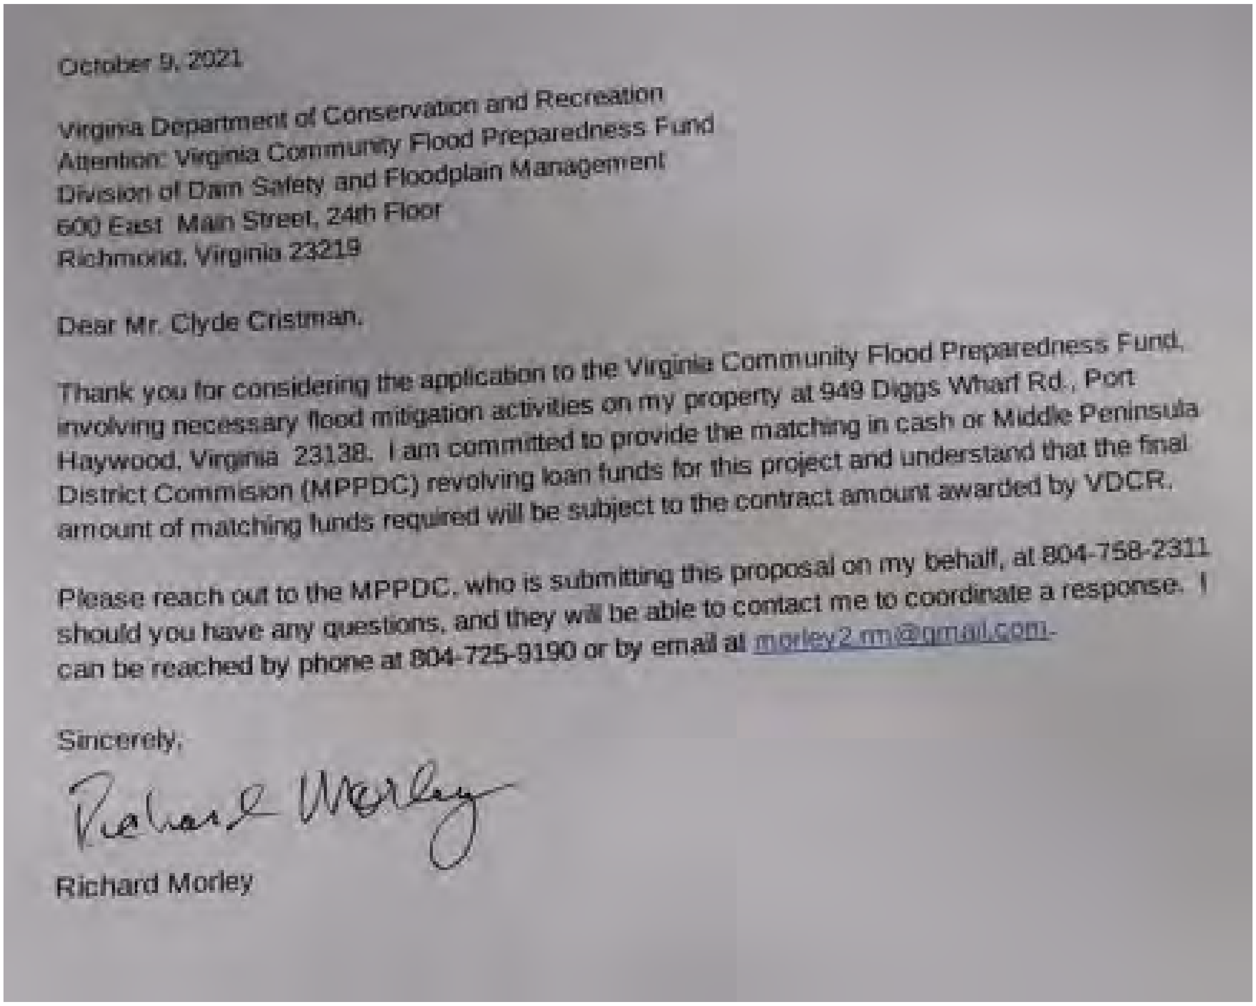
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



October 9, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 949 Diggs Wharf Rd., Port Haywood, Virginia 23138. I am committed to provide the matching in cash or Middle Peninsula District Commision (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 804-725-9190 or by email at morley2.rm@gmail.com.

Sincerely,

Richard Morley

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Mathews County **-** Please see the attached corresponding maps for this application.

Total Cost of Project: ___________$24,963______________________________________

Total Amount Requested: _______$17,475_____________________

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. This project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, on private property located on Chesapeake Shore Road in Mathews County. The applicant is one of 6 applicants joining together to submit Flood Fund applications under Round 1 and 2 within the Chesapeake Shores community to make a demonstrable impact on shoreline protection.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem-based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Chesapeake Shore Road in Mathews County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Mathews County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

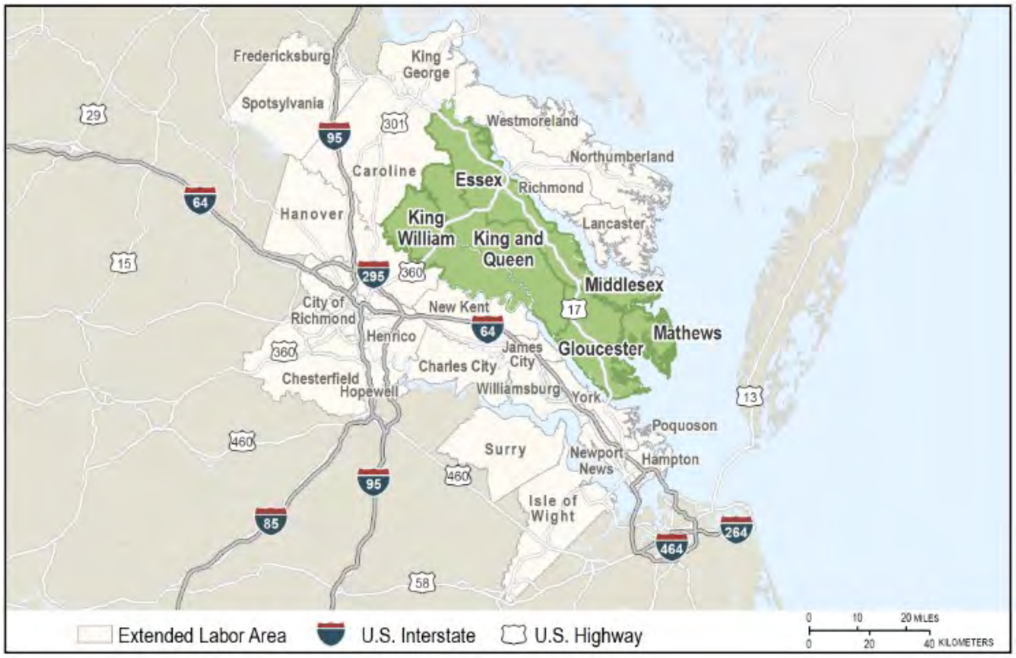

Figure 2. Middle Peninsula Population

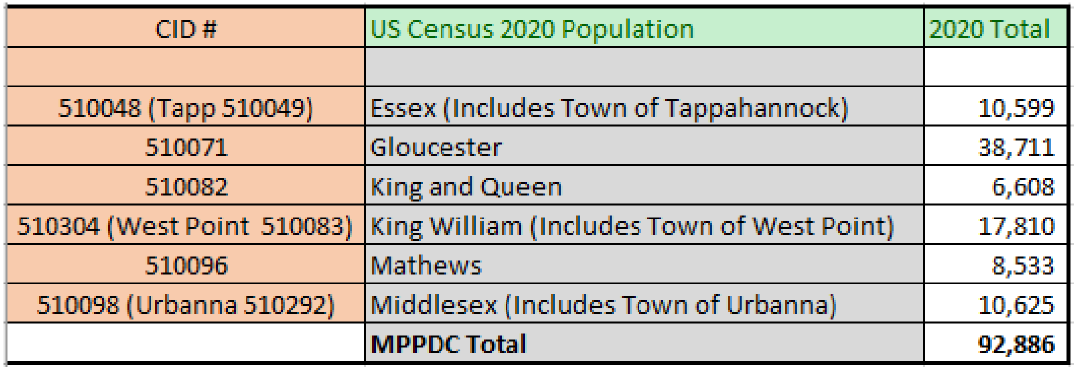

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to design nature-based shoreline solution on one private property on Chesapeake Shore Road in Mathews County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

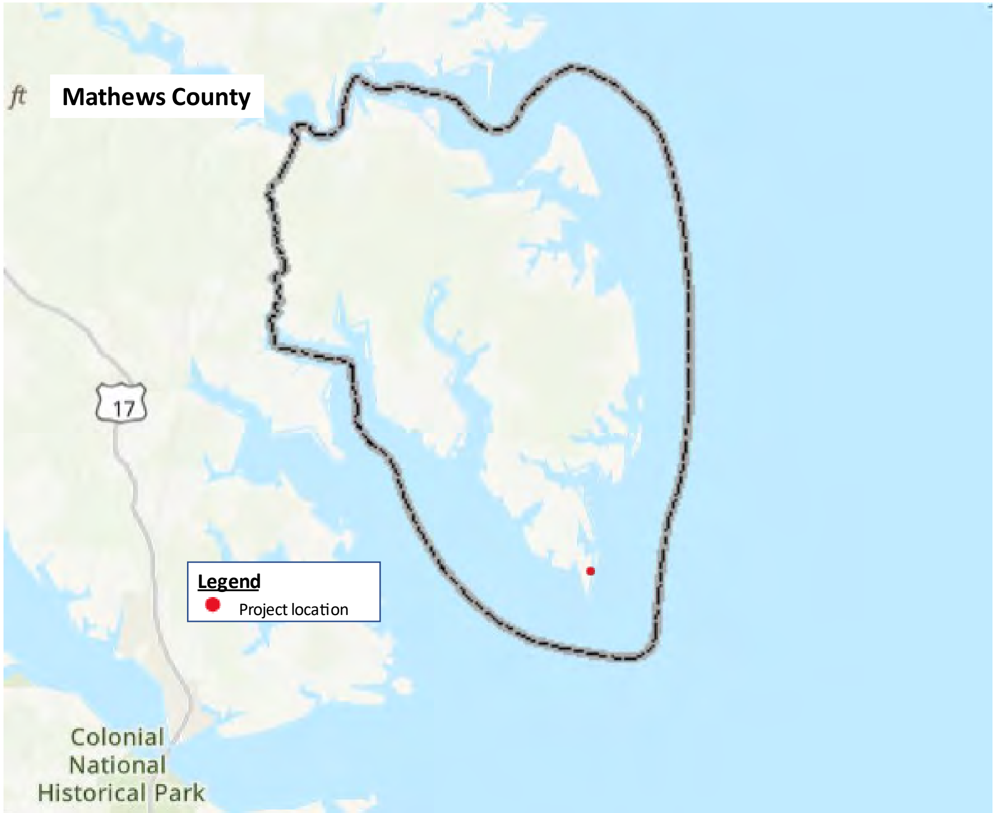

Figure 4. Parcel Map of Project Location

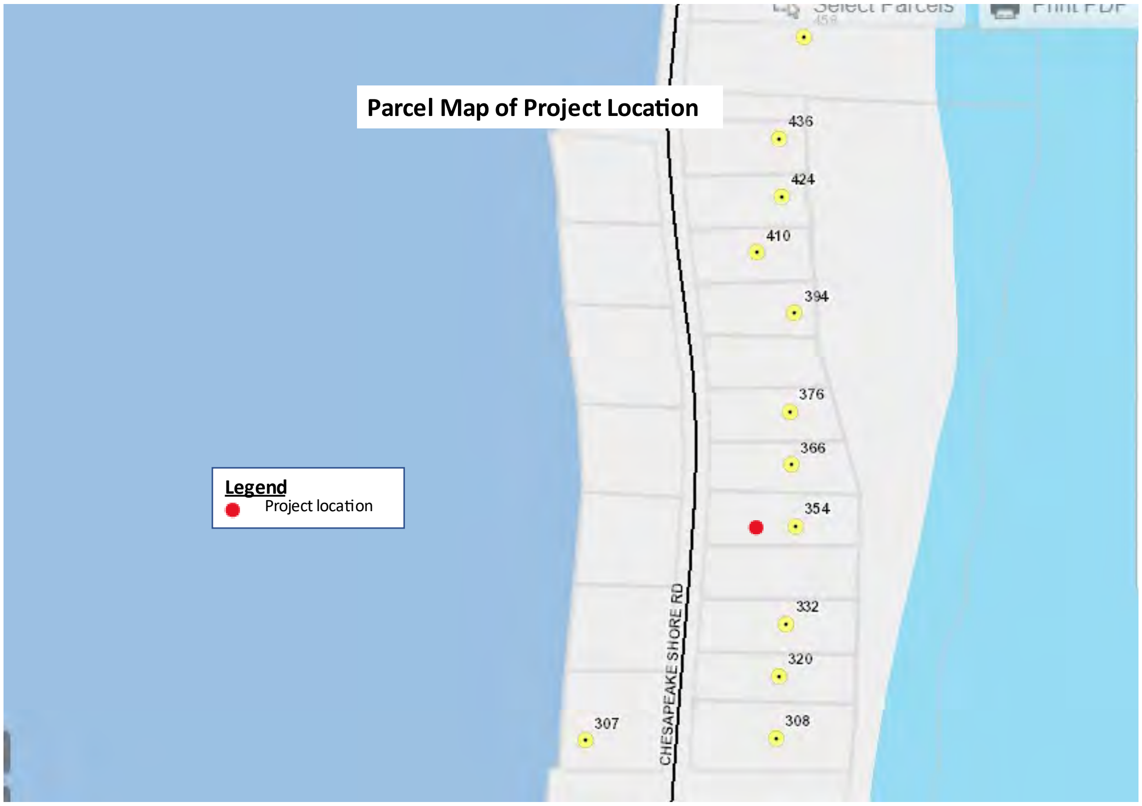


Mathews County is located on Virginia's Middle Peninsula and has an economy based upon agriculture, forestry, and the water. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County's population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas

Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

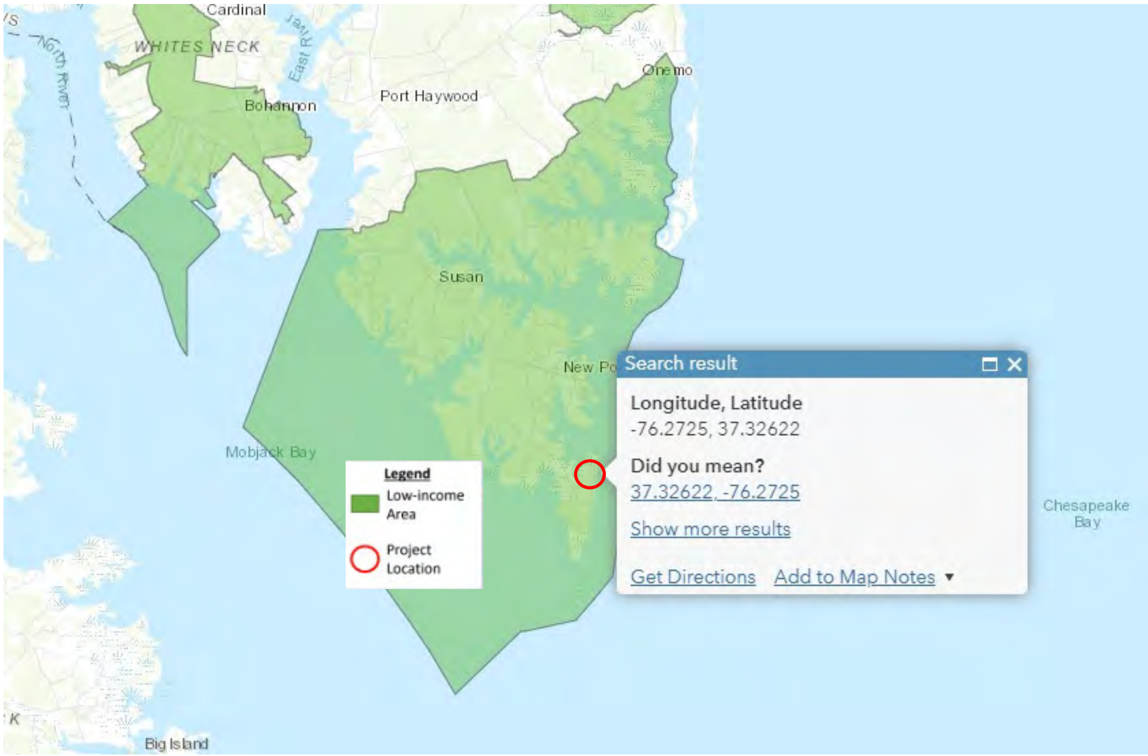
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

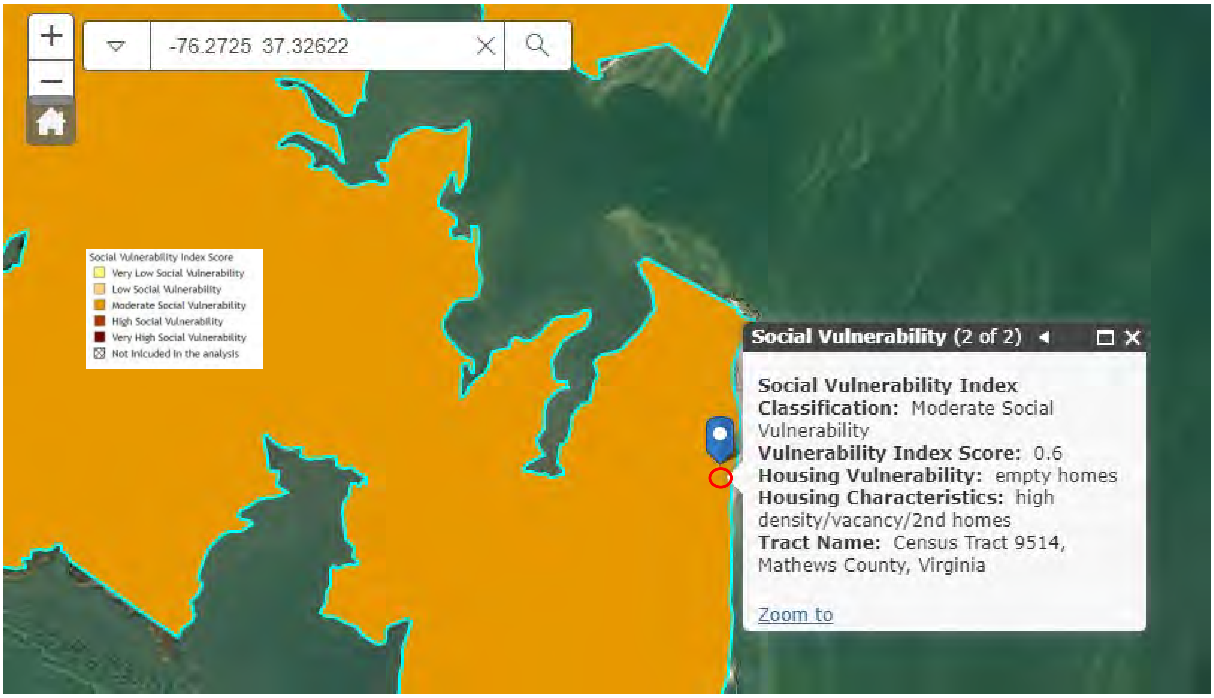
Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



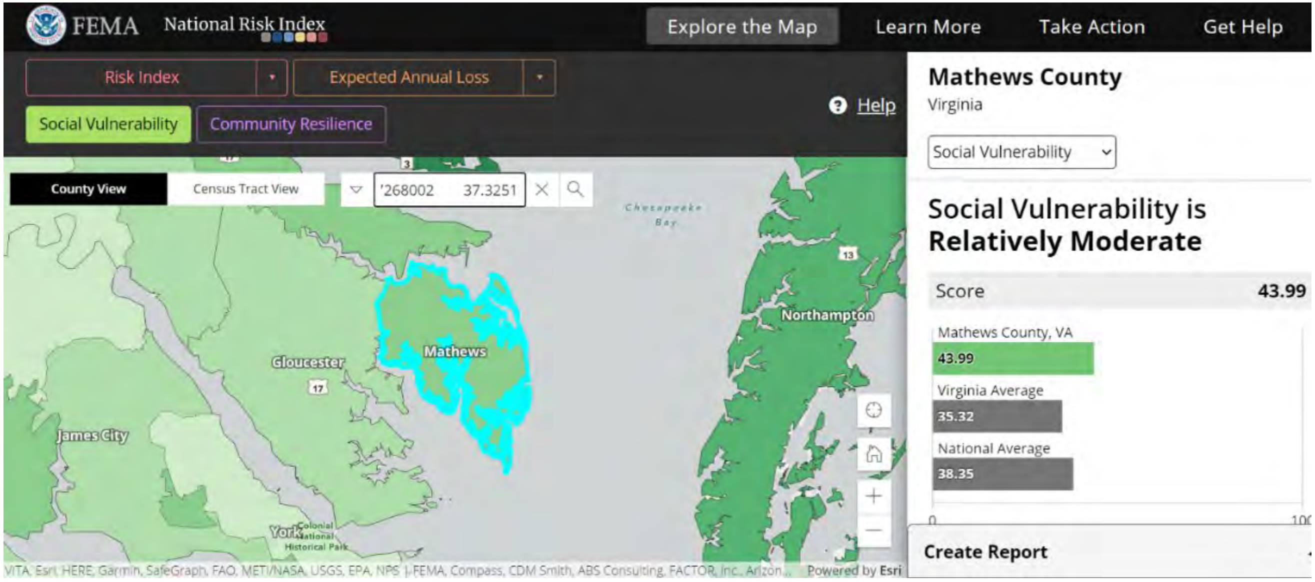
According to the VDAPT Virginia’s Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA’s National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability Index
Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.6
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9514, Mathews County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Mathews County
Virginia

Social Vulnerability

Social Vulnerability is Relatively Moderate

Score 43.99

Mathews County, VA 43.99
Virginia Average 35.32
National Average 38.35

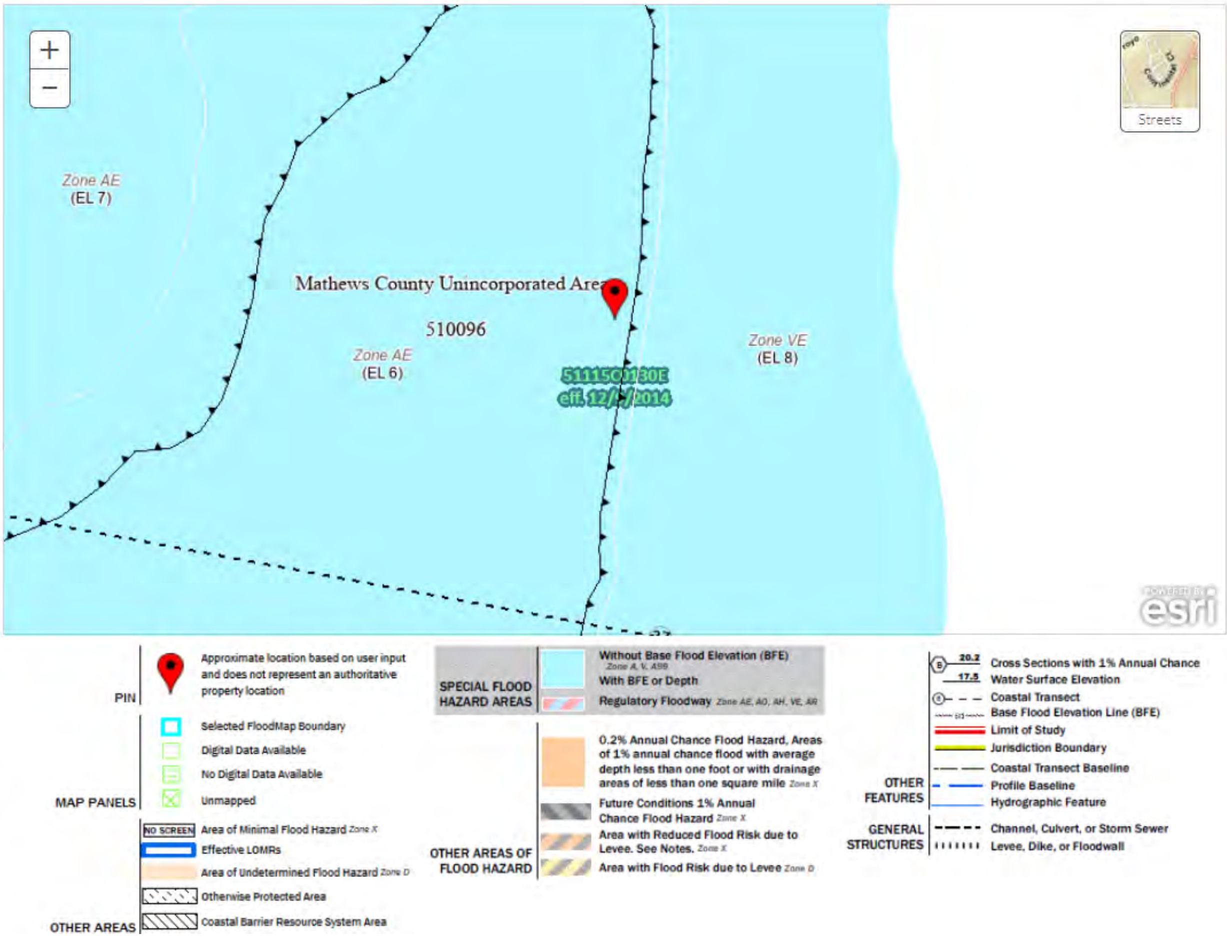
The property owners have owned the residence and the approximately 120 feet of shoreline since the summer of 2008. Since that time, the property has been constantly accruing sand. About seven to 10 years ago, the deck was raised since sand was significantly intruding the area and it became cumbersome to continue shoveling the sand off the deck. During that period, one could take one step off the once lower deck and would be immediately at the "beach" – it was a relatively flat landing at the time. There is some dune but it, too, is eroding away. The snow fences have also been dramatically covered by the massive amount of sand accumulating.

Even with the recent storms that washed away some of the sand, one can still barely see the fences. As a solid measurement in calculating the rise of sand, the property owner put a sturdy 2x4 post in to hold a wench at waist height. It was intended to pull the owner's Hobie Cat on the dune to give it leverage to hold onto. The post has since been almost completely covered by sand. Complicating matters further, they have a clearstream system for septic and the drain field is in the dune. Additionally, in speaking with others about their erosion problems, other non-nature-based solution designs constructed nearby have negatively impacted the area. It has been claimed that the sand comes and the sand goes, but in this particular area, the sand is staying and may potentially become a sandspit. Most in the area have only attempted individual solutions and a collective, communal approach is lacking; therefore, a holistic nature-based solution is not only desired but also needed. See accompanying pictures below.

Please see **Appendix 2** for additional property photos.

This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 3** for the FIRMettes (last mapped 12/9/2014).

Figure 9: Map of FEMA Flood Zones



Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 5,125.7 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 84 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 11**.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)

For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Mathews County's current floodplain ordinance can be found at: https://www.mathewscountyva.gov/172/National-Flood-Insurance-Program-NFIP*

COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving “demonstrable flood reduction” benefit, rural areas will never compete.

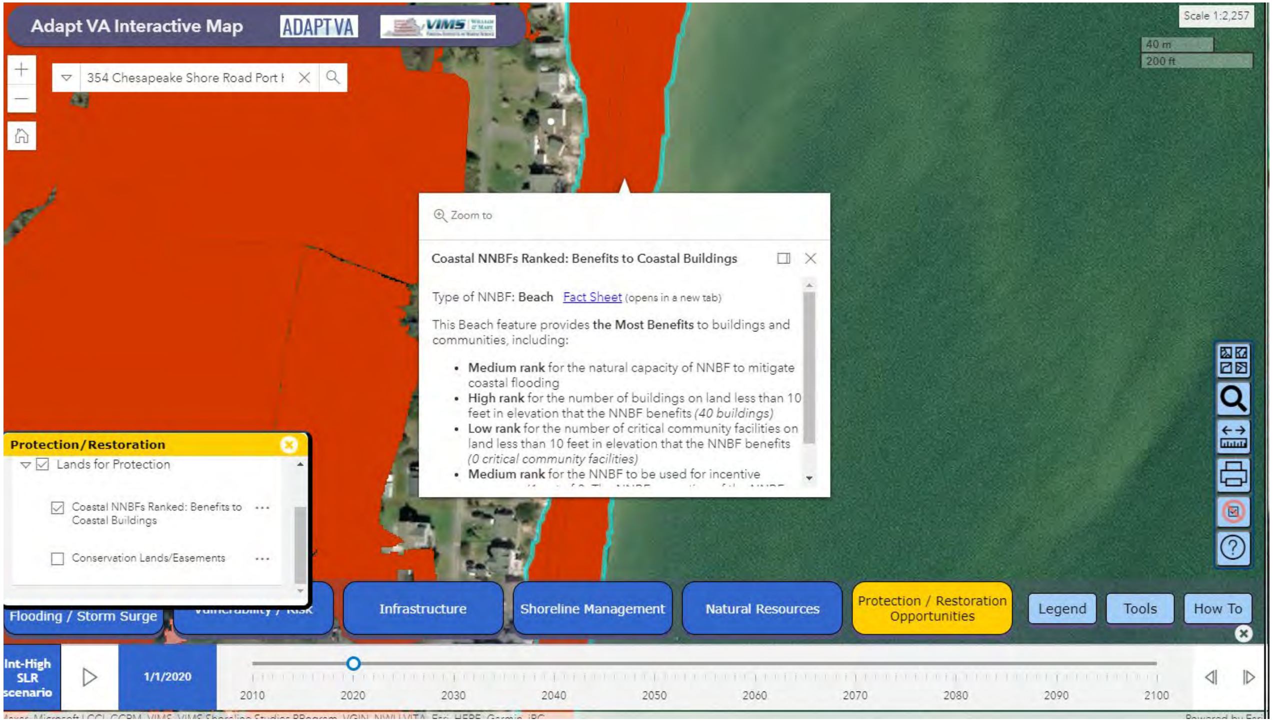
The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based “brick in the wall” and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Figure 11A shows the community reach of the Fight the Flood Program. 6 citizens have applied for funding from DCR under Round 1 and 2 to work collaboratively to address their flooding problems.

Figure 11A - FTF Chesapeake Shore participants

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12**. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Beach** Fact Sheet (opens in a new tab)

This Beach feature provides **the Most Benefits** to buildings and communities, including:

- **Medium rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(40 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **Medium rank** for the NNBF to be used for incentive

Protection/Restoration

☐ Conservation Lands/Easements

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

***ALTERNATIVES*.**

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural*

shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Mathews County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, a proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six-month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	M1	M2	M3	M4	M5	M6
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

<u>Long Term Planning</u>

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

A maintenance plan is not applicable in this application. The proposed project is to develop a

nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index Score.)](#)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		83

III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

- ***Estimated total project cost: $24,963***
- ***Amount of funds requested from the Fund: $17,475***

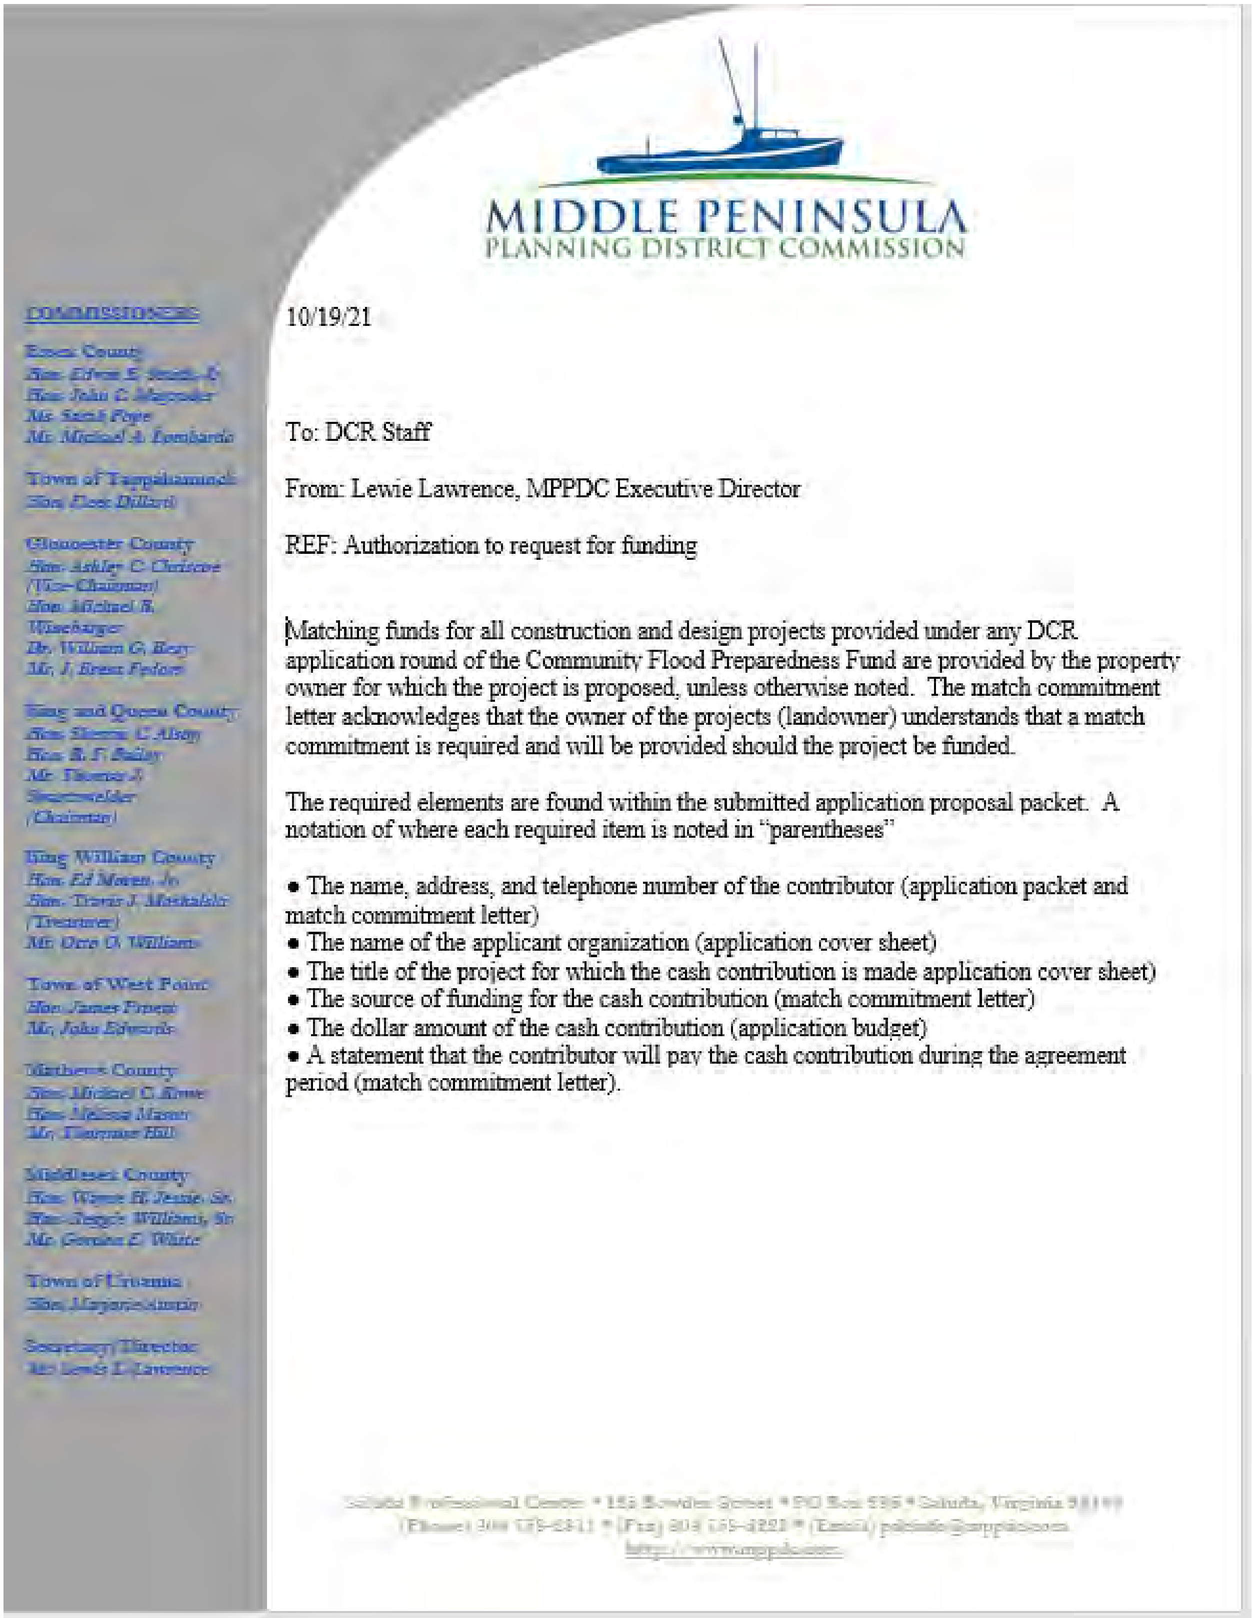
MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Authorization to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Signed pledge agreement from each contributing organization:

Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 354 Chesapeake Shore Road Port Haywood, VA. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 443-756-807 or by email at gastanley@verizon.net.

Sincerely,

Gary A Stanley

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

DocuSigned by:

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

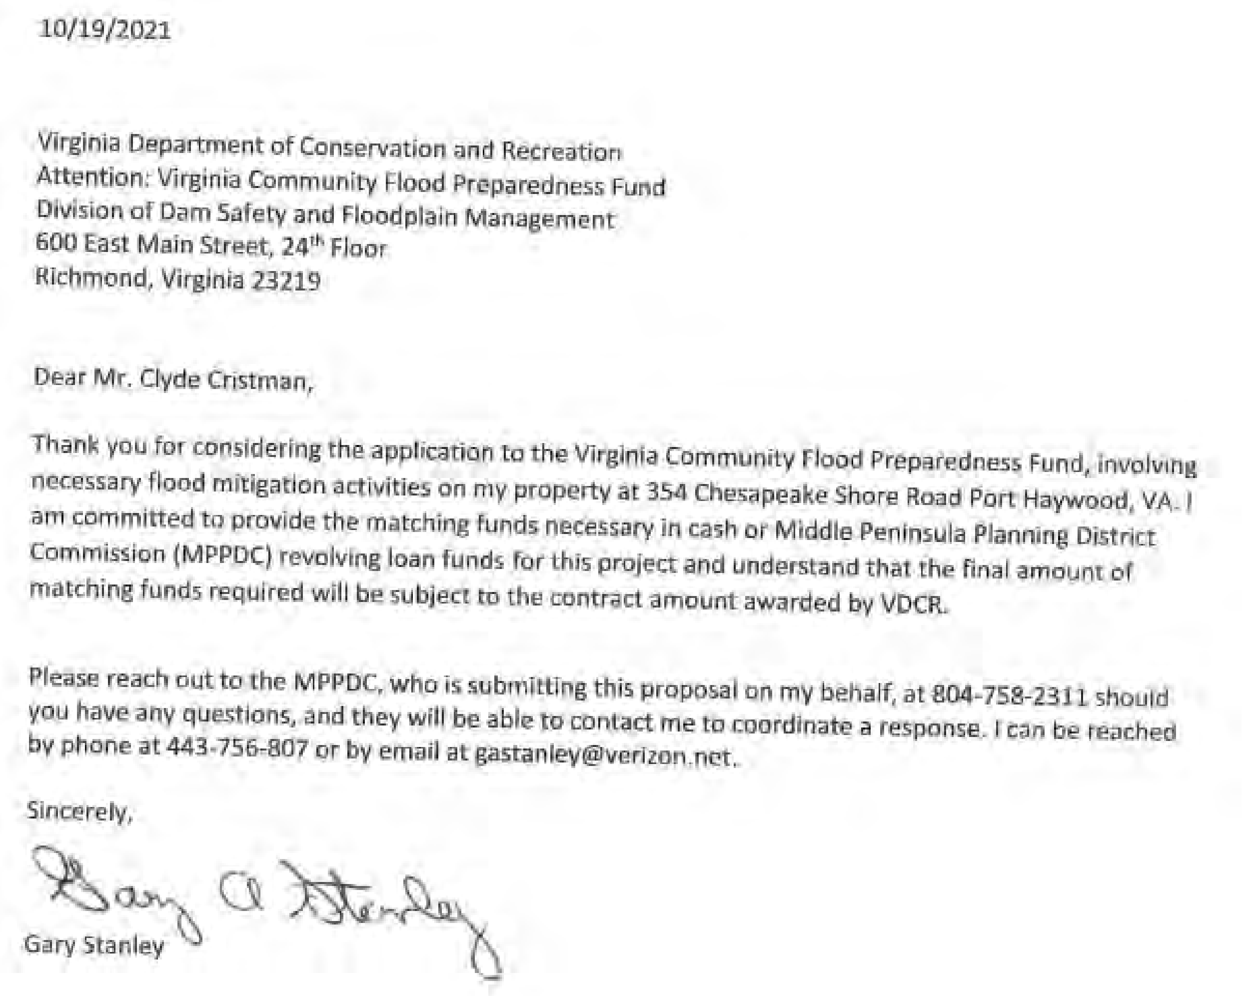
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



10/19/2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 354 Chesapeake Shore Road Port Haywood, VA. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 443-756-807 or by email at gastanley@verizon.net.

Sincerely,

Gary A Stanley

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Carr** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

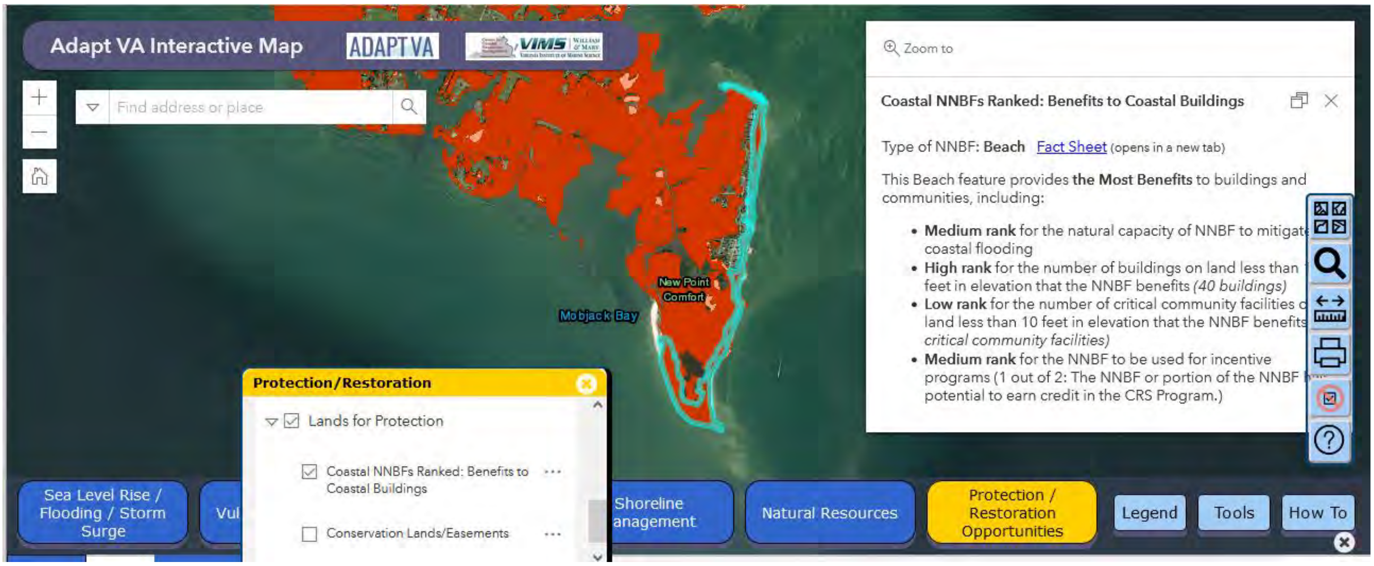
Issue #2
DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149
(Phone) 804 758-2311 ♦ (Fax) 804 758-3221 ♦ (Email) pdcinfo@mppdc.com
http://www.mppdc.com

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit.



Zoom to

Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Beach** Fact Sheet (opens in a new tab)

This Beach feature provides **the Most Benefits** to buildings and communities, including:

- **Medium rank** for the natural capacity of NNBF to mitigat coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(40 buildings)*
- **Low rank** for the number of critical community facilities land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **Medium rank** for the NNBF to be used for incentive programs (1 out of 2: The NNBF or portion of the NNBF potential to earn credit in the CRS Program.)

Protection/Restoration

▽ ☑ Lands for Protection

☑ Coastal NNBFs Ranked: Benefits to Coastal Buildings ···

☐ Conservation Lands/Easements ···

Between Round 1 and 2, MPPDC has 6 adjoining/neighborhood homeowners partnering and looking to protect larger "reach based" areas

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding and wetland loss.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal application requests funding address significant shoreline erosion.   Design work is needed using a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Chesapeake Bay Road in Mathews County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Mathews County. See the community support letter in Appendix 1.

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

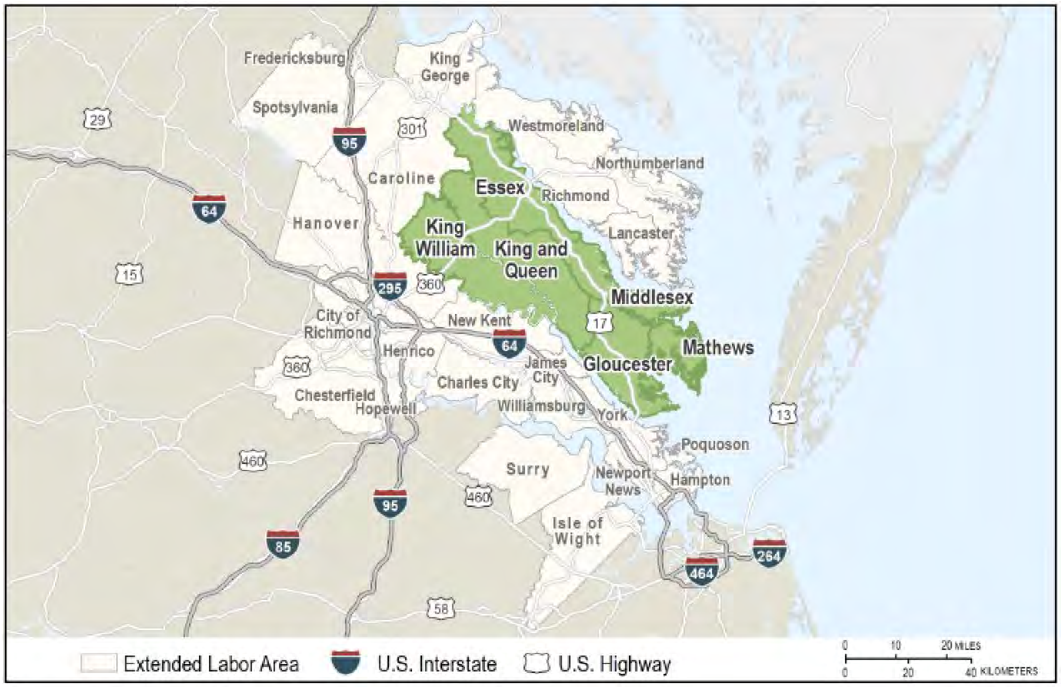

Figure 2. Middle Peninsula Population

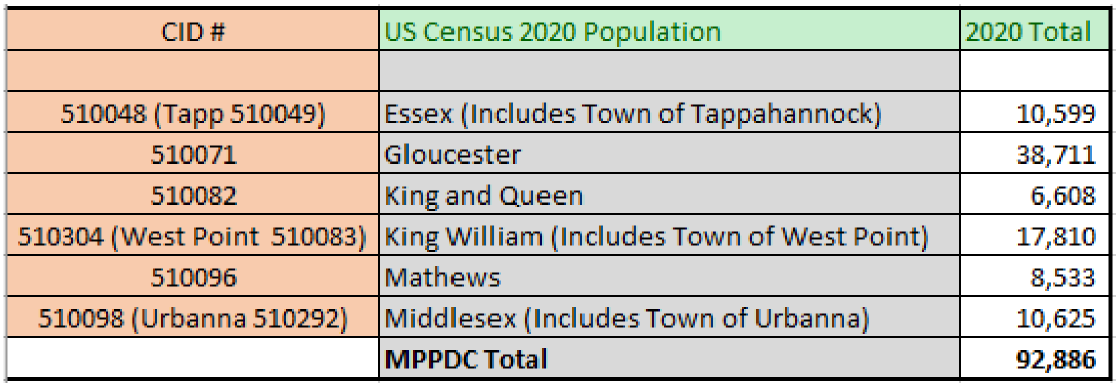

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on Chesapeake Bay Road in Mathews County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

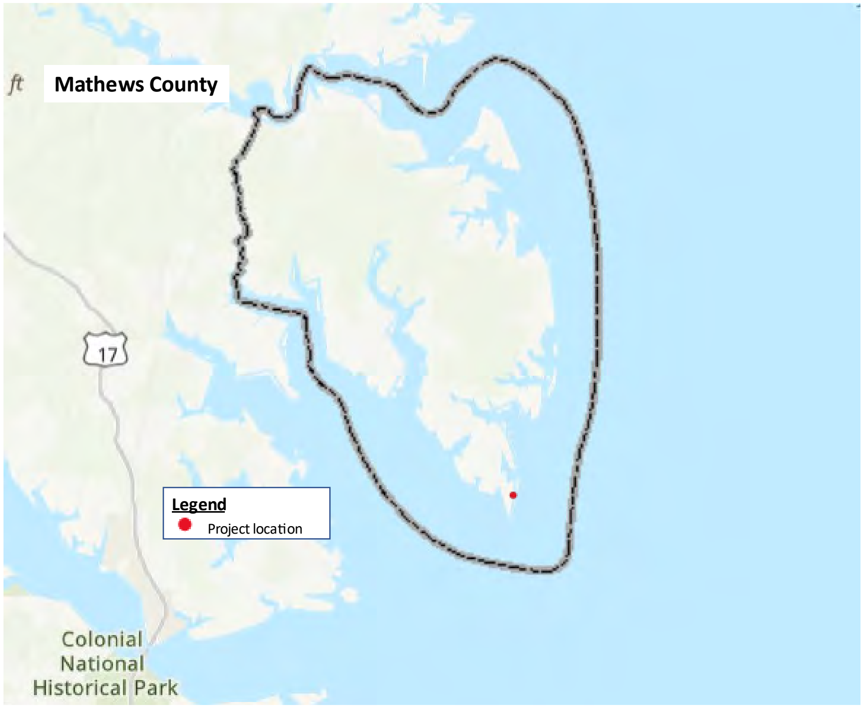

Figure 4. Parcel Map of Project Location

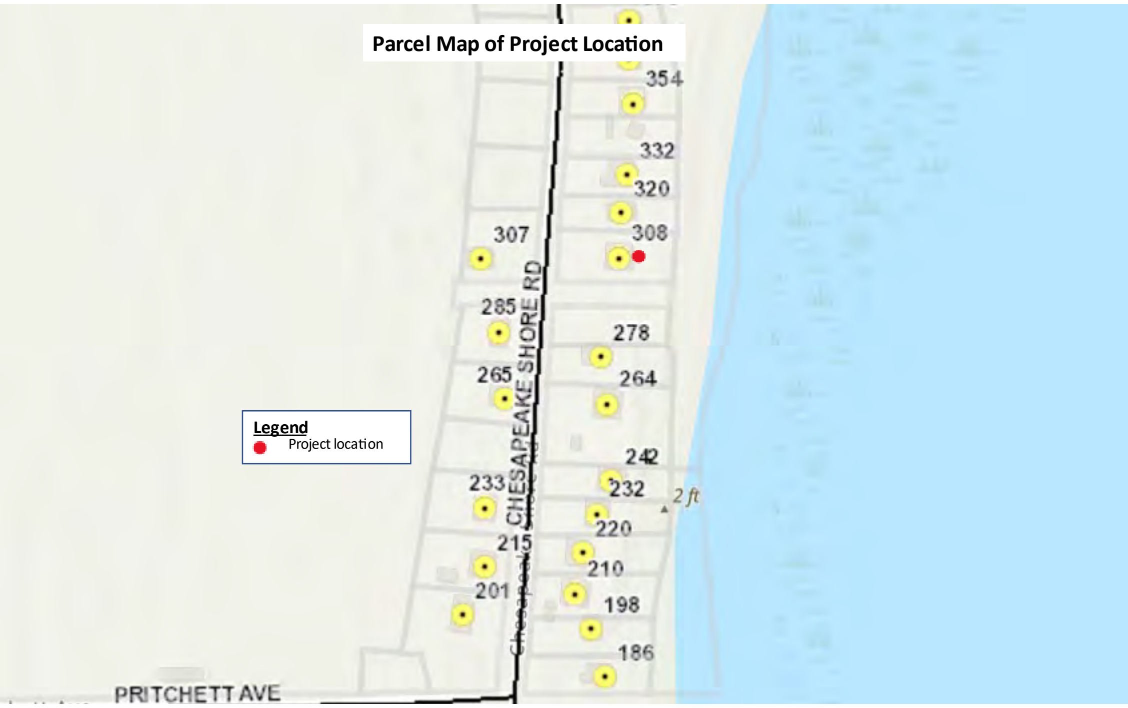
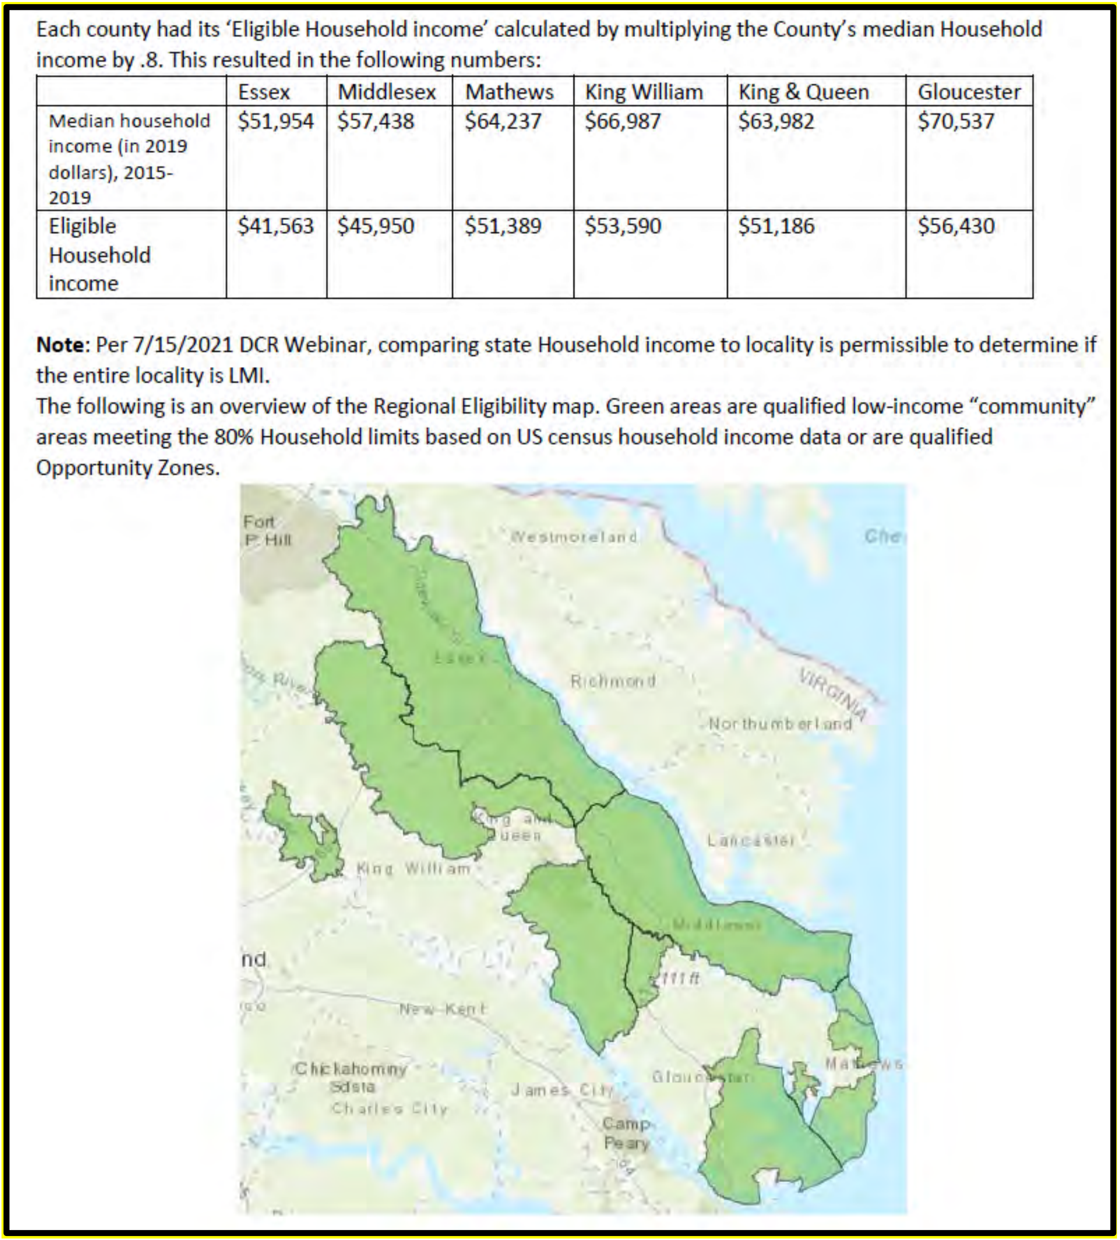


Mathews County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County's population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

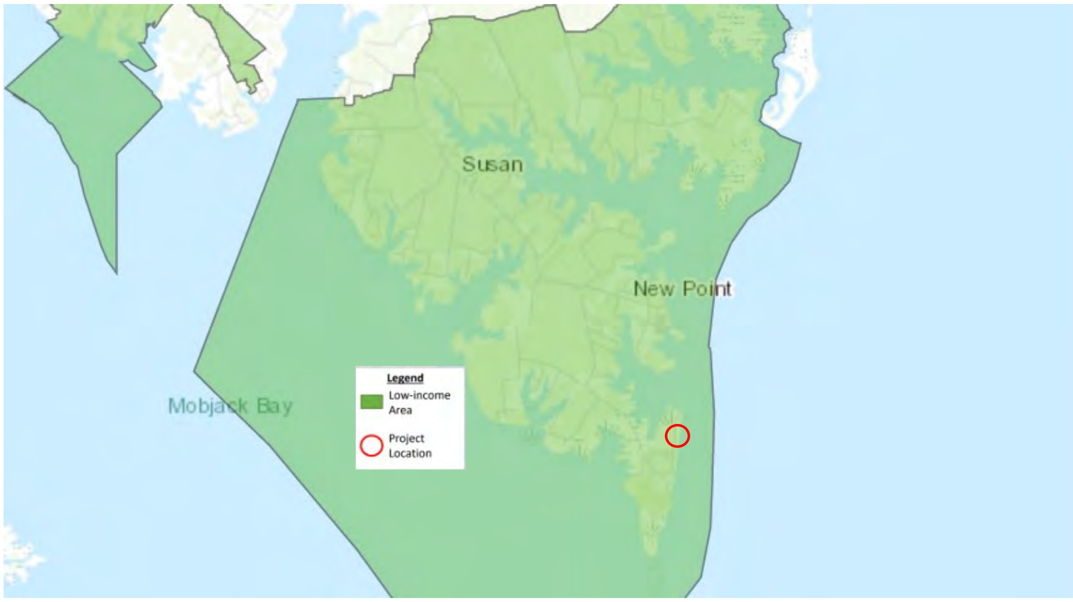
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

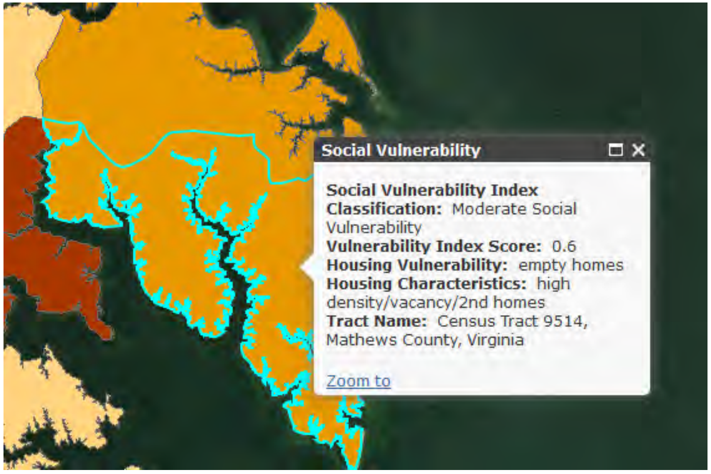
Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



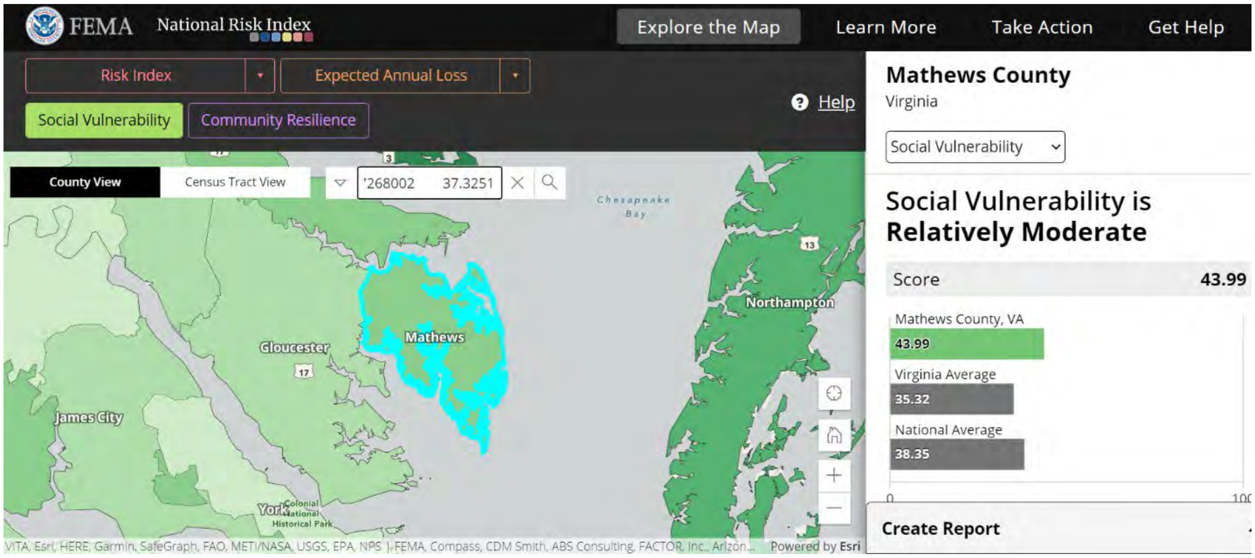
According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability is considered relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.6
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9514, Mathews County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Mathews County
Virginia

Social Vulnerability

Social Vulnerability is Relatively Moderate

Score	43.99
Mathews County, VA	43.99
Virginia Average	35.32
National Average	38.35

The project is located at 308 Chesapeake Shore Road, Port Haywood, VA 23138 (-76.26966522, 37.32654784).
