This property has two lots on the Bay with a 50-foot beach access right of way in between them. In the last year, the owner's primary dune has disappeared, exposing the previously completely buried metal posts that secured the wood slat sand fence that built the dune. The first, primary lot was purchased in 1983 followed by the additional beach front lot a few years later. The beach in front of the two property parcels and the community access parcel is very flat. During very high tides or storms, the Bay would come up to the steps on their house, a small one-story cottage. The owners immediately started to try and build up the beach with sandbags, hay bales, and hope. They finally realized that a sand fence was the answer, and was successful; still, persistent erosion continues.

The lower wet beach accrues or loses sand based on the action of the Bay water from the south. The upper dry beach accrues or loses sand from wind action from the north. The snow fence collected dry sand effectively and gradually built up the beach. Hurricane Isabel in 2003 flattened the beach, destroyed every blade of beach grass, took down 10 pine trees, flooded their barn building across the street and inundated the lot with water that floated the boardwalks and reached the bottom of their cottage floor. They then immediately installed snow fence and many of their neighbors did also. After Hurricane Isabel, the beach and a large dune grew steadily back and actually blocked their view because the house was lower than the sand. In 2012, they raised the cottage 11 feet and enclosed the "basement" below it which is still much lower than the sand. If the Bay gets close enough, it will flood the basement.

For 30 plus years, the natural movement of sand worked well for the Chesapeake Shores and Bavon Beach communities. Then, in 2016, Bavon Beach was in such bad shape that they constructed break waters to manage recurrent storm energy causing an escalation in erosion. The design was not effective on a large multi parcel reach. Chesapeake Shores homeowners need comprehensive action as the erosion continues to move further and further north. The beach in front of their two lots, and the community access lot between them, have been reduced significantly and their ability to stop it no longer exists. In March 2020, they had sandbags installed to try and stop the dune destruction but that quickly proved to be fruitless.

In the video associated with the following link, it notes the metal sand fence poles that used to be completely covered by the dune that was at least six feet high is now. It also provides a feel for the little peninsula. Very vulnerable from every direction. There is only one road in and out and it is through marsh land which regularly floods the road. See: https://vimeo.com/113180867.

This site is located within the VE flood zone as seen in **Figure 9**. Please see **Appendix 2** for the FIRMettes (last mapped 12/9/2014) and **Appendix 3** for additional property photos.

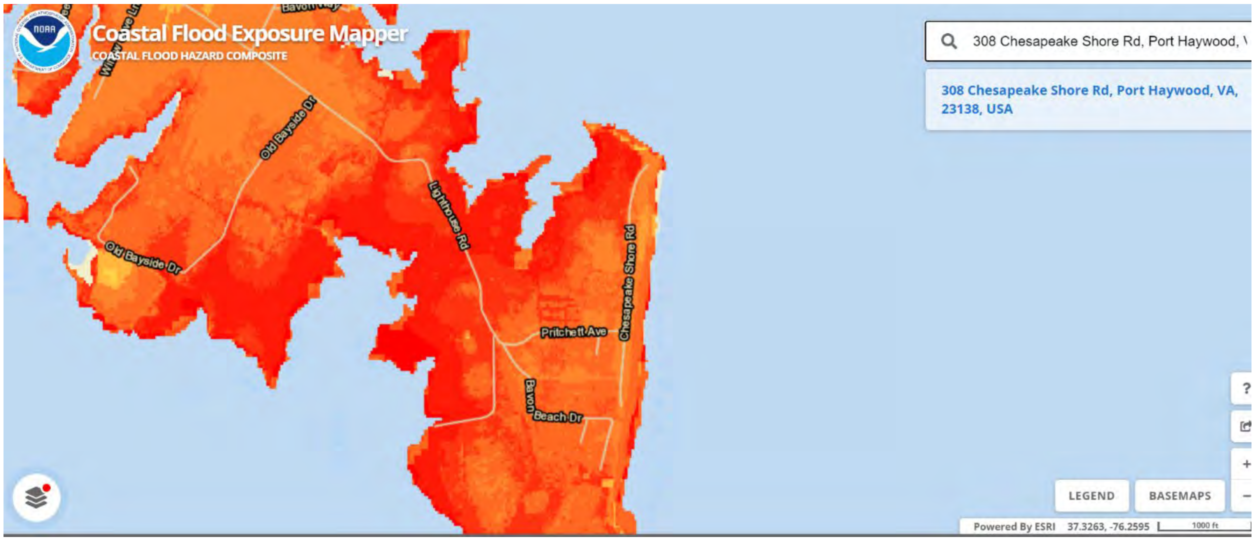
Figure 9: Map of FEMA Flood Zones

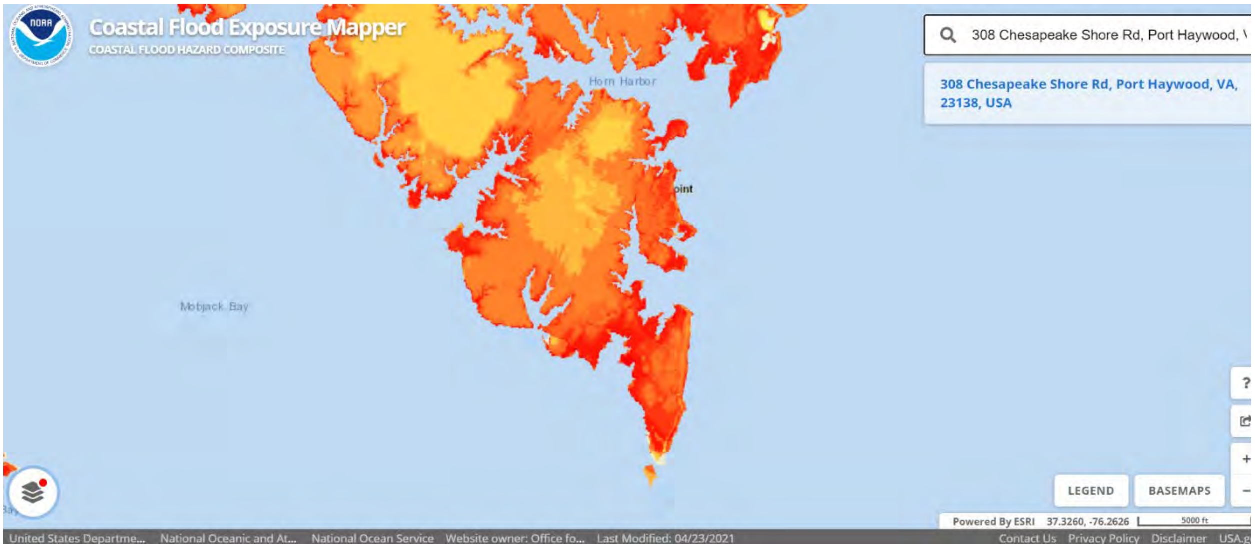
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 9** shows the 1937 and the 2017 shorelines. From the figure one can see significant erosion and change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 84 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 9. Project Location and Map of the Shoreline Change between 1937 (purple) and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 11.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)





For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Mathews County's current floodplain ordinance can be found at: https://www.mathewscountyva.gov/172/National-Flood-Insurance-Program-NFIP*

***ALTERNATIVES*.**

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

***GOALS AND OBJECTIVES*.**

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Mathews County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers. Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022.

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with					X	X

implementing the nature-based or hybrid design solution						
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fighttheffloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index Score.)](#)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		83

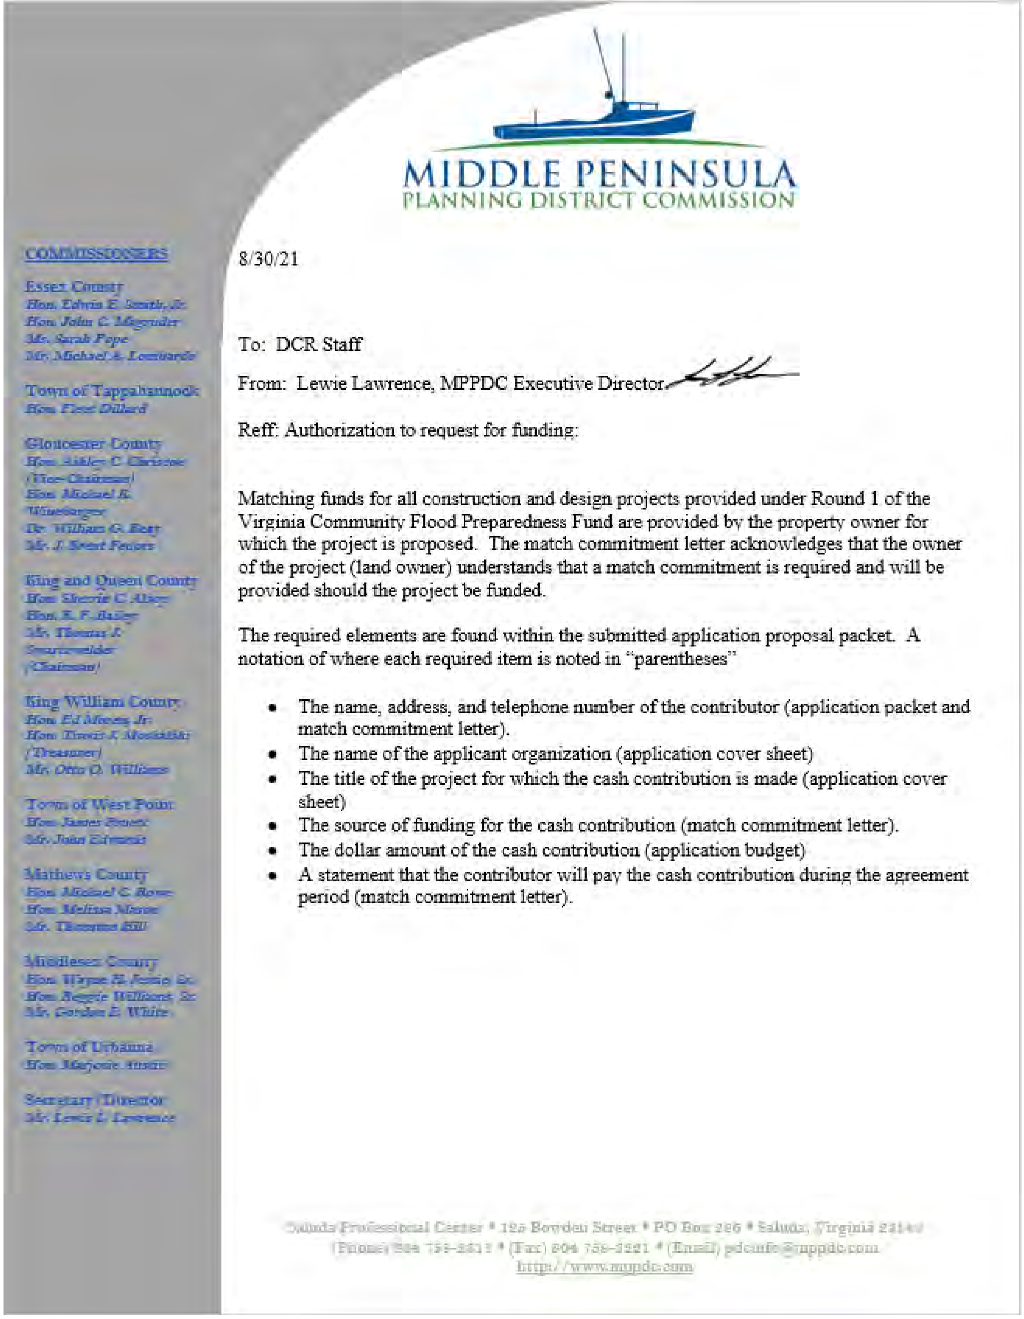
SUBTOTAL: Direct Costs					$10,580	$2,646	$13,226
Indirect/IDC/Facilities & Administrative Costs			**27.31%**		$3,266	$817	$4,083
Total					**$13,846**	**$3,463**	**$17,309**
Other Match:							
Source of Match					$0	$0	$0
GRAND TOTAL					**$13,846**	**$3,463**	**$17,309**

Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

- *Authorization to request for funding*



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property (2 lots) at 308 Chesapeake Shore Road. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804 261-5700 or by email at: spcarr22@verizon.net

Sincerely,

Sandra P. Carr

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

David Schlosser
Interim County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)
The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)
Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)
In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

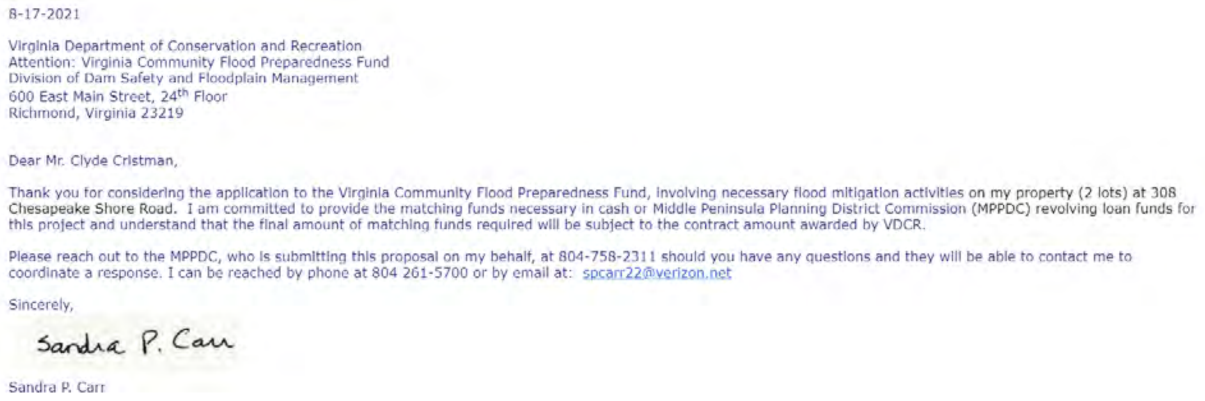
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



8-17-2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property (2 lots) at 308 Chesapeake Shore Road. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804 261-5700 or by email at: spcarr22@verizon.net

Sincerely,

Sandra P. Carr

Sandra P. Carr

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Matthew Gray-Keeling** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

Issue #2

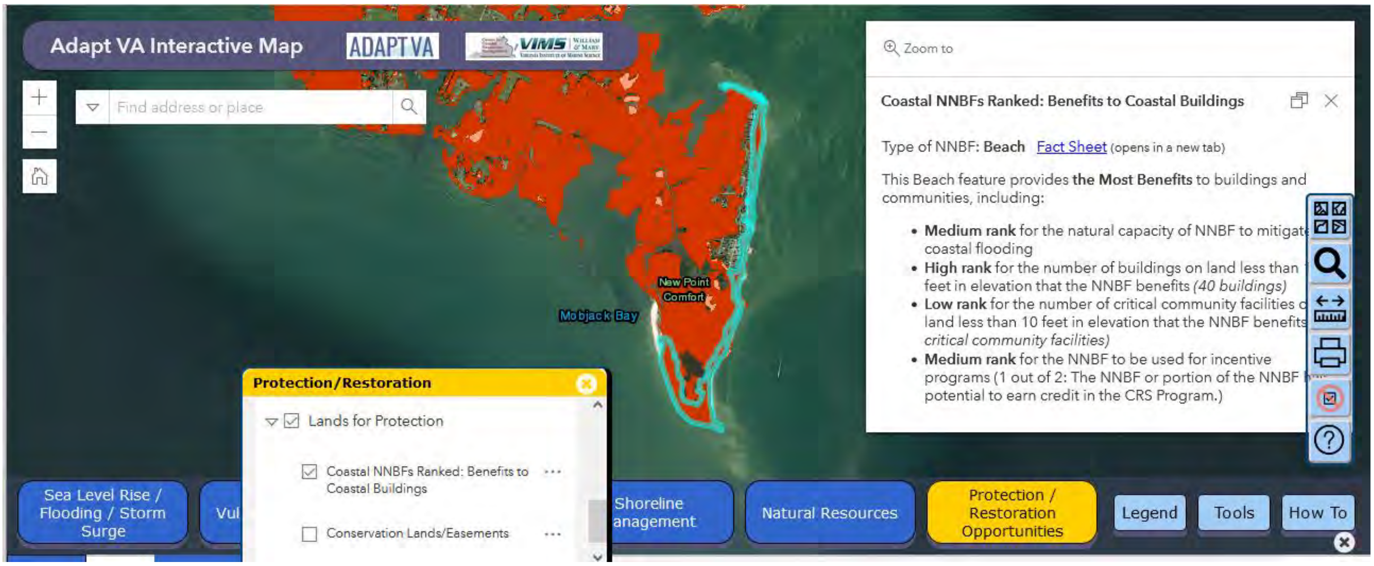
DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149
(Phone) 804 758-2311 ♦ (Fax) 804 758-3221 ♦ (Email) pdcinfo@mppdc.com
http://www.mppdc.com

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, “Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines “Community Scale project” which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving “demonstrable flood reduction” benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based “brick in the wall” and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit.



☑ Coastal NNBFs Ranked: Benefits to Coastal Buildings

☐ Conservation Lands/Easements

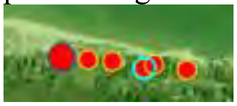
Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Beach** Fact Sheet (opens in a new tab)

This Beach feature provides **the Most Benefits** to buildings and communities, including:

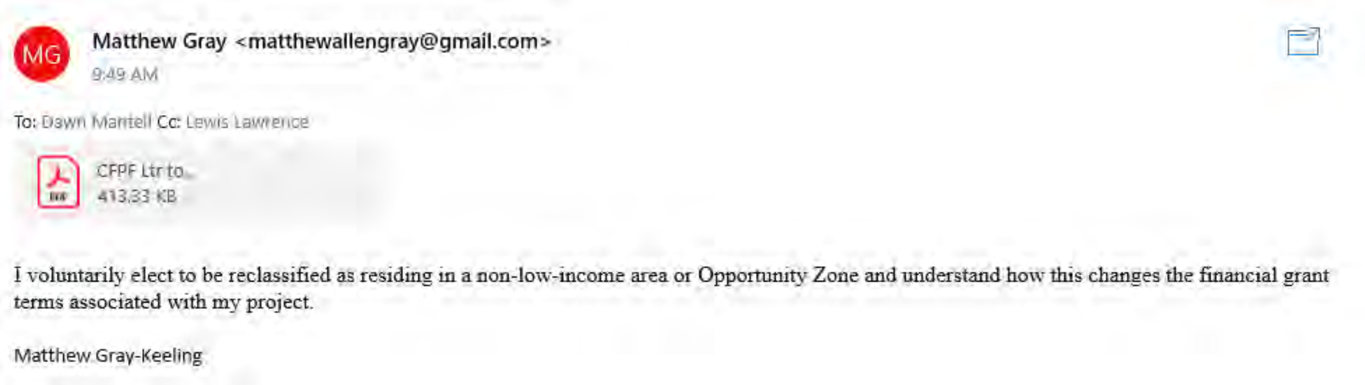
- **Medium rank** for the natural capacity of NNBF to mitigat coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(40 buildings)*
- **Low rank** for the number of critical community facilities land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **Medium rank** for the NNBF to be used for incentive programs (1 out of 2: The NNBF or portion of the NNBF potential to earn credit in the CRS Program.)

Between Round 1 and 2, MPPDC has 6 adjoining/neighborhood homeowners partnering and looking to protect larger “reach based areas



Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:



Matthew Gray <matthewallengray@gmail.com>
9:49 AM

To: Dawn Mantell Cc: Lewis Lawrence

CFPF Ltr to...
413.33 KB

I voluntarily elect to be reclassified as residing in a non-low-income area or Opportunity Zone and understand how this changes the financial grant terms associated with my project.

Matthew Gray-Keeling

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): County Name **-** Please see the attached corresponding maps for this application.

Total Amount Requested: ___$13,846_________________________

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding and wetland loss.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional

purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal design application seeks a nature-based design solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Chesapeake Bay Road in Mathews County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Mathews County. See the community support letter in Appendix 1.

- *A link to the Middle Peninsula PDC’s All Hazards Mitigation Plan (2016) can be found at:*

https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf
  - *Please see Section 4 (page 25), which includes historical hazard data within the region.*
- *A link to the County of Mathews' Comprehensive Plan can be found at: https://www.mathewscountyva.gov/196/Comprehensive-Plan.*

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

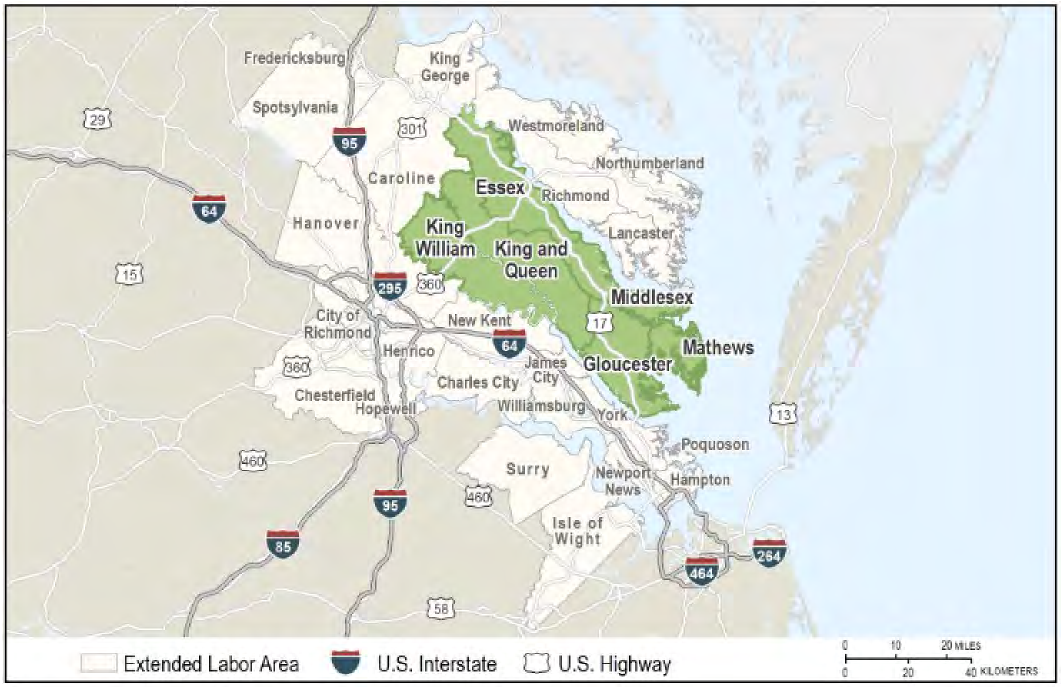

Figure 2. Middle Peninsula Population

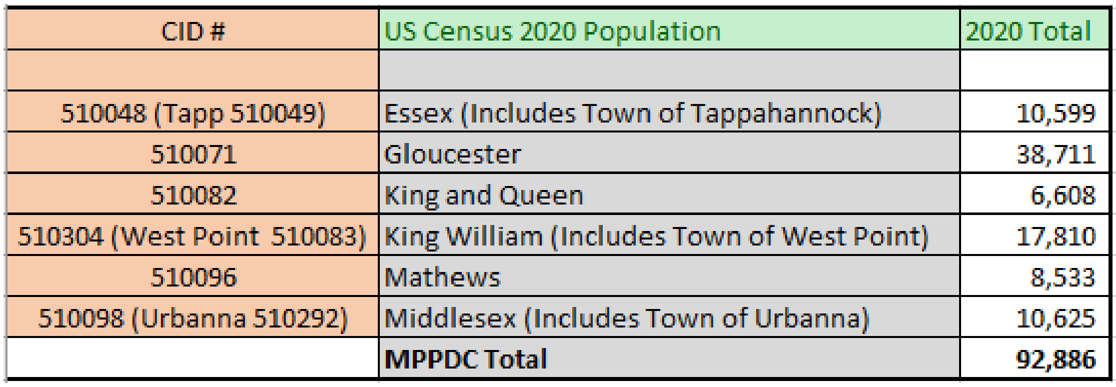

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on Chesapeake Bay Road in Mathews County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

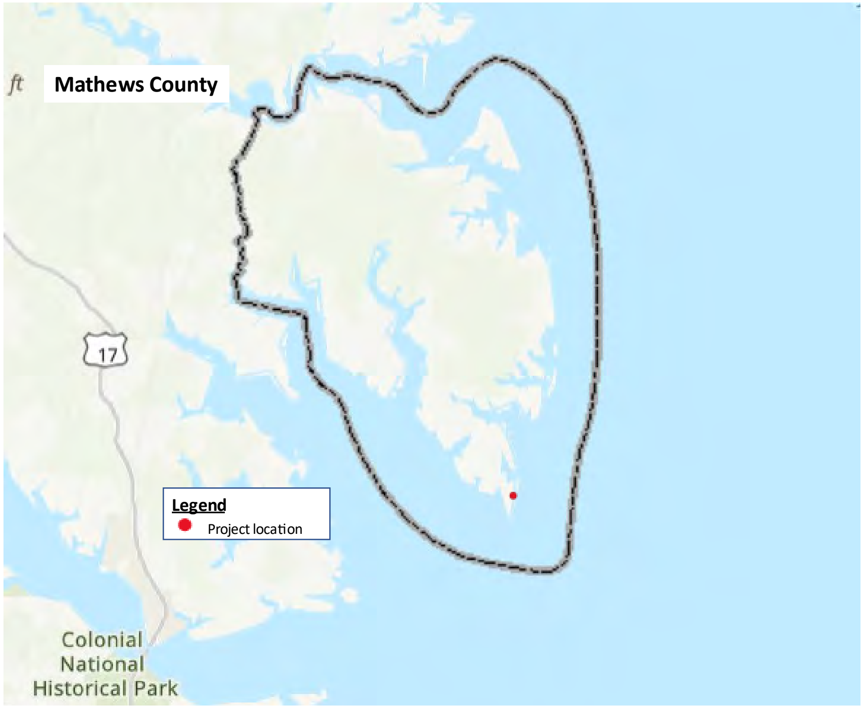

Figure 4. Parcel Map of Project Location

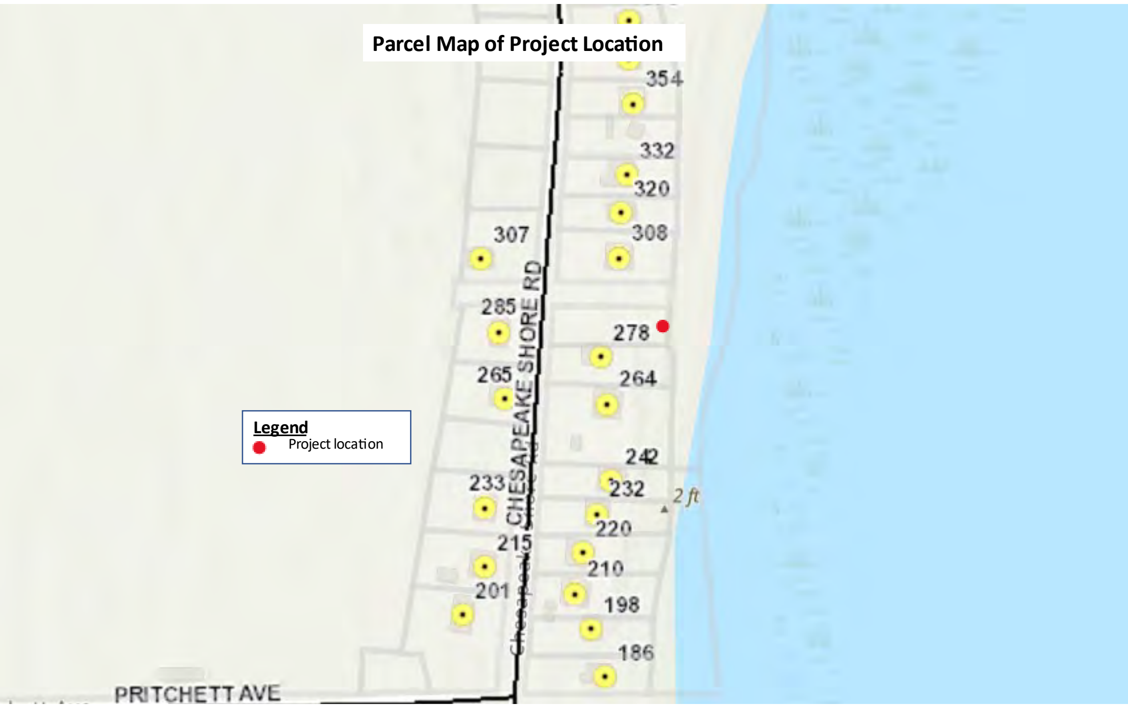
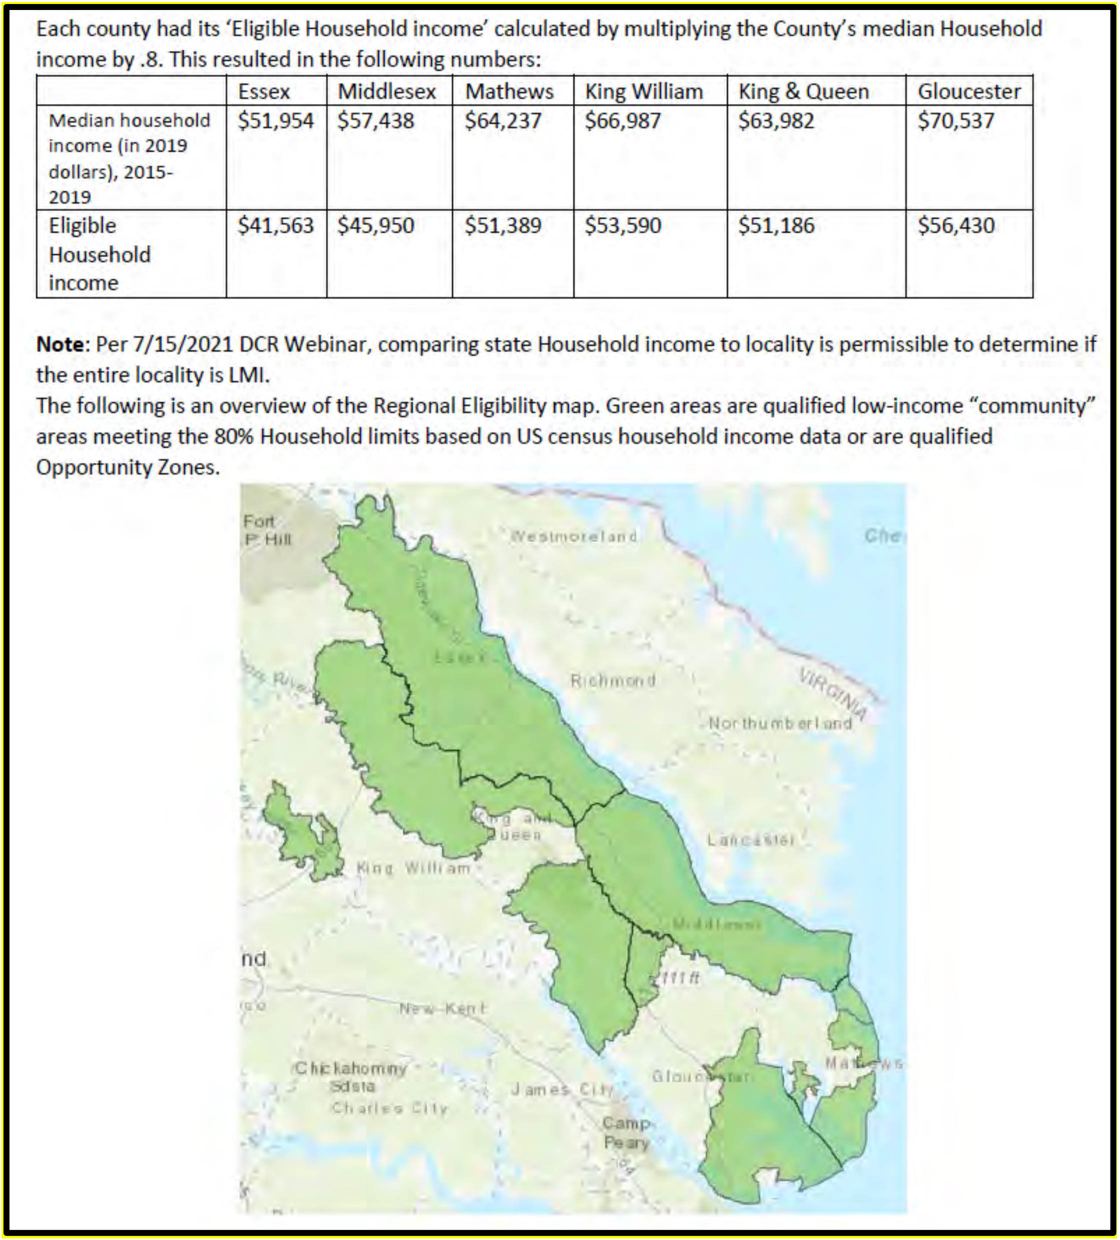


Mathews County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County's population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

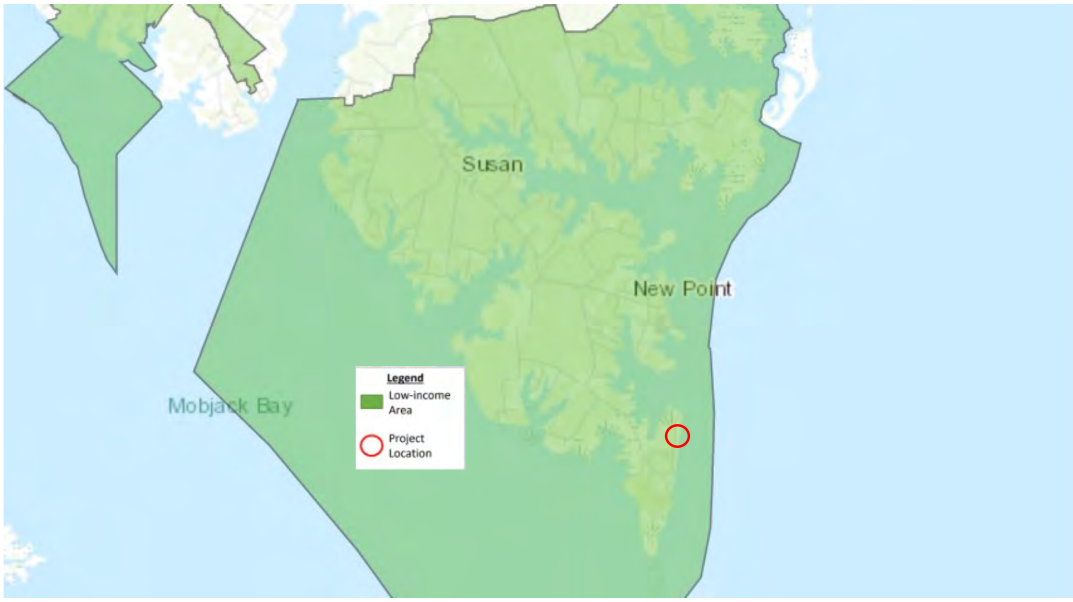
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

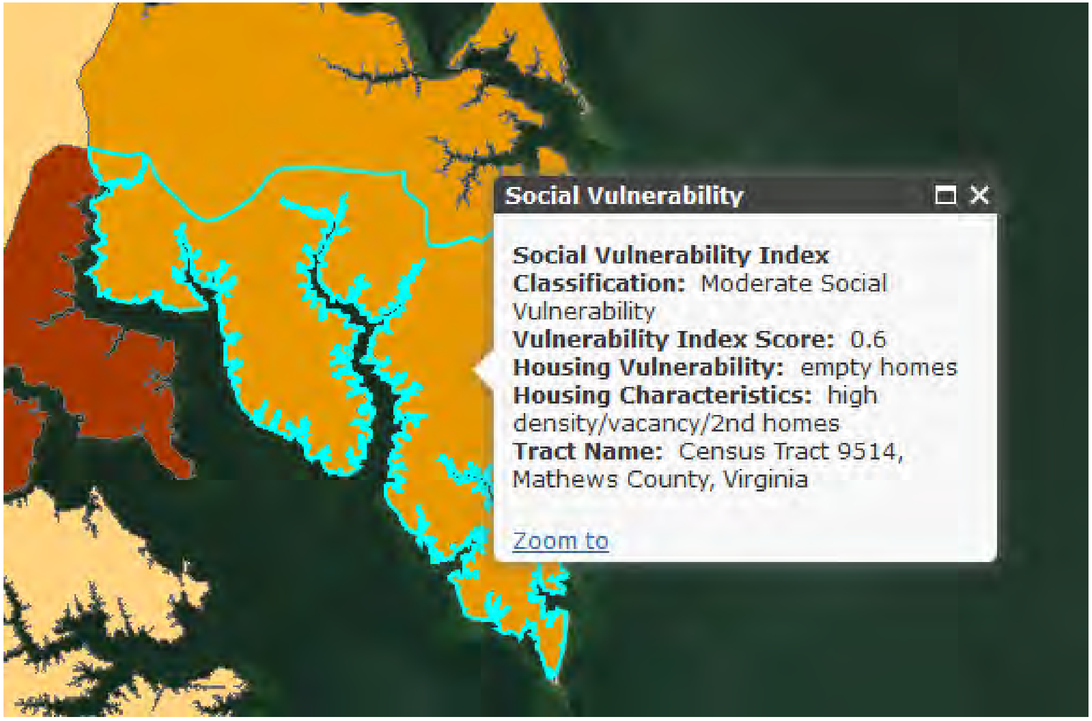
Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



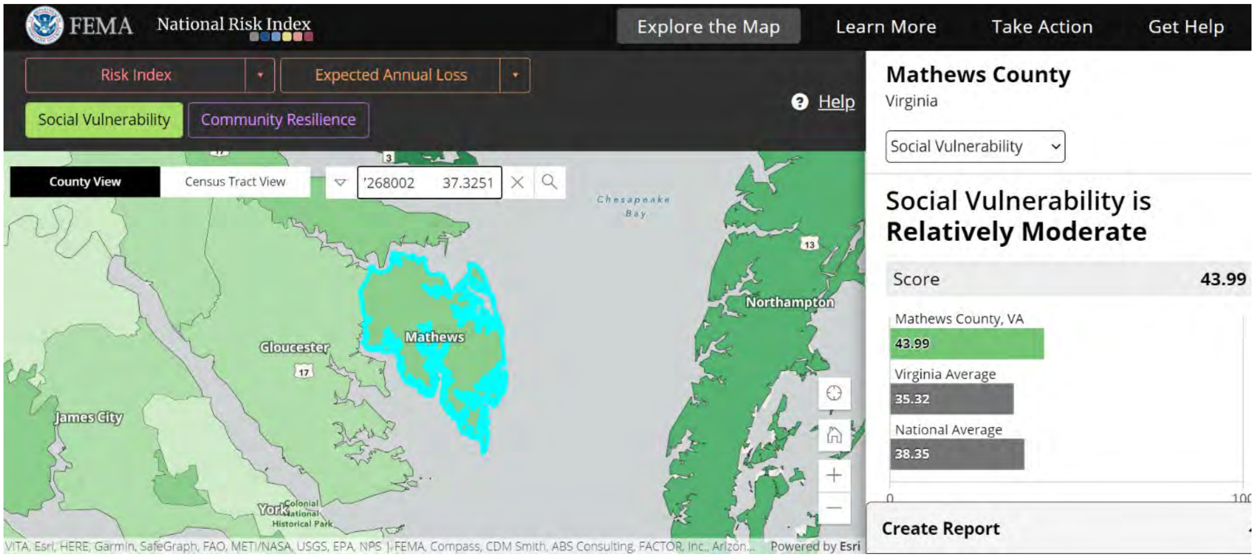
According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability is considered relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.6
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9514, Mathews County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Mathews County
Virginia

Social Vulnerability

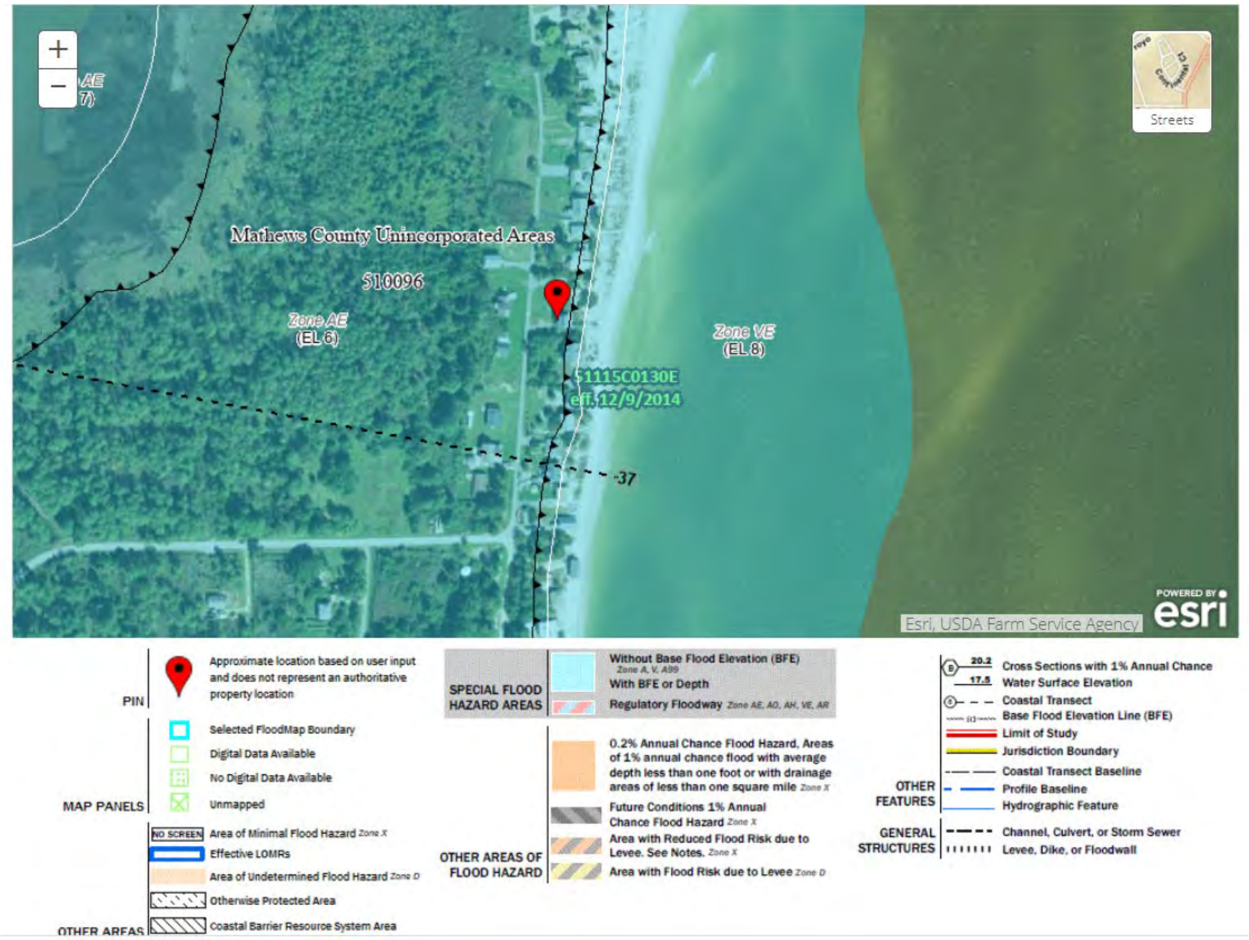
Social Vulnerability is Relatively Moderate

Score	43.99
Mathews County, VA	43.99
Virginia Average	35.32
National Average	38.35

The project is located at 278 Chesapeake Shore Road, Port Haywood, VA 23138 (-76.27268002, 37.32513599). The property was purchased in 2017 and has experienced a number of issues. At the time, the house it had a long sandy beach, but the beach has eroded steadily over the past several years. The beach has lost an entire doom. The walkway out to the beach had a doom to get to the beach and now the beach ends at the walkway; instead, the walkway dangles over the beach. Extreme erosion on the beach is so impactful that the sand is leaving. Additionally, other property owner nearby has implemented hard solutions in a way that it is now negatively impacting their property further to the point that there is no beach with high tide and each week they are losing more of the sand on the doom. The recent few weeks of major storms are causing the continued washing, which is presenting a sense of urgency. This habitat also protects the tiger beetle.

This site is located within the VE flood zone as seen in **Figure 9**. Please see **Appendix 2** for the FIRMettes (last mapped 12/9/2014) and **Appendix 3** for additional property photos.

Figure 9: Map of FEMA Flood Zones

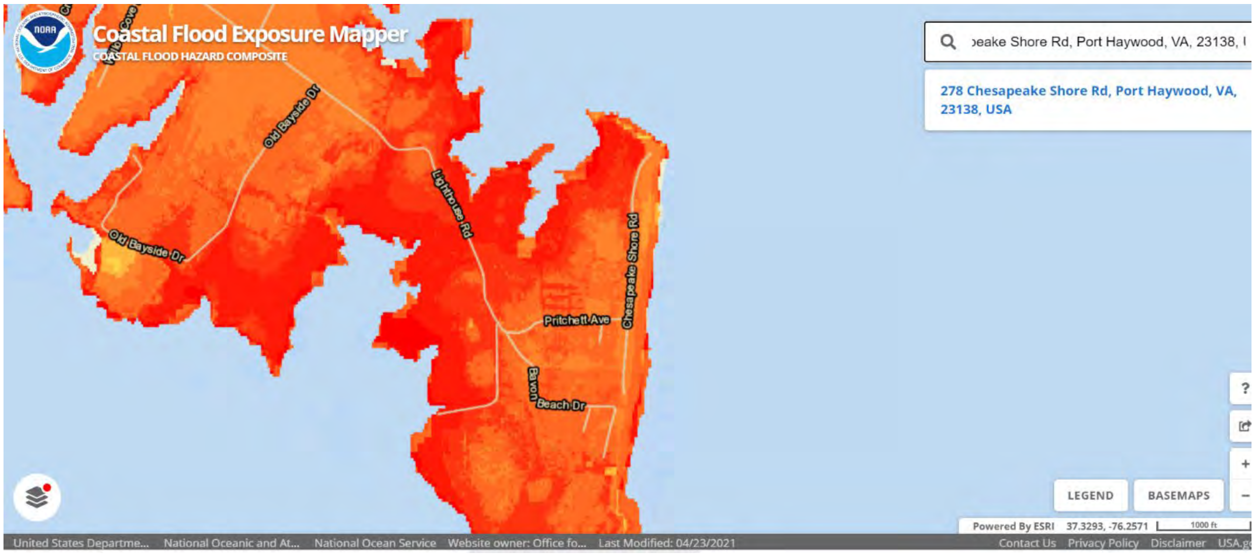


Due to the project site’s proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the active erosion change in the shoreline at the project location and the approximate loss of square feet of shoreline (see site photos). The project location has and continues to be impacted by tropical, sub-tropical, and nor’easter events. **Appendix 4** lists 84 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 and 2017

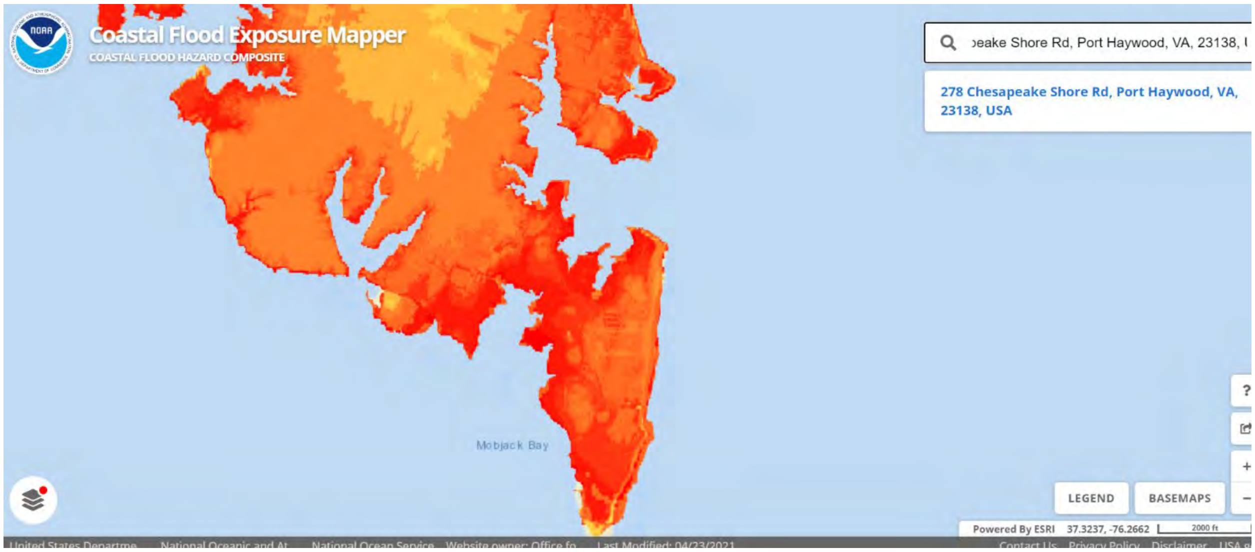
Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 11.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



ɔeake Shore Rd, Port Haywood, VA, 23138, l

278 Chesapeake Shore Rd, Port Haywood, VA, 23138, USA



For more information about this project area please see:

- *A link to Mathews County's current floodplain ordinance can be found at: https://www.mathewscountyva.gov/172/National-Flood-Insurance-Program-NFIP*

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Mathews County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers. Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022.

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with					X	X

implementing the nature-based or hybrid design solution						
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		83

SCOPE OF WORK CHECKLIST.

Scope of Work Narrative	
Supporting Documentation	**Included**
Detailed map of the project area(s) (Projects/Studies)	☑Yes ☐ No ☐ N/A
FIRMette of the project area(s) (Projects/Studies)	☑Yes ☐ No ☐ N/A
Historic flood damage data and/or images (Projects/Studies)	☑Yes ☐ No ☐ N/A
A link to or a copy of the current floodplain ordinance	☑Yes ☐ No ☐ N/A
Non-Fund financed maintenance and management plan forproject extending a minimum of 5 years from project close	☑Yes ☐ No ☐ N/A
A link to or a copy of the current hazard mitigation plan	☑Yes ☐ No ☐ N/A
A link to or a copy of the current comprehensive plan	☑Yes ☐ No ☐ N/A
Social vulnerability index score(s) for the project area from ADAPT VA's Virginia Vulnerability Viewer	☑Yes ☐ No ☐ N/A
If applicant is not a town, city, or county, letters of supportfrom affected communities	☑Yes ☐ No ☐ N/A

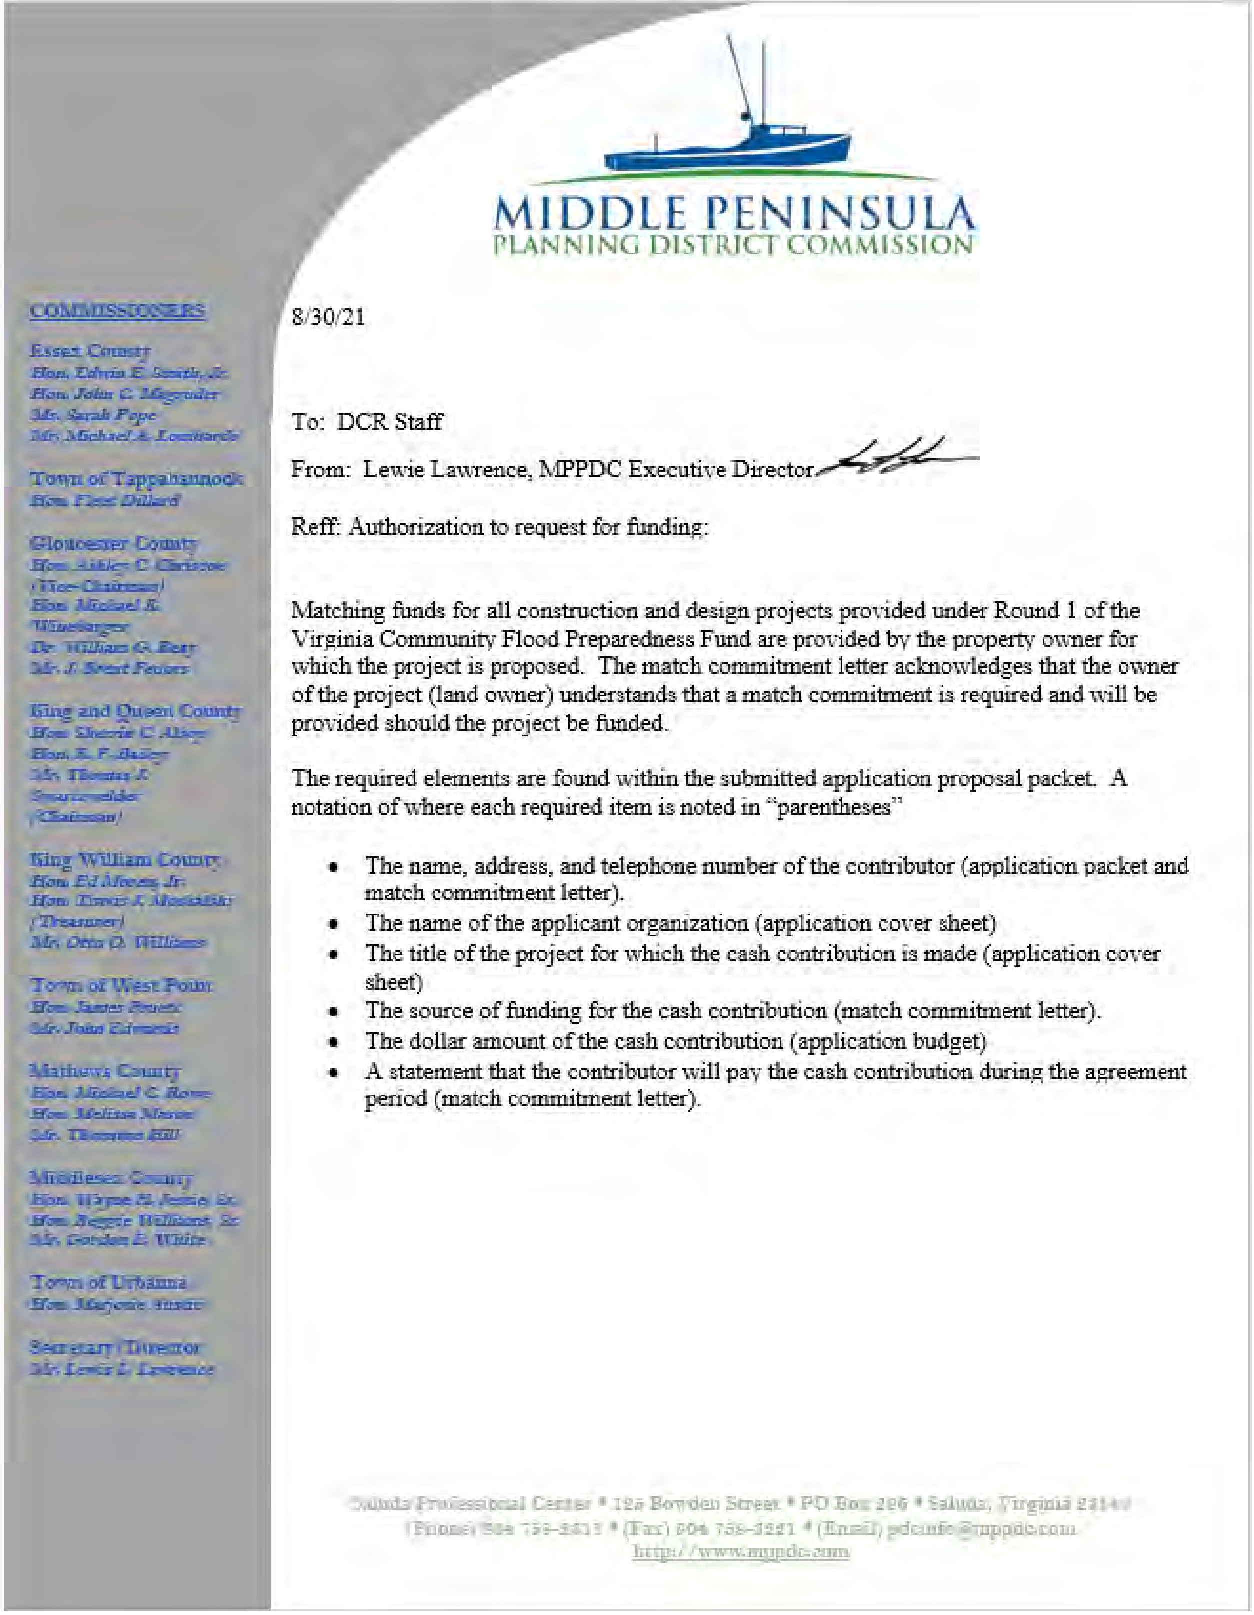
Indirect/IDC/Facilities & Administrative Costs				**27.31%**		$3,266	$817	$4,083
Total						**$13,846**	**$3,463**	**$17,309**
Other Match:								
Source of Match						$0	$0	$0
GRAND TOTAL						**$13,846**	**$3,463**	**$17,309**

Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

- *Authorization to request for funding*



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 278 Chesapeake Shore Road, Port Haywood, Virginia 23138. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804-380-9378 or by email at matthewallengray@gmail.com.

Sincerely,

Matthew A Gray

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

David Schlosser
Interim County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)

This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)

This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)

This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)

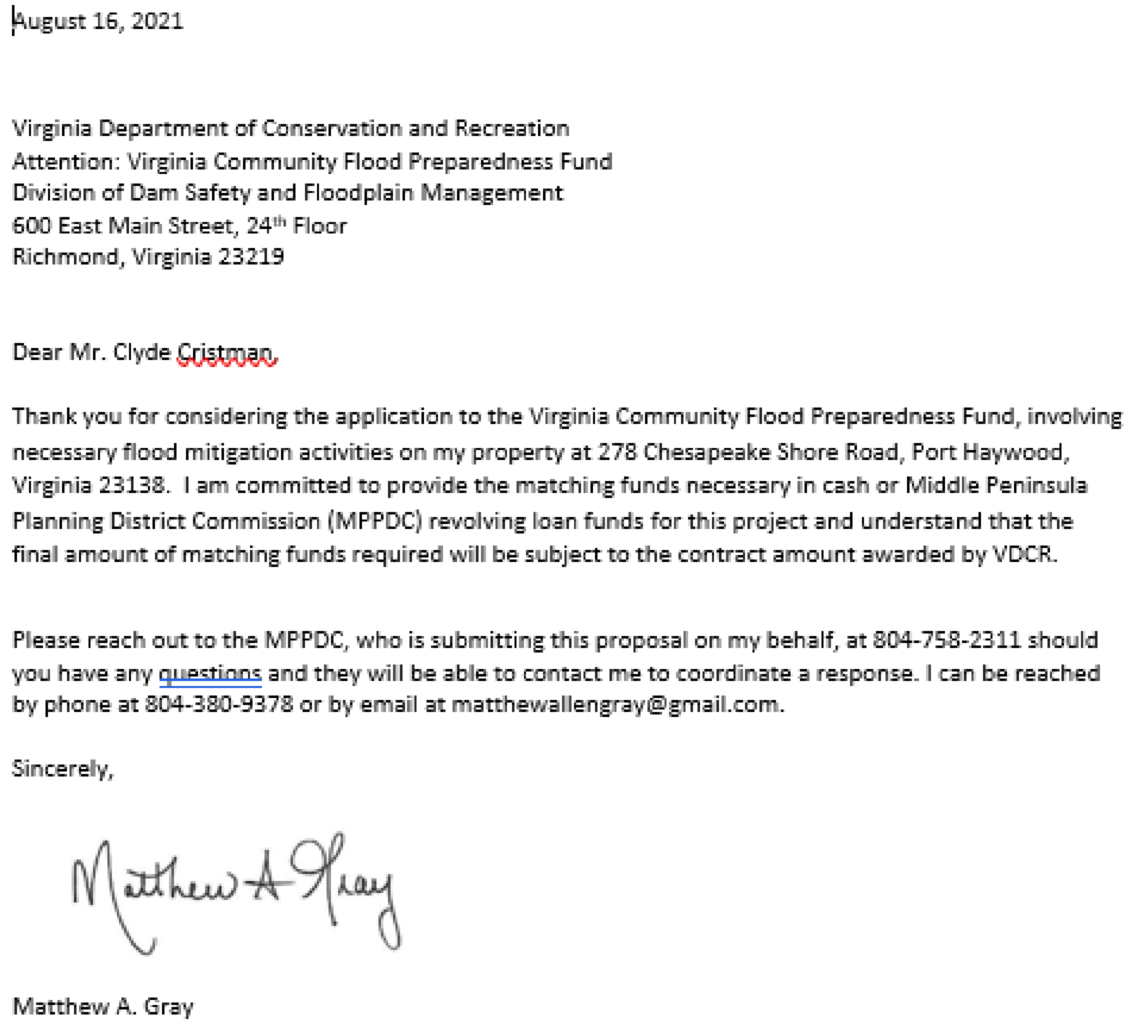
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



August 16, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 278 Chesapeake Shore Road, Port Haywood, Virginia 23138. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804-380-9378 or by email at matthewallengray@gmail.com.

Sincerely,

Matthew A Gray

Matthew A. Gray

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Long-Green Plains Shoreline Design** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As reported multiple times to DCR staff, the Long application is not included in a low-income area nor is it in an opportunity zone. MPPDC does not know why this application is being held up and the applicant can't voluntarily elect out of something they are not included in to start with.

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

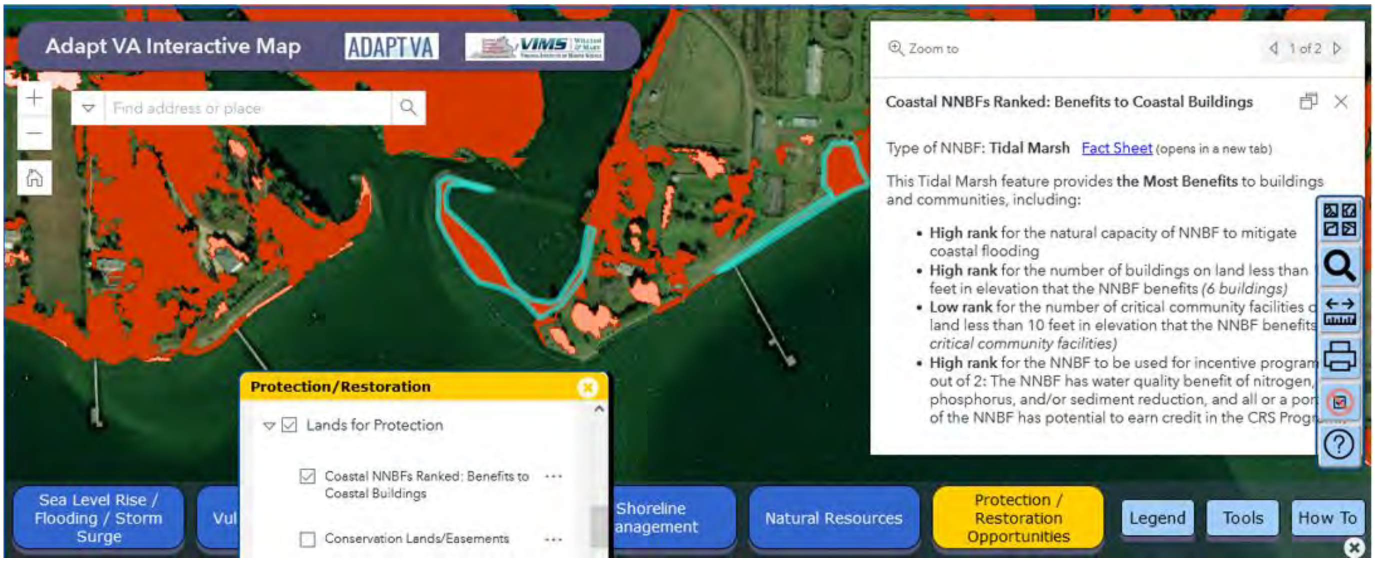
Issue #2

DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(6 buildings)*
- **Low rank** for the number of critical community facilities o land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Prog...

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:

The applicant was never included in a low-income area or an opportunity zone. The applicant cannot voluntarily opt out of something they were never included in. MPPDC staff does not understand why this application has issue with low income or opportunity zones?

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): County Name **-** Please see the attached corresponding maps for this application.

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for a shoreline site evaluation and recommendation and development of an appropriate nature-based shoreline design or hybrid solution if nature based isn't possible and draft JPA permit application for up to two miles of shoreline. The design is intended to reduce the impacts of storm events, flooding, and wetland loss. The site is a large waterfront estate with several parcels suffering from flooding and storm damage causing failure to the bulkhead which holds the septic drain field and tank in place, hundred year old trees, and loss of tidal wetlands protecting the road.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of "nature-based solutions", "ecosystem based adaptation," "eco-DRR," or "green infrastructure" has emerged as a good alternative or complement to traditional gray approaches.

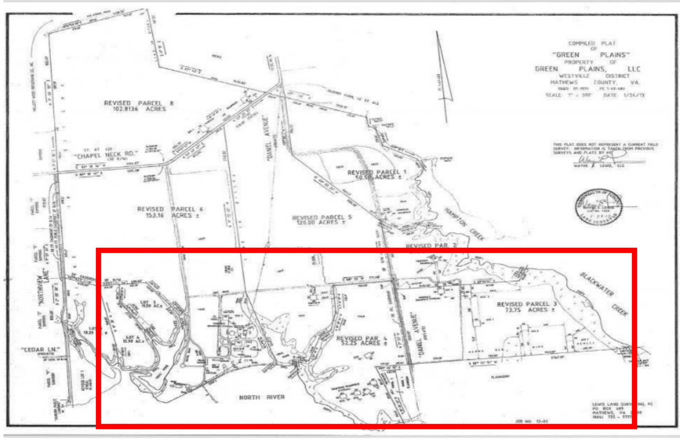
Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely "green" (i.e., consisting of only ecosystem elements) or "hybrid" (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal requests funding for a shoreline site evaluation, recommendation and development of an appropriate nature based shoreline design or hybrid solution if nature based isn't possible and draft JPA permit application. The design is intended to reduce the impacts of storm events, flooding, and wetland loss. The site is a large waterfront estate with several parcels suffering from flooding and storm damage causing failure to the bulkhead which holds the septic drain field and tank in place, hundred year old trees, and loss of tidal wetlands protecting the road (see below red box).

Plat Illustration 1



The applicant request assistance with determining and designing the most appropriate nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal looks to incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life. The owner expressed significant concern about septic failure due to flooding, surge, and erosion on her private property located at Green Plains in Mathews County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Mathews County. See the community support letter in Appendix 1.

- *A link to the County of Mathews' Comprehensive Plan can be found at: https://www.mathewscountyva.gov/196/Comprehensive-Plan.*

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

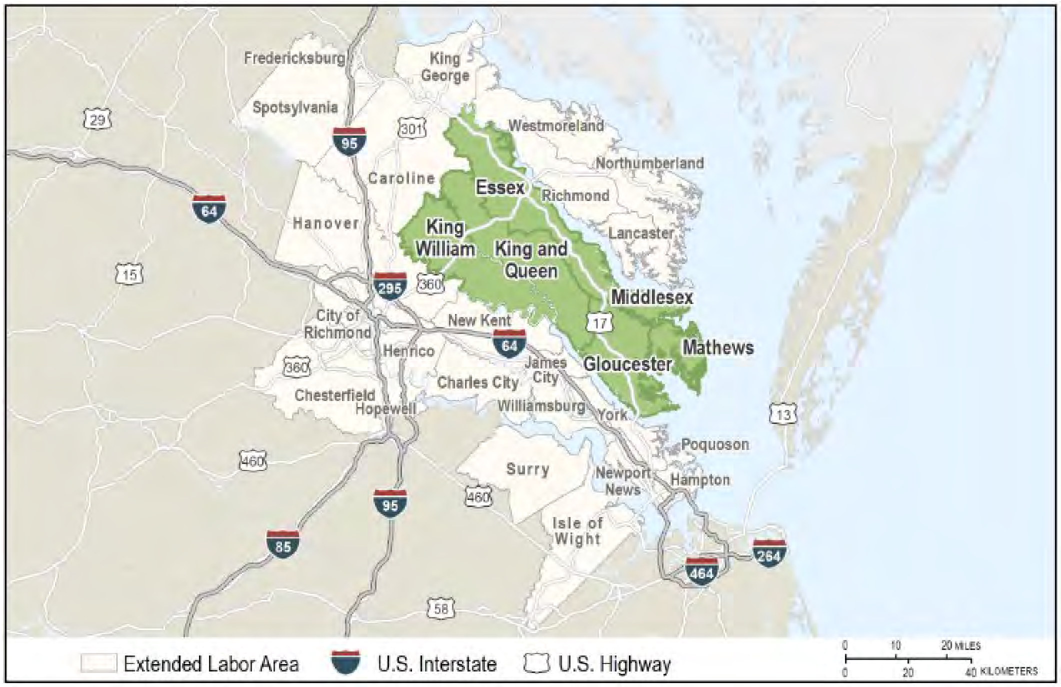

Figure 2. Middle Peninsula Population

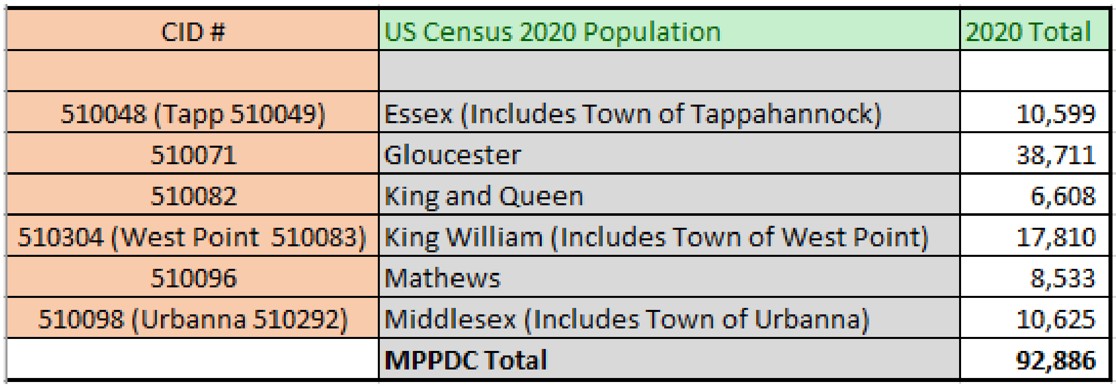

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property at Green Plains in Mathews County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

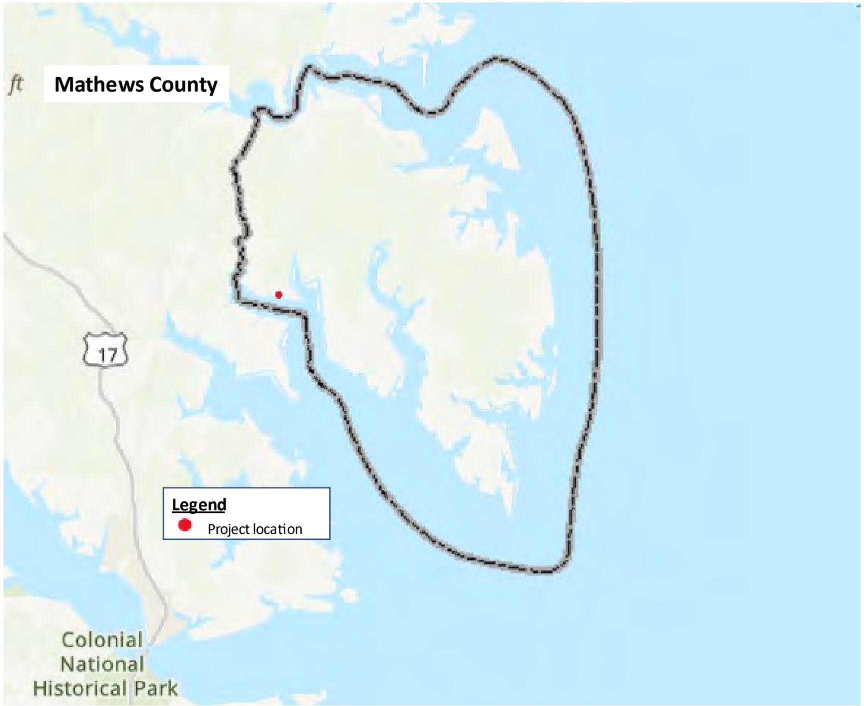

Figure 4. Parcel Map of Project Location

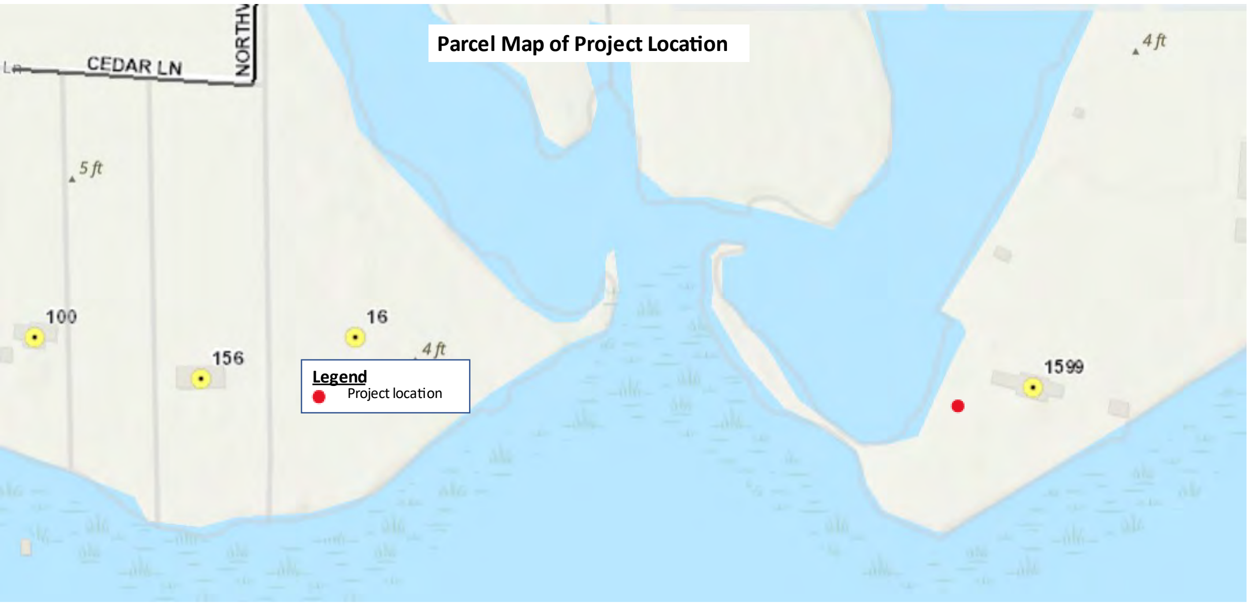
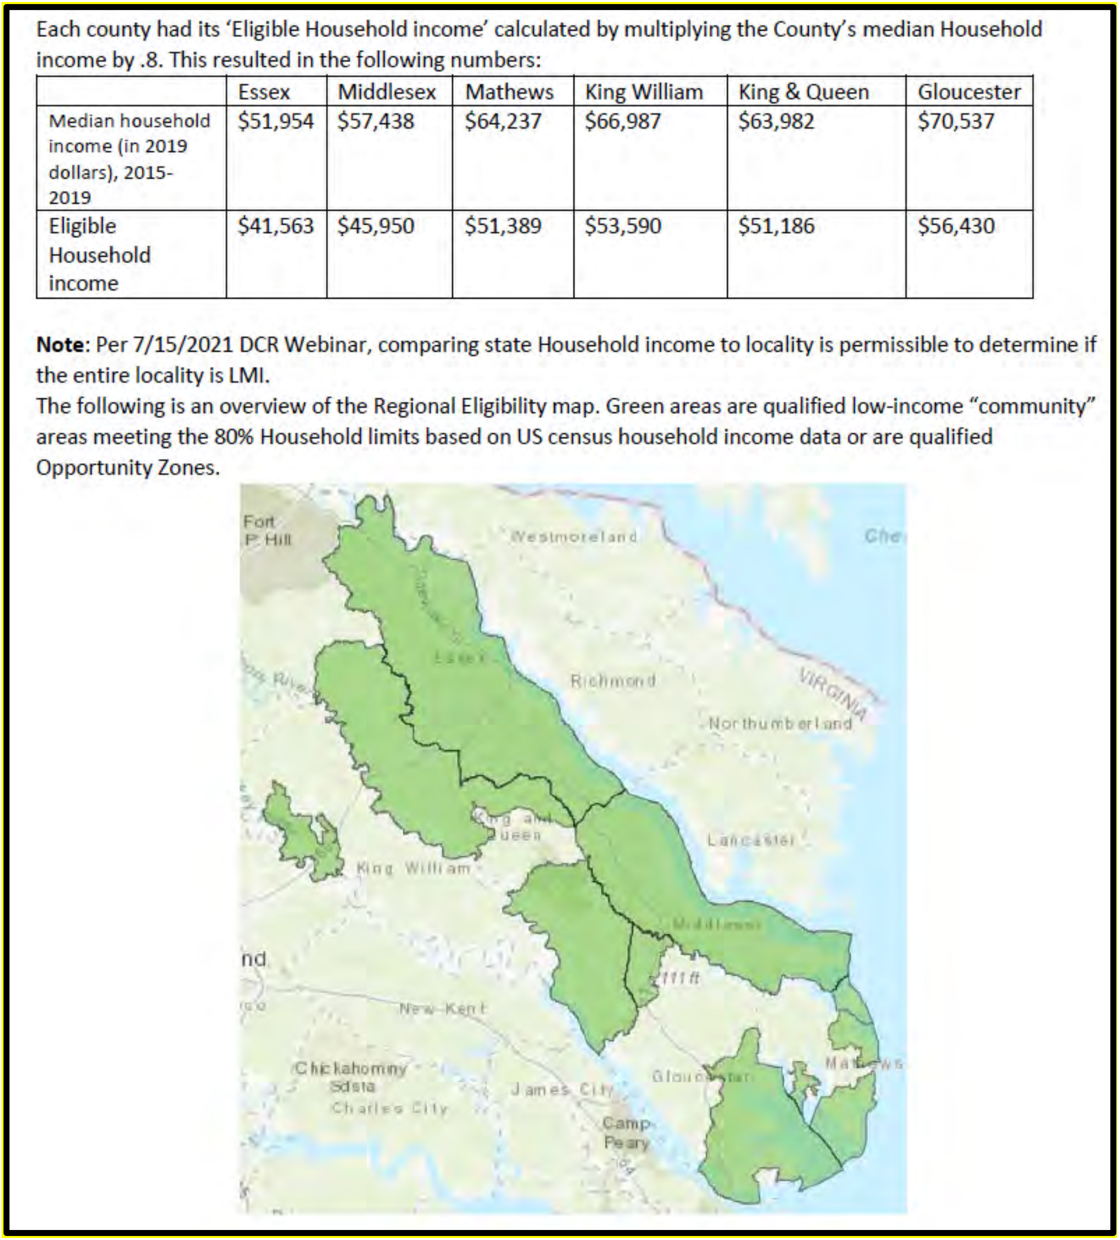


Mathews County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County's population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income “community” areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



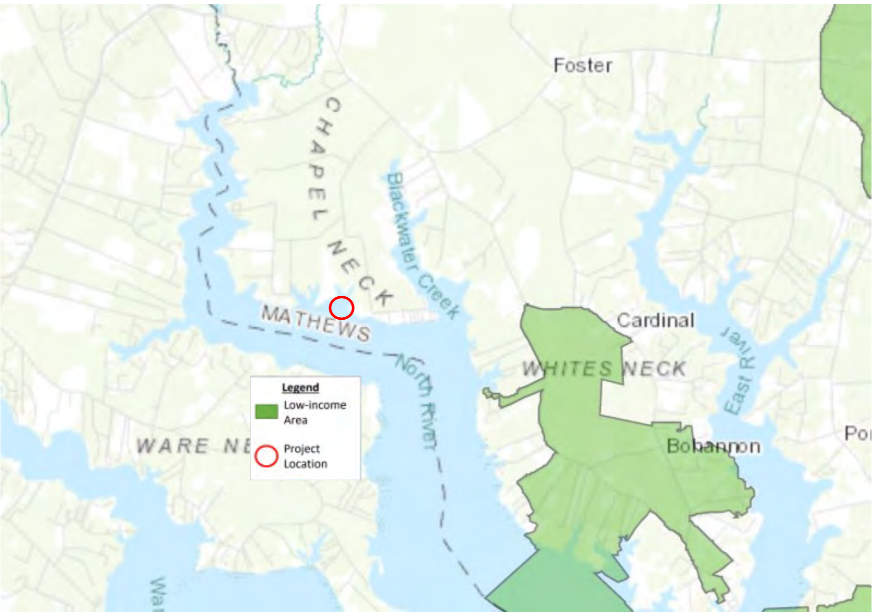
Each county had its ‘Eligible Household income’ calculated by multiplying the County’s median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.
The following is an overview of the Regional Eligibility map. Green areas are qualified low-income “community” areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. **This shows that the project location is not within the low-income area.**

Figure 6. Map of the Project Location within the Green Low-Income Area



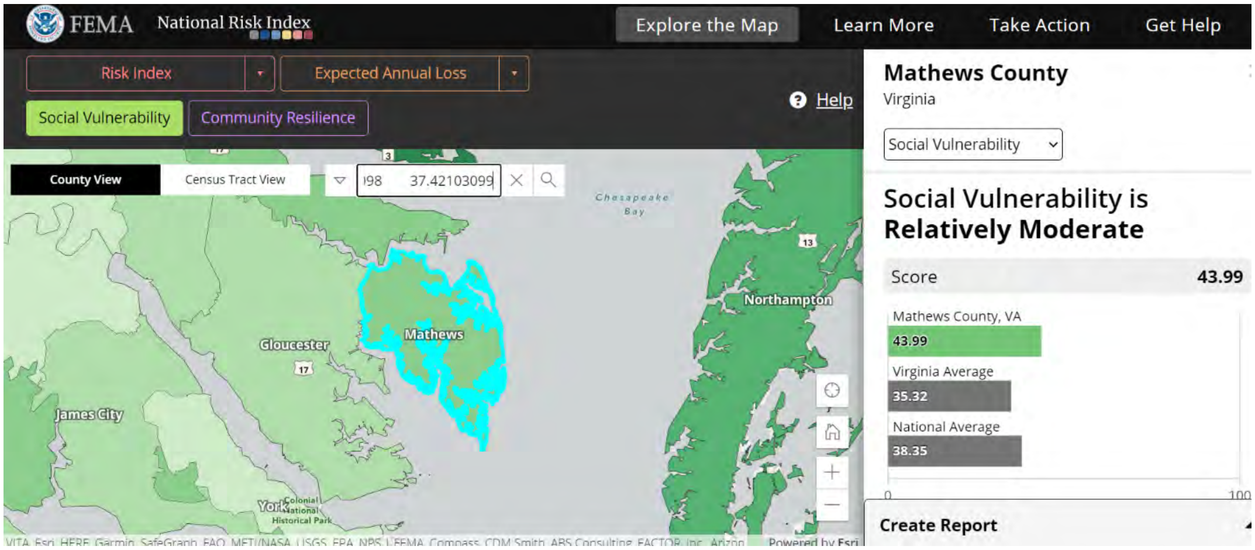
According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability is considered relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

Social Vulnerability

Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.6
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9514, Mathews County, Virginia

Figure 8.
FEMA Nation Risk Index of Census Track of Project Location



Mathews County
Virginia

Social Vulnerability

Social Vulnerability is
Relatively Moderate

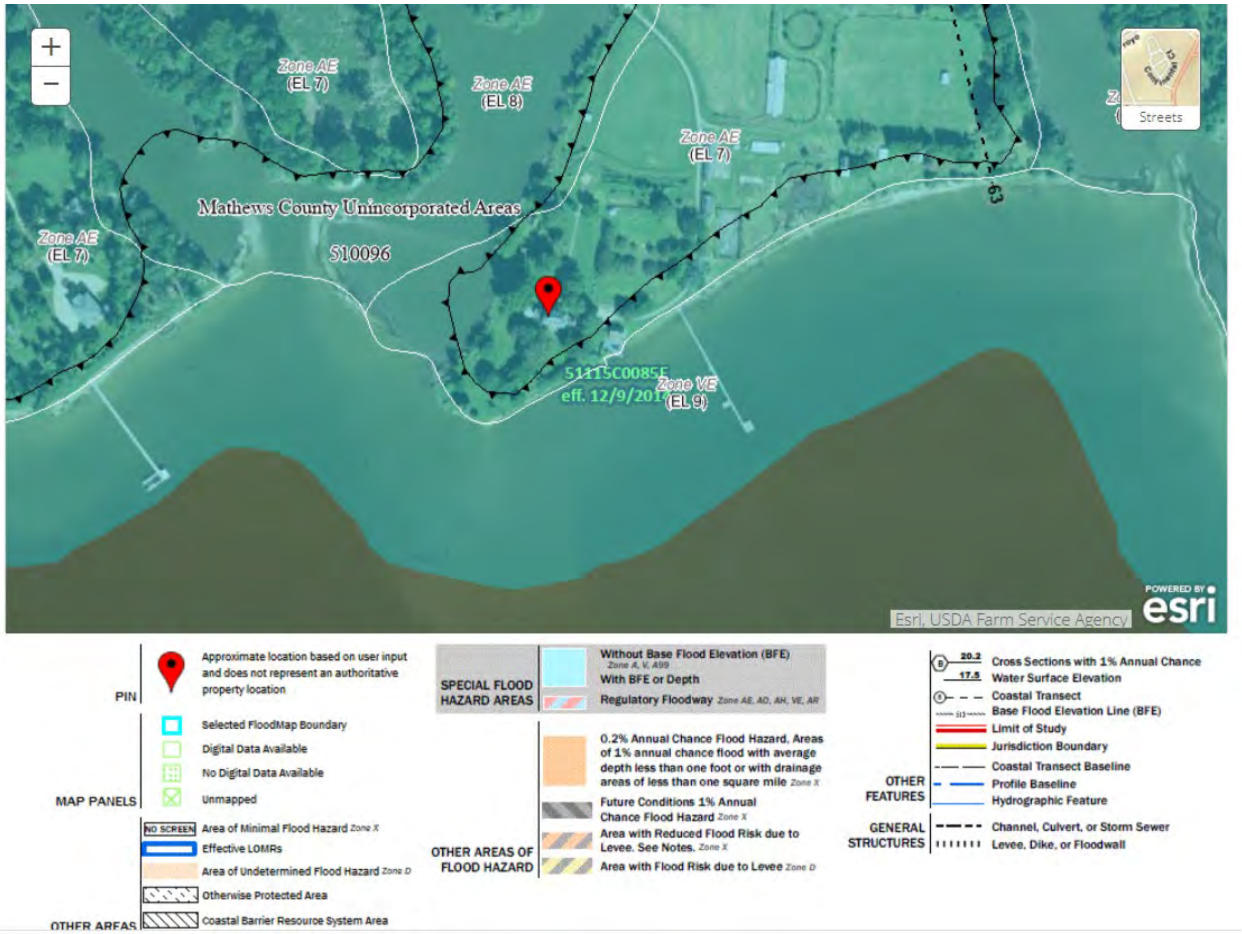
Score	**43.99**
Mathews County, VA	43.99
Virginia Average	35.32
National Average	38.35

The project is located at 1599 Chapel Neck Road North, VA 23128 (-76.42750098,37.42103099). It was purchased by the property owner's father in 1968 and was later inherited. The home was built in 1789 and serves as a historical marker for the region. The current owner has lived there on and off her entire life, as the place has meaning and a legacy. If they had built the home, they would not have located it so close to the water's edge. Now it presents a number of critical infrastructure challenges as the property spans two miles of waterfront. The land once started where the sandbar currently resides. There is a 22 year old sea wall that is failing and is situated on the north river. The septic pump and two drainage fields are between the historic house and the river.

Therefore, if the sea wall fails, the septic lines will drain into the river. People have to drive through the farm in order to get to housing estate development, where FEMA had to rebuild all the houses at one point. The nearby public right of way is adjacent is to the farm and it has already eroded to the point where a mini bridge has been built to service the area. In addition to these issues, many trees are at risk across the 617 acres of coming down, and many are at risk of falling into the water as the soil is completely saturated.

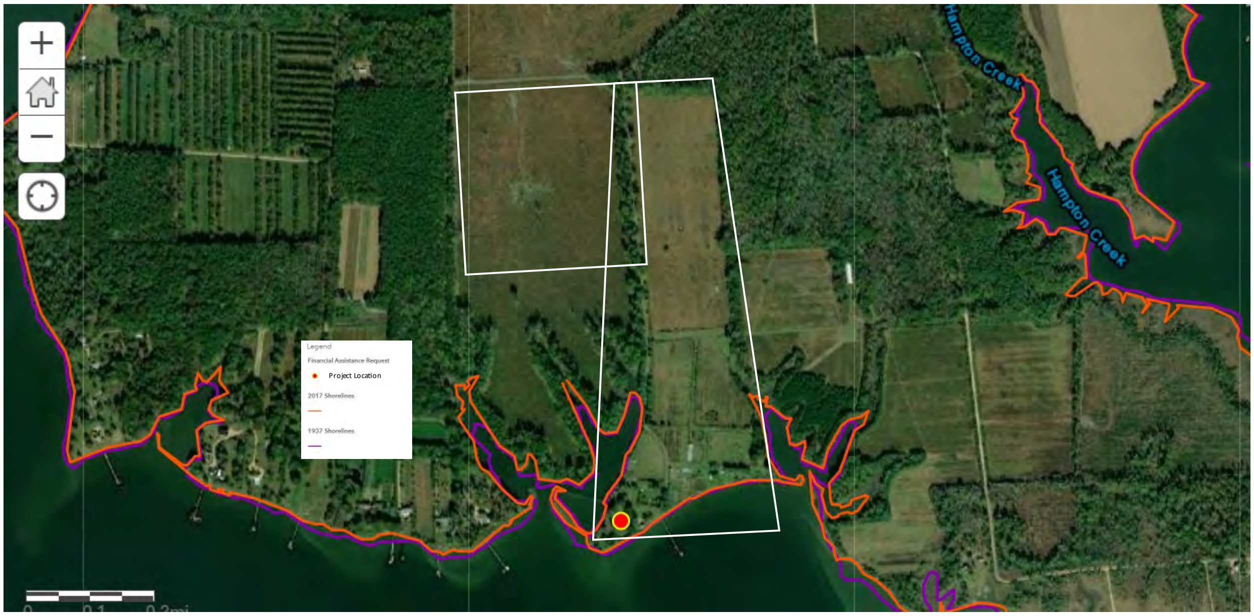
This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 2** for the FIRMettes (last mapped 12/9/2014) and **Appendix 3** for additional property photos.

Figure 9: Map of FEMA Flood Zones



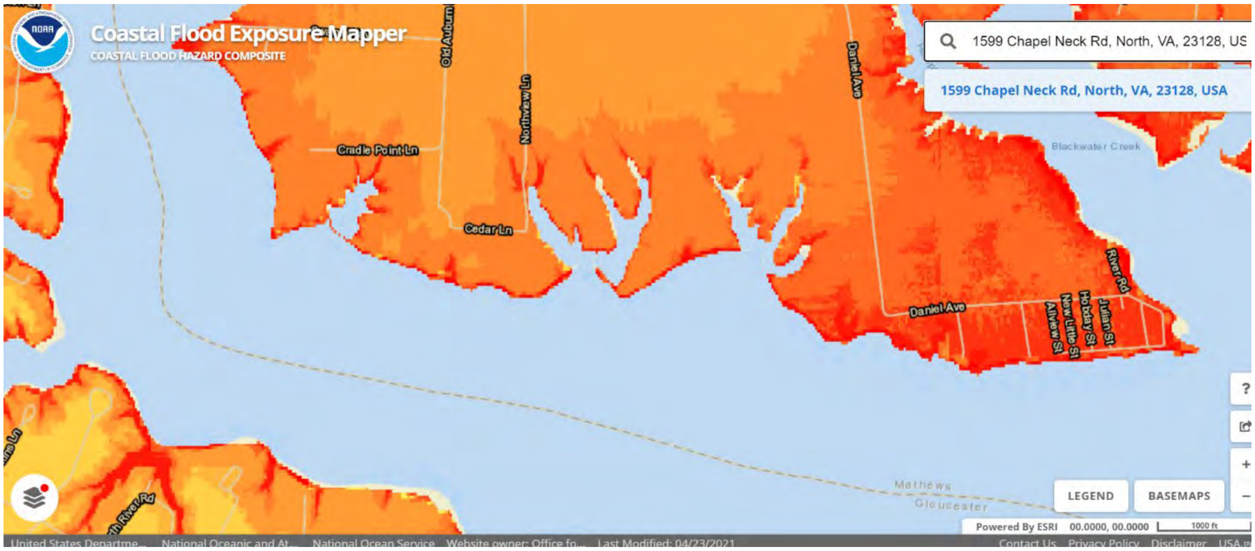
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 9** shows the 1937 and the 2017 shorelines. From the site photos and figure one can see the erosion change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 80 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

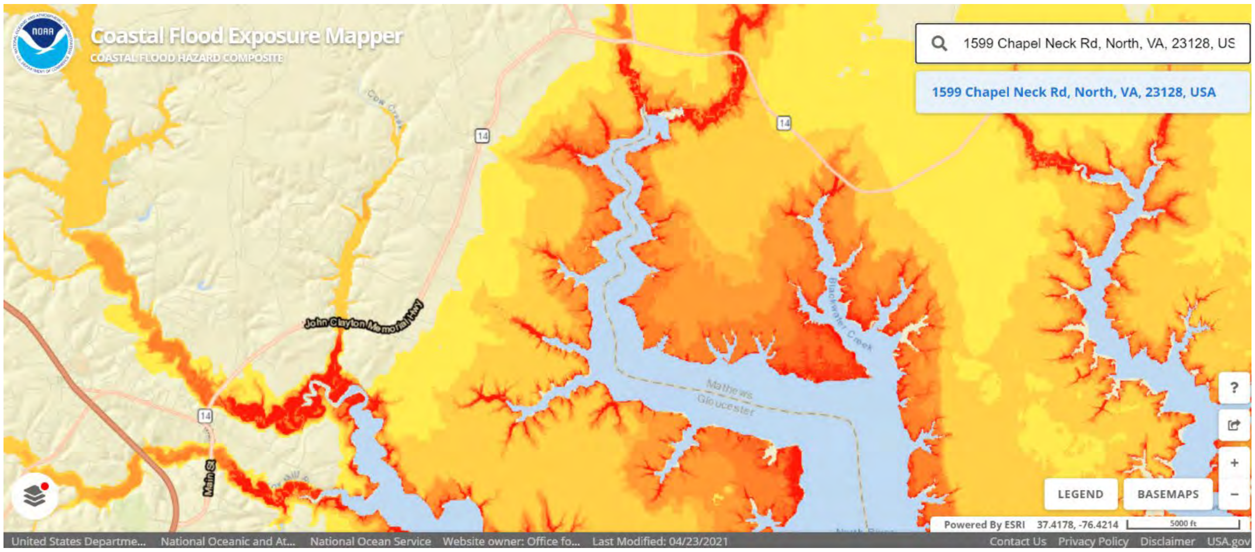
Figure 9. Project Location and Map of the Shoreline Change between 1937 and 2017



Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 11.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)





For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Mathews County's current floodplain ordinance can be found at: https://www.mathewscountyva.gov/172/National-Flood-Insurance-Program-NFIP*

***ALTERNATIVES*.**

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

***GOALS AND OBJECTIVES*.**

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Mathews County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to asses and develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers. Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022.

solution						
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

<u>Long Term Planning</u>

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

<u>Short Term Implementation</u>

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics.

All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	
No	**0**	0
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		73

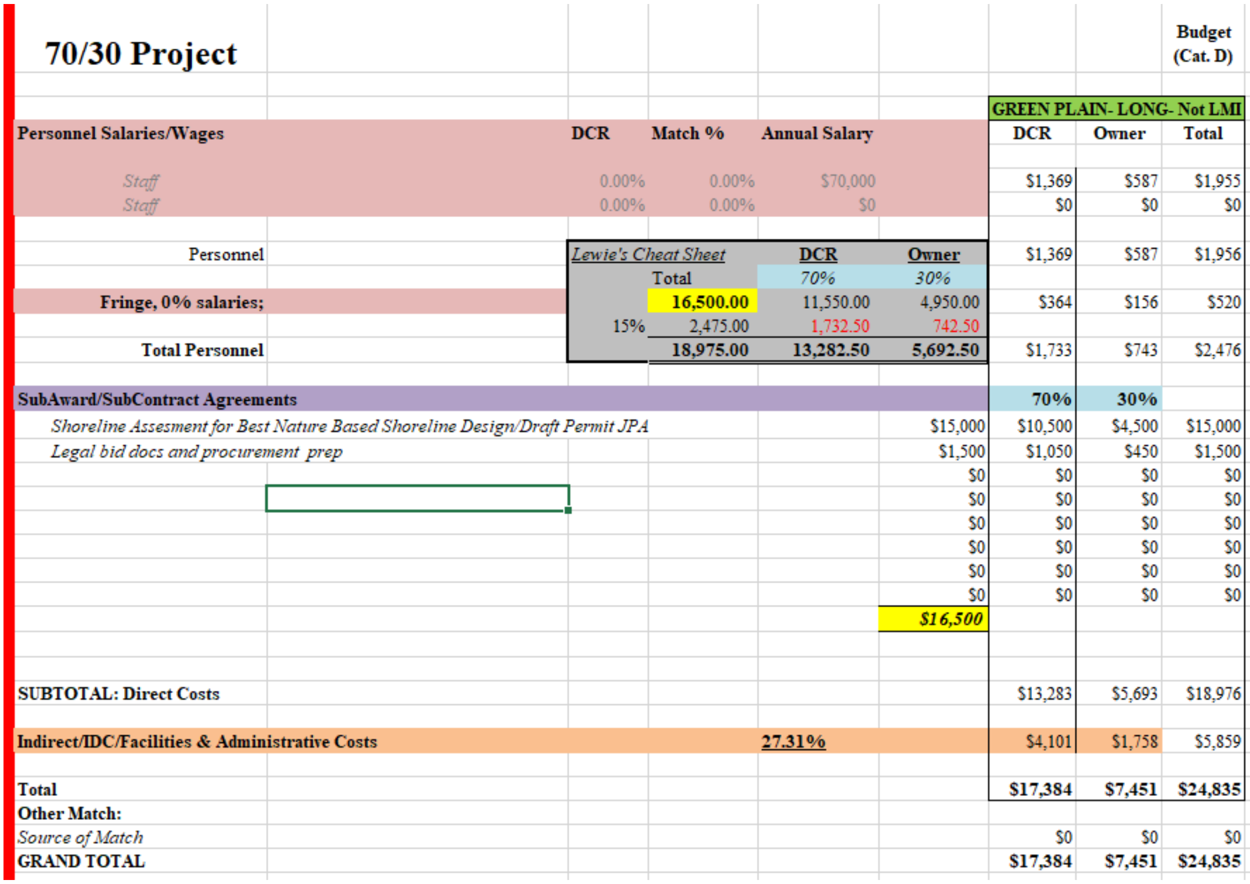
SCOPE OF WORK CHECKLIST.

Scope of Work Narrative	
Supporting Documentation	**Included**
Detailed map of the project area(s) (Projects/Studies)	☑Yes ☐ No ☐ N/A
FIRMette of the project area(s) (Projects/Studies)	☑Yes ☐ No ☐ N/A
Historic flood damage data and/or images (Projects/Studies)	☑Yes ☐ No ☐ N/A
A link to or a copy of the current floodplain ordinance	☑Yes ☐ No ☐ N/A
Non-Fund financed maintenance and management plan forproject extending a minimum of 5 years from project close	☑Yes ☐ No ☐ N/A
A link to or a copy of the current hazard mitigation plan	☑Yes ☐ No ☐ N/A
A link to or a copy of the current comprehensive plan	☑Yes ☐ No ☐ N/A
Social vulnerability index score(s) for the project area from ADAPT VA's Virginia Vulnerability Viewer	☑Yes ☐ No ☐ N/A
If applicant is not a town, city, or county, letters of supportfrom affected communities	☑Yes ☐ No ☐ N/A
Completed Scoring Criteria Sheet in Appendix B, C, or D	☑Yes ☐ No ☐ N/A

Budget Narrative	
Supporting Documentation	**Included**
Authorization to request funding from the Fund from governing body or chief executive of the local government	☑Yes ☐ No ☐ N/A
Signed pledge agreement from each contributing organization	☑Yes ☐ No ☐ N/A

III. BUDGET NARRATIVE

The proposed project has an estimated Total budget of $24,835



70/30 Project								**Budget (Cat. D)**

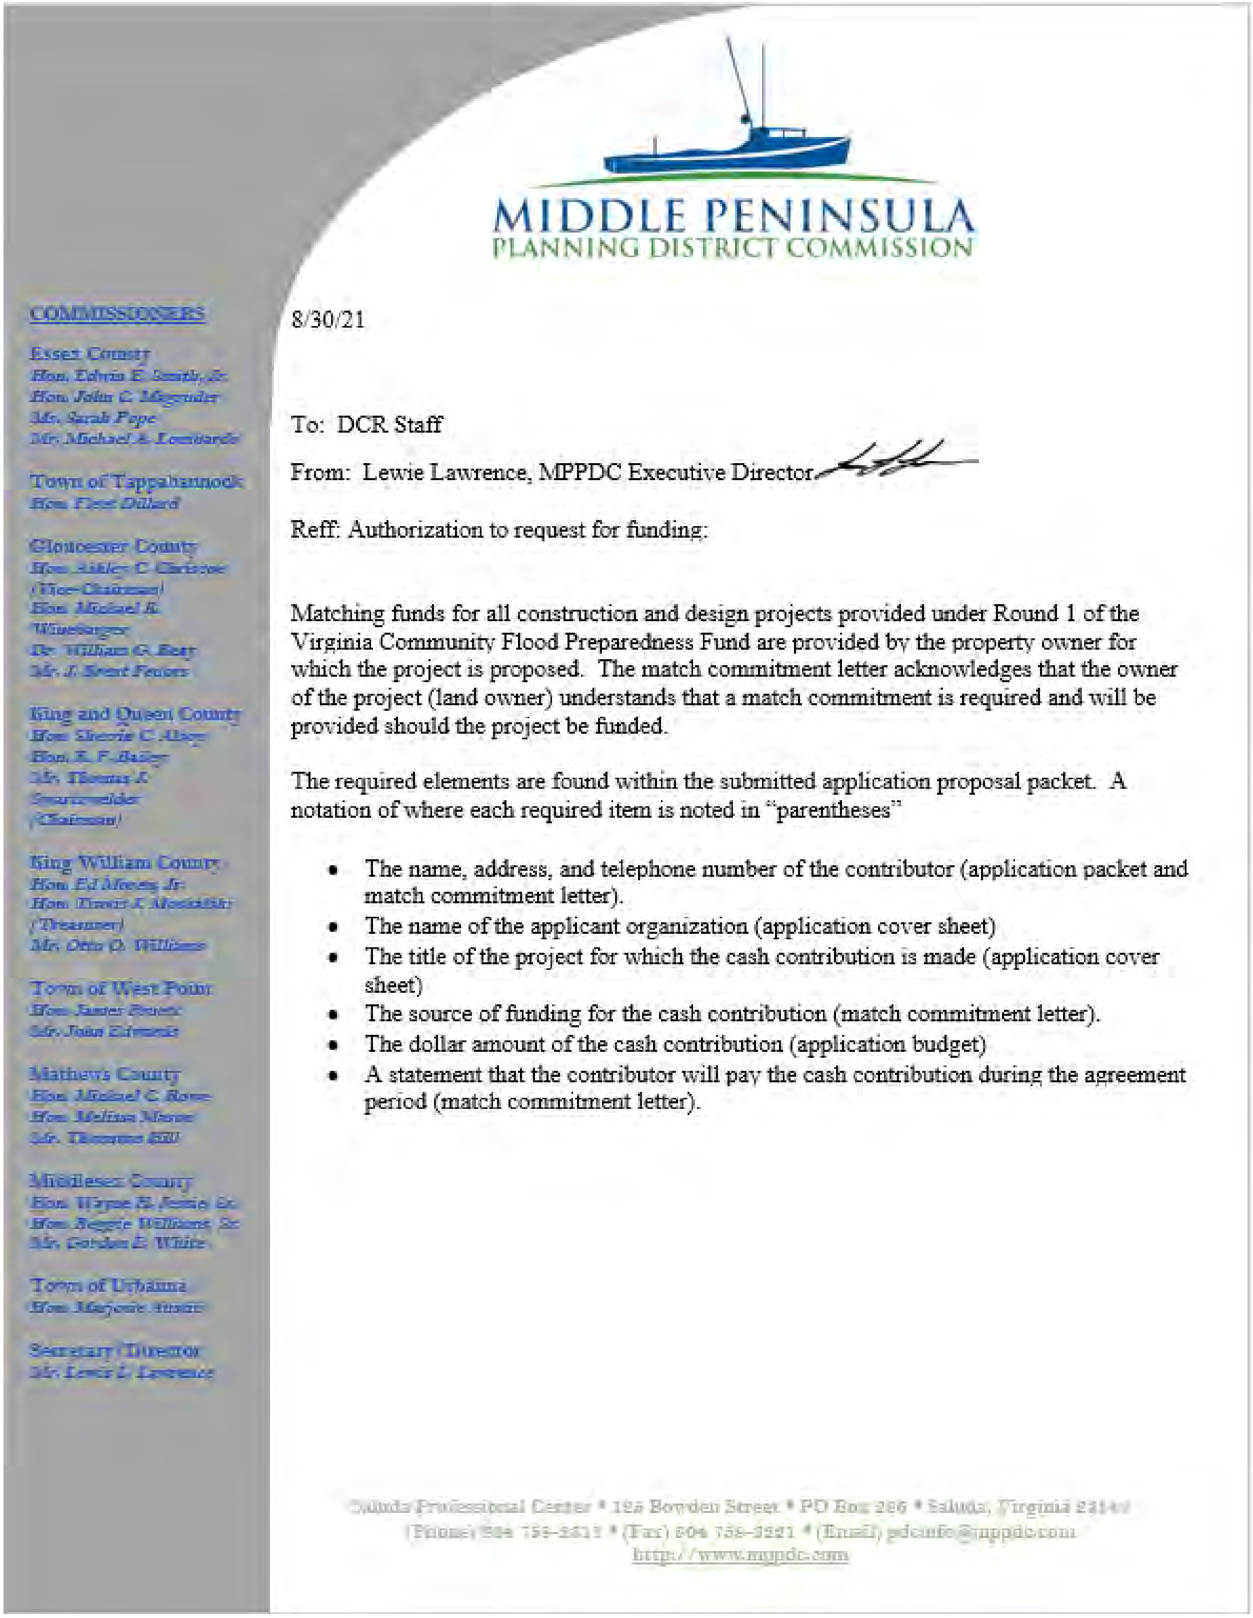
Indirect/IDC/Facilities & Administrative Costs				**27.31%**		$4,101	$1,758	$5,859
Total						**$17,384**	**$7,451**	**$24,835**
Other Match:								
Source of Match						$0	$0	$0
GRAND TOTAL						**$17,384**	**$7,451**	**$24,835**

Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

- *Authorization to request for funding*



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

- *Signed pledge agreement from each contributing organization*

Virginia Department of Conservation and Recreation

Attention: Virginia Community Flood Preparedness Fund

Division of Dam Safety and Floodplain Management

600 East Main Street, 24th Floor

Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at Green Plains Farm, 1599 Chapel Neck Road, #97, North, Virginia 23128-0097. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at (804)725-3648 or by email at dorothysaralong@aol.com.

Sincerely,

Dorothy S. Long

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

David Schlosser
Interim County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

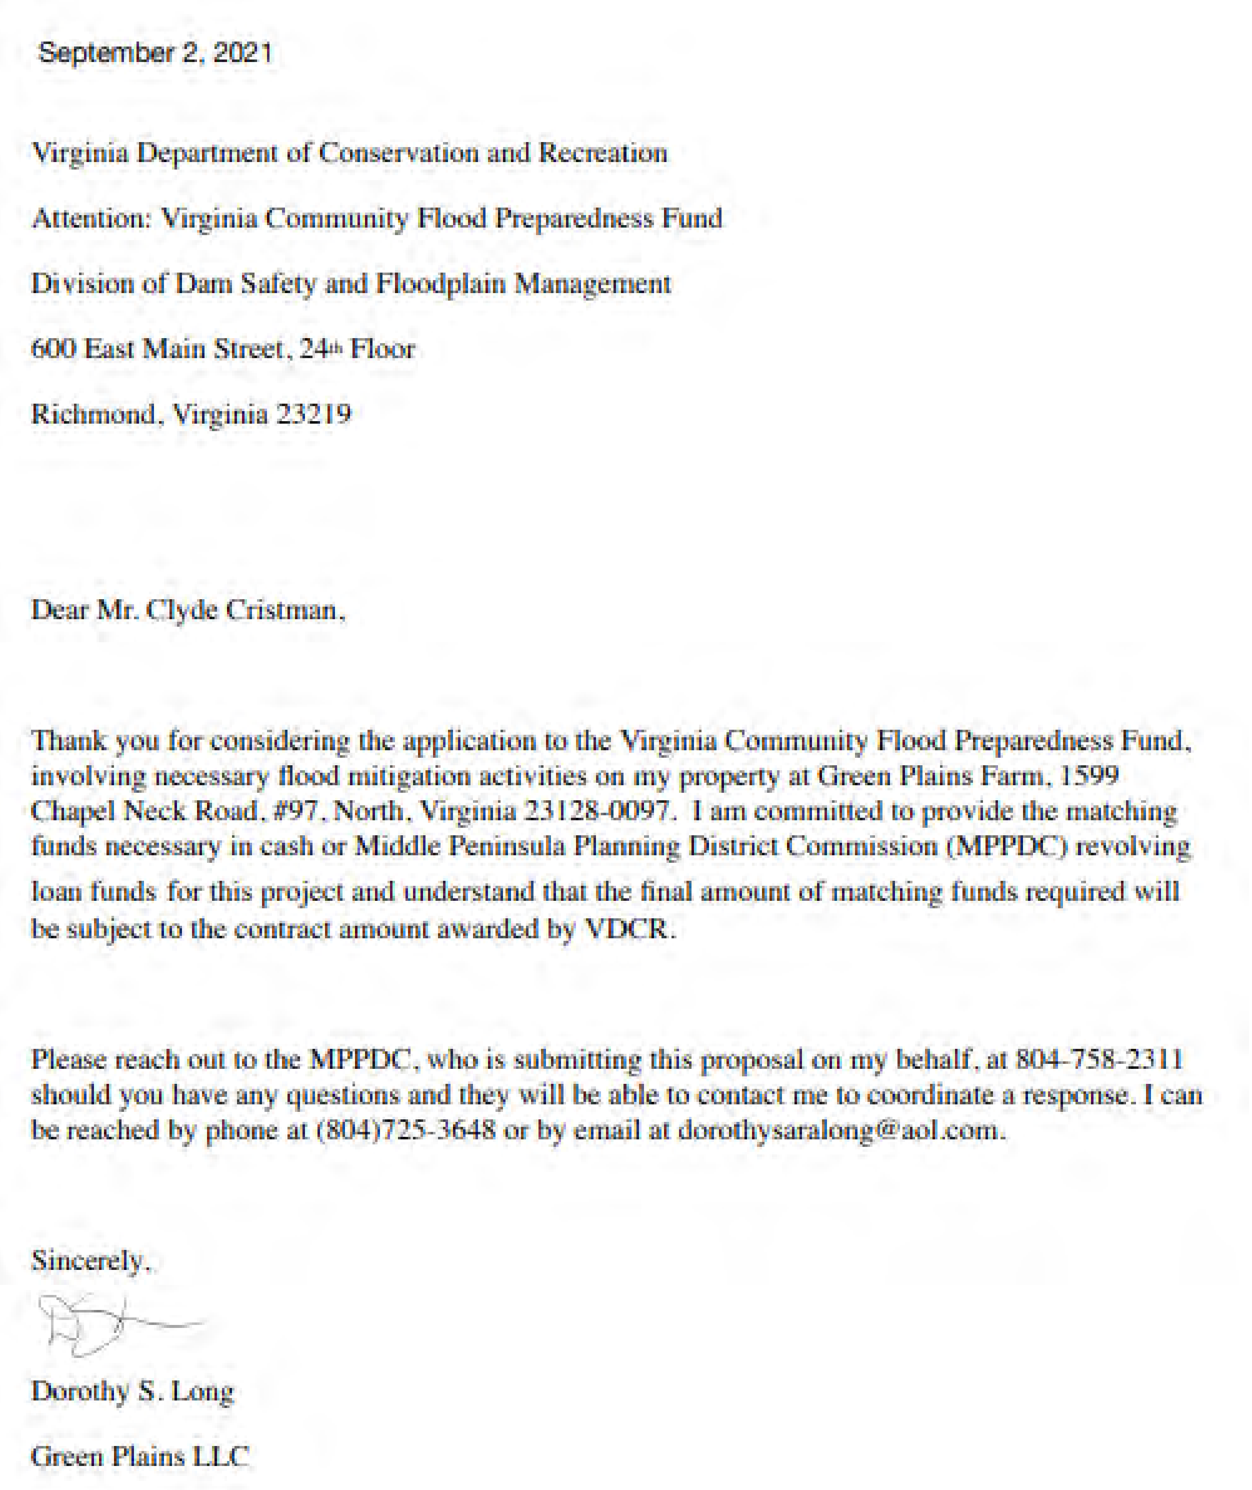
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



September 2, 2021

Virginia Department of Conservation and Recreation

Attention: Virginia Community Flood Preparedness Fund

Division of Dam Safety and Floodplain Management

600 East Main Street, 24th Floor

Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at Green Plains Farm, 1599 Chapel Neck Road, #97, North, Virginia 23128-0097. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at (804)725-3648 or by email at dorothysaralong@aol.com.

Sincerely,

Dorothy S. Long

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Wuckovich Shoreline Design** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As reported multiple times to DCR staff, the Wuckovich application is not included in a low-income area nor is it in an opportunity zone. MPPDC does not know why this application is being held up and the applicant can't voluntarily elect out of something they are not included in to start with.

Issue #2

DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

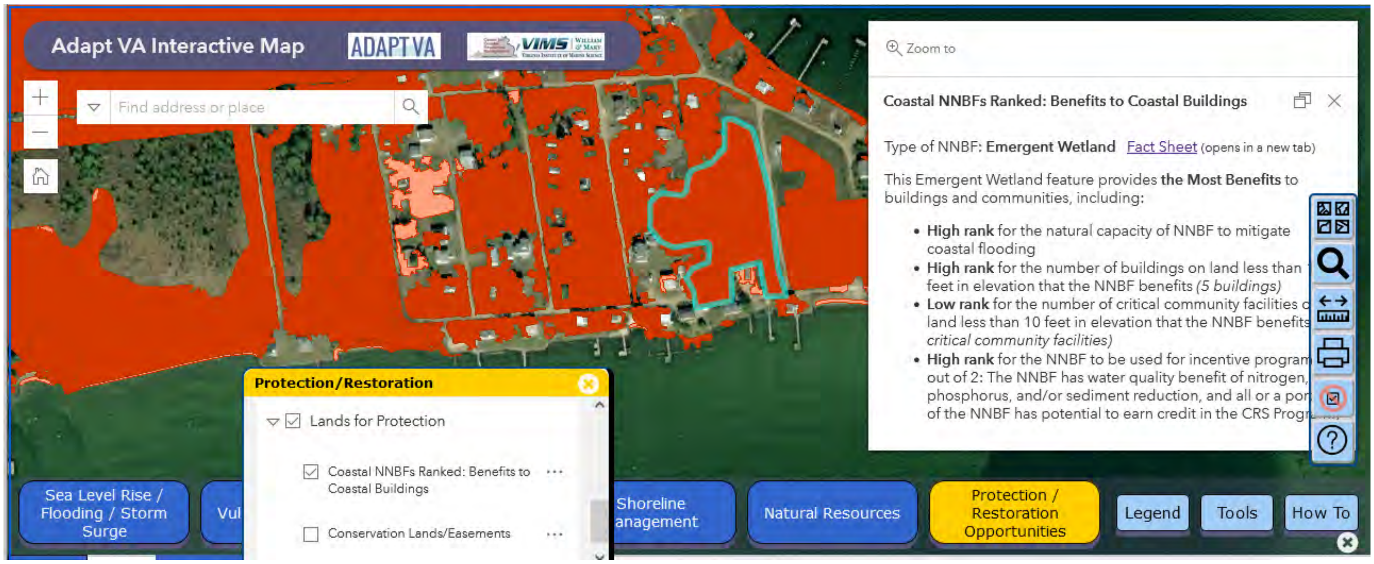
Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149
(Phone) 804 758-2311 ♦ (Fax) 804 758-3221 ♦ (Email) pdcinfo@mppdc.com
http://www.mppdc.com

means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Emergent Wetland** Fact Sheet (opens in a new tab)

This Emergent Wetland feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(5 buildings)*
- **Low rank** for the number of critical community facilities land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Progr

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:

The applicant was never included in a low-income area or an opportunity zone. The applicant cannot voluntarily opt out of something they were never included in. MPPDC staff does not understand why this application has issue with low income or opportunity zones?

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of "nature-based solutions", "ecosystem based adaptation," "eco-DRR," or "green infrastructure" has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional

purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal application requests a design for a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Bayshore Road in Mathews County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Mathews County. See the community support letter in Appendix 1.

  https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf
    - *Please see Section 4 (page 25), which includes historical hazard data within the region.*
- *A link to the County of Mathews' Comprehensive Plan can be found at: https://www.mathewscountyva.gov/196/Comprehensive-Plan.*

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

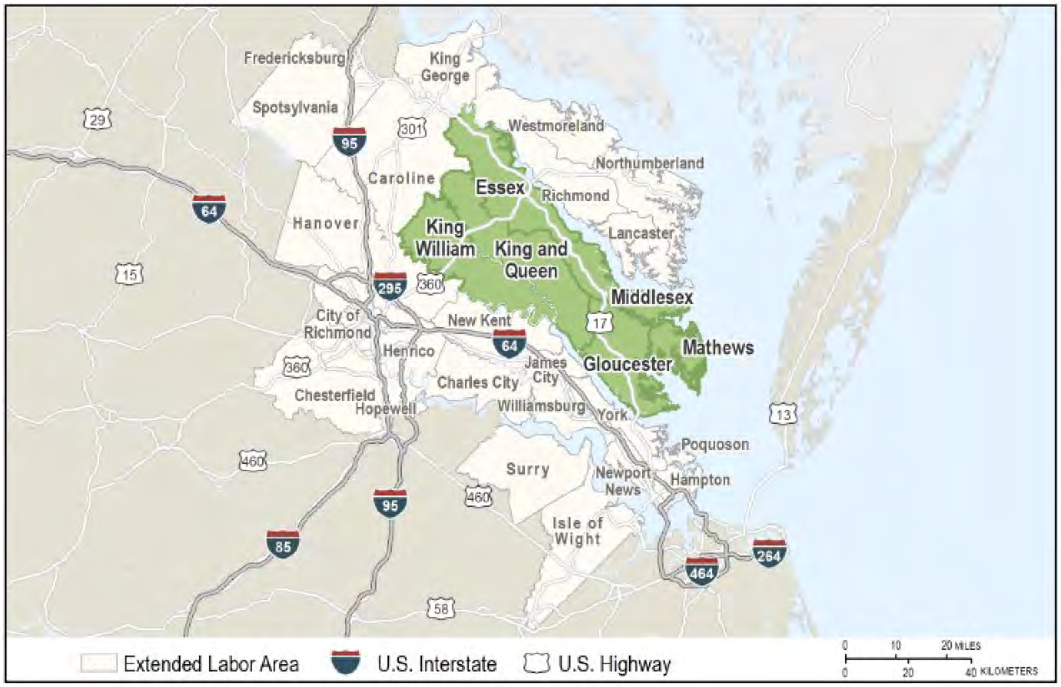

Figure 2. Middle Peninsula Population

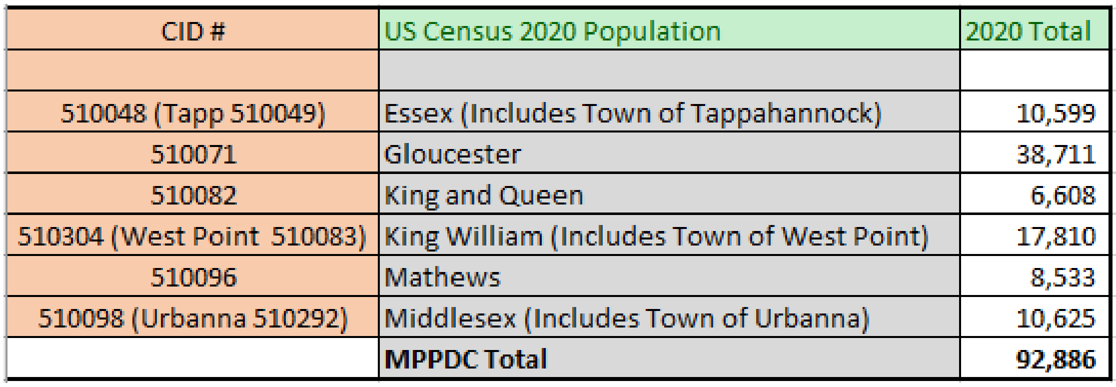

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on Chesapeake Bay Road in Mathews County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

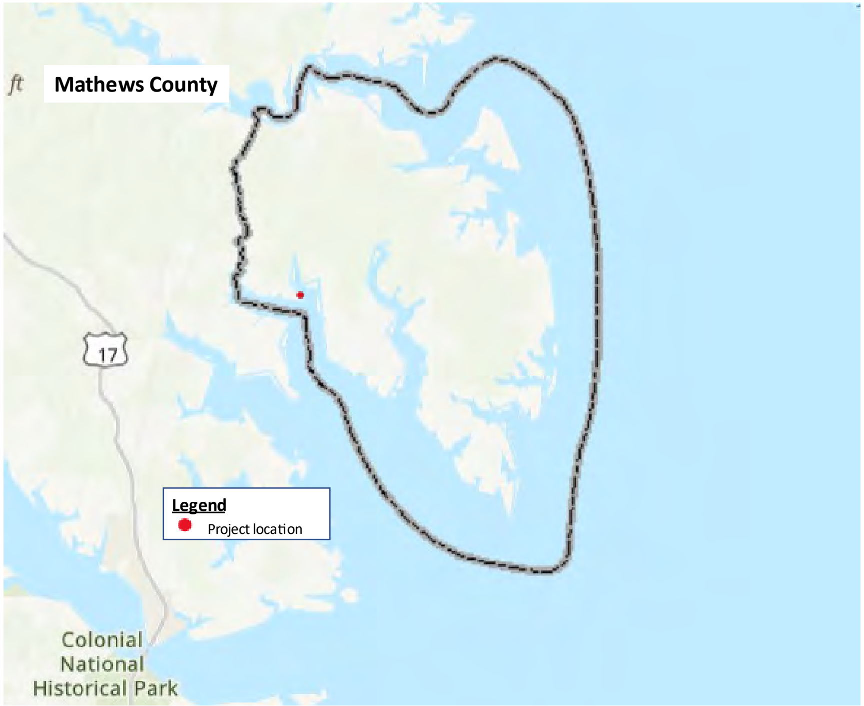

Figure 4. Parcel Map of Project Location

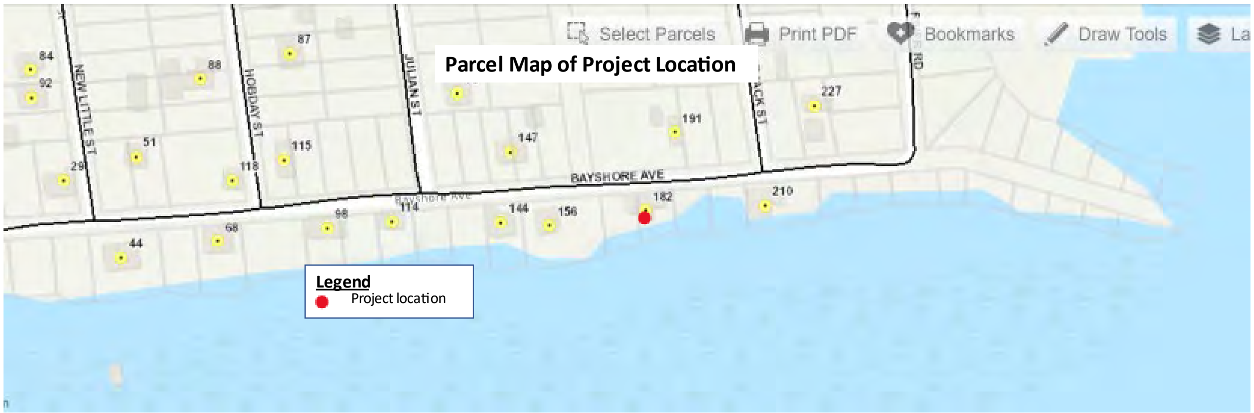
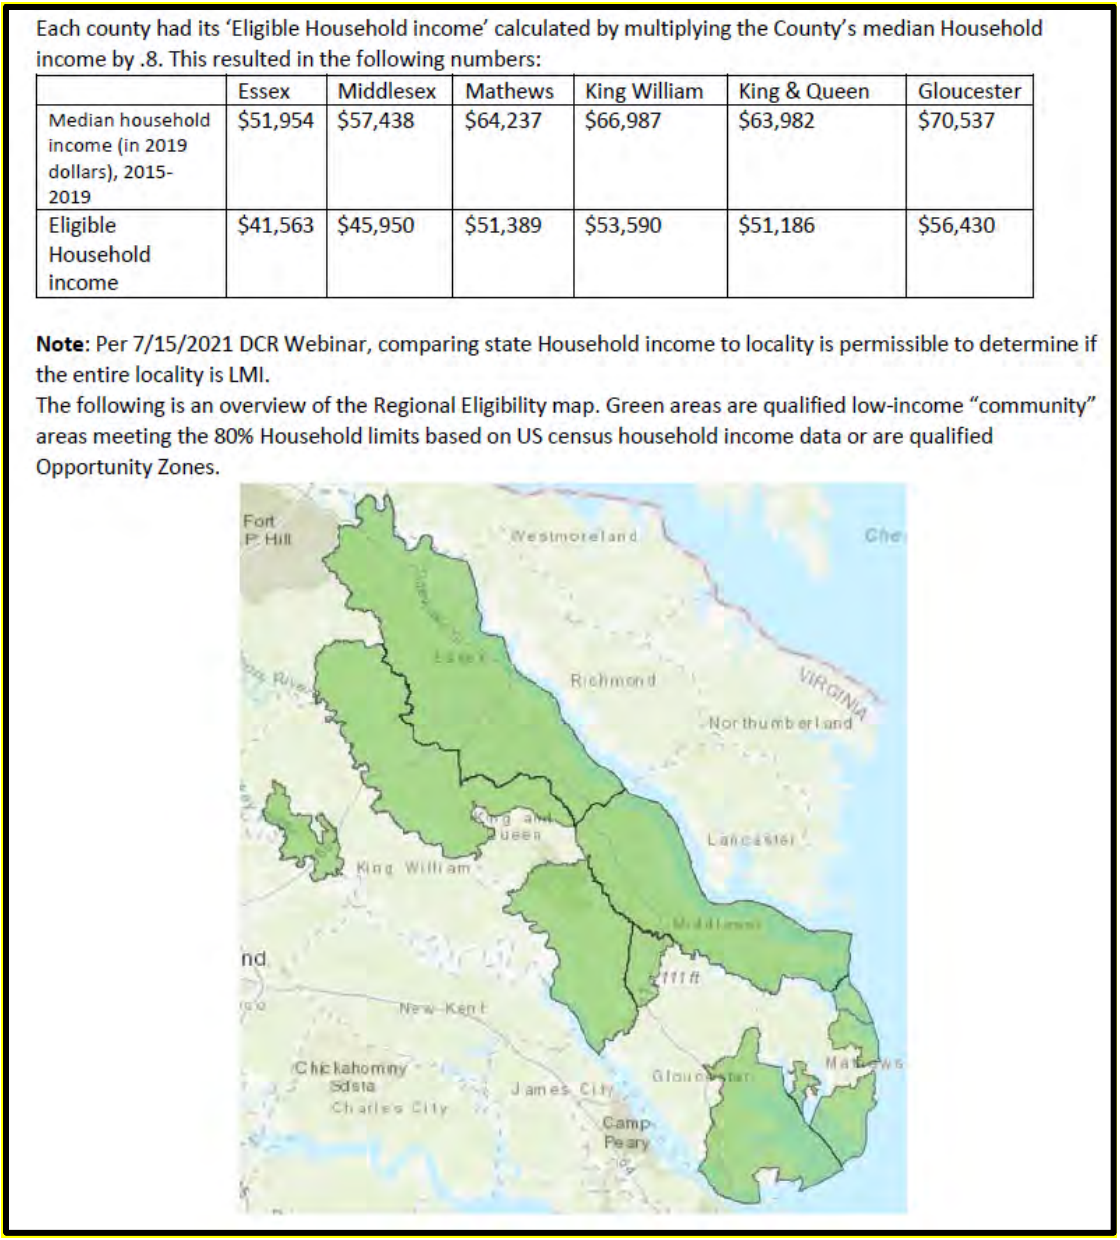


Mathews County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County's population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. **This shows that the project location is not within the low-income area**.

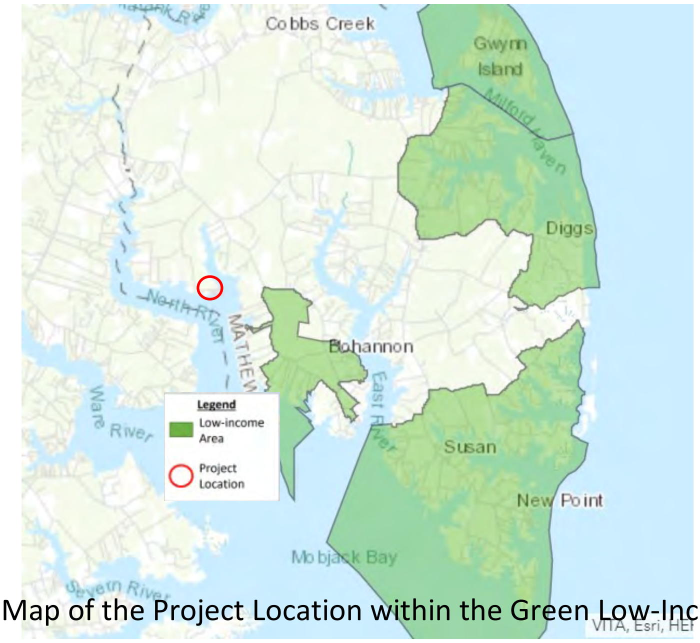


Figure 6. Map of the Project Location within the Green Low-Income Area

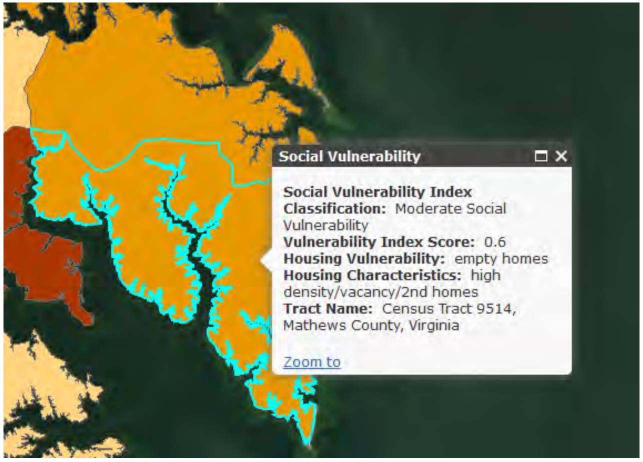
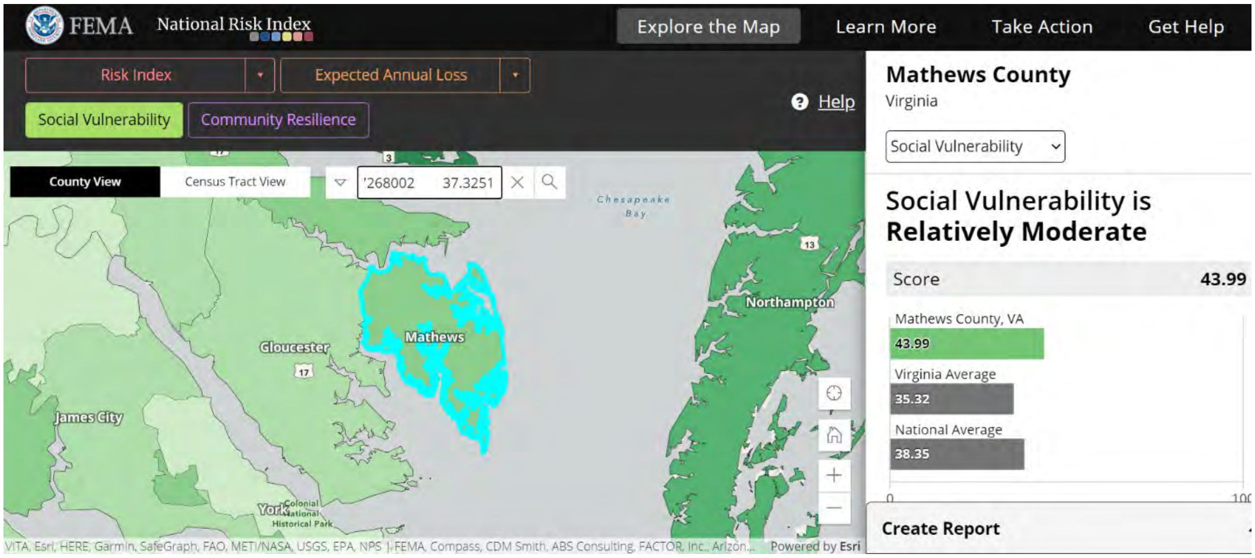
According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability is considered relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.6
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9514, Mathews County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Mathews County
Virginia

Social Vulnerability

Social Vulnerability is Relatively Moderate

Score	43.99
Mathews County, VA	43.99
Virginia Average	35.32
National Average	38.35

The project is located at 156 Bayshore Avenue, North, VA 23128 (-76.40596046, 37.41846129).

The property was purchased in 2012. Since then, it has endured countless storm events. The storm in August 2020 pushed the 80 foot wooden bulkhead wall along waterfront back toward property where there is significant erosion behind the bulkhead. The force of the water pushing the bulkhead back snapped the bolts that attached the pilings to the bulkhead. The filter cloth attached to the bulkhead was forced out of place, so the owners have continued erosion of soil through the bulkhead into the bay. Also, the riprap in front on the bulkhead has slumped down. Their house is approximately 10 feet from the bulkhead, so this presents significant ramifications.

This site is located within the VE flood zone as seen in **Figure 9**. Please see **Appendix 2** for the FIRMettes (last mapped 12/9/2014) and **Appendix 3** for additional property photos.

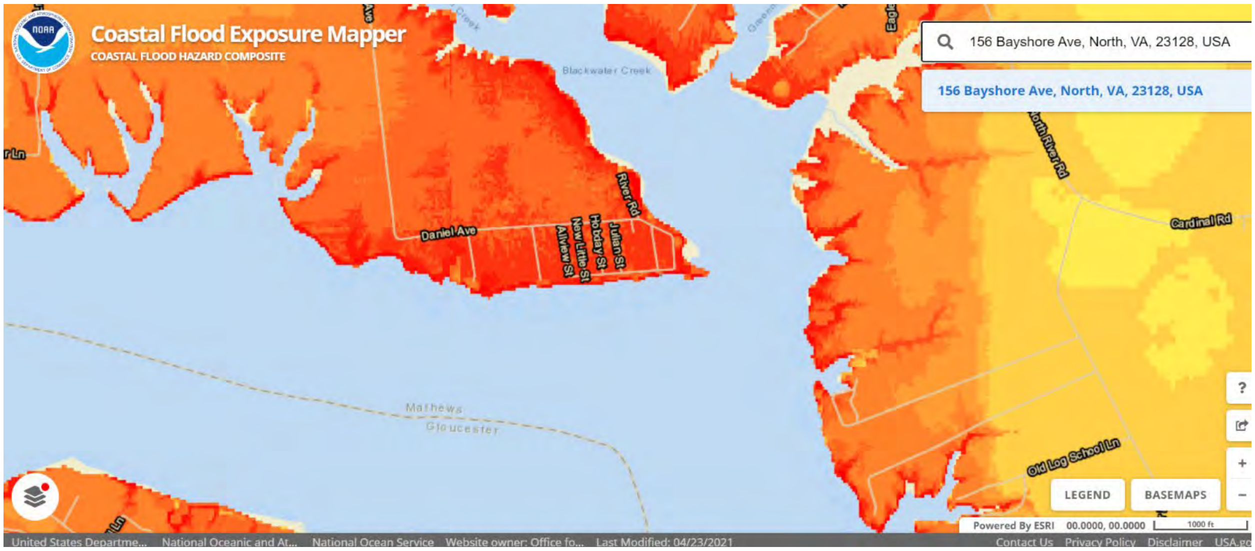
Figure 9: Map of FEMA Flood Zones

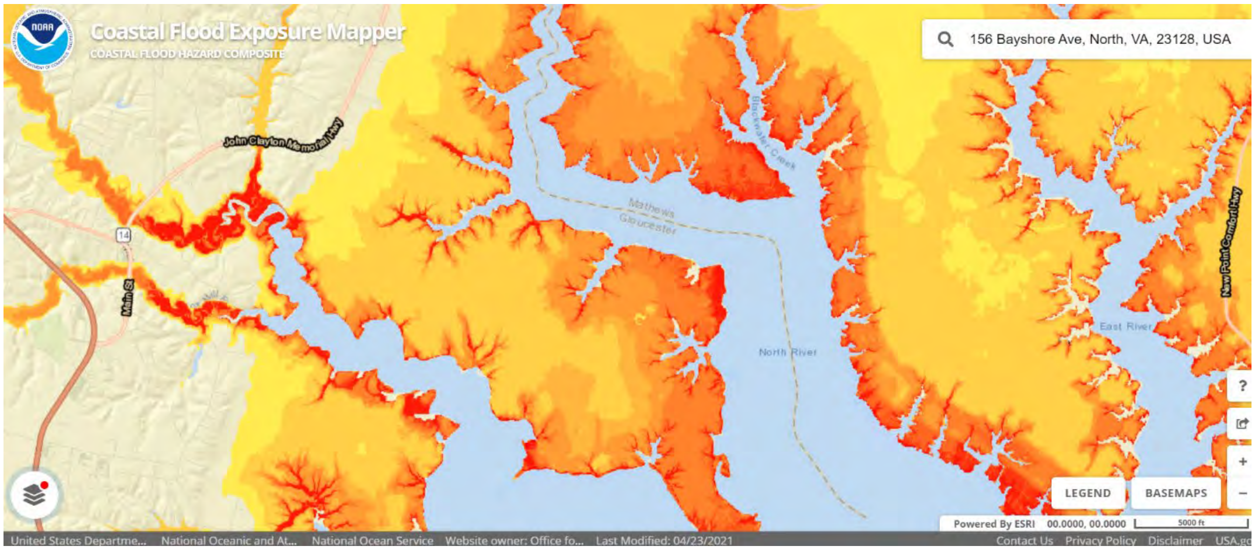
Due to the project site’s proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor’easter events. **Appendix 4** lists 82 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 (purple)and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 11.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)





For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Mathews County's current floodplain ordinance can be found at: https://www.mathewscountyva.gov/172/National-Flood-Insurance-Program-NFIP*

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Mathews County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers. Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022.

RELATIONSHIP TO OTHER PROJECTS.

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
  - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	
No	**0**	0
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		73

SCOPE OF WORK CHECKLIST.

Scope of Work Narrative

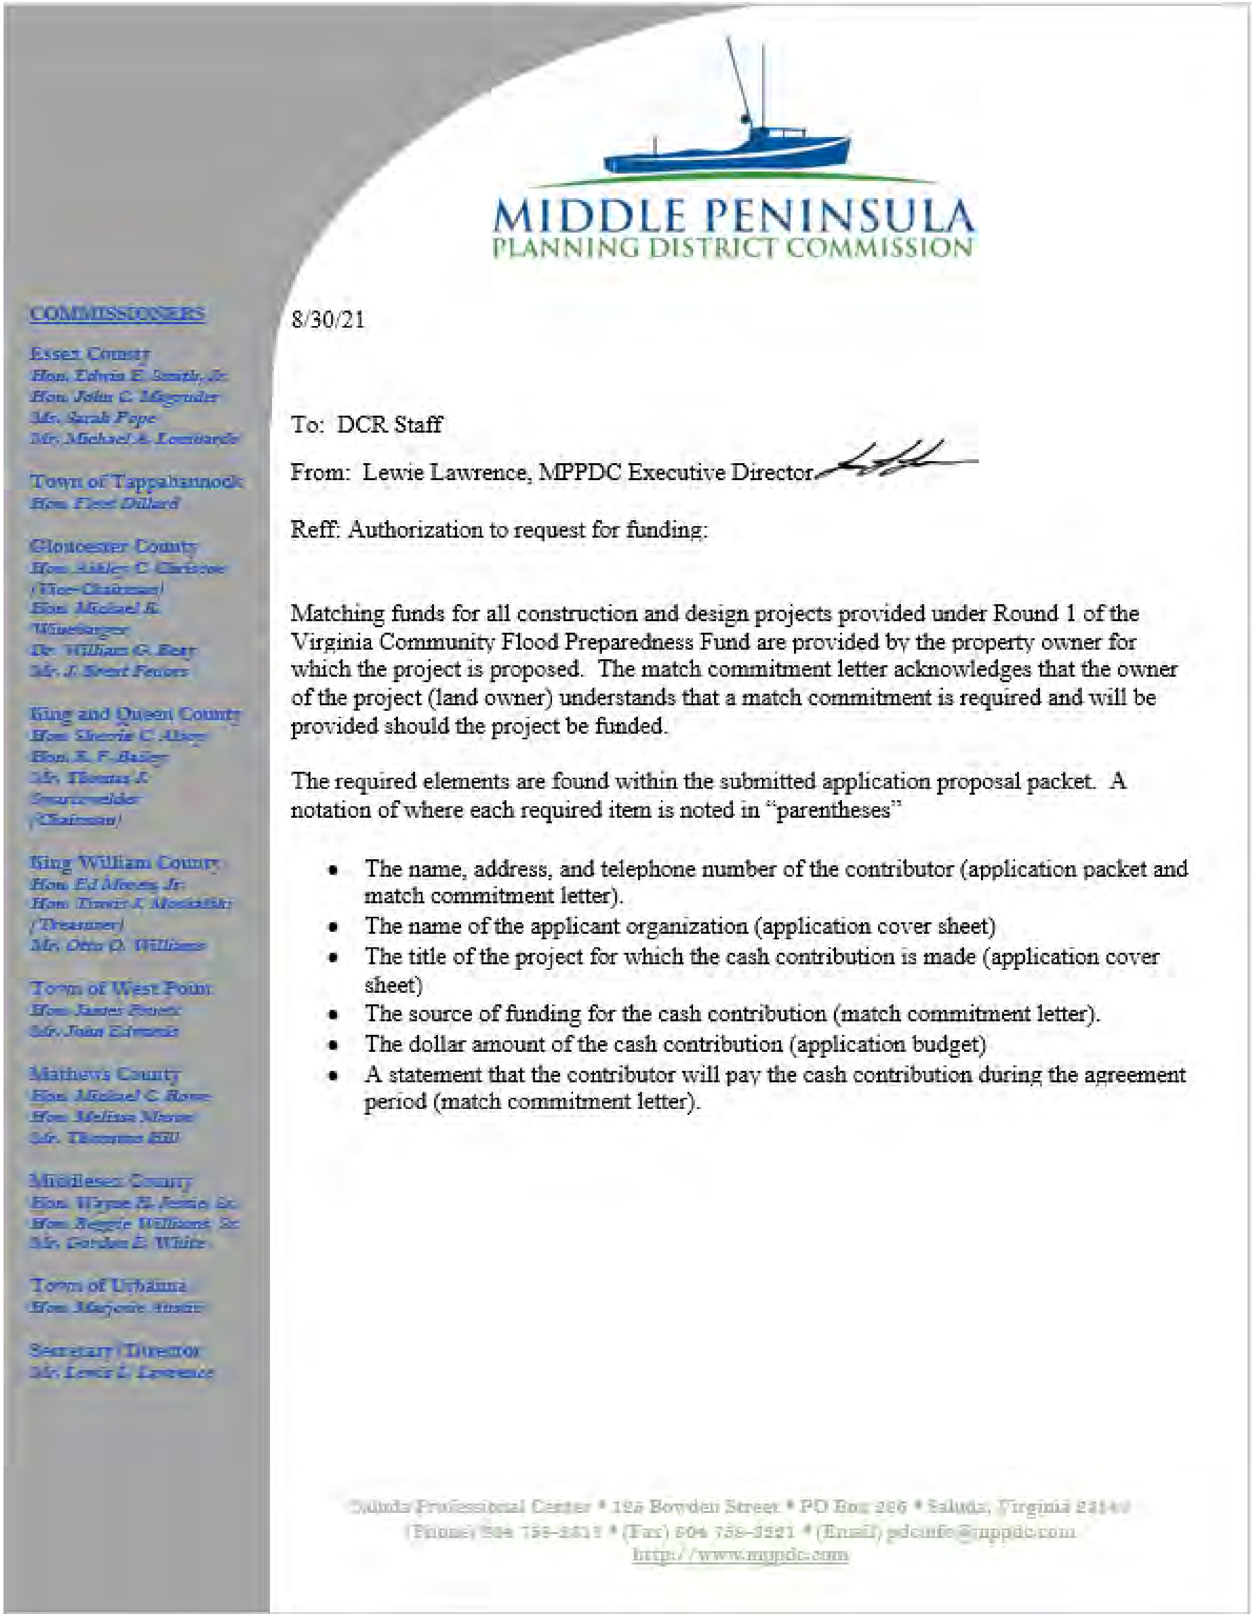
Indirect/IDC/Facilities & Administrative Costs				**27.31%**		$1,118	$480	$1,598
Total						**$4,740**	**$2,033**	**$6,773**
Other Match:								
Source of Match						$0	$0	$0
GRAND TOTAL						**$4,740**	**$2,033**	**$6,773**

Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

- *Authorization to request for funding*



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Re: Property Located at 182 Bayshore Avenue, Mathews, VA 23128

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 182 Bayshore Avenue Mathews, VA 23128. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at (540)373-5572 or by email at fourwucks@aol.com.

Sincerely,

Nicholas Wuckovich

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

David Schlosser
Interim County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)

This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)

This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)

This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)

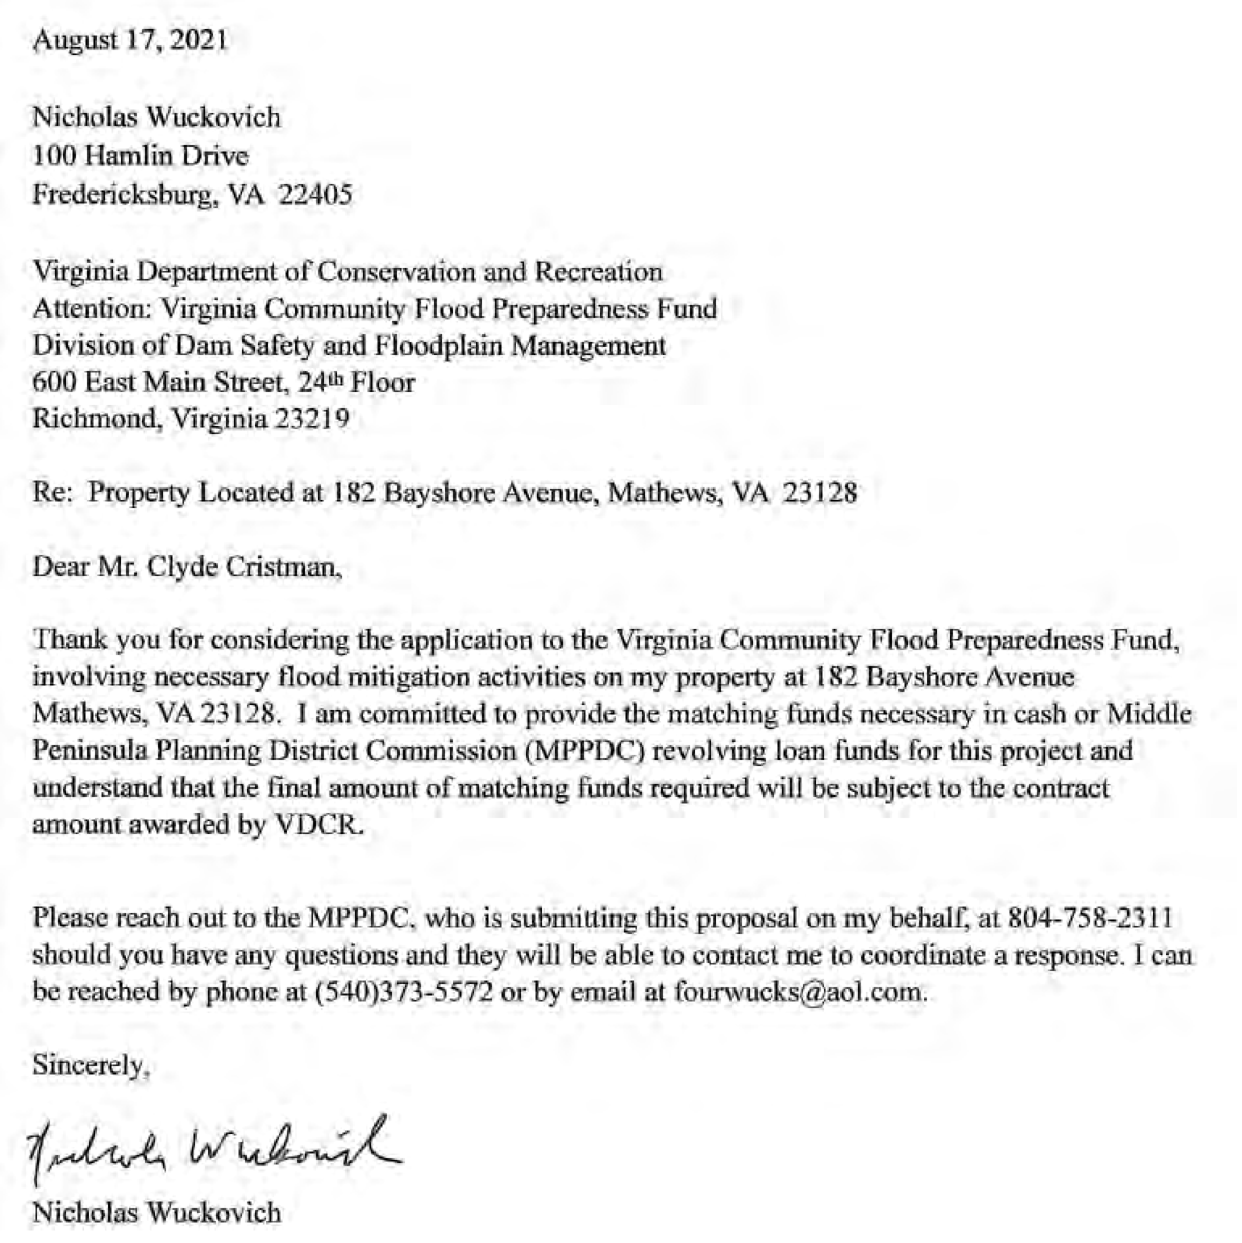
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



August 17, 2021

Nicholas Wuckovich
100 Hamlin Drive
Fredericksburg, VA 22405

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management

Richmond, Virginia 23219

Re: Property Located at 182 Bayshore Avenue, Mathews, VA 23128

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 182 Bayshore Avenue Mathews, VA 23128. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at (540)373-5572 or by email at fourwucks@aol.com.

Sincerely,

Nicholas Wuckovich

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **VIDA** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

Issue #2

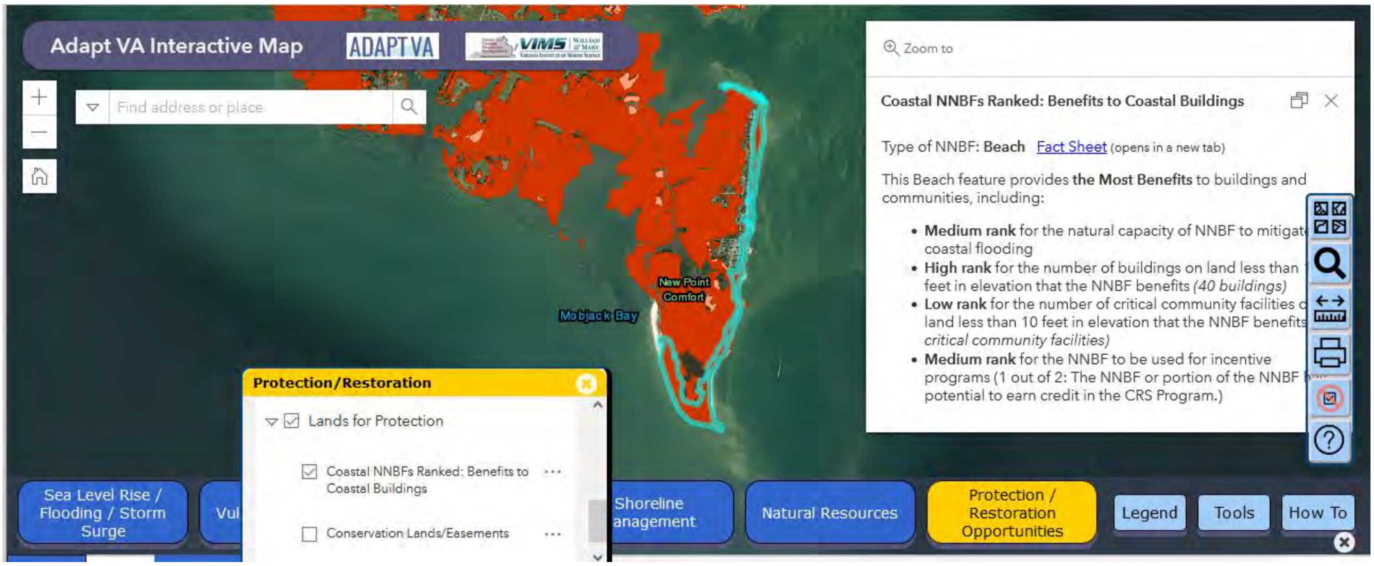
DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149
(Phone) 804 758-2311 ♦ (Fax) 804 758-3221 ♦ (Email) pdcinfo@mppdc.com
http://www.mppdc.com

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit.



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Beach** Fact Sheet (opens in a new tab)

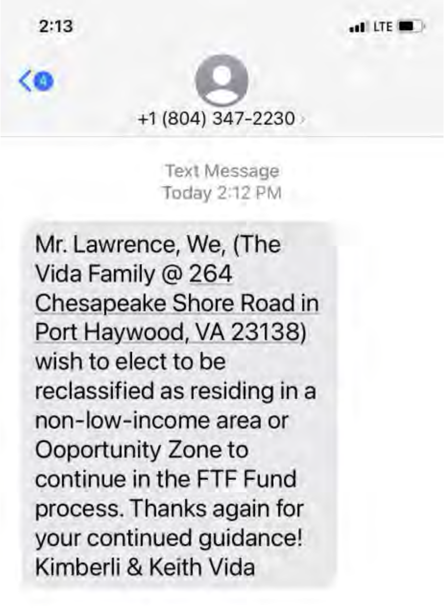
This Beach feature provides **the Most Benefits** to buildings and communities, including:

- **Medium rank** for the natural capacity of NNBF to mitigat coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(40 buildings)*
- **Low rank** for the number of critical community facilities land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **Medium rank** for the NNBF to be used for incentive programs (1 out of 2: The NNBF or portion of the NNBF potential to earn credit in the CRS Program.)

Between Round 1 and 2, MPPDC has 6 adjoining/neighborhood homeowners partnering and looking to protect larger "reach based areas

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:



Text Message
Today 2:12 PM

Mr. Lawrence, We, (The Vida Family @ 264 Chesapeake Shore Road in Port Haywood, VA 23138) wish to elect to be reclassified as residing in a non-low-income area or Ooportunity Zone to continue in the FTF Fund process. Thanks again for your continued guidance! Kimberli & Keith Vida

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): County Name **-** Please see the attached corresponding maps for this application.

Total Amount Requested: ___$13,846__________________________

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of "nature-based solutions", "ecosystem based adaptation," "eco-DRR," or "green infrastructure" has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional

purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal design application requests a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Chesapeake Bay Road in Mathews County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Mathews County. See the community support letter in Appendix 1.

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

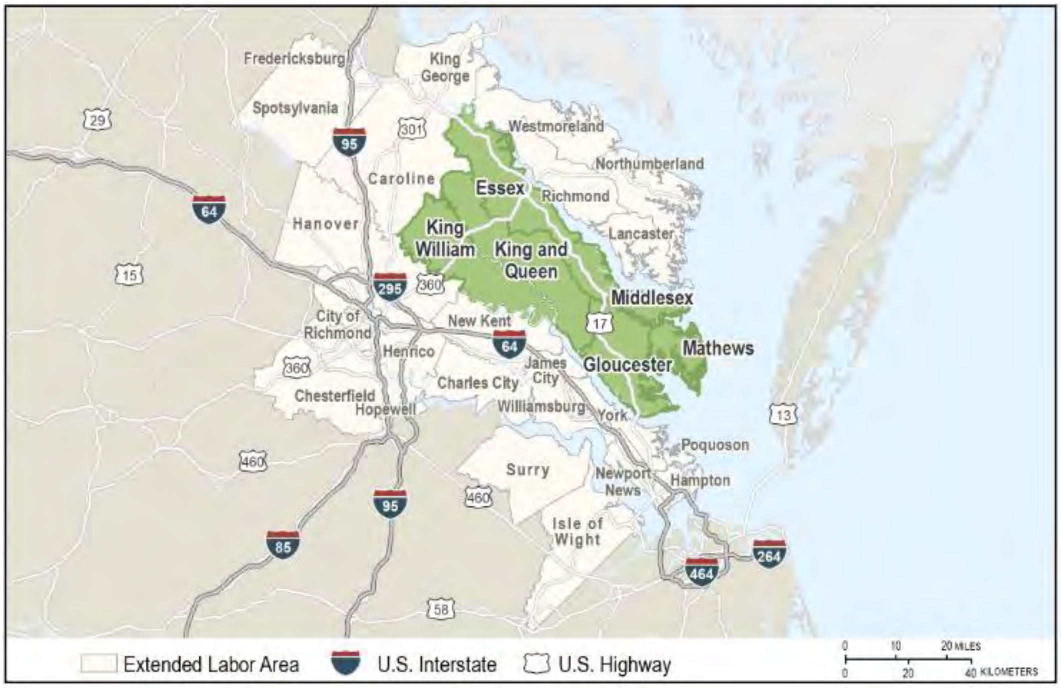

Figure 2. Middle Peninsula Population

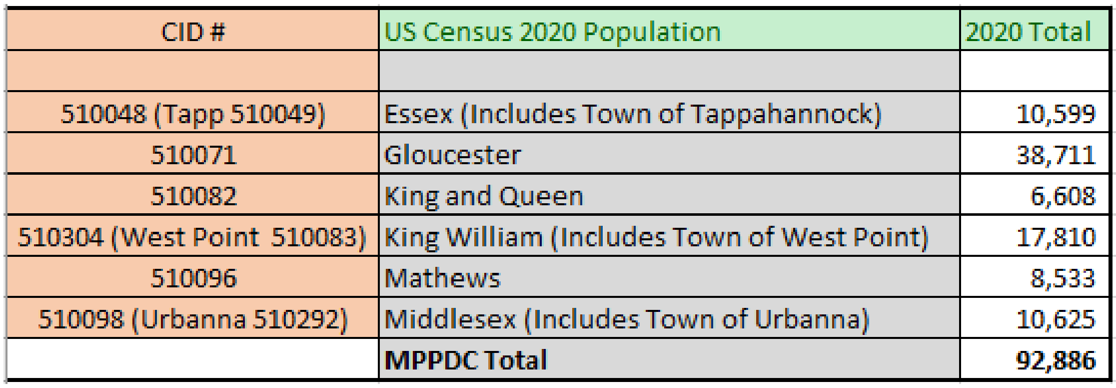

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on Chesapeake Bay Road in Mathews County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

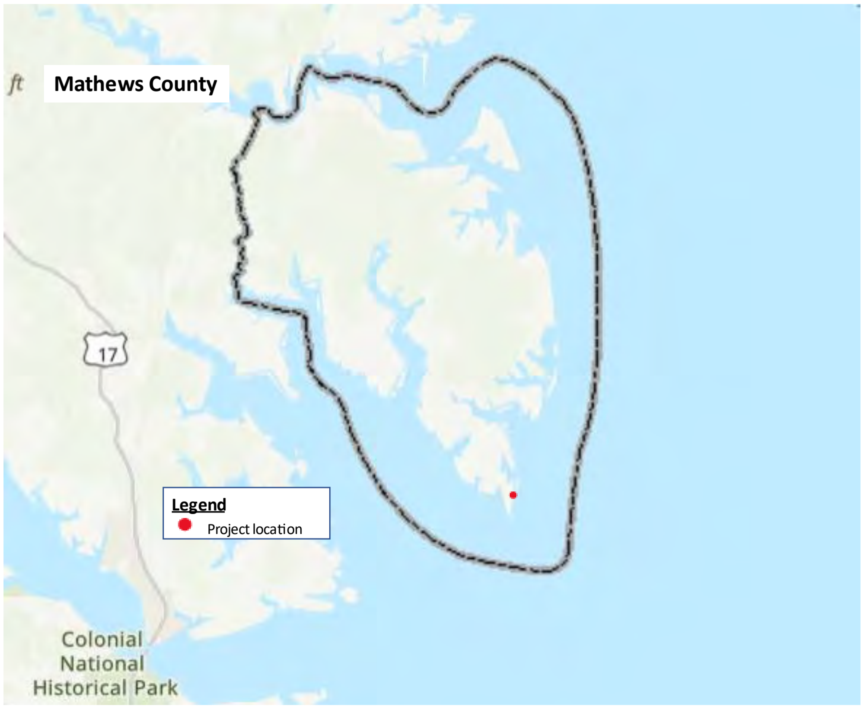

Figure 4. Parcel Map of Project Location

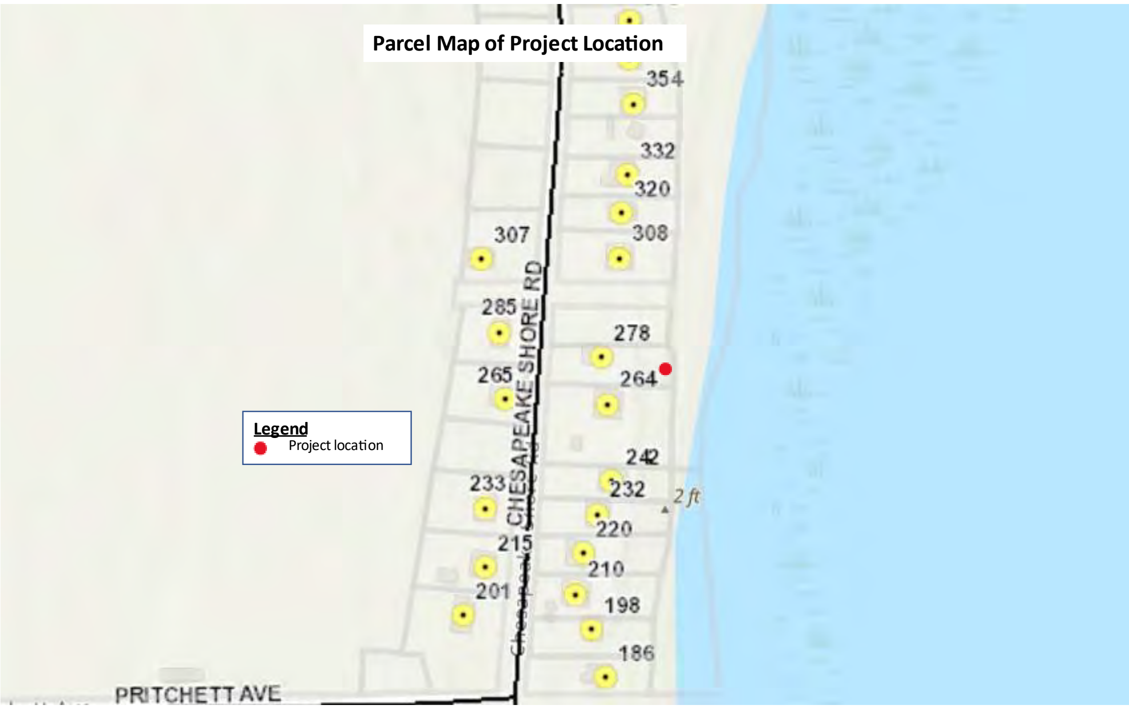
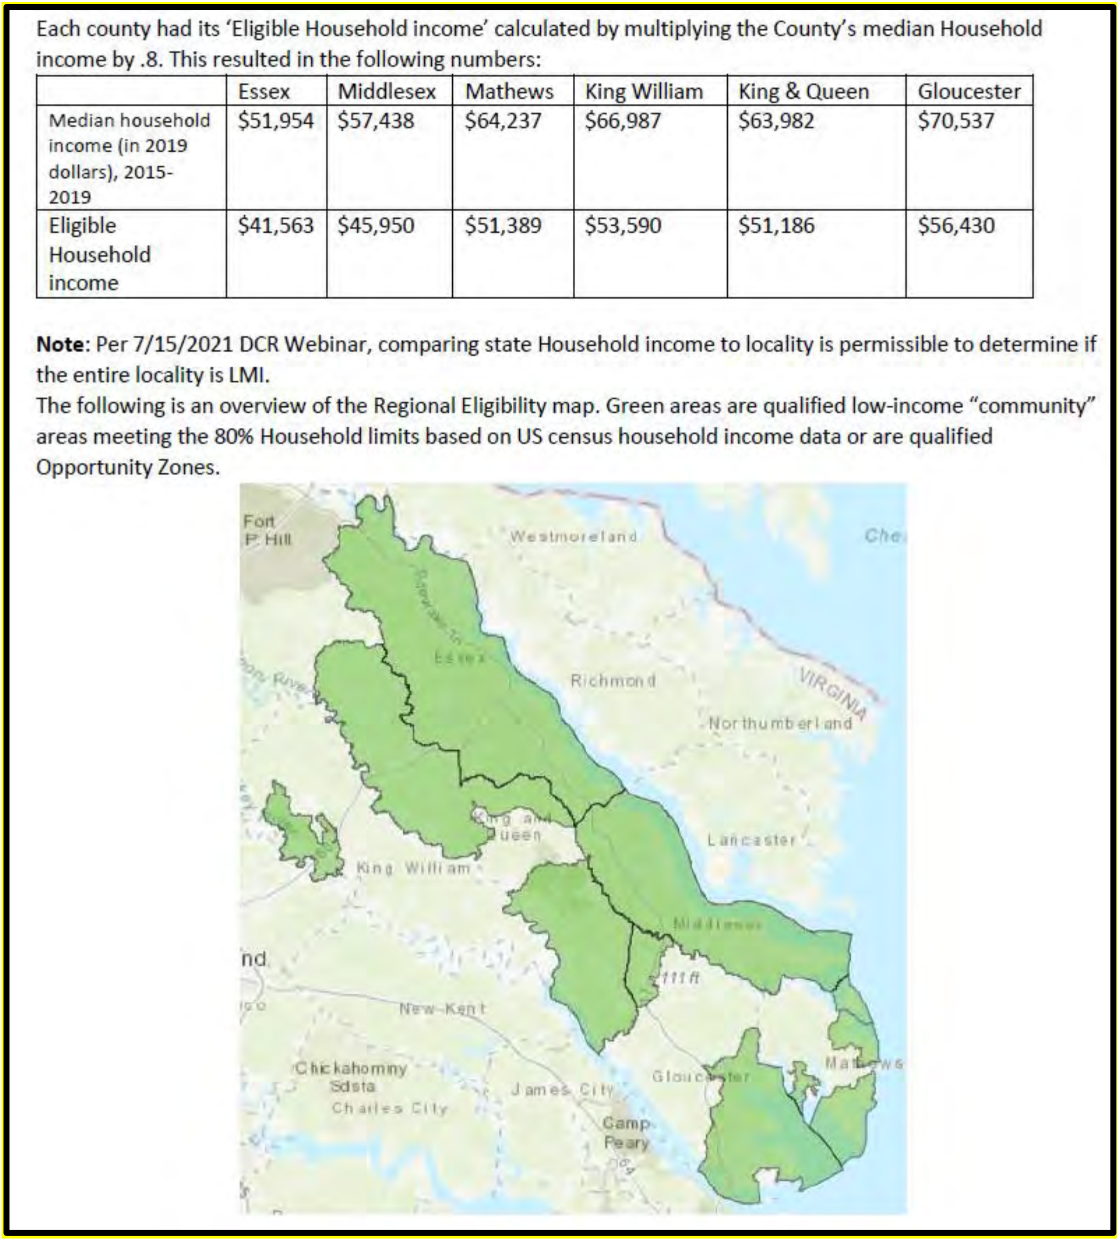


Mathews County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County's population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

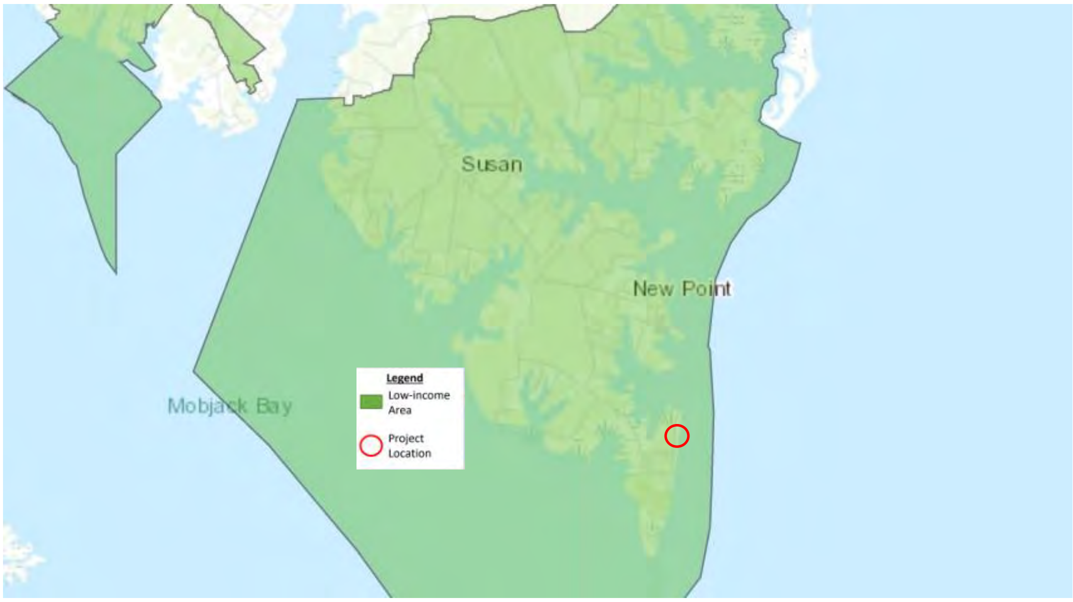
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability is considered relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

Social Vulnerability

Social Vulnerability Index
Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.6
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9514, Mathews County, Virginia

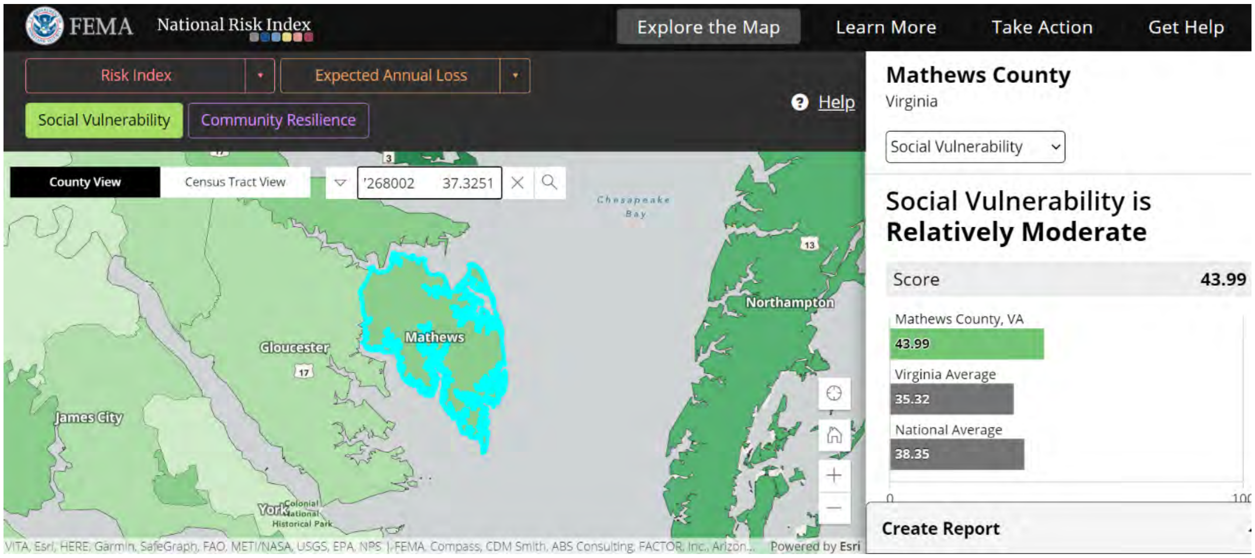
Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Mathews County
Virginia

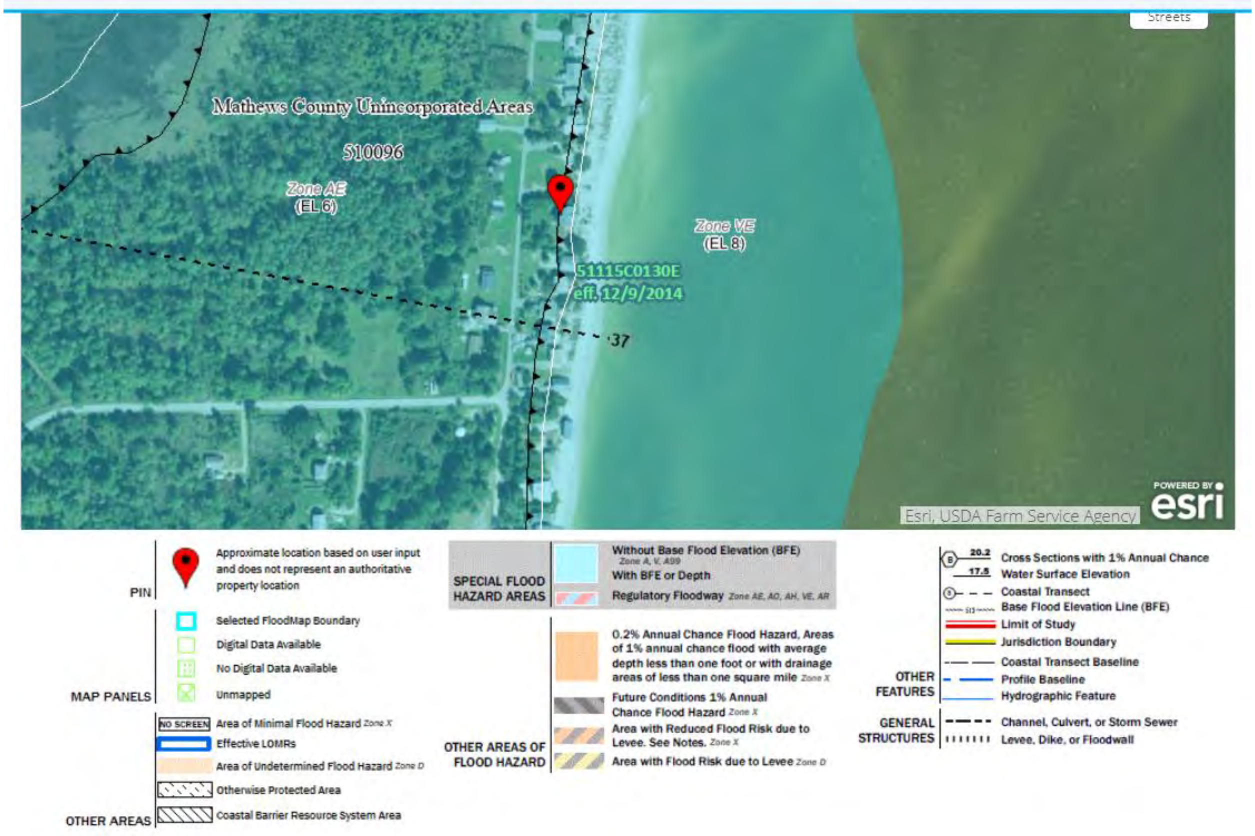
Social Vulnerability is Relatively Moderate

Score	43.99
Mathews County, VA	43.99
Virginia Average	35.32
National Average	38.35

The project is located at 264 Chesapeake Shore Road, Port Haywood, VA 23138 (-76.27260098, 37.324922). Since the recent purchase of the property in November 2020, the owners have witnessed an exponentially-escalating erosion of their dunes. They have lost approximately six to eight feet of their dunes from the land to water erosion, and they have also lost about two and half to five feet in height since over the past year without being hit by any major storms or hurricanes. One significant weather event will cause serious devastation to the community. In regard to the property, they have significant flooding on one side of the property and a bit in the driveway which is increasing the mosquito population. Neighbor next has a breakwater close to their shoreline but even Hurricane Henri caused some water issues. That storm brought in great such waves that were hitting the dune and was spilling over. The rapid progression in erosion issues is also threating several large trees that will likely soon topple over and fall into the encroaching water.

This site is located within the VE flood zone as seen in **Figure 9**. Please see **Appendix 2** for the FIRMettes (last mapped 12/9/2014) and **Appendix 3** for additional property photos.

Figure 9: Map of FEMA Flood Zones



Due to the project site’s proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 9** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of square feet of shoreline, which has accelerated in recent storms (see phots). The project location has and continues to be impacted by tropical, sub-tropical, and nor’easter events. **Appendix 4** lists 84 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 9. Project Location and Map of the Shoreline Change between 1937 and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 11.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)

***ALTERNATIVES*.**

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

***GOALS AND OBJECTIVES*.**

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Mathews County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers. Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022.

Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with					X	X

implementing the nature-based or hybrid design solution						
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is not a town, city, or county, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		83

SCOPE OF WORK CHECKLIST.

					$0	$0	$0	$0
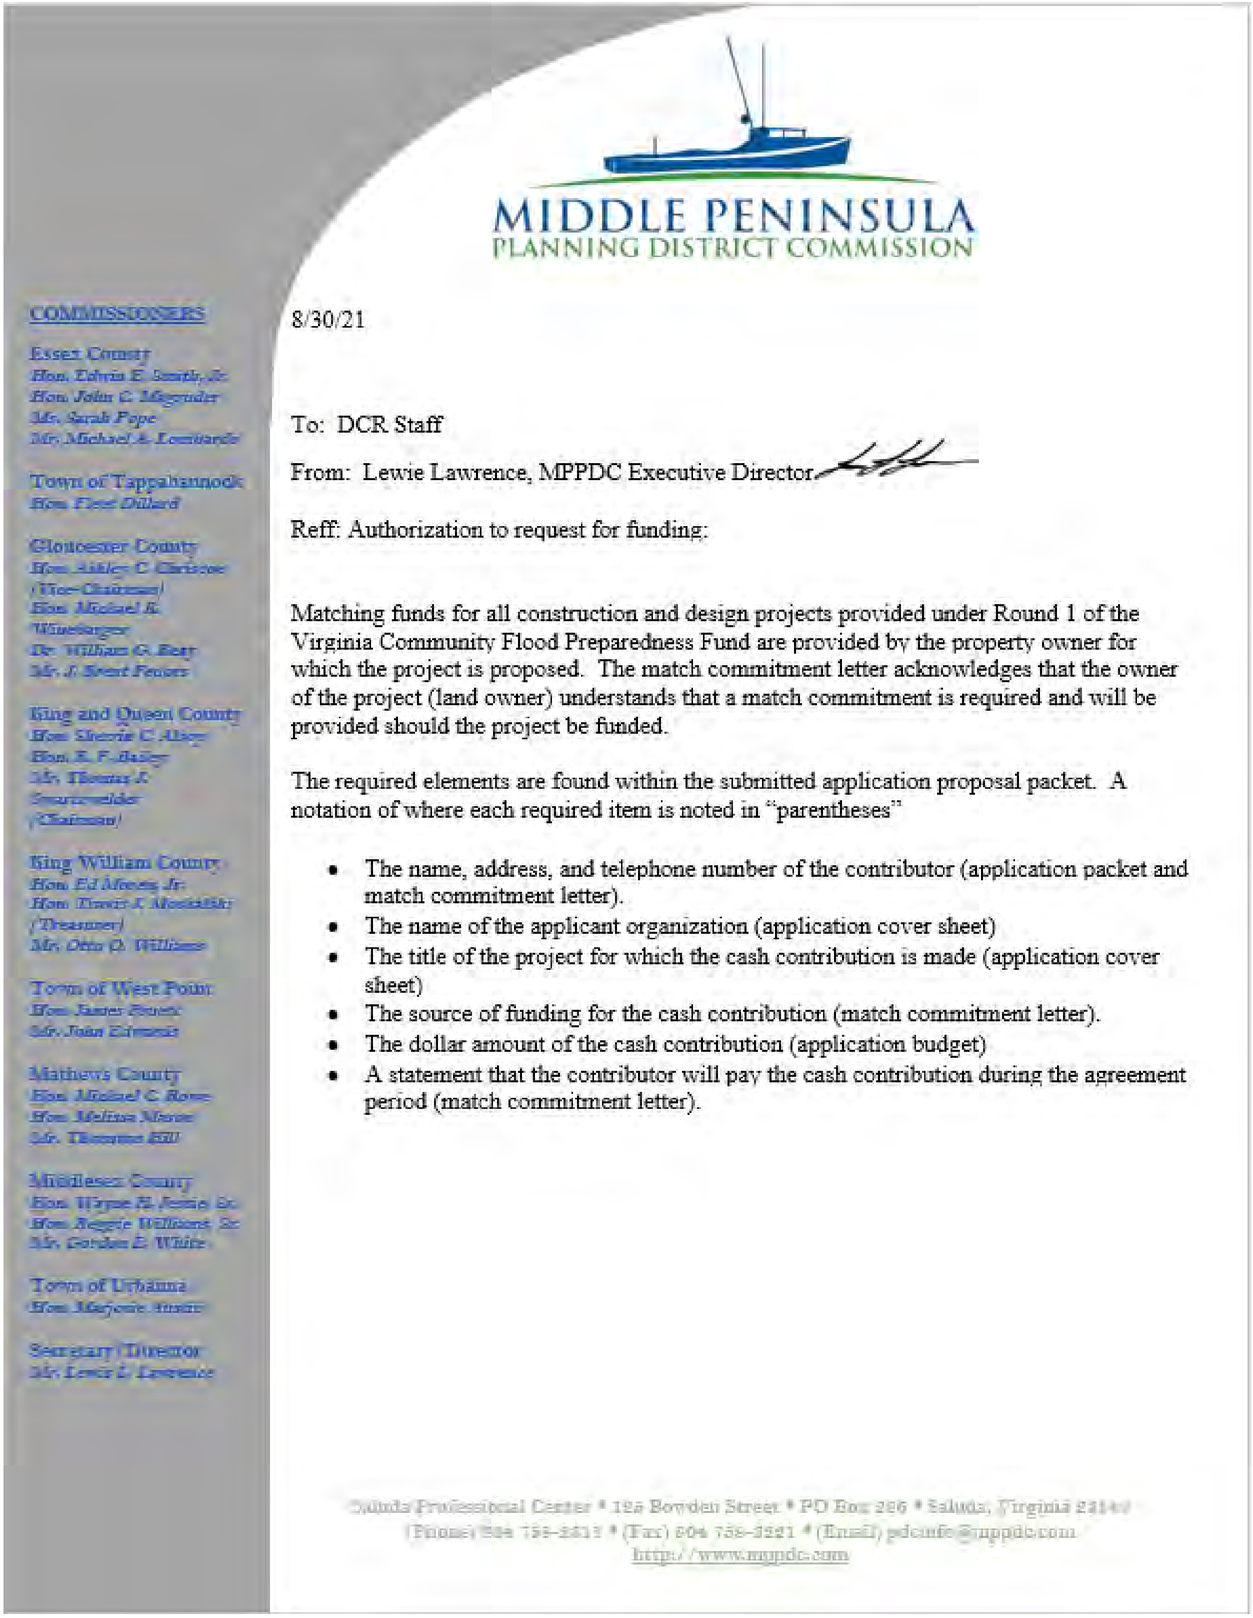
					$11,500			
SUBTOTAL: Direct Costs						$10,580	$2,646	$13,226
Indirect/IDC/Facilities & Administrative Costs				**27.31%**		$3,266	$817	$4,083
Total						**$13,846**	**$3,463**	**$17,309**
Other Match:								
Source of Match						$0	$0	$0
GRAND TOTAL						**$13,846**	**$3,463**	**$17,309**

Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipmen

- *Authorization to request for funding:*



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 264 Chesapeake Shore Road, Port Haywood, VA 23138. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804.347.2230 or by email at KimberliVida@gmail.com.

Sincerely,

Kimberli Russ Vida

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

David Schlosser
Interim County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter

August 14, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 264 Chesapeake Shore Road, Port Haywood, VA 23138. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804.347.2230 or by email at KimberliVida@gmail.com.

Sincerely,

Kimberli Russ Vida

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

March 28, 2022

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Matthew Wells,

Enclosed in this packet are three applications for flood protection and prevention projects that involve implementation of nature-based shoreline solutions.

Among the applications are projects which are currently at the construction stage. Construction projects are requesting funds to implement projects which have approved permits or are nearing permit approval prior to construction of a nature-based flood protection solution.

Below is short summary of proposed flood protection and prevention construction projects in Mathews County:

A. **Historic Antioch Rosenwald School Flood Protection**
   (CID): 510096 Total Cost (from individual project application): $141,438
   This proposal requests funding to assist the Antioch Baptist Church with designing and implementing stormwater protection activities to preserve and enhance the historic Antioch Rosenwald School property in Mathews County, which continues to serve a minority community which has historically been underserved regarding flood protection assistance. The efforts to mitigating the stormwater challenges faced at the property are a critical step towards the broader effort to convert the historic property into a community center and museum which can provide much needed assistance and create much needed opportunities for the underserved citizens of this vulnerable community as well as help preserve the rich minority history of the property and the community. The project will construct a stormwater collection system on the Rosenwald School focusing on the roof and managing runoff utilizing approved stormwater BMPs, as well as designing a suite of landscape-focused stormwater BMPs which can be implemented over time to ensure that the property grounds

themselves can once again be restored to a useable and functional condition to meet the needs of the community.

B. **North River Property Resiliency Construction Project**
(CID): 510096 Total Cost (from individual project application): $125,715
This project proposes to construct a nature-based solution on private property located on the North River in Mathews County. The nature-based solution will involve modifying and removing a dilapidated failed wooden bulkhead and the installation of 80 linear feet of living shoreline, 60 linear feet of a bioengineered structure, 900 square feet of fill and plantings and 103 linear feet of rip rap. The applicant also submitted a Round 1 proposal for design needed on a second portion of the project site and therefore this request is not duplicative.

C. **Chesapeake Bay – Robinson's Nature-based Solution Construction Project**
(CID): 510096 Total Cost (from individual project application): $65,263
This project proposes to construct a nature-based solution on a private property located on the Chesapeake Bay in Mathews County. The nature-based solution will entail the installation of a 75 linear feet breakwater, 412 cubic yards of beach nourishment and 100 linear feet of living shoreline. This project will be a partnership between the MPPDC and one private property owner and is supported by Mathews County.

The total project costs for Mathews County Round 3 construction applications is **$332,416** and MPPDC staff are requesting **$232,691** from DCR to support this work.

We consider helping both public and private entities manage flooding a critical and essential function of government.

Thank you for considering the enclosed proposed projects. If you have any questions about the enclosed, please contact me by email at llawrence@mppdc.com or by phone at 804-758-2311.

Lewis Lawrence
Executive Director

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund
Flood Prevention and Protection Project

PROJECT TITLE: Historic Antioch Rosenwald School Flood Protection
Name of Local Government: Middle Peninsula Planning District Commission

Category of Grant Being Applied for (check one):

____Capacity Building/Planning X Project _____Study

NFIP/DCR Community Identification Number (CID): Mathews County (510096)

If a state or federally recognized Indian tribe, Name of tribe: NA

Name of Authorized Official: Lewis Lawrence, Executive Director

Signature of Authorized Official: ______________________________

Mailing Address (1): PO Box 286
Mailing Address (2): 125 Bowden Street
City: Saluda **State:** VA **Zip:** 23149
Telephone Number: (804) 758-2311 Cell Phone Number: (804) 832-6747
Email Address: llawrence@mppdc.com

Contact Person (If different from authorized official): Curtis Smith
Mailing Address (1): PO Box 286
Mailing Address (2): 125 Bowden Street
City: Saluda **State:** VA **Zip:** 23149
Telephone Number: (804) 758-2311 **Cell Phone Number:** (804) 384-7509
Email Address: csmith@mppdc.com

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes __X__ **No ____**

Project Grants (Check All that Apply)

☐ **Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.**

☐ **Wetland restoration.**

☐ Floodplain restoration.

☑ Construction of swales and settling ponds.

☐ Living shorelines and vegetated buffers.

☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.

☑ Storm water system upgrades.

☐ Medium and large-scale Low Impact Development (LID) in urban areas.

☐ Permanent conservation of undeveloped lands identified as having flood resilience value by ConserveVirginia Floodplain and Flooding Resilience layer or a similar data driven analytic tool.

☐ Dam restoration or removal.

☐ Stream bank restoration or stabilization.

☑ Restoration of floodplains to natural and beneficial function.

☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Mathews County – Please see the attached corresponding maps for this application
NFIP Community Identification Number (CID#): 510096

Is Project Located in an NFIP Participating Community? ☑ Yes ☐ No
Is Project Located in a Special Flood Hazard Area? ☐ Yes ☑ No Flood Zone(s) (If Applicable): N/A
Flood Insurance Rate Map Number(s) (If Applicable): 51115C0130E

Total Cost of Project: **$141,438**

Total Amount Requested: **$99,007**

INTRODUCTION –

This proposal requests funding to assist the Antioch Baptist Church with designing and implementing stormwater protection activities to preserve and enhance the historic Antioch Rosenwald School property in Mathews County, which continues to serve a minority community which has historically been underserved regarding flood protection assistance. The efforts to mitigating the stormwater challenges faced at the property are a critical step towards the broader effort to convert the historic property into a community center and museum which can provide much needed assistance and create much needed opportunities for the underserved citizens of this vulnerable community as well as help preserve the rich minority history of the property and the community. The project will construct a stormwater collection system on the Rosenwald School focusing on the roof and managing runoff utilizing approved stormwater BMPs, as well as designing a suite of landscape-focused stormwater BMPs which can be implemented over time to ensure that the property grounds themselves can once again be restored to a useable and functional condition to meet the needs of the community.

FEMA, Virginia General Assembly, DCR's Floodplain Management Program, and the Middle Peninsula PDC all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes and territories and the citizens which reside and work there. These hazards include flooding, drought, hurricanes, landslides, wildfires and more. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program (www.FightTheFloodVA.com). This proposal intends to implement nature-based solutions which utilize and incorporate sustainable planning, design, environmental management, and engineering practices that weave natural features or processes into the built environment to promote adaptation and resilience. Further, this proposal incorporates natural features and processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore and protect wetlands, reduce heat, add recreational space, preserve historic structures, provide resilience-related educational opportunities and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. These benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life (*FEMA Building Community Resilience with Nature Based Solutions,* June 2021).

PROJECT LOCATION INFORMATION –

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

FIGURE 1. MIDDLE PENINSULA REGIONAL MAP SHOWING PROJECT LOCATION

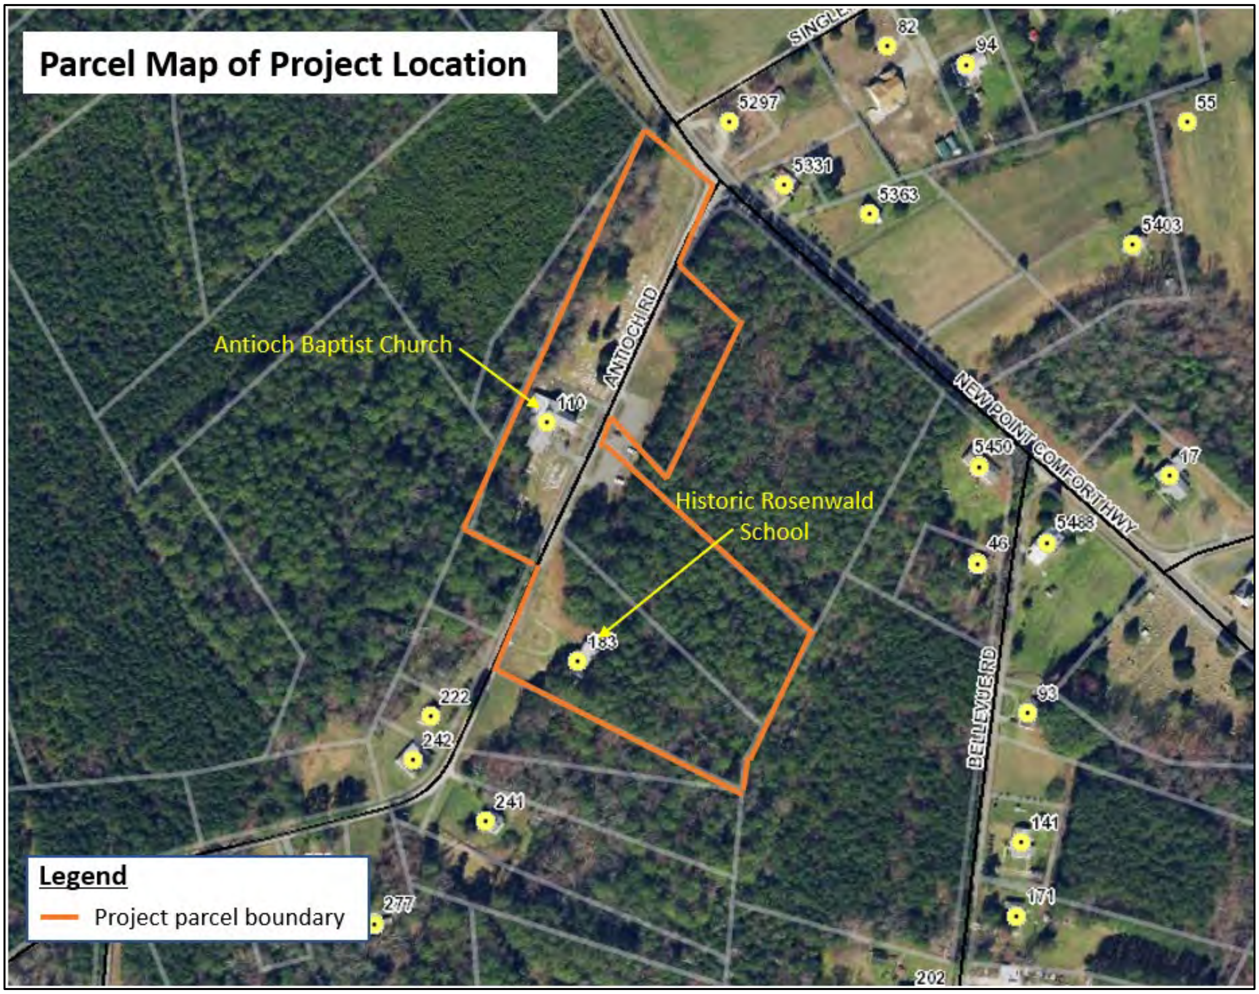
FIGURE 2. MIDDLE PENINSULA POPULATION

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to design and implement stormwater flooding solutions on four private parcels of land constituting approximately 10.5 acres of land located in the historically minority and underserved community of Susan in Mathews County as found in **Figures 3 and 4**. The property is owned by the Antioch Baptist Church, which has served for nearly 100 years as a religious, community, cultural, and educational center for the historically underserved African American citizens of Mathews County. The property consists of the historic Antioch Rosenwald School, the Antioch Baptist Church, the church cemetery, and several wooded, grassy, and parking areas.

FIGURE 3: COUNTY MAP OF PROJECT LOCATION.

FIGURE 4: PARCEL MAP OF PROJECT LOCATION.

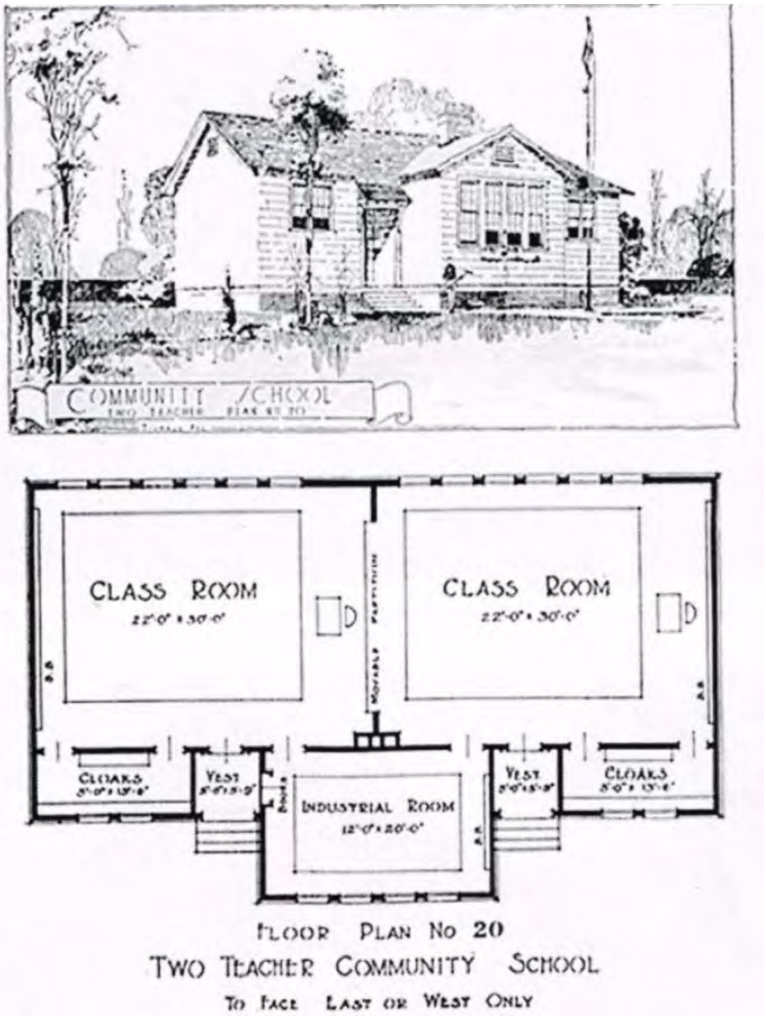


The Antioch Baptist Church congregation and other supporters throughout the community are currently attempting to preserve the historic Rosenwald School for restored use as a museum and cultural and community center. However, the school building and the property grounds experience regular and increasingly problematic amounts of stormwater flooding which has proved to be a great challenge to the preservation and revitalization of the property. Fundraising efforts in recent years have been successful; however, funds that were raised with the intent to revitalize the structure and reignite the functionality of the building as a community center and museum have instead needed to go to efforts to secure the building's foundation, which had degraded due to stormwater-related issues throughout the years. This same scenario is occurring once again as the roof of the building has begun to fail resulting in significant leaks and damages to the building and contents.

Church leadership have reported that stormwater flooding impacts the daily use of the properties including needing to regularly delay funerals for congregation members and alter parking accommodations due to standing water following both extreme and relatively smaller precipitation events. Many of these flooding issues are believed to be as result of the soil type, lack of elevation, local topographic influence, and overall lack of comprehensive stormwater management of impervious surfaces and drainage ditches at the property; however, the problem has not been investigated by an environmental engineer to date.

This proposal intends to design and construct a stormwater collection system and vegetated green roof at the historic Rosenwald School building and design a number of landscaping related BMPs on the Church-owned parcels, which can be implemented over time to ensure that the historic property and community hub remain in operation for generations to come and serve as a model for flooding resiliency for historic structures and similar properties across the Commonwealth.

FIGURE 5: ORIGINAL RENDERING & FLOOR PLAN FOR THE ANTIOCH ROSENWALD SCHOOL.



The Antioch Rosenwald School was constructed in 1927 and is the last remaining Rosenwald School in Mathews County. Between 1912 and 1932, through a unique collaboration between Sears & Roebuck President Julius Rosenwald and Tuskegee Institute's Booker T. Washington, almost 5,000 wood frame school buildings were built throughout the South to provide public education for African Americans. Typically located in proximity to African American Churches, these schools were built incorporating the latest ideas in education and health, including instructional needs, lighting, heating, and sanitation, in an effort to create a positive and healthy environment for learning. The Rosenwald Schools building program created a model for all rural schools in this country. Constructed in 1927 as a two-teacher pattern school (**Figures 5 and 6**) the Antioch School was in service a little over 20 years, until 1948, at which time the County closed the school and relocated the remaining students to the Thomas Hunter School in Mathews. In the years since, Antioch Church has used building for various uses including using the north classroom half of the building as a 3-bedroom dwelling/Parsonage, and the south classroom half as a fellowship hall for parishioners. Around 1970, the building was remodeled into its current appearance. The building which is currently vacant has an original roof that is leaking in several places and is need of replacement to stop further damage

FIGURE 6: FRONT OF THE ANTIOCH ROSENWALD SCHOOL DURING CONSTRUCTION IN 1927.

to the structure. Most of the items and artifacts have been removed and stored to protect them from rain damage. The Church's Board of Trustees has adopted a vision for the school to transform the school building into a community center which can provide educational, entrepreneurship, or workforce training center as well as a museum to preserve the property and community's invaluable history and culture.

Mathews County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County's population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 7,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

FIGURE 7: MAP OF MIDDLE PENINSULA LOW INCOME GEOGRAPHIC AREAS QUALIFYING PER DCR GUIDELINES.

Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

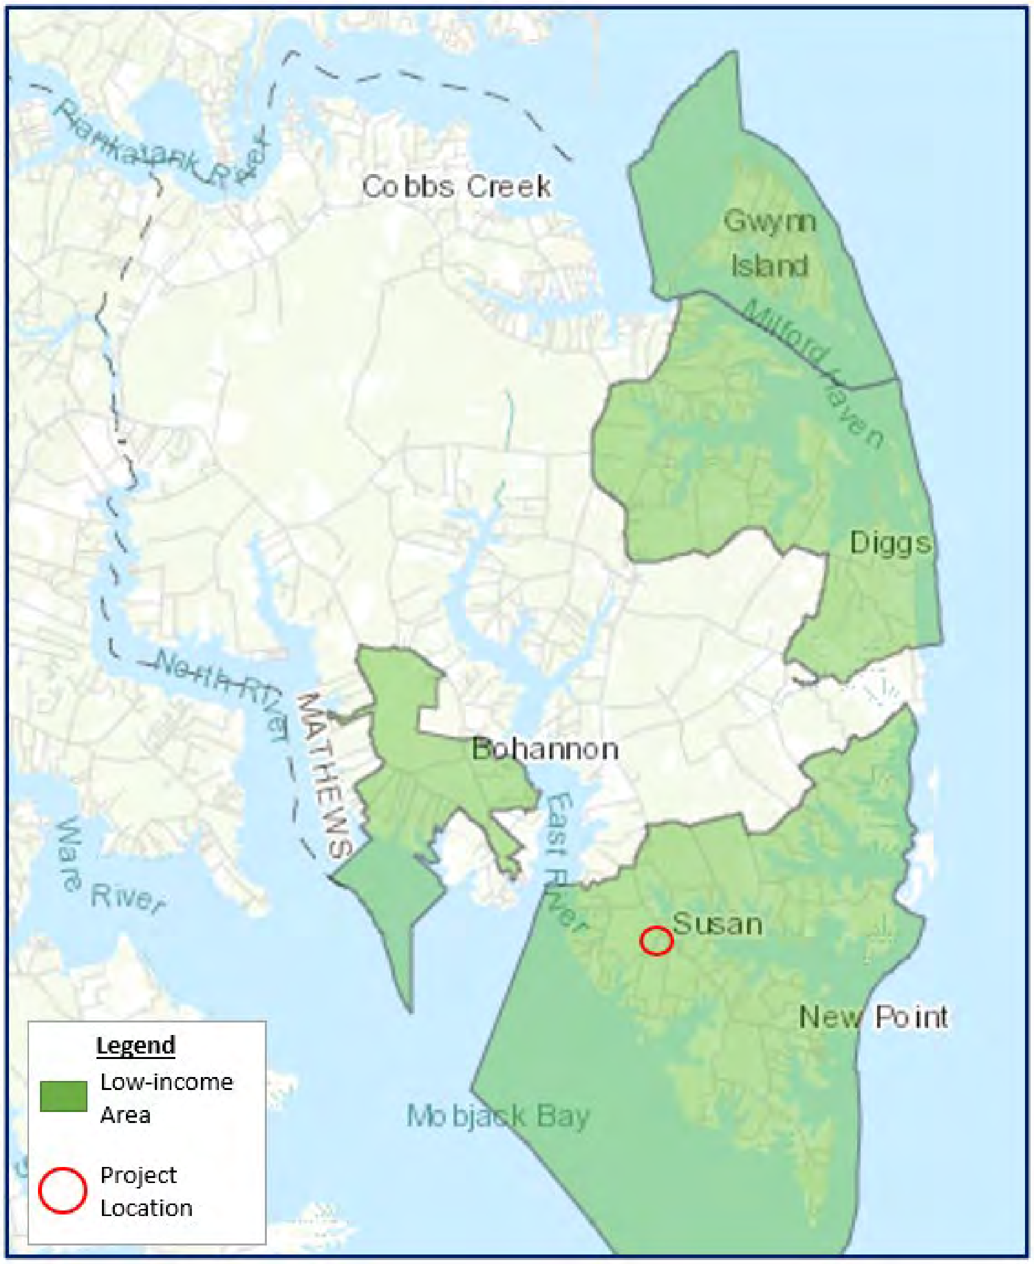
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 8** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

FIGURE 8: MAP OF THE PROJECT LOCATION WITHIN THE GREEN LOW-INCOME AREA.



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 9**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability is considered relatively moderate level of vulnerability as seen in **Figure 10.**

FIGURE 9. VIRGINIA'S SOCIAL VULNERABILITY INDEX SCORE MAP OF THE PROJECT LOCATION

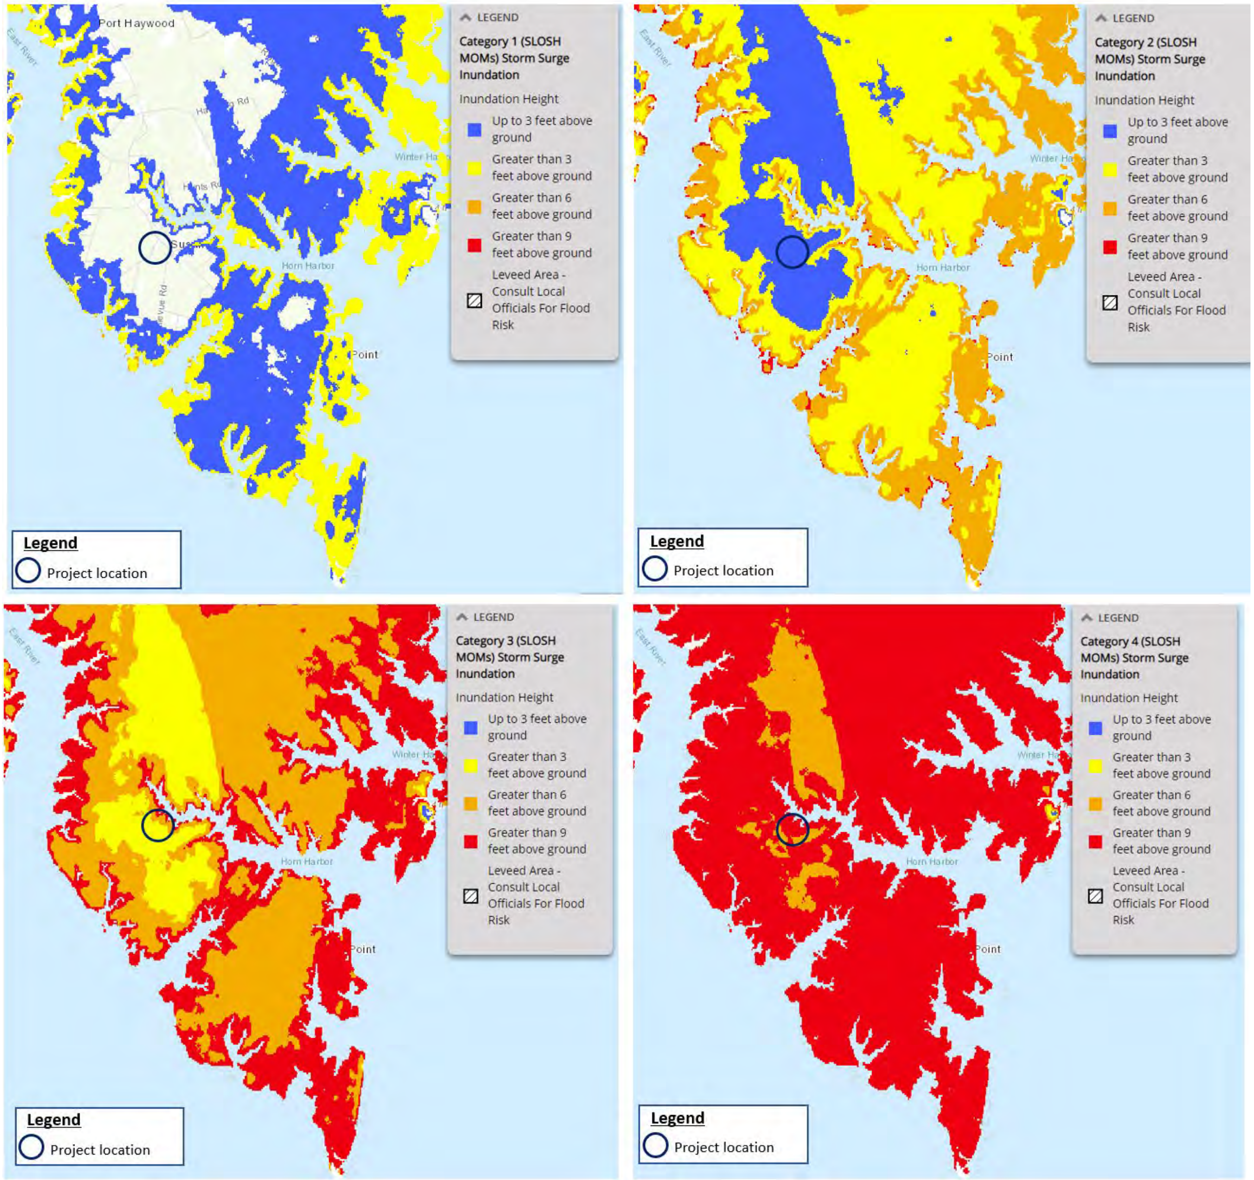
National Average	38.35

Create Report

The four subject parcels are not located within a designated FEMA Flood Zone but are vulnerable to coastal flooding from tropical and sub-tropical storm surge (**Figure 11** and **Attachment 2** *(FIRMette last mapped 12/19/2014)*) and nor-easters.

Figure 11. NOAA Storm Surge Hazard Maps



Above: Category 1 (top left), Category 2 (top right), Category 3 (bottom left) and Category 4 (bottom right) storm surge levels projected for the Antioch Church properties from the National Storm Surge Hazard Maps produced by NOAA (https://www.nhc.noaa.gov/nationalsurge/).

Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. The proposed stormwater protection solutions will take coastal flooding and long-range sea-level rise into consideration where and as appropriate. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Attachment 3** lists 81 storm events and provides a map with the project location.

For more information about this project area please see:

NEED FOR ASSISTANCE –

The Middle Peninsula Planning District Commission (MPPDC) is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 to provide solutions to problems of greater than local significance and cost-savings through economies of scale. The MPPDC serves nine localities of the Middle Peninsula including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna.

MPPDC is staffed using multiple methods including co-operative procurement, hourly, and burdened staff. MPPDC staff consists of Executive Director, Deputy Director, Chief Financial Officer, Senior Project Planner, clerical support staff; co-operative procured Director of Planning, General Planner, Certified Flood Plain Manager, Transportation Planner, Emergency Planner; Hourly staff for Housing, Community Development Planner and Public relations.

The PDC staffing team assists localities with long-term and/or regional planning efforts. The MPPDC Executive Director, Deputy Director, and Chief Financial Officer have decades of experience in managing and administering project grants at multiple scale from grants in excess of $1,000,000 to very small grants. MPPDC is an entrepreneurial based government agency with an annual operating budget ranging from $750,000 to over $1,000,000. The MPPDC manages annually 25-30 concurrent federal and state grants utilizing industry standard Grants Management Software. Staff utilize GIS and all Microsoft software as well as other software as required by different grants. The MPPDC operates service centers in the topical areas of coastal zone management, emergency planning, housing, transportation planning and transportation demand management, economic development, social assistance, small business development, general planning and technical assistance and other areas as determined by the Commission. MPPDC has over 25 years of experience managing multiple revolving loan programs. In the 25 years that the Executive Director has been employed by the Commission no audit findings have occurred.

The proposed project will 1) design and construct a stormwater collection system utilizing established stormwater Best Management Practices (BMP) where feasible including new gutters and roof to both preserve and protect the structure from further deterioration and 2) design landscape-related stormwater BMPs to serve as a comprehensive stormwater protection approach for the structures and property.

The need for assistance is two-fold. First and regarding to the Rosenwald School, an unique opportunity has presented itself to preserve and protect one of the most historic properties in Mathews County which has and will continue to serve as a community hub for the historically underserved African American citizens and congregation of the Antioch Baptist Church. The school building's impervious surfaces are a major contributing factor to the stormwater flooding impacts occurring at the property and the same stormwater is beginning to deteriorate the structure itself. The Antioch Church Board of Trustees need immediate financial assistance to implement solutions that will most importantly prevent further deterioration of the building as well as provide broader and longer-range stormwater BMPs which will ensure that the properties are useable for the community in the face of increasing precipitation volumes and frequencies.

Secondly, the need for landscape-related stormwater BMP designs are needed to provide a holistic and comprehensive approach to managing stormwater at the properties. These designs will complement the Rosenwald School impervious surface BMPs by targeting solutions which will make the other areas of the properties which are critical to daily operations at this community hub such as parking areas and the cemetery. If improvements were to be made only to the Rosenwald School building and BMPs focusing on stormwater management issues were neglected, then the current challenges for utilizing the properties would persist.

These designs will also incorporate and build upon previous efforts by the MPPDC to research and advance roadside ditch management solutions for Mathews County (Mathews County Ditch Mapping and Database (mppdc.com). This study was completed in 2017 at the request of Mathews County, which recognized the need of enhanced ditch maintenance as a critical component in the effort to mitigate stormwater flooding across the County. The ditches along Antioch Road and adjacent to the Antioch Baptist Church properties were included in this study. Since the study, Mathews County has cleaned several of the ditches near the Antioch Baptist Church properties where it was determined the County had maintenance responsibilities. The County’s efforts are representative of the magnitude of the stormwater flooding problems and the County’s commitment to preserving and protecting this vulnerable community center; however, they have not provided a long-lasting solution to the overall problem and additional and more holistic solutions are needed.

Figure 12 includes photographs demonstrating the need for assistance to mitigate stormwater flooding issues at the Antioch Baptist Church properties.

FIGURE 12: PHOTOS OF ANTIOCH BAPTIST CHURCH PROPERTIES

Photograph showing the current exterior front of the Historic Antioch Rosenwald School building. The current asphalt shingled roof is failing and is proposed to be replaced with a vegetated green roof or other stormwater collection roofing system.

Photograph showing recent stormwater-related damages to the Antioch Rosenwald School building interior. Immediate assistance is needed to prevent further damages from the failing roof.

Photograph locations depicted in red where stormwater is intruding the roof of historic Antioch Rosenwald School building interior. Immediate assistance is needed to prevent further damages from the failing roof.

A separate location depicted in red where stormwater is intruding the roof of historic Antioch Rosenwald School building interior. Immediate assistance is needed to prevent further damages from the failing roof.

Southward facing view along Antioch Road taken from in front of the Antioch Rosenwald School. The photograph was taken recently following a nominal rain event with less than 0.5" precipitation and is representative of the regular conditions at the site. The level of ponding in the roadside ditches and the yard in front of the school building are a constant challenge for daily operations at the site.

The photograph was taken recently following a nominal rain event with less than 0.5" precipitation and is representative of the regular conditions at the site. The level of ponding in the roadside ditches and the yard in front of the school building are a constant challenge for daily operations at the site.

ALTERNATIVES –

Several alternatives have been considered and are proposed regarding this project:

- Do Nothing Scenario – Should DCR not award the proposal. The Antioch Baptist Church Board of Trustees will continue its fundraising efforts to protect and preserve the last remaining Rosenwald School in Mathews County. However, the Church lacks the funds to address the immediate repair needs to the structure and continued stormwater flooding and damages will continue to degrade the historic structure, potentially to a point where the damages are beyond the ability of the Church to repair them. Should the Church be successful in repairing the roof, it is likely that the continued challenges in parking and daily use of the properties will continue to hamper the group's efforts to restore the school and reinvigorate it as a community center and museum.
- Rosenwald School Alternatives – (Note that the desired alternatives are subject to approval by relevant permitting authorities prior to implementation)
  1. Rosenwald School Vegetated/Green Roof (Alternative A) – As the most expensive alternative, the request for funding has been developed to be able to support the construction of a vegetated/green roof at the Rosenwald School as part of a

stormwater collection system to mitigate stormwater flooding at the property and preserve the historic structure. A qualified engineer experienced in these types of roofs will first assess the structure and deem whether a green roof is feasible and appropriate considering the age of the building, pitch of the roof, and potential for mitigating stormwater flooding at the property. Should the engineer deem Alternative A to not be feasible, then the project will shift to accomplishing Alternative B.

  2. Rosenwald School Traditional Roof and Stormwater Collection System (Alternative B) – Should a vegetated roof be deemed not feasible, then the stormwater resulting from the roof at the school will be managed by constructing a traditional non-vegetated roof and incorporating additional stormwater collection BMPs intended to capture or slow the roof runoff. Replacing the failing roof immediately to prevent further damage to the historic structure is of the utmost importance. Utilizing a traditional roof will accomplish this. A qualified stormwater engineer will be utilized to design the stormwater collection system which will be installed at the school. The system will involve components such as but not limited to cisterns and rain gardens.

- Antioch Properties Landscape BMPs – Designs for additional landscape and drainage focused BMPs will consider many alternatives. A qualified stormwater engineer will first assess the drainage conditions at the properties and create a customized stormwater management plan involving BMPs designed to make the property better equipped to handle the increased levels of precipitation forecast in coming years. The MPPDC and Mathews County are prepared to assist the Antioch Baptist Church Board of Trustees with securing future funding to implement the designs completed as part of the proposed project.

GOALS AND OBJECTIVES –

This project will implement nature-based solutions to mitigate stormwater flooding on the historic Antioch Rosenwald School as deemed feasible and appropriate by a qualified engineer and create a stormwater management plan including a suite of nature-based stormwater BMP designs on the nearly 10.5-acre site. The proposed activities will result in the preservation and enhancement of the building and property as the owners strive to reinvigorate the property as a community hub and museum for the historically underserved community.

The goals and objectives of this project are as follows -

Goal 1: Improve flood preparedness and resiliency within a minority and historically disadvantaged and underserved community in Mathews County and the Commonwealth.

Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based approach.

Objective B: Manage stormwater-related flooding to ensure that the historic Antioch Rosenwald School may continue to serve and prosper as a community hub and museum and in turn, so that the County's tax base does not erode.

Goal 2: Improve water quality.

Objective A: Construct a living shoreline to capture nitrogen, phosphorus, and sediment.

Goal 3: Transferability to other communities.

Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

The MPPDC anticipates that the stormwater BMPs installed at and designed for this project location will:

1. **Prevent continued degradation of the historic Antioch Rosenwald School building through waterproofing the structure**. According to the VA Department of Environmental Quality, vegetated roofs are alternative roof surfaces that typically consist of waterproofing and drainage materials and an engineered growing media that is designed to support plant growth. Vegetated roofs capture and temporarily store stormwater runoff in the growing media before it is conveyed into the storm drain system. A portion of the captured stormwater evaporates or is taken up by the plants, which helps reduce runoff volumes, peak runoff rates, and pollutant loads on development sites. Should a qualified engineer deem a vegetated roof as a feasible and applicable alternative, a vegetated roof will be constructed. Conversely, should a vegetated roof not be feasible, then a traditional metal or asphalt roof connected to a stormwater collection system will be installed.

2. **Provide ecosystem services to the community.** Since this project is proposing the installation of stormwater BMPs, this project will have nutrient and sediment reduction benefits to local waters. According to DEQ stormwater design specifications, the BMPs being considered have significant ability for removing nitrogen, phosphorous and sediment as described in the tables included in **Attachment 4**.

   According to DEQ Stormwater Design Specification #5 for Vegetated Roofs, vegetated roofs are an acceptable runoff reduction practice for the coastal plain, but they have a limited water quality function, since rooftops are not a major loading source for nutrients or bacteria. DEQ recommends that plant materials that can tolerate drought and salt spray be utilized for optimal performance.

   In addition to water quality improvements, stormwater BMPS may offer new or enhanced habitat for wildlife and birds.

APPROACH, MILESTONES, AND DELIVERABLES –
As explained in the previous "Alternative" section, at least one stormwater BMP will be designed and implemented to preserve and protect the historic Antioch Rosenwald School from continued and future degradation resulting from stormwater flooding. This will involve constructing a new roof, vegetated or traditional, on the 2,050 square foot building and associated stormwater collection system components as determined by a qualified engineer.

A separate site-wide Stormwater Management Plan will be developed by a qualified engineer or consultant to identify a suite of additional stormwater BMP solutions which may be implemented over time to ensure comprehensive and holistic stormwater management which can ensure the property is accessible and can support the community's needed daily uses as the property is transformed into a community hub/center and museum.

It is anticipated that the proposed project will commence January 2022 and be completed by June 2022. The anticipated timeline for this project could be as quick as 6 months, but no more than one year. The timeline range is due to the potential delays in the construction industry or delays caused by COVID, including supply shortages. Having a one-year timeline will offer potential windows for planting the vegetated roof or other stormwater BMPs involving vegetation. To explain, the Chesapeake Bay Foundation recommends that perennials and grasses should be planted during peak growing season (in mid-to-late summer) to allow enough time for their root systems to become established before they go dormant in the late Fall. Trees and shrubs should be planted in Spring and Fall when there is adequate rainfall to help them develop strong roots and leafy growth.

Below is the project timeline and project milestones for this project.

Action Item	M1	M2	M3	M4	M5	M6
Phase 1 – Environmental Scan and Solution Design						
Hold administrative project kick off meeting	X					
Select engineer(s) and/or contractor(s) to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Discuss nature-based or hybrid design solutions with contractor and property owner (for Rosenwald School Building and properties)		X	X			
Select which nature-based or hybrid design solution is most appropriate (for Rosenwald School construction only)		X	X			
Have contractor develop selected nature-based or hybrid design solution (for Rosenwald School construction only)		X	X			
Apply for any necessary permits (for Rosenwald School construction only)		X	X			
Phase 2 – Strategic Implementation						
Implement the nature-based or hybrid solution upon the Rosenwald School					X	
Complete the Stormwater Management Plan with specific designs for enhancing overall flood protection at the targeted properties.					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the property-wide Stormwater Management Plan						X
Hold administrative project close out meeting						X

The construction and Stormwater Management Plan contractor(s) will be contracted in accordance with the Virginia Public Procurement Act and the MPPDC’s Small Purchase Policy.

RELATIONSHIP TO OTHER PROJECTS –

For over 40 years the Middle Peninsula Planning District Commission (MPPDC) and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

The proposed project is a priority project generated from the Middle Peninsula Regional Flood Resilience Plan, which was approved by DCR during August 2021. The Flood Resiliency Plan serves as the MPPDC’s guiding document for its flood resiliency programs and is comprised of two primary MPPDC-approved policy documents which form the implementation and foundation of the Middle Peninsula flood protection approach and are indirectly and directly supported by multiple specific regional planning documents, both approved by various required federal, regional, or local partners as required by statute.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan, FEMA and Middle Peninsula locality approved 2016 (MPPDC Website)
- The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy, MPPDC Approved March 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan - MPPDC Approved ~annually

Short Term Implementation

- Middle Peninsula Planning District Commission Fight the Flood Program Design MPPDC Commission (approved June 2020 Chairman approved 8/6/21 update)
- Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program-Virginia Revolving Loan Fund Program Design and Guidelines (approved 2015)

As the MPPDC has continuously worked on flooding and coastal resiliency topics, **Attachment 5** lists the projects and short description of relevant projects. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the MPPDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The MPPDC Commission authorized staff to develop the **Middle Peninsula Fight the Flood (FTF) Program.** This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula **FTF** program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, MPPDC staff have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their flood protection need.

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

Community Scale Benefits -

The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of flood protection protected than urban areas which have smaller sized parcels. Therefore, we believe submissions of each nature-based project are essentially a nature-based "brick in the wall" and over time, the cumulative impact of this approach will be realized. Reducing the amount of impervious surface is critical for stormwater management in rural areas, especially those which are essentially of flat or little topographic relief.

This specific proposal presents a unique proposal for a community-wide stormwater mitigation solution. The stormwater BMPs designed and implemented will occur directly on four different parcels totaling nearly 10.5 acres which are owned by the Antioch Baptist Church. The community-scale benefits; however, will stretch far beyond the boundaries of those parcels. The proposed activities will greatly serve to preserve one of Mathews County and the Middle Peninsula's most unique and sensitive cultural properties, which is the historic Antioch Rosenwald School. While it is imperative that stormwater flooding be managed to ensure that it does not claim the last remaining Rosenwald School in Mathews County, it is equally important that the designs allow for the property and facility to thrive and prosper as the Antioch Baptist Church Board of Trustees works to reinvent the property as a community center and cultural and historical museum that not only celebrates the rich minority history of the community but creates opportunities for minority youth and young adults.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection as seen in **Figure 13**. All Round 1 and 2 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit.

Figure 13: Adapt VA Map of Project Location and Prospects for NNBF Benefits

Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Wooded** Fact Sheet (opens in a new tab)

This Wooded feature provides **Many Benefits** to buildings and communities, including:

- **Low rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(11 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **Medium rank** for the NNBF to be used for incentive programs (1 out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction.)

MAINTENANCE PLAN –

The approved permits for construction of the stormwater BMPs are not anticipated to require a maintenance plan; therefore, the maintenance of the construction element of this project will be in accordance with the permit requirements. The Antioch Baptist Church Board of Trustees is committed to not only revitalizing the Rosenwald School as a community center and museum but also ensuring the long-term maintenance of the facility and property.

CRITERIA –

Describe how the project meets each of the applicable scoring criteria containedin Appendix B and provide the required documentation where necessary. Documentationcan be incorporated into the Scope of Work Narrative or included as attachments to the application. Appendix B must be completed and submitted with the application.

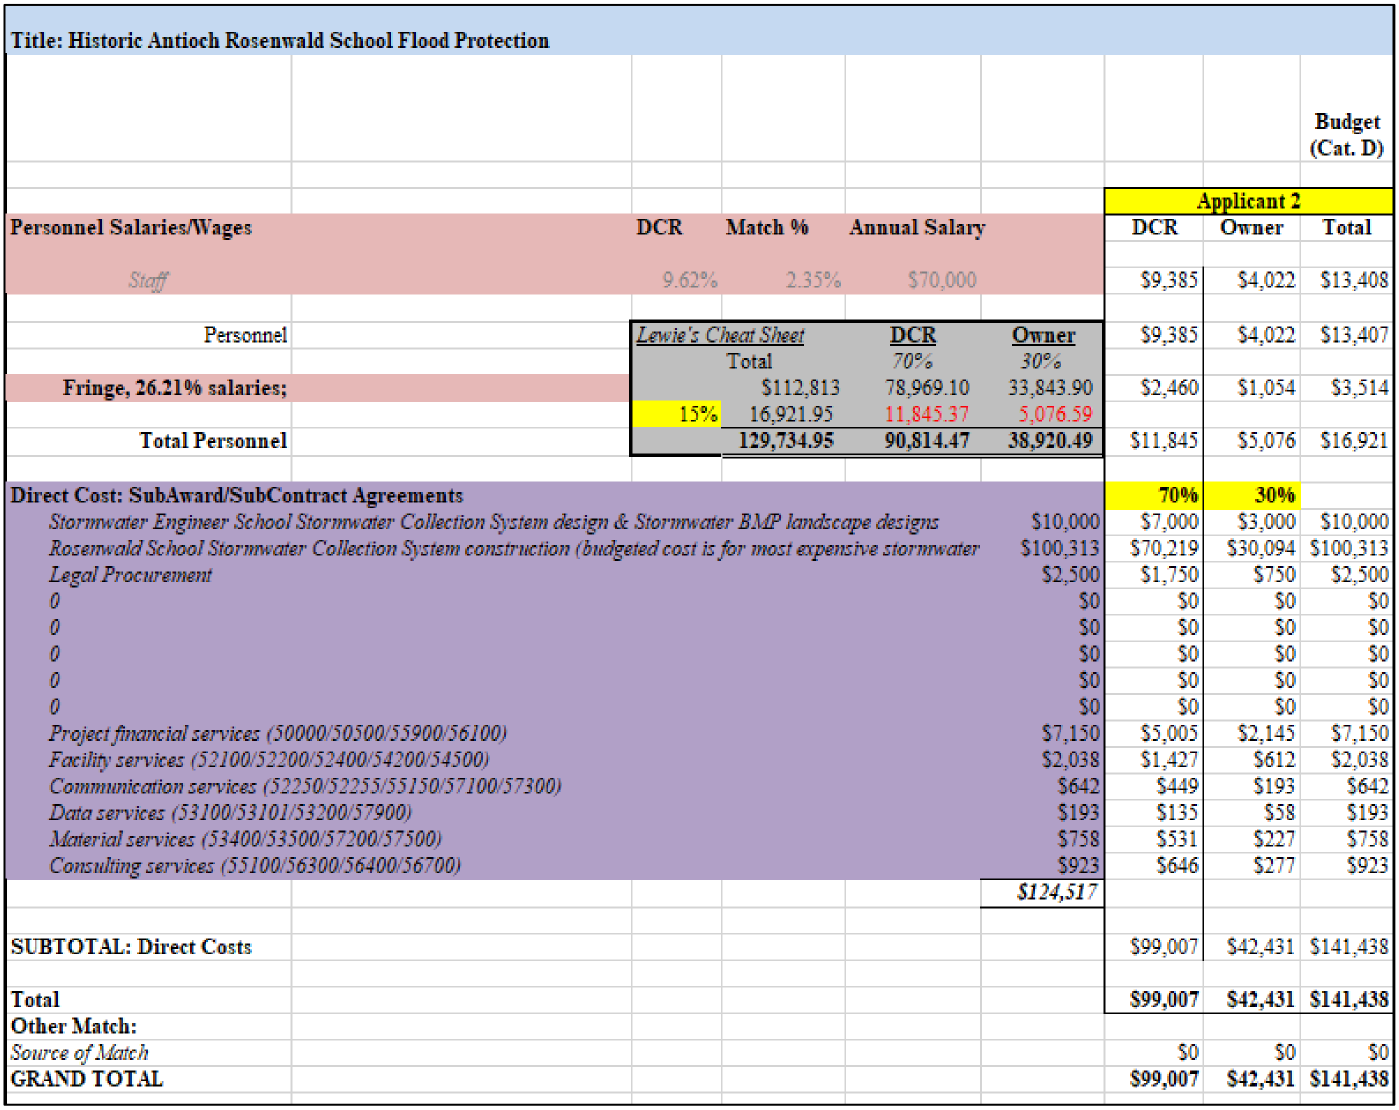
For local governments that are not towns, cities, or counties, the documentation provided for the criteria below should be based on the local government or local governments in which the project is located and/or directly impacts.

1. **Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?**
   YES - The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.
2. **Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?**
   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf
3. **For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?**
   YES - Please see **Attachment 1**.
4. **Has the applicant provided evidence of an ability to provide the required match funds?**
   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their project proposal is awarded as seen in **Attachment 7.**
5. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?** Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or establishing stormwater BMPs—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.
6. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?**
   YES.

BUDGET NARRATIVE -

For applications submitted under MPPDC Round 2 proposals that reside in a low-income area or opportunity zone, the following applies to the submitted budget. If the applicant does not reside in a low-income area or opportunity zone, then the following does not apply.

For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being located in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.



Title: Historic Antioch Rosenwald School Flood Protection								
								Budget (Cat. D)
						Applicant 2		
Personnel Salaries/Wages		**DCR**	**Match %**	**Annual Salary**		**DCR**	**Owner**	**Total**

Source of Match						$0	$0	$0
GRAND TOTAL						**$99,007**	**$42,431**	**$141,438**

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Please note that the cost estimates for the construction element of this project are based upon the most expensive cost estimate for the stormwater collection system, which was supplied by Storybound Construction, LLC. and is included in **Attachment 6**. The most expensive option was a component of the Storybound Construction cost estimate, which was $75,312.60 for a historically accurate Victorian style metal roof. An additional $25,000 was included in the construction element cost to cover additional elements of a stormwater collection system such as a cistern, rain garden, etc. should it be needed. Also, please note that DEQ estimates construction of a vegetated roof to cost between $12 and $25 per square foot. For the 2,050 square foot Rosenwald School, this equates to $51,250. So, the primary alternative, Alternative A, would be easily afforded under the proposed budget amount.

Costs to support legal counsel development of procurement documents to ensure compliance with the Virginia Public Procurement Act are included as well and will be utilized as necessary.

In summary:

***Estimated total project cost*:**	$141,438
***Amount of funds requested from the Fund (70% project total)*:**	$99,007
***Amount of cash funds available (30% project total)*:**	$42,431

Please see the match commitment letter from the property owner in **Attachment 7** and the authorization to request for funding in **Attachment 8.**

Appendix B: Scoring Criteria for Flood Prevention andProtection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Middle Peninsula Planning District Commission

Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☑ **Yes** ☐ **No**
Applicant Name:	Middle Peninsula Planning District Commission

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (**Based on ADAPT VA's Social Vulnerability Index Score.)**		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		123

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

David Schlosser
Interim County Administrator

Attachment 5: Flood Prevention Project and its Relevance to Other Projects

MPPDC staff have worked throughout the years to understand the policy, research and impacts of flooding (ie. stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change & Sea Level Rise (2009 to 2012)

The MPPDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, MPPDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally Phase 3 focused on developing adaptation public policies in response to the assessments.

Phase 1: Middle Peninsula Climate Change Adaptation: Facilitation of Presentations and Discussions of Climate Change Issues with Local Elected Officials and the General Public
Phase 2: Climate Change III: Initiating Adaptation Public Policy Development
Phase 3: Phase 3 Climate Change: Initiating Adaptation Public Policy Development

Emergency Management - Hazard Mitigation Planning (2009 to Present): Since 2009, the Middle Peninsula Planning District Commission has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. *The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise* (ie. Mean High Higher Water and the NOAA 2060 intermediate-high scenario), *and flooding (coastal and riverine flooding) that estimates losses from each hazard.* The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014): In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, OSDS management, storm water management, TMDLs, etc, staff from the Middle Peninsula Planning District Commission (MPPDC) will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and Onsite Sewage Disposal System (OSDS) and

community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)

The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The Virginia Department of Conservation and Recreation requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the MPPDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The MPPDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014): MPPDC staff and Draper Aden Associates worked with localities (i.e. Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional VSMP.

Mathews County Rural Ditch Enhancement Study (2015): In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015): This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)

In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical

assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the MPPDC developed the MPPDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the MPPDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in VRA loan funding and ~$400,000 in NFWF grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. MPPDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project - VCPC White Papers (2017): This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017): This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018): This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018): VIMS Shoreline Studies Program worked with the PAA to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020): The Fight the Flood was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic

Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

Subject: Roof replacement

To: Janice <janicefburgess4@gmail.com>

Cc: paul storyboundconstruction.com <paul@storyboundconstruction.com>, Michael Swiderski <mjswiderski@gmail.com>

Dear Ms. Burgess,
I have the prices for the roof replacement for the Antioch School House.
Each option includes facier and soffit repairs, but not any consealed damage under the existing roof.

Option 1. $ 75312.60
Metal roof similar to the one there, Victorian style, by Berridge

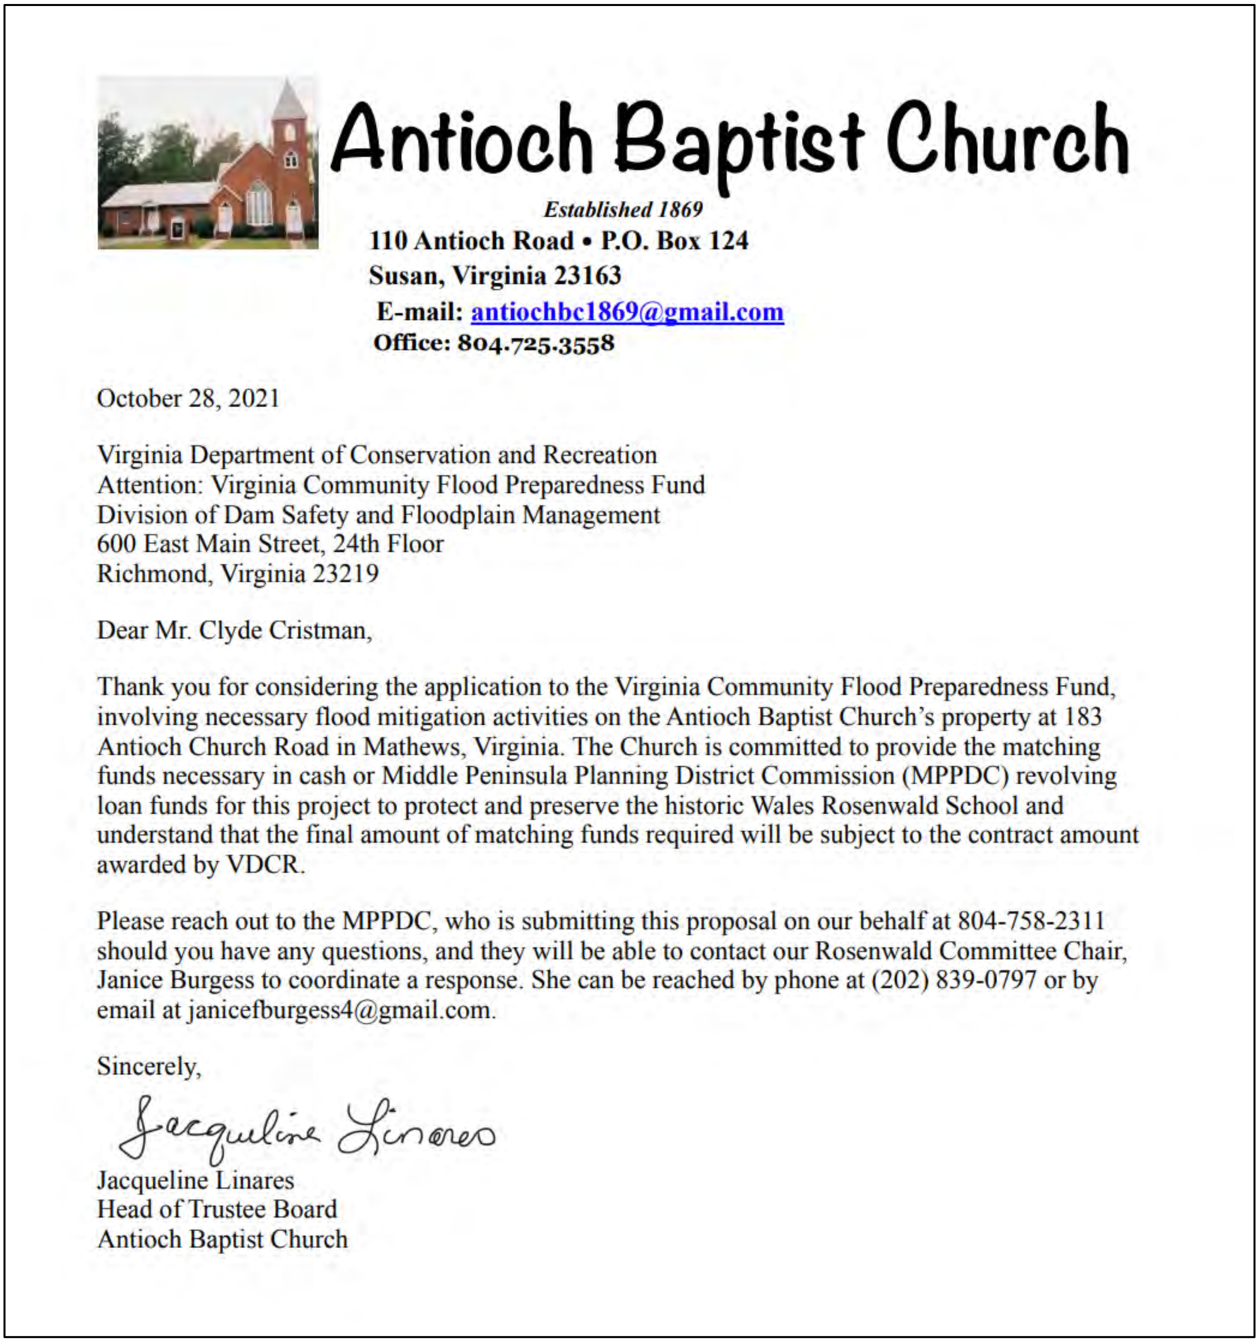
Option 2. $ 40260.00
Painted metal snap lock roof by Union Metals

Option 3. $ 12469.00
50 year asphalt roof

Thanks,
Mike Rowe, Storybound Construction

Prices good for 30 days

Attachment 7: Match Commitment Letter



Antioch Baptist Church

Established 1869

110 Antioch Road • P.O. Box 124

E-mail: antiochbc1869@gmail.com
Office: 804.725.3558

October 28, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on the Antioch Baptist Church's property at 183 Antioch Church Road in Mathews, Virginia. The Church is committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project to protect and preserve the historic Wales Rosenwald School and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on our behalf at 804-758-2311 should you have any questions, and they will be able to contact our Rosenwald Committee Chair, Janice Burgess to coordinate a response. She can be reached by phone at (202) 839-0797 or by email at janicefburgess4@gmail.com.

Sincerely,

Jacqueline Linares

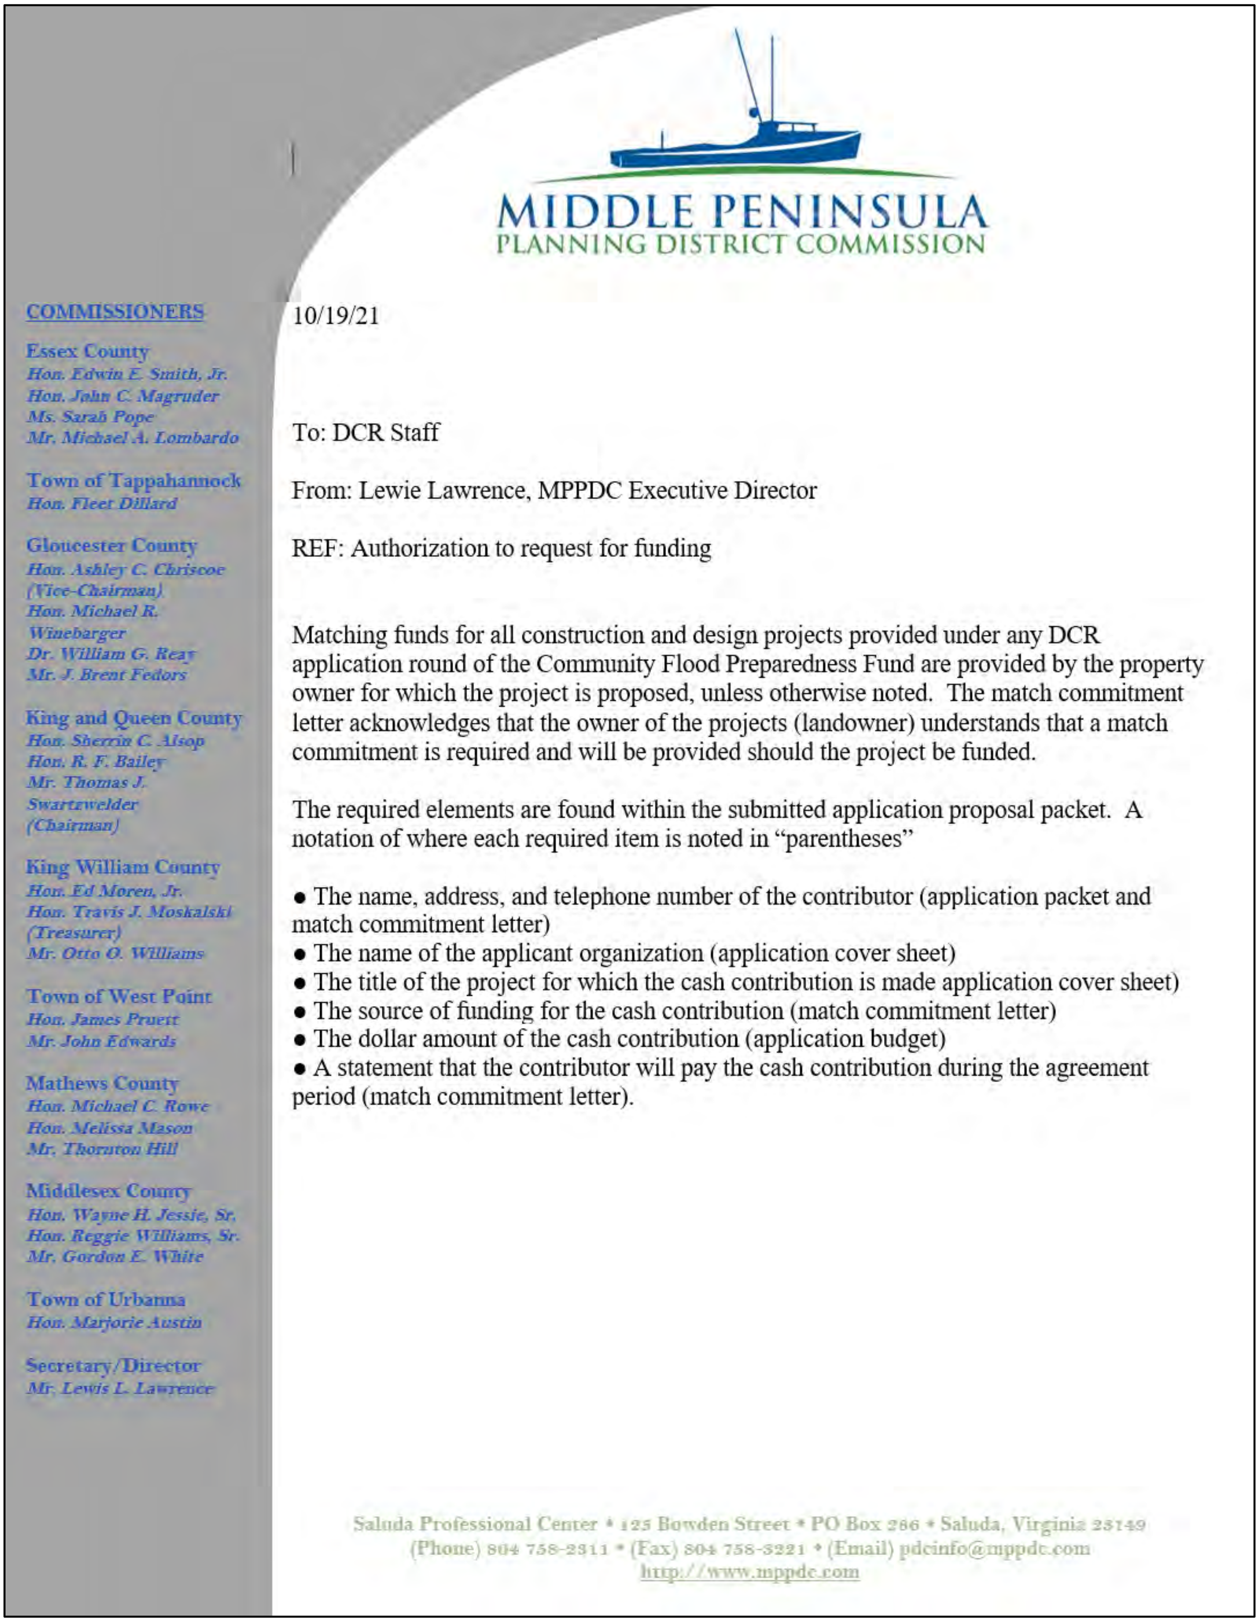
Attachment 8: Authorization to request for funding



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Project Grants (Check All that Apply)

☐ **Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.**

☑ **Wetland restoration.**

☑ **Floodplain restoration.**

☐ **Construction of swales and settling ponds.**

☑ **Living shorelines and vegetated buffers.**

☐ **Structural floodwalls, levees, berms, flood gates, structural conveyances.**

☐ **Storm water system upgrades.**

☐ **Medium and large-scale Low Impact Development (LID) in urban areas.**

☐ **Permanent conservation of undeveloped lands identified as having flood resilience value by ConserveVirginia Floodplain and Flooding Resilience layer or a similar data driven analytic tool.**

☐ **Dam restoration or removal.**

☑ **Stream bank restoration or stabilization.**

☐ **Restoration of floodplains to natural and beneficial function.**

☐ **Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.**

Location of Project (Include Maps): Mathews County
NFIP Community Identification Number (CID#) (See appendix F): 510096

Is Project Located in an NFIP Participating Community? þ Yes □ No
Is Project Located in a Special Flood Hazard Area? þ Yes □ No Flood Zone(s) (If Applicable): VE Zone
Flood Insurance Rate Map Number(s) (If Applicable): 51115C0085E

Total Cost of Project: **$125,715**

Total Amount Requested: **$88,000**

INTRODUCTION –

This project proposes to construct a nature-based solution on private property located on the North River in Mathews County. The nature-based solution will involve modifying and removing a dilapidated failed wooden bulkhead and the installation of 80 linear feet of living shoreline, 60 linear feet of a bioengineered structure, 900 square feet of fill and plantings and 103 linear feet of rip rap. The applicant also submitted a Round 1 proposal for design needed on a second portion of the project site and therefore this request is not duplicative.

FEMA, Virginia General Assembly, DCR's Floodplain Management Program, and the Middle Peninsula PDC all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes and territories and the citizens which reside and work there. These hazards include flooding, drought, hurricanes, landslides, wildfires and more. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program (www.FightTheFloodVA.com). This proposal is a Nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features or processes into the built environment to promote adaptation and resilience. Further, this proposal incorporates natural features and processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. These benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life (*FEMA Building Community Resilience with Nature Based Solutions,* June 2021).

This project will be a partnership between the MPPDC and one private property owner and is supported by Mathews County (See the community support letter in Attachment 1).

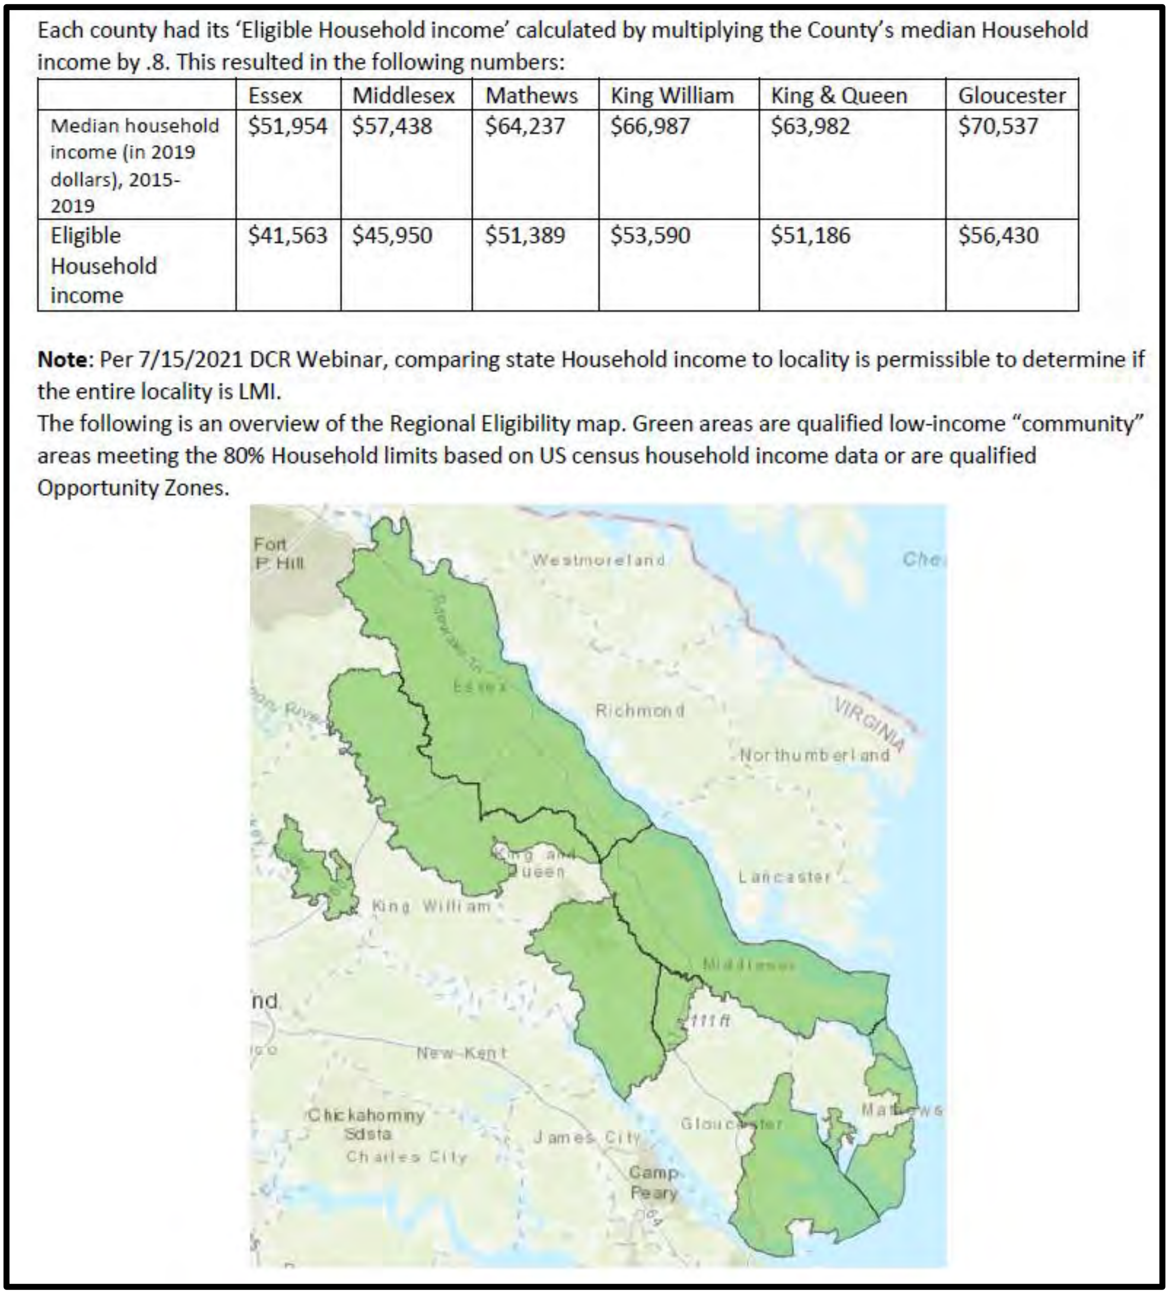
PROJECT LOCATION INFORMATION – This project proposes to install living shorelines on one private property on the North River in Mathews County (**Figure 1 and 2**). The property was purchased in 2012. Since then, it has endured countless storm events. The storm in August 2020 pushed the 80-foot wooden bulkhead wall along waterfront back toward property where there is significant erosion behind the bulkhead. The force of the water pushing the bulkhead back snapped the bolts that attached the pilings to the bulkhead. The filter cloth attached to the bulkhead was forced out of place, so the owners have continued erosion of soil through the bulkhead into the bay. Also, the riprap in front on the bulkhead has slumped down. Their house is approximately 10 feet from the bulkhead, so this presents significant ramifications.

FIGURE 1: COUNTY MAP OF PROJECT LOCATION.

FIGURE 2: PARCEL MAP OF PROJECT LOCATION.

Mathews County is located at Virginia’s Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 86 square miles of land 166 miles of shorelines. Based on 2020 Census Data, Mathews County’s population totals 8,533 which makes it the largest Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 3** the green areas qualified as low-income “community” areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

FIGURE 3: MAP OF MIDDLE PENINSULAS LOW INCOME GEOGRAPHIC AREAS QUALIFYING UNDER DCR GUIDELINES.



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

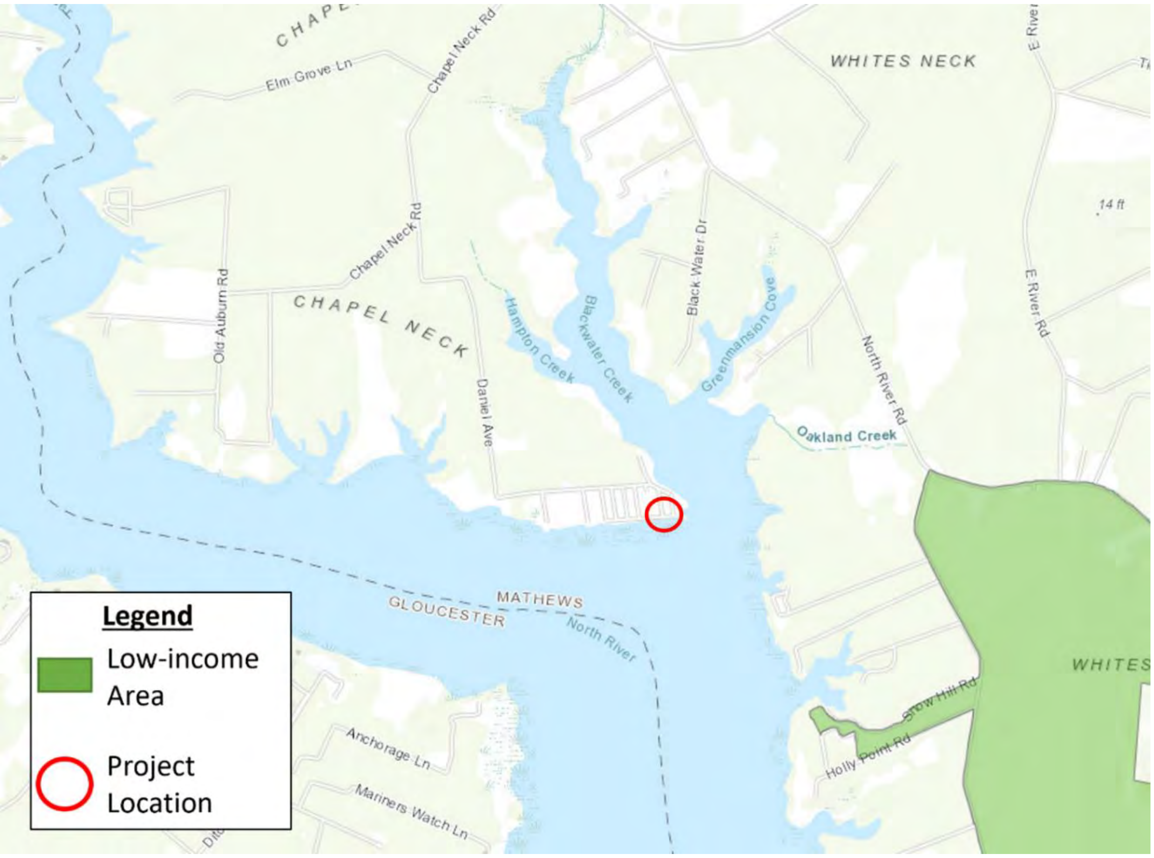
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

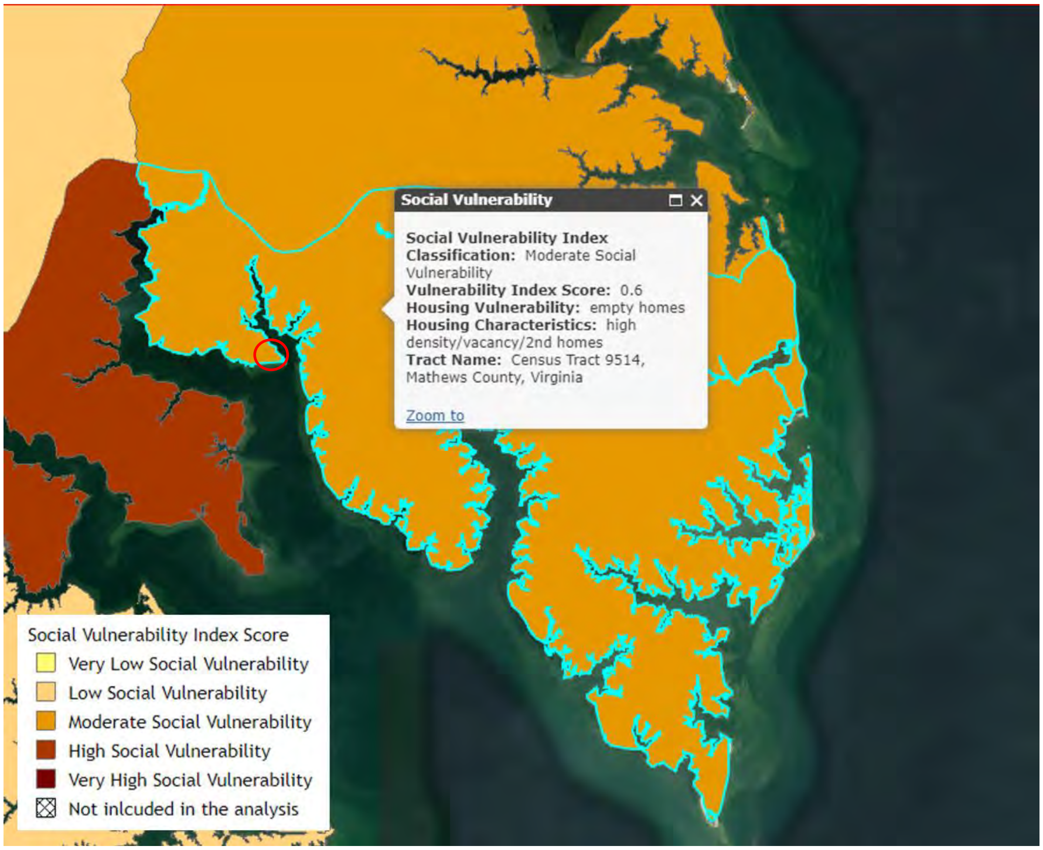
Please see **Figure 4** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is not within the low-income area.

FIGURE 4: MAP OF THE PROJECT LOCATION AND THE GREEN LOW-INCOME AREA.



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score (**Figure 5**). MPPDC is perplexed by the designation of the project area being automatically recognized as low income under the Community Flood Preparedness Fund Guidelines as an Opportunity Zone (**Figure 6**), identifying census tracts in the most in need, economically distressed and low-income communities while simultaneously the VA Social Vulnerability score of the exact same area reports a low social vulnerability score of -.03. MPPDC assumes the Opportunity Zone designation trumps the VA Social Vulnerability score in this case.

FIGURE 5: VIRGINIA'S SOCIAL VULNERABILITY INDEX SCORE MAP FOR THE PROJECT LOCATION.

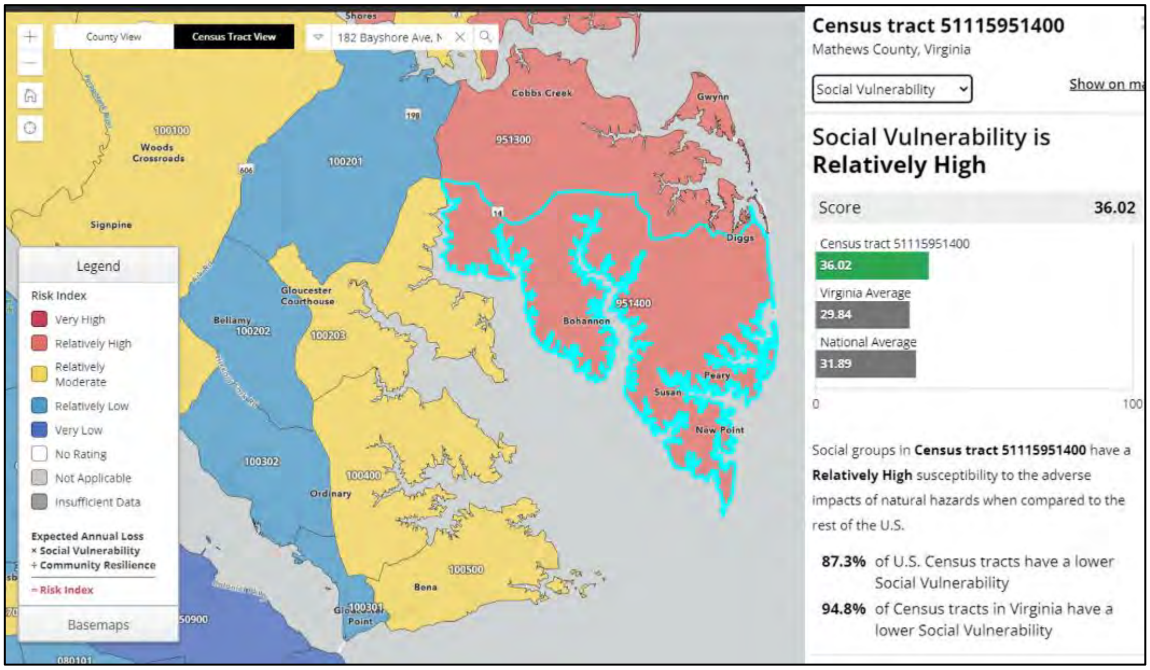


Social Vulnerability

Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.6
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9514, Mathews County, Virginia

Zoom to

FIGURE 6: FEMA NATION RISK INDEX OF CENSUS TRACK WHERE THE PROJECT LOCATION.



Census tract 51115951400
Mathews County, Virginia

Social Vulnerability is Relatively High

Score **36.02**

Social groups in **Census tract 51115951400** have a **Relatively High** susceptibility to the adverse impacts of natural hazards when compared to the rest of the U.S.

87.3% of U.S. Census tracts have a lower Social Vulnerability
94.8% of Census tracts in Virginia have a lower Social Vulnerability

The project is located at 182 Bayshore Ave. North, VA 23128 (37.41985, -76.40677). A total of 60 linear feet of Flexamat with plantings, 103 linear feet of Class II stone, and 80 linear feet of living shoreline will be constructed on this property. Additionally, the bulkhead on this property is failing and will be addressed in tandem with the nature-based solution design. This nature-based solution, **which is approximately 8 feet from the residential structure on the property**, will help to stabilize the shoreline. The structures on this property are not identified as severe repetitive loss structure or repetitive loss structures. This site is located within the VE flood zone (**Figure 7**). Please see **Attachment 2** for the FIRMettes (last mapped 12/9/2014).

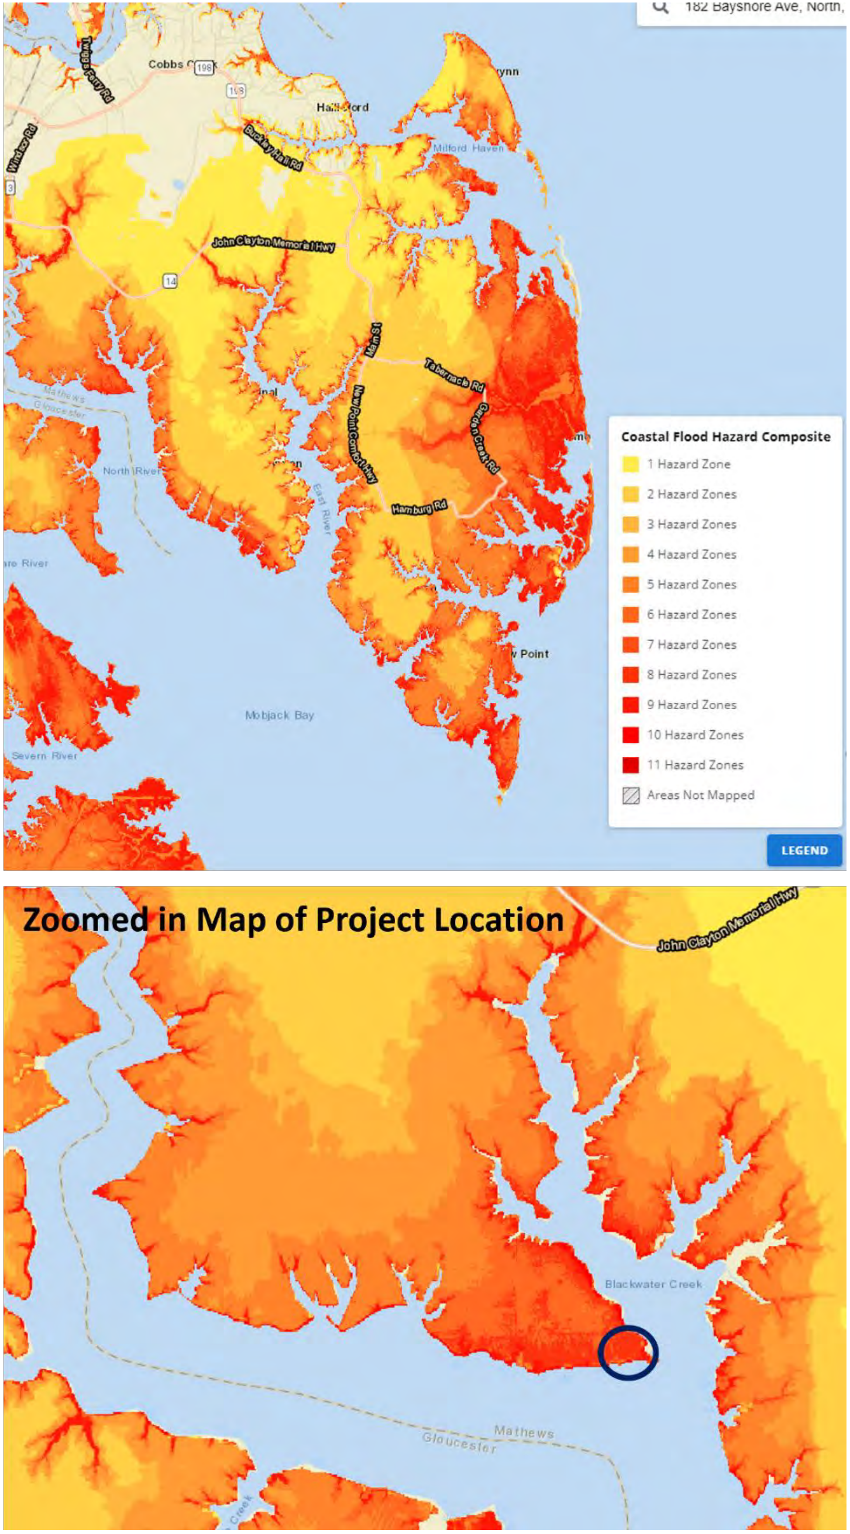
FIGURE 7: MAP OF FEMA FLOOD ZONES.

Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 8** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 8,032.2 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Attachment 3** lists 82 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

FIGURE 8: PROJECT LOCATION AND MAP OF THE SHORELINE CHANGE BETWEEN 1937 AND 2017. PLEASE NOTE THAT THE PROJECT AREA PARCEL IS OUTLINED IN WHITE.

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding (**Figure 9**).

FIGURE 9: MAP OF PROJECT LOCATION AND RISK OF COASTAL FLOODING (NOAA, 2021).



For more information about this project area please see:

- The Middle Peninsula All Hazards Mitigation Plan identifies all hazards that impact the

region - https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf .
- Mathews County Planning Department administers the NFIP. Here is the link to the current floodplain ordinance: http://mathewsco-va.elaws.us/code/coor_ch63

NEED FOR ASSISTANCE –

The Middle Peninsula Planning District Commission (MPPDC) is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 to provide solutions to problems of greater than local significance and cost-savings through economies of scale. The MPPDC serves nine localities of the Middle Peninsula including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna.

MPPDC is staffed using multiple methods including co-operative procurement, hourly, and burdened staff. MPPDC staff consists of Executive Director, Deputy Director, Chief Financial Officer, Senior Project Planner, clerical support staff; co-operative procured Director of Planning, General Planner, Certified Flood Plain Manager, Transportation Planner, Emergency Planner; Hourly staff for Housing, Community Development Planner and Public relations.

The PDC staffing team assists localities with long-term and/or regional planning efforts. The MPPDC Executive Director, Deputy Director, and Chief Financial Officer have decades of experience in managing and administering project grants at multiple scale from grants in excess of $1,000,000 to very small grants. MPPDC is an entrepreneurial based government agency with an annual operating budget ranging from $750,000 to over $1,000,000. The MPPDC manages annually 25-30 concurrent federal and state grants utilizing industry standard Grants Management Software. Staff utilize GIS and all Microsoft software as well as other software as required by different grants. The MPPDC operates service centers in the topical areas of coastal zone management, emergency planning, housing, transportation planning and transportation demand management, economic development, social assistance, small business development, general planning and technical assistance and other areas as determined by the Commission. MPPDC has over 25 years of experience managing multiple revolving loan programs. In the 25 years that the Executive Director has been employed by the Commission no audit findings have occurred.

The need for assistance is two-fold.

First, Mathews County’s proximity to the Chesapeake Bay and numerous tidal rivers, coupled with the County’s low elevation, creates an area at high risk of coastal flooding, sea-level rise, and storm surge. Based on tidal gauge data from the Virginia Institute of Marine Science (VIMS), relative sea level rise rates ranging from 0.11-0.23 in./yr. (2.9-5.8 mm/yr.; period: 1976-2007; 10 stations) within the Chesapeake Bay region, which are the highest rates reported along the U.S. Atlantic coast (Boon et al. 2010). In addition to sea level rise, Mathews County has a history of being impacted by hurricanes, tropical storms, and recurrent flooding. As storms pass over or near the coast the atmospheric pressure drops, causing a large volume of sea water to build up, eventually being pushed ashore by the storm’s winds causing a storm surge. Additionally, when a storm makes landfall at high tide, the storm surge and the added water from the tidal fluctuation combine to create a “storm tide”. In Mathews County, tidal waters fluctuate twice daily from 1.2 feet above mean sea level to 1.2 feet below mean sea level (FEMA 1987, 6). Thus, if a severe hurricane were to make landfall during high tide, an additional 1.2 feet of water would be added to the highest storm surge possible, which could create a storm tide of 16.2 feet (Rygel, 2005). Nor’easters, like hurricanes and tropical storms, can dump heavy amounts of rain and produce hurricane-force winds that push large amounts of sea water inland.

According to a study conducted by the Center for Coastal Resources Management (CCRM), a one-and-a-half-foot rise in sea level coupled with a three-foot storm surge, like what would be experienced in a strong tropical storm, could lead to 29% of Mathews County land mass being flooded. Also, this could potentially flood 139 miles of roads within the county. As a result, the County implements several preventative measures, property protection policies, public information activities, and emergency service measures to decrease impacts on the community. Getting projects such as the proposed constructed creates a more resilient community as flooding impacts persist and increase in intensity and frequency.

Second, at this project location, the shoreline is experiencing erosion and undercutting of the bulkhead. The waterfront of the property was severely damaged during the Isaias storm in August 2020. The wooden bulkhead wall was pushed back toward the house with significant soil erosion behind it on the house side. The property owners have tried to quell the erosion behind the bulkhead until a suitable repair can be implemented. However, the erosion is still occurring behind the bulkhead. Additionally, the erosion on either side of the bulkhead has been addressed with a living shoreline application completed under APA #20-1593. This phase called for installation of Flexamat on the left and right sides of our property. The central portion of the property was permitted to have riprap overlain over the existing inadequate riprap to protect a deteriorating bulkhead, which is allowing erosion of yard soil into the North River and Mobjack Bay. There would have to be excavation behind the failing bulkhead to install new filter cloth. The loss of soil is so close to the house behind the bulkhead, approximately 8 feet, which represents a severe threat to the property. The homeowners’ efforts to pack sand into voids have fallen short and fail to protect from soil erosion with each passing high tide and storm. Please see **Figure 10** for project location photos and **Attachment 4** for more photos.

FIGURE 10: PHOTOS OF THE WUCKOVICH PROPERTY.

ALTERNATIVES –

Alternatives are not applicable to this project. A living shoreline is feasible at this location and therefore required per VMRC regulations. This project employs a nature-based solution, and this project cost is not greater than $3 Million.

GOALS AND OBJECTIVES –

This project will install a nature-based solution consisting of 60 linear feet of Flexamat with plantings, 103 linear feet of Class II stone, and 80 linear feet of living shoreline (i.e., clean sand nourishment and spartina plantings). Additionally, the bulkhead on this property will be repaired. This project will reduce erosion and stabilize the shoreline. The installation of a nature-based solution will also help to protect the residential home from falling into the North River. The nature-based solution will be installed as designed and permitted through the JPA process. Please note that the design work for 80 linear feet of living shorelines was submitted through Round 1 of the DCR Community Flood Preparedness Fund. Please see the permit package for the remaining elements of this project in **Attachment 5**.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based approach.

Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode.

Goal 2: Improve water quality

Objective A: Construct a living shoreline to capture nitrogen, phosphorus, and sediment.

Goal 3: Transferability to other communities.

Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

The MPPDC anticipates that the living shoreline installed at this project location will:

1. **Stabilize the shoreline and reduce the overall erosion rate at the project location**. According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region’s commercial and recreational maritime economies.

2. **Provide ecosystem services to the community.** Since this project is proposing the installation of living shorelines, this project will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb./lf./yr.) and a phosphorus removal rate of 0.00861 lbs./lf./yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb./lf./yr. Therefore, with a proposed project of 243 linear feet of living shoreline this has the ability of removing 2.95974 pounds of nitrogen per year, 2.09223 pounds of phosphorus per year and 508.41189 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

   In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

3. **Prevent loss of property and life.** As the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Gloucester County, which is local government.

APPROACH, MILESTONES, AND DELIVERABLES –

This project will follow the designs outlined and approved in the Joint Permit Application. Upon issuance of the permits for this project, VMRC has analyzed the upstream and downstream impacts of this project using the best available science, as per state law. Please see **Attachment 5** for the JPA application, Design, and Permit Package. The below table outlines the components of the nature-based solution and what will be installed at the project location, as permitted by Virginia Marine Resource Commission (VMRC). Please note the living shoreline design was proposed in Round 1 of DCR Community Flood Preparedness funding and will not be included in the attached JPA.

	Total Project Location Specifications
Bioengineered Structure	60 Linear Feet
Rip Rap	103 Linear Feet
Fill/Plantings	900 Square Feet
Living Shorelines	80 linear Feet

The anticipated timeline for this project could be as quick as 1 year, but no more than two years. The timeline range is due to the potential delays in the construction industry or delays caused by COVID, including supply shortages. Having a two-year timeline will offer potential windows for planting the living shoreline - one in 2022 and one in 2023. To explain, the Chesapeake Bay Foundation recommends that perennials and grasses for living shorelines should be planted during peak growing season (in mid-to-late summer) to allow enough time for their root systems to become established before they go dormant in the late Fall. Trees and shrubs should be planted in Spring and Fall when there is adequate rainfall to help them develop strong roots and leafy growth.

Below is the project timeline and project milestones for this project.

Receive funding notice - December 2021
Coordinate with property owners and the project contractor R & W Marine Construction, Inc to review project timeline and project expectations – December 2021
Initiate site preparation at the project location - January 2022 to June 2022
Construction of the living shoreline – July 2022 to October 2022
Project Close out – December 2022

RELATIONSHIP TO OTHER PROJECTS –

For over 40 years the Middle Peninsula Planning District Commission (MPPDC) and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

The proposed project is a priority project generated from the Middle Peninsula Regional Flood Resilience Plan, which was approved by DCR during August 2021. The Flood Resiliency Plan serves as the MPPDC's guiding document for its flood resiliency programs and is comprised of two primary MPPDC-approved policy documents which form the implementation and foundation of the Middle Peninsula flood protection approach and are indirectly and directly supported by multiple specific regional planning documents, both approved by various required federal, regional, or local partners as required by statute.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan, FEMA and Middle Peninsula locality approved 2016 (MPPDC Website)
- The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy, MPPDC Approved March 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan - MPPDC Approved ~annually

Short Term Implementation

- Middle Peninsula Planning District Commission Fight the Flood Program Design MPPDC Commission (approved June 2020 Chairman approved 8/6/21 update)
- Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program-Virginia Revolving Loan Fund Program Design and Guidelines (approved 2015)

As the MPPDC has continuously worked on flooding and coastal resiliency topics, **Attachment 6** lists the projects and short description of relevant projects. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the MPPDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The MPPDC Commission authorized staff to develop the **Middle Peninsula Fight the Flood (FTF) Program.** This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula **FTF** program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, MPPDC staff have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline.

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN –

The approved VMRC permits does not require a maintenance plan; therefore, the maintenance of this construction project will be in accordance with the permit requirements.

CRITERIA –

Describe how the project meets each of the applicable scoring criteria containedin Appendix B and provide the required documentation where necessary. Documentationcan be incorporated into the Scope of Work Narrative or included as attachments to the application. <u>Appendix B must be completed and submitted with the application.</u>

For local governments that are not towns, cities, or counties, the documentation providedfor the criteria below should be based on the local government or local governments in which the project is located and/or directly impacts.

1. **Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?**
   YES.
2. **Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?**
   YES. Here's the link: https://fighttheflood va.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf
3. **For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?**
   YES. Please see **Attachment 1**
4. **Has the applicant provided evidence of an ability to provide the required match funds?**
   YES. Please see the match commitment letter in **Attachment 8**
5. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?**
   YES.

BUDGET NARRATIVE -

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being located in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding, we respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Also please note that the cost estimates for the construction of this project were supplied by the contractor, R & W Marine Construction, Inc. Please see **Attachment 7**.

In summary:
***Estimated total project cost*:** $ 125,715
***Amount of funds requested*:** $ 88,000

Finally, please see the authorization to request for funding in **Attachment 9.**

Appendix B: Scoring Criteria for Flood Prevention andProtection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Middle Peninsula Planning District Commission

Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is not a town, city, or county, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☐ Yes ☐ No
Applicant Name:	Middle Peninsula Planning District Commission

Scoring Information

Criterion	Point Value	Points Awarded
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index Score.)](#)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		88

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

David Schlosser
Interim County Administrator

Received by VMRC August 31, 2020 /blh

- ❖ DEQ: Permit application fees required for Virginia Water Protection permits – while detailed in 9VAC25-20 – are conveyed to the applicant by the applicable DEQ office (http://www.deq.virginia.gov/Locations.aspx). Complete the Permit Application Fee Form and submit it per the instructions to the address listed on the form. Instructions for submitting any other fees will be provided to the applicant by DEQ staff.
- ❖ VMRC: An application fee of $300 may be required for projects impacting tidal wetlands, beaches and/or dunes when VMRC acts as the LWB. VMRC will notify the applicant in writing if the fee is required. Permit fees involving subaqueous lands are $25.00 for projects costing $10,000 or less and $100 for projects costing more than $10,000. Royalties may also be required for some projects. The proper permit fee and any required royalty is paid at the time of permit issuance by VMRC. VMRC staff will send the permittee a letter notifying him/her of the proper permit fees and submittal requirements.
- ❖ LWB: Permit fees vary by locality. Contact the LWB for your project area or their website for fee information and submittal requirements. Contact information for LWBs may be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html.

Part 1 - General Information (continued)

1. Applicant's legal name* and complete mailing address:

Kim and Nick Wuckovick
100 Hamlin Drive
Fredericksburg, VA
22405

Contact Information:
Home (____)_____________
Work (____)_____________
Fax (____)_____________
Cell (540) 373 5572
e-mail fourwucks@aol.com

State Corporation Commission Name and ID Number (if applicable) _____________

2. Property owner(s) legal name* and complete address, if different from applicant: Contact Information:
Home (____)_____________
Work (____)_____________
Fax (____)_____________
Cell (____)_____________
e-mail _________________

State Corporation Commission Name and ID Number (if applicable) _____________

3. Authorized agent name* and complete mailing address (if applicable):

Chris Davis (ReadyReef Inc)
504 Smoketree Ct
North Chesterfield, VA 23236

Contact Information:
Home (____)_____________
Work (____)_____________
Fax (____)_____________
Cell (804) 338-3103
e-mail chris.readyreef@gmail.com

State Corporation Commission Name and ID Number (if applicable) _____________

<u>* If multiple applicants, property owners, and/or agents, each must be listed and each must sign the applicant signature page.</u>

4. Provide a <u>detailed</u> description of the project in the space below, including the type of project, its dimensions, materials, and method of construction. Be sure to include how the construction site will be accessed and whether tree clearing and/or grading will be required, including the total acreage. If the project requires pilings, please be sure to include the total number, type (e.g. wood, steel, etc), diameter, and method of installation (e.g. hammer, vibratory, jetted, etc). If additional space is needed, provide a separate sheet of paper with the project description.

The project consists of installing a total of 60LF of Flexamat on the eroding bank of the Applicant's two lots. The mat will be planted with new marsh grass sprigs. All work is above MLW. A small living shoreline of clean sand and plants will be installed in place of invasive phragmities in the east basin. There will be a net gain in marsh grass.
A second phase consists of installing 103LF of Class 2 stone up and over existing, decaying bulkhead as a splashblock. Access will be through the yard.

Part 1 - General Information (continued)

5. Have you obtained a contractor for the project? x Yes* ___ No. *If your answer is "Yes" complete the remainder of this question and submit the Applicant's and Contractor's Acknowledgment Form (enclosed)

Contractor's name* and complete mailing address:

ReadyReef Inc
504 Smoketree Ct
North Chesterfield, VA
23236

Contact Information:
Home (____)____________
Work (____)____________
Fax (____)____________
Cell (804) 338-3103
email chris.readyreef@gmail.com

State Corporation Commission Name and ID Number (if applicable) ____________________

<u>* If multiple contractors, each must be listed and each must sign the applicant signature page.</u>

6. List the name, address and telephone number of the newspaper having general circulation in the area of the project. Failure to complete this question may delay local and State processing.

Name and complete mailing address:

Gazette-Journal
PO Box 2060
Gloucester, VA 23061

legals@gazettejournal.net

Telephone number
(804) 693-3101

7. Give the following project location information:

Street Address (911 address if available) 182 Bayshore Avenue North
Lot/Block/Parcel# 24A-1-2-10 and 24A-1-2-11
Subdivision____________________
City / County North, VA ZIP Code 23128
Latitude and Longitude at Center Point of Project Site (Decimal Degrees):
37.418415 / - -76.405924 (Example: 36.41600/-76.30733)

If the project is located in a rural area, please provide driving directions giving distances from the best and nearest visible landmarks or major intersections. *Note: if the project is in an undeveloped subdivision or property, clearly stake and identify property lines and location of the proposed project. A supplemental map showing how the property is to be subdivided should also be provided.*

From Gloucester Court House, take Rt. 14 East towards Mathews. After crossing the North River Bridge, turn right onto Rt. 620 (Chapel Neck Rd).
At fork in the road where the hard surface road takes a sharp right, go straight on the dirt road (Daniel Ave). Go to the end at Bayshore Community. Turn right onto Allview Street, then left onto Bayshore Ave. House #182 is on the right.

8. What are the *primary and secondary purposes of and the need for* the project? For example, the primary purpose <u>may</u> be "to protect property from erosion due to boat wakes" and the secondary purpose <u>may</u> be "to provide safer access to a pier."

The primary purpose of the project is to prevent erosion of the property's bank and to repair the protection system at the decaying bulkhead. The bulkhead has been compromised and is leaking sediment from behind it.
The secondary purpose is to install living plants in such a way that they can migrate upslope if forced by Relative Sea Level Rise, thus preventing the existing Living shoreline from being "squeezed out" at the backslope area.

Part 1 - General Information (continued)

9. Proposed use (check one):
   _X_ Single user (private, non-commercial, residential)
   ___ Multi-user (community, commercial, industrial, government)

10. Describe alternatives considered and the measures that will be taken to avoid and minimize impacts, to the maximum extent practicable, to wetlands, surface waters, submerged lands, and buffer areas associated with any disturbance (clearing, grading, excavating) during and after project construction. *Please be advised that unavoidable losses of tidal wetlands and/or aquatic resources may require compensatory mitigation.*

    All work will be done from upland lawn areas and above MHW. There will be no impact on sensitive areas. At the bottom edge of the west Flexamat installation, existing marsh grass will be flipped up seaward while the mat gets tucked in behind and below it. The grass will then be laid back down in place. There will be a net gain in grass.

11. Is this application being submitted for after-the-fact authorization for work which has already begun or been completed? ___Yes _X_No. If yes, be sure to clearly depict the portions of the project which are already complete in the project drawings.

12. Approximate cost of the entire project (materials, labor, etc.): $___________________________
    Approximate cost of that portion of the project that is channelward of mean low water:
    $0___________

13. Completion date of the proposed work: July 30 - 2021

14. Adjacent Property Owner Information: List the name and complete **mailing address**, including zip code, of each adjacent property owner to the project. (NOTE: If you own the adjacent lot, provide the requested information for the first adjacent parcel beyond your property line.) Failure to provide this information may result in a delay in the processing of your application by VMRC.

    23069

Part 2 - Signatures

1. Applicants and property owners (if different from applicant). NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, USACE, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.

In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

APPENDIX B

U.S. Army Corps
Of Engineers
Norfolk District

REGIONAL PERMIT 17 CHECKLIST

Expires: September 5, 2023

Please review the 18-RP-17 enclosure before completing this form and note 18-RP-17 can only be used for proposed <u>PRIVATE USE</u> structure(s) that comply with the terms and conditions of 18-RP-17. Copies can be obtained online at http://www.nao.usace.army.mil/Missions/Regulatory/RBregional/.

YES☐ NO☐ **(1)** Has the permittee reviewed the 18-RP-17 enclosure and verified that the proposed structure(s) is in compliance with all the terms, conditions, and limitations of 18-RP-17?

YES☐ NO☐ **(2)** Does the proposed structure(s) extend no more than one-fourth of the distance across the waterway measured from either mean high water (MHW) to MHW (including all channelward wetlands) or ordinary high water (OHW) to OHW (including all channelward wetlands)?

YES☐ NO☐ **(3)** Does the proposed structure(s) extend no more than 300 feet from MHW or OHW (including all channelward wetlands)?

YES☐ NO☐ N/A☐ **(4)** Does the proposed structure(s) attach to the upland at a point landward of MHW or OHW (including all channelward wetlands)?

YES☐ NO☐ N/A☐ **(5)** If the proposed structure(s) crosses wetland vegetation, is it an open-pile design that has a <u>maximum</u> width of five (5) feet and a <u>minimum</u> height of four (4) feet between the decking and the wetland substrate?

YES☐ NO☐ N/A☐ **(6)** Does the proposed structure(s) include no more than two (2) boatlifts and no more than two (2) boat slips?

YES☐ NO☐ N/A☐ **(7)** Is the open-sided roof structure designed to shelter a boat ≤ 700 square feet and/or is the open sided roof structure or gazebo structure designed to shelter a pier ≤ 400 square feet?

YES☐ NO☐ N/A☐ **(8)** Are all piles associated with the proposed structure(s) non-steel, less than or equal to 12” in diameter, and will less than or equal to 25 piles be installed channelward of MHW?

YES☐ NO☐ N/A☐ **(9)** Is all work occurring behind cofferdams, turbidity curtains, or other methods to control turbidity being utilized when operationally feasible and federally listed threatened or endangered species may be present?

YES☐ NO☐ N/A☐ **(10)** If the proposed structure(s) is to be located within an anadromous fish use area, the prospective permittee will adhere to the anadromous fish use area time of year restriction (TOYR) prohibiting in-water work from occurring between February 15 through June 30 of any given year if (1) piles are to be installed with a cushioned impact hammer and there is less than 492 feet between the most channelward pile and mean low water (MLW) on the opposite shoreline or (2) piles are to be installed with a vibratory hammer and there is less than 384 feet between the most channelward pile and MLW on the opposite shoreline.

YES☐ NO☐ **(11)** Is all work occurring outside of submerged aquatic vegetation (SAV) mapped by the Virginia Institute of Marine Sciences’ (VIMS) most recent survey year and 5 year composite?

YES☐ NO☐ **(12)** Has the permittee ensured the construction and/or installation of the proposed structure(s) will not affect federally listed threatened or endangered species or designated critical habitat?

YES☐ NO☐ **(13)** Will the proposed structure be located outside of Broad Creek in Middlesex County, Fisherman’s Cove in Norfolk, or the Salt Ponds in Hampton?

YES☐ NO☐ **(14)** Will the proposed structure(s) be located outside of the waterways containing a Federal Navigation Project listed in Permit Specific Condition 12 of 18-RP-17 and/or will all portions of the proposed structure(s) be located more than 85 feet from the Federal Navigation Project?

YES☐ NO☐ **(15)** Will the proposed structure(s) be located outside a USACE Navigation and Flood Risk Management project area?

YES☐ NO☐ **(16)** Will the proposed structure(s) be located outside of any Designated Trout Waters?

YES☐ NO☐ N/A☐ **(17)** If the proposed structure(s) includes flotation units, will the units be made of materials that will not become waterlogged or sink if punctured?

YES☐ NO☐ N/A☐ **(18)** If the proposed structure(s) includes flotation units, will the floating sections be braced so they will not rest on the bottom during periods of low water?

YES☐ NO☐ **(19)** Is the proposed structure(s) made of suitable materials and practical design so as to reasonably ensure a safe and sound structure?

YES☐ NO☐ **(20)** Will the proposed structure(s) be located on the property in accordance with the local zoning requirements?

YES☐ NO☐ N/A☐ **(21)** If the proposed structure(s) includes a device used for shellfish gardening, will the device be attached directly to a pier and limited to a total of 160 square feet?

YES☐ NO☐ N/A☐ **(22)** If the proposed structure(s) includes a device used for shellfish gardening, does the permittee recognize this RP does not negate their responsibility to obtain an oyster gardening permit (General Permit #3) from Virginia Marina Resources Commission's Habitat Management Division?

YES ☐NO ☐ **(23)** Does the permittee recognize this RP does not authorize any dredging or filling of waters of the United States (including wetlands) and does not imply that future dredging proposals will be approved by the Corps?

YES☐ NO☐ **(24)** Does the permittee understand that by accepting 18-RP-17, the permittee accepts all of the terms and conditions of the permit, including the limits of Federal liability contained in the 18-RP-17 enclosure? Does the permittee acknowledge that the structures permitted under 18-RP-17 may be exposed to waves caused by passing vessels and that the permittee is solely responsible for the integrity of the structures permitted under 18-RP-17 and the exposure of such structures and vessels moored to such structures to damage from waves? Does the permittee accept that the United States is not liable in any way for such damage and that it shall not seek to involve the United States in any actions or claims regarding such damage?

IF YOU HAVE ANSWERED "NO" TO ANY OF THE QUESTIONS ABOVE, REGIONAL PERMIT 17 (18-RP-17) DOES NOT APPLY AND YOU ARE REQUIRED TO OBTAIN WRITTEN AUTHORIZATION FROM THE CORPS PRIOR TO PERFORMING THE WORK.

IF YOU HAVE ANSWERED "YES" (OR "N/A", WHERE APPLICABLE) TO ALL OF THE QUESTIONS ABOVE, YOU ARE IN COMPLIANCE WITH REGIONAL PERMIT 17 (18-RP-17). PLEASE SIGN BELOW, ATTACH, AND SUBMIT THIS CHECKLIST WITH YOUR COMPLETED JOINT PERMIT APPLICATION (JPA). THIS SIGNED CERTIFICATE SERVES AS YOUR LETTER OF AUTHORIZATION FROM THE CORPS. YOU WILL NOT RECEIVE ANY OTHER WRITTEN AUTHORIZATION FROM THE CORPS; HOWEVER, YOU MAY NOT PROCEED WITH CONSTRUCTION UNTIL YOU HAVE OBTAINED ALL OTHER NECESSARY STATE AND LOCAL PERMITS.

I CERTIFY THAT I HAVE READ AND UNDERSTAND ALL CONDITIONS OF THE REGIONAL PERMIT 17 (18-RP-17), DATED SEPTEMBER 2018, ISSUED BY THE US ARMY CORPS OF ENGINEERS, NORFOLK DISTRICT REGULATORY BRANCH (CENAO-WRR), NORFOLK, VIRGINIA.

Proposed work to be located at:

Part 3 – Appendices

Please complete and submit the appendix questions applicable to your project, and attach the required vicinity map(s) and drawings to your application. If an item does not apply to your project, please write "N/A" in the space provided.

Appendix A: (TWO PAGES) Projects for Access to the water such as private and community piers, boathouses, marinas, moorings, and boat ramps. Answer all questions that apply.

1. **Briefly describe your proposed project**.

2. **For private, noncommercial piers:**
   Do you have an existing pier on your property? ____Yes____ No
   If yes, will it be removed? ____Yes ____No
   Is your lot platted to the mean low water shoreline? ____Yes ____No
   What is the overall length of the proposed structure? ________feet.
   Channelward of Mean High Water? ________feet.
   Channelward of Mean Low Water? ________feet.
   What is the area of the piers and platforms that will be constructed over
   Tidal non-vegetated wetlands __________ square feet.
   Tidal vegetated wetlands _________ square feet.
   Submerged lands __________square feet.
   What is the total size of any and all L- or T-head platforms?_______sq. ft.
   For boathouses, what is the overall size of the roof structure? ________sq. ft.
   Will your boathouse have sides?_____Yes____ No.

   NOTE: All proposals for piers, boathouses and shelter roofs must be reviewed by the Virginia Marine Resources Commission (Commission or VMRC), however, pursuant to § 28.2-1203 A 5 of the Code of Virginia a VMRC permit may not be required for such structures (except as required by subsection D of § 28.2-1205 for piers greater than 100 feet in length involving commercially productive leased oyster or clam grounds), provided that (i) the piers do not extend beyond the navigation line or private pier lines established by the Commission or the United States Army Corps of Engineers (USACE), (ii) the piers do not exceed six feet in width and finger piers do not exceed five feet in width, (iii) any L or T head platforms and appurtenant floating docking platforms do not exceed, in the aggregate, 400 square feet, (iv) if prohibited by local ordinance open-sided shelter roofs or gazebo-type structures shall not be placed on platforms as described in clause (iii), but may be placed on such platforms if not prohibited by local ordinance, and (v) the piers are determined not to be a navigational hazard by the Commission. Subject to any applicable local ordinances, such piers may include an attached boat lift and an open-sided roof designed to shelter a single boat slip or boat lift. In cases in which open-sided roofs designed to shelter a single boat, boat slip or boat lift will exceed 700 square feet in coverage or the open-sided shelter roofs or gazebo structures exceed 400 square feet, and in cases in which an adjoining property owner objects to a proposed roof structure, permits shall be required as provided in § 28.2-1204.

Part 3 – Appendices (continued)

3. **For USACE permits**, in cases where the proposed pier will encroach beyond one fourth the waterway width (as determined by measuring mean high water to mean high water or ordinary high water mark to ordinary high water mark), the following information must be included before the application will be considered complete. For an application to be considered complete:

   a. The USACE MAY require depth soundings across the waterway at increments designated by the USACE project manager. Typically 10-foot increments for waterways less than 200 feet wide and 20-foot increments for waterways greater than 200 feet wide with the date and time the measurements were taken and how they were taken (e.g., tape, range finder, etc.).
   b. The applicant MUST provide a justification as to purpose if the proposed work would extend a pier greater than one-fourth of the distance across the open water measured from mean high water or the channelward edge of the wetlands.
   c. The applicant MUST provide justification if the proposed work would involve the construction of a pier greater than five feet wide or less than four feet above any wetland substrate.

4. Provide the type, size, and registration number of the vessel(s) to be moored at the pier or mooring buoy.

   Type Length Width Draft Registration #

   ____
   ____
   ____

5. For **Marinas, Commercial Piers, Governmental Piers, Community Piers and other non-private piers**, provide the following information:
   A) Have you obtained approval for sanitary facilities from the Virginia Department of Health?___________ (required pursuant to Section 28.2-1205 C of the Code of Virginia).
   B) Will petroleum products or other hazardous materials be stored or handled at your facility?_______________.
   C) Will the facility be equipped to off-load sewage from boats?__________.
   D) How many wet slips are proposed?_______. How many are existing?______.
   E) What is the area of the piers and platforms that will be constructed over
      Tidal non-vegetated wetlands __________ square feet
      Tidal vegetated wetlands _________ square feet
      Submerged lands __________square feet

6. For **boat ramps**, what is the overall length of the structure?________feet.
   From Mean High Water?________feet.
   From Mean Low Water?________feet.

   Note: drawings must include the construction materials, method of installation, and all dimensions. If tending piers are proposed, complete the pier portion.

   Note: If dredging or excavation is required, you must complete the Standard Joint Point Permit application.

Part 3 – Appendices (continued)

Appendix B: Projects for Shoreline Stabilization in tidal wetlands, tidal waters and dunes/beaches including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, and living shoreline projects. Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service or VIMS**.**

NOTE: It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1). **Information on non-structural, vegetative alternatives (i.e., Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html.**

1. Describe each **revetment, bulkhead, marsh toe, breakwater, groin, jetty, other structure, or living shoreline project** separately in the space below. Include the overall length in linear feet, the amount of impacts in acres, and volume of associated backfill below mean high water and/or ordinary high water in cubic yards, as applicable:

   Two 8' x 30' rolls of Flexamat will be used, with about half in the RPA zone and half in the upper part of the 1.5x Tide Range zone.

   3 cuyds of clean sand will be used to grade a 3:1 slope under the Flexamat.
   The balance of 1 truckload of sand will be put into the eastern basin to achieve a 10:1 slope overtop of where phragmities will be treated. Then this area will be planted with new marsh grass sprigs.

2. What is the maximum encroachment channelward of mean high water? 0 feet.
   Channelward of mean low water? 0 feet.
   Channelward of the back edge of the dune or beach? 3 feet.

3. Please calculate the square footage of encroachment over:
   - Vegetated wetlands 0 square feet
   - Non-vegetated wetlands 280 square feet
   - Subaqueous bottom 0 square feet
   - Dune and/or beach 0 square feet

4. For bulkheads, is any part of the project maintenance or replacement of a previously authorized, currently serviceable, existing structure? ____ Yes____ No.

   If yes, will the construction of the new bulkhead be no further than two (2) feet channelward of the existing bulkhead? _____Yes ____No.

   If no, please provide an explanation for the purpose and need for the additional encroachment.

Part 3 – Appendices (continued)

5. Describe the type of construction and **all** materials to be used, including source of backfill material, if applicable (e.g., vinyl sheet-pile bulkhead, timber stringers and butt piles, 100% sand backfill from upland source; broken concrete core material with Class II quarry stone armor over filter cloth).
NOTE: **Drawings must include construction details, including dimensions, design and all materials, including fittings if used**.

Clean sand from upland pit meeting USACE sand specifications.
Nursery grown marsh grass plants.
Flexamat specifications provided as an attachment.

Steel Rebar anchors for the Flexamat.

6. If using stone, broken concrete, etc. for your structure(s), what is the average weight of the:
Core (inner layer) material__________ pounds per stone Class size ________
Armor (outer layer) material __________ pounds per stone Class size ________

7. For **beach nourishment**, including that associated with breakwaters, groins or other structures, provide the following:

• Volume of material	0	cubic yards channelward of mean low water
	7	cubic yards landward of mean low water
	7	cubic yards channelward of mean high water
	3	cubic yards landward of mean high water
• Area to be covered	0	square feet channelward of mean low water
	600	square feet landward of mean low water
	300	cubic yards channelward of mean high water
	300	cubic yards landward of mean high water

- Source of material, composition (e.g. 90% sand, 10% clay): 93% sand, 7% clay
- Method of transportation and placement:
  Truck transport from Middlesex pit, dump on client lot, skid steer transport over yard to deposition site for grading and packing.
- Describe any proposed vegetative stabilization measures to be used, including planting schedule, spacing, monitoring, etc. Additional guidance is available at http://www.vims.edu/about/search/index.php?q=planting+guidelines:

  Flexamat will be planted one foot on center with the elevation appropriate Spartina Grass.

  Grasses will be monitored three times in the first year and twice in the second year. They are covered under contractor warranty for two years.

Attachment 6: Flood Prevention Project and its Relevance to Other Projects

MPPDC staff have worked throughout the years to understand the policy, research and impacts of flooding (ie. stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change & Sea Level Rise (2009 to 2012)
The MPPDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, MPPDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally Phase 3 focused on developing adaptation public policies in response to the assessments.

Phase 1: Middle Peninsula Climate Change Adaptation: Facilitation of Presentations and Discussions of Climate Change Issues with Local Elected Officials and the General Public
Phase 2: Climate Change III: Initiating Adaptation Public Policy Development
Phase 3: Phase 3 Climate Change: Initiating Adaptation Public Policy Development

Emergency Management - Hazard Mitigation Planning (2009 to Present): Since 2009, the Middle Peninsula Planning District Commission has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. *The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise* (ie. Mean High Higher Water and the NOAA 2060 intermediate-high scenario), *and flooding (coastal and riverine flooding) that estimates losses from each hazard.* The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014): In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, OSDS management, storm water management, TMDLs, etc, staff from the Middle Peninsula Planning District Commission (MPPDC) will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and Onsite Sewage Disposal System (OSDS) and

community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The Virginia Department of Conservation and Recreation requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the MPPDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The MPPDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014): MPPDC staff and Draper Aden Associates worked with localities (i.e. Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional VSMP.

Mathews County Rural Ditch Enhancement Study (2015): In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015): This report explored the enabling mechanism in
which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical

assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the MPPDC developed the MPPDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the MPPDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in VRA loan funding and ~$400,000 in NFWF grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. MPPDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project - VCPC White Papers (2017): This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017): This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018): This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018): VIMS Shoreline Studies Program worked with the PAA to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020): The Fight the Flood was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic

Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

Re: Riprap repair and backfill. Property located at 182 Bayshore Ave, Mathews, VA.

Dear Mr. Wuckovich:

We appreciate the opportunity to quote on your proposed marine project.

R & W MARINE CONSTRUCTION, INC. proposes the work mentioned below:

1. Adding ½ ton of class II riprap to 80' of existing riprap. Excavating 3'x 5'x 80' behind existing wall, installing filter cloth and backfilling with a clay/sand material. Cover with topsoil and grass seed	20,550.00
TOTAL COST	$20,550.00

Should you have any questions concerning this proposal, please contact our office.

Sincerely,

Laura Morgan

To: Jackie Rickards <jrickards@mppdc.com>
Subject: Re: FTF Grant Application Development - Introduction and Invoice_Round 2

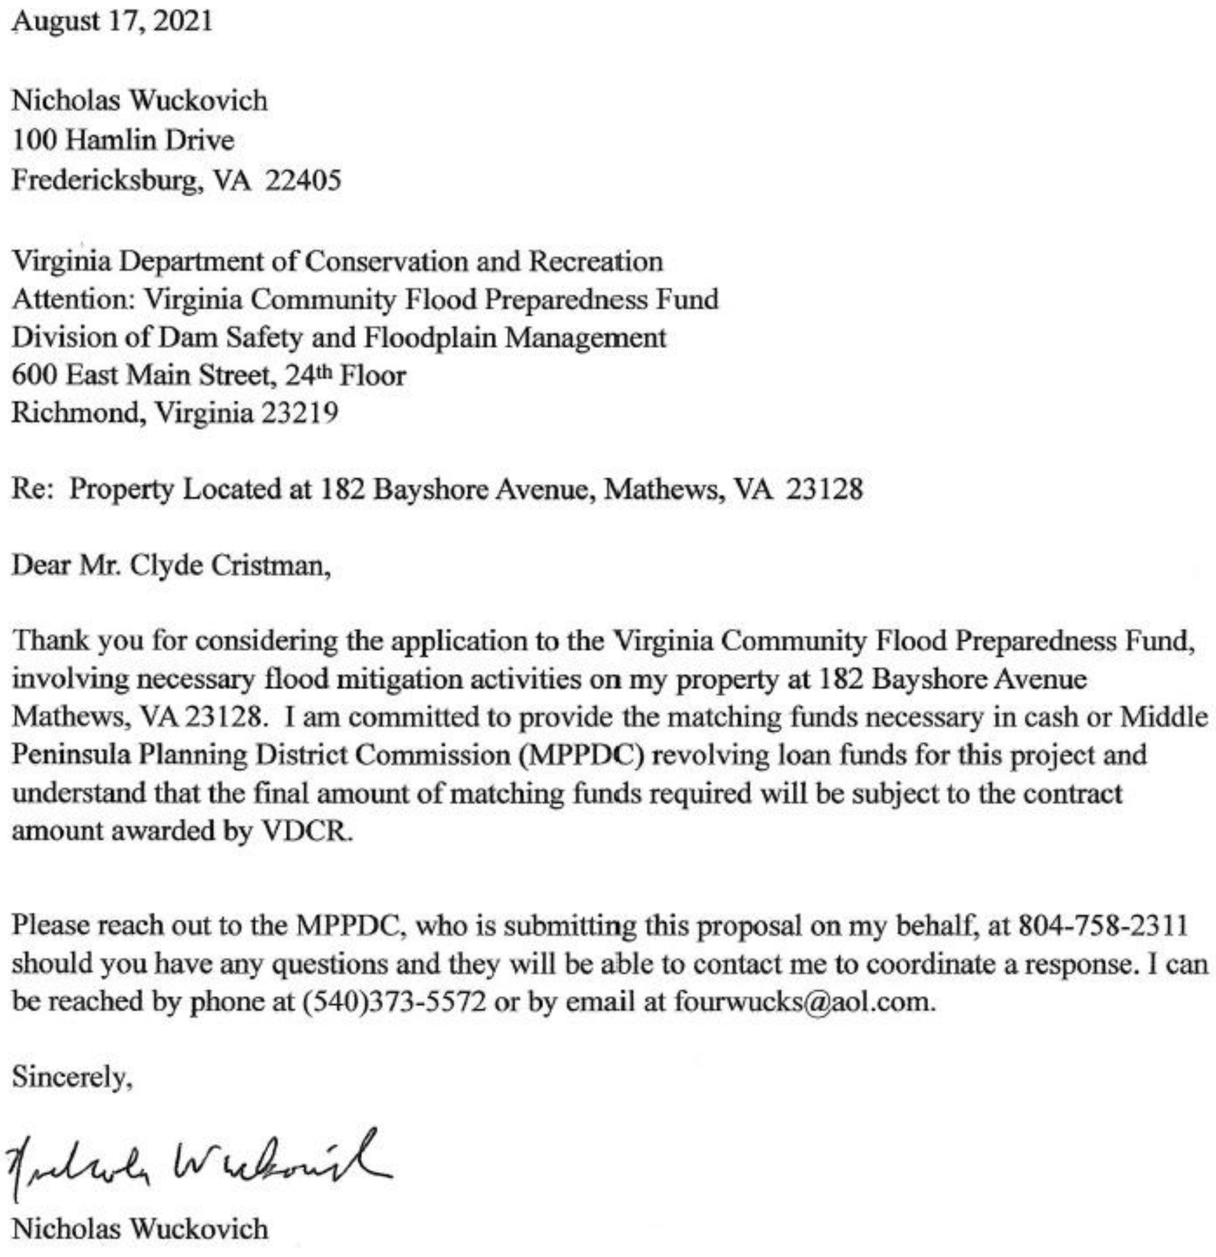
Received the detailed estimate from our living shoreline contractor. He has adjusted his quote. See new number and details below:

Reefs: $13,500
Barge fee: $1000
Crane Truck: $3000
Dock Work: $1500
Extra Anchors for Flexamat: $600
Flexamat: $33,120
Sand (15 truckloads): $5850
Sand Distribution: $3500
Sand Packing: $600
Sub- Total: $62,670
Total with General Contractor Margin added: $72,070

Let us know if you need additional information.

Kim and Nick Wuckovich

Attachment 8: Match Commitment Letters



August 17, 2021

Re: Property Located at 182 Bayshore Avenue, Mathews, VA 23128

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 182 Bayshore Avenue Mathews, VA 23128. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

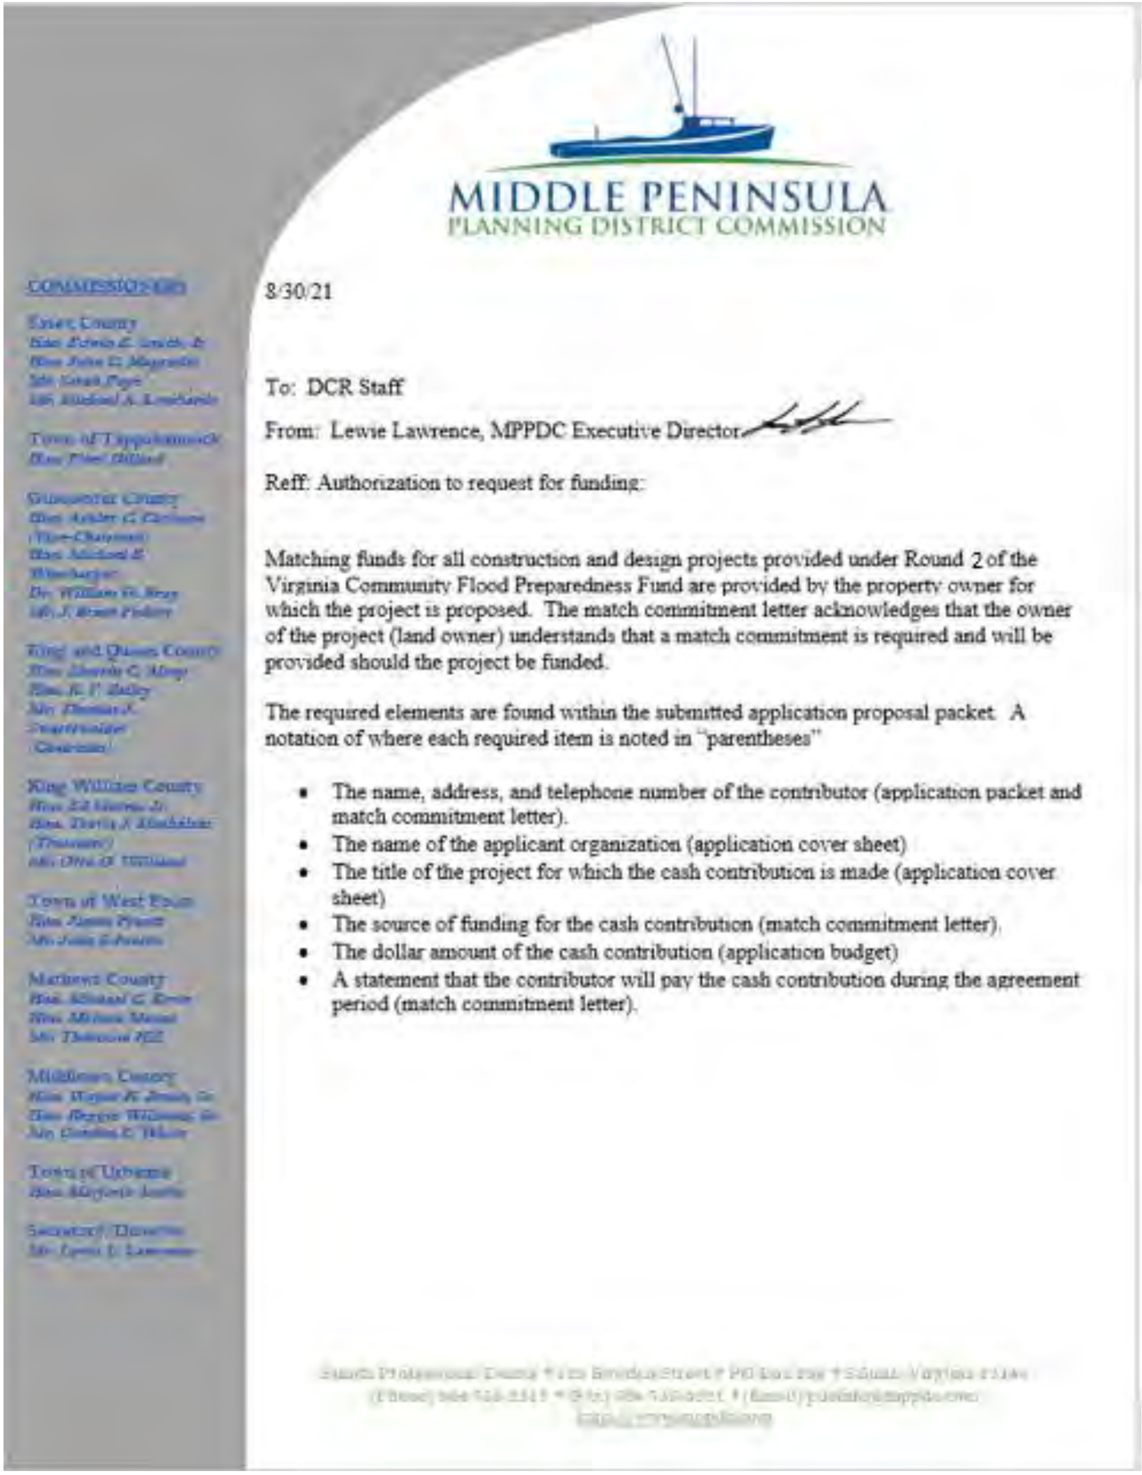
Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at (540)373-5572 or by email at fourwucks@aol.com.

Sincerely,

Nicholas Wuckovich

Nicholas Wuckovich

Attachment 9: Authorization to request for funding



8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 2 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Robinson Shoreline Construction** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

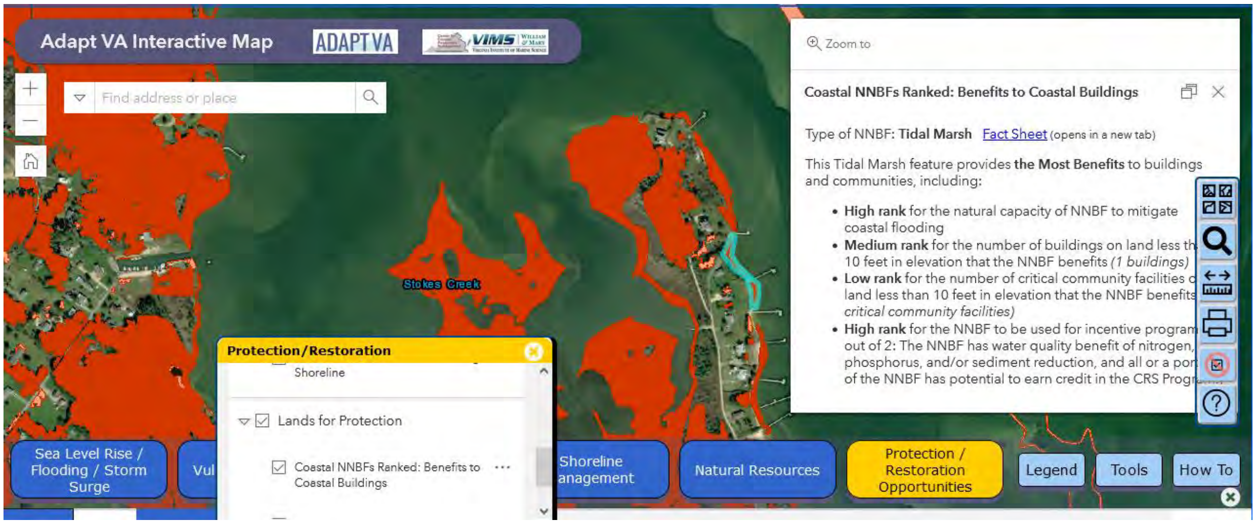
Issue #2

DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit.



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **Medium rank** for the number of buildings on land less th 10 feet in elevation that the NNBF benefits *(1 buildings)*
- **Low rank** for the number of critical community facilities o land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Progr

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes __X__ No ____

Project Grants (Check All that Apply)

☐ **Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.**

☑ **Wetland restoration.**

☑Floodplain restoration.

☐ Construction of swales and settling ponds.

☑Living shorelines and vegetated buffers.

☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.

☐ Storm water system upgrades.

☐ Medium and large-scale Low Impact Development (LID) in urban areas.

☐ Permanent conservation of undeveloped lands identified as having flood resilience value by ConserveVirginia Floodplain and Flooding Resilience layer or a similar data driven analytic tool.

☐ Dam restoration or removal.

☑ Stream bank restoration or stabilization.

☑ Restoration of floodplains to natural and beneficial function.

☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Mathews County
NFIP Community Identification Number (CID#) (See appendix F): 510096

Is Project Located in an NFIP Participating Community? ☑ Yes ☐ No
Is Project Located in a Special Flood Hazard Area? ☑ Yes ☐ No Flood Zone(s) (If Applicable): VE Zone
Flood Insurance Rate Map Number(s) (If Applicable): 51115C0060E

Total Cost of Project: **$63,279**

Total Amount Requested **$50,624**

INTRODUCTION –

FEMA, Virginia General Assembly, DCR's Floodplain Management Program, and the Middle Peninsula PDC all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes and territories and the citizens which reside and work there. These hazards include flooding, drought, hurricanes, landslides, wildfires and more. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program (www.FightTheFloodVA.com). This proposal is a Nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features or processes into the built environment to promote adaptation and resilience. Further, this proposal incorporates natural features and processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. These benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life (*FEMA Building Community Resilience with Nature Based Solutions*, June 2021).

Specifically, this project proposes to construct a nature-based solution on a private property located on the Chesapeake Bay in Mathews County. The nature-based solution will entail the installation of a 75 linear feet breakwater, 412 cubic yards of beach nourishment and 100 linear feet of living shoreline. This project will be a partnership between the MPPDC and one private property owner and is supported by Mathews County (See the community support letter in **Attachment 1**).

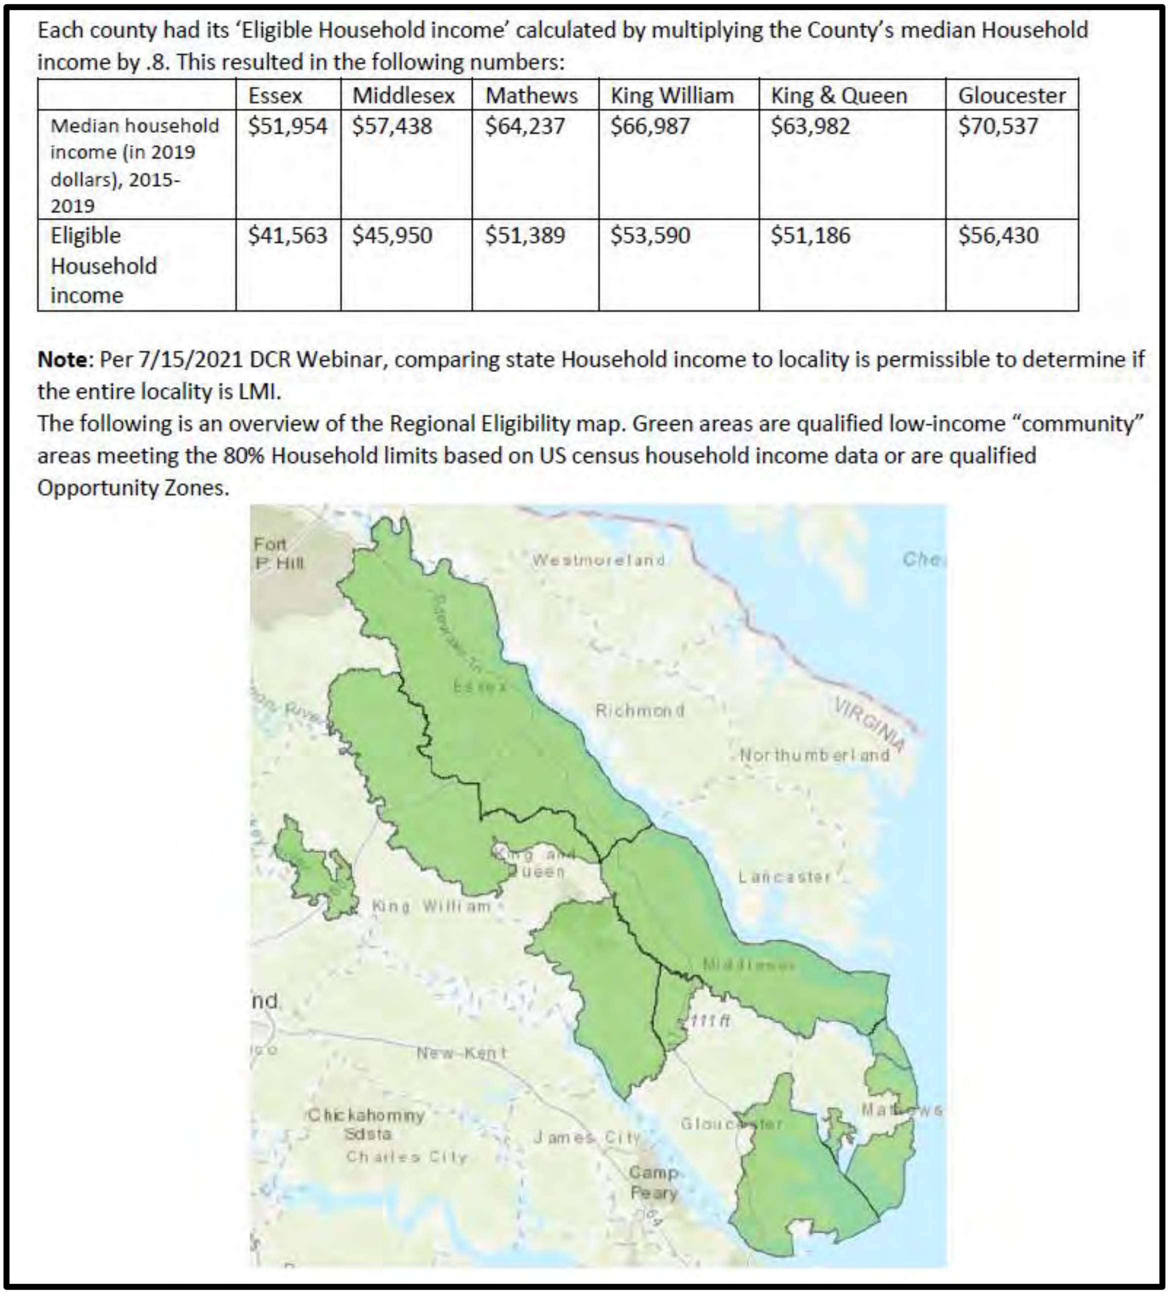
PROJECT LOCATION INFORMATION – This project proposes to construct a nature-based solution on one private property on the Chesapeake Bay in Mathews County (**Figure 1 and 2**).

FIGURE 1: COUNTY MAP OF PROJECT LOCATION.

FIGURE 2: PARCEL MAP OF PROJECT LOCATION.

Mathews County is located at the eastern edge of Virginia's Middle Peninsula and has an abundance of forests, wetlands, and special environmental areas. The County is comprised of 86 square miles of land and 350 miles of shorelines. Based on 2020 Census Data, Mathews County's population totals 8,533. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 3** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

FIGURE 3: MAP OF MIDDLE PENINSULAS LOW INCOME GEOGRAPHIC AREAS QUALIFYING UNDER DCR GUIDELINES.



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

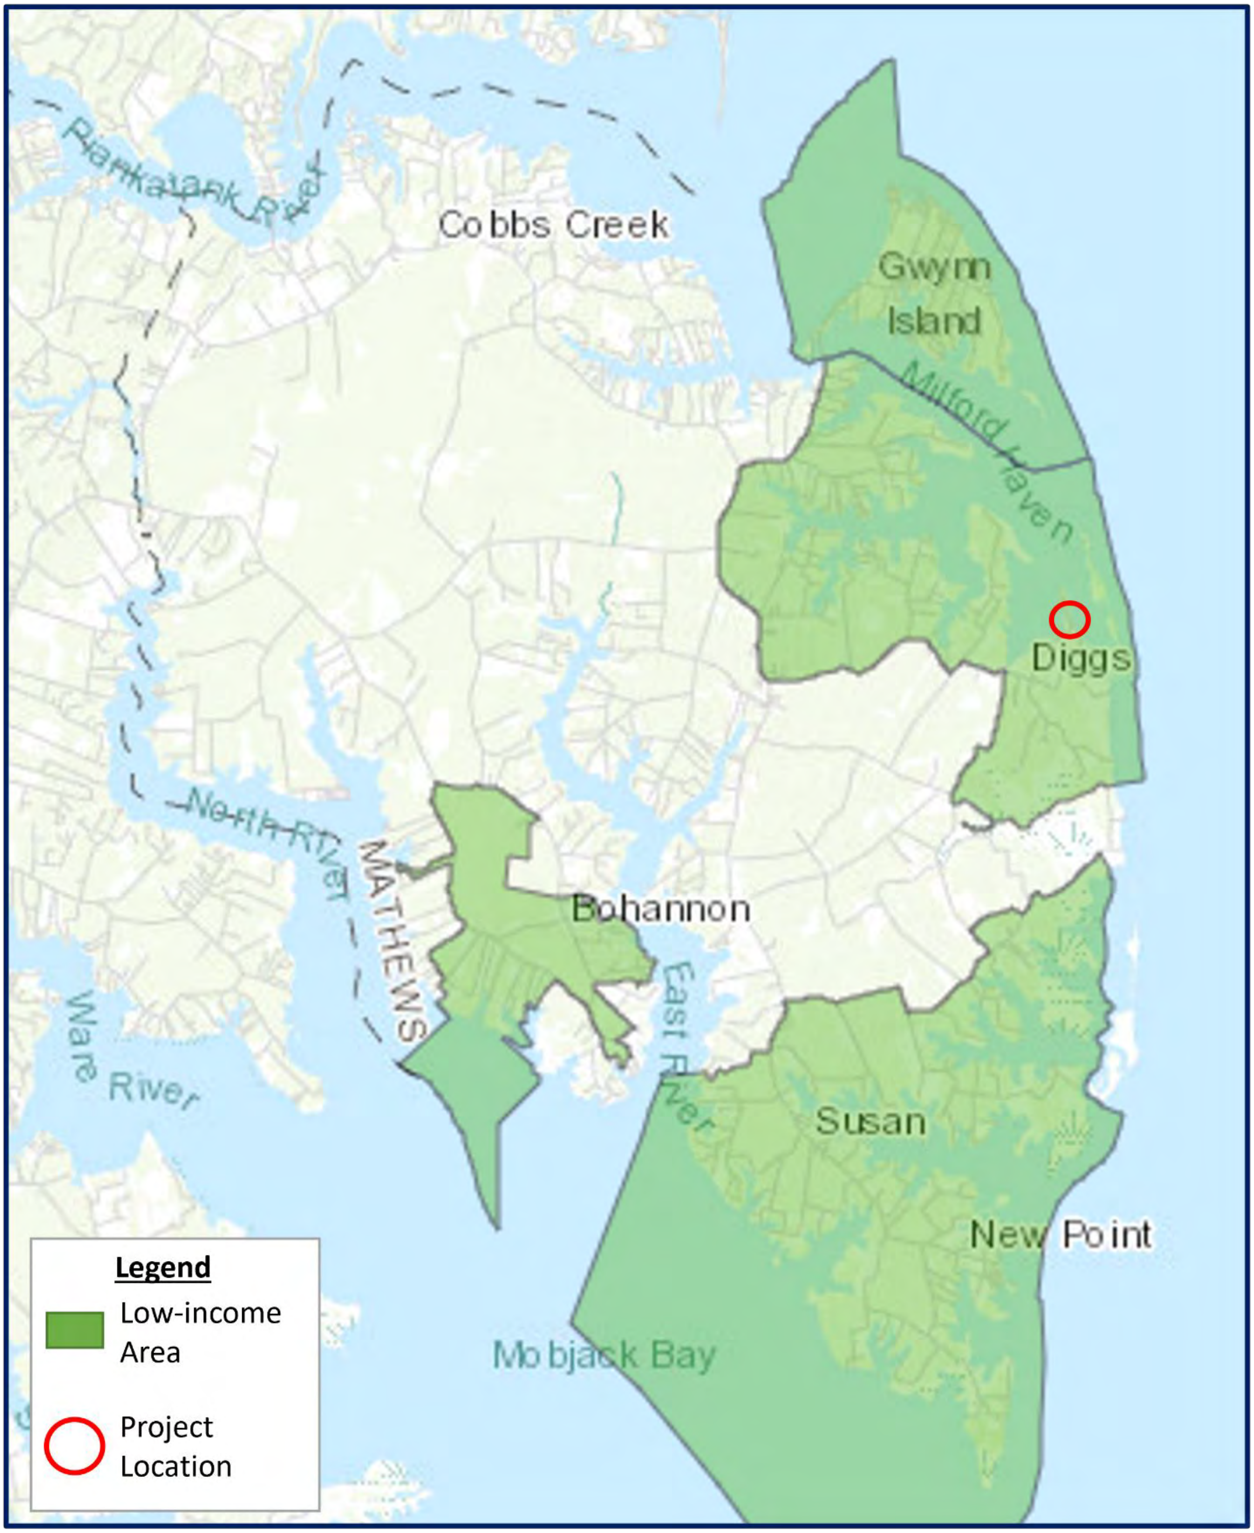
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

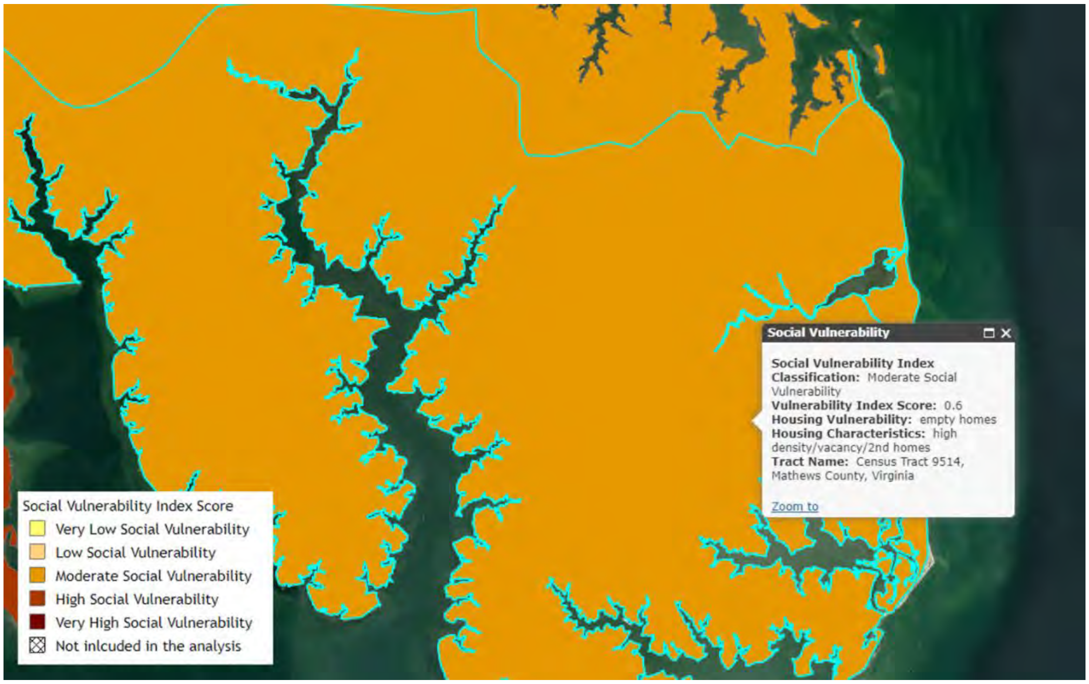
Please see **Figure 4** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

FIGURE 4: MAP OF THE PROJECT LOCATION WITHIN THE GREEN LOW-INCOME AREA.



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score (**Figure 5**). Additionally, the FEMA National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, classifies the site's social vulnerability as relatively moderate level of vulnerability, which is in agreement with h VDAPT Social Vulnerability Index Score (**Figure 6**).

FIGURE 5: VIRGINIA'S SOCIAL VULNERABILITY INDEX SCORE MAP FOR THE PROJECT LOCATION.



Social Vulnerability

Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.6
Housing Vulnerability: empty homes

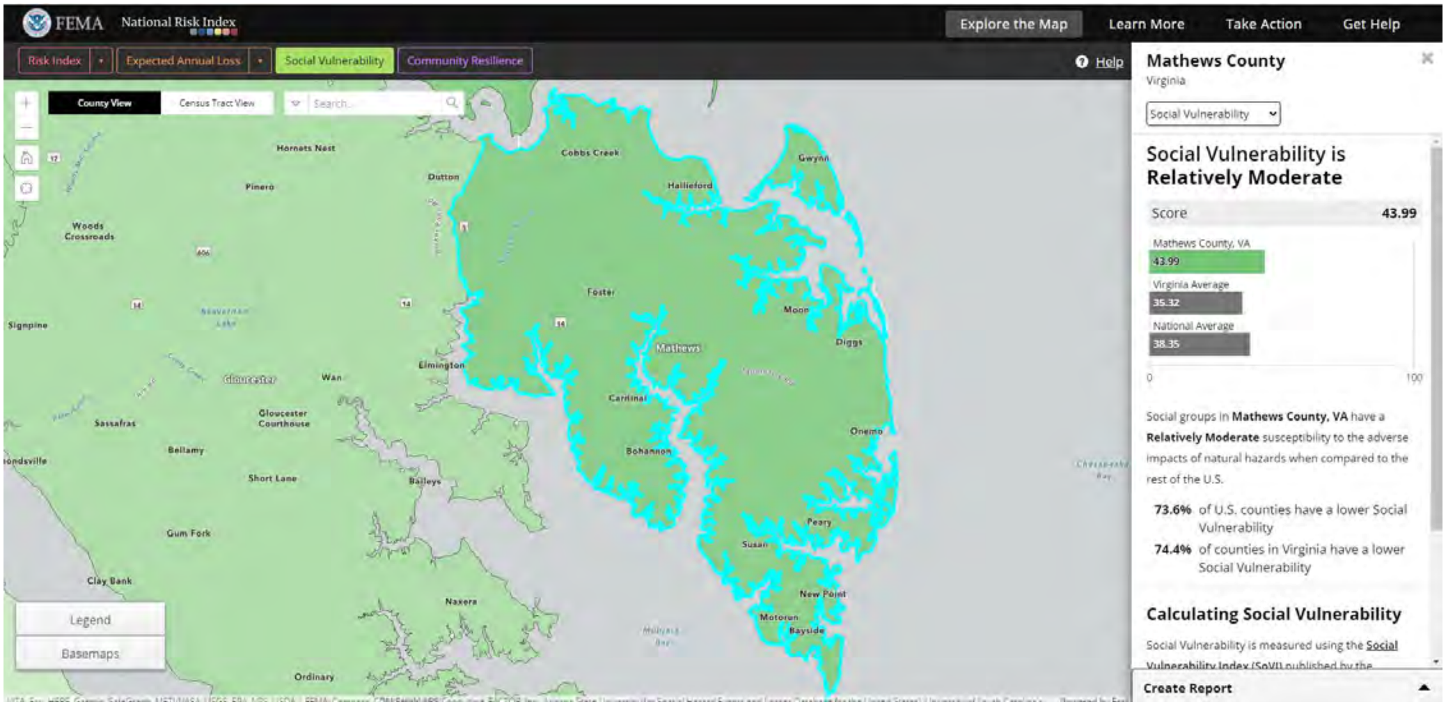
FIGURE 6: FEMA NATION RISK INDEX OF CENSUS TRACK WHERE THE PROJECT LOCATION.



Mathews County
Virginia

Social Vulnerability is Relatively Moderate

Score	43.99
Mathews County, VA	43.99
Virginia Average	35.32
National Average	38.35

Social groups in **Mathews County, VA** have a **Relatively Moderate** susceptibility to the adverse impacts of natural hazards when compared to the rest of the U.S.

73.6% of U.S. counties have a lower Social Vulnerability
74.4% of counties in Virginia have a lower Social Vulnerability

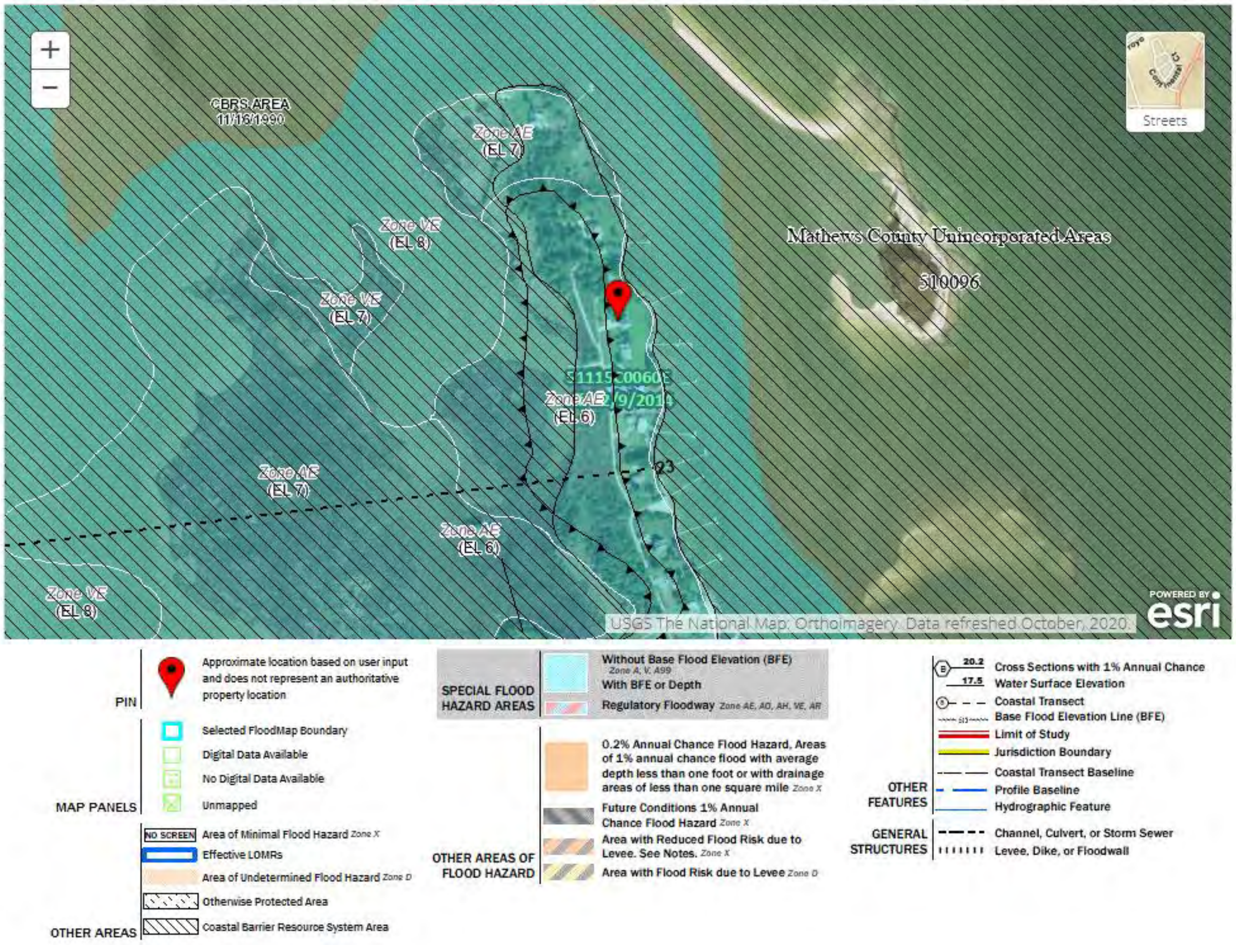
Calculating Social Vulnerability

Social Vulnerability is measured using the Social Vulnerability Index (SoVI) published by the

Create Report

The project is located at 162 Rigby Lane Diggs, VA 23045 (37.449067, -76.260698). The construction project will involve the installation of a 75 linear feet breakwater, 412 cubic yards of beach nourishment, and 100 linear feet of living shoreline. Within the project area there are 2 structures on the property including 1 residential home and 1 detached garage. Additionally, between the residential home and the Chesapeake Bay sits the residential septic system. Based on the location of the septic drain field and its proximity to the Bay, the drain field is at high risk of flooding and ultimately causing local water quality impairments. The structures are not classified as severe repetitive loss structures or repetitive loss structures. This site is located within the VE flood zone (**Figure 7**). Please see **Attachment 2** for the FIRMettes (last mapped 12/09/2014).

FIGURE 7: MAP OF FEMA FLOOD ZONES.



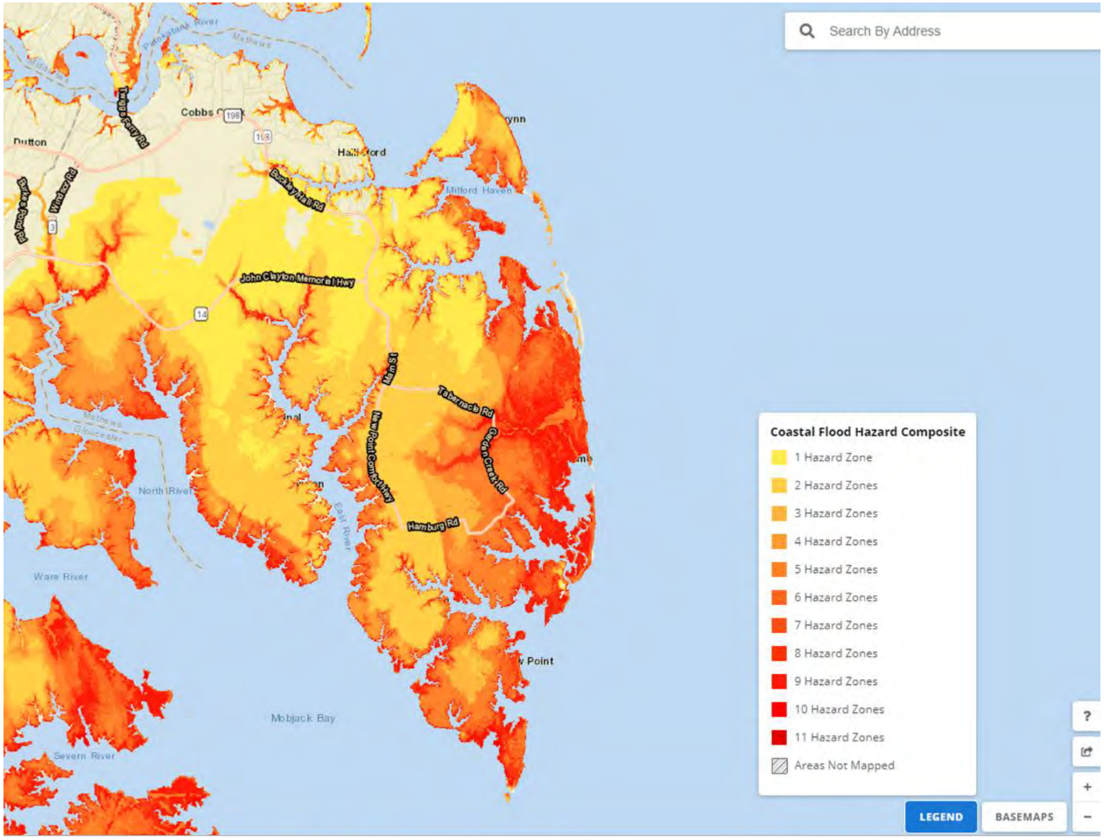
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 8** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 6,345.5 square feet of shoreline. Additionally, Figure 9 shows that approximately a quarter mile from the shoreline there was once a robust barrier island, known as Rigby Island, that protected this area of Mathews County from direct wave energy and winds from the Chesapeake Bay; however, between 1937 to 2017 Rigby Island has shrunk to less than a quarter of what it was. Consequently, this exposes the project location to the Chesapeake Bay and the site continues to become increasingly vulnerability to impacts by tropical, sub-tropical, and nor'easter events. **Attachment 3** lists 82 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

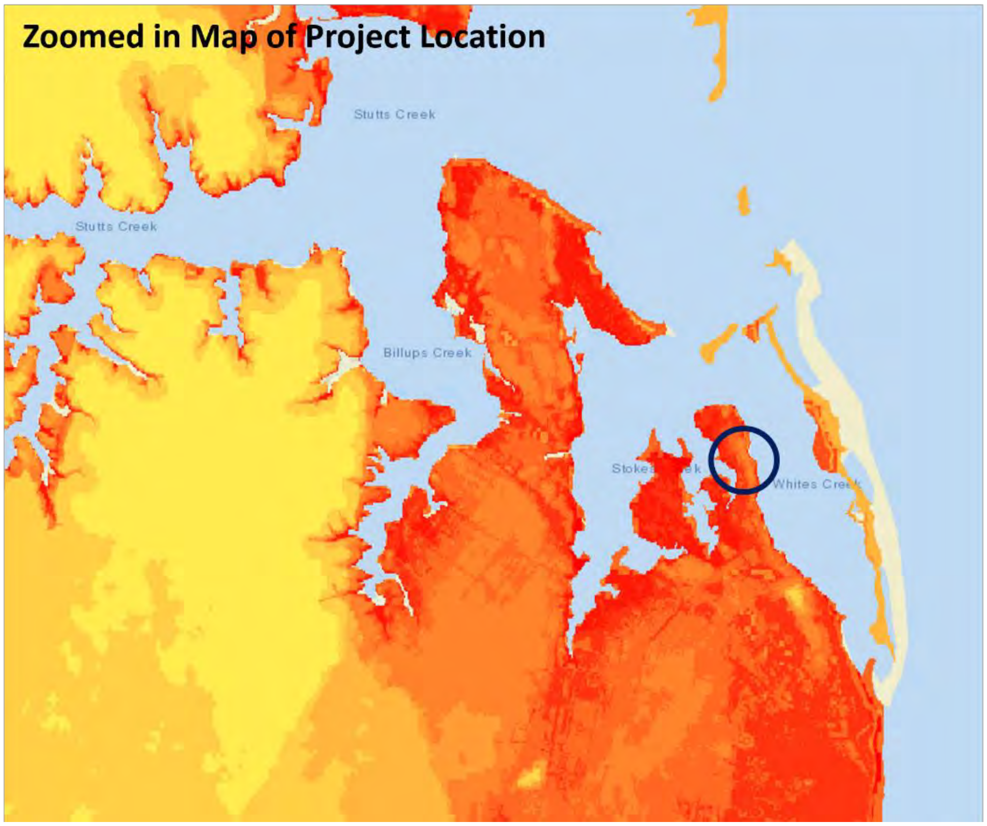
FIGURE 8: PROJECT LOCATION AND MAP OF THE SHORELINE CHANGE BETWEEN 1937 AND 2017. PLEASE NOTE THAT THE PROJECT AREA PARCEL IS OUTLINED IN WHITE.

FIGURE 9: MAP OF PROJECT LOCATION AND THE SHRINKING RIGBY ISLAND.

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding (**Figure 10**).

FIGURE 10: MAP OF PROJECT LOCATION AND RISK OF COASTAL FLOODING (NOAA, 2021).





For more information about this project area please see:

- Mathews County Building Department administers the NFIP. Here is the link to the current floodplain ordinance: https://ecode360.com/8426620

NEED FOR ASSISTANCE –

The Middle Peninsula Planning District Commission (MPPDC) is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 to provide solutions to problems of greater than local significance and cost-savings through economies of scale. The MPPDC serves nine localities of the Middle Peninsula including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna.

MPPDC is staffed using multiple methods including co-operative procurement, hourly, and burdened staff. MPPDC staff consists of Executive Director, Deputy Director, Chief Financial Officer, Senior Project Planner, clerical support staff; co-operative procured Director of Planning, General Planner, Certified Flood Plain Manager, Transportation Planner, Emergency Planner; Hourly staff for Housing, Community Development Planner and Public relations.

The PDC staffing team assists localities with long-term and/or regional planning efforts. The MPPDC Executive Director, Deputy Director, and Chief Financial Officer have decades of experience in managing and administering project grants at multiple scale from grants in excess of $1,000,000 to very small grants. MPPDC is an entrepreneurial based government agency with an annual operating budget ranging from $750,000 to over $1,000,000. The MPPDC manages annually 25-30 concurrent federal and state grants utilizing industry standard Grants Management Software. Staff utilize GIS and all Microsoft software as well as other software as required by different grants. The MPPDC operates service centers in the topical areas of coastal zone management, emergency planning, housing, transportation planning and transportation demand management, economic development, social assistance, small business development, general planning and technical assistance and other areas as determined by the Commission. MPPDC has over 25 years of experience managing multiple revolving loan programs. In the 25 years that the Executive Director has been employed by the Commission no audit findings have occurred.

The need for assistance is two-fold.

First, Mathews County's proximity to the Chesapeake Bay and numerous tidal rivers, coupled with the County's low elevation, creates an area at high risk of coastal flooding, sea-level rise, and storm surge. Based on tidal gauge data from the Virginia Institute of Marine Science (VIMS), relative sea level rise rates ranging from 0.11-0.23 in./yr. (2.9-5.8 mm/yr.; period: 1976-2007; 10 stations) within the Chesapeake Bay region, which are the highest rates reported along the U.S. Atlantic coast (Boon et al. 2010). In addition to sea level rise, Mathews County has a history of being impacted by hurricanes, tropical storms, and recurrent flooding. As storms pass over or near the coast the atmospheric pressure drops, causing a large volume of sea water to build up, eventually being pushed ashore by the storm's winds causing a storm surge. Additionally, when a storm makes landfall at high tide, the storm surge and the added water from the tidal fluctuation combine to create a "storm tide". In Mathews County, tidal waters fluctuate twice daily from 1.2 feet above mean sea level to 1.2 feet below mean sea level (FEMA 1987, 6). Thus, if a severe hurricane were to make landfall during high tide, an additional 1.2 feet of water would be added to the highest storm surge possible, which could create a storm tide of 16.2 feet (Rygel, 2005). Nor'easters, like hurricanes and tropical storms, can dump heavy amounts of rain and produce hurricane-force winds that push large amounts of sea water inland.

According to a study conducted by the Center for Coastal Resources Management (CCRM), a one-and-a-half-foot rise in sea level coupled with a three-foot storm surge, like what would be experienced in a strong tropical storm, could lead to 29% of Mathews County land mass being flooded. Also, this could potentially flood 139 miles of roads within the county. As a result, the County implements several preventative measures, property protection policies, public information activities, and emergency service measures to decrease impacts on the community. Getting projects such as the proposed constructed creates a more resilient community as flooding impacts persist and increase in intensity and frequency.

Second, at this project location, the shoreline is experiencing high erosion rates. At one time there was a barrier island approximately a quarter mile in front of the property that protected this area of Mathews County from direct wave energy and winds from the Chesapeake Bay. Now, as the barrier island complex has shrunk to a fourth of its original size, it no longer offers protection to this property. Therefore, the project location has seen the loss of bushes/shrubs on the shoreline as well as marsh grasses in just the past three years (**Figure 12**) The shoreline is now exposed and bears the brunt of the Chesapeake Bay and coastal storms. Without offering this section of shoreline some protection with the installation of a nature-based solution this property will continue to see their land erode into the Chesapeake Bay and flood waters will come closer to the structures on the property. Please see **Figure 11** for project location photos and **Attachment 4** for more photos.

FIGURE 11: PHOTOS OF THE ROBINSON PROPERTY.

Photos taken in 2021. Bushes are no longer protecting the shoreline

ALTERNATIVES –
Alternatives are not applicable to this project. This project employs a nature-based solution, and this project cost is not greater than $3 Million.

GOALS AND OBJECTIVES –
This project will install a 75 linear feet breakwater, 412 cubic yards of beach nourishment, and 100 linear feet of living shoreline. This project will reduce erosion, stabilize the shoreline, and build community resiliency. This nature-based solution will be installed as designed and permitted through the JPA process. Please see the permit package for each site within the project area in **Attachment 5**.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.
Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based approach.
Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode.

Goal 2: Improve water quality
Objective A: Construct a living shoreline to capture nitrogen, phosphorus, and sediment.

Goal 3: Transferability to other communities.
Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

The MPPDC anticipates that the living shoreline installed at this project location will:

1. **Stabilize the shoreline and reduce the overall erosion rate at the project location**. According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

2. **Provide ecosystem services to the community.** Since this project is proposing the installation of living shorelines, this project will have nutrient and sediment reduction benefit to local waters. According to a report titled, <u>Removal Rates of Shoreline Management Project</u>, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb./lf./yr.) and a phosphorus removal rate of 0.00861 lbs./lf./yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb./lf./yr. Therefore,

with a proposed project of 100 linear feet of living shoreline this has the ability of removing 1.218 pounds of nitrogen per year, 0.861 pounds of phosphorus per year and 4,200 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

3. **Prevent loss of property and life.** The installation of the proposed shoreline and flood protection measures will reduce erosion and flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Mathews County, which is local government.

APPROACH, MILESTONES, AND DELIVERABLES –

This project will follow the designs outlined and approved in the Joint Permit Application. Please see Attachment 5 for the JPA application, Design, and Permit Package. The below table outlines the components of the living shoreline and what will be installed at the project location.

	Total Project Location
Breakwater	75 Linear Feet (LF)
Living Shoreline	100 LF
Sand Nourishment	412 cubic yards

The anticipated timeline for this project could be as quick as 1 year, but no more than two years. The timeline range is due to the potential delays in the construction industry or delays caused by COVID, including supply shortages. Having a two-year timeline will offer potential windows for planting the living shoreline - one in 2022 and one in 2023. To explain, the Chesapeake Bay Foundation recommends that perennials and grasses for living shorelines should be planted during peak growing season (in mid-to-late summer) to allow enough time for their root systems to become established before they go dormant in the late Fall. Trees and shrubs should be planted in Spring and Fall when there is adequate rainfall to help them develop strong roots and leafy growth.

Below is the project timeline and project milestones for this project.

Receive funding notice - October 2021
Coordinate with property owners and the project contractor Earth Resources, INC. to review project timeline and project expectations – October 2021
Initiate site preparation at the project location - November 2021 to May 2022
Construction of the living shoreline – June 2022 to September 2022
Project Close out – November 2022

RELATIONSHIP TO OTHER PROJECTS –

For over 40 years the Middle Peninsula Planning District Commission (MPPDC) and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

The proposed project is a priority project generated from the Middle Peninsula Regional Flood Resilience Plan, which was approved by DCR during August 2021. The Flood Resiliency Plan serves as the MPPDC's guiding document for its flood resiliency programs and is comprised of two primary MPPDC-approved policy documents which form the implementation and foundation of the Middle Peninsula flood protection approach and are indirectly and directly supported by multiple specific regional planning documents, both approved by various required federal, regional, or local partners as required by statute.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan, FEMA and Middle Peninsula locality approved 2016 (MPPDC Website)
- The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy, MPPDC Approved March 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan - MPPDC Approved ~annually

Short Term Implementation

- Middle Peninsula Planning District Commission Fight the Flood Program Design MPPDC Commission (approved June 2020 Chairman approved 8/6/21 update)
- Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program-Virginia Revolving Loan Fund Program Design and Guidelines (approved 2015)

As the MPPDC has continuously worked on flooding and coastal resiliency topics, **Attachment 6** lists the projects and short description of relevant projects. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the MPPDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The MPPDC Commission authorized staff to develop the **Middle Peninsula Fight the Flood (FTF) Program.** This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula **FTF** program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, MPPDC staff have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline.

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN –

The approved VMRC permits does not require a maintenance plan; therefore, the maintenance of this construction project will be in accordance with the permit requirements.

CRITERIA –

For local governments that are not towns, cities, or counties, the documentation providedfor the criteria below should be based on the local government or local governments in which the project is located and/or directly impacts.

1. **Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?**
   YES.

2. **Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?**
   YES. Here's the link: Approved-8_19_DCR-packet_letterandplan.pdf (fighttheflood va.com)

3. **For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?**
   YES. Please see **Attachment 1.**

4. **Has the applicant provided evidence of an ability to provide the required match funds?**
   YES. Please see the match commitment letter in **Attachment 8.**

5. **Has the applicant demonstrated to the extent possible, the positive impacts of**

the project or study on prevention of flooding?
YES.

BUDGET NARRATIVE -
Below is the estimated budget for the proposed flood prevention and protection construction project that will result in a nature-based solution located in a low-income geographic area. Therefore, MPPDC staff is requesting 80% funding from DCR and will provide 20% match. Please see match commitment letters from the property owners in **Attachment 11**.

			DCR (80%)	Match from Owner (20%)	Project Total
Project Management Costs					
	Personnel		$ 4,494	$ 1,123	$ 5,617
	Fringe (26.58% on Salaries)		$ 1,195	$ 298	$ 1,493
SubAward/SubContract Agreement					
	Robinson	*Liv Shoreline 130 LF RipRap 3 tons per LF*	$31,200	$ 7,800	$ 39,000
	Robinson	*120 cubic yds sand*	$4,320	$ 1,080	$ 5,400
	Robinson	*Mobilization, demobolition, log mats, ground repair, plants*	$2,400	$ 600	$ 3,000
Indirect/IDC/Facilities & Administrative Costs (27.31%)			$ 7,015	$ 1,754	$ 8,769
Project totals			$ 50,624	$ 12,655	$ 63,279

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment.

Also please note that the cost estimates for the construction of this project were supplied by the contractor, Earth Resources, Inc. Please see **Attachment 7**.

In summary:

Estimated total project cost:	$63,279
Amount of funds requested from the Fund (80% project total):	$50,624
Amount of cash funds available (20% project total):	$12,655

Finally, please see the authorization to request for funding in **Attachment 9.**

Appendix B: Scoring Criteria for Flood Prevention andProtection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Middle Peninsula Planning District Commission

Eligibility Information

Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☑ **Yes** ☐ **No**

Applicant Name:	Middle Peninsula Planning District Commission

Scoring Information

Criterion	Point Value	Points Awarded
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		128

Appendix D: Checklist All Categories

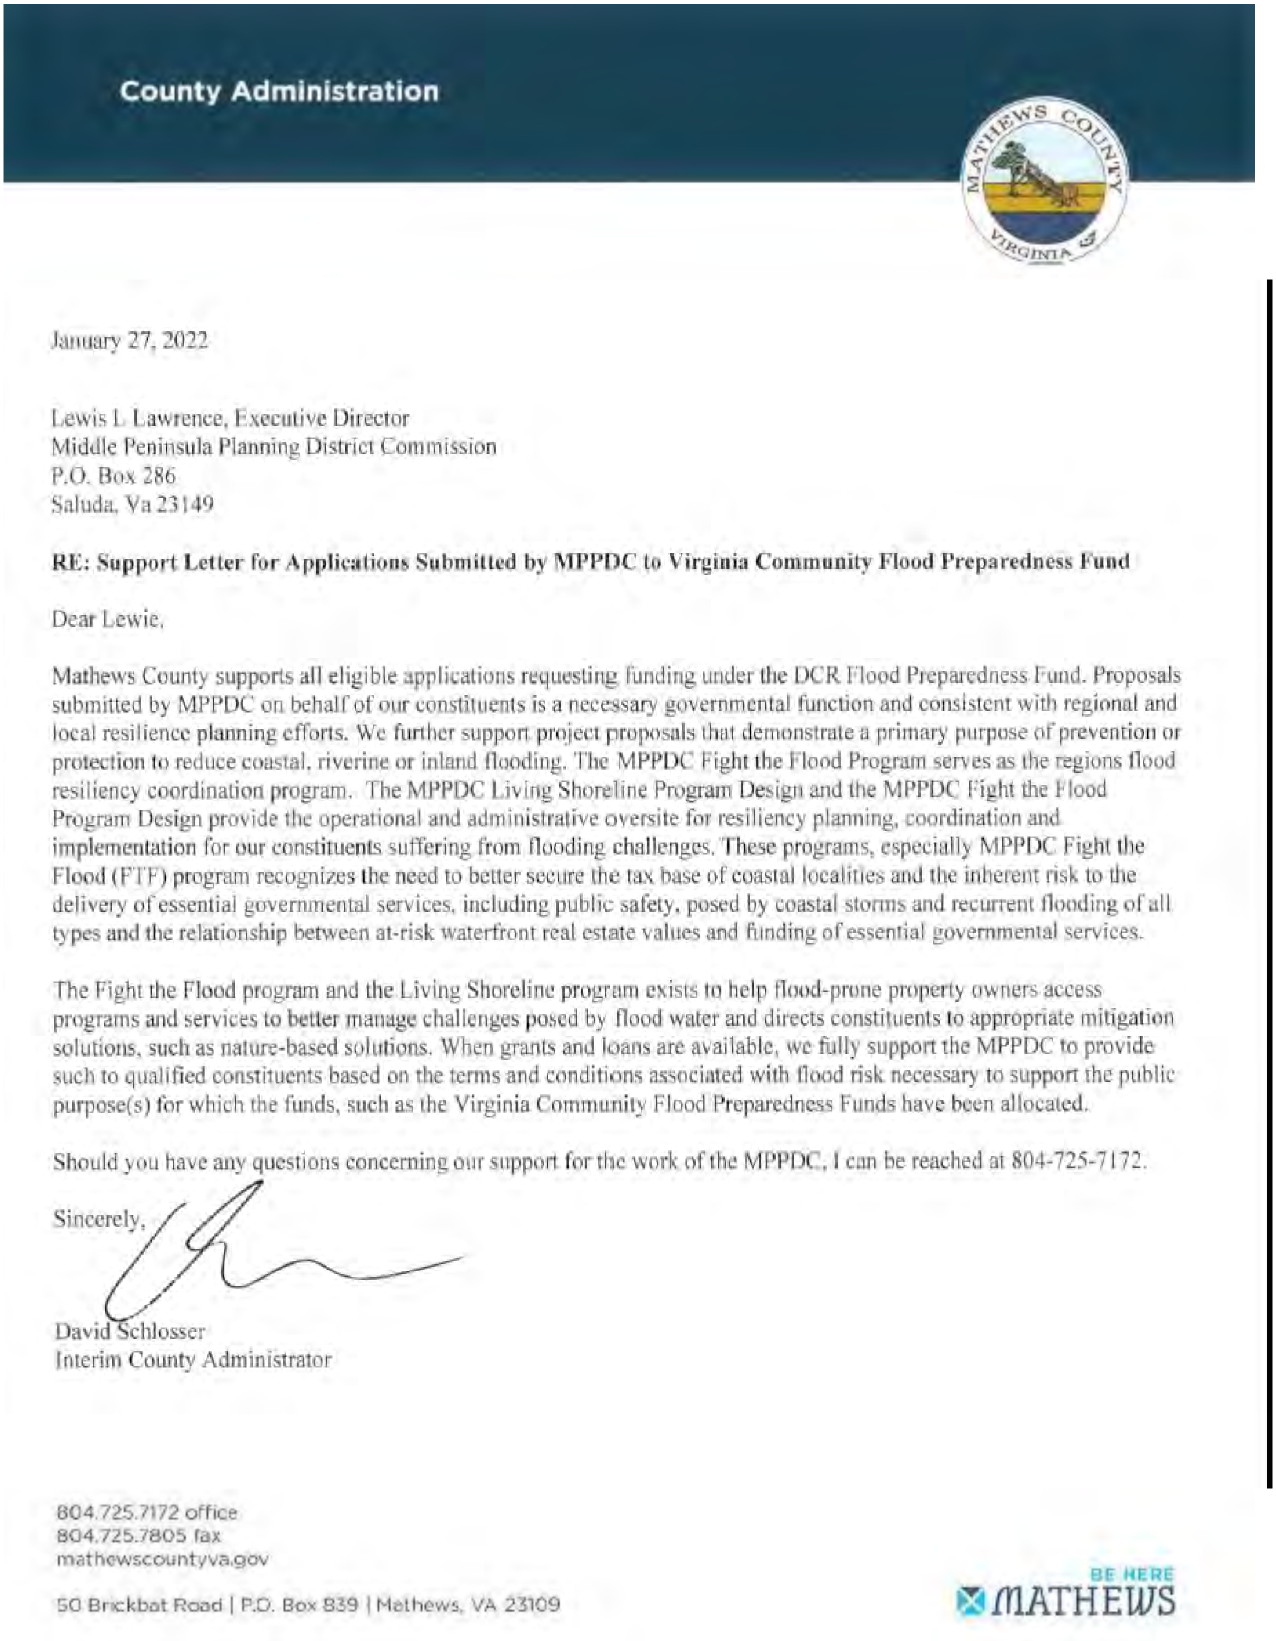
Attachment 1: Community Support Letter



County Administration

January 27, 2022

Lewis L Lawrence, Executive Director
Middle Peninsula Planning District Commission
P.O. Box 286
Saluda, Va 23149

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Lewie,

Mathews County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-725-7172.

Sincerely,

David Schlosser
Interim County Administrator

Attachment 4: Photos of the Robinson property shoreline.

Shoreline showing severe erosion and dying vegetation.

Since Robinson has only owned the property since 2018, he has not been through major storm events on this property, therefore he has provided photos of his neighbor's property during Hurricane Anna in 2015 that caused flood waters to come to the front steps of the house and damaged the pier.

- DEQ: Permit application fees required for Virginia Water Protection permits – while detailed in 9VAC25-20 – are conveyed to the applicant by the applicable DEQ office (http://www.deq.virginia.gov/Locations.aspx). Complete the Permit Application Fee Form and submit it per the instructions to the address listed on the form. Instructions for submitting any other fees will be provided to the applicant by DEQ staff.
- VMRC: An application fee of $300 may be required for projects impacting tidal wetlands, beaches and/or dunes when VMRC acts as the LWB. VMRC will notify the applicant in writing if the fee is required. Permit fees involving subaqueous lands are $25.00 for projects costing $10,000 or less and $100 for projects costing more than $10,000. Royalties may also be required for some projects. The proper permit fee and any required royalty is paid at the time of permit issuance by VMRC. VMRC staff will send the permittee a letter notifying him/her of the proper permit fees and submittal requirements.
- LWB: Permit fees vary by locality. Contact the LWB for your project area or their website for fee information and submittal requirements. Contact information for LWBs may be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html.

State Corporation Commission Name and ID Number (if applicable) ________

*** If multiple applicants, property owners, and/or agents, each must be listed and each must sign the applicant signature page.**

4. Provide a detailed description of the project in the space below, including the type of project, its dimensions, materials, and method of construction. Be sure to include how the construction site will be accessed and whether tree clearing and/or grading will be required, including the total acreage. If the project requires pilings, please be sure to include the total number, type (e.g. wood, steel, etc), diameter, and method of installation (e.g. hammer, vibratory, jetted, etc). If additional space is needed, provide a separate sheet of paper with the project description.

THE APPLICANT IS PROPOSING TO CONSTRUCT 1 ARMOR STONE BREAKWATER, WITH TWO ASSOCIATED ARMOR STONE SPURS.

Part 1 - General Information (continued)

5. Have you obtained a contractor for the project? X Yes* ___ No. *If your answer is "Yes" complete the remainder of this question and submit the Applicant's and Contractor's Acknowledgment Form (enclosed)

   Contractor's name* and complete mailing address:

   MR. JEFF BROWN
   EARTH RESOURCES INC.
   PO. BOX 520
   LANCASTER, VA. 22503

   Contact Information:
   Home ( )
   Work (804) 435-1085
   Fax ( )
   Cell ( )
   email

   State Corporation Commission Name and ID Number (if applicable) ____________________

*** If multiple contractors, each must be listed and each must sign the applicant signature page.**

6. List the name, address and telephone number of the newspaper having general circulation in the area of the project. Failure to complete this question may delay local and State processing.

   Name and complete mailing address:
   SOUTHSIDE SENTINAL
   URBANNA, VA.

   Telephone number
   ( ) ________________

7. Give the following project location information:
   Street Address (911 address if available) 162 RIGBY LANE, DIGGS, VA.
   Lot/Block/Parcel# COUNTY SEC. # 22-A-117H
   Subdivision ____________________
   City / County MATHEWS COUNTY ZIP Code ________
   Latitude and Longitude at Center Point of Project Site (Decimal Degrees):
   37-26-58.74 N / -76-15-38.59 W (Example: 36.41600/-76.30733)

   If the project is located in a rural area, please provide driving directions giving distances from the best and nearest visible landmarks or major intersections. *Note: if the project is in an undeveloped subdivision or property, clearly stake and identify property lines and location of the proposed project. A supplemental map showing how the property is to be subdivided should also be provided.*

   FROM THE INTX. OF RT 14 AND RT. 198, TURN ONTO RT. 643, HAVEN BRANCH ROAD, AND FOLLOW FOR 3.1 MILES TO A LEFT ONTO RT. 682, WHITES CREEK LANE, FOLLOW W.C.L. FOR 1.0 MI. TO THE PROPERTY ON THE RIGHT.

8. What are the *primary and secondary purposes of and the need for* the project? For example, the primary purpose may be "to protect property from erosion due to boat wakes" and the secondary purpose may be "to provide safer access to a pier."

   THE PRIMARY PURPOSE OF THIS PROJECT IS TO STOP THE CURRENT EROSION THAT IS TAKING PLACE AND PROTECT THE APPLICANTS PROPERTY.

Part 1 - General Information (continued)

9. Proposed use (check one):
   X Single user (private, non-commercial, residential)
   ___ Multi-user (community, commercial, industrial, government)

10. Describe alternatives considered and the measures that will be taken to avoid and minimize impacts, to the maximum extent practicable, to wetlands, surface waters, submerged lands, and buffer areas associated with any disturbance (clearing, grading, excavating) during and after project construction. *Please be advised that unavoidable losses of tidal wetlands and/or aquatic resources may require compensatory mitigation.*

    THIS PROJECT WILL BE PERFORMED FROM THE LAND WITH LANDSCAPE MATS BEING PLACED OVER ANY VEGETATION, ALLOWING ACCESS TO THE SITE.

11. Is this application being submitted for after-the-fact authorization for work which has already begun or been completed? ___Yes X No. If yes, be sure to clearly depict the portions of the project which are already complete in the project drawings.

12. Approximate cost of the entire project (materials, labor, etc.): $ $35,000
    Approximate cost of that portion of the project that is channelward of mean low water:
    $ $16,000

13. Completion date of the proposed work: SEPTEMBER 30, 2021 - ______

14. Adjacent Property Owner Information: List the name and complete **mailing address**, including zip code, of each adjacent property owner to the project. (NOTE: If you own the adjacent lot, provide the requested information for the first adjacent parcel beyond your property line.) Failure to provide this information may result in a delay in the processing of your application by VMRC.

1. Applicants and property owners (if different from applicant).
NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, U.S. Army Corps of Engineers, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.

In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

CONTRACTOR ACKNOWLEDGEMENT

I (we), R. ROBINSON (Applicant's Name(s)), have contracted MR. JEFF BROWN (Contractor's Name(s)) to perform the work described in this Joint Permit Application, signed and dated 04-15-21.

We will read and abide by all conditions set forth in all Federal, State and Local permits as required for this project. We understand that failure to follow the conditions of the permits may constitute a violation of applicable Federal, state and local statutes and that we will be liable for any civil and/or criminal penalties imposed by these statutes. In addition, we agree to make available a copy of any permit to any regulatory representative visiting the project to ensure permit compliance. If we fail to provide the applicable permit upon request, we understand that the representative will have the option of stopping our operation until it has been determined that we have a properly signed and executed permit and are in full compliance with all terms and conditions.

APPENDIX B

U.S. Army Corps
Of Engineers
Norfolk District

REGIONAL PERMIT 17 CHECKLIST

Expires: September 5, 2023

Please review the 18-RP-17 enclosure before completing this form and note 18-RP-17 can only be used for proposed PRIVATE USE structure(s) that comply with the terms and conditions of 18-RP-17. Copies can be obtained online at http://www.nao.usace.army.mil/Missions/Regulatory/RBregional/.

YES☒ NO☐	**(1)** Has the permittee reviewed the 18-RP-17 enclosure and verified that the proposed structure(s) is in compliance with all the terms, conditions, and limitations of 18-RP-17?
YES☒ NO☐	**(2)** Does the proposed structure(s) extend no more than one-fourth of the distance across the waterway measured from either mean high water (MHW) to MHW (including all channelward wetlands) or ordinary high water (OHW) to OHW (including all channelward wetlands)?
YES☒ NO☐	**(3)** Does the proposed structure(s) extend no more than 300 feet from MHW or OHW (including all channelward wetlands)?
YES☒ NO☐ N/A☐	**(4)** Does the proposed structure(s) attach to the upland at a point landward of MHW or OHW (including all channelward wetlands)?
YES☐ NO☐ N/A☒	**(5)** If the proposed structure(s) crosses wetland vegetation, is it an open-pile design that has a maximum width of five (5) feet and a minimum height of four (4) feet between the decking and the wetland substrate?
YES☐ NO☐ N/A☒	**(6)** Does the proposed structure(s) include no more than two (2) boatlifts and no more than two (2) boat slips?
YES☐ NO☐ N/A☒	**(7)** Is the open-sided roof structure designed to shelter a boat ≤ 700 square feet and/or is the open sided roof structure or gazebo structure designed to shelter a pier ≤ 400 square feet?
YES☐ NO☐ N/A☒	**(8)** Are all piles associated with the proposed structure(s) non-steel, less than or equal to 12" in diameter, and will less than or equal to 25 piles be installed channelward of MHW?
YES☐ NO☐ N/A☒	**(9)** Is all work occurring behind cofferdams, turbidity curtains, or other methods to control turbidity being utilized when operationally feasible and federally listed threatened or endangered species may be present?
YES☒ NO☐ N/A☐	**(10)** If the proposed structure(s) is to be located within an anadromous fish use area, the prospective permittee will adhere to the anadromous fish use area time of year restriction (TOYR) prohibiting in-water work from occurring between February 15 through June 30 of any given year if (1) piles are to be installed with a cushioned impact hammer and there is less than 492 feet between the most channelward pile and mean low water (MLW) on the opposite shoreline or (2) piles are to be installed with a vibratory hammer and there is less than 384 feet between the most channelward pile and MLW on the opposite shoreline.
YES☒ NO☐	**(11)** Is all work occurring outside of submerged aquatic vegetation (SAV) mapped by the Virginia Institute of Marine Sciences' (VIMS) most recent survey year and 5 year composite?
YES☒ NO☐	**(12)** Has the permittee ensured the construction and/or installation of the proposed structure(s) will not affect federally listed threatened or endangered species or designated critical habitat?
YES☒ NO☐	**(13)** Will the proposed structure be located outside of Broad Creek in Middlesex County, Fisherman's Cove in Norfolk, or the Salt Ponds in Hampton?
YES☒ NO☐	**(14)** Will the proposed structure(s) be located outside of the waterways containing a Federal Navigation Project listed in Permit Specific Condition 12 of 18-RP-17 and/or will all portions of the proposed structure(s) be located more than 85 feet from the Federal Navigation Project?

Received by VMRC April 21, 2021 /blh

YES☒ NO☐ **(15)** Will the proposed structure(s) be located outside a USACE Navigation and Flood Risk Management project area?

YES☒ NO☐ **(16)** Will the proposed structure(s) be located outside of any Designated Trout Waters?

YES☐ NO☐ N/A☒ **(17)** If the proposed structure(s) includes flotation units, will the units be made of materials that will not become waterlogged or sink if punctured?

YES☐ NO☐ N/A☒ **(18)** If the proposed structure(s) includes flotation units, will the floating sections be braced so they will not rest on the bottom during periods of low water?

YES☒ NO☐ **(19)** Is the proposed structure(s) made of suitable materials and practical design so as to reasonably ensure a safe and sound structure?

YES☒ NO☐ **(20)** Will the proposed structure(s) be located on the property in accordance with the local zoning requirements?

YES☐ NO☐ N/A☒ **(21)** If the proposed structure(s) includes a device used for shellfish gardening, will the device be attached directly to a pier and limited to a total of 160 square feet?

YES☐ NO☐ N/A☒ **(22)** If the proposed structure(s) includes a device used for shellfish gardening, does the permittee recognize this RP does not negate their responsibility to obtain an oyster gardening permit (General Permit #3) from Virginia Marina Resources Commission's Habitat Management Division?

YES ☒ NO ☐ **(23)** Does the permittee recognize this RP does not authorize any dredging or filling of waters of the United States (including wetlands) and does not imply that future dredging proposals will be approved by the Corps?

YES☒ NO☐ **(24)** Does the permittee understand that by accepting 18-RP-17, the permittee accepts all of the terms and conditions of the permit, including the limits of Federal liability contained in the 18-RP-17 enclosure? Does the permittee acknowledge that the structures permitted under 18-RP-17 may be exposed to waves caused by passing vessels and that the permittee is solely responsible for the integrity of the structures permitted under 18-RP-17 and the exposure of such structures and vessels moored to such structures to damage from waves? Does the permittee accept that the United States is not liable in any way for such damage and that it shall not seek to involve the United States in any actions or claims regarding such damage?

IF YOU HAVE ANSWERED "NO" TO ANY OF THE QUESTIONS ABOVE, REGIONAL PERMIT 17 (18-RP-17) DOES NOT APPLY AND YOU ARE REQUIRED TO OBTAIN WRITTEN AUTHORIZATION FROM THE CORPS PRIOR TO PERFORMING THE WORK.

IF YOU HAVE ANSWERED "YES" (OR "N/A", WHERE APPLICABLE) TO ALL OF THE QUESTIONS ABOVE, YOU ARE IN COMPLIANCE WITH REGIONAL PERMIT 17 (18-RP-17). PLEASE SIGN BELOW, ATTACH, AND SUBMIT THIS CHECKLIST WITH YOUR COMPLETED JOINT PERMIT APPLICATION (JPA). THIS SIGNED CERTIFICATE SERVES AS YOUR LETTER OF AUTHORIZATION FROM THE CORPS. YOU WILL NOT RECEIVE ANY OTHER WRITTEN AUTHORIZATION FROM THE CORPS; HOWEVER, YOU MAY NOT PROCEED WITH CONSTRUCTION UNTIL YOU HAVE OBTAINED ALL OTHER NECESSARY STATE AND LOCAL PERMITS.

I CERTIFY THAT I HAVE READ AND UNDERSTAND ALL CONDITIONS OF THE REGIONAL PERMIT 17 (18-RP-17), DATED SEPTEMBER 2018, ISSUED BY THE US ARMY CORPS OF ENGINEERS, NORFOLK DISTRICT REGULATORY BRANCH (CENAO-WRR), NORFOLK, VIRGINIA.

Date APRIL 15, 2021

Proposed work to be located at:
162 RIGBY LANE
DIGGS, VA. 23045

VMRC Number: SAME

Part 3 – Appendices (continued)

Appendix B: Projects for Shoreline Stabilization in tidal wetlands, tidal waters and dunes/beaches including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, and living shoreline projects. Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service or VIMS.

NOTE: It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1). **Information on non-structural, vegetative alternatives (i.e., Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html.**

1. Describe each **revetment, bulkhead, marsh toe, breakwater, groin, jetty, other structure, or living shoreline project** separately in the space below. Include the overall length in linear feet, the amount of impacts in acres, and volume of associated backfill below mean high water and/or ordinary high water in cubic yards, as applicable:

   THIS PROJECT INCLUDES ONE ARMOR STONE BREAKWATER, 16' WIDE AND 75' LONG, FOR A TOTAL FOOTPRINT OF 1,200 SQ. FT. THIS APPLICATION ALSO INCLUDES TWO ASSOCIATED ARMOR STONE SPURS, THE FIRST MEASURING 12' X 45', WITH A FOOTPRINT OF 540 SQ. FT, THE SECOND SPUR MEASURES APPROX. 44' X 12', FOR A TOTAL FOOTPRINT OF 528 SQ. FT. ALL STRUCTURES WILL BE PLACED ON FILTER CLOTH.

2. What is the maximum encroachment channelward of mean high water? 36' feet.
   Channelward of mean low water? 20' feet.
   Channelward of the back edge of the dune or beach? 36' feet.

3. Please calculate the square footage of encroachment over:
   - Vegetated wetlands 00000000000 square feet
   - Non-vegetated wetlands 620 square feet
   - Subaqueous bottom 1,500 square feet
   - Dune and/or beach 0000000000 square feet

4. For bulkheads, is any part of the project maintenance or replacement of a previously authorized, currently serviceable, existing structure? N/A Yes____ No.

   If yes, will the construction of the new bulkhead be no further than two (2) feet channelward of the existing bulkhead? _____Yes ____No.

   If no, please provide an explanation for the purpose and need for the additional encroachment.

Part 3 – Appendices (continued)

5. Describe the type of construction and **all** materials to be used, including source of backfill material, if applicable (e.g., vinyl sheet-pile bulkhead, timber stringers and butt piles, 100% sand backfill from upland source; broken concrete core material with Class II quarry stone armor over filter cloth).
   NOTE: Drawings must include construction details, including dimensions, design and all materials, including fittings if used.

   ALL OF THE PROPOSED STRUCTURES WILL BE CONSTRUCTED OF QUARRY STONE, CLASS II, ARMOR STONE, 150 TO 500 LBS. PER STONE. ALL WILL BE PLACED ON FILTER CLOTH.

6. If using stone, broken concrete, etc. for your structure(s), what is the average weight of the:
   Core (inner layer) material 25 TO 75 pounds per stone Class size A1
   Armor (outer layer) material 150 TO 500 pounds per stone Class size CLASS II,

7. For **beach nourishment**, including that associated with breakwaters, groins or other structures, provide the following:

- Volume of material
  ____________ cubic yards channelward of mean low water
  ____________ cubic yards landward of mean low water
  ____________ cubic yards channelward of mean high water
  ____________ cubic yards landward of mean high water
- Area to be covered
  ____________ square feet channelward of mean low water
  ____________ square feet landward of mean low water
  ____________ cubic yards channelward of mean high water
  ____________ cubic yards landward of mean high water
- Source of material, composition (e.g. 90% sand, 10% clay):______________________________
- Method of transportation and placement:
  ____
- Describe any proposed vegetative stabilization measures to be used, including planting schedule, spacing, monitoring, etc. Additional guidance is available at http://www.vims.edu/about/search/index.php?q=planting+guidelines:

MATHEWS COUNTY WETLANDS BOARD PERMIT

Pursuant to Chapter 166 of the Mathews County Ordinance, the Mathews County Wetlands Zoning Board, hereinafter referred to as the Board, hereby grants unto **Ronald Robinson, 3718 Willow Bend Pl., Richmond, VA 23233,** hereinafter referred to as the Permittee, permission to undertake the following described project:

Tax Map #: 22 (A) 117 H Physical Address: 162 Rigby Ln.

Permit authorizing the installation of a stone breakwater to be 75' x 16' and two spurs. One spur will be 12' x 44' the other spur will be 12' x 45'. Project will take place along a portion of the Chesapeake Bay shoreline.

For a more complete description of said project, reference is hereby made to the Permittee's Application for Wetlands Permit, **Wetlands Application #21-0900;** however, information on the Permittee's Permit supersedes any conflicting information on the application.

This permit is granted subject to the following terms and conditions:

1. Permittee shall comply with all applicable laws, ordinances, rules and regulations affecting the conduct of the project. Failure to comply may lead to revocation of this permit. The granting of this permit shall not relieve the Permittee of the responsibility of obtaining any and all other permits of authority required for the project.
2. The duly authorized agents of the Board shall have the right to enter upon the premises at any reasonable time for the purpose of inspecting the work being done pursuant to this permit.
3. This permit grants no authority to the Permittee to encroach upon the property rights, including riparian rights, of others.
4. The Permittee agrees to indemnify and save harmless the Commonwealth of Virginia and the County of Mathews from any liability arising from the establishment, operation or maintenance of said project.
5. The Permittee shall, to the greatest extent practicable, minimize the adverse effects of the project upon adjacent properties, wetlands, and the natural resources of the County of Mathews, including implementation of sediment control measures such as silt fences and/or straw bales as needed. Failure to comply may lead to revocation of this permit.
6. This permit shall not be transferred without the prior written approval of the Board.

7. The project, **approved by the Board on July 7, 2021**, **shall be completed in 18 months** after which time this permit shall be void; however, upon proper application to the Board, the time for the completion of the project may be extended by the Board at its discretion. Any such application for extension of time shall be in writing prior to the expiration date hereof and shall specify the reasons for such extension and the expected date of completion of the project. **Expiration date of this project is January 7, 2023.**

8. This permit may be revoked at any time by the Board upon the failure of the Permittee to comply with any of the terms and conditions herein, including description of project.

IN WITNESS WHEREOF, the Mathews County Wetlands Zoning Board has caused these presents to be executed on its behalf by **Katy Walden, Chairman or James Knighton, Planner/Wetlands & Marine Projects Coordinator**. The signature of **Ronald Robinson or their agent** is affixed hereto as evidence of his/her acceptance of the terms and conditions hereof.

Attachment 6: Flood Prevention Project and its Relevance to Other Projects

MPPDC staff have worked throughout the years to understand the policy, research and impacts of flooding (ie. stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change & Sea Level Rise (2009 to 2012)
The MPPDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, MPPDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally Phase 3 focused on developing adaptation public policies in response to the assessments.

Phase 1: Middle Peninsula Climate Change Adaptation: Facilitation of Presentations and Discussions of Climate Change Issues with Local Elected Officials and the General Public
Phase 2: Climate Change III: Initiating Adaptation Public Policy Development
Phase 3: Phase 3 Climate Change: Initiating Adaptation Public Policy Development

Emergency Management - Hazard Mitigation Planning (2009 to Present): Since 2009, the Middle Peninsula Planning District Commission has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. *The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise* (ie. Mean High Higher Water and the NOAA 2060 intermediate-high scenario), *and flooding (coastal and riverine flooding) that estimates losses from each hazard.* The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014): In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, OSDS management, storm water management, TMDLs, etc, staff from the Middle Peninsula Planning District Commission (MPPDC) will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and Onsite Sewage Disposal System (OSDS) and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The Virginia Department of Conservation and Recreation requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the MPPDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The MPPDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014): MPPDC staff and Draper Aden Associates worked with localities (i.e. Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional VSMP.

Mathews County Rural Ditch Enhancement Study (2015): In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015): This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the MPPDC developed the MPPDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the MPPDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in VRA loan funding and

~$400,000 in NFWF grant funding. Living Shoreline construction cost to date range per job $14,000-$180,000. MPPDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project - VCPC White Papers (2017): This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017): This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018): This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018): VIMS Shoreline Studies Program worked with the PAA to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020): The Fight the Flood was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

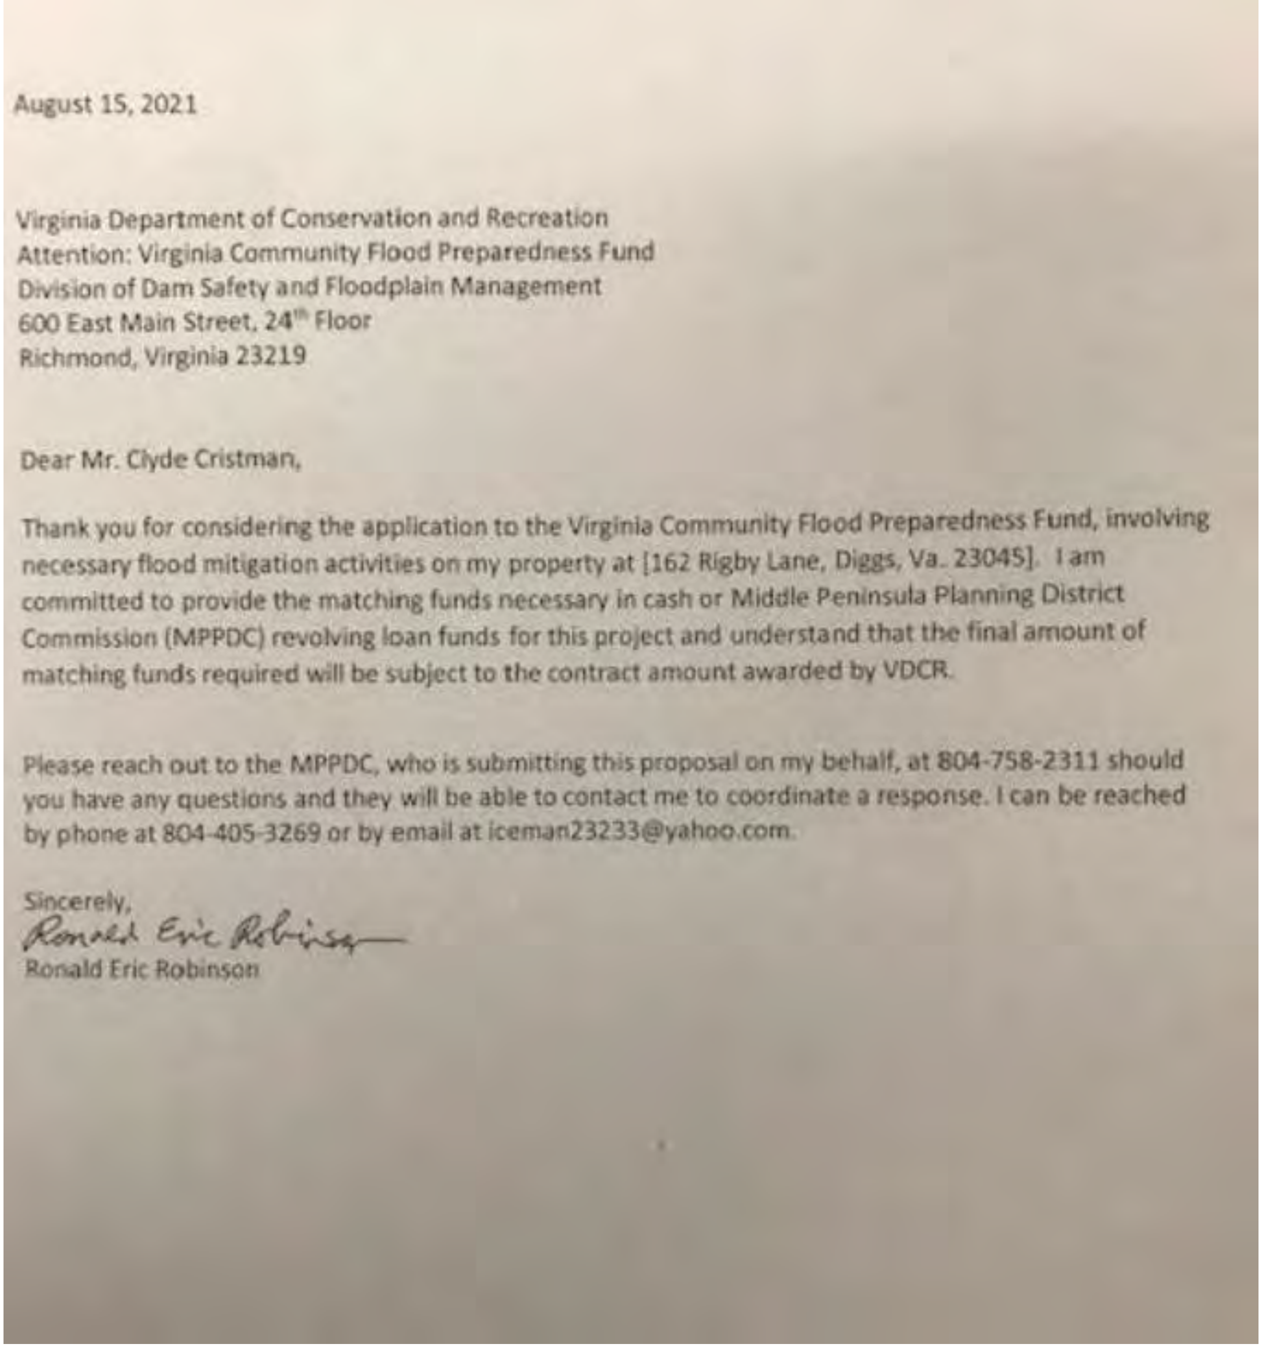
Attachment 8: Match Commitment Letters



August 15, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [162 Rigby Lane, Diggs, Va. 23045]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804-405-3269 or by email at iceman23233@yahoo.com.

Sincerely,
Ronald Eric Robinson

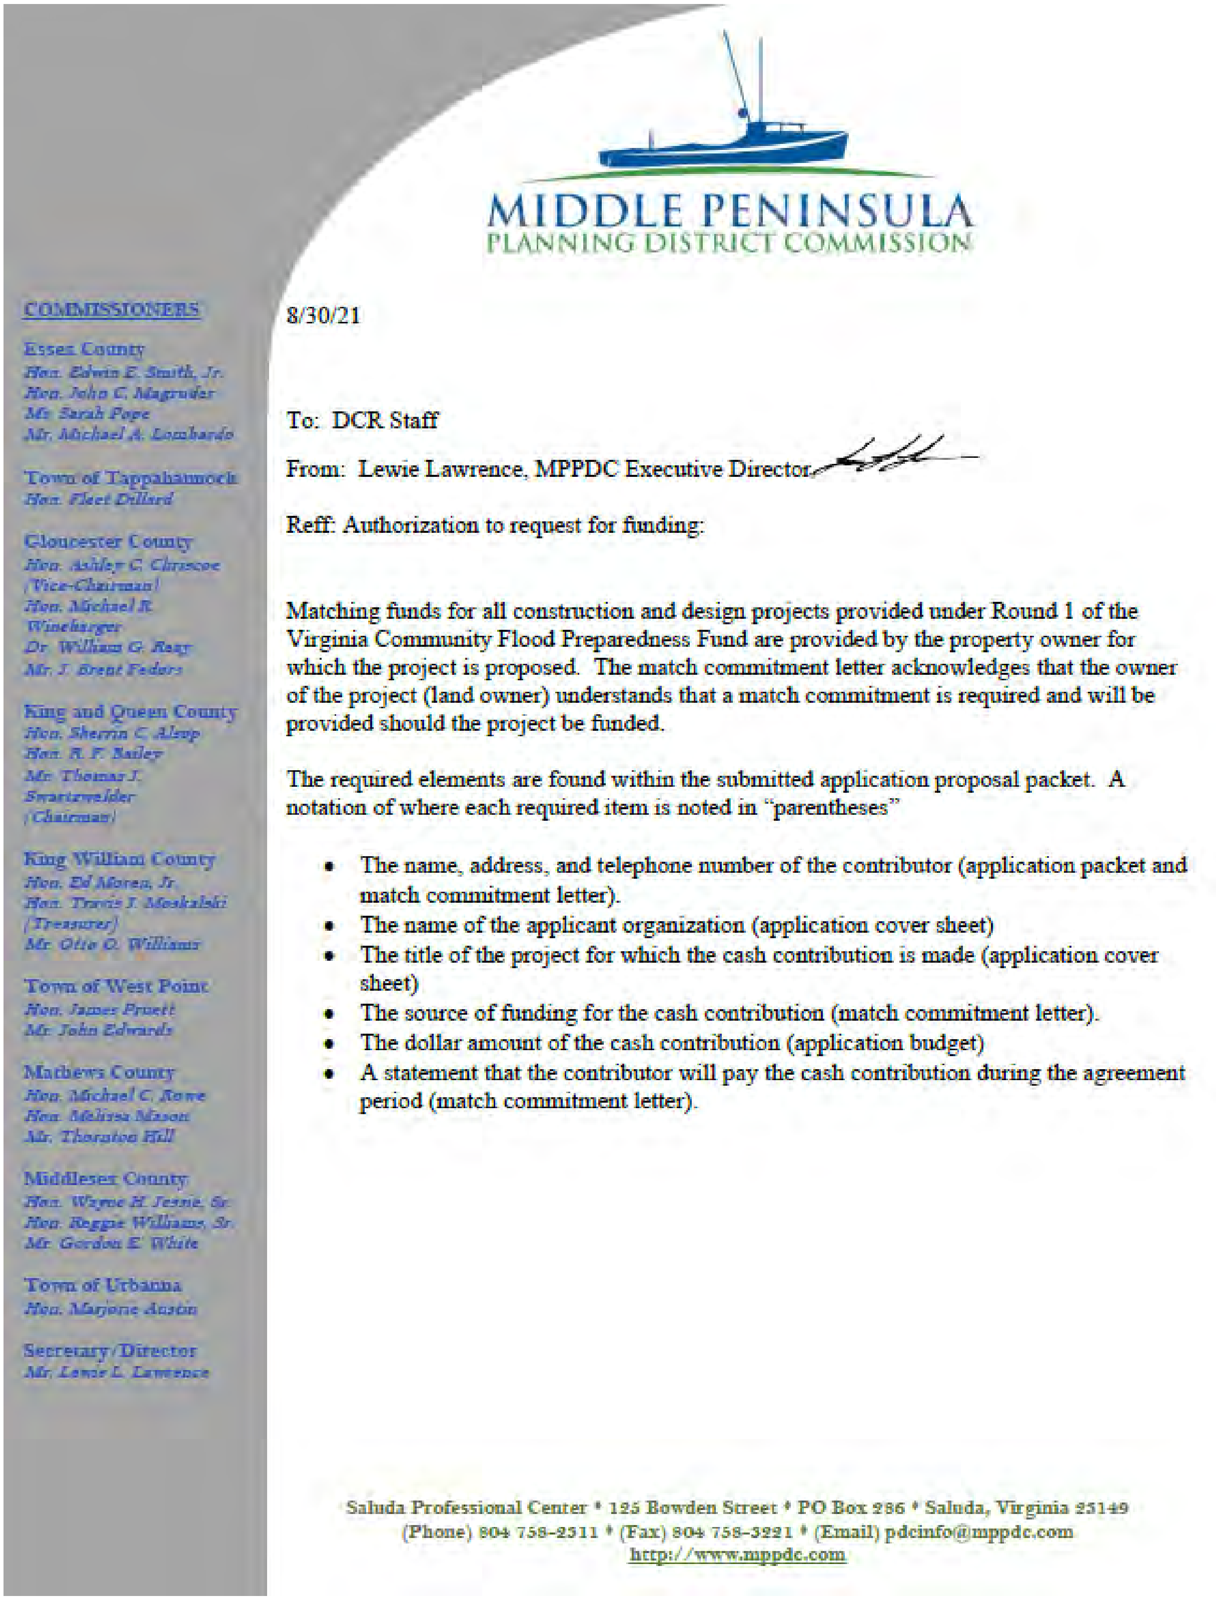
Attachment 9: Authorization to request for funding



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

March 28, 2022

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Matthew Wells,

Enclosed in this packet are five applications for flood protection and prevention projects that involve implementation of nature-based shoreline solutions.

Among the applications are projects which are currently at the design stage. Design projects are requesting funds for professional designs and development of Joint Permit Applications which are needed before the property owner can move to construction of a nature-based flood protection solution.

Below is short summary of proposed projects in Middlesex County:

A. **Flood Prevention and Protection for Shore Drive for Gallimore**
(CID): 510098 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. There is significant erosion along the applicant's approximately 40 feet of shoreline due to wave and wind action. One river birch tree along the shoreline is close to falling into the water. The County of Middlesex previously made the property owner's deceased husband plant two river birch trees to replace one of the river birch trees after the tree had died. The owner prefers natural solutions for this location. Given that her husband is recently deceased, she has very limited financial means to help stabilize this communal front yard area.

B. **Flood Prevention and Protection for Bucks Landing for Lively**
(CID): 510098 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution and draft Joint Permit Application or DEQ Water Quality Impact Assessment depending on the jurisdictional determination for the application to

reduce the impacts of storm events, flooding, and wetland loss. Rapid rainwater runoff is steadily eroding the property's steep bank located on Urbanna Creek, a tributary of the Rappahannock River (length of shoreline is approximately 165 feet). This has occurred over a period of years the property was purchase by the current owners. The primary concern is the flood-induced erosion that is undermining posts supporting steps to a pier and accelerated undermining tree roots causing tree loss. A steep bank under the pier steps and to each side of the pier steps is in danger of becoming a cliff that will not support pier steps or sustain plants. There is a potential design solution in mind. Enviro-Lock (Enviro-Lock.com) provides a system and products utilizing soil and sandbags that can be stacked five to eight feet and planted with natural plants creating a stable living shoreline "bank" minimizing or avoiding the utilization of traditional "rip rap" rock or other gray infrastructure.

C. Flood Prevention and Protection for Oakes Landing Road for Sandbach

(CID): 510098 Total Cost (from individual project application): $24,963

This proposal requests funding for the development of a nature-based shoreline design solution and draft Joint Permit Application to reduce the impacts of storm events, flooding, and wetland loss. The project is located at 1387 Oakes Landing Road, Saluda, VA 23149 (-76.5831, 37.62254). The property was purchased in 2019 and has experienced a number of issues (length of shoreline in approximately 200 feet). When the property was purchased, there was an undercut like a cave along the shoreline. Some of it has subsequently caved in. When it rains hard, the hill is eroding from the top; now lots of roots are showing on the hill. Several trees have come down and more are in danger of falling. The location is on Urbanna Creek which experiences lots of wave action from boating traffic. Mr. Michael L. Vanlandingham, the Shoreline Engineer with the Department of Conservation and Recreation Division of Soil and Water Conservation, Eastern Area Regional Office, has visited the property and his recommendation is included and incorporated into the proposal.

D. Flood Prevention and Protection for Wooldridge Cove Drive for Stone

(CID): 510098 Total Cost (from individual project application): $24,963

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. Relative sea-level rise and tidal and storm surge waters are undercutting the banks along the property (length of shoreline is 540 feet). An old, deteriorating wood bulkhead has holes in it which is allowing the backfill to behind the bulkhead to erode. There are also trees falling into the water with several more having roots exposed to salt water at the base of the steep eroding bank. Chris Davis of ReadyReef Inc. has visited the site and suggested some possible nature-based solutions that made sense in lieu of riprap. As with many other properties, the last few years have been more damaging than in past decades. Therefore, Mr. Michael L. Vanlandingham, the Shoreline Engineer with the Department of Conservation and Recreation Division of Soil and Water Conservation, Eastern Area Regional Office, has visited the property and his letter of recommendation is included.

E. **Flood Prevention and Protection for Bland Point Road**
(CID): 510098 Total Cost (from individual project application): $17,399
This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. This private property has a 330-foot shoreline that is steep and the water is undercutting the bank; therefore, the top of the bank is steeply facing down toward Moore's Creek causing significant runoff. The trees that are along the bank are now at risk of falling into the water as the erosion continues. Therefore, Mr. Michael L. Vanlandingham, the Shoreline Engineer with the Department of Conservation and Recreation Division of Soil and Water Conservation, Eastern Area Regional Office, has visited the property and his letter of recommendation is included.

The total project costs for Middlesex County Round 3 design applications are **$102,123** and MPPDC staff are requesting **$71,490** from DCR to support this work.

We consider helping both public and private entities manage flooding a critical and essential function of government.

Thank you for considering the enclosed proposed projects. If you have any questions about the enclosed, please contact me by email at llawrence@mppdc.com or by phone at 804-758-2311.

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants

Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Middlesex County **-** Please see the attached corresponding maps for this application.

Total Cost of Project: **$17,399**

Total Amount Requested: **$12,180**

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. There is significant erosion along the applicant's approximately 40 feet of shoreline due to wave and wind action. One river birch tree along the shoreline is close to falling into the water. The County of Middlesex previously made the property owner's deceased husband plant two river birch trees to replace one of the river birch trees after the tree had died. The owner prefers natural solutions for this location. Given that her husband is recently deceased, she has very limited financial means to help stabilize this communal front yard area, but with no guidelines the applicant must be treated as all other applicants.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe.
Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of "nature-based solutions", "ecosystem-based adaptation," "eco-DRR," or "green infrastructure" has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely "green" (i.e., consisting of only ecosystem elements) or "hybrid" (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Shore Drive in Middlesex County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Middlesex County. See the community support letter in **Appendix 1**.

    - *Please see Page 3-5, which notates the need to respond to emerging flood challenges.*
- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf.*

  - *Please see Section 4 (page 25), which includes historical hazard data within the region.*
- *A link to the County of Middlesex's Comprehensive Plan can be found at: https://www.co.middlesex.va.us/252/Comprehensive-Plan.*

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

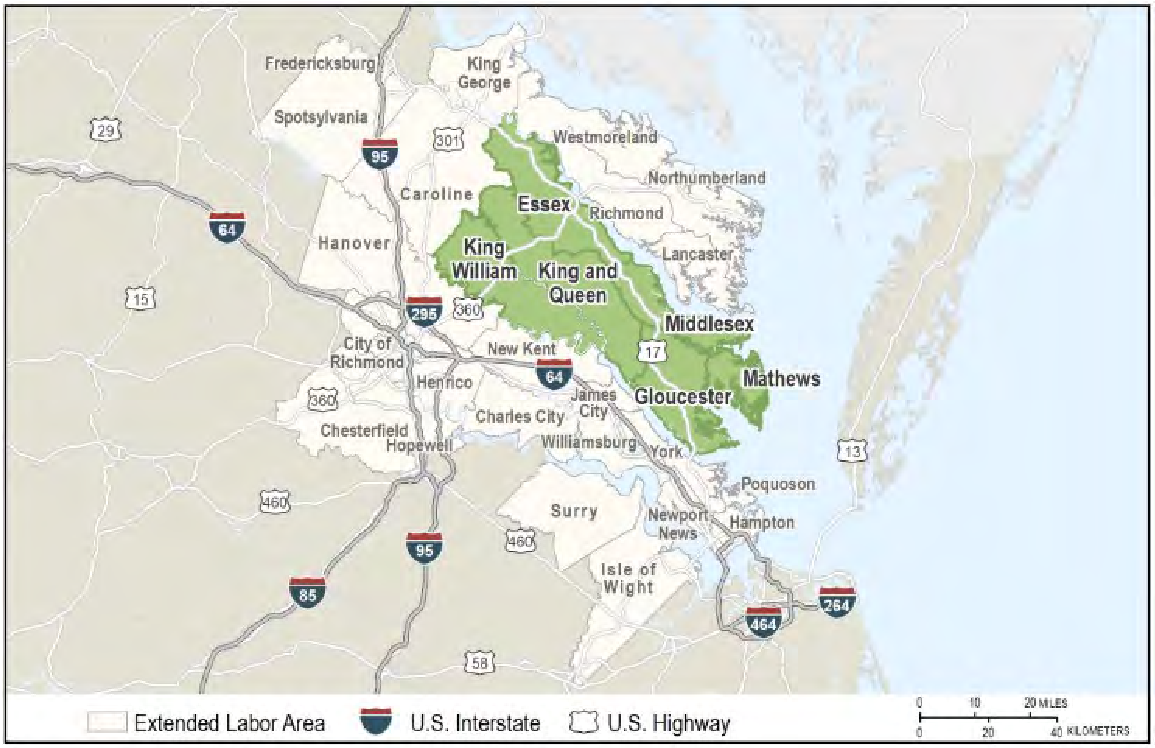

Figure 2. Middle Peninsula Population

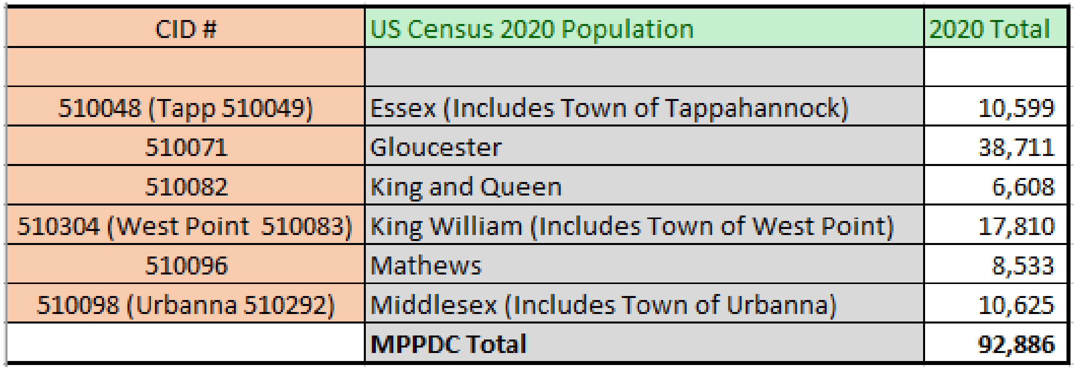

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to design a nature-based solution on one private property on Shore Drive in Middlesex County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

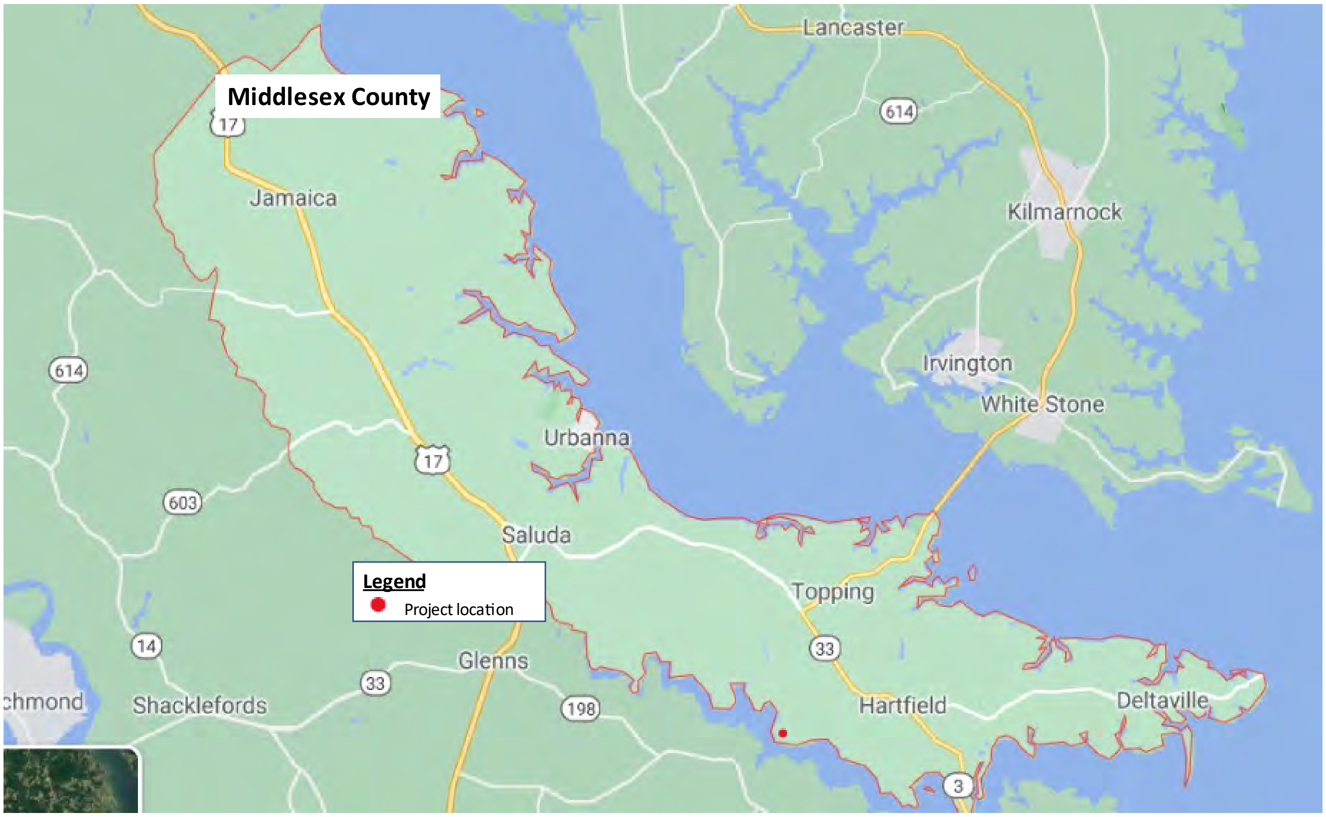

Figure 4. Parcel Map of Project Location

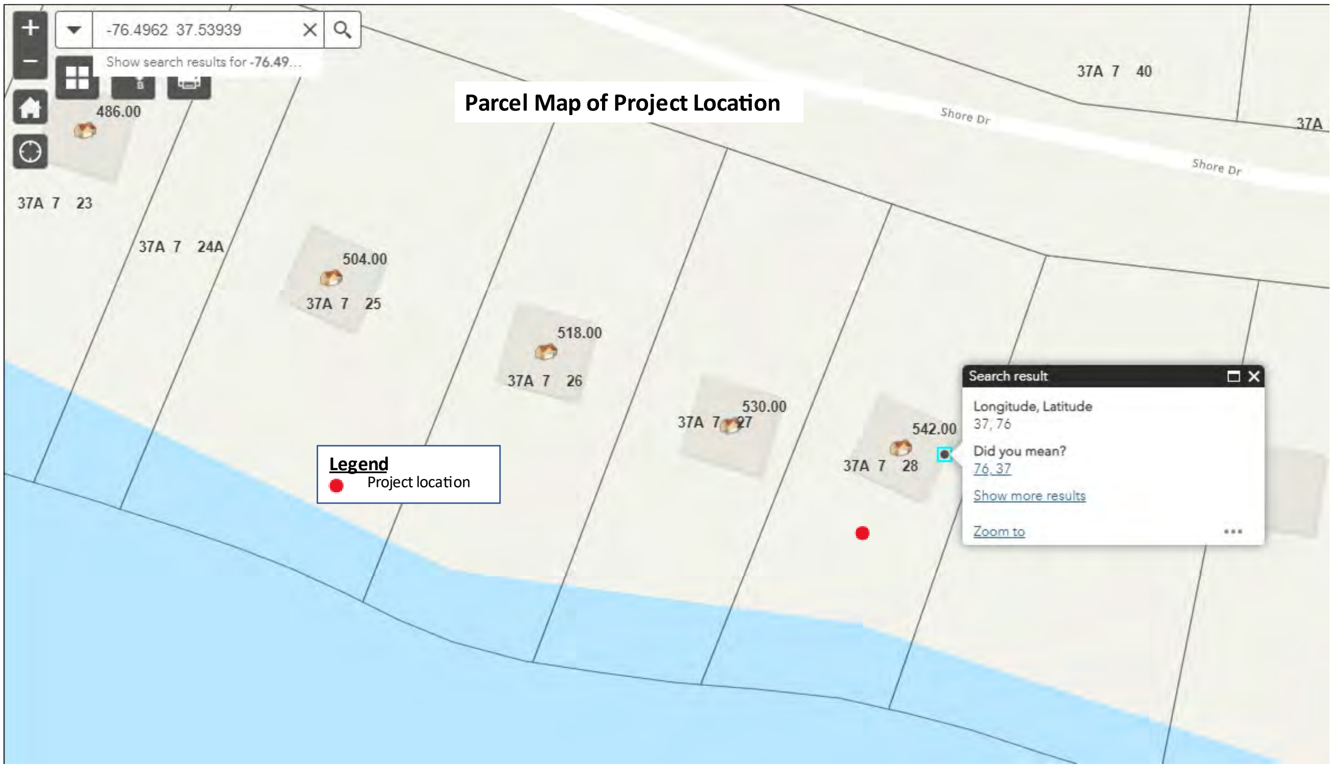
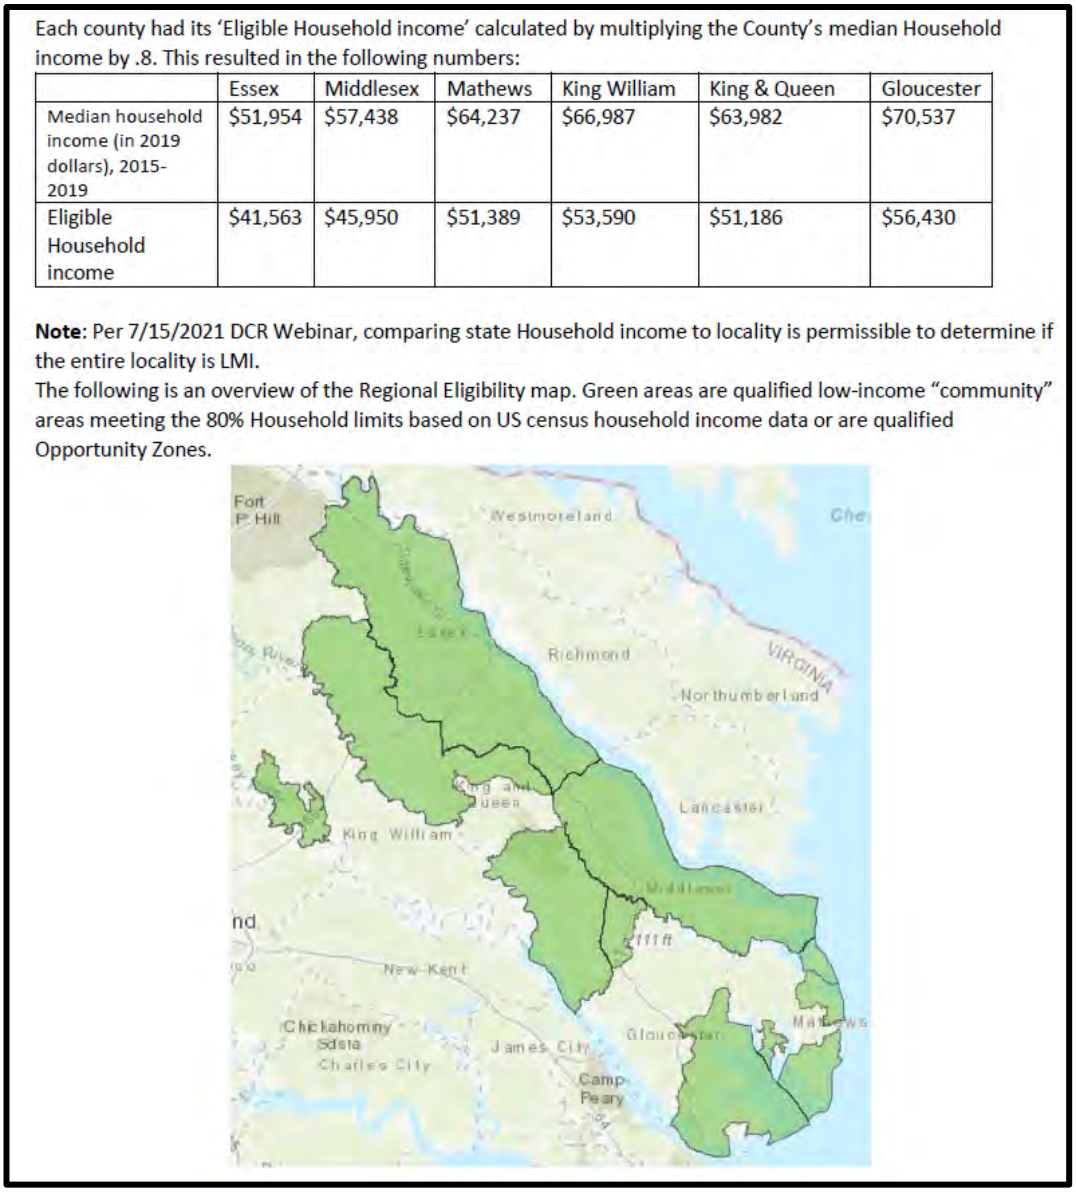


Middlesex County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 130 square miles of land 80 miles of shorelines. Based on 2020 Census Data, Middlesex County's population totals 10,625 which. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

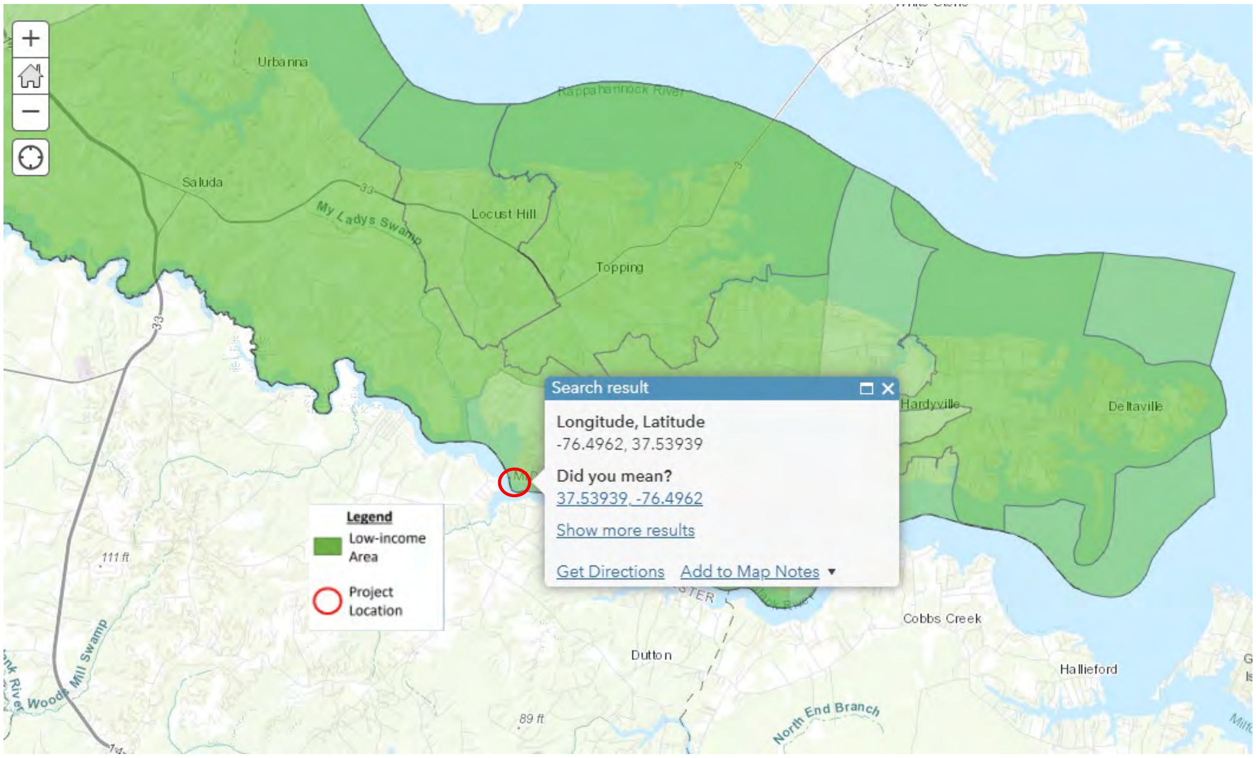
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

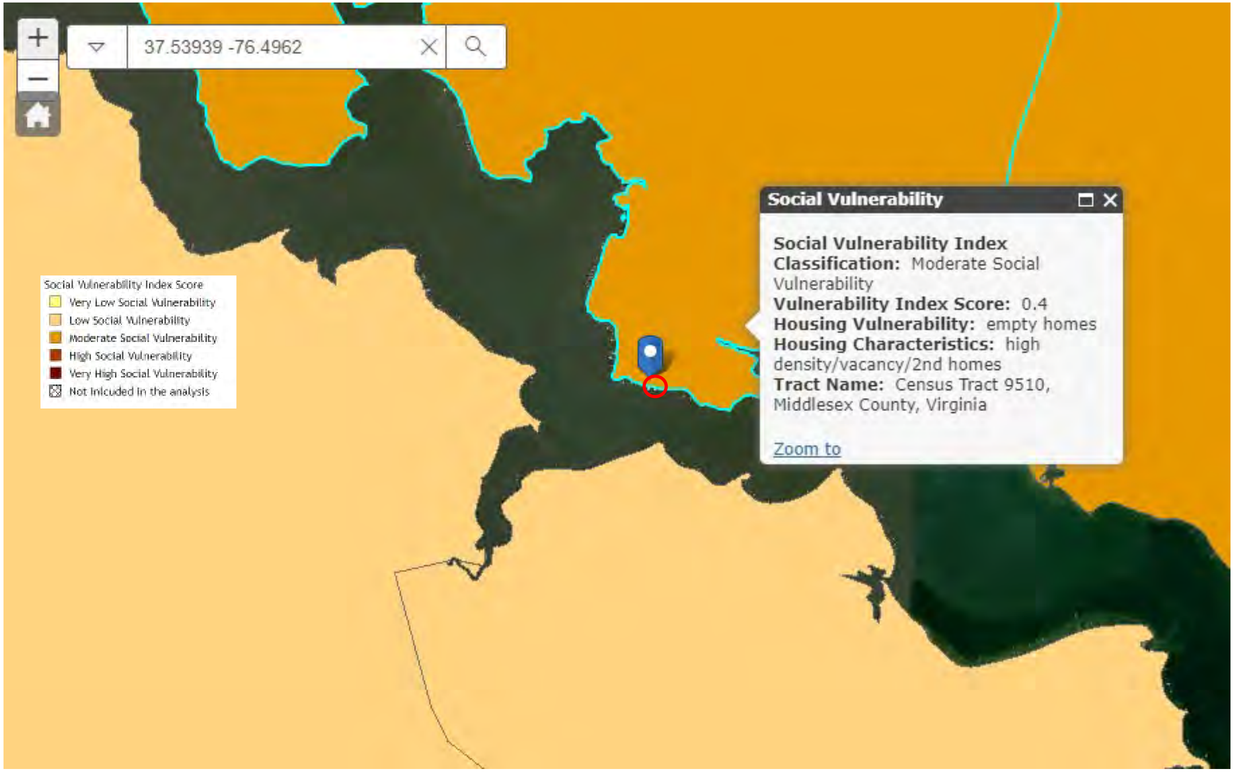
Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location

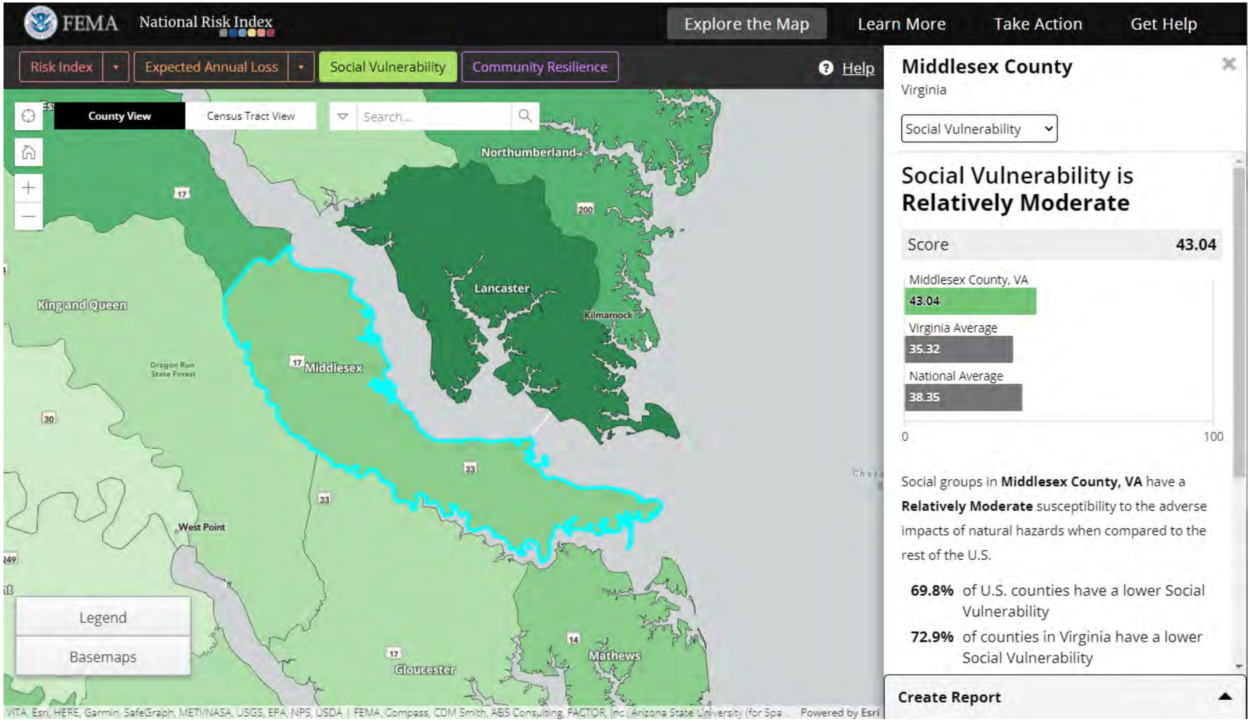


37.53939 -76.4962

Social Vulnerability

Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.4
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9510, Middlesex County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Middlesex County
Virginia

Social Vulnerability

Social Vulnerability is **Relatively Moderate**

Score 43.04

Social groups in **Middlesex County, VA** have a **Relatively Moderate** susceptibility to the adverse impacts of natural hazards when compared to the rest of the U.S.

69.8% of U.S. counties have a lower Social Vulnerability

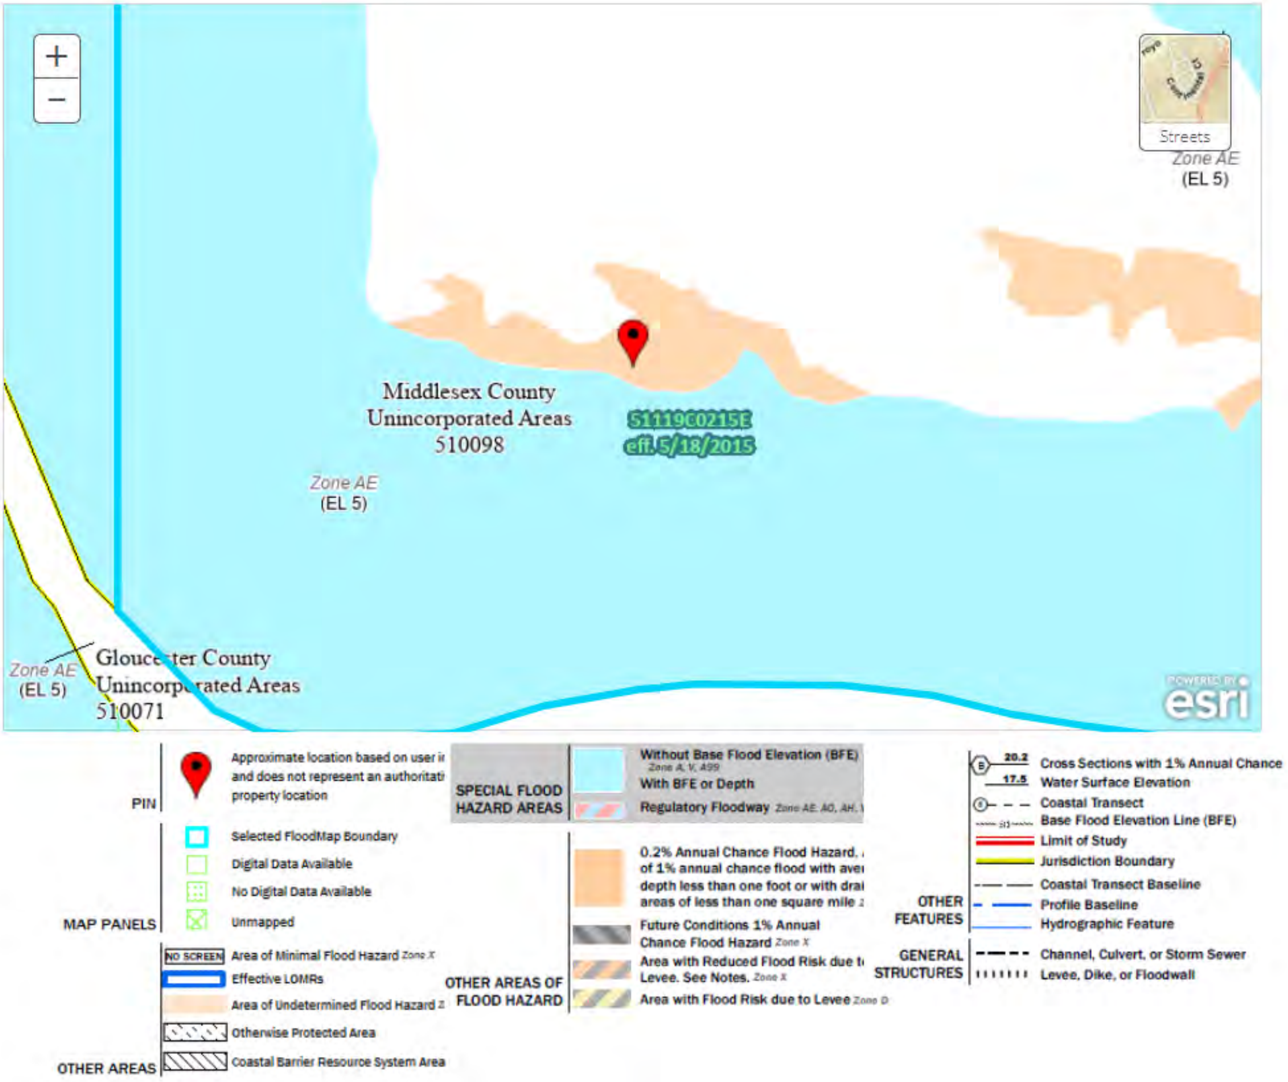
72.9% of counties in Virginia have a lower Social Vulnerability

The project is located at 542 Shore Drive, Hartfield, VA 23071 (-76.4962, 37.53939). The property was purchased in 1988 and has experienced a number of issues over the past 30 plus years. There is significant erosion along the shoreline due to wave and wind action (length of shoreline is approximately 40 feet). One river birch tree is close to falling into the water. The County of Middlesex previously made the property owner's deceased husband planted two river birch trees to "replace" one of the river birch trees he removed after it died. Natural water plants are idea for this location as a matter of a nature-based solution. The property owner has made the pier an open access location for the community to utilize. Given that her husband is recently deceased, she has very limited financial means to help stabilize this communal front yard area. See accompanying pictures below.

Please see **Appendix 2** for additional property photos.

This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 3** for the FIRMettes (last mapped 5/18/2015).

Figure 9: Map of FEMA Flood Zones



Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 1,106.8 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 79 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 and 2017

- *A link to Middlesex County's current floodplain ordinance can be found at:*

https://www.co.middlesex.va.us/DocumentCenter/View/422/Floodplain-Management-PDF.

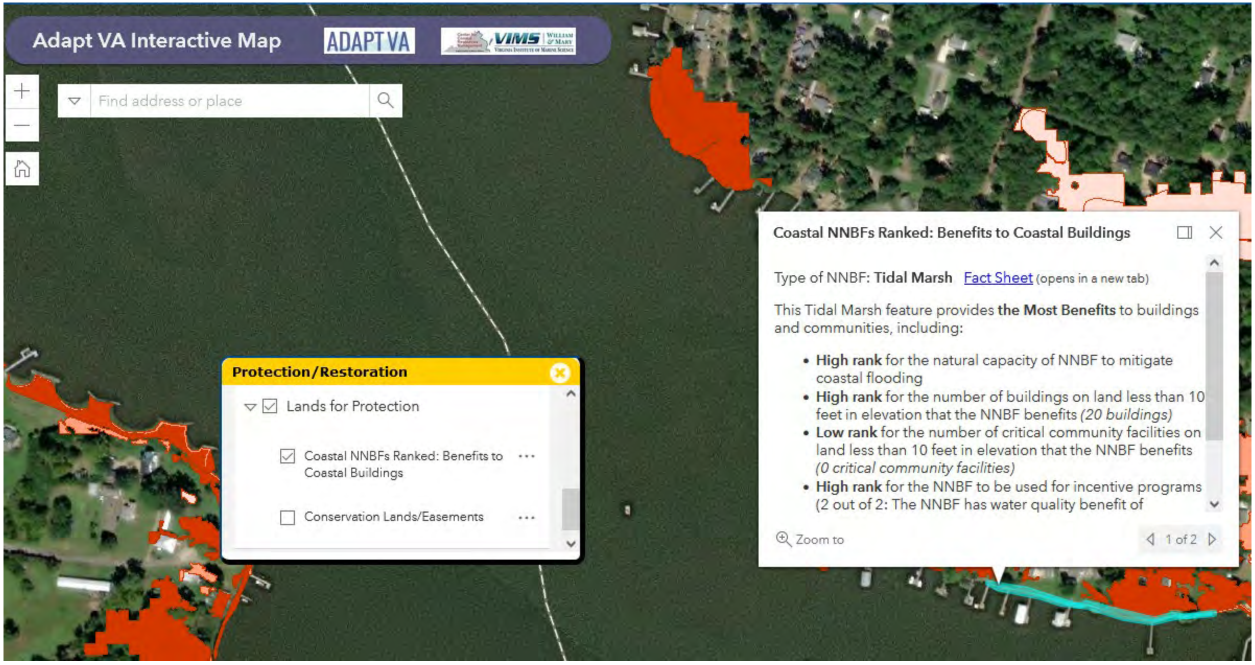
COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in Figure 12. All Round 2 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Tidal Marsh** Fact Sheet (opens in a new tab)

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **High rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(20 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **High rank** for the NNBF to be used for incentive programs (2 out of 2: The NNBF has water quality benefit of

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, the Middle Peninsula PDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Middlesex County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, a proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six-month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

A maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fighttheflood va.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	X Yes ☐No

Applicant Name:	**Middle Peninsula Planning District Commission**

Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration X Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. Any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index Score.)]		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		88

III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

If the applicant is determined to be low-income, MPPDC will attempt to use loan forgiveness from VRA revolving loan funding to help to reduce or eliminate the match requirement. To be able to do this, MPPDC will rely on DCR staff to advise how to determine if the applicant is low income.

- ***Estimated total project cost:*** *$17,399*

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Signed pledge agreement from each contributing organization:

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 542 Shore Drive, Hartfield, VA 23071. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at (804) 832-3711 or by email at mklotz66@gmail.com.

Sincerely,

Dorothy Gallimore

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Mr. Lawrence:

Middlesex County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents are part of our necessary governmental functions and are consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood (FTF) Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC FTF Program provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs assist to secure the tax base of coastal localities and reduce the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types.

The FTF and the Living Shoreline programs exist to help the owners of flood-prone properties access programs and services to better manage challenges posed by flood water and to direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents, to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-758-4330.

Respectfully,

Matt Walker
County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)
The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)
Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)
In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

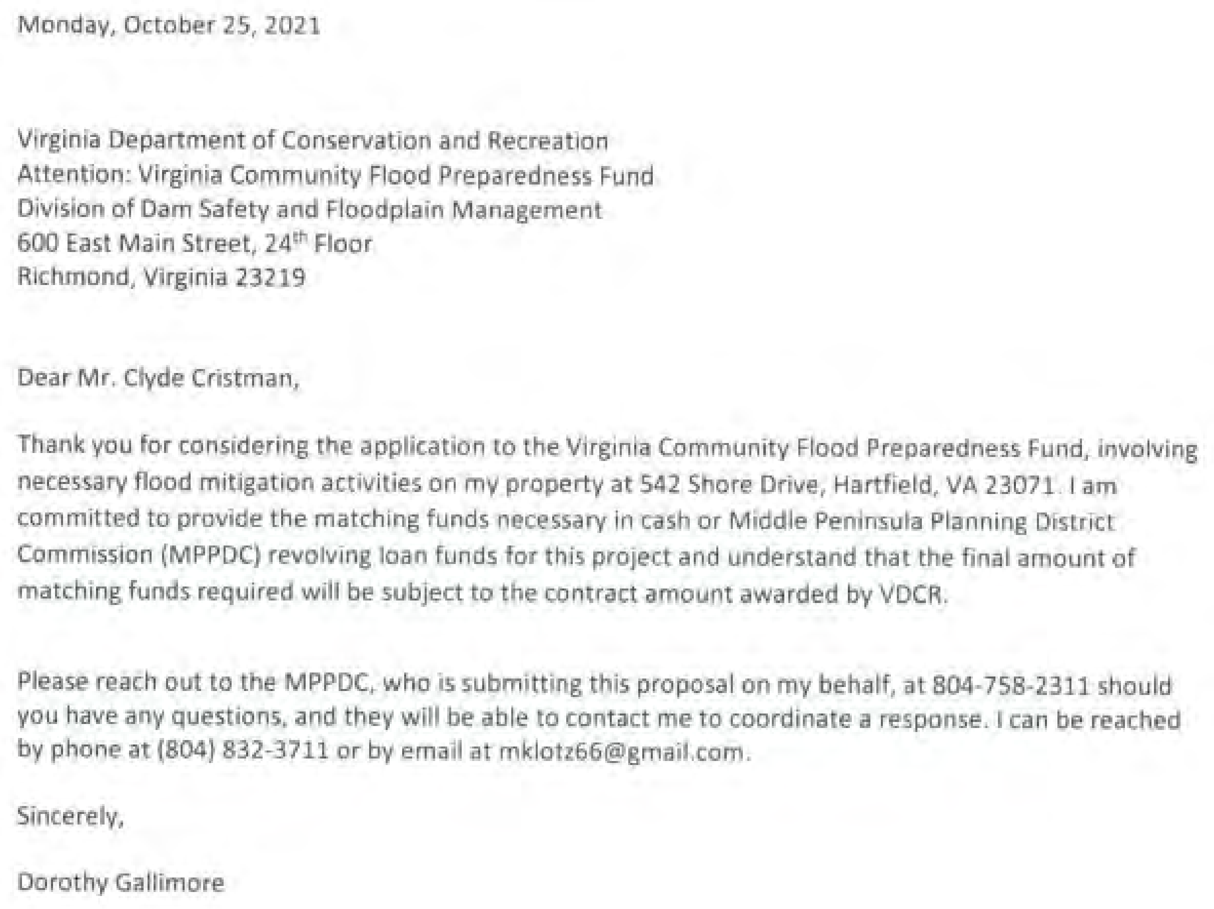
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



Monday, October 25, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 542 Shore Drive, Hartfield, VA 23071. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at (804) 832-3711 or by email at mklotz66@gmail.com.

Sincerely,

Dorothy Gallimore

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Middlesex County **-** Please see the attached corresponding maps for this application.

Total Cost of Project: _____________$17,399____

Total Amount Requested: _________$12,180__________________

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft Joint Permit Application or DEQ Water Quality Impact Assessment depending on the jurisdictional determination for the application to reduce the impacts of storm events, flooding, and wetland loss. Rapid rainwater runoff is steadily eroding the property's steep bank located on Urbanna Creek, a tributary of the Rappahannock River (length of shoreline is approximately 165 feet). This has occurred over a period of years the property was purchase by the current owners. The primary concern is the flood-induced erosion that is undermining posts supporting steps to a pier and accelerated undermining tree roots causing tree loss. A steep bank under the pier steps and to each side of the pier steps is in danger of becoming a cliff that will not support pier steps or sustain plants. There is a potential design solution in mind. Enviro-Lock (Enviro-Lock.com) provides a system and products utilizing soil and sandbags that can be stacked five to eight feet and planted with natural plants creating a stable living shoreline "bank" minimizing or avoiding the utilization of traditional "rip rap" rock or other gray infrastructure.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Bucks Landing in Middlesex County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Middlesex County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

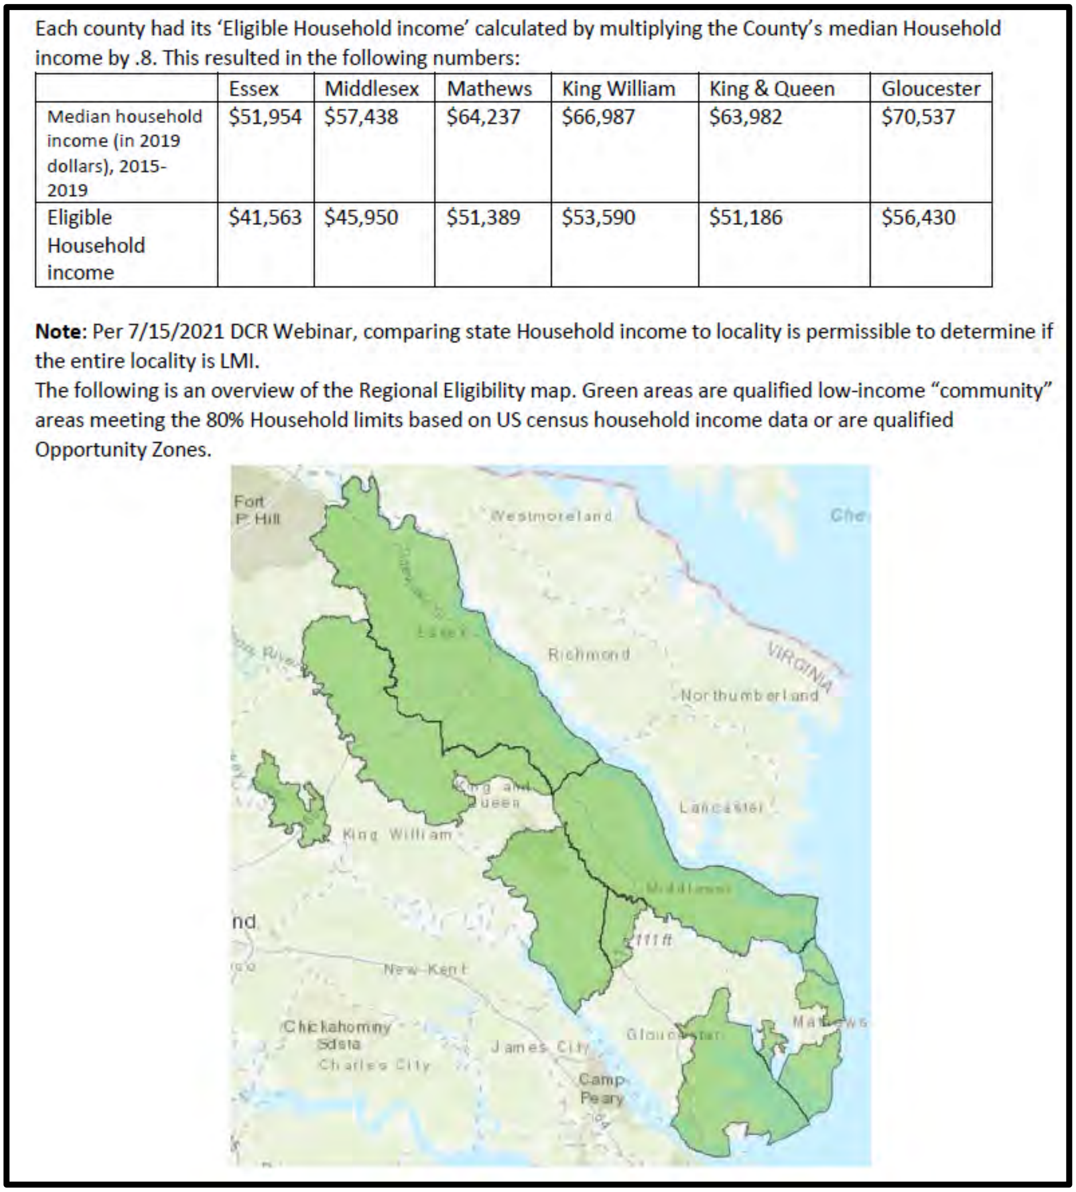
Middlesex County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 130 square miles of land 80 miles of shorelines. Based on 2020 Census Data, Middlesex County's population totals 10,625 which. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

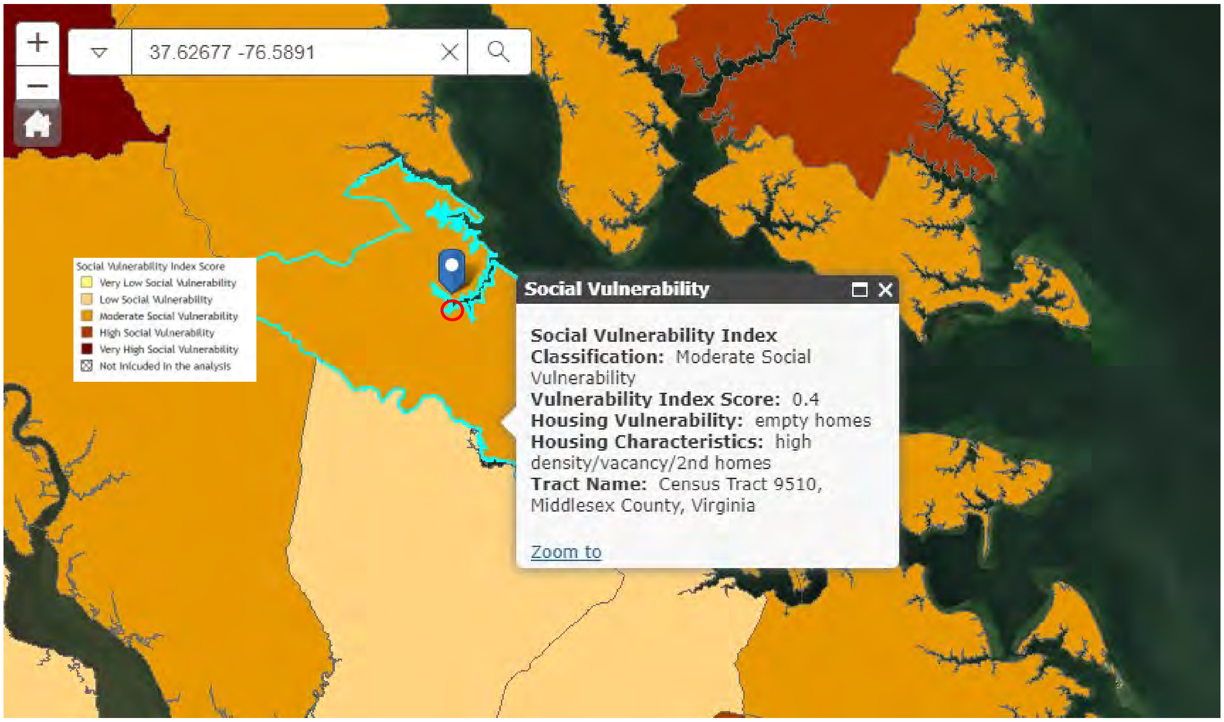
According to the VDAPT Virginia’s Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA’s National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively moderate level of vulnerability as seen in **Figure 8**.

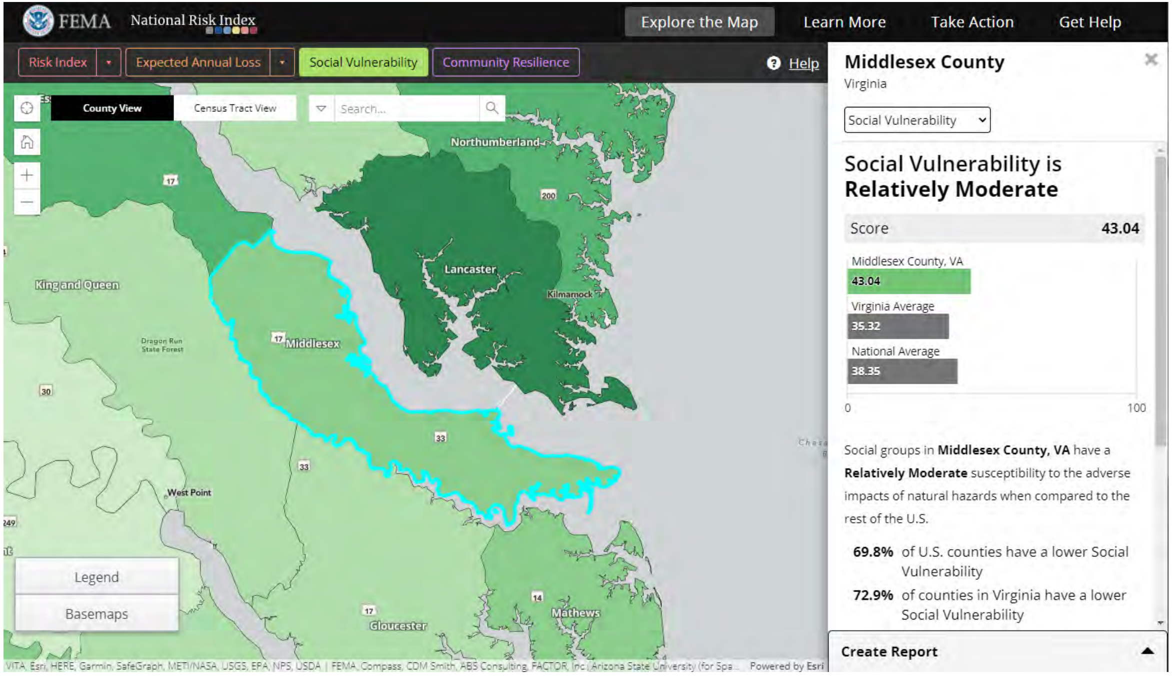
Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability

Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.4
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9510, Middlesex County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Middlesex County
Virginia

Social Vulnerability is Relatively Moderate

Score	43.04
Middlesex County, VA	43.04
Virginia Average	35.32
National Average	38.35

Social groups in **Middlesex County, VA** have a **Relatively Moderate** susceptibility to the adverse impacts of natural hazards when compared to the rest of the U.S.

69.8% of U.S. counties have a lower Social Vulnerability

72.9% of counties in Virginia have a lower Social Vulnerability

The project is located at 42 Bucks Landing, Urbanna, VA 23175 (-76.5891, 37.62677). The property was purchased in 2008 and has experienced a number of issues. Rapid rainwater runoff is steadily eroding the property's steep bank located on Urbanna Creek off of the Rappahannock River (length of shoreline is approximately 165 feet). This has occurred over a period of years since the property was purchased by the current homeowners. The primary concern is the flood-induced erosion that is undermining posts supporting steps to a pier and undermining tree roots causing tree loss. The steep bank under pier steps and to each side of the pier steps is in danger of becoming a cliff that will not support pier steps or sustain plants. Part of the homeowner's eroding bank is in front of a neighbor's home that is located close to the bank. One tree has died (two years ago) and fallen into the water and opened up the creek bank. Three additional trees have died. One of those dead trees is about 12 feet tall with no top. The two other additional dead trees were alive last year and died this summer. Another tree was partially alive but hollow and leaning over the pier. A permit was secured for that tree as part of a "Friends of the Rappahannock" Living Shoreline project and was cut. There is a remaining tree stump and severe erosion exposed roots. There is one other live tree on the bank leaning toward the water that will likely succumb to death in the next few years. There is one other old tree stump with severe erosion exposed roots.

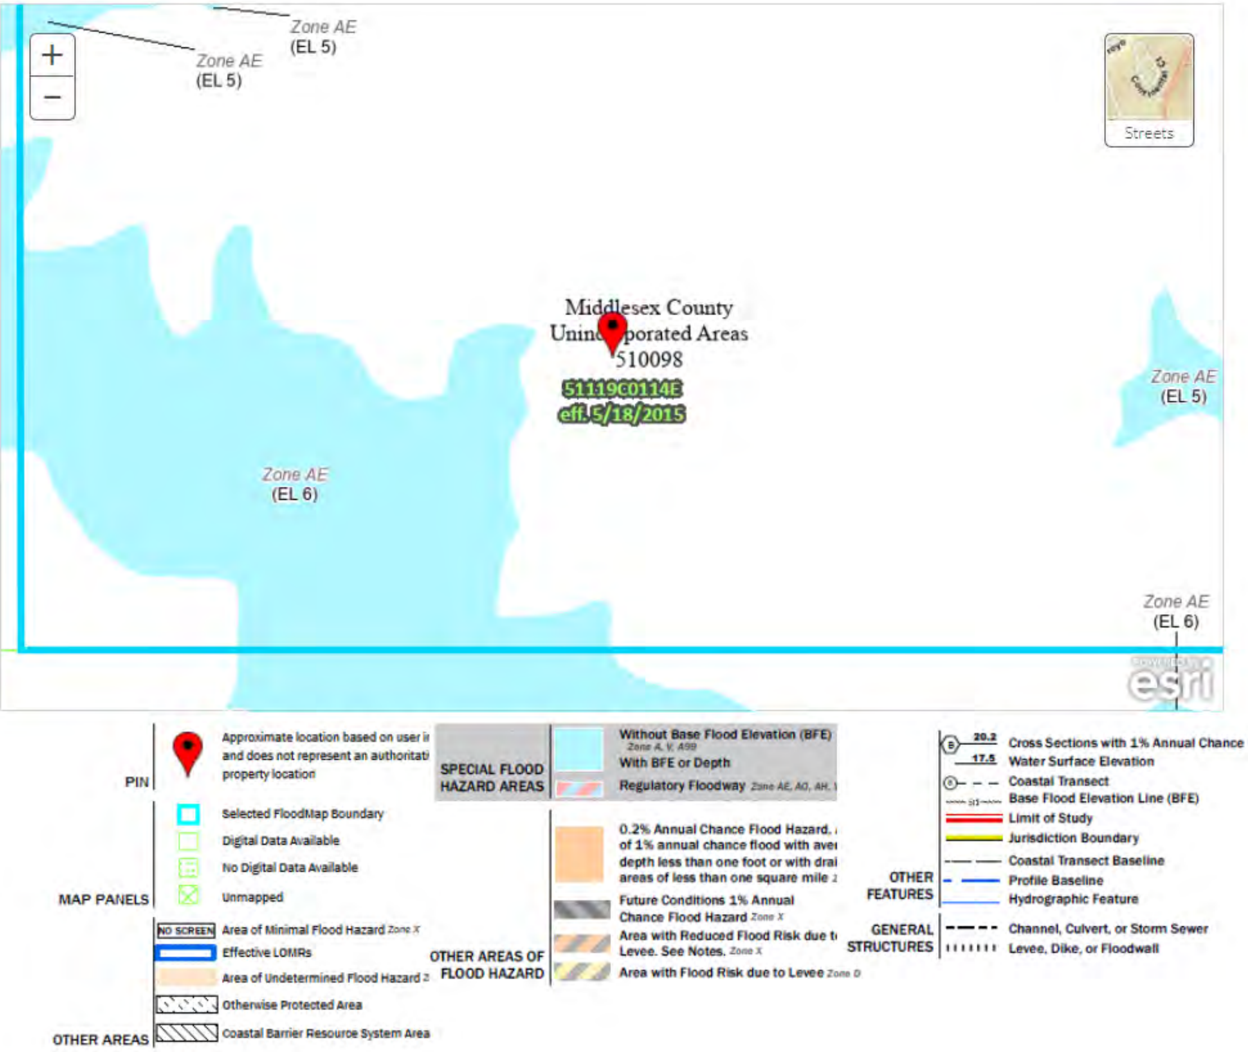
There is a potential design solution in mind. Enviro-Lock (Enviro-Lock.com) provides a system and products utilizing soil/sandbags that can be stacked five to eight feet and planted with natural plants creating a stable living shoreline "bank" minimizing or avoiding the utilization of traditional "rip rap" rock or other gray infrastructure. The homeowners have observed two creek bank erosion projects (one completed and one in the process of being completed) in Middlesex County that are using this system/product and prefer this natural solution. The preliminary plan includes additional soil and plantings of the remaining bank above the soil and sandbags and plantings. The area beneath and adjacent to the pier steps may require rock rip rap unless it is feasible to utilize the soil sand bags. The contractor, in process of completing "Friends of the Rappahannock "living shoreline project that involves oyster bag reef, sand and natural plantings, alerted homeowner to Enviro-Lock system/products and showed homeowners the other projects utilizing the Enviro-Lock system/products. The current "Friends of the Rappahannock" living shoreline project will not solve the serious erosion issue caused by the rainwater runoff. No contractor for design work has been contacted at this point.

See accompanying pictures below of the site conditions.

Please see **Appendix 2** for additional property photos.

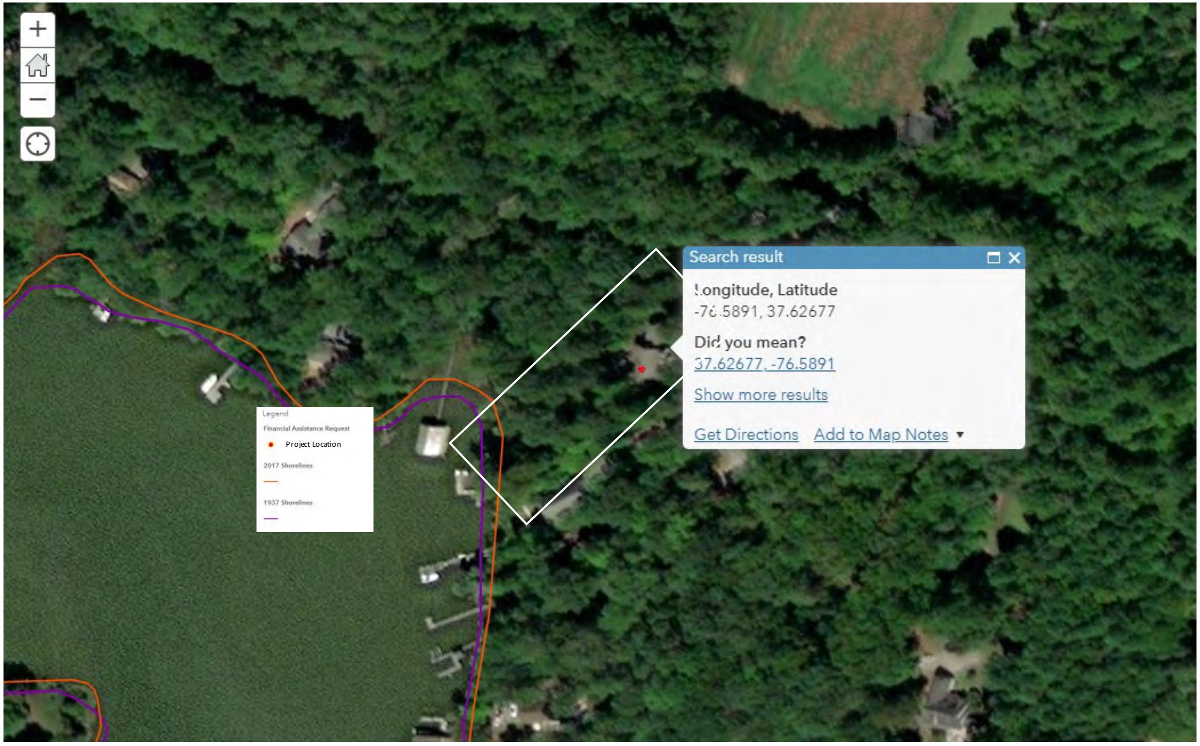
This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 3** for the FIRMettes (last mapped 5/18/2015).

Figure 9: Map of FEMA Flood Zones



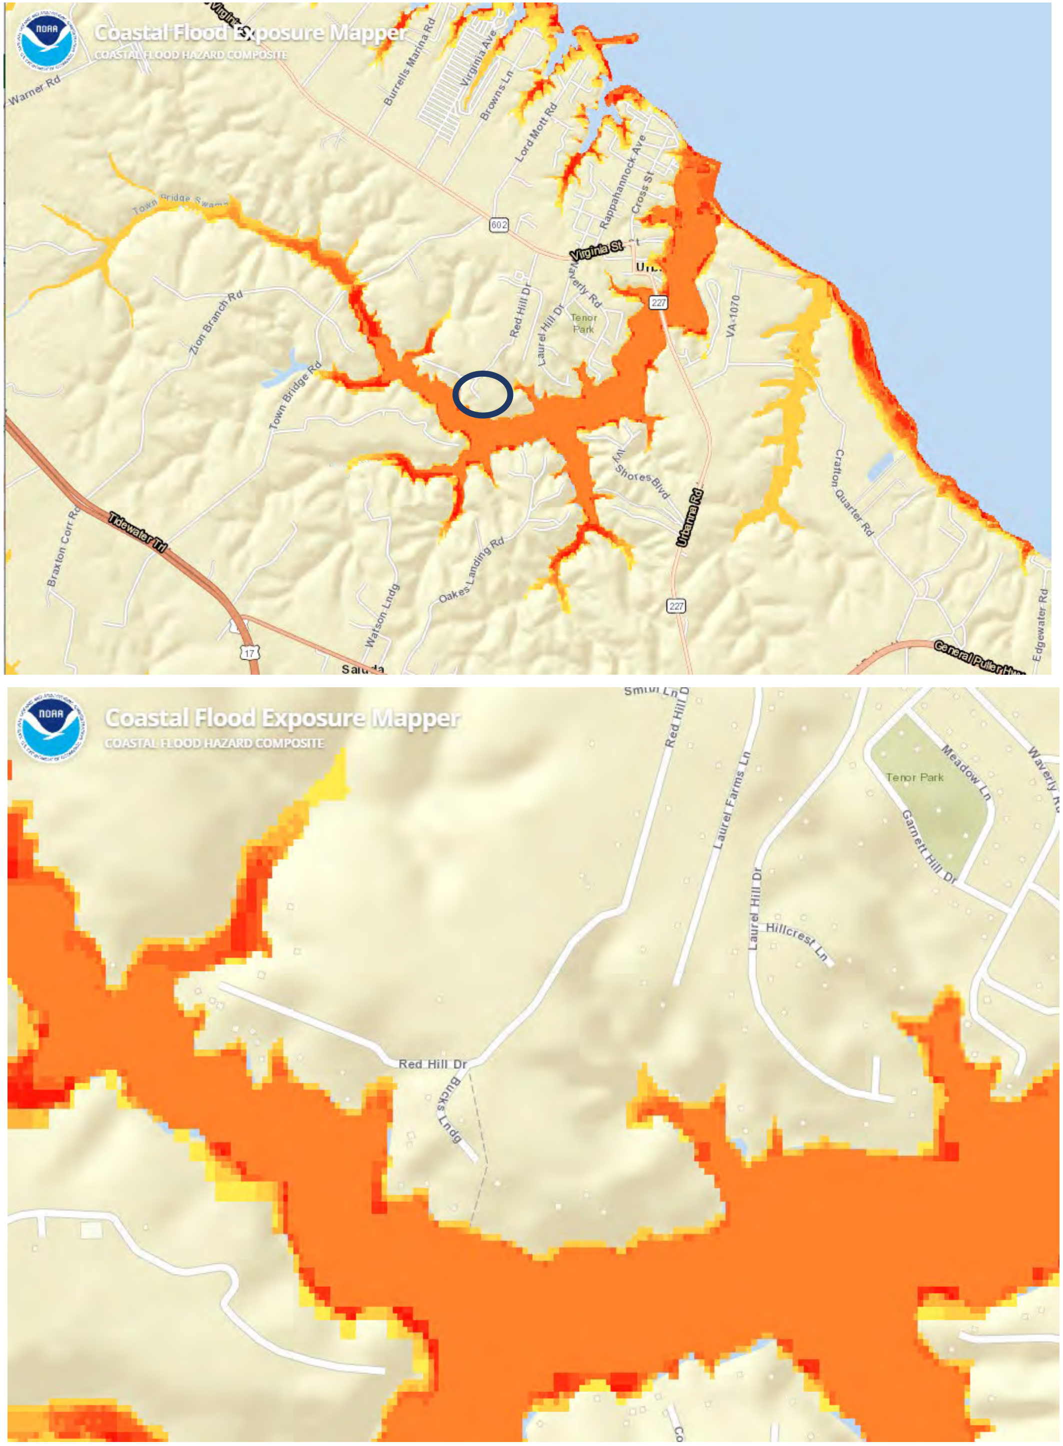
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 4,815.7 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 74 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 and 2017



Finally, according to NOAA’s Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 11**.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



For more information about this project area please see:

- *A link to Middlesex County's current floodplain ordinance can be found at:*

https://www.co.middlesex.va.us/DocumentCenter/View/422/Floodplain-Management-PDF.

COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, “Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines “Community Scale project” which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving “demonstrable flood reduction” benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based “brick in the wall” and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12**. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits

Coastal NNBFs Ranked: Benefits to Coastal Buildings

42 Bucks Landing, Urbanna, VA 23

This Tidal Marsh feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **Low rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(0 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **High rank** for the NNBF to be used for incentive programs (2 out of 2: The NNBF has water quality benefit of

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, the Middle Peninsula PDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Middlesex County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, <u>Removal Rates of Shoreline Management Project</u>, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, a proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300

pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	M1	M2	M3	M4	M5	M6
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

<u>Long Term Planning</u>

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
  - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

A maintenance plan is not applicable in this application. The proposed project is to develop a

nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**

Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration XLiving shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. Any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index Score.)](#)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		88

III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

This project may require usage of the new DEQ State Water Control Board regulations to manage flooding within the RPA. Middlesex County will be required to make regulatory determination as to who is the permitting authority VMRC/DEQ or both.

- ***Estimated total project cost: $17,399***
- ***Amount of funds requested from the Fund: $12,180***

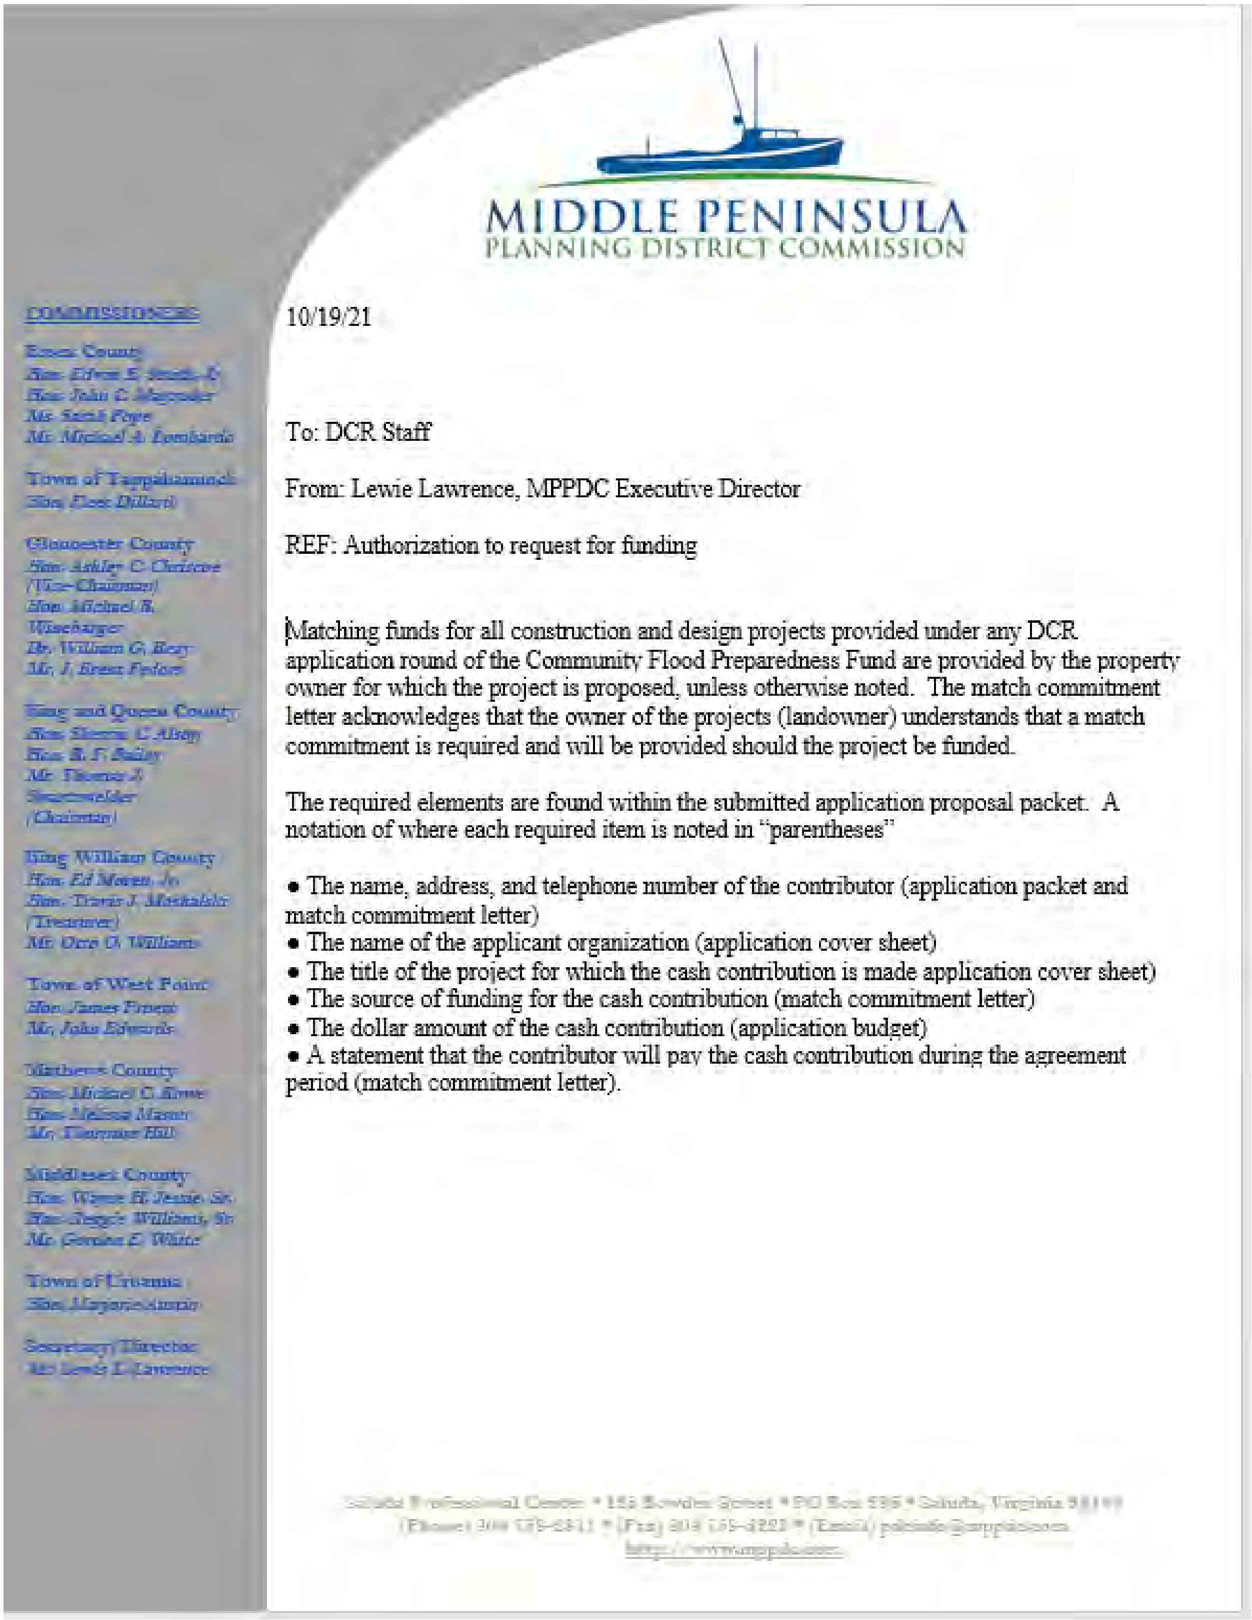
MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Authroration to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Signed pledge agreement from each contributing organization:

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 42 Bucks Landing, Urbanna Virginia, 23175. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at (757) 268-6479 or by email at L1vely6@aol.com.

Sincerely,

[redacted]

David G. Lively

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Mr. Lawrence:

Middlesex County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents are part of our necessary governmental functions and are consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood (FTF) Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC FTF Program provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs assist to secure the tax base of coastal localities and reduce the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types.

The FTF and the Living Shoreline programs exist to help the owners of flood-prone properties access programs and services to better manage challenges posed by flood water and to direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents, to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-758-4330.

Respectfully,

Matt Walker
County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter

10/13/2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 42 Bucks Landing, Urbanna Virginia, 23175. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at (757) 268-6479 or by email at L1vely6@aol.com.

Sincerely,

David G. Lively

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft Joint Permit Application to reduce the impacts of storm events, flooding, and wetland loss. The project is located at 1387 Oakes Landing Road, Saluda, VA 23149 (-76.5831, 37.62254). The property was purchased in 2019 and has experienced a number of issues (length of shoreline in approximately 200 feet). When the property was purchased, there was an undercut like a cave along the shoreline. Some of it has subsequently caved in. When it rains hard, the hill is eroding from the top; now lots of roots are showing on the hill. Several trees have come down and more are in danger of falling. The location is on Urbanna Creek which experiences lots of wave action from boating traffic. Mr. Michael L. Vanlandingham, the Shoreline Engineer with the Department of Conservation and Recreation Division of Soil and Water Conservation, Eastern Area Regional Office, has visited the property and his recommendation is included and incorporated into the proposal.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Oakes Landing Road in Middlesex County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Middlesex County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

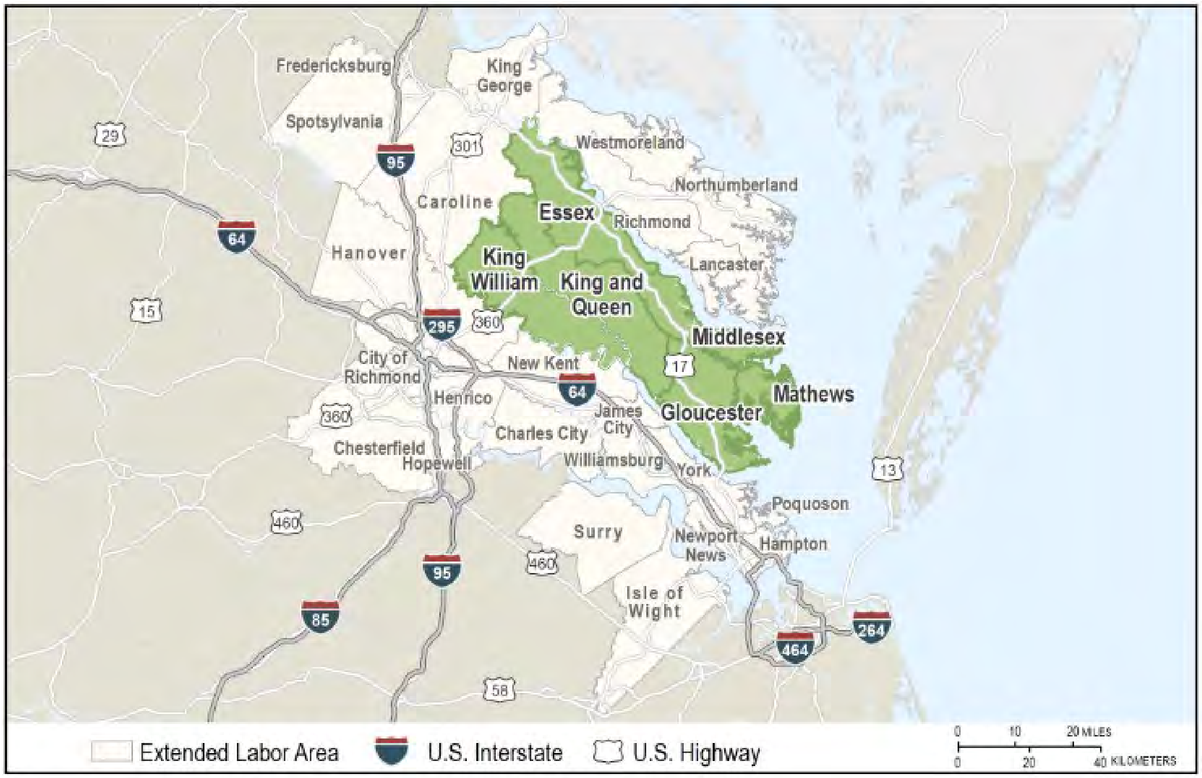

Figure 2. Middle Peninsula Population

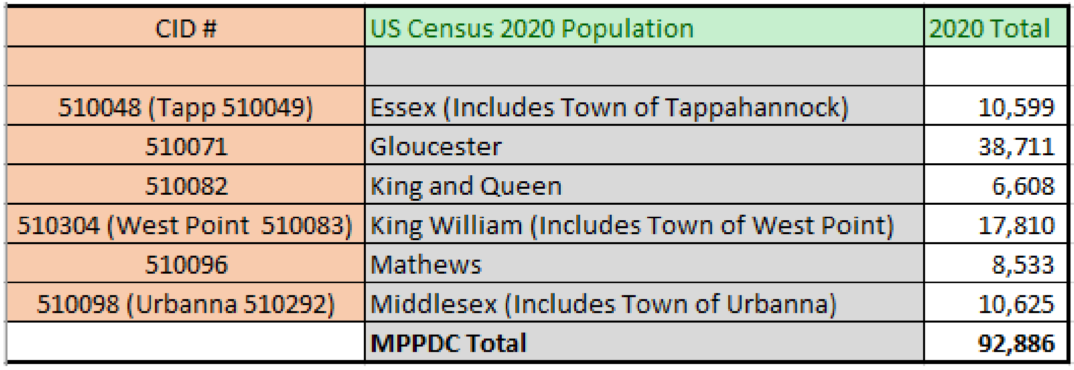

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to design a nature-based solution on one private property on Oakes Landing Road in Middlesex County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

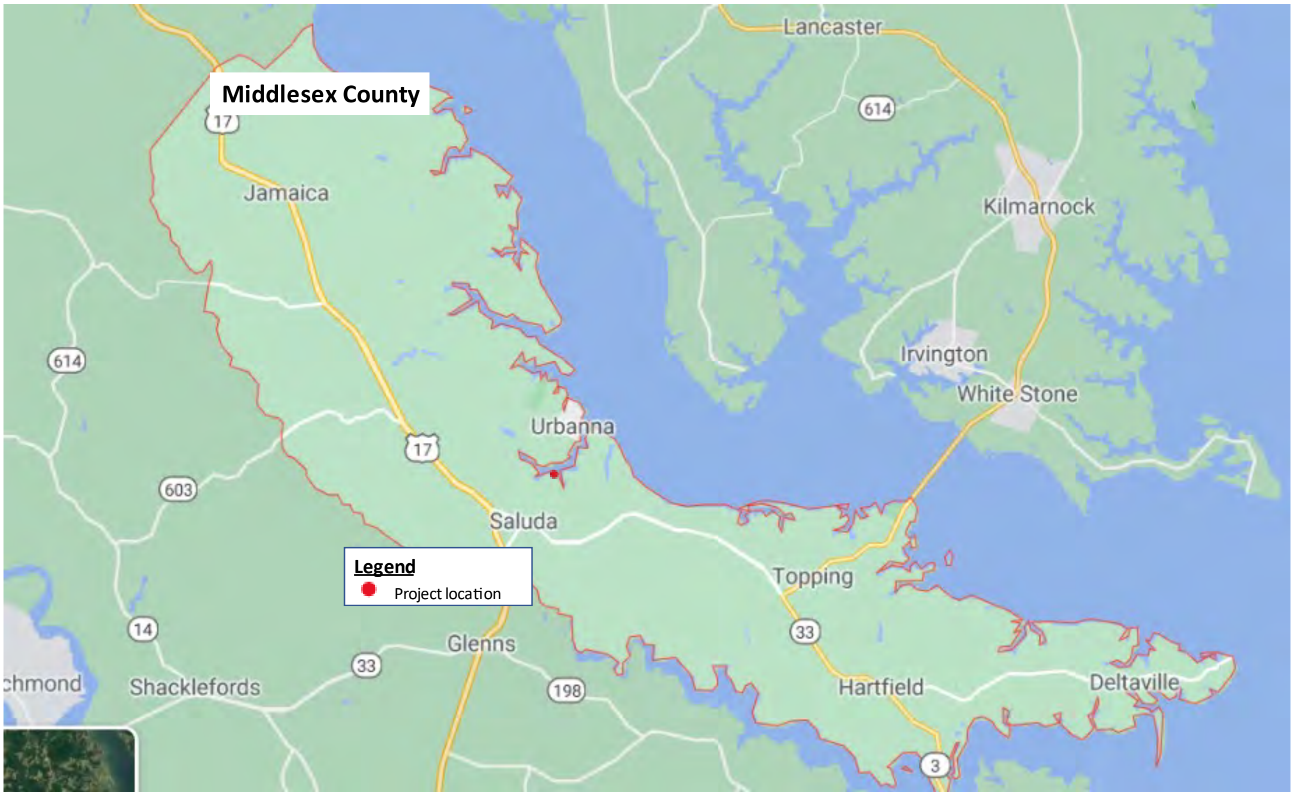

Figure 4. Parcel Map of Project Location

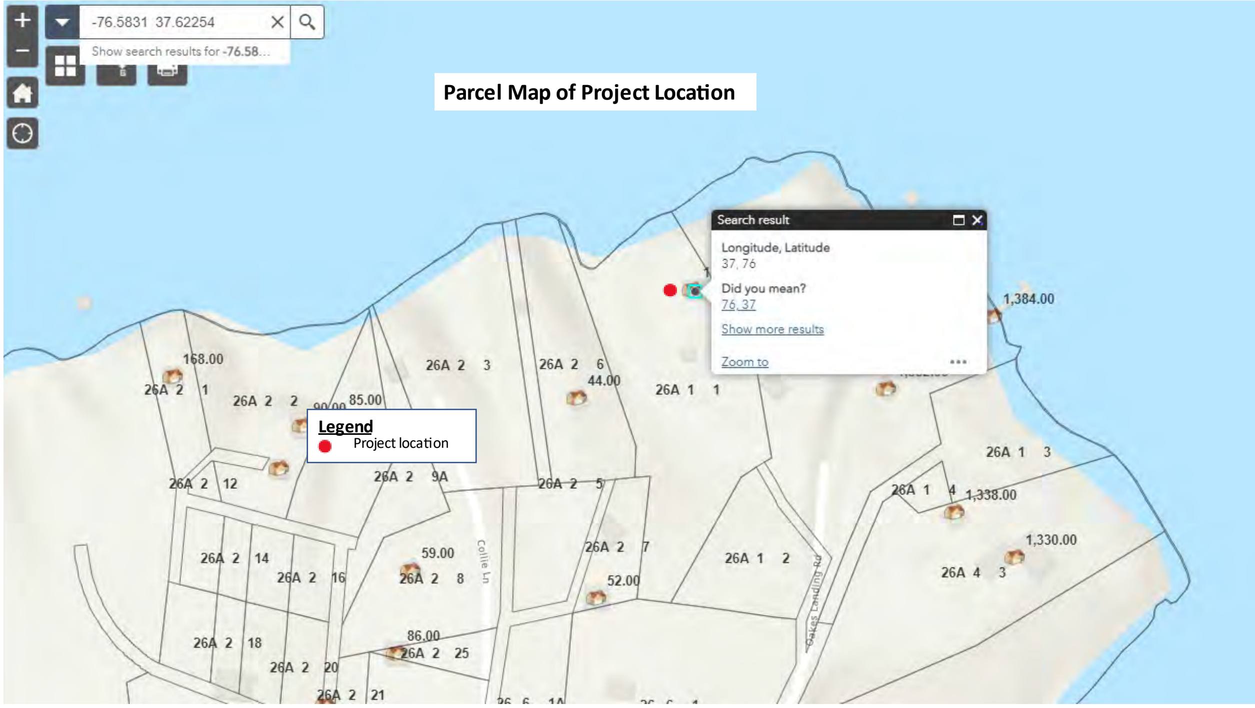
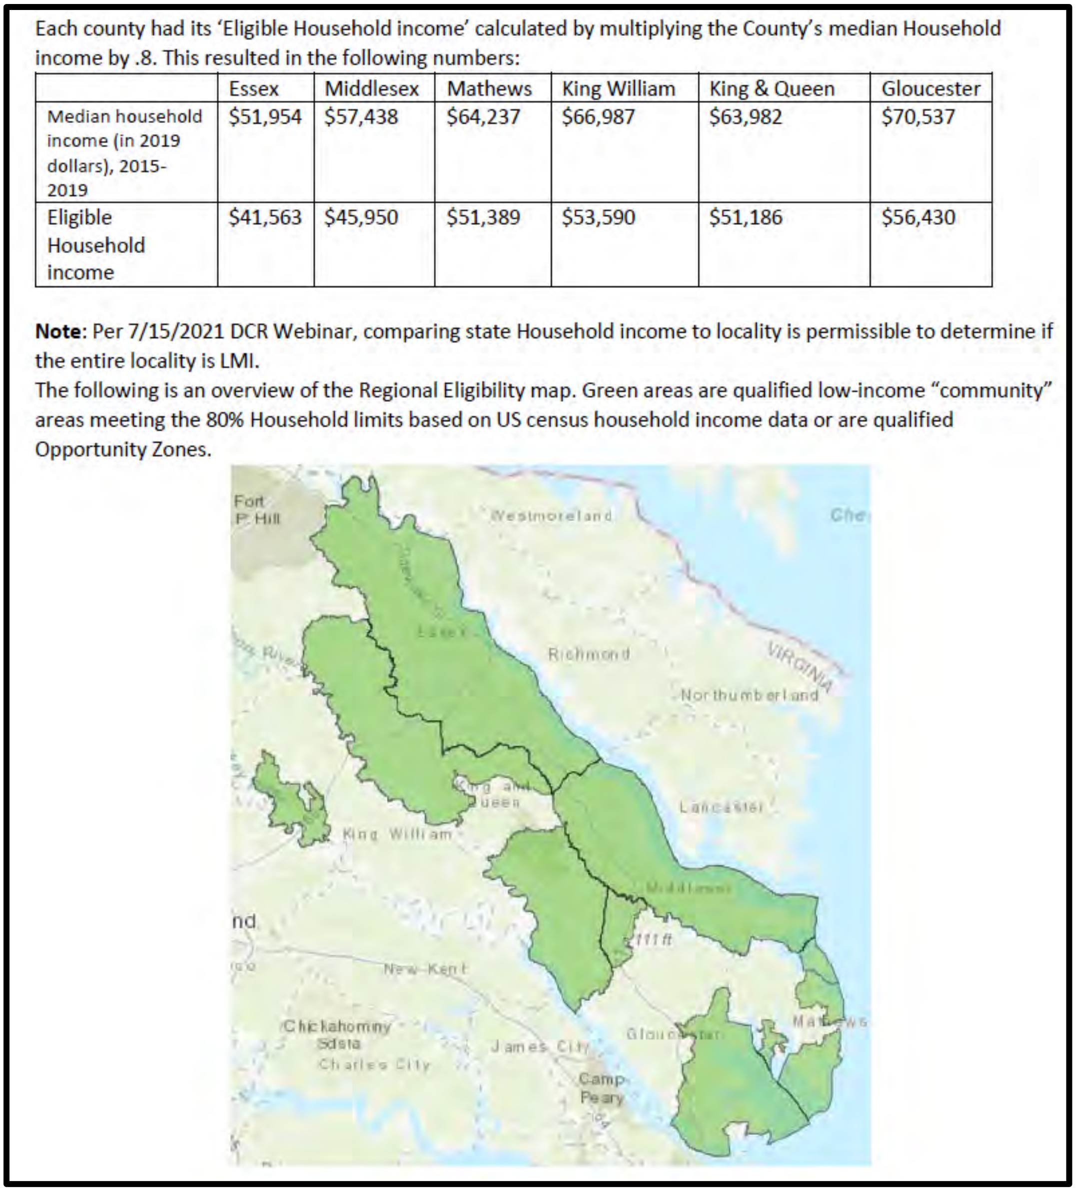


Middlesex County is located at Virginia’s Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 130 square miles of land 80 miles of shorelines. Based on 2020 Census Data, Middlesex County's population totals 10,625 which. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area

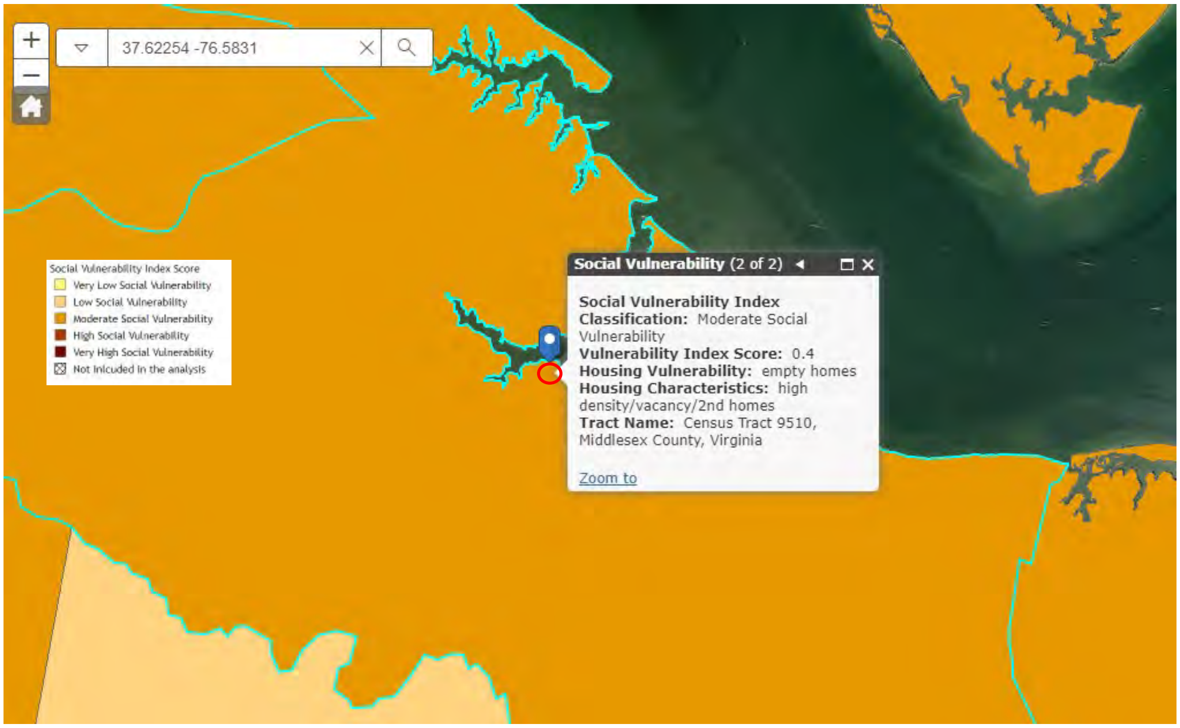
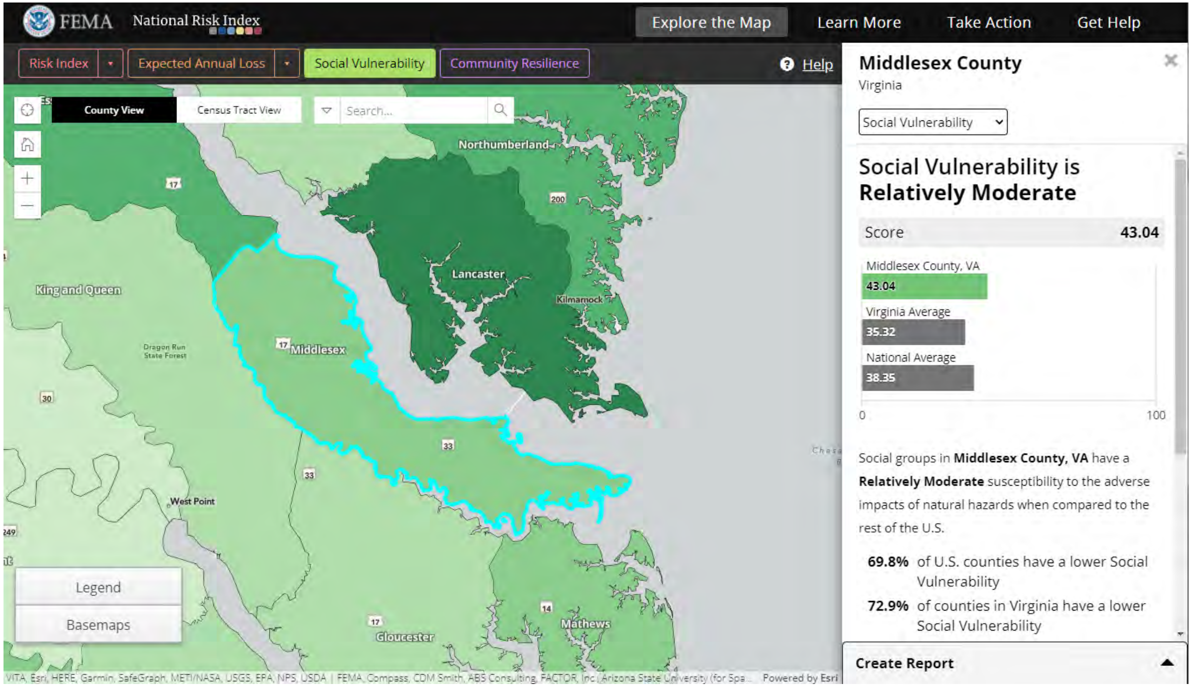
According to the VDAPT Virginia’s Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA’s National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.4
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/2nd homes
Tract Name: Census Tract 9510, Middlesex County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Middlesex County
Virginia

Social Vulnerability is Relatively Moderate

Score	43.04

Social groups in **Middlesex County, VA** have a **Relatively Moderate** susceptibility to the adverse impacts of natural hazards when compared to the rest of the U.S.

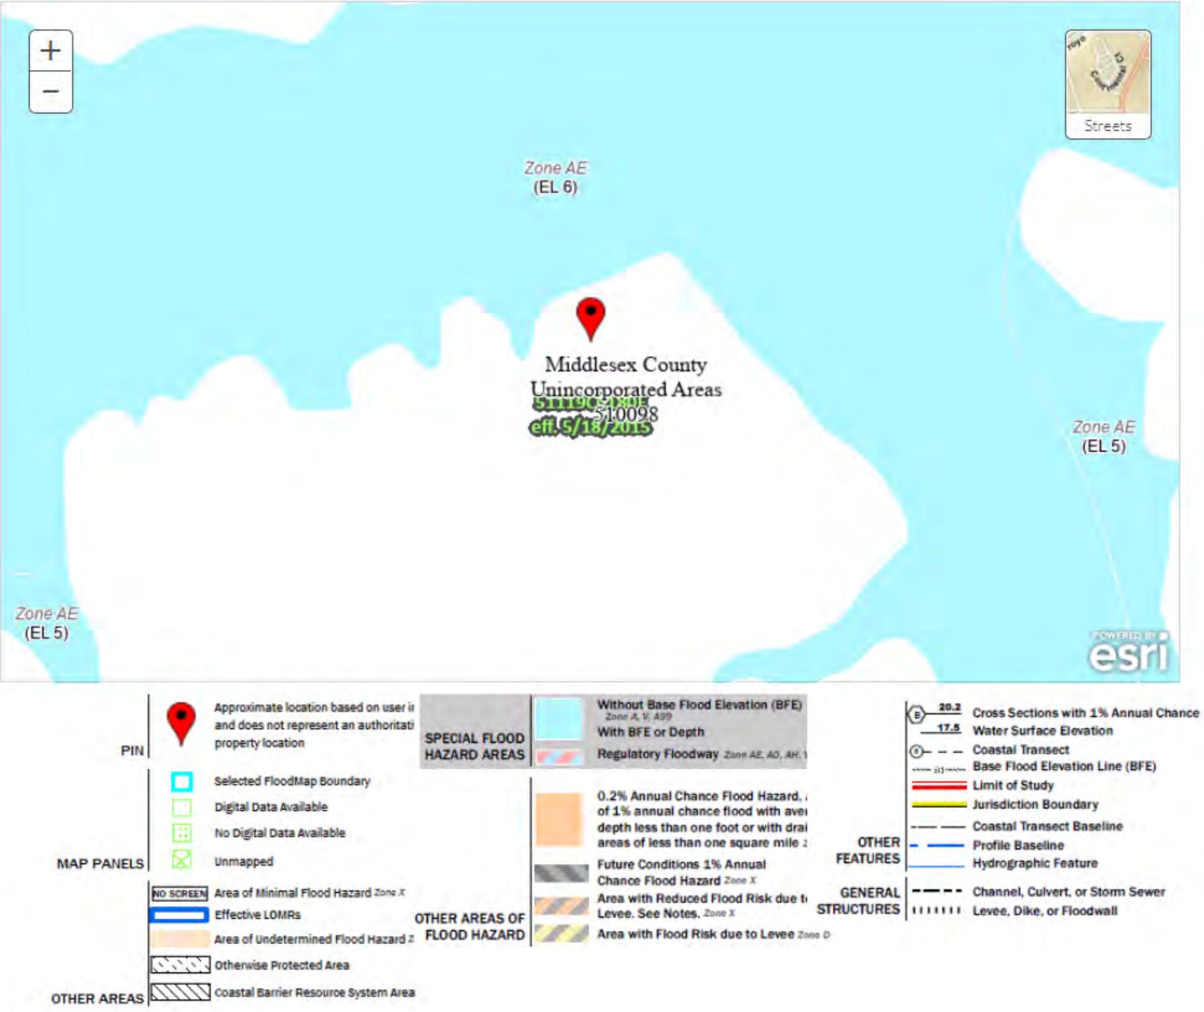
69.8%	of U.S. counties have a lower Social Vulnerability
72.9%	of counties in Virginia have a lower Social Vulnerability

The project is located at 1387 Oakes Landing Road, Saluda, VA 23149 (-76.5831, 37.62254). The property was purchased in 2019 and has experienced a number of issues (length of shoreline in approximately 200 feet). When the property was purchased, there was an undercut like a cave along the shoreline. Some of it has subsequently caved in. When it rains hard, the hill is eroding from the top; now lots of roots are showing on the hill. Several trees have come down and more are in danger of falling. The location is on Urbanna Creek and experiences lots of wave action from boating traffic. Therefore, Mr. Michael L. Vanlandingham, the Shoreline Engineer with the Department of Conservation and Recreation Division of Soil and Water Conservation, Eastern Area Regional Office, has visited the property and his letter of recommendation is included as **Appendix 2**. This recommendation is valued highly, especially the permitting process in following the recommendation of the Shoreline Engineer to construct a riprap marsh sill and breakwater. See accompanying pictures of the site conditions below.

Please see **Appendix 3** for additional property photos.

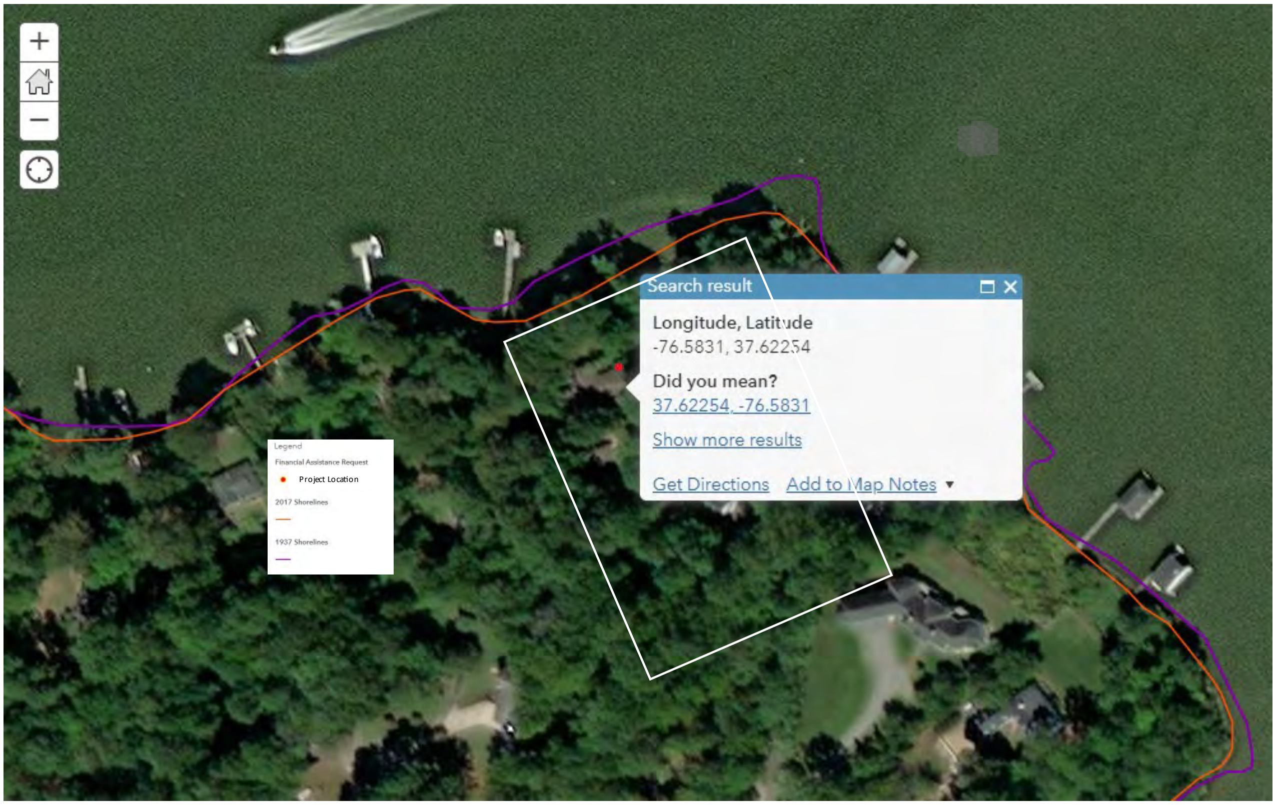
This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 4** for the FIRMettes (last mapped 5/18/2015).

Figure 9: Map of FEMA Flood Zones



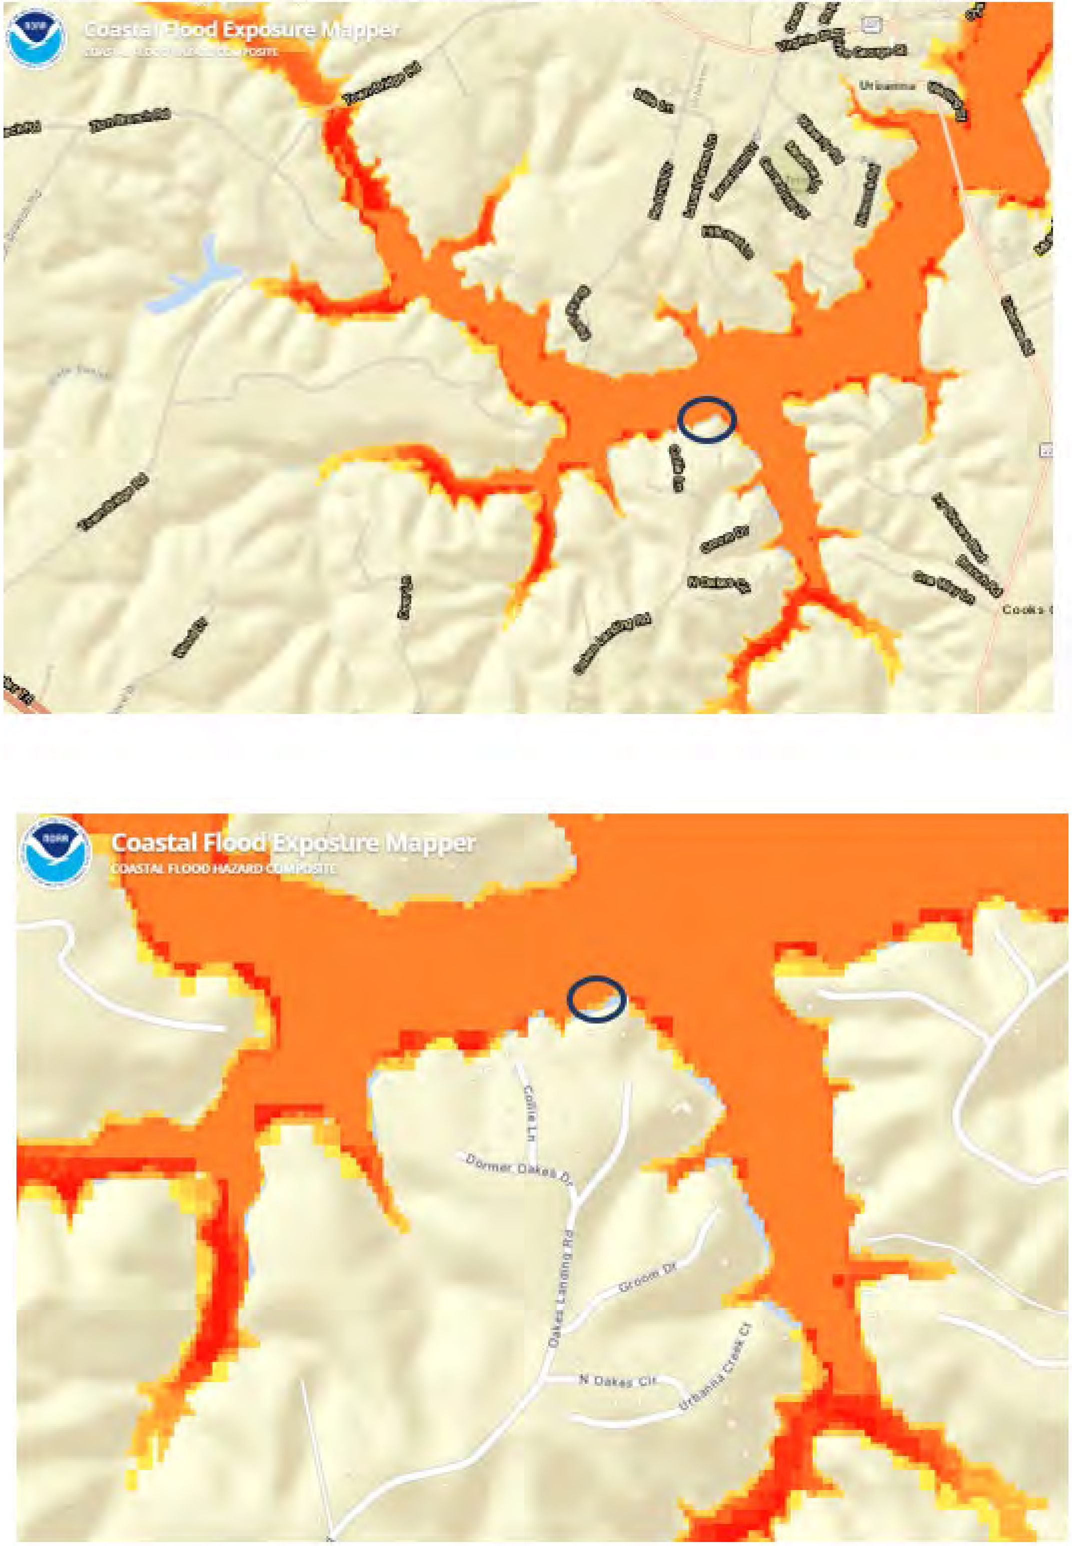
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 26,145.2 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 5** lists 75 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 (purple) and 2017



Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 11**.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Middlesex County's current floodplain ordinance can be found at: https://www.co.middlesex.va.us/DocumentCenter/View/422/Floodplain-Management-PDF.*

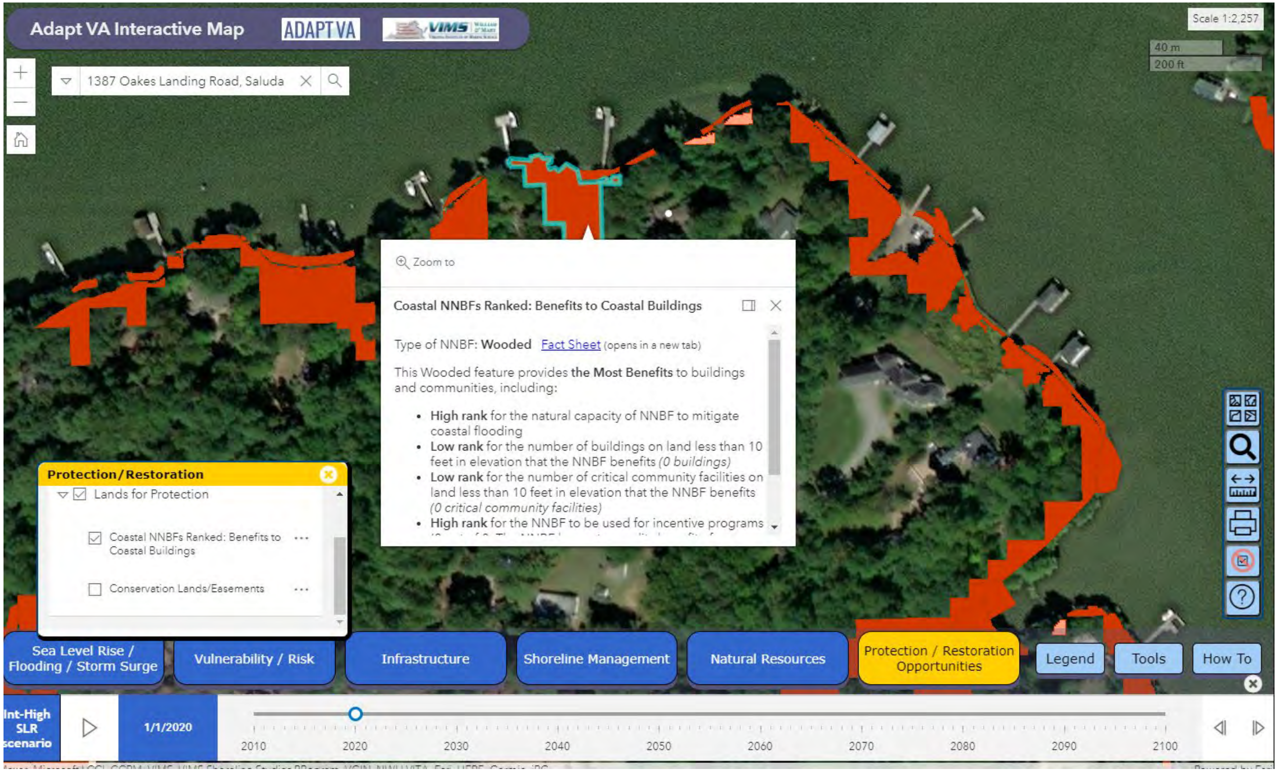
COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12**. All Round 2 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Wooded** Fact Sheet (opens in a new tab)

This Wooded feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **Low rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(0 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **High rank** for the NNBF to be used for incentive programs

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, the Middle Peninsula PDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES.

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice* *that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as recommended by SEAS, as the installation of a nature-based solution will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Middlesex County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, a proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300

pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to design a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**. In previous efforts the landowner has worked with a contractor to receive a cost estimate and summary (**Appendix 6**) for potential nature-based solutions to stabilize their shoreline; however more work needs to be done in order to select the appropriate nature-based or hybrid design that best suits the property.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with implementing the nature-based or hybrid design solution					X	X
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 7.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

A maintenance plan is not applicable in this application. The proposed project is to develop a

nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 8.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index Score.)](#)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		83

III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

- ***Estimated total project cost:*** *$24,963*
- ***Amount of funds requested from the Fund:*** $17,475

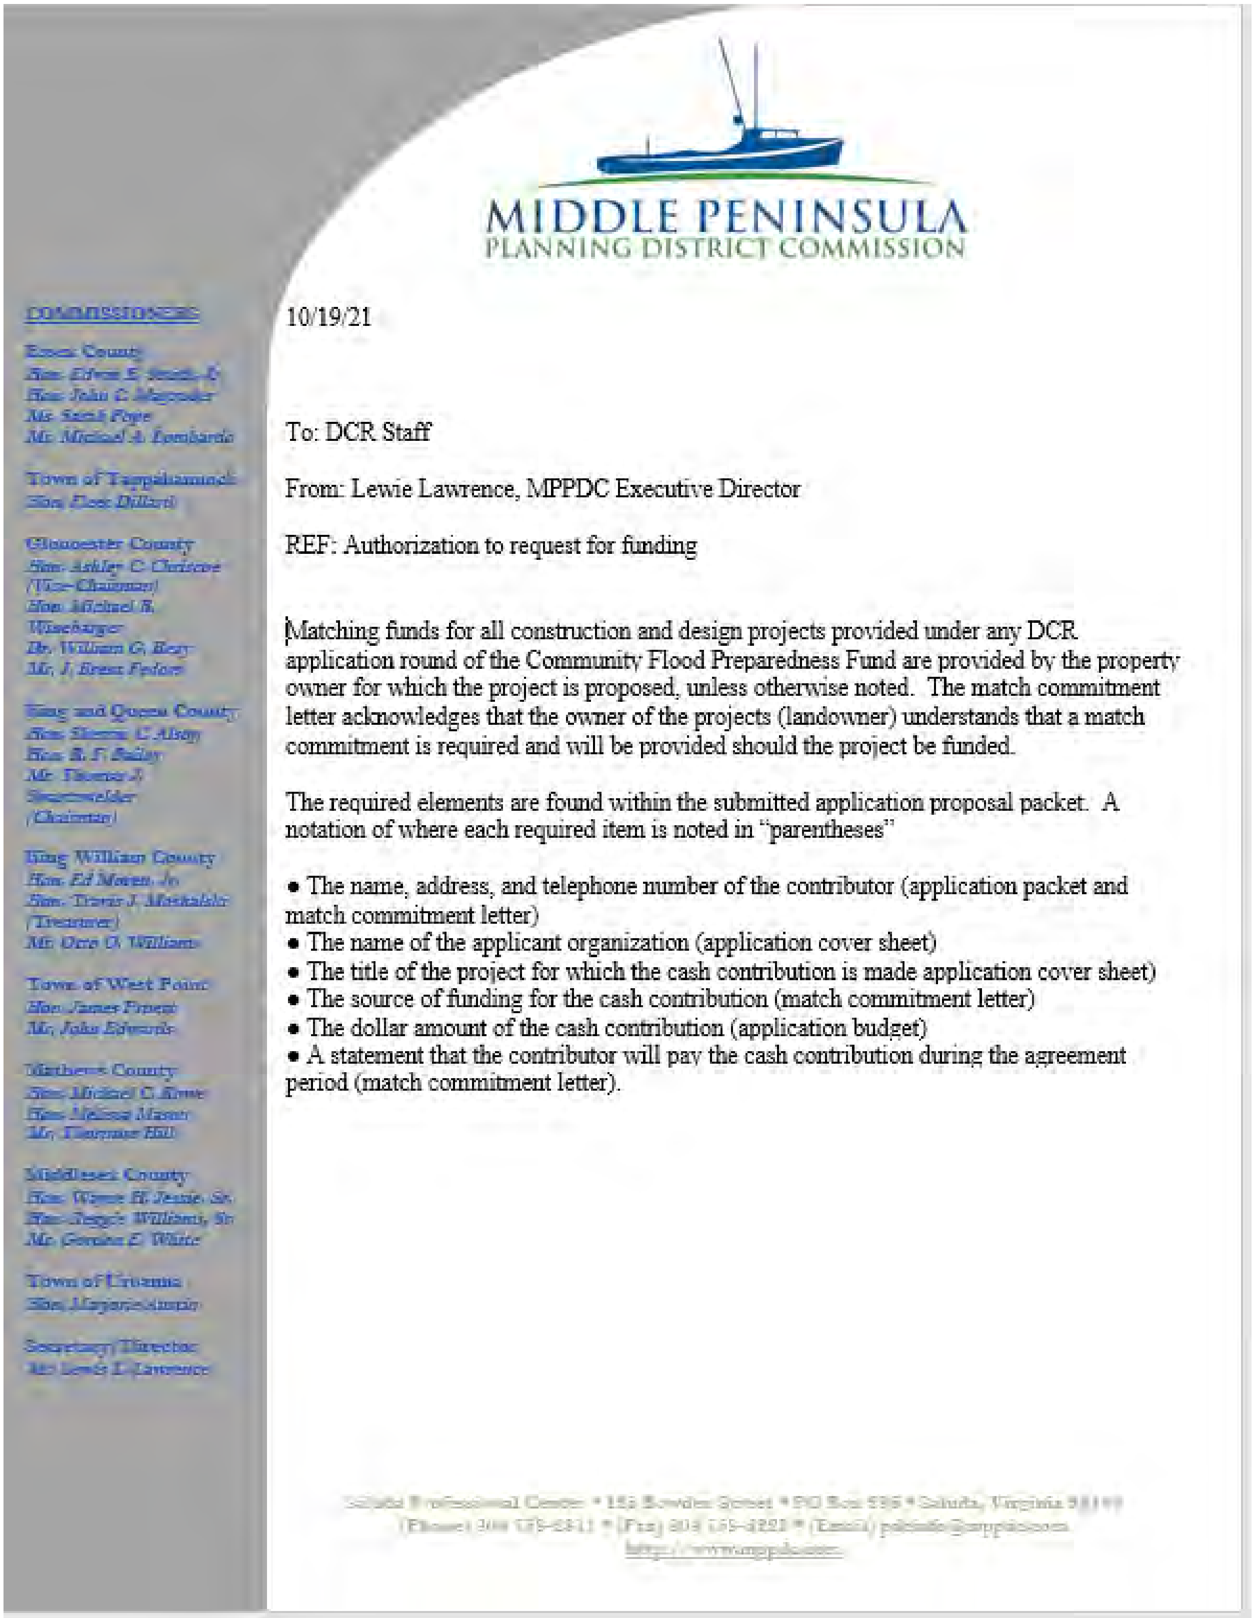
MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Authorization to request for funding:



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

10/19/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

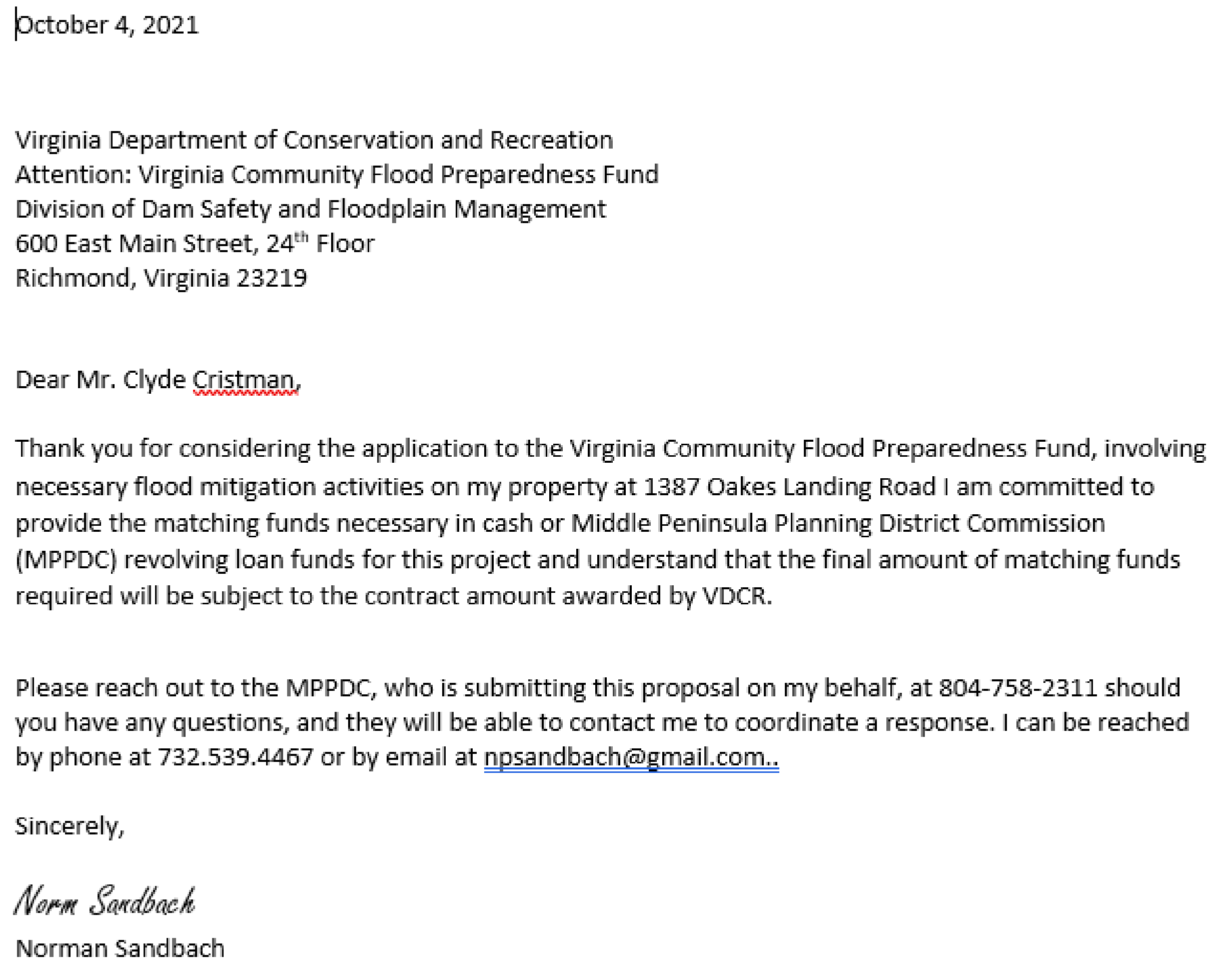
REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).
]

Signed pledge agreement from each contributing organization:



October 4, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 1387 Oakes Landing Road I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 732.539.4467 or by email at npsandbach@gmail.com..

Sincerely,

Norm Sandbach

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Mr. Lawrence:

Middlesex County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents are part of our necessary governmental functions and are consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood (FTF) Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC FTF Program provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs assist to secure the tax base of coastal localities and reduce the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types.

The FTF and the Living Shoreline programs exist to help the owners of flood-prone properties access programs and services to better manage challenges posed by flood water and to direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents, to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-758-4330.

Respectfully,

Matt Walker
County Administrator

RE: SEAS# T22003

Dear Mrs. Sanbach:

On Jube 3, 2021, I met with you and your husband, at your property, on Urbanna Creek in Middlesex County. The site visit was in response to your request for advisory assistance concerning a shoreline erosion problem.

The Shoreline Studies Program, at the Virginia Institute of Marine Science, has created a Shoreline Evolution Map for tidal localities in Virginia. The map was created using aerial photography from 1937 to 2009. The map shows shoreline change over time. Based upon that map, the historical erosion rate for your area is less than 1 foot per year. The erosion on your property appears to be caused by elevated water levels and waves associated with storms. The following recommendations are made as a result of the site visit and subsequent analysis of the problem:

1. If you wish to pursue options to stabilize the bank, a geotechnical engineering evaluation should be conducted to determine the stability of the soil types and hydrology of the site. Any strategy to stabilize the slope should address the possible problem of the groundwater seeps that occur along the sand/clay interface of the slope.
2. The trees and shrubs growing on the bank and within 20 feet of the bank edge should be selectively cut or trimmed. Trees undermined by erosion displace large amounts of soil when they fall. Tree removal should decrease the weight on the bank and reduce the chance of sloughing. The additional sunlight exposure should stimulate growth of the upland ground cover and marsh fringe. Before cutting any trees, please contact Middlesex County at (804) 758-3382 for information concerning tree removal restrictions under the Chesapeake Bay Preservation Act.
3. Bank grading may not be practical due to the bank height, location of the house and depth of the lot. Although grading the entire bank may be impractical or cost prohibitive, portions of the bank may be selectively graded. In conjunction with or as an alternative to bank grading, a properly designed and constructed retaining wall system may be installed.
4. To prevent further bank erosion, we recommend a properly designed and constructed riprap (large rock) revetment. The structure should be installed to minimize encroachment beyond the mean high

water position. The riprap should be constructed on a 2:1 (horizontal/vertical) slope or flatter. A minimum of two layers of armor rock should be used. Each armor rock should weigh a minimum of 50 pounds. The toe of the riprap should be buried a minimum of 1 feet below the mean low water elevation. An alternative to the buried toe is a riprap apron. The apron consists of 2 layers of armor rock extending a minimum of 2 feet onto the bottom. A layer of filter cloth should be used under and behind the riprap. The riprap should be extended inland or properly connected to neighboring structures to prevent erosional flanking. Lists of filter cloth and riprap suppliers have been enclosed. See the enclosed cross-sectional view of a typical riprap revetment.

The above recommendations are made in my capacity as an advisory agent in shoreline erosion control matters. The suggestions should not be considered as binding you to any particular course of action, as they are intended to indicate what we think would be the best solution in terms of cost and effectiveness. Our examination of the site or this report does not constitute permission by the Commonwealth, or its agencies, to proceed with implementation of control measures. Permits from State and Federal agencies are generally required for shoreline modification.

You should also be aware that success in shoreline erosion control cannot be guaranteed, as there are many variables involved. In this regard, we suggest care in selecting a contractor. Our comments concerning construction are intended as guidelines developed from our experience in viewing structures that have been successful or have failed.

If you decide to construct a control measure, an assessment of the impacts of the project on the environment will be given by the regulatory agencies. Our advice is given with the idea of reducing environmental impacts associated with our recommendations. Although this has been considered in our recommendations, the permit reviewing agencies may desire additional information or measures.

Services available through this office include: review of the permit application; review of design and construction plans; and inspection of structures under construction when plans have been reviewed by this office. We recommend that a copy of this report be attached to the permit application.

If we may be of further assistance or if you have any questions, please let me know.

Sincerely,

Michael L. Vanlandingham

Fletcher Profile Views 11-19-20.png
72 KB

I have attached some sketches of various configurations I have proposed to another customer.
It shows large and small reefs, Envirolok bags, combinations, etc.
This cliff is not as large as yours, not as undercut, and without the big bare slope.
The various configurations are all in the same ballpark. I do think an all Envirolok bag solution is not optimum for you due to high boat wake activity. We will break wave energy with marsh grass in front of the bags and steep slope.

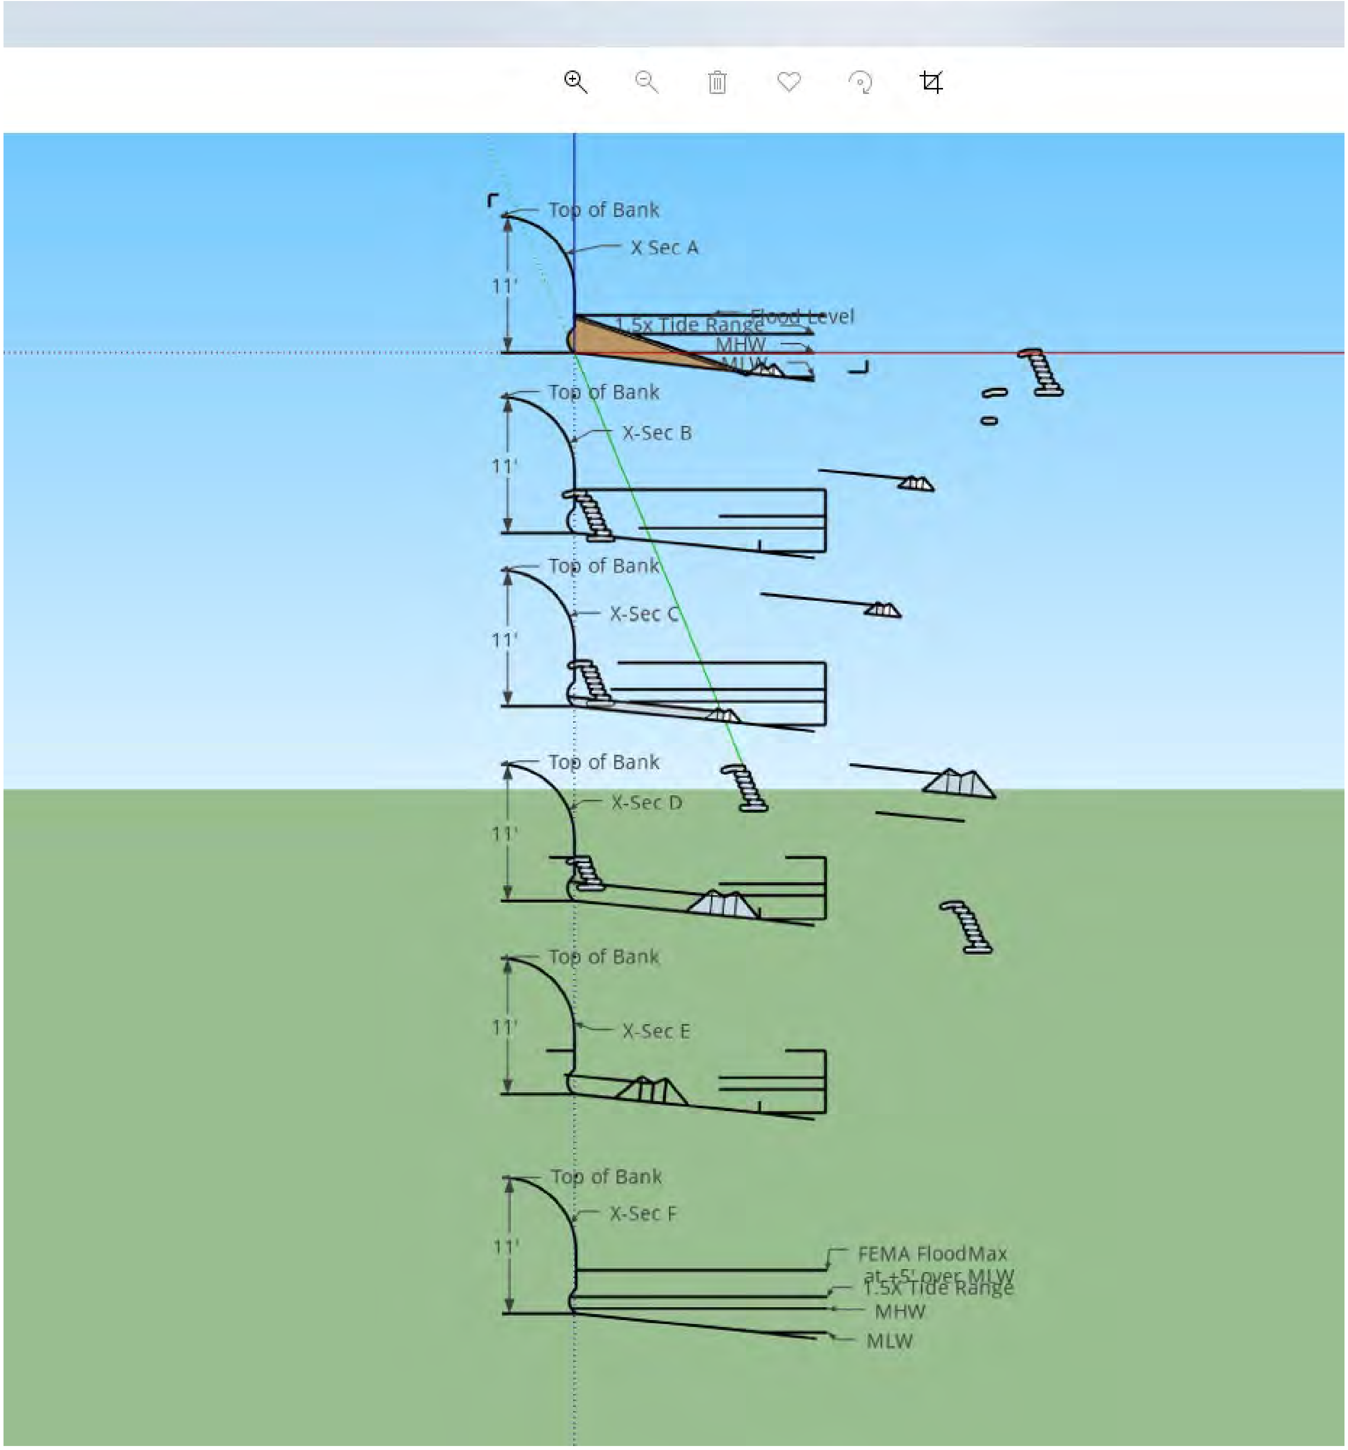
I may be able to reduce with more precise measurements (especially re Envirolok bags and sand feed from bank top)

Using 2' high reefs and 1.5' of sand backfill.
Reefs: $15,500
Envirolok bags: $20,000
Sand: $1470
Install sand (from dump pile on driveway): $3500
Plant Living Shoreline: $2052
Clear bank, including big downed tree and haul away: $2500
Equipment rentals and fees: $3000
(Barge, crane truck, sand conveyor/feeder, Bobcat, Haul trucks and trailers, slurry piping, pumps, sand chutes, material pallets, yard mats)
Overhead and profit: $14354
Total: $62,201

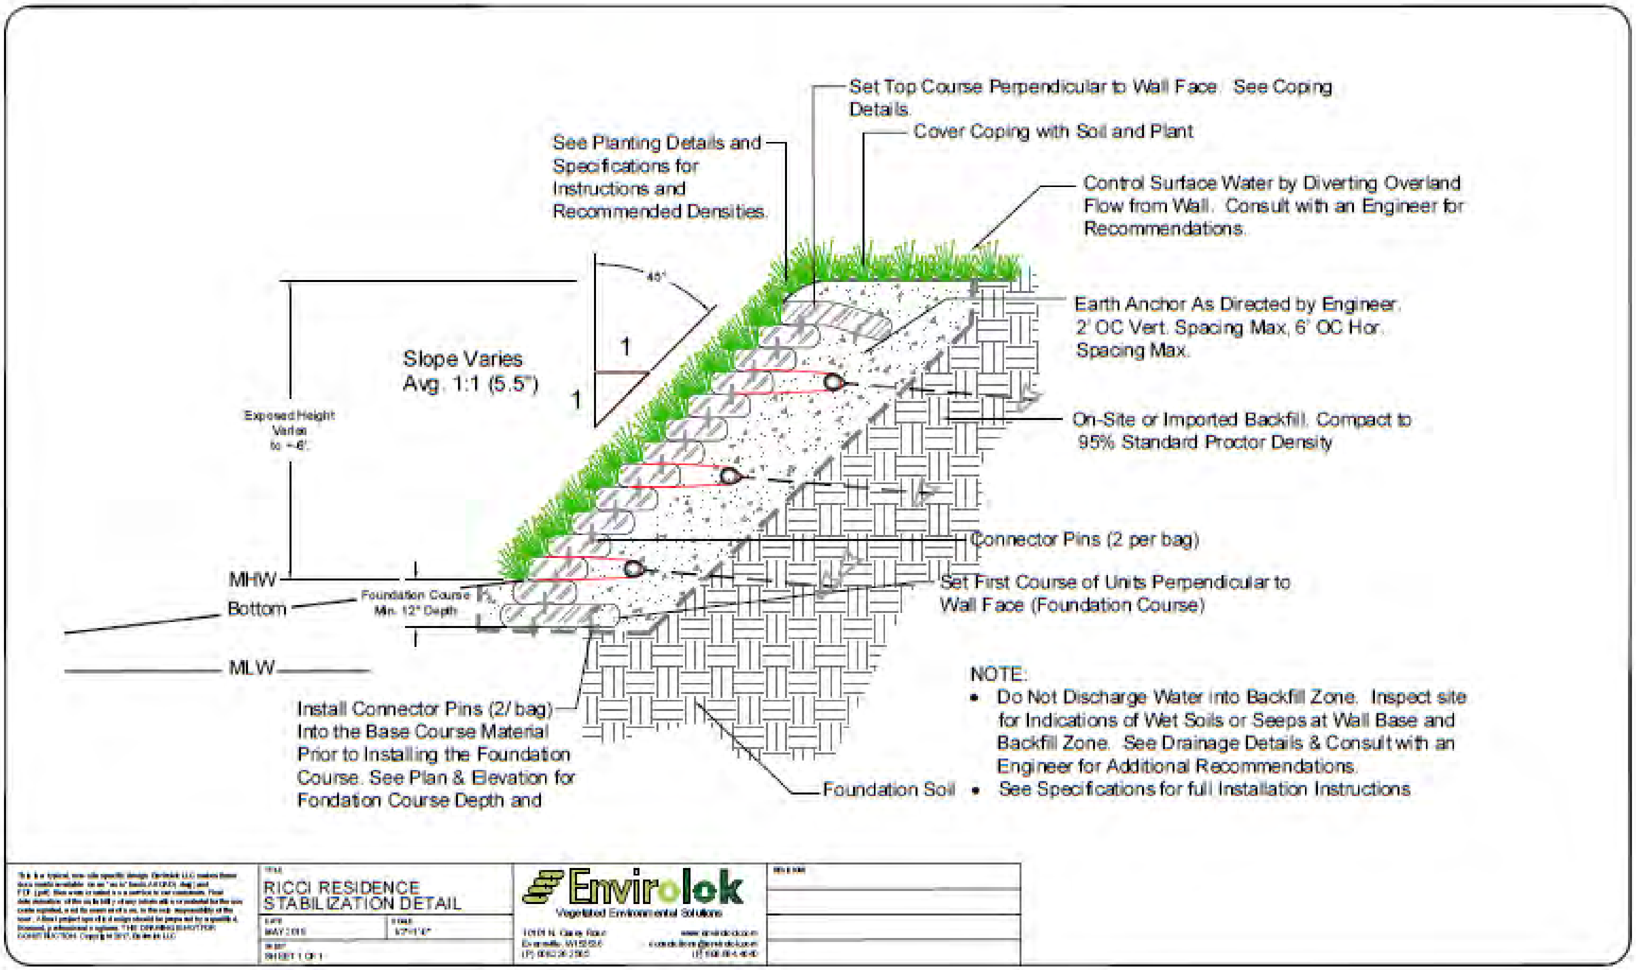
Lawn repair not included
Permit and Agent Fee: $800 (does not include Middlesex County Wetlands fee, about $275).

This project could be done in phases. It could earn the $15,000 grant money if that is restored , and it would be eligible for the low cost (at prime rate) living shoreline loans from the MPPD. The grant possibility is complex, but it might be possible to know by March before construction. However, I would need a commitment from you to go ahead with the project even if you do not get the grant. We could hold off construction until mid-summer, for example, if the bank will hold that long.

Email Attachment – “configurations I have proposed to another customer”



Envirolok Bag shoreline stabilization option:



APPENDIX 7

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 8

Match Commitment Letter

October 4, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 1387 Oakes Landing Road I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 732.539.4467 or by email at npsandbach@gmail.com..

Sincerely,

Norm Sandbach

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes X___ No ____

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): Middlesex County **-** Please see the attached corresponding maps for this application.

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal requests funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding, and wetland loss. Relative sea-level rise and tidal and storm surge waters are undercutting the banks along the property (length of shoreline is 540 feet). An old, deteriorating wood bulkhead has holes in it which is allowing the backfill to behind the bulkhead to erode. There are also trees falling into the water with several more having roots exposed to salt water at the base of the steep eroding bank. Chris Davis of ReadyReef Inc. has visited the site and suggested some possible nature-based solutions that made sense in lieu of riprap. As with many other properties, the last few years have been more damaging than in past decades. Therefore, Mr. Michael L. Vanlandingham, the Shoreline Engineer with the Department of Conservation and Recreation Division of Soil and Water Conservation, Eastern Area Regional Office, has visited the property and his letter of recommendation is included.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered “acts of God,” and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as “hard” engineering or “gray” infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of “nature-based solutions”, “ecosystem-based adaptation,” “eco-DRR,” or “green infrastructure” has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely “green” (i.e., consisting of only ecosystem elements) or “hybrid” (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This design proposal application is a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal incorporates natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Wooldridge Cove Drive in Middlesex County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Middlesex County. See the community support letter in **Appendix 1**.

The Middle Peninsula is the second of three large peninsulas on the western shore of the Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

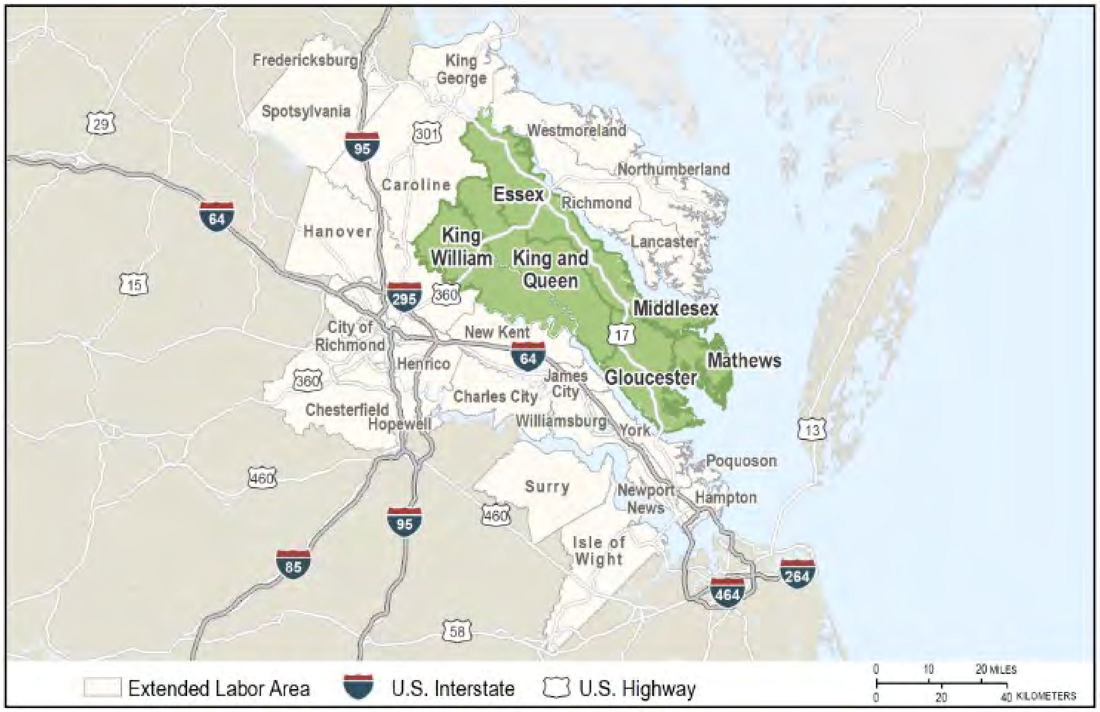

Figure 2. Middle Peninsula Population

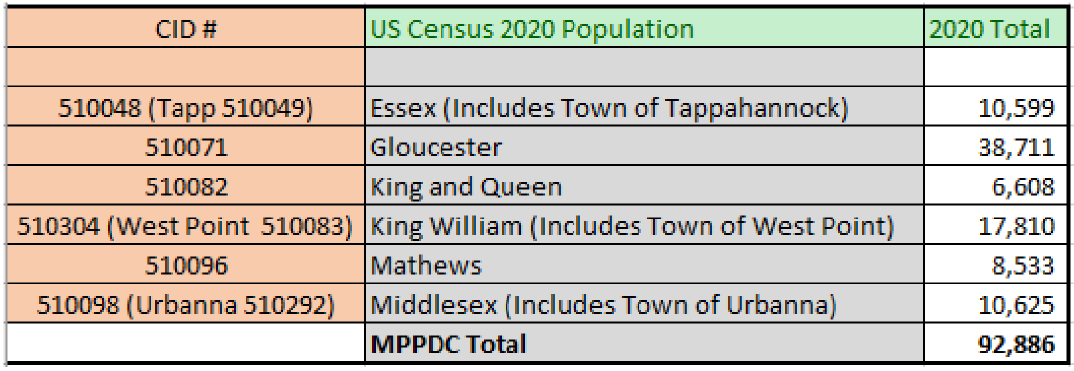

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to design a nature-based solution on one private property on Wooldridge Cove Drive in Middlesex County as found in **Figures 3 and 4**.

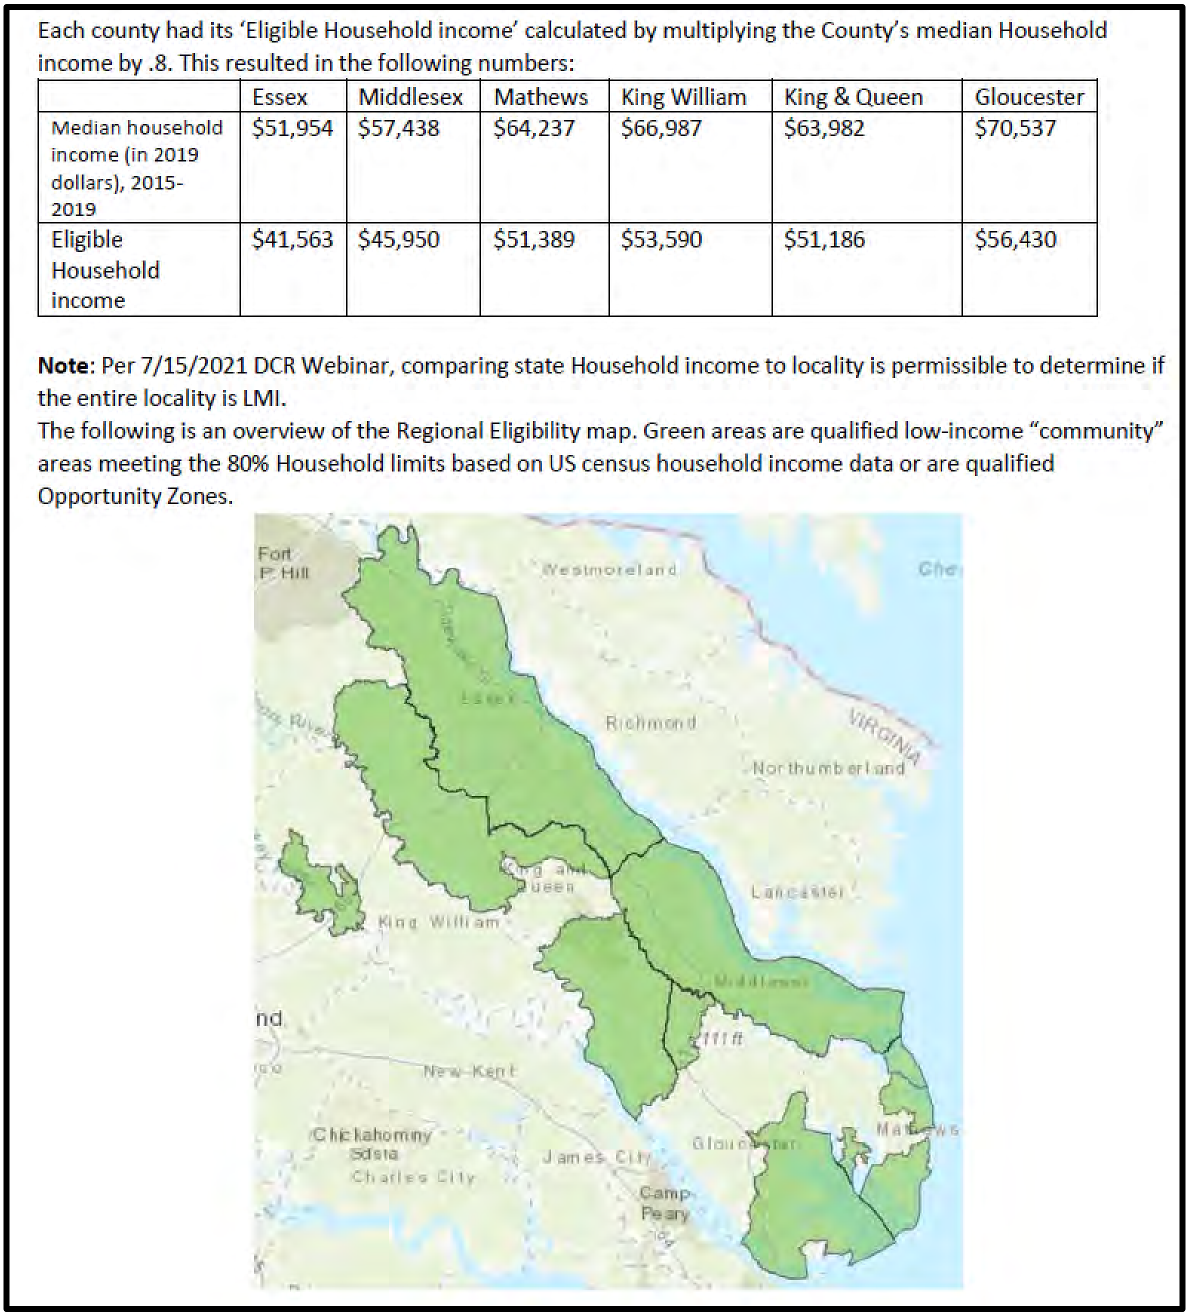
Middlesex County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 130 square miles of land 80 miles of shorelines. Based on 2020 Census Data, Middlesex County's population totals 10,625 which. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

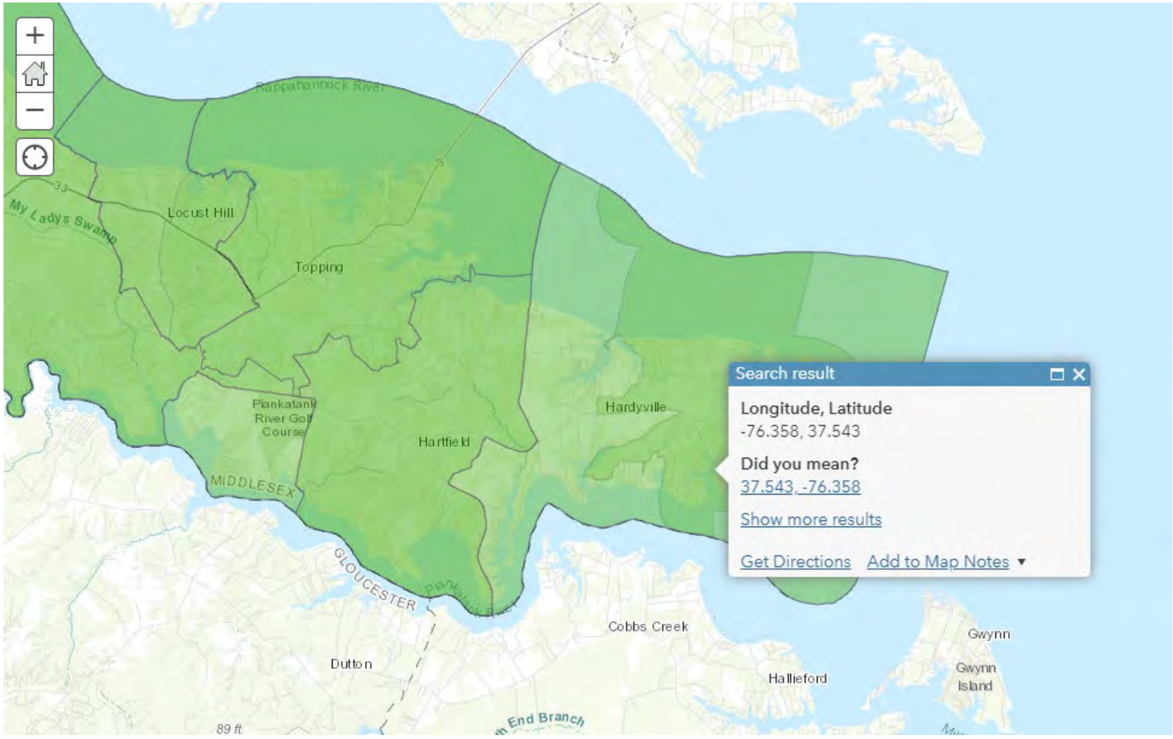
	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

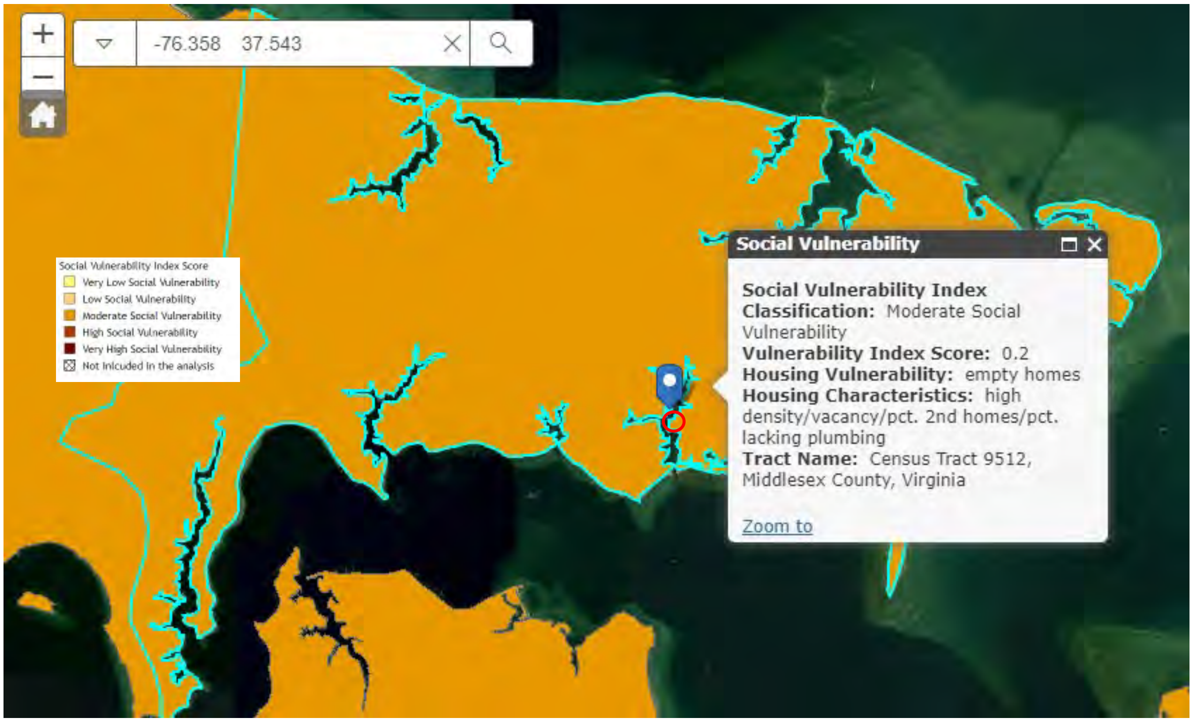
Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area



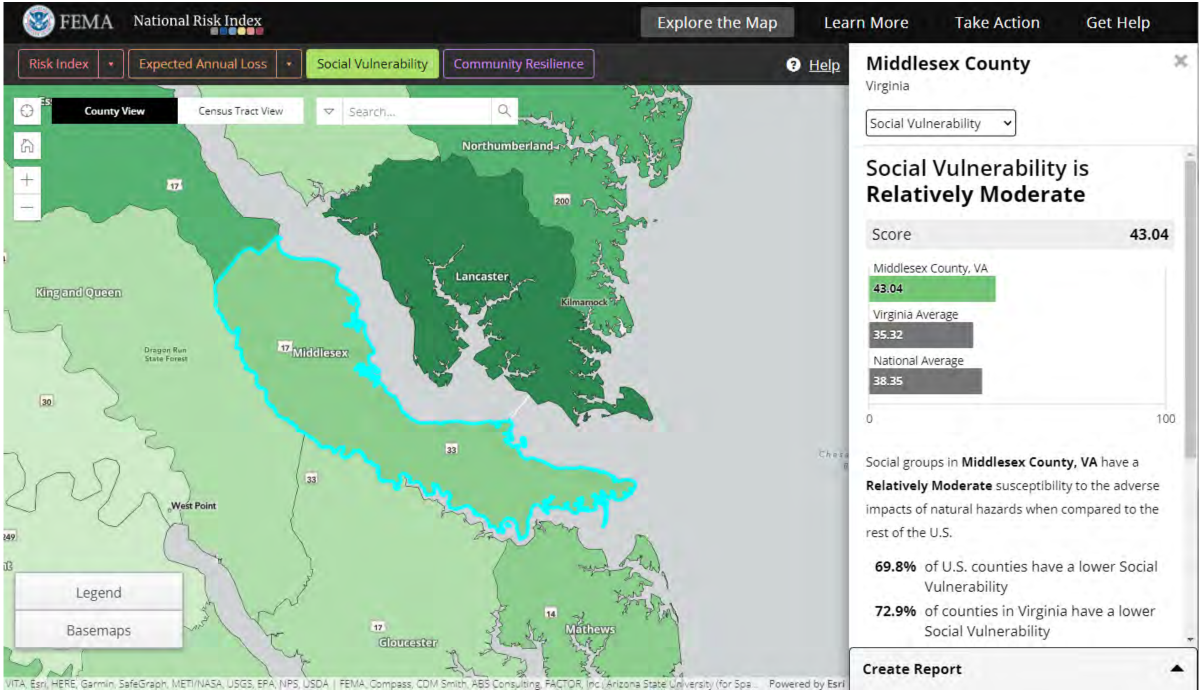
According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA's National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability of the County is considered to be a relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia's Social Vulnerability Index Score Map of the Project Location



Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.2
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/pct. 2nd homes/pct. lacking plumbing
Tract Name: Census Tract 9512, Middlesex County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Middlesex County
Virginia

Social Vulnerability

Social Vulnerability is Relatively Moderate

Score	43.04
Middlesex County, VA	43.04
Virginia Average	35.32
National Average	38.35

Social groups in **Middlesex County, VA** have a **Relatively Moderate** susceptibility to the adverse impacts of natural hazards when compared to the rest of the U.S.

69.8% of U.S. counties have a lower Social Vulnerability

72.9% of counties in Virginia have a lower Social Vulnerability

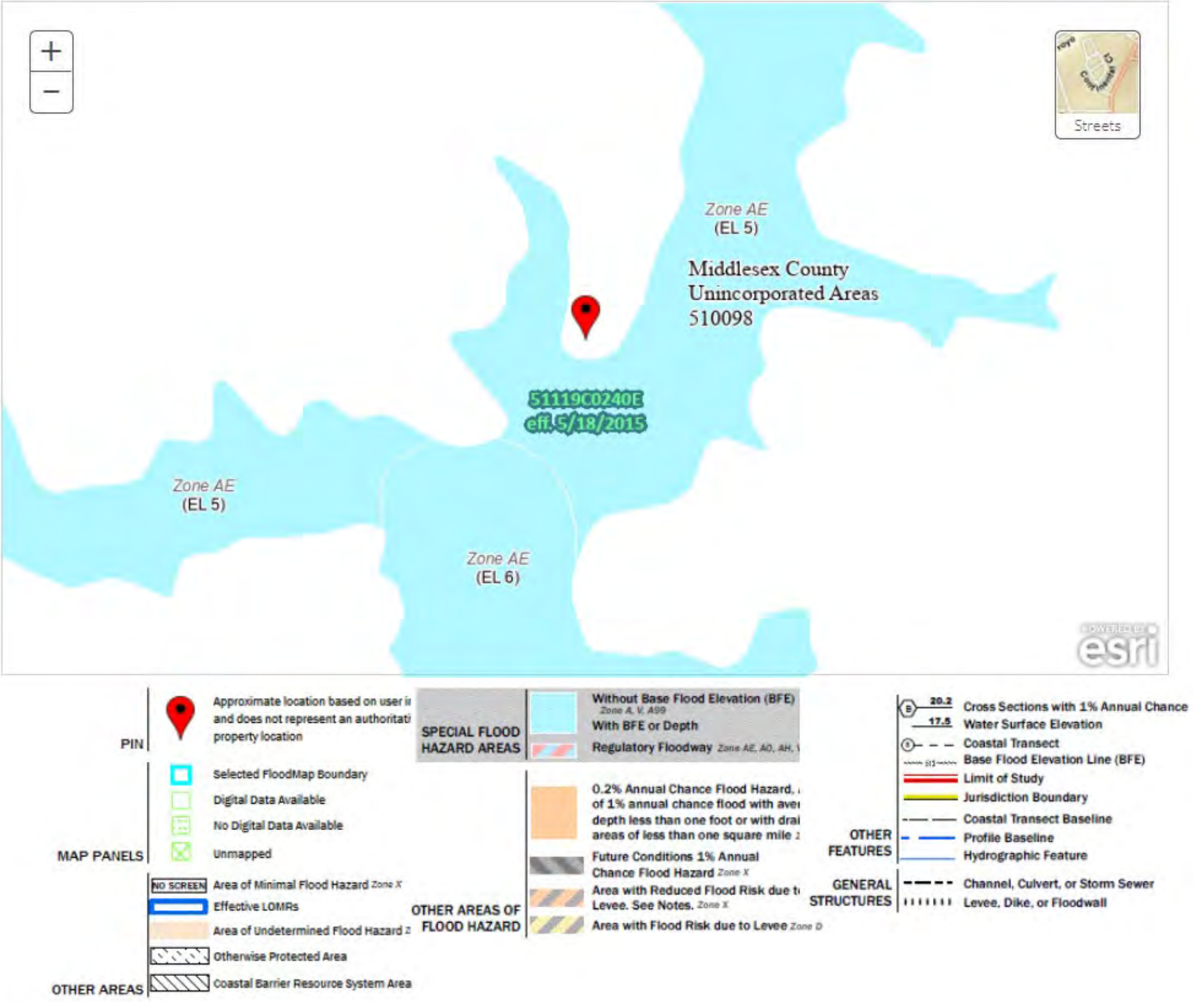
The project is located at 156 Wooldridge Cove Drive, Deltaville, VA 23043 (-76.358, 37.543).

The property was purchased in 2020 and has experienced a number of issues. Relative sea-level rise and tidal and storm surge waters are undercutting the banks along the property (length of shoreline is 540 feet). An old, deteriorating wood bulkhead is failing and has holes in it which is allowing the backfill bulkhead to erode. There are also trees falling into the water with several more having roots exposed to salt water at the base of the steep eroding bank. Chris Davis of ReadyReef Inc. has visited the site and suggested some possible nature-based solutions that made sense in lieu of riprap. As with many other properties, the last few years have been more damaging than in past decades. Therefore, Mr. Michael L. Vanlandingham, the Shoreline Engineer with the Department of Conservation and Recreation Division of Soil and Water Conservation, Eastern Area Regional Office, has visited the property and his letter of recommendation is included as **Appendix 2**. This recommendation is valued highly, especially the permitting process in following the recommendation of the Shoreline Engineer to construct a riprap marsh sill and breakwater. See accompanying pictures showing site conditions below.

Please see **Appendix 3** for additional property photos.

This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 4** for the FIRMettes (last mapped 5/18/2015).

Figure 9: Map of FEMA Flood Zones

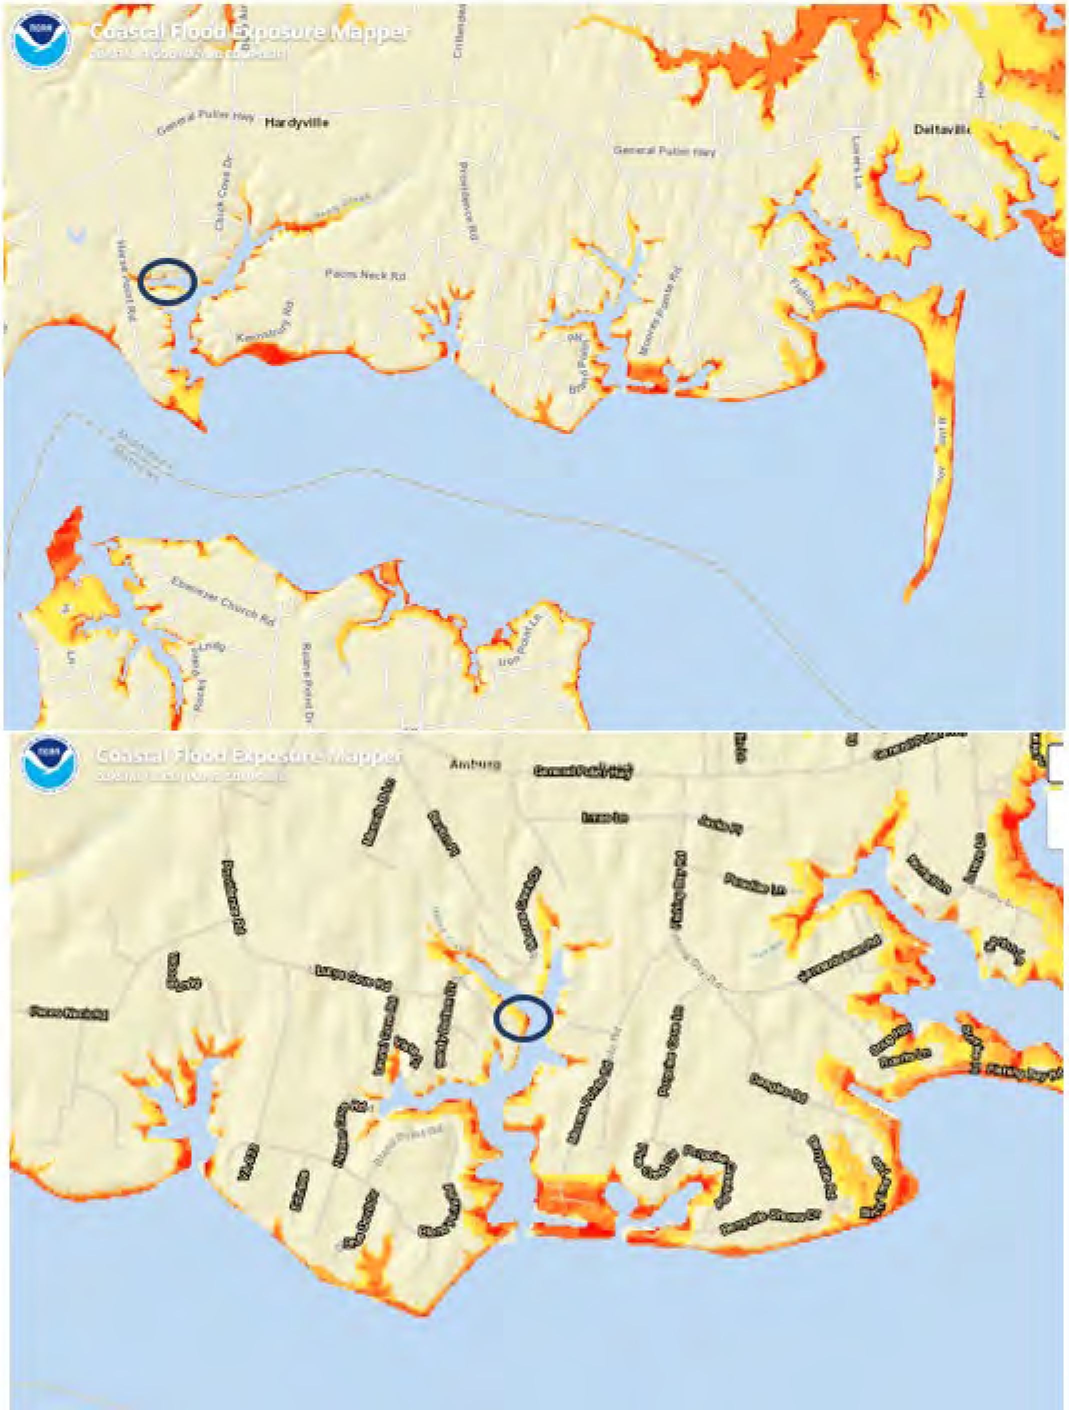


Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 7,353.2 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 5** lists 79 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat, and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 and 2017

Finally, according to NOAA’s Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure 11**.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)



For more information about this project area please see:

- *A link to Middlesex County's current floodplain ordinance can be found at: https://www.co.middlesex.va.us/DocumentCenter/View/422/Floodplain-Management-PDF.*

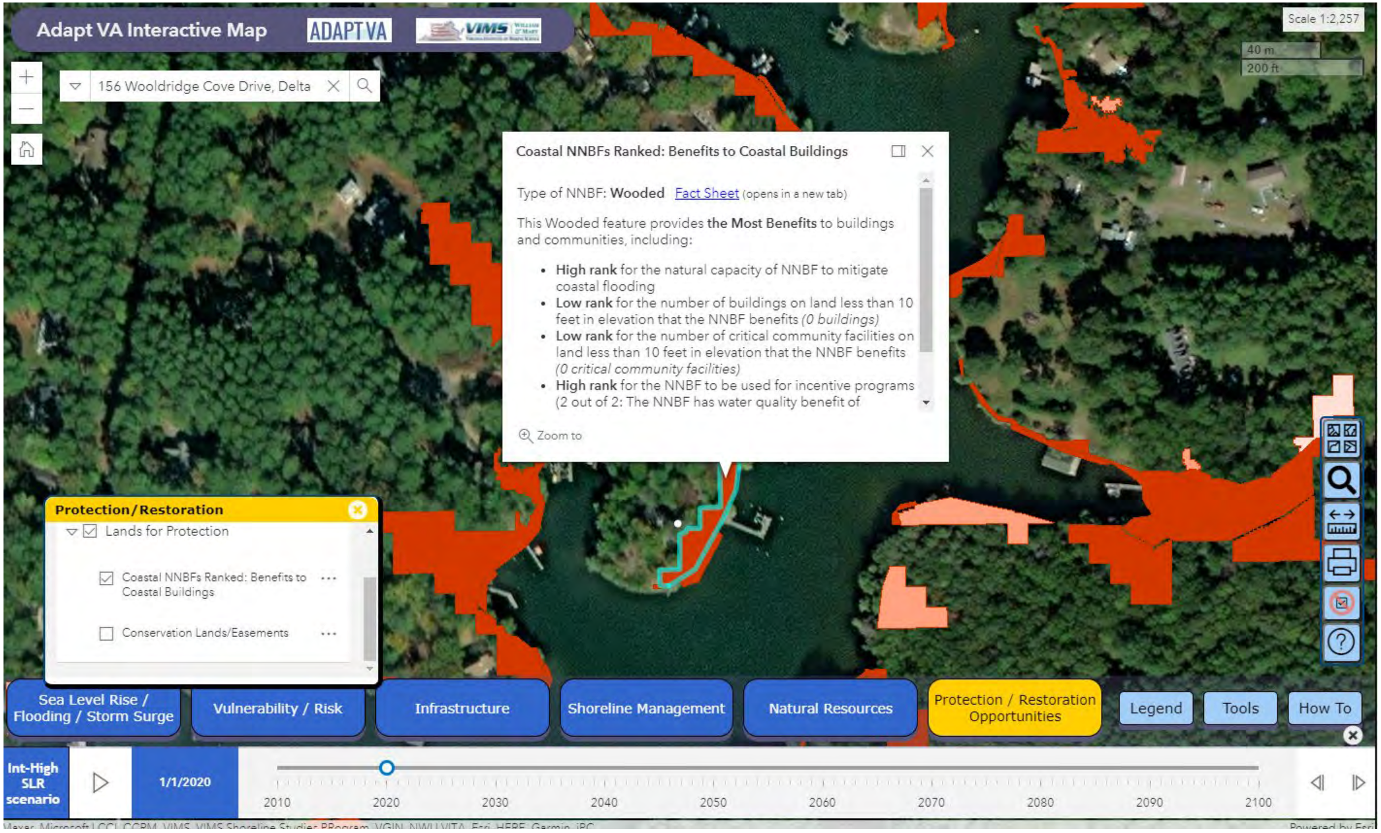
COMMUNITY SCALE BENEFITS.

The Commonwealth of Virginia may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. VA Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for rejecting applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the U.S. census block level or greater. A census block is the smallest U.S. Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one square mile in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

The Middle Peninsula PDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to Virginia Marine Resources Commission (VMRC) that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of natural and nature-based features (NNBF) to coastal buildings, habitat, and community protection as seen in **Figure 12**. All Round 2 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and Credit for Habitat Protection credit.

Figure 12. Adapt VA Map of Project Location and Elevation for NNBF Benefits



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Wooded** Fact Sheet (opens in a new tab)

This Wooded feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **Low rank** for the number of buildings on land less than 10 feet in elevation that the NNBF benefits *(0 buildings)*
- **Low rank** for the number of critical community facilities on land less than 10 feet in elevation that the NNBF benefits *(0 critical community facilities)*
- **High rank** for the NNBF to be used for incentive programs (2 out of 2: The NNBF has water quality benefit of

CONCERNING ADVERSE IMPACTS.

The Middle Peninsula PDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, the Middle Peninsula PDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, the Middle Peninsula PDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require the Department of Conservation and Recreation (DCR) SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

ALTERNATIVES**.**

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

GOALS AND OBJECTIVES.

The Code of Virginia § 28.2-104.1. defines "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA, living shorelines are more resilient against storms compared to bulkhead. With the installation of sills, these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline/nature solution will reduce erosion of the property, this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location, which directly protects the largest employer in Middlesex County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefits to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. For example, a proposed project of 150 linear feet of living shoreline has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, incorporated plantings will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land-water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers in the flood hazard area as seen in **Figure 13**.

Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six-month period. The anticipated timeline for the proposed project could be as quick as 3 months, but no more than six months. The timeline range is due to the potential for delays in project initiation, contractor availability, procurement of materials, and permitting.

It is anticipated that the proposed project will commence in December 2021 and be completed by May 2022.

Action Item	M1	M2	M3	M4	M5	M6
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazards Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 in response to emerging flood challenges; the Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF Program to assist them in finding funding for their shoreline as seen in **Appendix 6.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

A maintenance plan is not applicable in this application. The proposed project is to develop a

nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 7.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**

Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration X Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. Any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		88

III. BUDGET NARRATIVE

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

- ***Estimated total project cost: $ 24,963***
- ***Amount of funds requested from the Fund: $17,475***

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

REF: Authorization to request for funding

Matching funds for all construction and design projects provided under any DCR application round of the Community Flood Preparedness Fund are provided by the property owner for which the project is proposed, unless otherwise noted. The match commitment letter acknowledges that the owner of the projects (landowner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter)
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made application cover sheet)
- The source of funding for the cash contribution (match commitment letter)
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 156 Wooldridge Cove Drive, Delatville, Va. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 804-306-4376 or by email at Lstone@asharperpalate.com.

Sincerely,
Leslie Stone

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Mr. Lawrence:

Middlesex County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents are part of our necessary governmental functions and are consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood (FTF) Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC FTF Program provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs assist to secure the tax base of coastal localities and reduce the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types.

The FTF and the Living Shoreline programs exist to help the owners of flood-prone properties access programs and services to better manage challenges posed by flood water and to direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents, to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-758-4330.

Respectfully,

Matt Walker
County Administrator

Deltaville, VA 23043

RE: SEAS# T21026

Dear Mrs. Vest:

On July 23, 2020, I met with Will & Barbara Vest and Tuffy Stone, at your property, on Moore Creek in Middlesex County. The site visit was in response to your request for advisory assistance concerning a shoreline erosion problem.

The Shoreline Studies Program, at the Virginia Institute of Marine Science, has created a Shoreline Evolution Map for tidal localities in Virginia. The map was created using aerial photography from 1937 to 2009. The map shows shoreline change over time. Based upon that map, the historical erosion rate for your area is less than 1 foot per year. The erosion on your property appears to be caused by elevated water levels and waves associated with storms. The following recommendations are made as a result of the site visit and subsequent analysis of the problem:

1. The trees and shrubs growing on the bank and within 15 feet of the bank edge should be selectively cut or trimmed. Trees undermined by erosion displace large amounts of soil when they fall. Tree removal should decrease the weight on the bank and reduce the chance of sloughing. The additional sunlight exposure should stimulate growth of the upland ground cover and marsh fringe. Before cutting any trees, please contact Middlesex County at (804) 758-3382 for information concerning tree removal restrictions under the Chesapeake Bay Preservation Act.

2. After tree removal, a vegetative cover should be established. We recommend a mixture of native grasses or other low-growing vegetation. For further details about the establishment of vegetation and soil tests, contact the Virginia Cooperative Extension Agent for Middlesex County at (804) 758-4120.

3. The marsh grasses growing on your shore dissipate wave energy and bind the soil with their roots. We recommend you begin a periodic maintenance program for the grasses. Tidal debris should be periodically removed to prevent smothering of the grasses. The encroachment of trees and shrubs into the grasses should be prohibited. The program should increase plant vigor and promote growth.

4. In all segments where the marsh grasses are sparse or absent, we recommend establishment of a

marsh fringe. The establishment of a marsh fringe would involve planting smooth cordgrass between the mean low and mean high tide elevations. Plants for transplanting can be purchased or obtained from neighboring marsh areas with permission. When transplanting, care should be taken to plant the smooth cordgrass within the proper tidal zone.

To transplant smooth cordgrass, dig individual plants. You should obtain healthy plants with an adequate root mass. The plants should be planted on an 18-inch by 18-inch grid during late April through June. We recommend fertilization at the time of planting. A slow release fertilizer such as Osmocote can be placed in the hole with the plant. You should use approximately one ounce per plant. An alternative to Osmocote is any available fertilizer such as 10-10-10. Approximately two ounces of the alternate fertilizer should be side-dressed about six inches from the plant. To prevent damage to the source area, do not remove large numbers of plants from one section. The source area should be fertilized after plugging. If you wish to purchase plants or have someone do the planting for you, see the enclosed list of suppliers and contractors. See the enclosed information concerning a description of smooth cordgrass.

5. Along with enhancing the existing marsh fringe, you may consider the construction of a riprap marsh sill. The structure should have a trapezoidal cross section with 2:1 side slopes. It should have a top elevation 1-foot above the mean high water elevation. A minimum of two layers of armor rock should be used. Each armor rock should weigh a minimum of 50 pounds. Install the rock so that a "V" notch is placed about every 100 feet along the improved section to allow tidal flushing to occur. A layer of filter cloth should be used under the riprap. See the enclosed cross-sectional view of a typical riprap breakwater (modified).

   Immediately following construction, we recommend filling the area landward of the sill with good-quality, medium to coarse grain sand. The height of the sand fill against the bank should be such that mean high water no longer reaches the base of the bank. The slope of the sand nourishment should be 10:1 (horizontal:vertical). This slope will help promote positive drainage and mimics natural fringe marsh elevations. Moving mean high water off the base of the bank will should greatly reduce the under cutting of the bank. This sand will also provide an excellent planting media for marsh grasses.

6. Oyster shell bags, are plastic mesh bags filled with oyster shells. The bags can be used as an alternative to riprap for the marsh sill. The bags are stacked to create a trapezoidal shape. The design components for this alternative are similar to the riprap marsh sill.

7. Enhancing the existing fringe marsh by installing a sill, adding sand nourishment and planting marsh grasses is considered a "Living Shoreline" erosion control strategy. During the site visit we discussed possible funding assistance for living shoreline projects through the Tidewater Soil and Water Conservation District. The program is called the Virginia Conservation Assistance Program (VCAP). If you would like to learn more about this program, please contact the District office. Their Phone number is (804) 699-3482.

8. The Middle Peninsula Planning District Commission offers a low interest loan program for living shoreline projects. To learn more about the loan program please contact them at (804) 758-3221.

9. Stormwater should be directed away from the bank. If that is not possible, the stormwater should be collected via a pipe system and conveyed to the base of the bank. The pipe outlet should have

sufficient outlet protection to prevent erosion.

The above recommendations are made in my capacity as an advisory agent in shoreline erosion control matters. The suggestions should not be considered as binding you to any particular course of action, as they are intended to indicate what we think would be the best solution in terms of cost and effectiveness. Our examination of the site or this report does not constitute permission by the Commonwealth, or its agencies, to proceed with implementation of control measures. Permits from State and Federal agencies are generally required for shoreline modification.

You should also be aware that success in shoreline erosion control cannot be guaranteed, as there are many variables involved. In this regard, we suggest care in selecting a contractor. Our comments concerning construction are intended as guidelines developed from our experience in viewing structures that have been successful or have failed.

If you decide to construct a control measure, an assessment of the impacts of the project on the environment will be given by the regulatory agencies. Our advice is given with the idea of reducing environmental impacts associated with our recommendations. Although this has been considered in our recommendations, the permit reviewing agencies may desire additional information or measures.

Services available through this office include: review of the permit application; review of design and construction plans; and inspection of structures under construction when plans have been reviewed by this office. We recommend that a copy of this report be attached to the permit application.

If we may be of further assistance or if you have any questions, please let me know.

Sincerely,

Michael L. Vanlandingham

APPENDIX 6

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 7

Match Commitment Letter

October 12, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 156 Wooldridge Cove Drive, Delatville, Va. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at 804-306-4376 or by email at Lstone@asharperpalate.com.

Sincerely,
Leslie Stone

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Kimbrough Shoreline Design** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

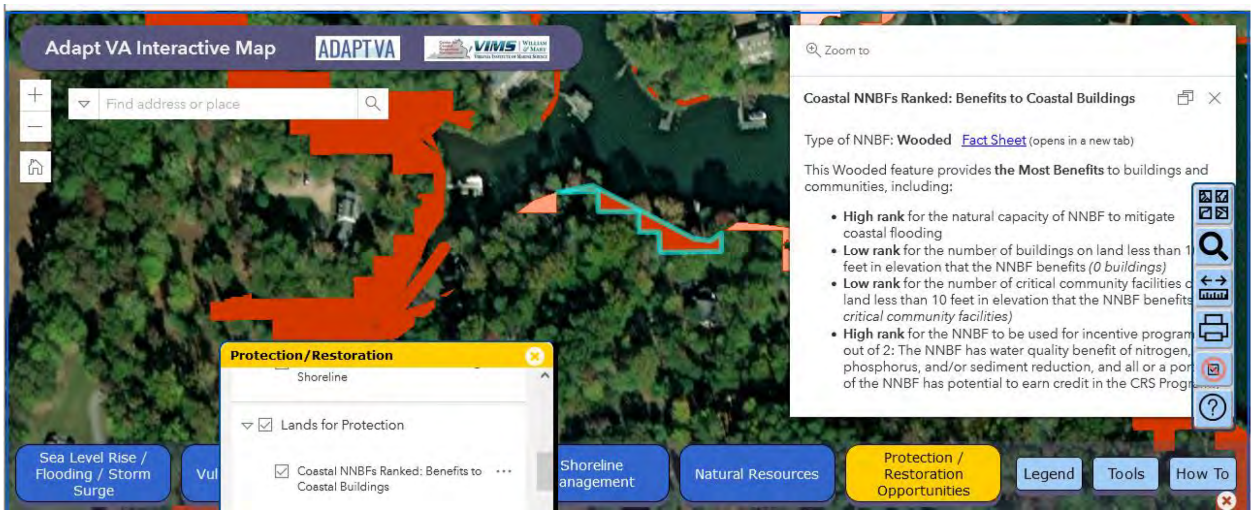
Issue #2

DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, "Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines "Community Scale project" which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving "demonstrable flood reduction" benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based "brick in the wall" and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit



Coastal NNBFs Ranked: Benefits to Coastal Buildings

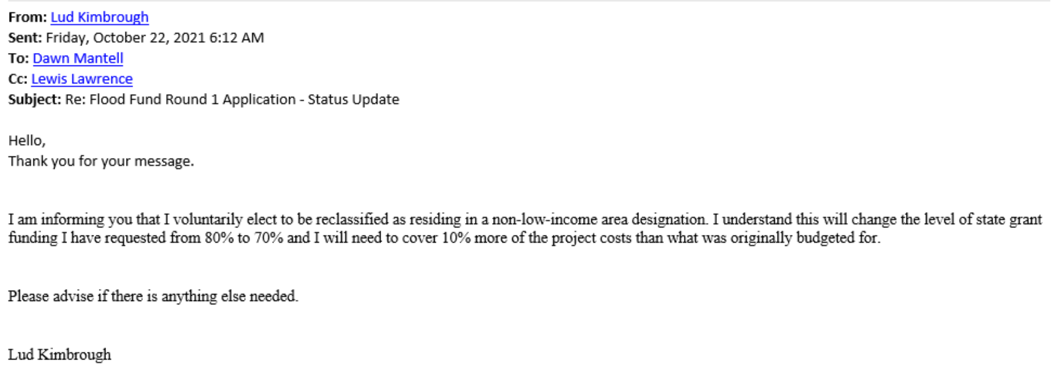
Type of NNBF: **Wooded** Fact Sheet (opens in a new tab)

This Wooded feature provides **the Most Benefits** to buildings and communities, including:

- **High rank** for the natural capacity of NNBF to mitigate coastal flooding
- **Low rank** for the number of buildings on land less than 1 feet in elevation that the NNBF benefits *(0 buildings)*
- **Low rank** for the number of critical community facilities o land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **High rank** for the NNBF to be used for incentive program out of 2: The NNBF has water quality benefit of nitrogen, phosphorus, and/or sediment reduction, and all or a por of the NNBF has potential to earn credit in the CRS Progr

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:



From: Lud Kimbrough
Sent: Friday, October 22, 2021 6:12 AM
To: Dawn Mantell
Cc: Lewis Lawrence
Subject: Re: Flood Fund Round 1 Application - Status Update

Hello,
Thank you for your message.

I am informing you that I voluntarily elect to be reclassified as residing in a non-low-income area designation. I understand this will change the level of state grant funding I have requested from 80% to 70% and I will need to cover 10% more of the project costs than what was originally budgeted for.

Please advise if there is anything else needed.

Lud Kimbrough

Categories (select applicable project): Project Grants
Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- X Wetland restoration.
- X__Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- X__Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☐ Storm water system upgrades.
- ☐ Medium and large-scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Location of Project (Include Maps): County Name **-** Please see the attached corresponding maps for this application.

Flood Insurance Rate Map Number(s) (If Applicable): 51119C0240E

Total Cost of Project: ___________$17,309____

Total Amount Requested: ___$13,846__________________________

II. SCOPE OF WORK NARRATIVE

INTRODUCTION.

This proposal request funding for the development of a nature-based shoreline design solution and draft JPA permit application to reduce the impacts of storm events, flooding and wetland loss.

Risks to natural hazards are increasing. Population growth along coastlines worldwide, in addition to technological and infrastructural development, inherently results in a concomitant increase in places prone to disasters. Modern society relies upon government for effective prevention and protection strategies for continued resilience and sustainability.

Natural hazards are hazards that exist within the natural environment and are considered "acts of God," and consist of atmospheric, geologic, hydrologic, seismic, and biologic agents. Such hazards include flooding, drought, hurricanes, landslides, wildfires, and more. They are thought be unpreventable and are associated with a perceived lack of control. As a result, the ability to manage risk to natural hazards greatly varies due to differences in background. Therefore, the identification of hazards is the foundation of effectively dealing with and avoiding risks. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties, and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program.

The 2018 United States National Climate Assessment noted that global climate model predictions, though imprecise, suggest an increased frequency of strong hurricanes (Categories 4 and 5) in the Atlantic Basin, including the Caribbean. It also includes a range of sea-level rise predictions with significant impacts, especially together with high tide flooding. Other estimates include more frequent and intense droughts with microburst and deluge events. This is especially the case for the Coastal Plain area of Virginia.

The Federal Emergency Management Agency (FEMA), Virginia General Assembly, Virginia Department of Conservation and Recreation (DCR) Floodplain Management Program, and the Middle Peninsula Planning District Commission (PDC) all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes, and territories and the citizens which reside there.

Until recently, most flood risk management involved conventional engineering measures. These measures are sometimes referred to as "hard" engineering or "gray" infrastructure. Examples include building embankments, dams, levees, and channels to control flooding. Recently the concept of "nature-based solutions", "ecosystem based adaptation," "eco-DRR," or "green infrastructure" has emerged as a good alternative or complement to traditional gray approaches.

Nature-based solutions make use of natural processes and ecosystem services for functional purposes, such as decreasing flood risk or improving water quality. These interventions can be completely "green" (i.e., consisting of only ecosystem elements) or "hybrid" (i.e., a combination of ecosystem elements and hard engineering approaches). Nature-based solutions can help mitigate flood (the focus of this document), drought, erosion, and landslide. In addition, they may help decrease vulnerability to climate change while also creating multiple benefits to the environment and local communities. These include sustaining livelihoods, improving food security, and sequestering carbon. Such solutions can be applied to river basins (e.g., reforestation and green embankments), coastal zones (e.g., mangroves and wetlands), and cities (e.g., urban parks).

There is increasing momentum for the use of nature-based solutions as part of resilience-building strategies, sustainable adaptation, and disaster risk management portfolios. Awareness of nature-based solutions from communities, donors, and policy- and decision-makers is growing. Further, investors and the insurance industry are increasingly interested in nature-based solutions. From a climate change perspective, ecosystem-based adaptation has been highlighted as a priority investment area as noted in this DCR opportunity.

PROJECT INFORMATION.

This proposal application seeks a design for a nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features and/or processes into the built environment to promote adaptation and resilience. Further this proposal design will incorporate natural features and/or processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. According to FEMA Building Community Resilience with Nature Based Solutions, these benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life.

Specifically, this project proposes to investigate nature-based design solutions or, if necessary, hybrid design solutions when nature-based design solutions are not preferable, to a living shoreline on a private property located on Bland Point Road in Middlesex County. This project will be a partnership between the Middle Peninsula PDC and one private property owner and is supported by Middlesex County. See the community support letter in Appendix 1.

  - *Please see Section 4 (page 25), which includes historical hazard data within the region.*
- *A link to the County of Middlesex's Comprehensive Plan can be found at:* *https://www.co.middlesex.va.us/252/Comprehensive-Plan*.

The Middle Peninsula is the second of three large peninsulas on the western shore of Chesapeake Bay in Virginia as seen in **Figure 1**. It lies between the Northern Neck and the Virginia Peninsula. The region is predominantly rural, with large, scattered farms and forested tracts; close-knit waterfront communities; an active regional arts association; broad-based civic involvement; and an excellent transportation infrastructure that provides easy access to urban markets. The area contains 3.2% of Virginia's land mass but only 1.1% of the Commonwealth's total population of approximately 93,000 as seen in **Figure 2**.

Figure 1. Middle Peninsula Geographic Area

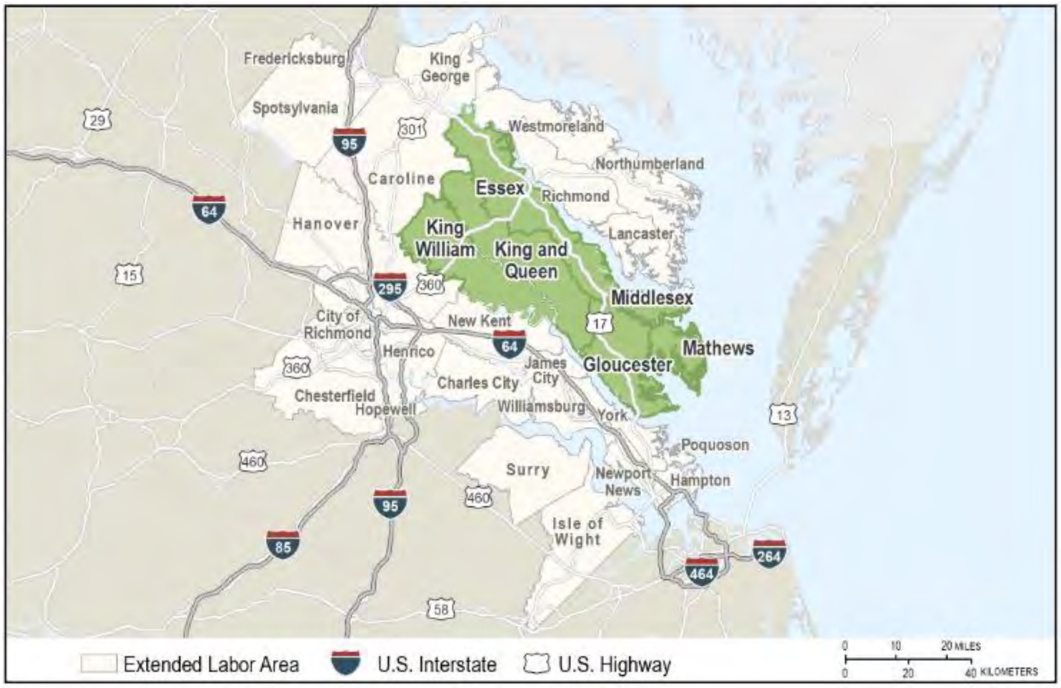

Figure 2. Middle Peninsula Population

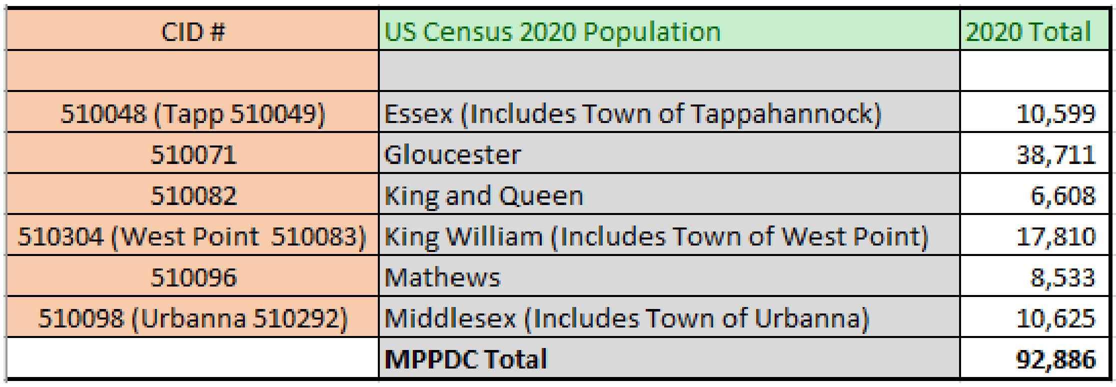

CID #	US Census 2020 Population	2020 Total
510048 (Tapp 510049)	Essex (Includes Town of Tappahannock)	10,599
510071	Gloucester	38,711
510082	King and Queen	6,608
510304 (West Point 510083)	King William (Includes Town of West Point)	17,810
510096	Mathews	8,533
510098 (Urbanna 510292)	Middlesex (Includes Town of Urbanna)	10,625
	MPPDC Total	**92,886**

This project proposes to install living shorelines on one private property on Bland Point Road in Middlesex County as found in **Figures 3 and 4**.

Figure 3. County Map of Project Location

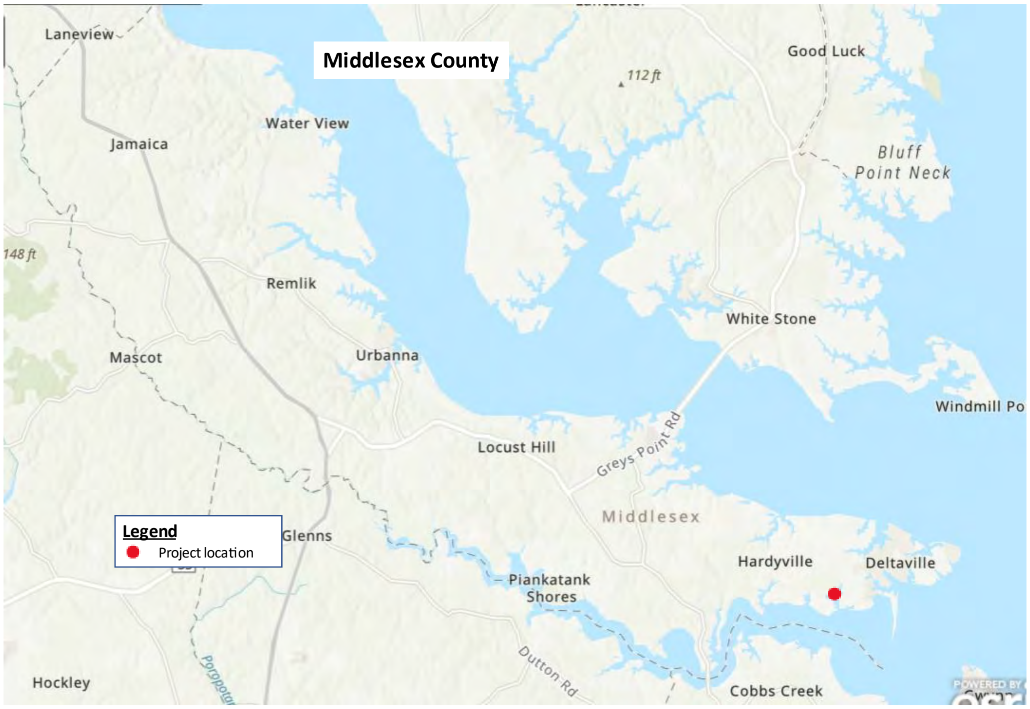

Figure 4. Parcel Map of Project Location

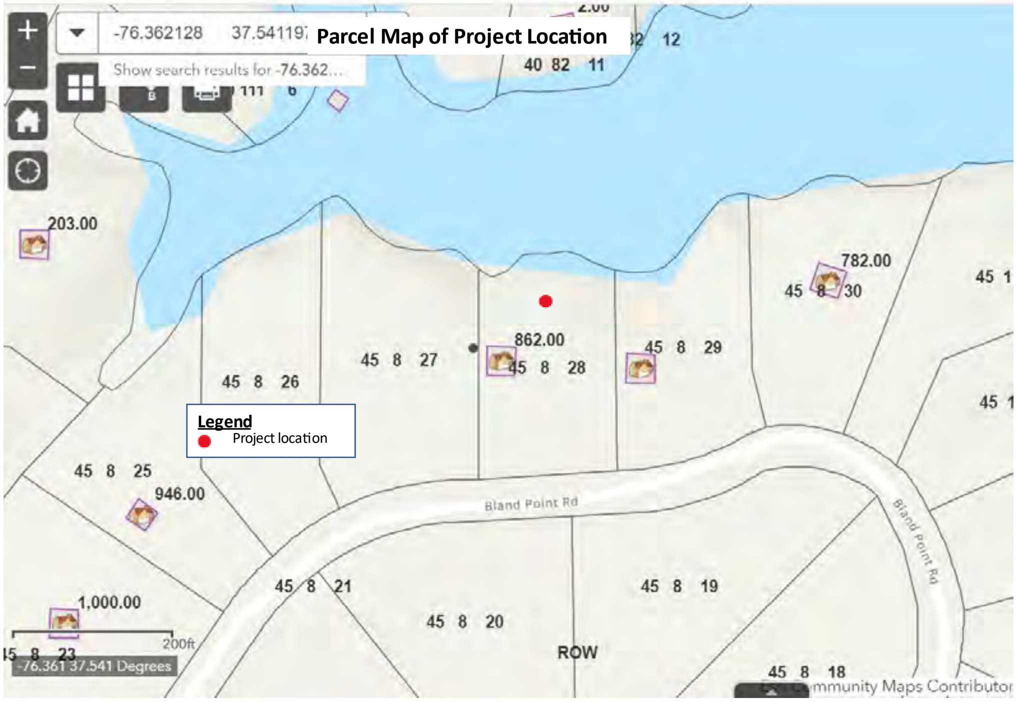
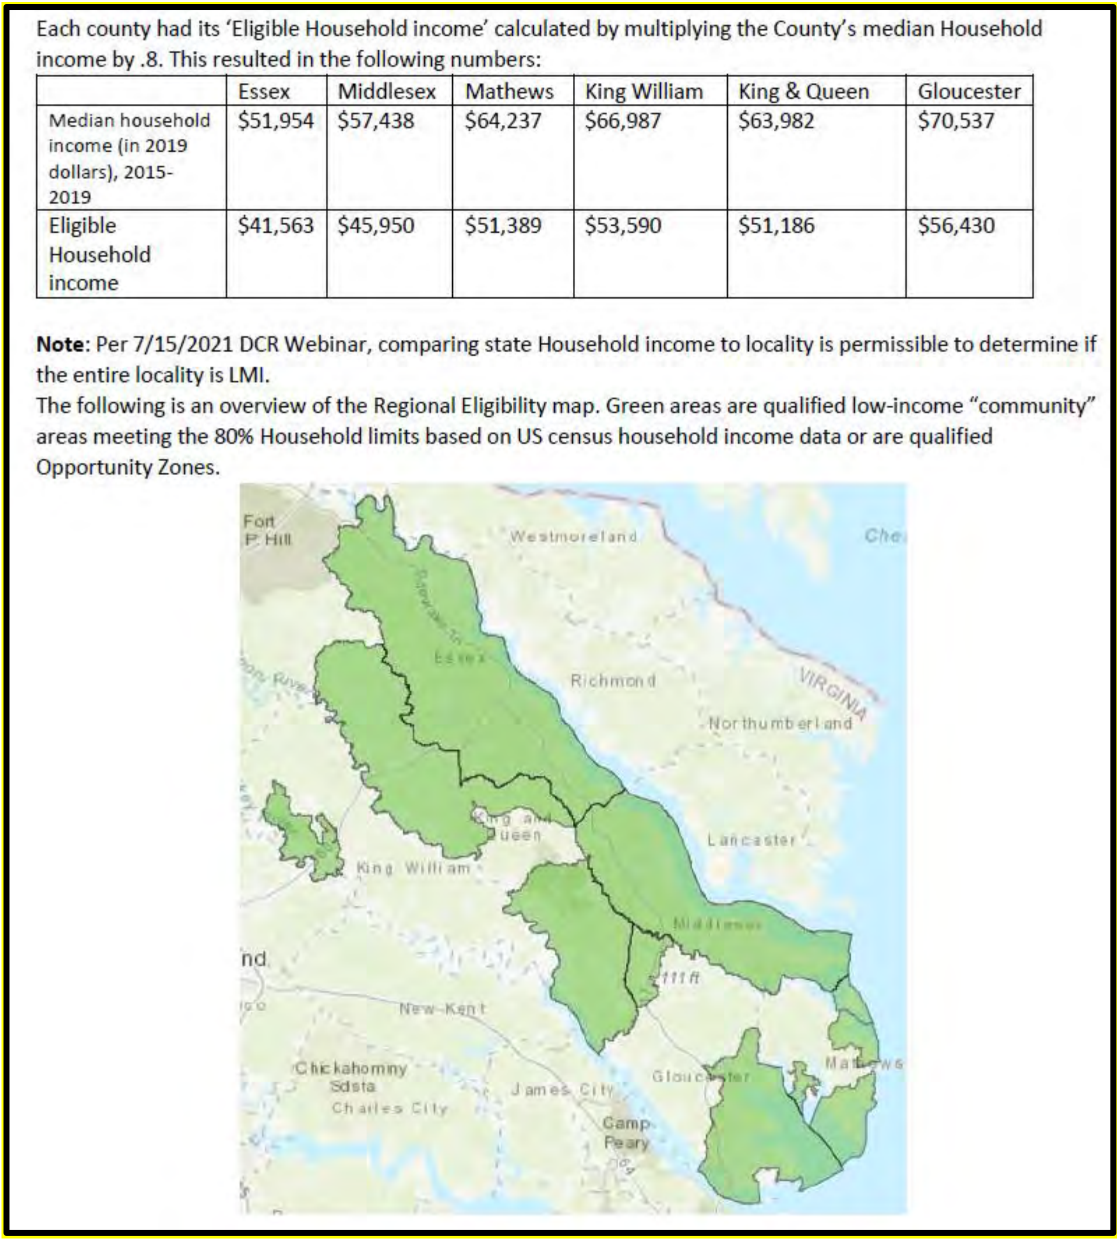


Middlesex County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 130 square miles of land 80 miles of shorelines. Based on 2020 Census Data, Mathews County's population totals 10,625 which. According to DCR guidelines, a portion of the County is considered a low-income geographic area.

In **Figure 5,** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 5. Map of Middle Peninsula Qualifying Low Income Geographic Areas



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

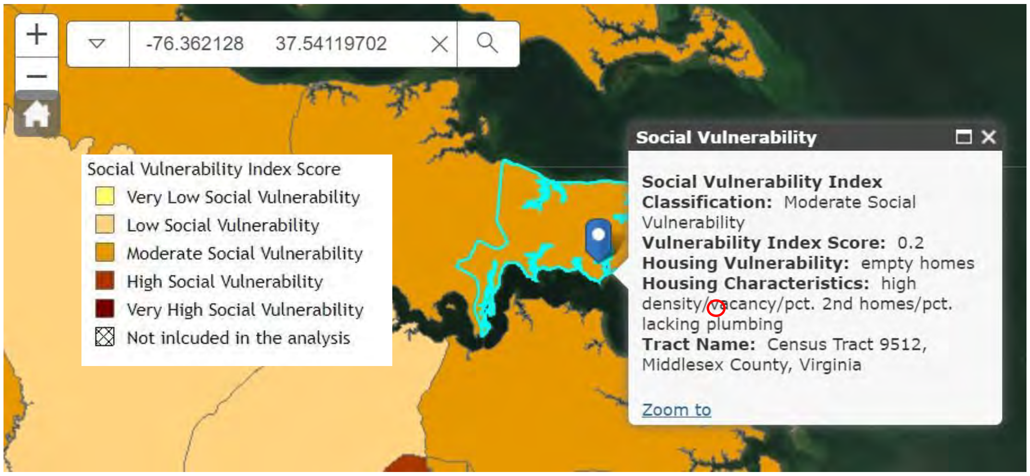
The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 6** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is not within the low-income area.

Figure 6. Map of the Project Location within the Green Low-Income Area

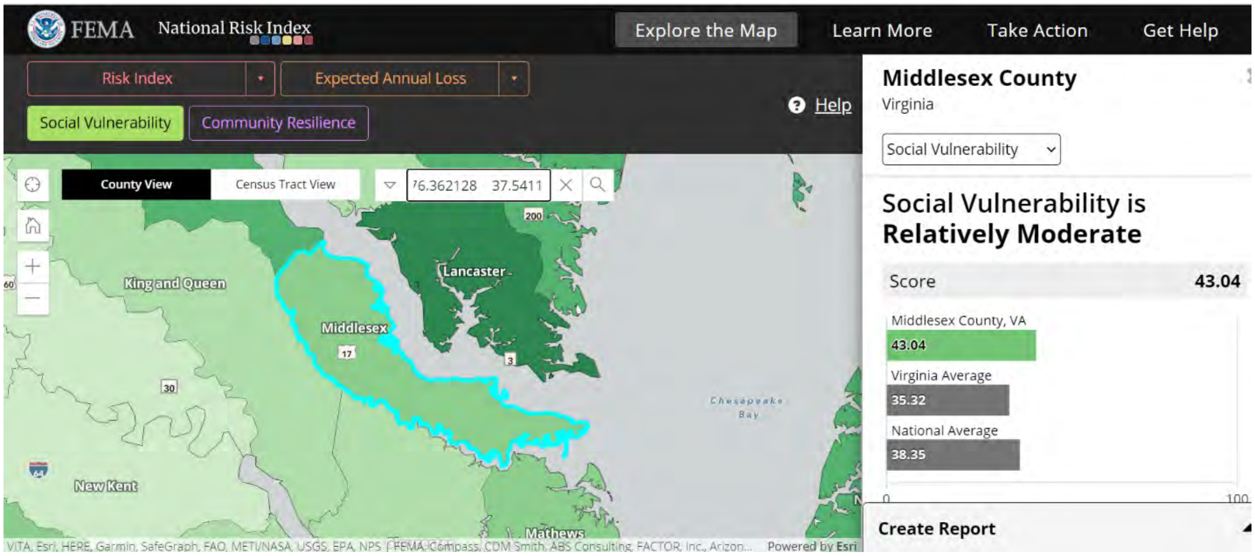
According to the VDAPT Virginia’s Social Vulnerability Index Score, this project location has a moderate social vulnerability score as seen in **Figure 7**; however, it also is important to recognize that there are other social vulnerability models which reflect higher social vulnerability within this project area. For instance, according to FEMA’s National Risk Index (https://hazards.fema.gov/nri/map), which assesses vulnerability at a census track level, the social vulnerability is considered relatively moderate level of vulnerability as seen in **Figure 8**.

Figure 7. Virginia’s Social Vulnerability Index Score Map of the Project Location



Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.2
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/pct. 2nd homes/pct. lacking plumbing
Tract Name: Census Tract 9512, Middlesex County, Virginia

Figure 8. FEMA Nation Risk Index of Census Track of Project Location



Middlesex County
Virginia

Social Vulnerability

Social Vulnerability is Relatively Moderate

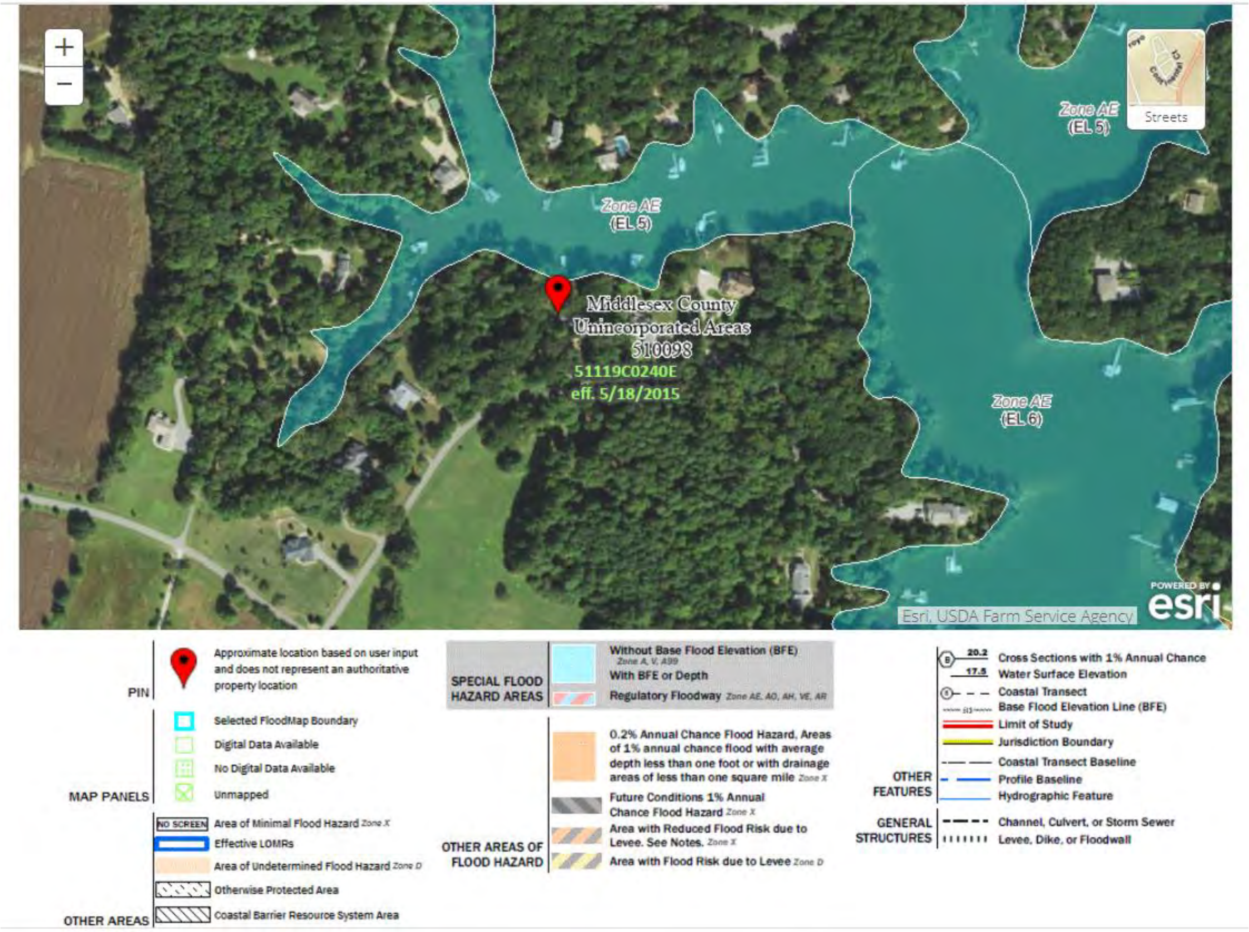
Score	43.04
Middlesex County, VA	43.04
Virginia Average	35.32
National Average	38.35

The project is located at 862 Bland Point Road, Deltaville, VA 23043 (-76.362128, 37.54119702). It was purchased just this year. It was built in 1993 by the previous owner. Today, the 330 foot shoreline is on a steep back and the water is undercutting the bank; therefore, the top of the bank is steeply facing down toward Moore's Creek causing significant runoff. The trees that are along the bank are now at risk of falling into the water as the erosion continues. Rift raft has been used across the way on another property and seems to be working for several property owners in this area; still, a natural based living shoreline design solution is preferable. The photos were taken at low tide, so you can see how the high tide reaches the bank, which is being undercut by the water, especially in unusual flood tides and storms that cause high turbulence. Rising water levels will cause more vegetative barrier failure and a major bank failure is our greatest concern. Wind is also a cause for concern if there is a direct storm impact.

This site is located within the AE flood zone as seen in **Figure 9**. Please see **Appendix 2** for the FIRMettes (last mapped 5/18/2015) and **Appendix 3** for additional property photos.

Figure 9: Map of FEMA Flood Zones

v

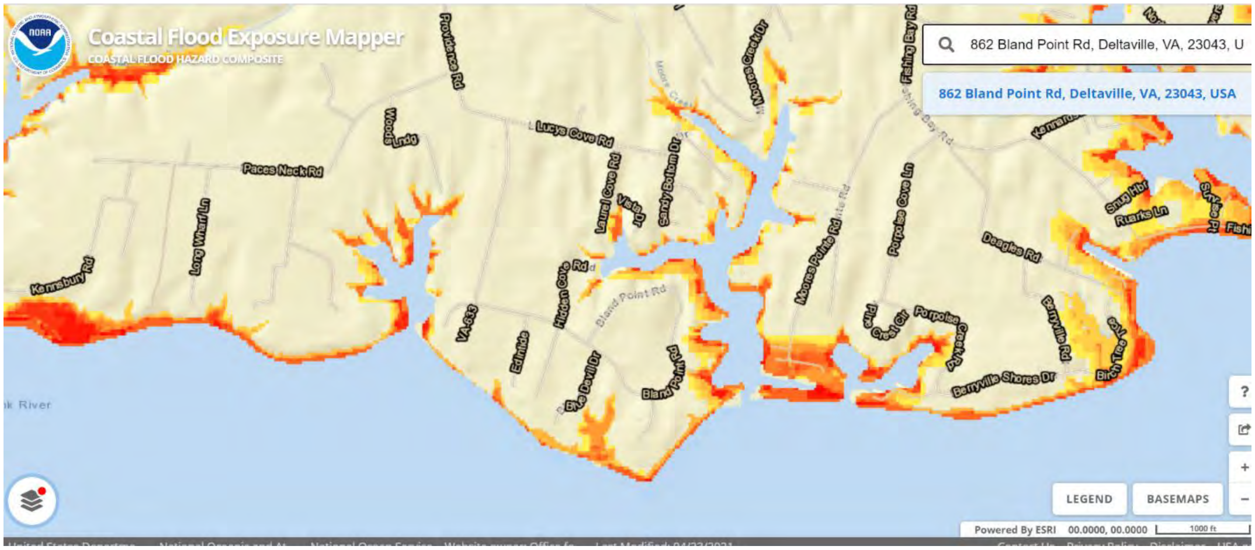


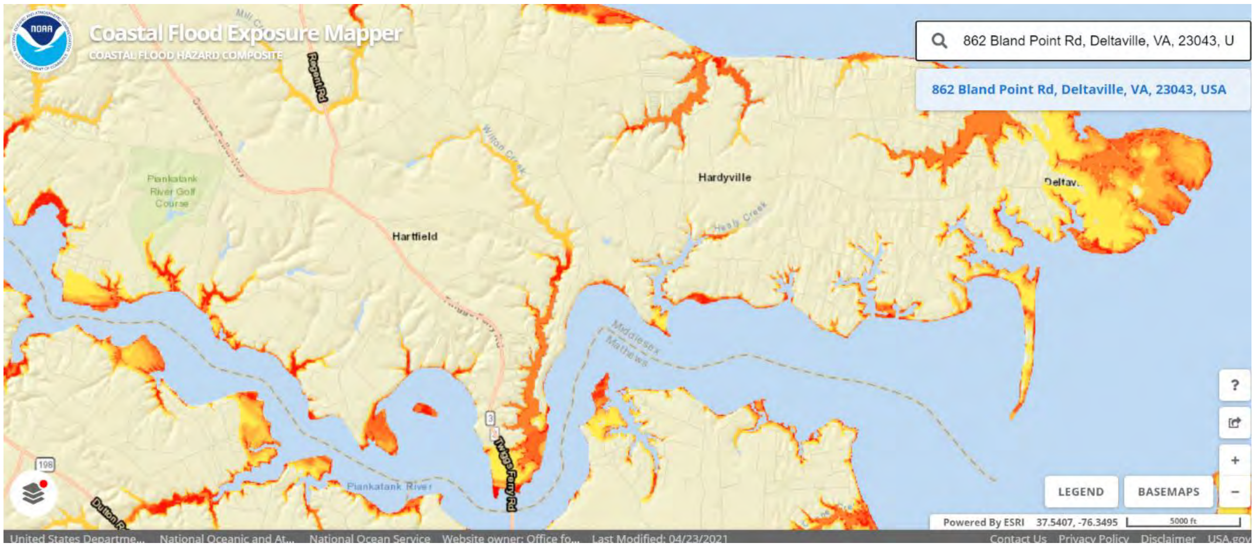
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 10** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Appendix 4** lists 79 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

Figure 10. Project Location and Map of the Shoreline Change between 1937 (purple)and 2017

Finally, according to NOAA's Coastal Flood Mapper, this project is at the highest risk of coastal flooding as seen in **Figure** 11.

Figure 11. Map of Project Location and Risk of Coastal Flooding (NOAA, 2021)





For more information about this project area please see:

- *A link to the Middle Peninsula PDC's All Hazards Mitigation Plan (2016) can be found at: https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf*
- *A link to Middlesex County's current floodplain ordinance can be found at: https://www.co.middlesex.va.us/DocumentCenter/View/422/Floodplain-Management-PDF.*

***ALTERNATIVES*.**

Alternative design solutions are not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not exceed $3 million.

***GOALS AND OBJECTIVES*.**

The Code of Virginia § 28.2-104.1. define "Living shoreline" *as shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials. When practicable, a living shoreline may enhance coastal resilience and attenuation of wave energy and storm surge.*

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.

- Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based design approach.

- Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode and reduce the overall erosion rate within the project area using a nature-based design approach.

According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

Additionally, as the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Middlesex County, which is local government.

Goal 2: Improve water quality for the Chesapeake Bay area.

- Objective A: Improve nitrogen, phosphorus, and sediment using a nature-based design approach.

Since this project is proposing a nature-based design solution for living shorelines, it could result in a design that will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb/lf/yr) and a phosphorus removal rate of 0.00861 lbs/lf/yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb/lf/yr. Therefore, with a proposed project of 150 linear feet of living shoreline this has the ability of removing 1.827 pounds of nitrogen per year, 1.2915 pounds of phosphorus per year and 6,300 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

Goal 3: Transferability to other communities.

- Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

For over 40 years the Middle Peninsula PDC and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

APPROACH, MILESTONES, AND DELIVERABLES.

The proposed project is to develop a nature-based or hybrid design solutions in flood prevention and protection to living shorelines and vegetated buffers. Upon receiving notification of an award to proceed, the Middle Peninsula PDC will commence work in moving forward with the project in partnership with the property owner of the specified location.

The proposed project includes three phases of activities over the course of a six month period. The anticipated timeline for the proposed project could be as quick as 3 months year, but no more than six months years. The timeline range is due to the potential delays in project initiation, contractor availability, and permitting.

It is anticipated that the proposed project will commence October 2021 and be completed by March 2022.

Action Item	**M1**	**M2**	**M3**	**M4**	**M5**	**M6**
Phase 1 – Environmental Scan						
Hold administrative project kick off meeting	X					
Conduct environmental scan of property location in need of a flood resiliency design solution	X					
Select contractor to provide potential nature-based or hybrid design solutions	X					
Coordinate with property owner and contractor on project expectations	X	X	X	X	X	
Apply for any necessary permits	X	X	X			
Phase 2 – Solution Design						
Discuss nature-based or hybrid design solutions with contractor and property owner		X	X			
Select which nature-based or hybrid design solution is most appropriate		X	X			
Have contractor develop selected nature-based or hybrid design solution			X	X		
Phase 3 – Strategic Implementation						
Share nature-based or hybrid design solution with property owner					X	
Discuss strategies in moving forward with					X	X

implementing the nature-based or hybrid design solution						
Provide a digital close out report and copy of the completed nature-based or hybrid design solution along with the completed Certificate of Approval Floodplain Management form to the funding agency						X
Hold administrative project close out meeting						X

***RELATIONSHIP TO OTHER PROJECTS*.**

In response to emerging flood challenges, the Middle Peninsula PDC launched the Middle Peninsula FTF Program in 2020 which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The FTF Program helps property owners (private and public) gain access to programs, funding (i.e., grants and loans), and services to better manage challenges posed by flood water.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan – FEMA and Middle Peninsula locality approved 2016
    - The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy – Middle Peninsula PDC approved 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan – Middle Peninsula PDC approved annually

Short Term Implementation

- Middle Peninsula PDC Fight the Flood (FTF) Program Design – Middle Peninsula PDC, approved June 2020 and chairman approved update 2021
- Middle Peninsula PDC Living Shoreline Resiliency Incentive Funding Program – Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

As the Middle Peninsula PDC has continuously worked on flooding and coastal resiliency topics. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the Middle Peninsula PDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The Middle Peninsula PDC Commission authorized staff to develop the Middle Peninsula FTF Program. This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula FTF program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, the Middle Peninsula PDC have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline as seen in **Appendix 5.**

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN.

Maintenance plan is not applicable in this application. The proposed project is to develop a nature-based or hybrid design solutions and its cost does not require ongoing operation and future maintenance.

CRITERIA.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?

   The Middle Peninsula PDC is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 and pursuant to the Constitution or laws of the Commonwealth.

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?

   The Middle Peninsula PDC does have an Approved Regional Flood Resiliency Plan as of August 19, 2021, which can be found at the following link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf.

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?

   The Middle Peninsula PDC does have support letters from all nine localities including the Counties of including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna as seen in **Appendix 1**.

4. Has the applicant provided evidence of an ability to provide the required match funds?

   The property owner has provided a match commitment letter to the Middle Peninsula PDC indicating their responsibility to provide the appropriate match if their design solution project proposal is awarded as seen in **Appendix 6.**

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?

   Yes, nature-based solutions—such as reconnecting floodplains to give rivers more room during floods or restoring reefs, marshes or dunes that can protect coastal communities during storms—as well as hybrid solutions can also help improve water quality, provide prime wildlife habitat, enhance recreational opportunities, and produce related economic and social benefits.

6. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding? Yes.

SCORING CRITERIA FOR FLOOD PREVENTION AND PROTECTION PROJECTS.

Applicant Name:	**Middle Peninsula Planning District Commission**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly orpursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to theplan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected localgovernments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously fundedby the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration		X Yes ☐No
Applicant Name:	**Middle Peninsula Planning District Commission**	

Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local orregional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resiliencevalue by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar datadriven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. Any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	0

9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		83

SCOPE OF WORK CHECKLIST.

Scope of Work Narrative	
Supporting Documentation	**Included**
Detailed map of the project area(s) (Projects/Studies)	☑Yes ☐ No ☐ N/A
FIRMette of the project area(s) (Projects/Studies)	☑Yes ☐ No ☐ N/A
Historic flood damage data and/or images (Projects/Studies)	☑Yes ☐ No ☐ N/A
A link to or a copy of the current floodplain ordinance	☑Yes ☐ No ☐ N/A
Non-Fund financed maintenance and management plan forproject extending a minimum of 5 years from project close	☑Yes ☐ No ☐ N/A
A link to or a copy of the current hazard mitigation plan	☑Yes ☐ No ☐ N/A
A link to or a copy of the current comprehensive plan	☑Yes ☐ No ☐ N/A
Social vulnerability index score(s) for the project area from ADAPT VA's Virginia Vulnerability Viewer	☑Yes ☐ No ☐ N/A
If applicant is not a town, city, or county, letters of supportfrom affected communities	☑Yes ☐ No ☐ N/A

SUBTOTAL: Direct Costs					$10,580	$2,646	$13,226
Indirect/IDC/Facilities & Administrative Costs			**27.31%**		$3,266	$817	$4,083
Total					**$13,846**	**$3,463**	**$17,309**
Other Match:							
Source of Match					$0	$0	$0
GRAND TOTAL					**$13,846**	**$3,463**	**$17,309**

Cost estimates for shoreline nature-based design and draft joint permit application development was based on estimates provided by design professional who does shoreline design work. Given that the program is reimbursable, billing will be for actual cost, which we anticipate being lower cost than estimated in the budget. Additionally, it is anticipated that legal and procurement cost may be needed.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at **862 Bland Point Rd, Deltaville , Virginia 23043**. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response.

Sincerely,

Lud H. Kimbrough, III

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Mr. Lawrence:

Middlesex County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents are part of our necessary governmental functions and are consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood (FTF) Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC FTF Program provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs assist to secure the tax base of coastal localities and reduce the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types.

The FTF and the Living Shoreline programs exist to help the owners of flood-prone properties access programs and services to better manage challenges posed by flood water and to direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents, to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-758-4330.

Respectfully,

Matt Walker
County Administrator

APPENDIX 5

Flood Prevention Project and its Relevance to Other Projects

The Middle Peninsula PDC staff have worked throughout the years to understand the policy, research and impacts of flooding (i.e., stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change and Sea Level Rise (2009 to 2012)

The Middle Peninsula PDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, Middle Peninsula PDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally, Phase 3 focused on developing adaptation public policies in response to the assessments.

Emergency Management – Hazard Mitigation Planning (2009 to Present)

Since 2009, the Middle Peninsula PDC has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise (i.e., Mean High Higher Water and the National Oceanic and Atmospheric Administration (NOAA) 2060 intermediate-high scenario), and flooding (coastal and riverine flooding) that estimates losses from each hazard. The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014)

In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, onsite sewage disposal system (OSDS) management, storm water management, total maximum daily load (TMDL), etc., staff from the Middle Peninsula PDC will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and OSDS and community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems,

assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The DCR requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the Middle Peninsula PDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The Middle Peninsula PDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014)
Middle Peninsula PDC staff and Draper Aden Associates worked with localities (i.e., Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional Virginia Stormwater Management Program.

Mathews County Rural Ditch Enhancement Study (2015)
In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015)
This report explored the enabling mechanism in which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however,

no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the Middle Peninsula PDC developed the Middle Peninsula PDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the Middle Peninsula PDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in Virginia Resources Authority loan funding and ~$400,000 in National Fish and Wildlife Foundation grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. Middle Peninsula PDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project – VCPC White Papers (2017)
This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017)
This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018)
This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

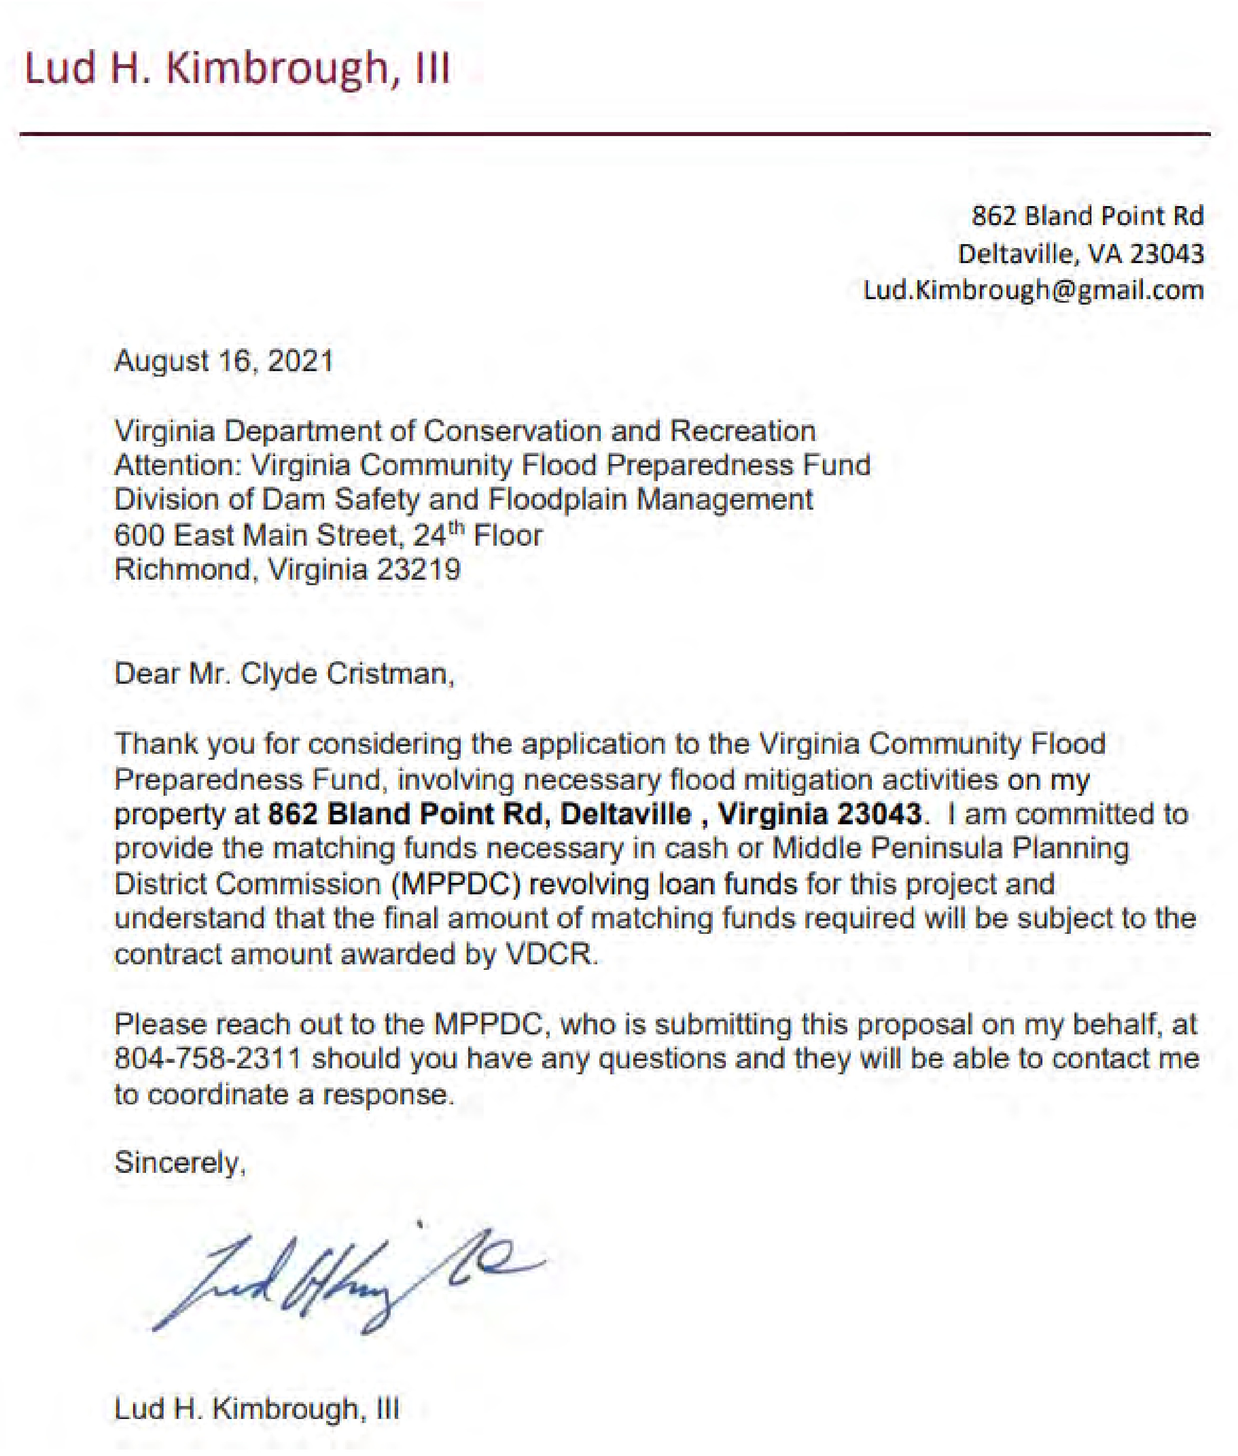
Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018)
Virginia Institute of Marine Science (VIMS) Shoreline Studies Program worked with the Public Access Authority (PAA) to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020)

The Fight the Flood (FTF) was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

APPENDIX 6

Match Commitment Letter



Lud H. Kimbrough, III

862 Bland Point Rd
Deltaville, VA 23043
Lud.Kimbrough@gmail.com

August 16, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at **862 Bland Point Rd, Deltaville , Virginia 23043**. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response.

Sincerely,

Lud H. Kimbrough, III

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

March 28, 2022

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Matthew Wells,

Enclosed in this packet is one flood protection and prevention project that involves the implementation of nature-based shoreline solutions.

The application is currently at the construction stage. Construction projects are requesting funds to implement projects which have approved permits or are nearing permit approval prior to construction of a nature-based flood protection solution.

Below is short summary of proposed projects in Middlesex County:

A. **Moore Creek Nature Based Shoreline Management Construction Project** (CID): 510098 Total Cost (from individual project application): $86,652
This project proposes to construct a nature-based solution on a private property located on Moore Creek in Middlesex County. The nature-based solution will involve the installation of 50 linear feet (LF) by 4 feet high of Envirolok Bags planted with marsh grass; a 179 LF perimeter of ReadyReefs to mean low water, backfilled sand and planted with marsh grass to make a living shoreline; and 143 LF by average of 3' high more Envirolok bags will be stacked to prevent erosion higher up the bank.

The total project costs for Middlesex County Round 3 construction applications is **$86,652** and MPPDC staff are requesting **$69,322** from DCR to support this work.

We consider helping both public and private entities manage flooding a critical and essential function of government.

Thank you for considering the enclosed proposed projects. If you have any questions about the enclosed, please contact me by email at llawrence@mppdc.com or by phone at 804-758-2311.

Project Grants (Check All that Apply)

- ☐ **Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.**
- ☑ **Wetland restoration.**

- ☑ **Floodplain restoration.**
- ☐ **Construction of swales and settling ponds.**
- ☑ **Living shorelines and vegetated buffers.**
- ☐ **Structural floodwalls, levees, berms, flood gates, structural conveyances.**
- ☐ **Storm water system upgrades.**
- ☐ **Medium and large-scale Low Impact Development (LID) in urban areas.**
- ☐ **Permanent conservation of undeveloped lands identified as having flood resilience value by ConserveVirginia Floodplain and Flooding Resilience layer or a similar data driven analytic tool.**
- ☐ **Dam restoration or removal.**
- ☑ **Stream bank restoration or stabilization.**
- ☐ **Restoration of floodplains to natural and beneficial function.**
- ☐ **Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.**

Location of Project (Include Maps): Middlesex County

Total Cost of Project: $86,652

Total Amount Requested: $69,322

INTRODUCTION –

This project proposes to construct a nature-based solution on a private property located on Moore Creek in Middlesex County. The nature-based solution will involve the installation of 50 linear feet (LF) by 4 feet high of Envirolok Bags planted with marsh grass; a 179 LF perimeter of ReadyReefs to mean low water, backfilled sand and planted with marsh grass to make a living shoreline; and 143 LF by average of 3' high more Envirolok bags will be stacked to prevent erosion higher up the bank.

FEMA, Virginia General Assembly, DCR's Floodplain Management Program, and the Middle Peninsula PDC all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes and territories and the citizens which reside and work there. These hazards include flooding, drought, hurricanes, landslides, wildfires and more. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program (www.FightTheFloodVA.com). This proposal is a Nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features or processes into the built environment to promote adaptation and resilience. Further, this proposal incorporates natural features and processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. These benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life (*FEMA Building Community Resilience with Nature Based Solutions,* June 2021).

This project will be a partnership between the MPPDC and one private property owner and is supported by Middlesex County (See the community support letter in Attachment 1).

PROJECT LOCATION INFORMATION –

This project proposes to install living shorelines on one private property on Moore Creek in Middlesex County (**Figure 1 and 2**).

FIGURE 1: COUNTY MAP OF PROJECT LOCATION.

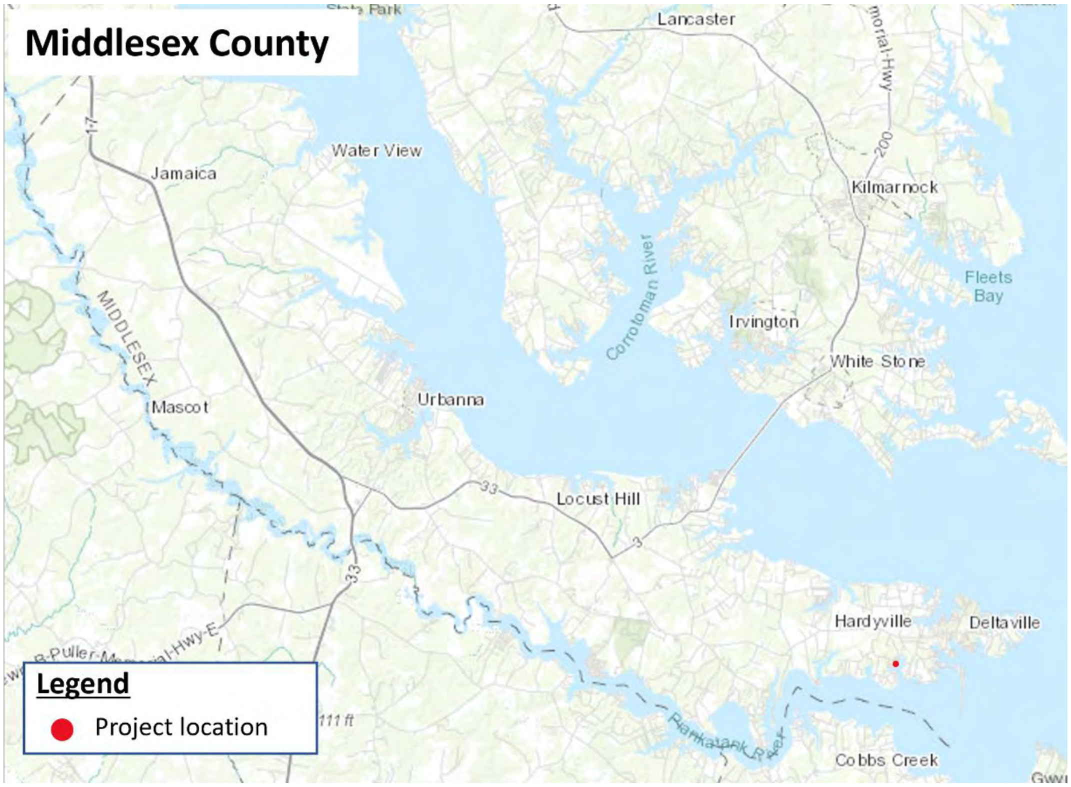

FIGURE 2: PARCEL MAP OF PROJECT LOCATION.

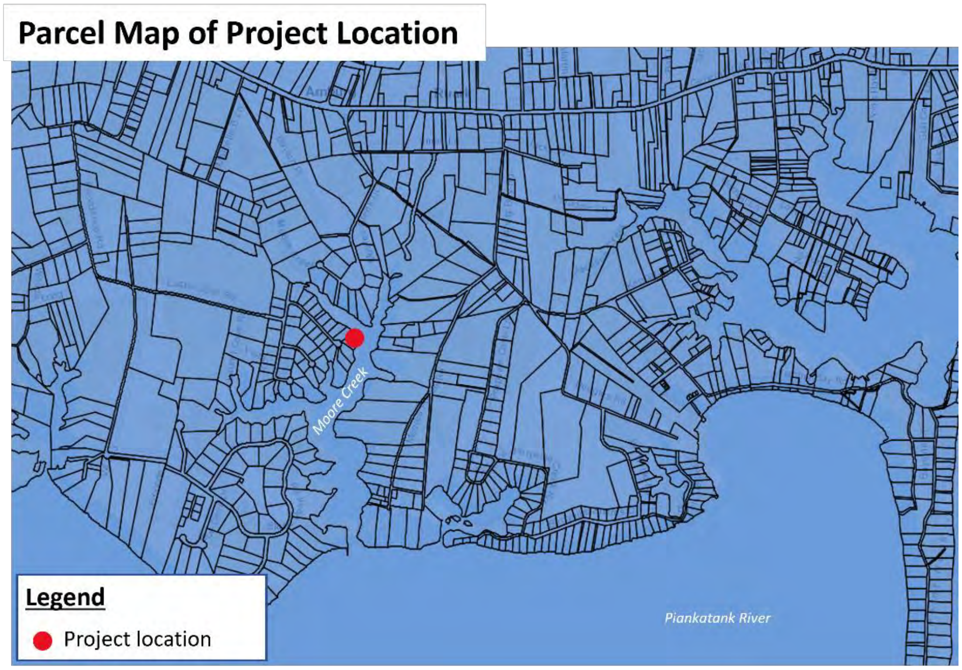
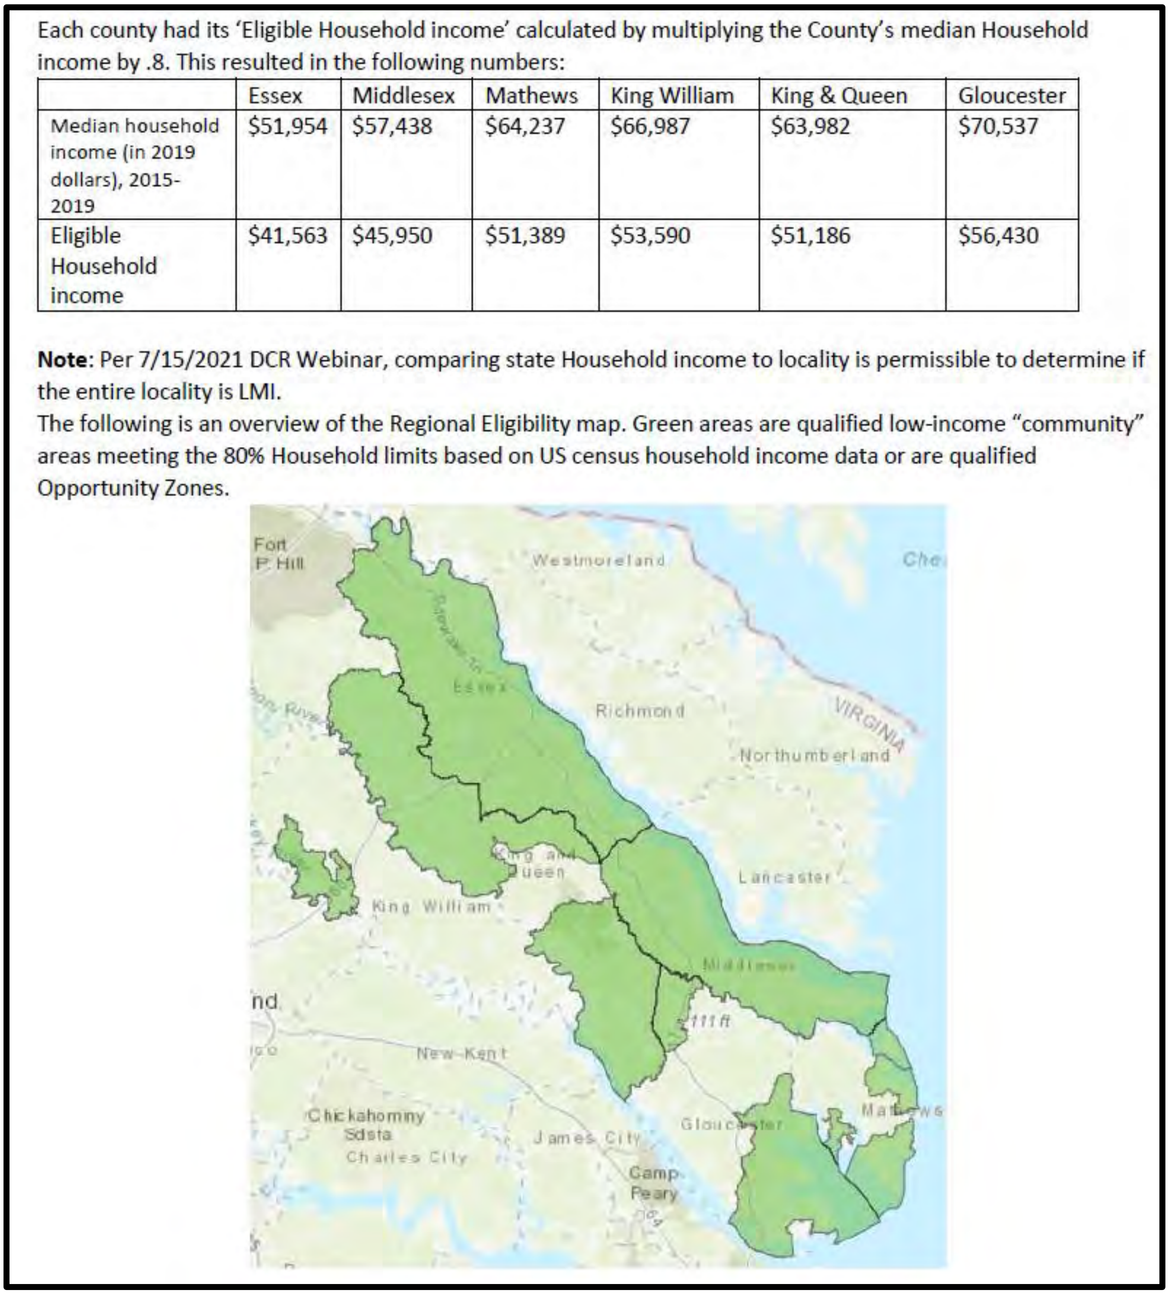


Middlesex County is located at Virginia's Middle Peninsula and is an agriculture, forestry, and water-based economy. The County is comprised of 130 square miles of land 80 miles of shorelines. Based on 2020 Census Data, Middlesex County's population totals 10,625 which. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 3** the green areas qualified as low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Figure 3: Map of Middle Peninsulas Low Income Geographic Areas qualifying under DCR guidelines.



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

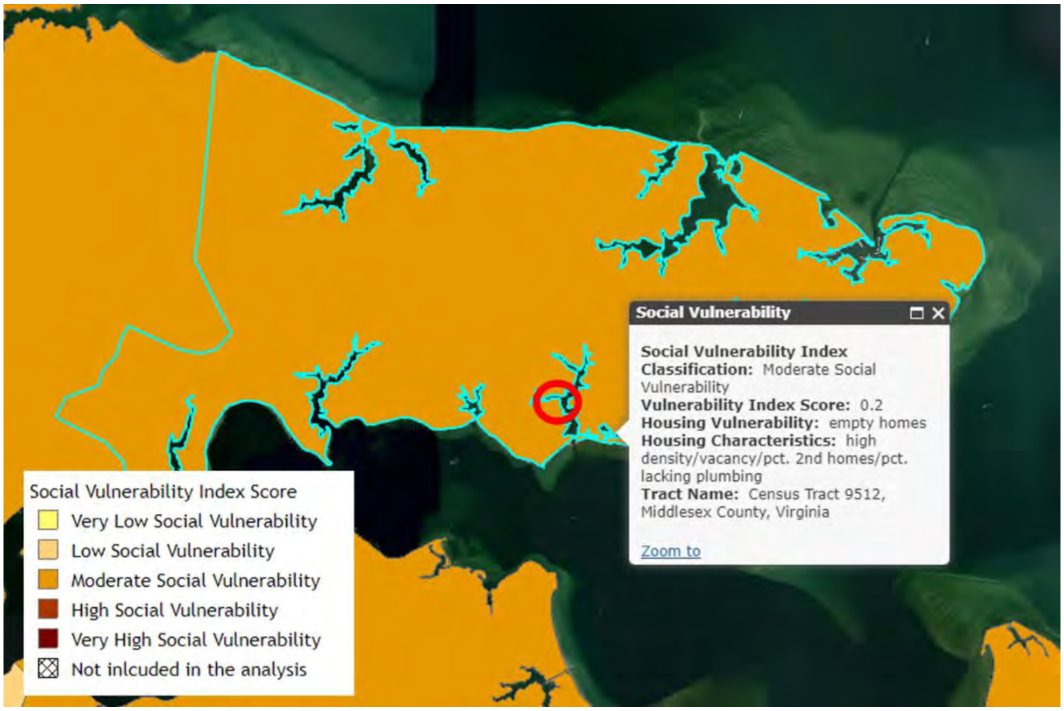
The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 4** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

FIGURE 4: MAP OF THE PROJECT LOCATION WITHIN THE GREEN LOW-INCOME AREA.

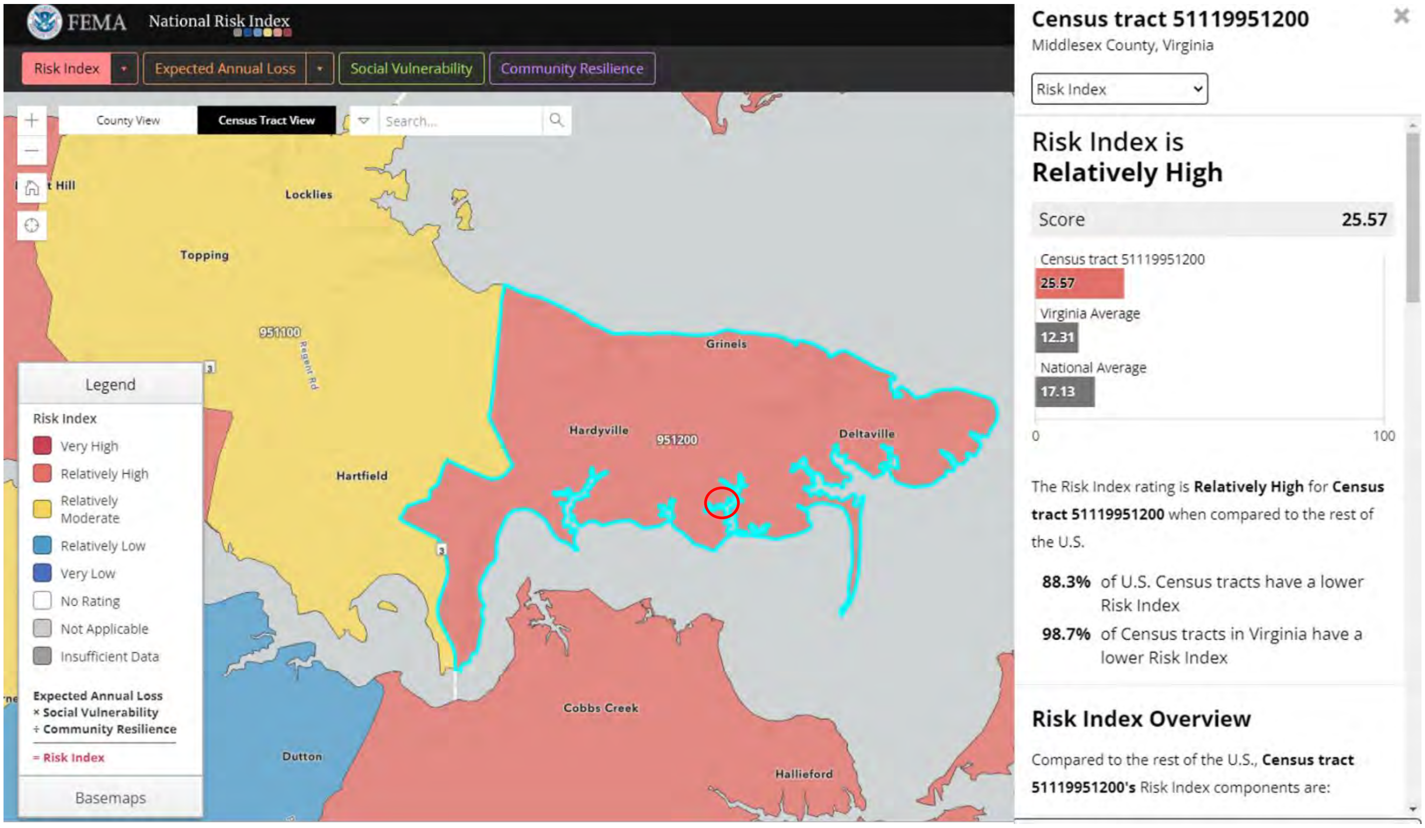
According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score (**Figure 5**). This is also supported by FEMA's National Risk Index which identifies the project area as having a relatively high-risk index **Figure 6**).

FIGURE 5: VIRGINIA'S SOCIAL VULNERABILITY INDEX SCORE MAP FOR THE PROJECT LOCATION.



Social Vulnerability Index
Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.2
Housing Vulnerability: empty homes
Housing Characteristics: high density/vacancy/pct. 2nd homes/pct. lacking plumbing
Tract Name: Census Tract 9512, Middlesex County, Virginia

FIGURE 6: FEMA NATION RISK INDEX OF CENSUS TRACKS WHERE THE PROJECT LOCATION.



Census tract 51119951200
Middlesex County, Virginia

Risk Index

Risk Index is Relatively High

Score	25.57
Census tract 51119951200	25.57
Virginia Average	12.31
National Average	17.13

The Risk Index rating is **Relatively High** for **Census tract 51119951200** when compared to the rest of the U.S.

88.3% of U.S. Census tracts have a lower Risk Index

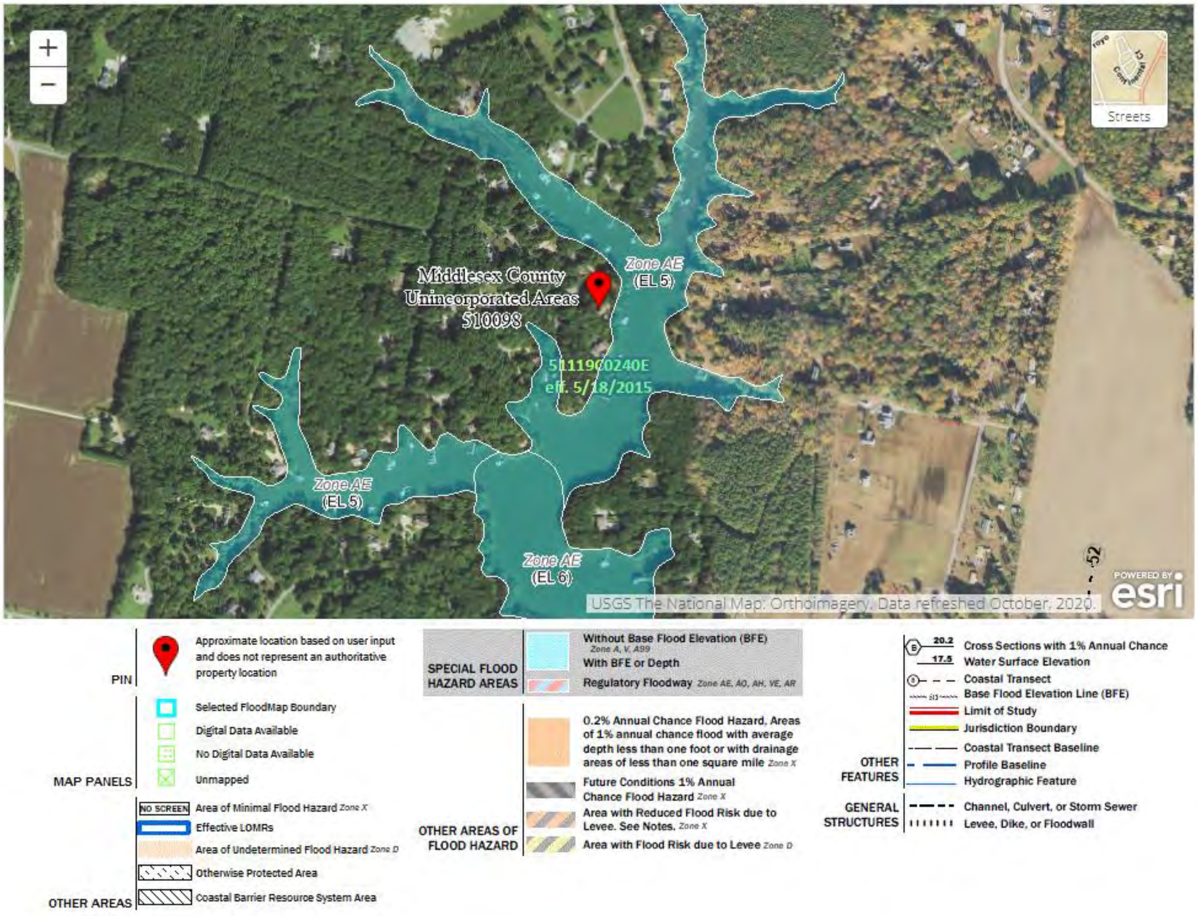
98.7% of Census tracts in Virginia have a lower Risk Index

Risk Index Overview

Compared to the rest of the U.S., **Census tract 51119951200's** Risk Index components are:

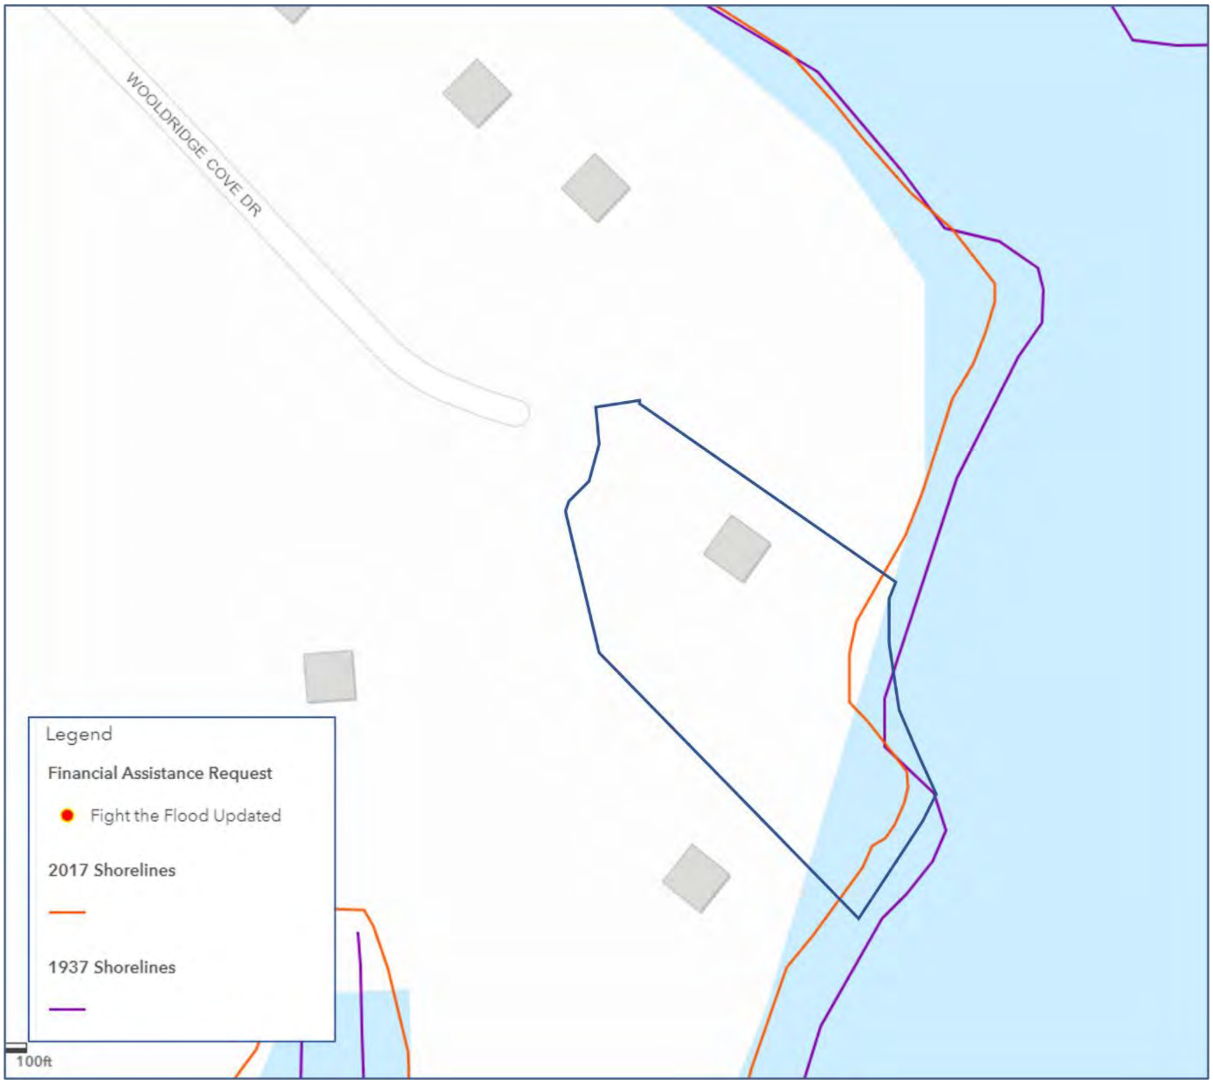
The project is located at 160 Wooldridge Cove Drive Deltaville, VA 23043 (37.54430, -76.35740). A 179-linear foot bioengineered structure, 176 linear feet of living shoreline, and 40 cubic yards of sill fill will be constructed at this project location. Within the project area there is one structure on the property including 1 residential home. The structure is not identified as severe repetitive loss structure or repetitive loss structures. This property is located within the X flood zone; however, since the project location will be on the property's shoreline this falls into the AE Zone (**Figure 7**). Please see **Attachment 2** for the FIRMettes (last mapped 5/18/2015).

FIGURE 7: MAP OF FEMA FLOOD ZONES.



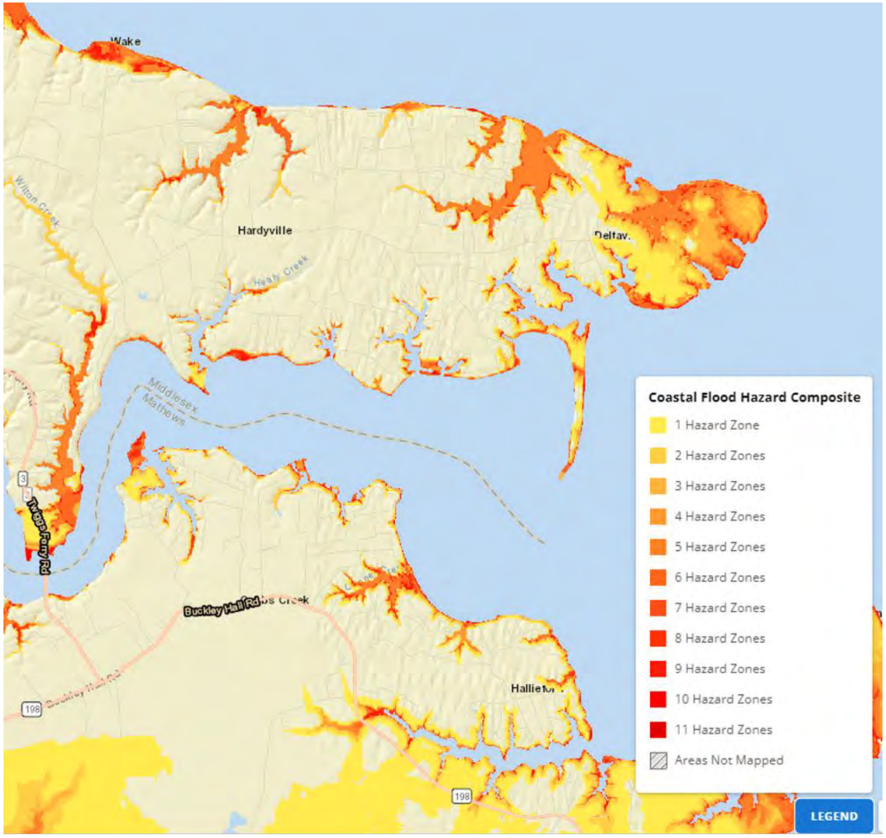
Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 8** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 4,363.8 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Attachment 3** lists 79 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

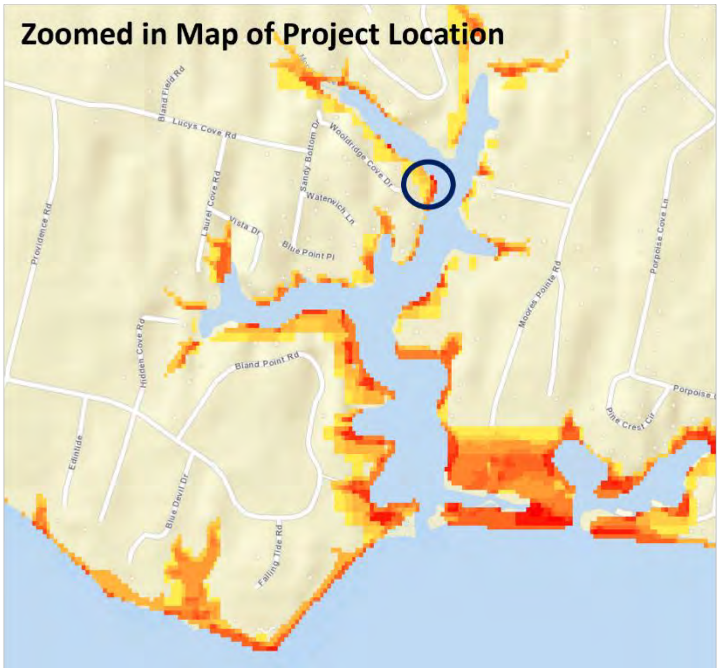
FIGURE 8: PROJECT LOCATION AND MAP OF THE SHORELINE CHANGE BETWEEN 1937 AND 2017. PLEASE NOTE THAT THE PROJECT AREA PARCEL IS OUTLINED IN WHITE.



Finally, according to NOAA’s Coastal Flood Mapper, this project is at the highest risk of coastal flooding (**Figure 9**).

Figure 9: Map of project location and risk of coastal flooding (NOAA, 2021).





Zoomed in Map of Project Location

For more information about this project area please see:

- The Middle Peninsula All Hazards Mitigation Plan identifies all hazards that impact the region -

https://www.mppdc.com/articles/reports/AHMP_2016_FEMA_Approved_RED.pdf .

- Middlesex County Building and Engineering Department administers the NFIP. Here is the link to the current floodplain ordinance: https://www.co.middlesex.va.us/DocumentCenter/View/422/Floodplain-Management-PDF

NEED FOR ASSISTANCE –

The Middle Peninsula Planning District Commission (MPPDC) is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 to provide solutions to problems of greater than local significance and cost-savings through economies of scale. The MPPDC serves nine localities of the Middle Peninsula including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna.

MPPDC is staffed using multiple methods including co-operative procurement, hourly, and burdened staff. MPPDC staff consists of Executive Director, Deputy Director, Chief Financial Officer, Senior Project Planner, clerical support staff; co-operative procured Director of Planning, General Planner, Certified Flood Plain Manager, Transportation Planner, Emergency Planner; Hourly staff for Housing, Community Development Planner and Public relations.

The PDC staffing team assists localities with long-term and/or regional planning efforts. The MPPDC Executive Director, Deputy Director, and Chief Financial Officer have decades of experience in managing and administering project grants at multiple scale from grants in excess of $1,000,000 to very small grants. MPPDC is an entrepreneurial based government agency with an annual operating budget ranging from $750,000 to over $1,000,000. The MPPDC manages annually 25-30 concurrent federal and state grants utilizing industry standard Grants Management Software. Staff utilize GIS and all Microsoft software as well as other software as required by different grants. The MPPDC operates service centers in the topical areas of coastal zone management, emergency planning, housing, transportation planning and transportation demand management, economic development, social assistance, small business development, general planning and technical assistance and other areas as determined by the Commission. MPPDC has over 25 years of experience managing multiple revolving loan programs. In the 25 years that the Executive Director has been employed by the Commission no audit findings have occurred.

The need for assistance is two-fold.

First, as Middlesex County borders the Rappahannock and Piankatank Rivers, the County is influenced by the water and is at high risk of coastal flooding, sea-level rise, and storm surge. Sea levels in Middlesex County have risen over 1 foot since 1950, leading to more frequent and severe coastal flooding, agricultural losses, and property damage. Sea levels are projected to rise between 2-6 feet by 2070, submerging private property and reshaping Middlesex County's coastline. Based on tidal gauge data from VIMS, relative sea- level rise rates ranging from 0.11-0.23 in./yr. (2.9-5.8 mm/yr.; period: 1976-2007; 10 stations) within the Chesapeake Bay region, which are the highest rates reported along the U.S. Atlantic coast (Boon et. al., 2010). In addition to sea-level rise, Middlesex County has a history of being impacted by hurricanes and tropical storms. As storms pass over or near the coast, the atmospheric pressure drops, causing a large volume of sea water to build up, eventually being pushed ashore by the storm's winds causing a storm surge. In Middlesex County, strong East and Northeast winds can push water from the Chesapeake Bay into the mouth of the York and Rappahannock Rivers and Mobjack Bay, flooding much of the county's low-lying areas (Middle Peninsula Planning District Commission, 2005). Additionally, when a storm makes landfall at high tide, the storm surge and the added water from the tidal fluctuation combine to create a "storm tide". In Middlesex County, tidal waters fluctuate twice daily from 1.2 feet above mean sea level to 1.2 feet below (FEMA 1987, 6). The County has implemented several preventative measures, property protection policies, public information activities, and emergency service measures to decrease impacts on communities. Therefore, this project will build on other local efforts move toward becoming a more resilient community.

Second, at this project location, the shoreline is experiencing flood-induced erosion and undercutting of the bank. The north end of the property currently has Envirolok bags to prevent erosion and now the homeowner is looking to duplicate this effort on the south side of the property to the property line. Based on the photos in **Figure 10** the bank is eroding, and it is threatening the vegetation and trees along the bank. Without offering this section of shoreline some protection with the installation of a nature-based shoreline protection solution, this bank will continue to erode and the vegetation and trees on the shoreline will most certainly be lost. This will ultimately bring water closer to the structures on the property and increase the overall flood vulnerability of the property. Please see **Figure 10** for project location photos and **Attachment 4** for more photos.

FIGURE 10: PHOTOS OF THE MARRON PROPERTY.

Shoreline. Envirolok Bags are shown of the right and on the left is the eroding shoreline where the Envirolok Bags are planned to be installed to the property line.

Close-up of the bank erosion on the shoreline. This is where the Envirolok Bags are planned to be installed.

ALTERNATIVES –

Alternatives are not applicable to this project. A living shoreline is feasible at this location and therefore required per VMRC regulations. This project employs a nature-based solution, and this project cost is not greater than $3 Million.

GOALS AND OBJECTIVES –

This project proposes to remove the failing bulkhead which has hardened the shoreline for years and will be replaced with a nature-based solution. The nature-based solution is based on the DCR Flood Preparedness Fund definition: *"Nature-based solution" means an approach that reduces the impacts of flood and storm events through the use of environmental processes and natural systems. A nature-based solution may provide additional benefits beyond flood control, including recreational opportunities and improved water quality. This includes a project that reduces these impacts by protecting, restoring, or emulating natural features.* The project stie will use Evirolok bags. The Envirolok bag is a nonwoven geotextile produced by needle-punching together 100% synthetic staple fibers, in a random network, forming a high strength, dimensionally stable fabric. The synthetic fibers are specially formulated to resist ultraviolet light deterioration and are inert to commonly encountered soil chemicals. The fabric will not rot or mildew, is non-biodegradable, and is resistant to damage from insects and rodents. For more information about the Envirolok bags and for the permit package for the project area please see **Attachment 5**.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.
Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based approach.
Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode.

Goal 2: Improve water quality
Objective A: Construct a living shoreline to capture nitrogen, phosphorus, and sediment.

Goal 3: Transferability to other communities.
Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

The MPPDC anticipates that the living shoreline installed at this project location will:

1. **Stabilize the shoreline and reduce the overall erosion rate at the project location**. According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and reduce the erosion on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

2. **Provide ecosystem services to the community.** Since this project is proposing the installation of living shorelines, this project will have nutrient and sediment reduction

benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb./lf./yr.) and a phosphorus removal rate of 0.00861 lbs./lf./yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb./lf./yr. Therefore, with a proposed project of 176 linear feet of living shoreline this has the ability of removing 2.14368 pounds of nitrogen per year, 1.51536 pounds of phosphorus per year and 7,392 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

3. **Prevent loss of property and life.** As the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax-base at this project location which directly protects the largest employer in Middlesex County, which is local government.

APPROACH, MILESTONES, AND DELIVERABLES –

This project will follow the designs outlined and approved in the Joint Permit Application. Upon issuance of the permits for this project, VMRC has analyzed the upstream and downstream impacts of this project using the best available science, as per state law. Please see **Attachment 5** for the JPA application, Design, and Permit Package. The below table outlines the components of the nature-based solution and what will be installed at the project location, as permitted by Virginia Marine Resource Commission (VMRC).

	Total Project Location
Sill Fill	40 Cubic Yards
Bioengineered Structure	179 Linear Feet
Living Shoreline	176 Linear Feet

The anticipated timeline for this project could be as quick as 1 year, but no more than two years. The timeline range is due to the potential delays in the construction industry or delays caused by COVID, including supply shortages. Having a two-year timeline will offer potential windows for planting the living shoreline - one in 2022 and one in 2023. To explain, the Chesapeake Bay Foundation recommends that perennials and grasses for living shorelines should be planted during peak growing season (in mid-to-late summer) to allow enough time for their root systems to become established before they go dormant in the late Fall. Trees and shrubs should be planted in Spring and Fall when there is adequate rainfall to help them develop strong roots and leafy growth.

Below is the project timeline and project milestones for this project.
Receive funding notice - December 2021
Coordinate with property owners and the project contractor ReadyReef Inc to review project timeline and project expectations – January 2022
Initiate site preparation at the project location - January 2022 to July 2022
Construction of the living shoreline – June 2022 to September 2022
Project Close out – December 2022

RELATIONSHIP TO OTHER PROJECTS –
For over 40 years the Middle Peninsula Planning District Commission (MPPDC) and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

The proposed project is a priority project generated from the Middle Peninsula Regional Flood Resilience Plan, which was approved by DCR during August 2021. The Flood Resiliency Plan serves as the MPPDC's guiding document for its flood resiliency programs and is comprised of two primary MPPDC-approved policy documents which form the implementation and foundation of the Middle Peninsula flood protection approach and are indirectly and directly supported by multiple specific regional planning documents, both approved by various required federal, regional, or local partners as required by statute.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan, FEMA and Middle Peninsula locality approved 2016 (MPPDC Website)
- The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy, MPPDC Approved March 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan - MPPDC Approved ~annually

Short Term Implementation

- Middle Peninsula Planning District Commission Fight the Flood Program Design MPPDC Commission (approved June 2020 Chairman approved 8/6/21 update)
- Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program-Virginia Revolving Loan Fund Program Design and Guidelines (approved 2015)

As the MPPDC has continuously worked on flooding and coastal resiliency topics, **Attachment 6** lists the projects and short description of relevant projects. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the MPPDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The MPPDC Commission authorized staff to develop the **Middle Peninsula Fight the Flood (FTF) Program.** This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula **FTF** program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, MPPDC staff have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline.

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN –

The approved VMRC permits does not require a maintenance plan; therefore, the maintenance of this construction project will be in accordance with the permit requirements.

CRITERIA –

Describe how the project meets each of the applicable scoring criteria containedin Appendix B and provide the required documentation where necessary. Documentationcan be incorporated into the Scope of Work Narrative or included as attachments to the application. <u>Appendix B must be completed and submitted with the application.</u>

For local governments that are not towns, cities, or counties, the documentation providedfor the criteria below should be based on the local government or local governments in which the project is located and/or directly impacts.

1. **Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?**

YES.

2. **Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?**
   YES. Here's the link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf
3. **For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?**
   YES. Please see **Attachment 1**
4. **Has the applicant provided evidence of an ability to provide the required match funds?**
   YES. Please see the match commitment letter in **Attachment 8**
5. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?**
   YES.

BUDGET NARRATIVE -

For applications submitted under MPPDC Round 2 proposals that resides in a low-income area or opportunity zone the following applies to the submitted budget. If the applicant does not, then the following does not apply: For projects within low-income areas and opportunity zones, the budgets are being submitted with budgets that reflect a 70:30 grant to match ratio even though the program manual states that these projects are eligible for 80:20 match for being in low-income areas and opportunity zones. In response to the DCR letter addressed to the MPPDC dated October 20, 2021, which eliminated the ability of MPPDC applicants who reside in a low-income area or opportunity zone to request 80% state funding. We respectfully request that DCR reconsider applying the determination required for Round 1 proposals on the MPPDC Round 2 proposals since the grant manual states that all applicants who reside in a low-income area or opportunity zone should be funded at the level that they qualify for. Should DCR agree to award projects located in low-income areas or opportunity zones at the levels indicated within the grant manual, the budgets can be adjusted when contracts are awarded to ensure consistency with the grant manual.

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. Direct charges are costs associated with overall projects costs consistent with general accounting principles.

Also please note that the cost estimates for the construction of this project were supplied by the contractor, Ready Reef, LLC. Please see **Attachment 7**.

In summary:

***Estimated total project cost*:** $ 86,652

***Amount of funds requested from the Fund (70% project total)*:** $ 69,322

Appendix B: Scoring Criteria for Flood Prevention andProtection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Middle Peninsula Planning District Commission	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☑ Yes ☐ No

Applicant Name:	Middle Peninsula Planning District Commission

Scoring Information		
Criterion	Point Value	Points Awarded
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**

RE: Support Letter for Applications Submitted by MPPDC to Virginia Community Flood Preparedness Fund

Dear Mr. Lawrence:

Middlesex County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents are part of our necessary governmental functions and are consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood (FTF) Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC FTF Program provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs assist to secure the tax base of coastal localities and reduce the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types.

The FTF and the Living Shoreline programs exist to help the owners of flood-prone properties access programs and services to better manage challenges posed by flood water and to direct constituents to appropriate mitigation solutions, such as nature-based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituents, to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds, have been allocated.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-758-4330.

Respectfully,

Matt Walker
County Administrator

- DEQ: Permit application fees required for Virginia Water Protection permits – while detailed in 9VAC25-20 – are conveyed to the applicant by the applicable DEQ office (http://www.deq.virginia.gov/Locations.aspx). Complete the Permit Application Fee Form and submit it per the instructions to the address listed on the form. Instructions for submitting any other fees will be provided to the applicant by DEQ staff.
- VMRC: An application fee of $300 may be required for projects impacting tidal wetlands, beaches and/or dunes when VMRC acts as the LWB. VMRC will notify the applicant in writing if the fee is required. Permit fees involving subaqueous lands are $25.00 for projects costing $10,000 or less and $100 for projects costing more than $10,000. Royalties may also be required for some projects. The proper permit fee and any required royalty is paid at the time of permit issuance by VMRC. VMRC staff will send the permittee a letter notifying him/her of the proper permit fees and submittal requirements.
- LWB: Permit fees vary by locality. Contact the LWB for your project area or their website for fee information and submittal requirements. Contact information for LWBs may be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html.

e-mail chris.readyreef@gmail.com

State Corporation Commission Name and ID Number (if applicable) ______________

*** If multiple applicants, property owners, and/or agents, each must be listed and each must sign the applicant signature page.**

4. Provide a detailed description of the project in the space below, including the type of project, its dimensions, materials, and method of construction. Be sure to include how the construction site will be accessed and whether tree clearing and/or grading will be required, including the total acreage. If the project requires pilings, please be sure to include the total number, type (e.g. wood, steel, etc), diameter, and method of installation (e.g. hammer, vibratory, jetted, etc). If additional space is needed, provide a separate sheet of paper with the project description.

The project is to install Envirolok Bags planted with marsh grass for 50 LF x 4' high at the shoreline against the steep bank adjacent to the Client's dock on Moore Creek. To the north and south of these bags, a 179 LF perimeter of ReadyReefs out to MLW will be installed, with backfilled sand and planted with marsh grass to make a living shoreline. Against the bank, 143 LF x average of 3' high more Envirolok bags will be stacked to prevent erosion higher up the bank. All work is above MLW, except where reefs diverge out to create 5' gap. No SAVs are present. Any grasses covered by backfill or bags will be replaced. There will be a net gain of 520 ft^2 of marsh grass. No grading or tree clearing in the RPA is required. Site will be accessed through the yard.

Part 1 - General Information (continued)

5. Have you obtained a contractor for the project? x Yes* ___ No. *If your answer is "Yes" complete the remainder of this question and submit the Applicant's and Contractor's Acknowledgment Form (enclosed)

Contractor's name* and complete mailing address:

ReadyReef Inc
504 Smoketree Ct.
North Chesterfield, VA
23236

Contact Information:

Home (____)____________
Work (____)____________
Fax (____)____________
Cell (804) 338-3103
email chris.readyreef@gmail.com

State Corporation Commission Name and ID Number (if applicable) ____________________

*** If multiple contractors, each must be listed and each must sign the applicant signature page.**

6. List the name, address and telephone number of the newspaper having general circulation in the area of the project. Failure to complete this question may delay local and State processing.

Name and complete mailing address:

Southside Sentinel
276 Virginia Street
PO Box 549
Urbanna, VA
23175

Telephone number

(804) 758-2328

7. Give the following project location information:

Street Address (911 address if available) 160 Wooldridge Cove Rd
Lot/Block/Parcel# 40 82 41
Subdivision Lucys Cove
City / County Deltaville ZIP Code 23043
Latitude and Longitude at Center Point of Project Site (Decimal Degrees):
37.544195°N / -76.357231°W (Example: 36.41600/-76.30733)

If the project is located in a rural area, please provide driving directions giving distances from the best and nearest visible landmarks or major intersections. *Note: if the project is in an undeveloped subdivision or property, clearly stake and identify property lines and location of the proposed project. A supplemental map showing how the property is to be subdivided should also be provided.*

From Saluda, take Rt. 33 East towards Deltaville. Turn Right onto Providence Rd, State Rt 633. Follow Rt. 633, but when it takes a 90°right turn, keep going straight as it turns into Lucy Cove Rd. Turn left at Stop Sign onto Sandy Bottom Drive. Turn right onto Wooldridge Cove Drive. House Number 160 is at the end in the cul-de-sac.

8. What are the *primary and secondary purposes of and the need for* the project? For example, the primary purpose may be "to protect property from erosion due to boat wakes" and the secondary purpose may be "to provide safer access to a pier."

The primary purpose is stop erosion at the toe of the bank which is being undercut with soil loss and threat to dock access.
The secondary purpose is to achieve erosion control with the environmental benefit of adding marsh grasses and oysters to the waterfront.

Received by VMRC December 8, 2020 /blh

Part 1 - General Information (continued)

9. Proposed use (check one):
   _x_ Single user (private, non-commercial, residential)
   ___ Multi-user (community, commercial, industrial, government)

10. Describe alternatives considered and the measures that will be taken to avoid and minimize impacts, to the maximum extent practicable, to wetlands, surface waters, submerged lands, and buffer areas associated with any disturbance (clearing, grading, excavating) during and after project construction. *Please be advised that unavoidable losses of tidal wetlands and/or aquatic resources may require compensatory mitigation.*

    Only 20ft² of thin marsh grass will be covered with backfill delivered from the yard.
    These will be replaced with 540 ft² of new marsh grass plants in the Envirolok bags and on the Living Shoreline.
    No buffer areas will be impacted by traffic over the mulch covered yard.

11. Is this application being submitted for after-the-fact authorization for work which has already begun or been completed? ___Yes _x_No. If yes, be sure to clearly depict the portions of the project which are already complete in the project drawings.

12. Approximate cost of the entire project (materials, labor, etc.): $____________________
    Approximate cost of that portion of the project that is channelward of mean low water:
    $130

13. Completion date of the proposed work: June 30 - 2022

14. Adjacent Property Owner Information: List the name and complete **mailing address**, including zip code, of each adjacent property owner to the project. (NOTE: If you own the adjacent lot, provide the requested information for the first adjacent parcel beyond your property line.) Failure to provide this information may result in a delay in the processing of your application by VMRC.

1. Applicants and property owners (if different from applicant).
NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, USACE, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.

In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Appendix B: Projects for Shoreline Stabilization in tidal wetlands, tidal waters and dunes/beaches including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, and living shoreline projects. Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service or VIMS**.**

NOTE: It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1). **Information on non-structural, vegetative alternatives (i.e., Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html.**

1. Describe each **revetment, bulkhead, marsh toe, breakwater, groin, jetty, other structure, or living shoreline project** separately in the space below. Include the overall length in linear feet, the amount of impacts in acres, and volume of associated backfill below mean high water and/or ordinary high water in cubic yards, as applicable:

   179 LF of ReadyReefs are arrange in linear double rows that mate together. Oyster veneers face seaward. The bottom is firm, so no filter cloth is required. The 6 ft² encroachment below MLW is only necessary due to the requirement for a 5' gap every 100'.

   The Envirolok bags spec sheets and installation diagrams are attached.
   The foundation layer bags are filled with round river rock to allow for hydraulic relief behind the bags. They can be stacked at any angle to match slope.
   Also the installation diagram shows anchoring specs, using geoweb, rebar and earth anchors for structurally fixing the bags to the embankment.
   Sand will be placed behind the bags and packed with them using soil compactor machine.
   Marsh grass sprigs will be planted 1' on center in the backfilled sand to create a Living Shoreline.

2. What is the maximum encroachment channelward of mean high water? 15 feet.
   Channelward of mean low water? 3 feet.
   Channelward of the back edge of the dune or beach? 15 feet.

3. Please calculate the square footage of encroachment over:
   - Vegetated wetlands 20 square feet
   - Non-vegetated wetlands 2102 square feet
   - Subaqueous bottom 6 square feet
   - Dune and/or beach 0 square feet

4. For bulkheads, is any part of the project maintenance or replacement of a previously authorized, currently serviceable, existing structure? ____ Yes____ No.

   If yes, will the construction of the new bulkhead be no further than two (2) feet channelward of the existing bulkhead? _____Yes ____No.

   If no, please provide an explanation for the purpose and need for the additional encroachment.

Part 3 – Appendices (continued)

5. Describe the type of construction and **all** materials to be used, including source of backfill material, if applicable (e.g., vinyl sheet-pile bulkhead, timber stringers and butt piles, 100% sand backfill from upland source; broken concrete core material with Class II quarry stone armor over filter cloth).
NOTE: **Drawings must include construction details, including dimensions, design and all materials, including fittings if used**.

The ReadyReefs are locally sourced crack resistant concrete substrate with an oyster shell veneer cast in. There is 5" of embedded PVC pipe for attachment/lifting purposes.

The Envirolok bags spec sheets are attached. They are filled with a 25% topsoil and 75% clean sand mix. Marsh grass sprigs are laid between bags with Osmocote fertilizer.

Also attached is an installation diagram showing anchoring specs, using geoweb, rebar and earth anchors for structurally fixing the bags to the embankment.
Sand is locally sourced from Middlesex upland pit, meeting grain size and composition requirements of the USACE.

6. If using stone, broken concrete, etc. for your structure(s), what is the average weight of the:
Core (inner layer) material__________ pounds per stone Class size ________
Armor (outer layer) material __________ pounds per stone Class size ________

7. For **beach nourishment**, including that associated with breakwaters, groins or other structures, provide the following:

- Volume of material

Volume of material	0	cubic yards channelward of mean low water
	40	cubic yards landward of mean low water
	35	cubic yards channelward of mean high water
	5	cubic yards landward of mean high water
Area to be covered	0	square feet channelward of mean low water
	1300	square feet landward of mean low water
	35	cubic yards channelward of mean high water
	5	cubic yards landward of mean high water

- Source of material, composition (e.g. 90% sand, 10% clay): 93% sand, 7% clay
- Method of transportation and placement:
  Truck from Pit to front yard. Skid steer from front yard to shoreline. Chutes from shoreline to installation points.
- Describe any proposed vegetative stabilization measures to be used, including planting schedule, spacing, monitoring, etc. Additional guidance is available at http://www.vims.edu/about/search/index.php?q=planting+guidelines:

Marsh grass spigs of Spartina will be placed one foot on center on Living shoreline slope and in Envirolok bag face. The Spartina types are Alterniflora and Patens, each according to its elevation appropriate level. Installation is concurrent with project install and completion. All ReadyReef sites are monitored for marsh grass growth for 2 years according to contract warranty and the time it takes for living shorelines to fully establish themselves.

Part 3 – Appendices (continued)

Appendix D: Aquaculture Related Structures such as cages and floats. Before completing this appendix, please review the aquaculture requirements summary at: http://mrc.virginia.gov/Shellfish_Aquaculture.shtm.

1. Will the activity be for commercial purposes? _____Yes _____ No.

   If Yes and structures will be placed upon an oyster ground lease, you may qualify for the VMRC General Permit #4 for Temporary Protective Enclosures for Shellfish. For more info see: http://www.mrc.virginia.gov/regulations/MRC_Scanned_Regs/Shellfish_Mix/fr1130_12-0107.pdf. If you qualify for the General Permit #4, or if such structures are proposed that are not on an oyster planting ground lease, or for floating structures of any kind, complete this Joint Permit Application and include the necessary information requested below in question 2 through 11.

   If No, you may qualify for the VMRC General Permit #3, for Noncommercial Riparian Shellfish Growing (i.e. "Gardening") For more information see: http://www.mrc.virginia.gov/forms/VGP3_Aquaculture.doc.pdf. If you qualify for this general permit use the Abbreviated Joint Permit Application For Noncommercial Riparian Shellfish Aquaculture Structures available at https://mrc.virginia.gov/forms/2019/VGP3_Aquaculture_form_2019.pdf ***do not use this Joint Permit Application***.

2. Will aquaculture structures be attached to an existing pier or other structure? ____ Yes ____ No.

3. The plat file # if proposed upon oyster planting ground lease(s).____________________________

4. The maximum area where enclosures are proposed. ___________ square feet

5. The maximum number of enclosures being proposed to be deployed. _____________

6. The species of shellfish to be cultured. ____________________________

7. A detailed description of the enclosures to include width, length and height.

8. In addition to the requirements itemized in Part 4 Project Drawings, the following additional information must be included on your project drawings: A general description of the area within 500 feet of deployment area. Provide a drawing that depicts existing marine resources such as SAV, shellfish beds, fixed fishing devices, public grounds, piers, water depths at mean low water, tide range, and the minimum clearance at mean low tide over the enclosures.

9. Provide the date enclosures are proposed to be deployed _______________. How will the structures be secured? ____.

Part 3 – Appendices (continued)

10. List of all riparian land owners within 500 feet of the area where enclosures are proposed along with a map (tax map or other suitable map) depicting the locations of such parcels or riparian property owner acknowledgement forms signed by the riparian land owner with any comments concerning the enclosures deployment request.

11. Proof that the applicant holds a current oyster or clam aquaculture product owners permit, and verification that the applicant is in compliance with Mandatory Harvest Reporting requirements, and verification that the current years oyster ground rent is paid, if structures are proposed on an oyster ground lease.

Envirolok Bag (Tan) Data Sheet

The Envirolok bag is a nonwoven geotextile produced by needle-punching together 100% synthetic staple fibers, in a random network, forming a high strength, dimensionally stable fabric. The synthetic fibers are specially formulated to resist ultraviolet light deterioration, and are inert to commonly encountered soil chemicals. The fabric will not rot or mildew, is non-biodegradable, and is resistant to damage from insects and rodents. The synthetic fiber is stable within a pH range of 2 to 13, making it one of the most stable polymers available for geotextiles today. The Envirolok bag meets the following Minimum Average Roll Values (MARV):

PROPERTIES	TEST METHOD	UNIT	MARV
PHYSICAL			
Weight	ASTM D 5261	oz/yd2	4.0 (Typ) (135.62 g/m2)
Dimensions (unfilled)		35 x 16.5 inches (889 x 419 mm)	
Grab Tensile	ASTM D 4632	lbs.	100 (.450 kN)
Grab Elongation	ASTM D 4632	%	50
Puncture Strength	ASTM D 4833	lbs.	65 (.289 kN)
Mullen Burst	ASTM D 3786	psi	210 (1448 kPa)
Trapezoidal Tear	ASTM D 4533	lbs.	45 (.202 kN)
CBR Puncture Resistance	ASTM D 6241	lbs.	310 (1.379 kN)
UV Resistance After 1,000 Hours	ASTM D 4355	% Strength Retained	70
HYDRAULIC			
Permittivity [1]	ASTM D 4491	sec-1	2
Water Flow Rate [1]	ASTM D 4491	gpm/ft2	140 (5700 l/min/m2)
Apparent Opening Size [2]	ASTM D 4751	U.S. Sieve	70 (.212mm)

1. Handling at the time of manufacturing may change these properties.
2. Apparent Opening Size, (AOS), reported as Maximum Average Roll Value.

WETLANDS PERMIT

Date of Permit: *April 13, 2021*

Date of Permit's Expiration: *October 13, 2022*

Pursuant to provisions of the Middlesex County Wetlands Zoning Ordinance, the Wetlands Board of Middlesex County, Virginia, hereinafter referred to as the BOARD, hereby grants unto:

Brian Marron
6525 Monument Avenue
Richmond, VA 23226

Hereinafter referred to as the PERMITTEE, permission to undertake the following described project:

to install Envirolok Bags planted with marsh grass for 50 LF x 4' high at the shoreline against the steep bank adjacent to the Client's dock on Moore Creek. To the north and south of these bags, a 179 LF perimeter of ReadyReefs out to MLW will be installed, with backfilled sand and planted with marsh grass to make a living shoreline. Against the bank, 143 LF x average of 3' high more Envirolok bags will be stacked to prevent erosion higher up the bank. All work is above MLW, except where reefs diverge out to create 5' gap.

For a more complete description of said project, reference is hereby made to PERMITTEE'S Application for the Wetlands Permit (Joint Permit Application Number 2020-2221 which is made a part of this permit).

This Permit is granted subject to the following terms and conditions:

1. Except as hereinafter provided, all phases of the project shall conform in all respects to PERMITTEE'S application for Wetlands Permit. The duly authorized agents of the BOARD shall have the right to enter upon the premises at any time for the purpose of inspecting work authorized by this permit.

2. PERMITTEE shall comply with all applicable laws, ordinances, rules and regulations affecting the conduct of the project. The granting of this permit shall not relieve the PERMITTEE of the responsibility of obtaining any and all permits of authority required for the project. **Contact the Virginia Marine Resources Commission, the U.S. Army Corps of Engineers, and the Middlesex County Planning, Zoning and Building Departments for further permit requirements.**

3. PERMITTEE shall, to the greatest extent practicable, minimize the adverse effects of the project upon adjacent properties and wetlands and upon the natural resources of the County.

4. PERMITTEE is responsible for display of the yellow placard accompanying this permit. Placard must be conspicuously displayed at the work site prior to and throughout the construction phase of the authorized activity.

5. PERMITTEE agrees to notify the Wetlands Board a minimum of 48 hours to the start of the construction activities authorized by this permit.

6. PERMITTEE shall be responsible for all denuded areas disturbed during and after alteration. These areas shall be returned to its previous condition by re-vegetation or re-stabilization.

7. PERMITTEE is responsible that once work is begun on a project, the work shall be completed in a timely and efficient manner. Temporary and permanent erosion and sediment control measures, as approved by Minimum State Standards, must be applied throughout construction.

8. Other terms and conditions peculiar to this project:

9. This permit shall not be transferred without written approval of the BOARD.

10. The project shall be completed within eighteen months of the date of this permit, after which time this permit shall be null and void. Upon proper written application to the BOARD, however, the deadline for completion of the project may be extended by the BOARD, at its discretion. Any such request for extension of time shall be made prior to the expiration date of this permit and shall specify the reasons for such extension and the expected date of completion of the project. Extensions shall not be granted for more than three years from the date of this permit.

11. This permit may be revoked at any time by the BOARD upon failure of PERMITTEE to comply with any of the terms and conditions of this permit.

IN WITNESS WHEREOF, the Wetlands Board of Middlesex County, Virginia has caused this permit to be executed in its behalf by Fred W. Dolezal, Chairman of the BOARD. The signature of **Brian Marron** is affixed hereto as evidence of acceptance of the terms and conditions of the permit by PERMITTEE.

Attachment 6: Flood Prevention Project and its Relevance to Other Projects

MPPDC staff have worked throughout the years to understand the policy, research and impacts of flooding (ie. stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change & Sea Level Rise (2009 to 2012)

The MPPDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, MPPDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally Phase 3 focused on developing adaptation public policies in response to the assessments.

Phase 1: Middle Peninsula Climate Change Adaptation: Facilitation of Presentations and Discussions of Climate Change Issues with Local Elected Officials and the General Public
Phase 2: Climate Change III: Initiating Adaptation Public Policy Development
Phase 3: Phase 3 Climate Change: Initiating Adaptation Public Policy Development

Emergency Management - Hazard Mitigation Planning (2009 to Present): Since 2009, the Middle Peninsula Planning District Commission has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. *The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise* (ie. Mean High Higher Water and the NOAA 2060 intermediate-high scenario), *and flooding (coastal and riverine flooding) that estimates losses from each hazard.* The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014): In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, OSDS management, storm water management, TMDLs, etc, staff from the Middle Peninsula Planning District Commission (MPPDC) will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and Onsite Sewage Disposal System (OSDS) and

community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The Virginia Department of Conservation and Recreation requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the MPPDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The MPPDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014): MPPDC staff and Draper Aden Associates worked with localities (i.e. Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional VSMP.

Mathews County Rural Ditch Enhancement Study (2015): In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015): This report explored the enabling mechanism in
which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region’s stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical

assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the MPPDC developed the MPPDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the MPPDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in VRA loan funding and ~$400,000 in NFWF grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. MPPDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project - VCPC White Papers (2017): This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017): This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018): This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018): VIMS Shoreline Studies Program worked with the PAA to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020): The Fight the Flood was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic

Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

BRIAN R. MARRON

P.O. Box 1145

Deltaville, VA 23043

October 10, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

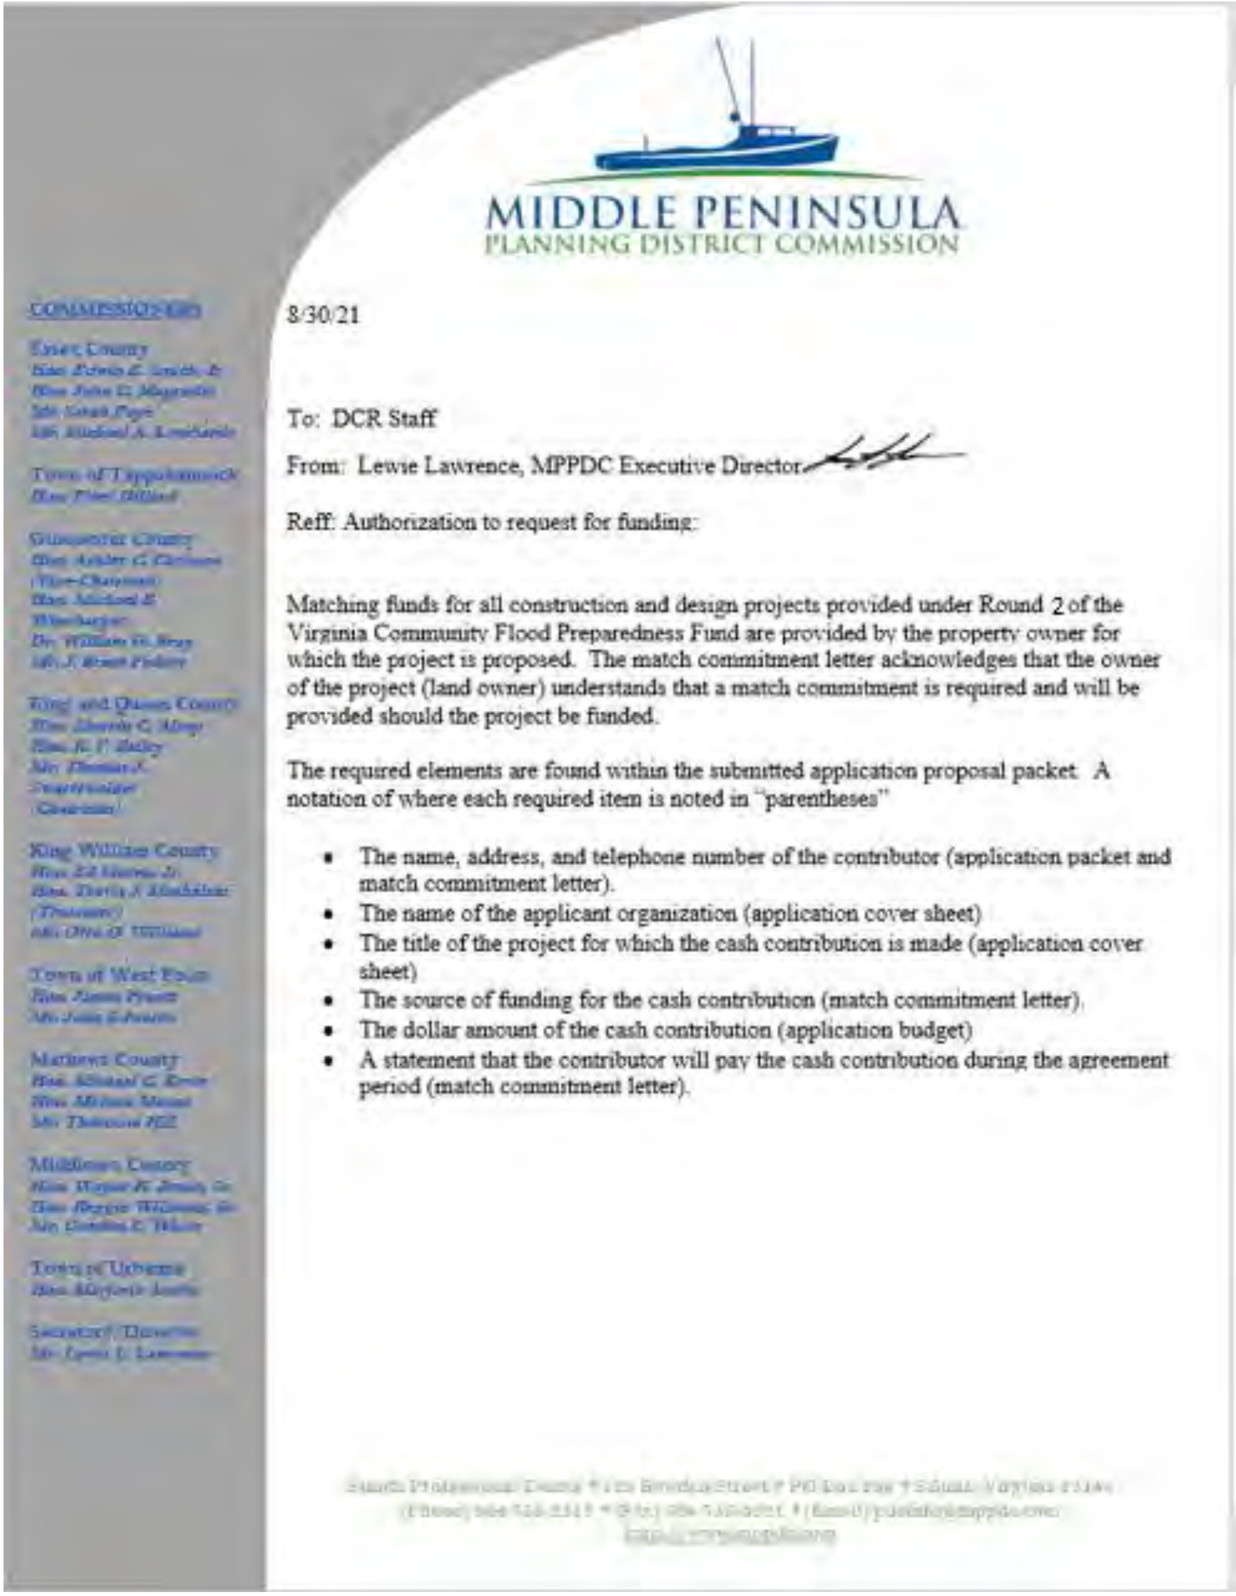
Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 160 Wooldridge Cove Drive, Deltaville, VA 23043. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions, and they will be able to contact me to coordinate a response. I can be reached by phone at (804) 370-3561 or by email at brian.marron79@gmail.com.

Sincerely,

BRIAN R. MARRON

Attachment 9: Authorization to request for funding



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 2 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

March 28, 2022

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Matthew Wells,

Enclosed in this packet is one application for flood protection and prevention project that involves implementation of nature-based shoreline solution.

This application is currently at the construction stage. Construction projects are requesting funds to implement projects which have approved permits or are nearing permit approval prior to construction of a nature-based flood protection solution.

Below is short summary of proposed projects in King & Queen County:

A. **York River – F. Hodge and M.K. Hodge's Nature-based Flood Protection Construction Project**
   (CID): 510082 Total Cost (from individual project application): $156,264
   This project proposes to construct a nature-based solution spanning two private properties located on the York River in King & Queen County. The nature-based solution will involve the installation of 3,552 square feet of Flexamat and 2,851 square feet of marsh grass plantings). This project will be a partnership between the MPPDC and two private property owners and is supported by King & Queen County.

The total project costs for King & Queen County Round 3 application is **$180,993** and MPPDC staff are requesting **$109,384** from DCR to support this work.

We consider helping both public and private entities manage flooding a critical and essential function of government.

Thank you for considering the enclosed proposed projects. If you have any questions about the enclosed, please contact me by email at llawrence@mppdc.com or by phone at 804-758-2311.

Lewis Lawrence
Executive Director

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

October 22, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

We are pleased to respond to DCR's October 20, 2021 request to amend Round 1 application based on the two concerns noted in the letter from Darryl Glover, Deputy Director. Our response follows for the **Hodges multi-parcel Plains Shoreline Const** application. As we have offered multiple times, if DCR would provide guidance as to what you desire for applications related to issue areas, we will gladly incorporate into future proposals. We consider helping both public and private entities manage flooding a critical and essential function of government.

Issue #1

DCR questions how properties valued with a stated range can be qualified as low income.

Response: As previously provided by MPPDC legal counsel to DCR, ***"The statute and guidance are clear that the criteria deals with areas, not people. To ignore its plain language or utilize unreliable measures such as property value for grants would be arbitrary and certainly inconsistent with the law.***

Nevertheless, the applicant has voluntarily elected to be reclassified as residing in a non-low-income area designation even though they reside in a low-income area. As such, the applicant has voluntarily elected to change the budget request from 80% to 70% in grant funding, which means the applicant will need to cover 10% more of the project costs than what was originally budgeted for. The applicant has authorized this modification which is included in this letter as well as a new proposed project budget.

Issue #2

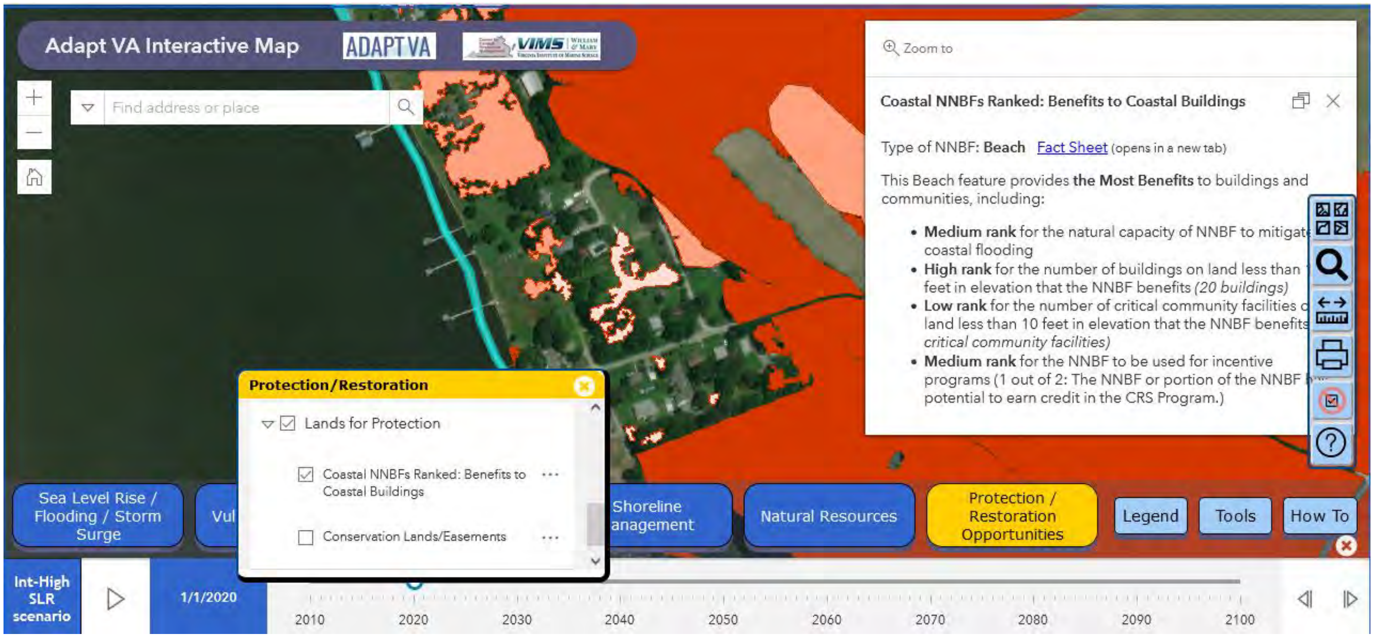
DCR questions how the submitted project relates to priority being given to community scale activities; benefit to the greater community; and adverse impact to other neighboring properties.

Saluda Professional Center ♦ 125 Bowden Street ♦ PO Box 286 ♦ Saluda, Virginia 23149
(Phone) 804 758-2311 ♦ (Fax) 804 758-3221 ♦ (Email) pdcinfo@mppdc.com
http://www.mppdc.com

Response: The state may have some basis to give preference to projects larger in scale than those affecting one parcel or property owner. Va. Code § 10.1-603.25(E) states, “Priority shall be given to projects that implement community-scale hazard mitigation activities that use nature-based solutions to reduce flood risk. However, this would not provide a basis for *rejecting* applications for one parcel or property owner as projects of all sizes are expressly to be considered. The issue is how the guidance defines “Community Scale project” which means a project that provides demonstrable flood reduction benefits at the US census block level or greater. A census block is the smallest US Census geography, but in rural application in many instances represents an extremely large area covering in excesses of 3,000 acres and almost 5 square miles, while an urban block may be as small as 2 acres or .003 of one acre in size. If the basis for approving rural projects is based singularly on proving “demonstrable flood reduction” benefit, rural areas will never compete.

MPPDC believes that proposing nature-based flood mitigation projects at the parcel scale and where possible, partnering with neighbors can accomplish more in terms of linear shoreline protected than urban areas which have smaller sized parcels. Therefore, consistent with the General Assembly directive to VMRC that every VMRC permitted living shoreline project is the preferred solution, we believe submissions of each nature-based project is essentially a nature- based “brick in the wall” and over time the cumulative impact of this approach will be realized. The alternative is hardening of the shoreline, which is counter to the desires of the General Assembly.

Additionally, Adapt VA contains a data layer illustrating areas of less than 10 feet in elevation that show locations in the Middle Peninsula that offer benefits of NNBF to coastal buildings, habitat, and community protection. All Round 1 applications from the Middle Peninsula have multiple community protection benefits which include combinations of mitigating coastal flooding, protecting buildings/community facilities and CRS credit



Coastal NNBFs Ranked: Benefits to Coastal Buildings

Type of NNBF: **Beach** Fact Sheet (opens in a new tab)

This Beach feature provides **the Most Benefits** to buildings and communities, including:

- **Medium rank** for the natural capacity of NNBF to mitigat coastal flooding
- **High rank** for the number of buildings on land less than feet in elevation that the NNBF benefits *(20 buildings)*
- **Low rank** for the number of critical community facilities c land less than 10 feet in elevation that the NNBF benefits *critical community facilities)*
- **Medium rank** for the NNBF to be used for incentive programs (1 out of 2: The NNBF or portion of the NNBF potential to earn credit in the CRS Program.)

Protection/Restoration

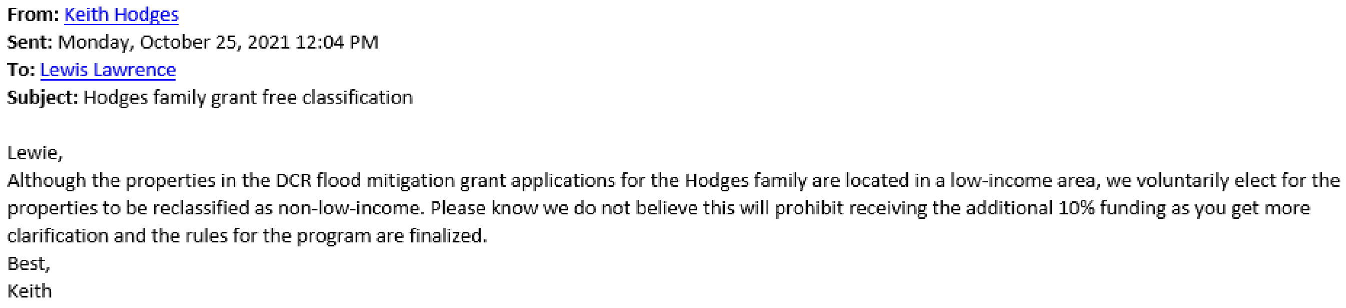
☑ Lands for Protection

☑ Coastal NNBFs Ranked: Benefits to Coastal Buildings

☐ Conservation Lands/Easements

Concerning adverse impacts. MPPDC recognizes that VMRC is the permit issuing authority for all shoreline projects and by statute the local wetlands board and VMRC Commission must utilize the best available science when evaluating each project including how the project impacts up stream and down steam impacts. This might include modifying any aspect of a Flood Fund design to ensure that impacts are mitigated. With that said, MPPDC proposes that prior to requesting final reimbursement from DCR for any design proposal funded under the Flood Fund, MPPDC staff will send the proposed design to the Shoreline Erosion Advisory Service (SEAS) for review. This will require DCR SEAS staff to work directly with the private project designer to address impacts that DCR staff has concerns with to ensure that impacts stemming from any design permitted by VMRC are lessened to a degree that is satisfactory by DCR.

Applicant Voluntarily Selection:



From: Keith Hodges
Sent: Monday, October 25, 2021 12:04 PM
To: Lewis Lawrence
Subject: Hodges family grant free classification

Lewie,
Although the properties in the DCR flood mitigation grant applications for the Hodges family are located in a low-income area, we voluntarily elect for the properties to be reclassified as non-low-income. Please know we do not believe this will prohibit receiving the additional 10% funding as you get more clarification and the rules for the program are finalized.
Best,
Keith

Total Cost of Project: **$154,210**

Total Amount Requested: **$123,368**

INTRODUCTION –

FEMA, Virginia General Assembly, DCR's Floodplain Management Program, and the Middle Peninsula PDC all recognize that natural hazards pose a serious risk to all levels of government including states, localities, tribes and territories and the citizens which reside and work there. These hazards include flooding, drought, hurricanes, landslides, wildfires and more. Because of climate change, many natural hazards are expected to become more frequent and more severe. Reducing the impacts these hazards have on lives, properties and the economy is a top priority for the Middle Peninsula PDC and the Middle Peninsula Fight the Flood (FTF) program (www.FightTheFloodVA.com). This proposal is a Nature-based solution which utilizes and incorporates sustainable planning, design, environmental management, and engineering practices that weave natural features or processes into the built environment to promote adaptation and resilience. Further, this proposal incorporates natural features and processes in efforts to combat climate change, reduce flood risks, improve water quality, protect coastal property, restore, and protect wetlands, stabilize shorelines, reduce heat, adds recreational space, and more. Nature-based solutions offer significant benefits, monetary and otherwise, often at a lower cost than more traditional infrastructure. These benefits include economic growth, green jobs, increased property values, and improvements to public health, including better disease outcomes and reduced injuries and loss of life (*FEMA Building Community Resilience with Nature Based Solutions,* June 2021).

Specifically, this project proposes to construct a nature-based solution spanning two private properties located on the York River in King & Queen County. The nature-based solution will involve the installation of 3,552 square feet of Flexamat[1] and 2,851 square feet of marsh grass plantings). This project will be a partnership between the MPPDC and two private property owners and is supported by King & Queen County (See the community support letter in **Attachment 1**).

---

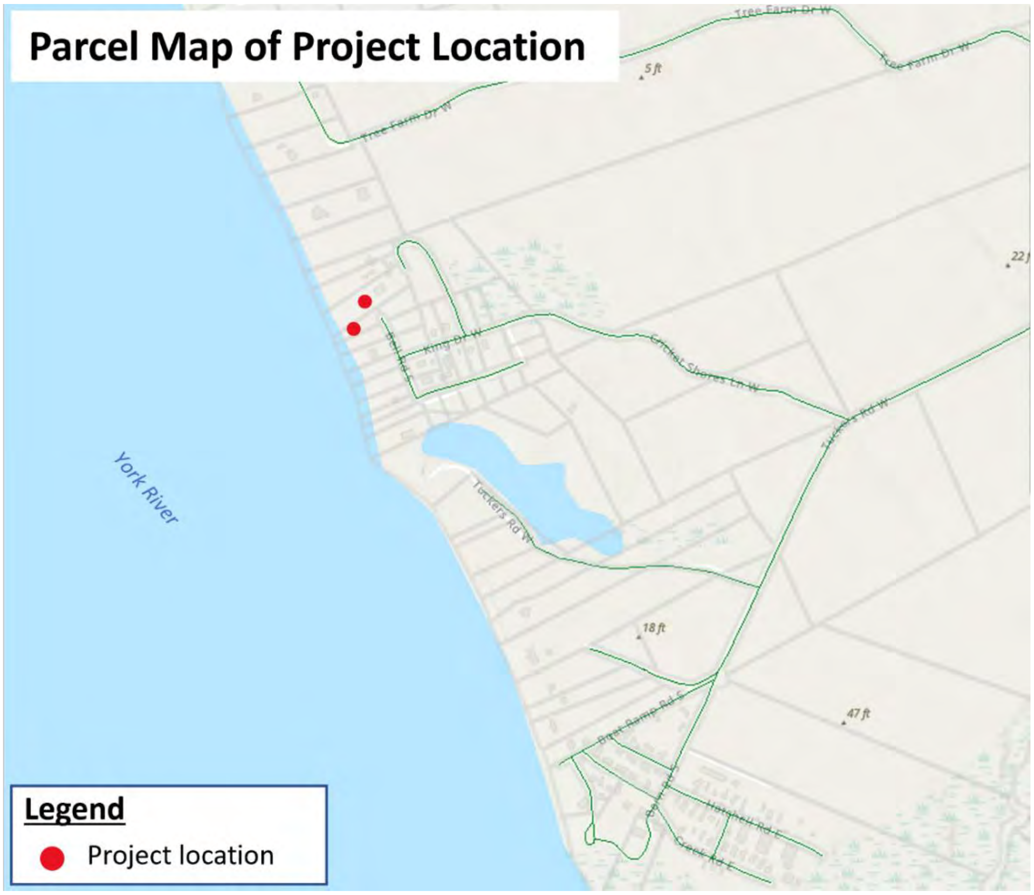
[1] *Flexamat® is tied concrete block mats designed to control erosion as well as provide stable driving/walking surfaces. Flexamat meets the state definition (28.2-104.1) of a Living Shoreline (as required by SB776 passed in 2020) as "a shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials." Flexamat enhances "coastal resilience and attenuation of wave energy and storm surge." For more information about the project please visit -* https://www.flexamat.com/

PROJECT LOCATION INFORMATION –

This project proposes to install a nature-based solution spanning two private properties on the York River in King & Queen County (**Figure 1 and 2**).

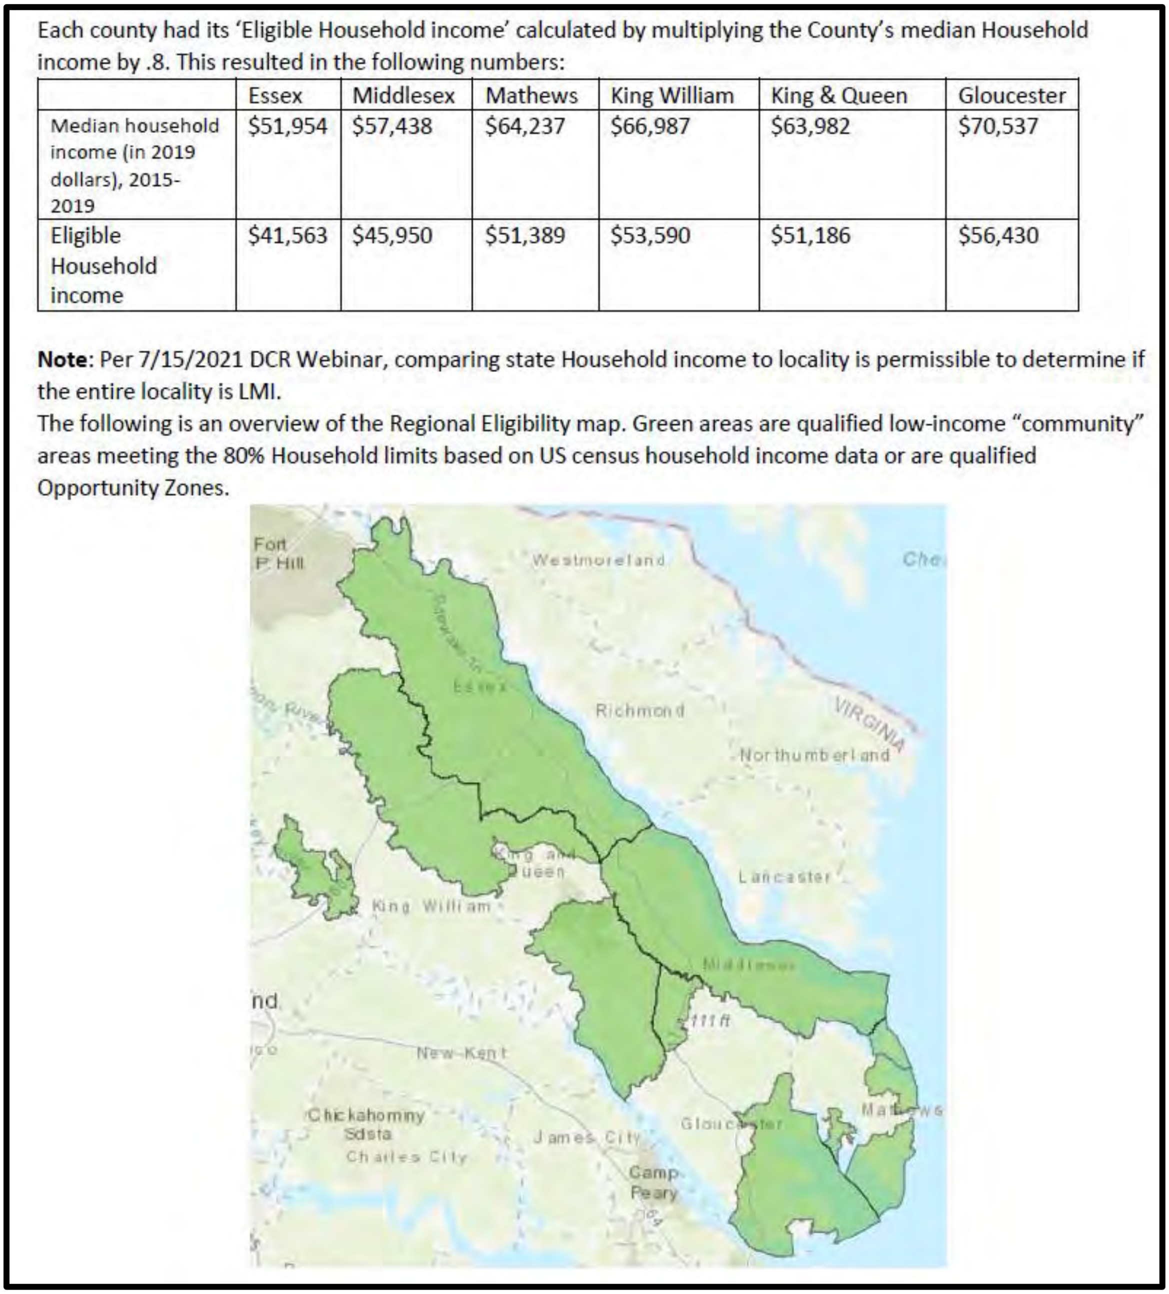
FIGURE 1: COUNTY MAP OF PROJECT LOCATION.

FIGURE 2: PARCEL MAP OF PROJECT LOCATION.



King & Queen County is part of the Middle Peninsula of Virginia's Coastal Plain and bounded on the southwest by the York and Mattaponi Rivers which separate King and Queen from King William and New Kent Counties. The County comprises 318.1 square miles of land area and 8.9 square miles of water area. Based on 2020 Census Data, King & Queen County’s population totals 6,608 which makes it the least populous Middle Peninsula locality. According to DCR guidelines, a portion of the County is considered a low-income geographic area. In **Figure 3** the green areas qualified as low-income “community” areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

FIGURE 3: MAP OF MIDDLE PENINSULAS LOW INCOME GEOGRAPHIC AREAS QUALIFYING UNDER DCR GUIDELINES.



Each county had its 'Eligible Household income' calculated by multiplying the County's median Household income by .8. This resulted in the following numbers:

	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2019 dollars), 2015-2019	$51,954	$57,438	$64,237	$66,987	$63,982	$70,537
Eligible Household income	$41,563	$45,950	$51,389	$53,590	$51,186	$56,430

Note: Per 7/15/2021 DCR Webinar, comparing state Household income to locality is permissible to determine if the entire locality is LMI.

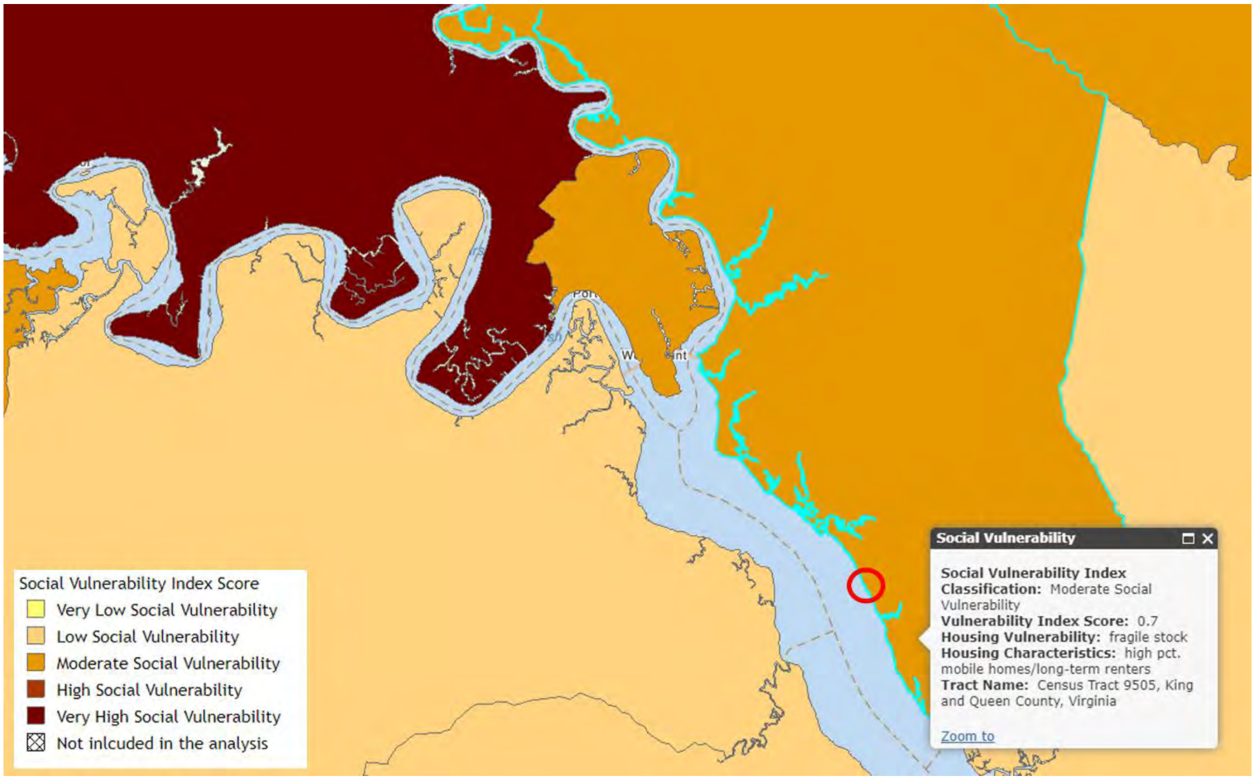
The following is an overview of the Regional Eligibility map. Green areas are qualified low-income "community" areas meeting the 80% Household limits based on US census household income data or are qualified Opportunity Zones.

Please see **Figure 4** for a zoomed in map of the project location and the green low-income area overlay. This shows that the project location is within the low-income area.

FIGURE 4: MAP OF THE PROJECT LOCATION WITHIN THE GREEN LOW-INCOME AREA.

According to the VDAPT Virginia's Social Vulnerability Index Score, this project location has a moderate social vulnerability score (**Figure 5**).

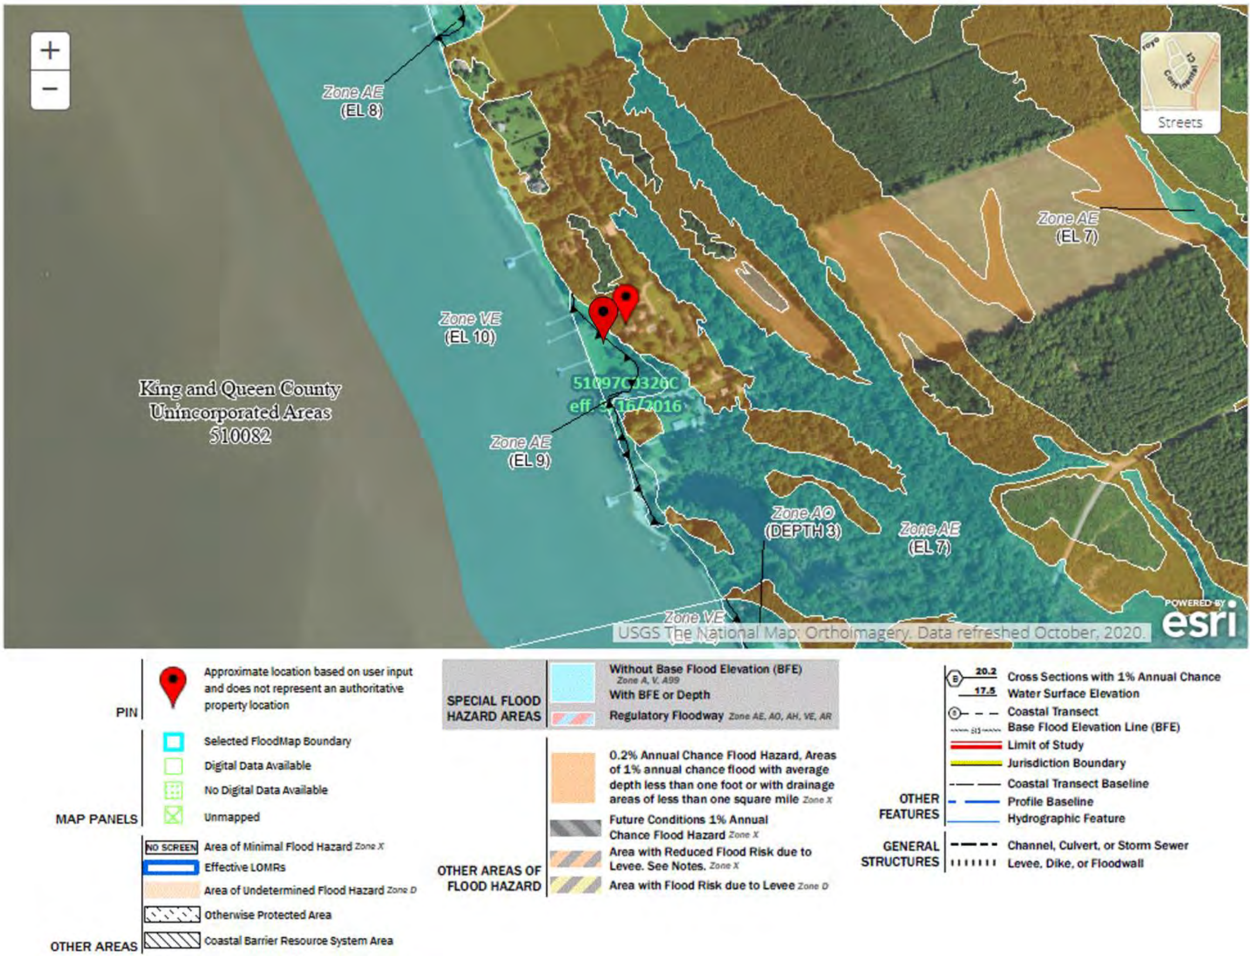
FIGURE 5: VIRGINIA'S SOCIAL VULNERABILITY INDEX SCORE MAP FOR THE PROJECT LOCATION.



Social Vulnerability Index
Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.7
Housing Vulnerability: fragile stock
Housing Characteristics: high pct. mobile homes/long-term renters
Tract Name: Census Tract 9505, King and Queen County, Virginia

The project will be located at 242 Old Farm Drive Shackleford, VA 23156 (37.479281, -76.732522) and on an adjacent land that is southeast of 242 Old Farm Drive (37.479031, -76.732418). The nature-based solution will involve the installation of 3,552 square feet of Flexamat and 2,851 square feet of marsh grass plantings. Please note that there are no structures on the adjacent piece of land; however, at the 242 Farm Drive location there is one residential structure and one detached garage. The structures are not severe repetitive loss structure or repetitive loss structures. This project location is located within the VE flood zone (**Figure 6**). Please see **Attachment 2** for the FIRMettes (last mapped 05/16/2016).

FIGURE 6: MAP OF FEMA FLOOD ZONES.

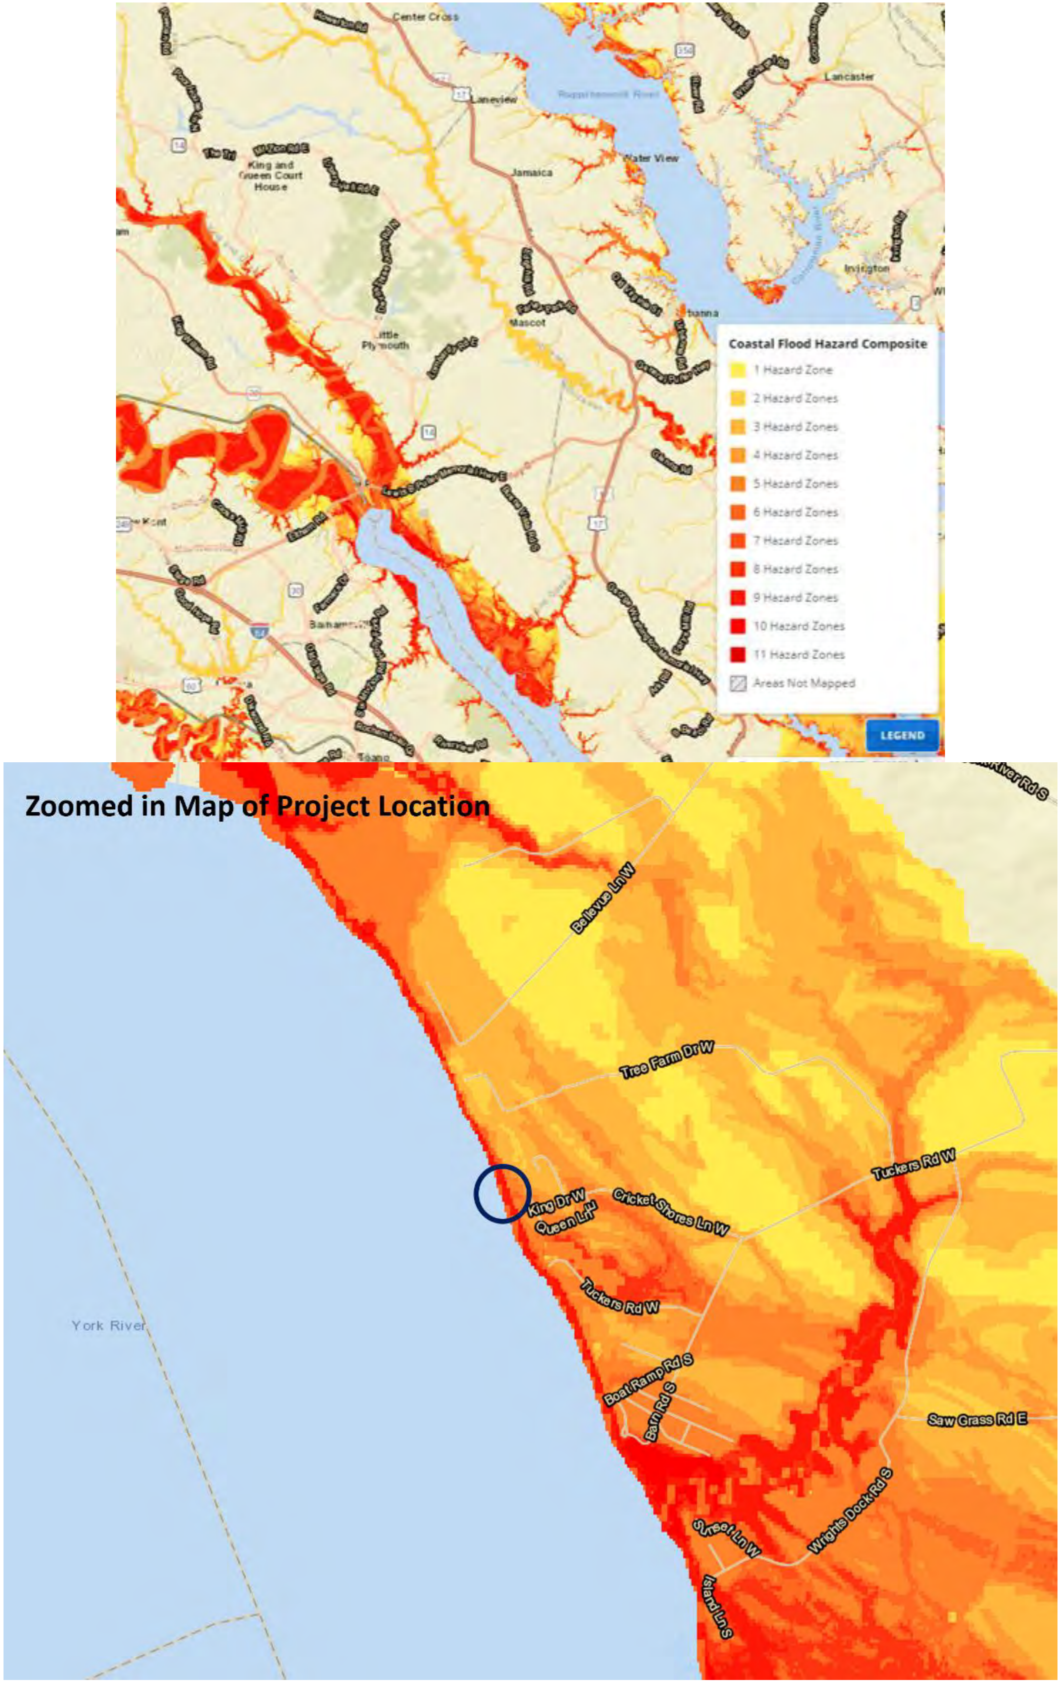


Due to the project site's proximity to the water and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. Based on the historical shoreline data from the Virginia Institute of Marine Science Shoreline Studies Program, **Figure 7** shows the 1937 and the 2017 shorelines. From the figure one can see the change in the shoreline at the project location and the approximate loss of 6,345.5 square feet of shoreline. The project location has and continues to be impacted by tropical, sub-tropical, and nor'easter events. **Attachment 3** lists 75 storm events and provides a map with the project location. Without the flood protection measures proposed, the land, habitat and infrastructure will be compromised, resulting in degradation of the environment and revenue loss to the local tax base.

FIGURE 7: PROJECT LOCATION AND MAP OF THE SHORELINE CHANGE BETWEEN 1937 AND 2017. PLEASE NOTE THAT THE PROJECT AREA PARCEL IS OUTLINED IN WHITE.

Finally, according to NOAA’s Coastal Flood Mapper, this project is at the highest risk of coastal flooding (**Figure 8**).

FIGURE 8: MAP OF PROJECT LOCATION AND RISK OF COASTAL FLOODING (NOAA, 2021).



For more information about this project area please see:

NEED FOR ASSISTANCE –
The Middle Peninsula Planning District Commission (MPPDC) is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 to provide solutions to problems of greater than local significance and cost-savings through economies of scale. The MPPDC serves nine localities of the Middle Peninsula including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna.

MPPDC is staffed using multiple methods including co-operative procurement, hourly, and burdened staff. MPPDC staff consists of Executive Director, Deputy Director, Chief Financial Officer, Senior Project Planner, clerical support staff; co-operative procured Director of Planning, General Planner, Certified Flood Plain Manager, Transportation Planner, Emergency Planner; Hourly staff for Housing, Community Development Planner and Public relations.

The PDC staffing team assists localities with long-term and/or regional planning efforts. The MPPDC Executive Director, Deputy Director, and Chief Financial Officer have decades of experience in managing and administering project grants at multiple scale from grants in excess of $1,000,000 to very small grants. MPPDC is an entrepreneurial based government agency with an annual operating budget ranging from $750,000 to over $1,000,000. The MPPDC manages annually 25-30 concurrent federal and state grants utilizing industry standard Grants Management Software. Staff utilize GIS and all Microsoft software as well as other software as required by different grants. The MPPDC operates service centers in the topical areas of coastal zone management, emergency planning, housing, transportation planning and transportation demand management, economic development, social assistance, small business development, general planning and technical assistance and other areas as determined by the Commission. MPPDC has over 25 years of experience managing multiple revolving loan programs. In the 25 years that the Executive Director has been employed by the Commission no audit findings have occurred.

The need for assistance is two-fold.

First, as King & Queen County boarders the Mattaponi River and the York River, the County is influenced by the water and is at high risk of coastal flooding, sea-level rise, and storm surge. Sea levels in King and Queen have risen over 1 foot since 1950, leading to more frequent and severe coastal flooding, agricultural losses, and property damage. Sea levels are projected to rise between 2-6 feet by 2070, submerging private property and reshaping King and Queen's coastline. Based on tidal gauge data from VIMS, relative sea- level rise rates ranging from 0.11-0.23 in./yr. (2.9-5.8 mm/yr.; period: 1976-2007; 10 stations) within the Chesapeake Bay region, which are the highest rates reported along the U.S. Atlantic coast (Boon et. al., 2010). Also, high tide flooding (also known as sunny day flooding) will become more frequent, putting low-lying homes and infrastructure at risk. Rising sea levels will amplify the impacts of storm surge, allowing waves and severe flooding to reach further inland, damaging homes and property. The County has implemented several preventative measures, property protection policies, public information activities, and emergency service measures to decrease impacts on communities. Therefore, this project is intended to build upon ongoing local and regional efforts to enhance community resiliency.

Second, at this project location, the bulkhead is damaged and underperforming which has exposed the shoreline to extensive winds and wind energy coming off the York River. The increasing shoreline erosion in threatening the residential structures, pier, and land at the project location. The residential structure at 242 Old Farm Dr has a history dating back to 1790. The house sits approximately 200 feet from the York River and one of the two septic drain fields is located between the water and the house. Therefore, if no protection is offered to this shoreline, then there are greater chances of the drain field becoming inundated and causing local water quality impairment. Finally, the adjacent land to 242 Old Farm Dr. (M.K. Hodges Property) currently has no structures on the land; however, protection of this shoreline provides a more effective and comprehensive approach to both properties considering the shorelines are hydrodynamically connected. Please see **Figure 9** for project location photos and **Attachment 4** for more photos.

FIGURE 9: PHOTOS OF THE HODGES PROPERTY.

Failing bulkhead caused high rates of shoreline erosion.

Failing bulkhead and exposed shoreline.

Failing bulkhead.

ALTERNATIVES –

Alternatives are not applicable to this project. A living shoreline is feasible at this location and therefore required per VMRC regulations. This project employs a nature-based solution, and this project cost is not greater than $3 Million.

GOALS AND OBJECTIVES –

This project proposes to remove the failing bulkhead which has hardened the shoreline for years and will be replaced with a nature-based solution. The nature-based solution is based on the DCR Flood Preparedness Fund definition: *"Nature-based solution" means an approach that reduces the impacts of flood and storm events through the use of environmental processes and natural systems. A nature-based solution may provide additional benefits beyond flood control, including recreational opportunities and improved water quality. This includes a project that reduces these impacts by protecting, restoring, or emulating natural features.* Project site requires the use of Flexamat®, a solution comprised of sand, gravel, or crushed stone meeting ASTM C150 and ASTM C33 standards to form 6.5" x 6.5" x 2.25" blocks with 1.5" spacing between the blocks allowing riparian vegetation to thrive and restoring natural features on site while simultaneously stabilizing the shoreline against flooding and erosion all while maintaining the natural environment and improving water quality. Federal agencies, including FEMA and the USACE, have incorporated Flexamat into multiple scale flood management projects. Flexamat prevents erosion protection in areas exposed to high flow and waves energy. Each block is tapered, beveled, and interlocked and includes connections that prevent lateral displacement of the blocks ensuring protection against erosion, storm surge, and wave attenuation. Flexamat as a product is less invasive when compared to the use of granite, which is not native to the coastal zone. The Flexamat company website and technical reports for shoreline erosion mitigation use allows the riparian vegetation to thrive and become one with the shoreline mitigation practice. Additional study of Flexamat shows that vegetated soil side slopes would improve water quality by offering phytoremediation including the reduction of thermal impact consistent with the DCR required definition for water quality improvement for nature-based solution. Flexamat offer additional co-benefits as recognized by the DCR definition such as using the shoreline as an entry point for recreational opportunity for uses such as canoes or kayaks and enhancing wildlife safely along the shoreline. Flexamat has high performance capabilities of 30 ft./sec. and 24 pounds per square foot. Flexamat has better performance than compared to 24" rock rip rap (all product information, description, benefits, specifications are sourced to the Flexamat website: https://www.flexamat.com/).

This project will reduce erosion and stabilize the shoreline. The nature-based solution will be installed as designed and permitted through the JPA process. Please see the permit package for each site within the project area in **Attachment 5**.

The goals and objectives of this project are as follows -

Goal 1: Improve coastal resiliency within the community and the Commonwealth.
Objective A: Prevent loss of life and reduce property damage by mitigating for recurrent, repetitive, and future flooding within the project area using a nature-based approach.

Objective B: Stabilize the shoreline to ensure that the County's tax base does not erode.

Goal 2: Improve water quality
Objective A: Construct a living shoreline to capture nitrogen, phosphorus, and sediment.

Goal 3: Transferability to other communities.
Objective A: Improve the implementation of Fight the Flood projects and project as an example program to be replicated in other communities within the region or the Commonwealth.

The MPPDC anticipates that the living shoreline installed at this project location will:

1. **Stabilize the shoreline and reduce the overall erosion rate at the project location**. According to FEMA and NOAA living shorelines are more resilient again storms than bulkheads. With the installation of sills these structures will run parallel to the existing or vegetative shoreline, reduce wave energy, and prevent erosion. This will protect the land and it will protect, or at least prolong, the life of the oak trees on the property. Additionally, eroding shorelines and sediment from stormwater runoff greatly contribute to the shoaling of navigable waterways. With maritime industries contributing substantially to the local and regional economy, the mitigation of continued sedimentation and shoaling provided by this project will protect and enhance the region's commercial and recreational maritime economies.

2. **Provide ecosystem services to the community.** Since this project is proposing the installation of living shorelines, this project will have nutrient and sediment reduction benefit to local waters. According to a report titled, Removal Rates of Shoreline Management Project, an expert Panel on Shoreline Management identified the living shorelines has having a nitrogen removal rate 0.01218 pounds per linear foot per year (lb./lf./yr.) and a phosphorus removal rate of 0.00861 lbs./lf./yr. Additionally living shorelines were shown to reduce total suspended sediment by 42 lb./lf./yr. Therefore, with a proposed project of 147 linear feet of living shoreline this has the ability of removing 1.79046 pounds of nitrogen per year, 1.26567 pounds of phosphorus per year and 6,174 pounds of sediment per year. Ultimately contributing to the overall water quality of the Chesapeake Bay.

   In addition to water quality improvements, living shorelines offer new habitat for marine wildlife and birds. With the living shorelines reducing wave energy in this area this provides a calmer, lower energy habitat to breed and nurse juvenile wildlife and fish. Also, the planting will offer more cover and protection from prey.

3. **Prevent loss of property and life.** As the installation of a living shoreline will reduce erosion of the property this will reduce flood risks at the project site. Also, as flooding and erosion threaten the tax base within the locality, this project will help maintain the tax base at this project location which directly protects the largest employer in King & Queen County, which is local government.

APPROACH, MILESTONES, AND DELIVERABLES –

This project has submitted all information needed to complete the Joint Permit Application (JPA) process and is currently waiting permit approval. This project will follow the designs outlined with the JPA. Please see **Attachment 5** for the JPA application and Design. The below table outlines the components of the nature-based solution and what will be installed at the project location, as proposed in the JPA:

	Fred Hodges (242 Old Farm Rd)	**M.K. Hodges (adjacent land)**	**Total Project Location**
Fleximat	2,352 square feet	1,200 square feet	3,552 square feet
Marsh Grass Planting	1,888 square feet	963 square feet	2851 square feet

The anticipated timeline for this project could be as quick as 1 year, but no more than two years. The timeline range is due to the potential delays in the construction industry or delays caused by COVID, including supply shortages. Having a two-year timeline will offer potential windows for planting the living shoreline - one in 2022 and one in 2023. To explain, the Chesapeake Bay Foundation recommends that perennials and grasses for living shorelines should be planted during peak growing season (in mid-to-late summer) to allow enough time for their root systems to become established before they go dormant in the late Fall. Trees and shrubs should be planted in Spring and Fall when there is adequate rainfall to help them develop strong roots and leafy growth.

Below is the project timeline and project milestones for this project.

Receive funding notice - October 2021
Coordinate with property owners and the project contractor Energy Reef to review project timeline and project expectations – October 2021
Initiate site preparation at the project location - November 2021 to May 2022
Construction of the living shoreline – June 2022 to September 2022
Project Close out – November 2022

RELATIONSHIP TO OTHER PROJECTS –

For over 40 years the Middle Peninsula Planning District Commission (MPPDC) and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (i.e. hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

The proposed project is a priority project generated from the Middle Peninsula Regional Flood Resilience Plan, which was approved by DCR during August 2021. The Flood Resiliency Plan serves as the MPPDC's guiding document for its flood resiliency programs and is comprised of two primary MPPDC-approved policy documents which form the implementation and foundation of the Middle Peninsula flood protection approach and are indirectly and directly supported by multiple specific regional planning documents, both approved by various required federal, regional, or local partners as required by statute.

Other plans and resources which are integral to the implementation of the Flood Resiliency Plan are:

Long Term Planning

- Middle Peninsula All Hazard Mitigation Plan, FEMA and Middle Peninsula locality approved 2016 (MPPDC Website)
- The overarching project that provides updates every five years of the hazards within the region is the Middle Peninsula All Hazards Mitigation Plan. This plan identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region. Additionally, this plan lists strategies and objectives that guide member localities to mitigate for these strategies.
- Middle Peninsula Comprehensive Economic Development Strategy, MPPDC Approved March 2021
- Middle Peninsula VDOT Rural Long Range Transportation Plan - MPPDC Approved ~annually

Short Term Implementation

- Middle Peninsula Planning District Commission Fight the Flood Program Design MPPDC Commission (approved June 2020 Chairman approved 8/6/21 update)
- Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program-Virginia Revolving Loan Fund Program Design and Guidelines (approved 2015)

As the MPPDC has continuously worked on flooding and coastal resiliency topics, **Attachment 6** lists the projects and short description of relevant projects. All of these projects have built upon each other to establish a solid foundation of regional expertise in flooding and coastal resiliency topics. Now, with such a wealth of information, the MPPDC can move beyond research and studies to begin implementing projects on the ground. One effort, in particular, was launched in 2020 was in response to emerging flood challenges. The MPPDC Commission authorized staff to develop the **Middle Peninsula Fight the Flood (FTF) Program.** This program leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula **FTF** program helps property owners gain access to programs and services to better manage challenges posed by flood water. Therefore, MPPDC staff have partnered with private property owners that have registered for the FTF program to assist them in finding funding for their shoreline.

Finally, the Flood Resiliency Plan and associated programs strive to carry out the guiding principles and goals set forth in the Virginia Coastal Resilience Master Planning Framework established in 2020. The proposed activities are proposed in accordance with the guiding principles and with the intent that the outcomes will help the Commonwealth meet the goals set forth in the planning framework.

MAINTENANCE PLAN –

Maintenance of this construction project will be in accordance with the requirements included in the final approved permit.

CRITERIA –

Describe how the project meets each of the applicable scoring criteria containedin Appendix B and provide the required documentation where necessary. Documentationcan be incorporated into the Scope of Work Narrative or included as attachments to the application. Appendix B must be completed and submitted with the application.

For local governments that are not towns, cities, or counties, the documentation providedfor the criteria below should be based on the local government or local governments in which the project is located and/or directly impacts.

1. **Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?**
   YES.

2. **Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?**
   YES. Here's the link: https://fightthefloodva.com/wp-content/uploads/2021/08/Approved-8_19_DCR-packet_letterandplan.pdf

3. **For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?**
   YES. Please see **Attachment 1**

4. **Has the applicant provided evidence of an ability to provide the required match funds?**
   YES. Please see the match commitment letter in **Attachment 9.**

5. **Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?**
   YES.

BUDGET NARRATIVE –

Below is the estimated budget for the proposed flood prevention and protection construction project that will result in a nature-based solution located in a low-income geographic area. Therefore, MPPDC staff is requesting 80% funding from DCR and will provide 20% match. Please see match commitment letters from the property owners in **Attachment 9**.

				DCR (80%)	Match from Owner (20%)	Project Total
Project Management Costs						
	Personnel			$ 11,732	$ 2,933	$ 14,665
	Fringe (26.58% on Salaries)			$ 3,118	$ 780	$ 3,898
SubAward/SubContract Agreement						
	Hodges F	Demolition	Bulkhead removal/haul away	$4,078	$ 1,019	$ 5,097
	Hodges F	Site Prep	Equipment Rental & Labor	$10,143	$ 2,536	$ 12,679
	Hodges F	Shoreline Install	Flexamat, Plants, Sand, Returns, Rock & Labor	$46,923	$ 11,731	$ 58,654
	Hodges F	Post Job Yard	Grading, Seeding, & Plantings	$3,282	$ 820	$ 4,102
	Hodges M.K.	Demolition	Bulkhead removal/haul away	$2,092	$ 523	$ 2,615
	Hodges M.K.	Site Prep	Equipment Rental & Labor	$5,067	$ 1,267	$ 6,334
	Hodges M.K.	Shoreline Install	Flexamat,Plants,Sand,Retu	$25,727	$ 6,432	$ 32,159
	Hodges M.K.	Post Job Yard	Grading, Seeding, Plantings	$1,688	$ 422	$ 2,110
Indirect/IDC/Facilities & Administrative Costs (27.31%)				$ 9,518	$ 2,379	$ 11,897
Project totals				$ 123,368	$ 30,842	$ 154,210

MPPDC staff will manage and administer this project. Thus, personnel time is needed to ensure that project deliverables are completed within the project timeline. Along with personnel expenses, MPPDC fringe is needed. This includes health insurance, retirement, group life insurance, workman's comp, and unemployment insurance. MPPDC fringe rate for FY22 is 26.58% and comprised of: Health Insurance – 49.33%, Retirement – 18.35%, Workers Comp – 27.42%, Social Security – 4.46%, Life Insurance – 0.40%, Unemployment – 0.04%. MPPDC also prepares an indirect cost (IDC) plan annually per 2 CFR 200 Appendix VII. Following annual audit, the plan is submitted to NOAA for acceptance. MPPDC's IDC rate has a basis of Modified Total Direct Costs (MTDC), with a planned rate of 27.31%. IDC is only applied to the first $25,000 of each contract. IDC calculated on MTDC (modified total direct cost)- Personnel, supplies, travel, and first $25,000 of each subcontract, etc.; excludes equipment.

Also please note that the cost estimates for the construction of this project were supplied by the contractor, Ready Reef. Please see **Attachment 8**.

In summary:

***Estimated total project cost*:**	$154,210
***Amount of funds requested from the Fund (80% project total)*:**	$123,368
***Amount of cash funds available (20% project total)*:**	$30,842

Finally, please see the authorization to request for funding in **Attachment 10.**

Appendix B: Scoring Criteria for Flood Prevention andProtection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Middle Peninsula Planning District Commission	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☑ **Yes** ☐ **No**
Applicant Name:	Middle Peninsula Planning District Commission

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. any other nature-based approach	**40**	40
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and theChesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices witha nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	5
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		128

8-5-21

Dear Lewie,

King and Queen County supports all eligible applications requesting funding under the DCR Flood Preparedness Fund. Proposals submitted by MPPDC on behalf of our constituents is a necessary governmental function and consistent with regional and local resilience planning efforts. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding. The MPPDC Fight the Flood Program serves as the regions flood resiliency coordination program. The MPPDC Living Shoreline Program Design and the MPPDC Fight the Flood Program Design provide the operational and administrative oversite for resiliency planning, coordination and implementation for our constituents suffering from flooding challenges. These programs, especially MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities and the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

The Fight the Flood program and the Living Shoreline program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water and directs constituents to appropriate mitigation solutions, such as nature based solutions. When grants and loans are available, we fully support the MPPDC to provide such to qualified constituent's based on the terms and conditions associated with flood risk necessary to support the public purpose(s) for which the funds, such as the Virginia Community Flood Preparedness Funds have been allocated.

Regards,

Thomas J. Swartzwelder
County Administrator

LOCAL WETLANDS BOARD (LWB) CONTACT INFORMATION:

Links to LWB information on the Web can be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html
In addition, the phone numbers listed below can be used to contact the LWB. Please be advised that these phone numbers are subject to change at any time.

Accomack County (757) 787-5721, Cape Charles (757) 331-3259, Charles City County (804) 829-9296, Chesapeake (757) 382-6248, Colonial Heights (804) 520-9275, Essex County (804) 443-4951, Fairfax County (703) 324-1364, Fredericksburg (540) 372-1179, Gloucester County (804) 693-2744, Hampton (757) 727-6140, Hopewell (804) 541-2267, Isle of Wight County (757) 365-6211, James City County (757) 253-6673, King and Queen County (804) 769-4978, King George County (540) 775-7111, King William County (804) 769-4927, Lancaster County (804) 462-5220, Mathews County (804) 725-5025, Middlesex County (804) 758-0500, New Kent County (804) 966-9690, Newport News (757) 247-8437, Norfolk (757) 664-4368, Northampton County (757) 678-0442, Northumberland County (804) 580-8910, Poquoson (757) 868-3040, Portsmouth (757) 393-8836, Prince William County (703) 792-6984, Richmond County (804) 333-3415, Stafford County (540) 658-8668, Suffolk (757) 923-3650, Virginia Beach (757) 427-8246, Westmoreland County (804) 493-0120, West Point (804) 843-3330, Williamsburg (757) 220-6130, York County (757) 890-3538

Tidewater Joint Permit Application (JPA) For Projects Involving Tidal Waters, Tidal Wetlands and/or Dunes and Beaches in Virginia

This application may be used for most commercial and noncommercial projects involving **tidal waters, tidal wetlands and/or dunes and beaches in Virginia** which require review and/or authorization by Local Wetlands Boards (LWB), the Virginia Marine Resources Commission (VMRC), the Department of Environmental Quality (DEQ), and/or the U. S. Army Corps of Engineers (USACE). This application can be used for:

- **Access-related activities**, including piers, boathouses, boat ramps (without associated dredging or excavation*), moorings, marinas.
- **Shoreline stabilization projects** including living shorelines, riprap revetments, marsh toe stabilization, bulkheads, breakwaters, beach nourishment, groins, and jetties. It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1).
- **Crossings** over or under tidal waters and wetlands including bridges and utility lines (water, sewer, electric).
- **Aquaculture structures**, including cages and floats except “oyster gardening”**

***Note:** for all dredging, excavation, or surface water withdrawal projects you **MUST** use the Standard JPA form; for noncommercial, riparian shellfish aquaculture projects (i.e., “oyster gardening”) you must use the abbreviated JPA found at https://mrc.virginia.gov/forms/2019/VGP3_Aquaculture_form_2019.pdf or call VMRC for a form.

The DEQ and the USACE use this form to determine whether projects qualify for certain General, Regional, and/or Nationwide permits. If your project does not qualify for these permits and you need a DEQ Virginia Water Protection permit or an individual USACE permit, you must submit the Standard Joint Permit application form. You can find this application at http://www.nao.usace.army.mil/Missions/Regulatory/JPA.aspx. Please note that some health departments and local agencies, such as local building officials and erosion and sediment control authorities, do not use the Joint Permit Application process or forms and may have different informational requirements. The applicant is responsible for contacting these agencies for information regarding those permitting requirements.

HOW TO APPLY

Submit one (1) completed copy of the Tidewater JPA to VMRC:

1. If by mail or courier, use the VMRC address provided on page 1.
2. If by electronic mail, address the package to: **JPA.permits@mrc.virginia.gov.** The application must be provided in the .pdf format and should not exceed 10 MB. If larger than 10 MB you may provide a file transfer protocol (ftp) site for download purposes.

The Tidewater JPA should include the following:

1. **Part 1** – General Information
2. **Part 2** – Signatures
3. **Part 3** - Appendices (A, B, C, and/or D as applicable to your project)
4. **Part 4** – Project Drawings.
   The drawings shall include the following for **ALL** projects:
   - Vicinity Map (USGS topographic map, road map or similar showing project location)
   - Plan View Drawing (overhead, to scale or with dimensions clearly marked)
   - Section View Drawing (side-view, to scale or with dimensions clearly marked)

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Sample drawings are included at the end of Part 4 of this application to show examples of the information needed to consider your application complete and allow for the timely processing.

When completing this form, use the legal name of the applicant, agent, and/or property owner. For DEQ application purposes, *legal name* means the full legal name of an individual, business, or other organization. For an individual, the legal name is the first name, middle initial, last name, and suffix. For an entity authorized to do business in Virginia, the legal name is the exact name set forth in the entity's articles of incorporation, organization or trust, or formation agreement, as applicable. Also provide the name registered with the State Corporation Commission, if required to register. DEQ issues a permit or grants coverage to the so-named individual or business, who becomes the 'permittee'. Correspondence from some agencies, including permits, authorizations, and/or coverage, may be provided via electronic mail. If the applicant and/or agent wishes to receive their permit via electronic mail, please remember to include an e-mail address at the requested place in the application.

In order for projects requiring LWB authorization to be considered complete (Virginia Code § 28.2-1302); "The permit application shall include the following: the name and address of the applicant; a detailed description of the proposed activities; a map, drawn to an appropriate and uniform scale, showing the area of wetlands directly affected, the location of the proposed work thereon, the area of existing and proposed fill and excavation, the location, width, depth and length of any proposed channel and disposal area, and the location of all existing and proposed structures, sewage collection and treatment facilities, utility installations, roadways, and other related appurtenances of facilities, including those on the adjacent uplands; a description of the type of equipment to be used and the means of access to the activity site; the names and addresses of record of adjacent land and known claimants of water rights in or adjacent to the wetland of whom the applicant has notice; an estimate of cost; the primary purpose of the project; and secondary purpose of the proposed project; a complete description of measures to be taken during and after alteration to reduce detrimental offsite effects; the completion date of the proposed work, project, or structure; and such additional materials and documentation as the wetlands board may require."

You may include signed Adjacent Property Owner (APO) Acknowledgement Forms found at the end of this Short Form. You must provide these addresses in Part 1 whether or not you use the APO forms. VMRC will request comments from APOs for projects that require permits for encroachment over state-owned submerged lands. VMRC or your local wetlands board must notify all APO's of public hearings required for all proposals involving tidal wetlands and dunes/beaches that are not authorized by statute. This information will not be used by DEQ to meet the requirements of notifying riparian land owners.

Regional Permit 17 (RP-17), authorizes the installation and/or construction of open-pile piers, mooring structures/devices, fender piles, covered boathouses/boatslips, boatlifts, osprey pilings/platforms, accessory pier structures, and certain devices associated with shellfish gardening, for private use, subject to strict compliance with all conditions and limitations further set out in the RP-17 enclosure located at http://www.nao.usace.army.mil/Missions/Regulatory/RBregional/. In addition to the information required in this JPA, prospective permittees seeking authorization under RP-17 must complete and submit the 'Regional Permit 17 Checklist' with their JPA. A copy of the 'Regional Permit 17 Checklist' is found on pages 13 and 14 of this application package. If the prospective permittee answers "yes" (or "N/A", where applicable) to all of the questions on the 'Regional Permit 17 Checklist', the permittee is in compliance with RP-17 and will not receive any other written authorization from the Corps but may not proceed with construction until they have obtained all necessary state and local permits. ***Note: If the prospective permittee answers "no" to any of the questions on the 'Regional Permit 17 Checklist' then their proposed structure(s) does not meet the terms and conditions of RP-17 and written authorization from the Corps is required before commencement of any work.***

Note: Land disturbance (grading, filling, etc.) or removal of vegetation associated with projects located in Chesapeake Bay Preservation Areas will require approval from local governments. Certain localities utilize this application during their Bay Act review. Part 5 of this application is included to provide assistance for the applicant to comply with Bay Act /or Erosion and Sediment Control requirements concurrent with this application.

WHAT HAPPENS NEXT

Upon receipt of an application, VMRC will assign a permit application number to the JPA and will then distribute a copy of the application and any original plan copies submitted to the other regulatory agencies that are involved in the JPA process. All agencies will conduct separate but concurrent reviews of your project. Please be aware that each agency must issue a separate permit (or a notification that no permit is required). Note that in some cases, DEQ may be taking an action on behalf of the USACE, such as when the State Program General Permit (SPGP) applies. Make sure that you have received all necessary authorizations, or documentation that no permit is required, from each agency prior to beginning the proposed work.

During the JPA review process, site inspections may be necessary to evaluate a proposed project. Failure to allow an authorized representative of a regulatory agency to enter the property, or to take photographs of conditions at the project site, may result in either the withdrawal or denial of your permit application.

For certain federal and state permit applications, a public notice is published in a newspaper having circulation in the project area, is mailed to adjacent and/or riparian property owners, and/or is posted on the agency's web page. The public may comment on the project during a designated comment period, if applicable, which varies depending upon the type of permit being applied for and the issuing agency. In certain circumstances, the project may be heard by a governing board, such as a Local Wetlands Board, the State Water Control Board, or VMRC in cases where a locality does not have a wetlands board and with certain subaqueous cases. You may be responsible for bearing the costs for advertisement of public notices.

Public hearings that are held by VMRC occur at their regularly scheduled monthly commission meetings under the following situations: Protested applications for VMRC permits which cannot be resolved; projects costing over $500,000 involving encroachment over state-owned subaqueous land; and all projects affecting tidal wetlands and dunes/beaches in localities without a LWB. All interested parties will be officially notified regarding the date and time of the hearing and Commission meeting procedures. The Commission will usually make a decision on the project at the meeting unless a decision for continuance is made. If a proposed project is approved, a permit or similar agency correspondence is sent to the applicant. In some cases, notarized signatures, as well as processing fees and royalties, are required before the permit is validated. If the project is denied, the applicant will be notified in writing.

PERMIT APPLICATION OR OTHER FEES

Do not send any fees with the JPA. VMRC is not responsible for accounting for fees required by other agencies. Please consult agency websites or contact agencies directly for current fee information and submittal instructions.

- ❖ USACE: Permit application fees are required for USACE Individual (Standard) permits. A USACE project manager will contact you regarding the proper fee and submittal requirements.

- DEQ: Permit application fees required for Virginia Water Protection permits – while detailed in 9VAC25-20 – are conveyed to the applicant by the applicable DEQ office (http://www.deq.virginia.gov/Locations.aspx). Complete the Permit Application Fee Form and submit it per the instructions to the address listed on the form. Instructions for submitting any other fees will be provided to the applicant by DEQ staff.
- VMRC: An application fee of $300 may be required for projects impacting tidal wetlands, beaches and/or dunes when VMRC acts as the LWB. VMRC will notify the applicant in writing if the fee is required. Permit fees involving subaqueous lands are $25.00 for projects costing $10,000 or less and $100 for projects costing more than $10,000. Royalties may also be required for some projects. The proper permit fee and any required royalty is paid at the time of permit issuance by VMRC. VMRC staff will send the permittee a letter notifying him/her of the proper permit fees and submittal requirements.
- LWB: Permit fees vary by locality. Contact the LWB for your project area or their website for fee information and submittal requirements. Contact information for LWBs may be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html.

FOR AGENCY USE ONLY	
	Notes:
	JPA # 21-0819

APPLICANTS
Part 1 – General Information

PLEASE PRINT OR TYPE ALL ANSWERS: If a question does not apply to your project, please print N/A (not applicable) in the space provided. If additional space is needed, attach 8-1/2 x 11 inch sheets of paper.

Check all that apply

Pre-Construction Notification (PCN) ☐ NWP # ____________ (*For Nationwide Permits ONLY - No DEQ-VWP permit writer will be assigned*)	Regional Permit 17 (RP-17) ☐	

County or City in which the project is located: King and Queen

Waterway at project site: York River

PREVIOUS ACTIONS RELATED TO THE PROPOSED WORK (Include all federal, state, and local pre application coordination, site visits, previous permits, or applications whether issued, withdrawn, or denied)

Historical information for past permit submittals can be found online with VMRC - https://webapps.mrc.virginia.gov/public/habitat/ - or VIMS - http://ccrm.vims.edu/perms/newpermits.html

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 1 - General Information (continued)

1. Applicant's legal name* and complete mailing address: Contact Information:

Fred W. Hodges, 242 Old Farm Drive,
Shacklefords, VA 23156 (Lot# 12A)

Home (804) 785-2047
Work (804) 370-4024
Fax (____)_____________
Cell (____)_____________
e-mail ___________________

State Corporation Commission Name and ID Number (if applicable) ______________

2. Property owner(s) legal name* and complete address, if different from applicant: Contact Information:

Home (____)_____________
Work (____)_____________
Fax (____)_____________
Cell (____)_____________
e-mail ___________________

State Corporation Commission Name and ID Number (if applicable) ______________

3. Authorized agent name* and complete mailing address (if applicable): Contact Information:

Chris Davis (ReadyReef Inc.)
504 Smoketree Court
North Chesterfield, VA 23236

Home (____)_____________
Work (____)_____________
Fax (____)_____________
Cell (804) 338-3103
e-mail chris.readyreef@gmail.com

State Corporation Commission Name and ID Number (if applicable) ______________

*** If multiple applicants, property owners, and/or agents, each must be listed and each must sign the applicant signature page.**

4. Provide a detailed description of the project in the space below, including the type of project, its dimensions, materials, and method of construction. Be sure to include how the construction site will be accessed and whether tree clearing and/or grading will be required, including the total acreage. If the project requires pilings, please be sure to include the total number, type (e.g. wood, steel, etc), diameter, and method of installation (e.g. hammer, vibratory, jetted, etc). If additional space is needed, provide a separate sheet of paper with the project description.

The project is to install a Living Shoreline using Flexamat installed behind a decaying bulkhead on the York River to protect the eroding bank. Mat sections totaling 16' wide x 147' (2352 ft^2) will be laid on a 3:1 slope and planted with marsh grasses. Flexamat meets the state definition (28.2-104.1) of a Living Shoreline (as required by SB776 passed in 2020) as "a shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials." Flexamat enhances "coastal resilience and attenuation of wave energy and storm surge."
The Flexamat will be installed from the adjacent yard. Grading the slope will be followed with some sand overlay to create a solid, smooth foundation. No tree clearing is required. The mat under-layment will include biodegradable soft wood shavings to prevent soil under-scouring.
The mat will be anchored mechanically and with marsh grass plants growing through it over time. The remnants of the existing bulkhead will be cut down and/or removed after the mat is installed.
The mat ends at neighboring bulkhead returns will be overlain with filter cloth and riprap to prevent scouring from wave action against the bulkhead sections.
There will be a gain of 1888 ft^2 of Spartina marsh grasses.
The existing dock will be extended 16' back over the graded area to intersect with the yard.
Equipment to be used: skid steer, Excavator, dump truck, flatbed truck and trailer, sand compactor, earth anchors driven with hammer drill powered by gas generator.

Part 1 - General Information (continued)

5. Have you obtained a contractor for the project? X Yes* ___ No. *If your answer is "Yes" complete the remainder of this question and submit the Applicant's and Contractor's Acknowledgment Form (enclosed)

Contractor's name* and complete mailing address:

ReadyReef Inc
504 Smoketree Court
North Chesterfield, VA 23236

Contact Information:
Home (____)____________
Work (____)____________
Fax (____)____________
Cell (804) 338-3103
email chris.readyreef@gmail.com

State Corporation Commission Name and ID Number (if applicable) ____________________

<u>* If multiple contractors, each must be listed and each must sign the applicant signature page.</u>

6. List the name, address and telephone number of the newspaper having general circulation in the area of the project. Failure to complete this question may delay local and State processing.

Name and complete mailing address:

Tidewater Review
www.tidewaterreview.com

Telephone number
(757) 446-2291

7. Give the following project location information:

Street Address (911 address if available) 242 Old Farm Drive
Lot/Block/Parcel# 23 131L 396A12A (Fred Hodges)
Subdivision ____________________
City / County Shacklefords ZIP Code 23156
Latitude and Longitude at Center Point of Project Site (Decimal Degrees):
37.479281 / -76.732522 (Example: 36.41600/-76.30733)

If the project is located in a rural area, please provide driving directions giving distances from the best and nearest visible landmarks or major intersections. *Note: if the project is in an undeveloped subdivision or property, clearly stake and identify property lines and location of the proposed project. A supplemental map showing how the property is to be subdivided should also be provided.*

From Rt. 17 going north from Gloucester Courthouse, turn left at Adner onto Rt 14 West (Buena Vista Rd). At Plainview, turn left onto Rt. 605 (Plain View Lane).
Shortly after, Rt. 605 takes a sharp right and continues.
Turn left onto Rt 666 (Tuckers Road) before Gressitt.
Turn right onto Cricket Shores Lane.
Near York River, it will end, then turn right onto Bells RD. Road ends at House #242 dead ahead.

8. What are the *primary and secondary purposes of and the need for* the project? For example, the primary purpose <u>may</u> be "to protect property from erosion due to boat wakes" and the secondary purpose <u>may</u> be "to provide safer access to a pier."

The primary purpose is to prevent erosion at the shoreline where an old bulkhead is failing.
The secondary purpose is to install a SB 776 compliant solution to meet the environmental goals of the Chesapeake Bay WIP.

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 1 - General Information (continued)

9. Proposed use (check one):
   _x_ Single user (private, non-commercial, residential)
   ___ Multi-user (community, commercial, industrial, government)

10. Describe alternatives considered and the measures that will be taken to avoid and minimize impacts, to the maximum extent practicable, to wetlands, surface waters, submerged lands, and buffer areas associated with any disturbance (clearing, grading, excavating) during and after project construction. *Please be advised that unavoidable losses of tidal wetlands and/or aquatic resources may require compensatory mitigation.*

    Bulkhead replacement and riprap revetment were eliminated as being non-compliant with the State's new Living Shoreline law (SB 776). Installing Flexamat will allow for marsh grass planting in its grid, and for a migratory path upwards in elevation should Relative Sea Level Rise continue as forecasted. No impacts to Wetlands, SAVs or buffer areas. Marsh grasses will be installed where none exist now.

11. Is this application being submitted for after-the-fact authorization for work which has already begun or been completed? ___Yes _x_No. If yes, be sure to clearly depict the portions of the project which are already complete in the project drawings.

12. Approximate cost of the entire project (materials, labor, etc.): $ $35,000
    Approximate cost of that portion of the project that is channelward of mean low water:
    $ 0

13. Completion date of the proposed work: July 31 - 2022

14. Adjacent Property Owner Information: List the name and complete **mailing address**, including zip code, of each adjacent property owner to the project. (NOTE: If you own the adjacent lot, provide the requested information for the first adjacent parcel beyond your property line.) Failure to provide this information may result in a delay in the processing of your application by VMRC.

Part 2 - Signatures

1. Applicants and property owners (if different from applicant).
NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, USACE, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.

In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Applicant's Legal Name (printed/typed)	(Use if more than one applicant)
Applicant's Signature	(Use if more than one applicant)
Date	
Property Owner's Legal Name (printed/typed) (If different from Applicant)	(Use if more than one owner)
Property Owner's Signature	(Use if more than one owner)
Date	

Part 2 – Signatures (continued)

2. Applicants having agents (if applicable)

CERTIFICATION OF AUTHORIZATION

I (we),____________________, hereby certify that I (we) have authorized ___________________________
(Applicant's legal name(s)) (Agent's name(s))
to act on my behalf and take all actions necessary to the processing, issuance and acceptance of this permit and any and all standard and special conditions attached.

We hereby certify that the information submitted in this application is true and accurate to the best of our knowledge.

____________________________________ _________________________________
(Agent's Signature) (Use if more than one agent)

____

____________________________________ _________________________________
(Applicant's Signature) (Use if more than one applicant)

____
(Date)

3. Applicant's having contractors (if applicable)

CONTRACTOR ACKNOWLEDGEMENT

I (we), ______________________, have contracted____
(Applicant's legal name(s)) (Contractor's name(s))
to perform the work described in this Joint Permit Application, signed and dated_________________________.

We will read and abide by all conditions set forth in all Federal, State and Local permits as required for this project. We understand that failure to follow the conditions of the permits may constitute a violation of applicable Federal, state and local statutes and that we will be liable for any civil and/or criminal penalties imposed by these statutes. In addition, we agree to make available a copy of any permit to any regulatory representative visiting the project to ensure permit compliance. If we fail to provide the applicable permit upon request, we understand that the representative will have the option of stopping our operation until it has been determined that we have a properly signed and executed permit and are in full compliance with all terms and conditions.

____
Contractor's name or name of firm

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

APPENDIX B

U.S. Army Corps
Of Engineers
Norfolk District

REGIONAL PERMIT 17 CHECKLIST

Expires: September 5, 2023

Please review the 18-RP-17 enclosure before completing this form and note 18-RP-17 can only be used for proposed PRIVATE USE structure(s) that comply with the terms and conditions of 18-RP-17. Copies can be obtained online at http://www.nao.usace.army.mil/Missions/Regulatory/RBregional/.

YES☐ NO☐ **(1)** Has the permittee reviewed the 18-RP-17 enclosure and verified that the proposed structure(s) is in compliance with all the terms, conditions, and limitations of 18-RP-17?

YES☐ NO☐ **(2)** Does the proposed structure(s) extend no more than one-fourth of the distance across the waterway measured from either mean high water (MHW) to MHW (including all channelward wetlands) or ordinary high water (OHW) to OHW (including all channelward wetlands)?

YES☐ NO☐ **(3)** Does the proposed structure(s) extend no more than 300 feet from MHW or OHW (including all channelward wetlands)?

YES☐ NO☐ N/A☐ **(4)** Does the proposed structure(s) attach to the upland at a point landward of MHW or OHW (including all channelward wetlands)?

YES☐ NO☐ N/A☐ **(5)** If the proposed structure(s) crosses wetland vegetation, is it an open-pile design that has a maximum width of five (5) feet and a minimum height of four (4) feet between the decking and the wetland substrate?

YES☐ NO☐ N/A☐ **(6)** Does the proposed structure(s) include no more than two (2) boatlifts and no more than two (2) boat slips?

YES☐ NO☐ N/A☐ **(7)** Is the open-sided roof structure designed to shelter a boat ≤ 700 square feet and/or is the open sided roof structure or gazebo structure designed to shelter a pier ≤ 400 square feet?

YES☐ NO☐ N/A☐ **(8)** Are all piles associated with the proposed structure(s) non-steel, less than or equal to 12” in diameter, and will less than or equal to 25 piles be installed channelward of MHW?

YES☐ NO☐ N/A☐ **(9)** Is all work occurring behind cofferdams, turbidity curtains, or other methods to control turbidity being utilized when operationally feasible and federally listed threatened or endangered species may be present?

YES☐ NO☐ N/A☐ **(10)** If the proposed structure(s) is to be located within an anadromous fish use area, the prospective permittee will adhere to the anadromous fish use area time of year restriction (TOYR) prohibiting in-water work from occurring between February 15 through June 30 of any given year if (1) piles are to be installed with a cushioned impact hammer and there is less than 492 feet between the most channelward pile and mean low water (MLW) on the opposite shoreline or (2) piles are to be installed with a vibratory hammer and there is less than 384 feet between the most channelward pile and MLW on the opposite shoreline.

YES☐ NO☐ **(11)** Is all work occurring outside of submerged aquatic vegetation (SAV) mapped by the Virginia Institute of Marine Sciences’ (VIMS) most recent survey year and 5 year composite?

YES☐ NO☐ **(12)** Has the permittee ensured the construction and/or installation of the proposed structure(s) will not affect federally listed threatened or endangered species or designated critical habitat?

YES☐ NO☐ **(13)** Will the proposed structure be located outside of Broad Creek in Middlesex County, Fisherman’s Cove in Norfolk, or the Salt Ponds in Hampton?

YES☐ NO☐ **(14)** Will the proposed structure(s) be located outside of the waterways containing a Federal Navigation Project listed in Permit Specific Condition 12 of 18-RP-17 and/or will all portions of the proposed structure(s) be located more than 85 feet from the Federal Navigation Project?

YES☐ NO☐	**(15)** Will the proposed structure(s) be located outside a USACE Navigation and Flood Risk Management project area?
YES☐ NO☐	**(16)** Will the proposed structure(s) be located outside of any Designated Trout Waters?
YES☐ NO☐ N/A☐	**(17)** If the proposed structure(s) includes flotation units, will the units be made of materials that will not become waterlogged or sink if punctured?
YES☐ NO☐ N/A☐	**(18)** If the proposed structure(s) includes flotation units, will the floating sections be braced so they will not rest on the bottom during periods of low water?
YES☐ NO☐	**(19)** Is the proposed structure(s) made of suitable materials and practical design so as to reasonably ensure a safe and sound structure?
YES☐ NO☐	**(20)** Will the proposed structure(s) be located on the property in accordance with the local zoning requirements?
YES☐ NO☐ N/A☐	**(21)** If the proposed structure(s) includes a device used for shellfish gardening, will the device be attached directly to a pier and limited to a total of 160 square feet?
YES☐ NO☐ N/A☐	**(22)** If the proposed structure(s) includes a device used for shellfish gardening, does the permittee recognize this RP does not negate their responsibility to obtain an oyster gardening permit (General Permit #3) from Virginia Marina Resources Commission's Habitat Management Division?
YES ☐NO ☐	**(23)** Does the permittee recognize this RP does not authorize any dredging or filling of waters of the United States (including wetlands) and does not imply that future dredging proposals will be approved by the Corps?
YES☐ NO☐	**(24)** Does the permittee understand that by accepting 18-RP-17, the permittee accepts all of the terms and conditions of the permit, including the limits of Federal liability contained in the 18-RP-17 enclosure? Does the permittee acknowledge that the structures permitted under 18-RP-17 may be exposed to waves caused by passing vessels and that the permittee is solely responsible for the integrity of the structures permitted under 18-RP-17 and the exposure of such structures and vessels moored to such structures to damage from waves? Does the permittee accept that the United States is not liable in any way for such damage and that it shall not seek to involve the United States in any actions or claims regarding such damage?

IF YOU HAVE ANSWERED "NO" TO ANY OF THE QUESTIONS ABOVE, REGIONAL PERMIT 17 (18-RP-17) DOES NOT APPLY AND YOU ARE REQUIRED TO OBTAIN WRITTEN AUTHORIZATION FROM THE CORPS PRIOR TO PERFORMING THE WORK.

IF YOU HAVE ANSWERED "YES" (OR "N/A", WHERE APPLICABLE) TO ALL OF THE QUESTIONS ABOVE, YOU ARE IN COMPLIANCE WITH REGIONAL PERMIT 17 (18-RP-17). PLEASE SIGN BELOW, ATTACH, AND SUBMIT THIS CHECKLIST WITH YOUR COMPLETED JOINT PERMIT APPLICATION (JPA). THIS SIGNED CERTIFICATE SERVES AS YOUR LETTER OF AUTHORIZATION FROM THE CORPS. YOU WILL NOT RECEIVE ANY OTHER WRITTEN AUTHORIZATION FROM THE CORPS; HOWEVER, YOU MAY NOT PROCEED WITH CONSTRUCTION UNTIL YOU HAVE OBTAINED ALL OTHER NECESSARY STATE AND LOCAL PERMITS.

I CERTIFY THAT I HAVE READ AND UNDERSTAND ALL CONDITIONS OF THE REGIONAL PERMIT 17 (18-RP-17), DATED SEPTEMBER 2018, ISSUED BY THE US ARMY CORPS OF ENGINEERS, NORFOLK DISTRICT REGULATORY BRANCH (CENAO-WRR), NORFOLK, VIRGINIA.

Proposed work to be located at:

VMRC Number: ____________________

Part 3 – Appendices

Please complete and submit the appendix questions applicable to your project, and attach the required vicinity map(s) and drawings to your application. If an item does not apply to your project, please write "N/A" in the space provided.

Appendix A: (TWO PAGES) Projects for Access to the water such as private and community piers, boathouses, marinas, moorings, and boat ramps. Answer all questions that apply.

1. **Briefly describe your proposed project**.

2. **For private, noncommercial piers:**
   Do you have an existing pier on your property? ____Yes____ No
   If yes, will it be removed? ____Yes ____No
   Is your lot platted to the mean low water shoreline? ____Yes ____No
   What is the overall length of the proposed structure? ________feet.
   Channelward of Mean High Water? ________feet.
   Channelward of Mean Low Water? ________feet.
   What is the area of the piers and platforms that will be constructed over
   Tidal non-vegetated wetlands __________ square feet.
   Tidal vegetated wetlands _________ square feet.
   Submerged lands __________square feet.
   What is the total size of any and all L- or T-head platforms?_______sq. ft.
   For boathouses, what is the overall size of the roof structure? ________sq. ft.
   Will your boathouse have sides?_____Yes____ No.

   NOTE: All proposals for piers, boathouses and shelter roofs must be reviewed by the Virginia Marine Resources Commission (Commission or VMRC), however, pursuant to § 28.2-1203 A 5 of the Code of Virginia a VMRC permit may not be required for such structures (except as required by subsection D of § 28.2-1205 for piers greater than 100 feet in length involving commercially productive leased oyster or clam grounds), provided that (i) the piers do not extend beyond the navigation line or private pier lines established by the Commission or the United States Army Corps of Engineers (USACE), (ii) the piers do not exceed six feet in width and finger piers do not exceed five feet in width, (iii) any L or T head platforms and appurtenant floating docking platforms do not exceed, in the aggregate, 400 square feet, (iv) if prohibited by local ordinance open-sided shelter roofs or gazebo-type structures shall not be placed on platforms as described in clause (iii), but may be placed on such platforms if not prohibited by local ordinance, and (v) the piers are determined not to be a navigational hazard by the Commission. Subject to any applicable local ordinances, such piers may include an attached boat lift and an open-sided roof designed to shelter a single boat slip or boat lift. In cases in which open-sided roofs designed to shelter a single boat, boat slip or boat lift will exceed 700 square feet in coverage or the open-sided shelter roofs or gazebo structures exceed 400 square feet, and in cases in which an adjoining property owner objects to a proposed roof structure, permits shall be required as provided in § 28.2-1204.

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 3 – Appendices (continued)

3. **For USACE permits**, in cases where the proposed pier will encroach beyond one fourth the waterway width (as determined by measuring mean high water to mean high water or ordinary high water mark to ordinary high water mark), the following information must be included before the application will be considered complete. For an application to be considered complete:

   a. The USACE MAY require depth soundings across the waterway at increments designated by the USACE project manager. Typically 10-foot increments for waterways less than 200 feet wide and 20-foot increments for waterways greater than 200 feet wide with the date and time the measurements were taken and how they were taken (e.g., tape, range finder, etc.).
   b. The applicant MUST provide a justification as to purpose if the proposed work would extend a pier greater than one-fourth of the distance across the open water measured from mean high water or the channelward edge of the wetlands.
   c. The applicant MUST provide justification if the proposed work would involve the construction of a pier greater than five feet wide or less than four feet above any wetland substrate.

4. Provide the type, size, and registration number of the vessel(s) to be moored at the pier or mooring buoy.

   Type Length Width Draft Registration #

   ____
   ____
   ____

5. For **Marinas, Commercial Piers, Governmental Piers, Community Piers and other non-private piers**, provide the following information:
   A) Have you obtained approval for sanitary facilities from the Virginia Department of Health?___________ (required pursuant to Section 28.2-1205 C of the Code of Virginia).
   B) Will petroleum products or other hazardous materials be stored or handled at your facility?_______________.
   C) Will the facility be equipped to off-load sewage from boats?__________.
   D) How many wet slips are proposed?_______. How many are existing?______.
   E) What is the area of the piers and platforms that will be constructed over
      Tidal non-vegetated wetlands __________ square feet
      Tidal vegetated wetlands _________ square feet
      Submerged lands __________square feet

6. For **boat ramps**, what is the overall length of the structure?________feet.
   From Mean High Water?________feet.
   From Mean Low Water?________feet.

   Note: drawings must include the construction materials, method of installation, and all dimensions. If tending piers are proposed, complete the pier portion.

   Note: If dredging or excavation is required, you must complete the Standard Joint Point Permit application.

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 3 – Appendices (continued)

Appendix B: Projects for Shoreline Stabilization in tidal wetlands, tidal waters and dunes/beaches including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, and living shoreline projects. Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service or VIMS**.**

NOTE: It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1). **Information on non-structural, vegetative alternatives (i.e., Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html.**

1. Describe each **revetment, bulkhead, marsh toe, breakwater, groin, jetty, other structure, or living shoreline project** separately in the space below. Include the overall length in linear feet, the amount of impacts in acres, and volume of associated backfill below mean high water and/or ordinary high water in cubic yards, as applicable:

   2352 ft² of Flexamat (147' x 16') will be installed in a cut and fill grading behind the decaying bulkhead. An additional 9 cuyds of clean sand will be overlain and compacted prior to mat installation in the space behind MLW and up to 1.5X the tide range, approximately 14' behind the remnants of the existing bulkhead.

2. What is the maximum encroachment channelward of mean high water? 14' feet.
   Channelward of mean low water? 0 feet.
   Channelward of the back edge of the dune or beach? 16' feet.

3. Please calculate the square footage of encroachment over:
   - Vegetated wetlands 0 square feet
   - Non-vegetated wetlands 865 square feet
   - Subaqueous bottom 0 square feet
   - Dune and/or beach 0 square feet

4. For bulkheads, is any part of the project maintenance or replacement of a previously authorized, currently serviceable, existing structure? ____ Yes____ No.

   If yes, will the construction of the new bulkhead be no further than two (2) feet channelward of the existing bulkhead? _____Yes ____No.

   If no, please provide an explanation for the purpose and need for the additional encroachment.

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 3 – Appendices (continued)

5. Describe the type of construction and **all** materials to be used, including source of backfill material, if applicable (e.g., vinyl sheet-pile bulkhead, timber stringers and butt piles, 100% sand backfill from upland source; broken concrete core material with Class II quarry stone armor over filter cloth).
NOTE: **Drawings must include construction details, including dimensions, design and all materials, including fittings if used**.

See attachments for Flexamat Specs and Materials
Clean sand source: upland pit in Middlesex County

6. If using stone, broken concrete, etc. for your structure(s), what is the average weight of the:
Core (inner layer) material __________ pounds per stone Class size ________
Armor (outer layer) material 75 pounds per stone Class size 1

7. For **beach nourishment**, including that associated with breakwaters, groins or other structures, provide the following:

- Volume of material
  0 cubic yards channelward of mean low water
  9 cubic yards landward of mean low water
  9 cubic yards channelward of mean high water
  0 cubic yards landward of mean high water

- Area to be covered
  0 square feet channelward of mean low water
  2352 square feet landward of mean low water
  9 cubic yards channelward of mean high water
  0 cubic yards landward of mean high water

- Source of material, composition (e.g. 90% sand, 10% clay): 93% sand, 7% clay
- Method of transportation and placement:
  Truck from pit to yard dump. Tracked Skid steer from dump to shoreline.
- Describe any proposed vegetative stabilization measures to be used, including planting schedule, spacing, monitoring, etc. Additional guidance is available at http://www.vims.edu/about/search/index.php?q=planting+guidelines:

Flexamat will be planted 1' on center in the grid between revetment blocks.
It will take up to 2 years to achieve saturation as the marsh grass sends out rhizomes in its second year after planting.

Part 3 – Appendices (continued)

Appendix C: Crossings in, on, over, or under, waters, submerged lands, tidal wetlands and/or dunes and beaches, including but not limited to, bridges, walkways, pipelines and utility lines.

1. What is the purpose and method of installation of the crossing?

2. What is the width of the waterway and/or wetlands to be crossed
   from mean high water to mean high water (tidal waters)? _______ feet.
   from mean low water to mean low water (tidal waters)? _______ feet.
   from ordinary high water to ordinary high water (non-tidal waters)? _______ feet.

3. For bridges (footbridges, golf cart bridges, roadway bridges, etc.), what is the width of the structure over the tidal wetlands, dunes/beaches and/or submerged lands? ____________square feet.

4. For overhead crossings:
   a. What will be the height above mean high water? _______feet.
   b. If there are other overhead crossings in the area, what is the minimum height? _____feet.
   c. If the proposed crossing is an electrical line, please confirm the total number of electrical circuits: _________

5. For buried crossings, what will be the depth below the substrate? __________feet. Will the proposed utility provide empty conduits for any additional utilities that may propose to co-locate at a later date? _____Yes _____No.

6. Will there be any excavation or fill required for placement of abutments, piers, towers, or other permanent structures on State-owned submerged lands, tidal wetlands, and dunes/beaches? ____Yes ____ No.

   If yes, please provide the following:

   a. Amount of excavation in wetlands _________ cubic yards
      _________ square feet

   b. Amount of excavation in submerged land _________ cubic yards
      _________ square feet

   c. Amount of excavation in dune/beach _________ cubic yards
      _________ square feet

   d. Amount of fill in wetlands _________ cubic yards
      _________ square feet

   e. Amount of fill in submerged lands _________ cubic yards
      _________ square feet

   f. Amount of fill in dune/beach ________ cubic yards
      ________ square feet

Part 3 – Appendices (continued)

Appendix D: Aquaculture Related Structures such as cages and floats. Before completing this appendix, please review the aquaculture requirements summary at: http://mrc.virginia.gov/Shellfish_Aquaculture.shtm.

1. Will the activity be for commercial purposes? _____Yes _____ No.

   If Yes and structures will be placed upon an oyster ground lease, you may qualify for the VMRC General Permit #4 for Temporary Protective Enclosures for Shellfish. For more info see: http://www.mrc.virginia.gov/regulations/MRC_Scanned_Regs/Shellfish_Mix/fr1130_12-0107.pdf. If you qualify for the General Permit #4, or if such structures are proposed that are not on an oyster planting ground lease, or for floating structures of any kind, complete this Joint Permit Application and include the necessary information requested below in question 2 through 11.

   If No, you may qualify for the VMRC General Permit #3, for Noncommercial Riparian Shellfish Growing (i.e. "Gardening") For more information see: http://www.mrc.virginia.gov/forms/VGP3_Aquaculture.doc.pdf. If you qualify for this general permit use the Abbreviated Joint Permit Application For Noncommercial Riparian Shellfish Aquaculture Structures available at https://mrc.virginia.gov/forms/2019/VGP3_Aquaculture_form_2019.pdf ***do not use this Joint Permit Application***.

2. Will aquaculture structures be attached to an existing pier or other structure? ____ Yes ____ No.

3. The plat file # if proposed upon oyster planting ground lease(s).___________________________

4. The maximum area where enclosures are proposed. ___________ square feet

5. The maximum number of enclosures being proposed to be deployed. _____________

6. The species of shellfish to be cultured. ____________________________

7. A detailed description of the enclosures to include width, length and height.

8. In addition to the requirements itemized in Part 4 Project Drawings, the following additional information must be included on your project drawings: A general description of the area within 500 feet of deployment area. Provide a drawing that depicts existing marine resources such as SAV, shellfish beds, fixed fishing devices, public grounds, piers, water depths at mean low water, tide range, and the minimum clearance at mean low tide over the enclosures.

9. Provide the date enclosures are proposed to be deployed _______________. How will the structures be secured? ____.

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 3 – Appendices (continued)

10. List of all riparian land owners within 500 feet of the area where enclosures are proposed along with a map (tax map or other suitable map) depicting the locations of such parcels or riparian property owner acknowledgement forms signed by the riparian land owner with any comments concerning the enclosures deployment request.

11. Proof that the applicant holds a current oyster or clam aquaculture product owners permit, and verification that the applicant is in compliance with Mandatory Harvest Reporting requirements, and verification that the current years oyster ground rent is paid, if structures are proposed on an oyster ground lease.

Part 4 - Project Drawings

Plan view and cross-sectional view drawings are required for all projects. Application drawings do not need to be prepared by a professional draftsman, but they must be clear, accurate, and should be to an appropriate scale. If a scale is not used, all dimensions must be clearly depicted in the drawings. If available, a plat of the property should be included, with the existing and proposed structures clearly indicated. Distances from the proposed structure(s) to fixed points of reference (benchmarks) and to the adjacent property lines must be shown. A vicinity map (County road map, USGS Topographic map, etc.) must also be provided to show the location of the property. **NOTE:** The sample drawings have been included at the end of this section to provide guidance on the information required for different types of projects. Clear and accurate drawings are essential for project review and compliance determination. Incomplete or unclear drawings may cause delays in the processing of your application.

The following items must be included on ALL project drawings: (plan and cross-sectional, as appropriate)

- **name of project**
- **north arrow**
- **scale**
- **waterway name**
- **existing and proposed structures, labeled as such**
- **dimensions of proposed structures**
- **mean high water and mean low water lines**
- **all delineated wetlands and all surface waters on the site, including the Cowardin classification (i.e., emergent, scrub-shrub, or forested) for those surface waters (if applicable)**
- **limits of proposed impacts to surface waters, such as fill areas, riprap scour protection placement, and dredged areas, and the amount of such impacts in square feet and acres**
- **ebb/flood direction**
- **adjacent property lines and owner's name**
- **distances from proposed structures to fixed points of reference (benchmarks) and adjacent property lines**

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 5 - Chesapeake Bay Preservation Act Information

All proposed development, redevelopment, land disturbance, clearing or grading related to this Tidewater JPA must comply with the Chesapeake Bay Preservation Area Designation and Management Regulations, which are enforced through locally adopted Chesapeake Bay Preservation Area (CBPA) ordinances. Compliance with state and local CBPA requirements mandates the submission of a ***Water Quality Impact Assessment (WQIA)*** for the review and approval of the local government. Contact the appropriate local government office to determine if a WQIA is required for the proposed activity(ies).

Because the 84 local governments within Tidewater Virginia are responsible for enforcing the CBPA Regulations, the completion of the JPA process does not constitute compliance with the Bay Act Regulations nor does it guarantee that the local government will approve encroachments into the RPA that may result from this project. Applicants should contact their local government as early in the design process as possible to ensure that the final design and construction of the proposed project meets all applicable CBPA requirements. Early cooperation with local government staff can help applicants avoid unnecessary and costly delays to construction. Applicants should provide local government staff with information regarding existing vegetation within the Resource Protection Area (RPA) as well as a description and site drawings of any proposed land disturbance, construction, or vegetation clearing. As part of their review and approval processes, local government staff will evaluate the proposed project and determine whether or not approval can be granted. Once the locality has made a decision on the project, they will advise the Local Wetlands Boards and other appropriate parties of applicable CBPA concerns or issues.

Resource Protection Areas (RPAs) are composed of the following features:

1. **Tidal wetlands;**
2. **Nontidal wetlands connected by surface flow and contiguous to tidal wetlands or water bodies with perennial flow;**
3. **Tidal shores;**
4. **Other lands considered by the local government to meet the provisions of subsection A of 9VAC25-830-80 and to be necessary to protect the quality of state waters; and**
5. **A buffer area not less than 100 feet in width located adjacent to and landward of the components listed in subdivisions 1 through 4 above, and along both sides of any water body with perennial flow.**

Notes for all projects in RPAs

Development, redevelopment, construction, land disturbance, or placement of fill within the RPA features listed above requires the approval of the locality and may require an exception or variance from the local Bay Act ordinance. Please contact the appropriate local government to determine the types of development or land uses that are permitted within RPAs.

Pursuant to 9VAC25-830-110, on-site delineation of the RPA is required for all projects in CBPAs. Because USGS maps are not always indicative of actual "in-field" conditions, they may not be used to determine the site-specific boundaries of the RPA.

Notes for shoreline erosion control projects in RPAs

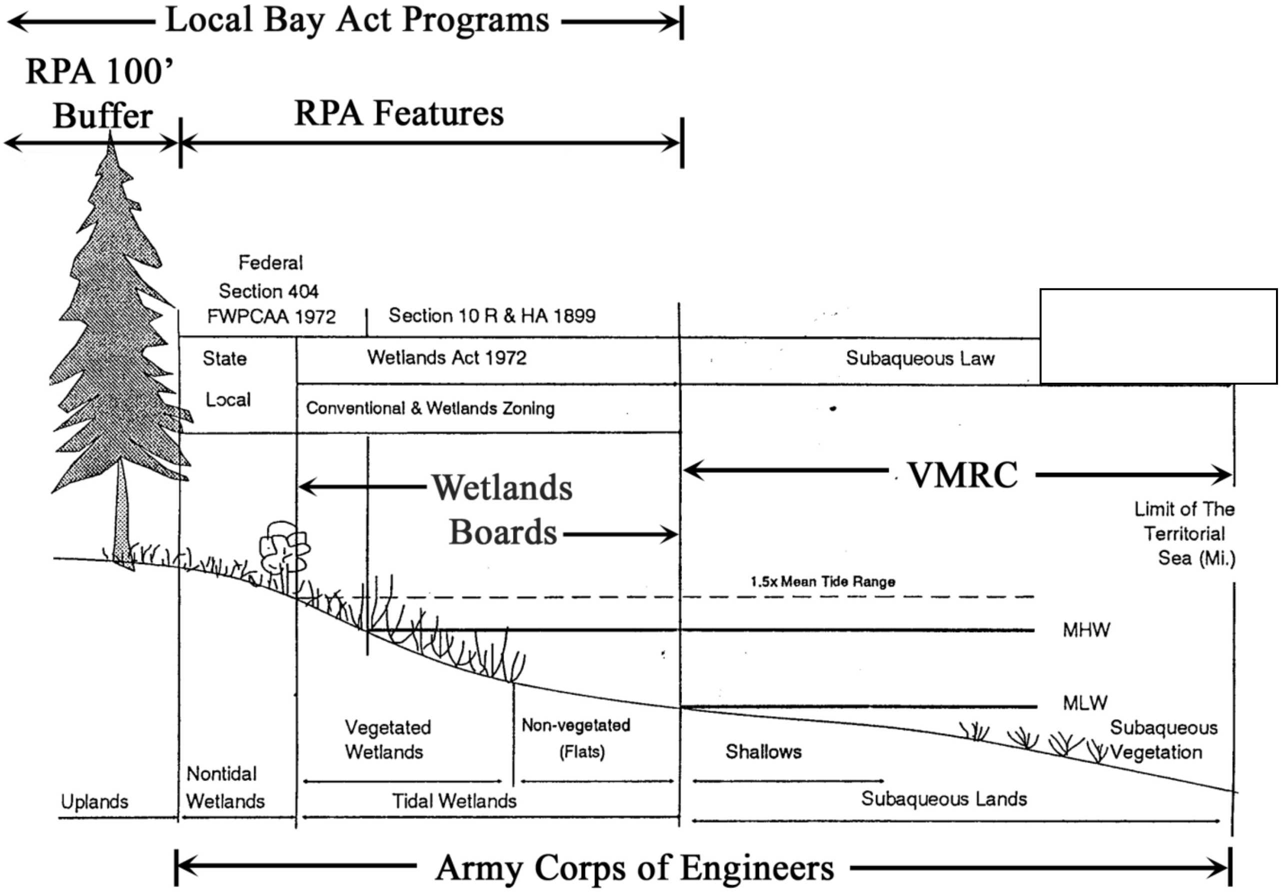
Re-establishment of woody vegetation in the buffer will be required by the locality to mitigate for the removal or disturbance of buffer vegetation associated with your proposed project. Please contact the local government to determine the mitigation requirements for impacts to the 100-foot RPA buffer.

Part 5 - Chesapeake Bay Preservation Act Information (continued)

Pursuant to 9VAC25-830-140 5 a (4) of the Virginia Administrative Code, shoreline erosion projects are a permitted modification to RPAs provided that the project is based on the "best technical advice" and complies with applicable permit conditions. In accordance with 9VAC25-830-140 1 of the Virginia Administrative Code, the locality will use the information provided in this Part V, in the project drawings, in this permit application, and as required by the locality, to make a determination that:

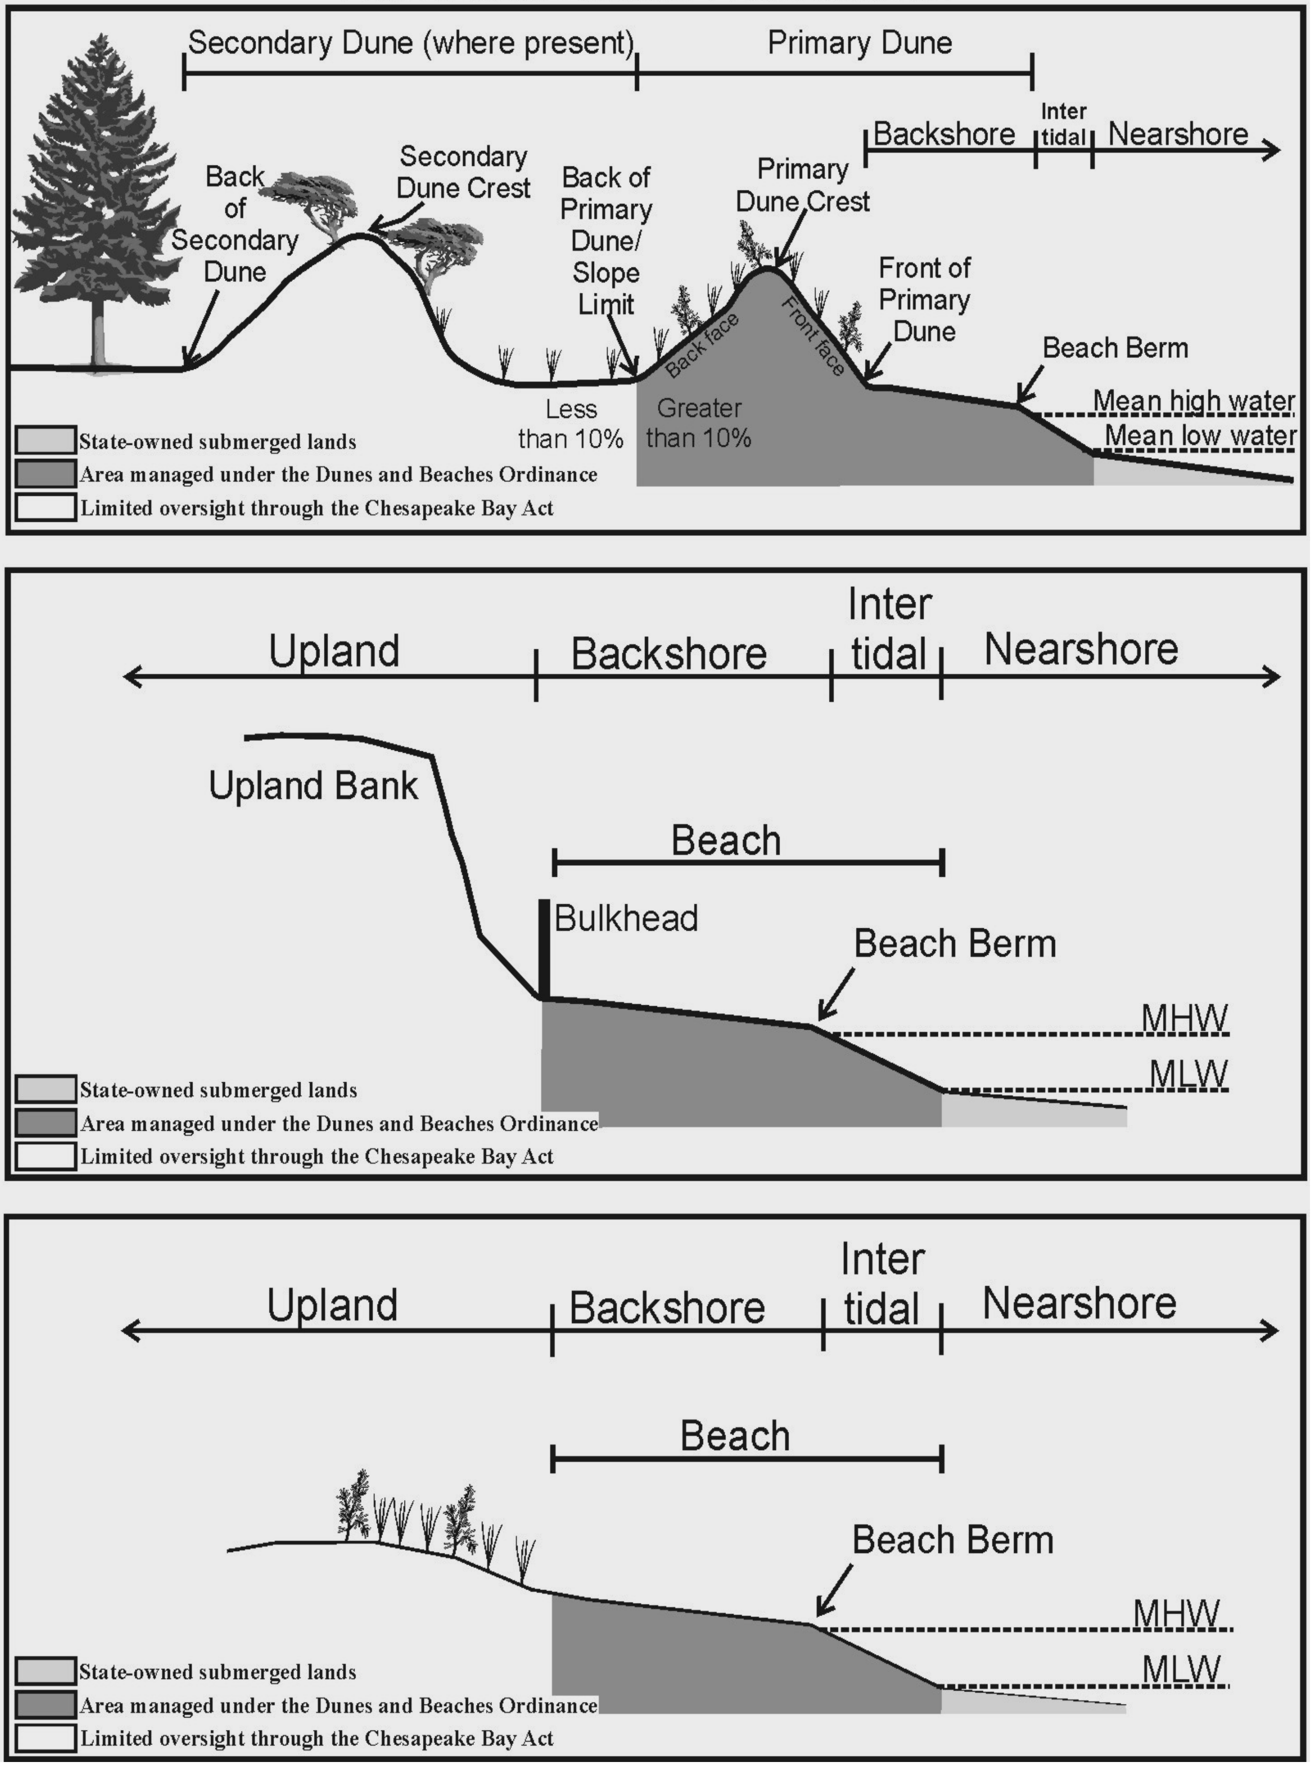
1. Any proposed shoreline erosion control measure is necessary and consistent with the nature of the erosion occurring on the site, and the measures have employed the "best available technical advice"
2. Indigenous vegetation will be preserved to the maximum extent practicable
3. Proposed land disturbance has been minimized
4. Appropriate mitigation plantings will provide the required water quality functions of the buffer (9VAC25-830-140 3)
5. The project is consistent with the locality's comprehensive plan
6. Access to the project will be provided with the minimum disturbance necessary.

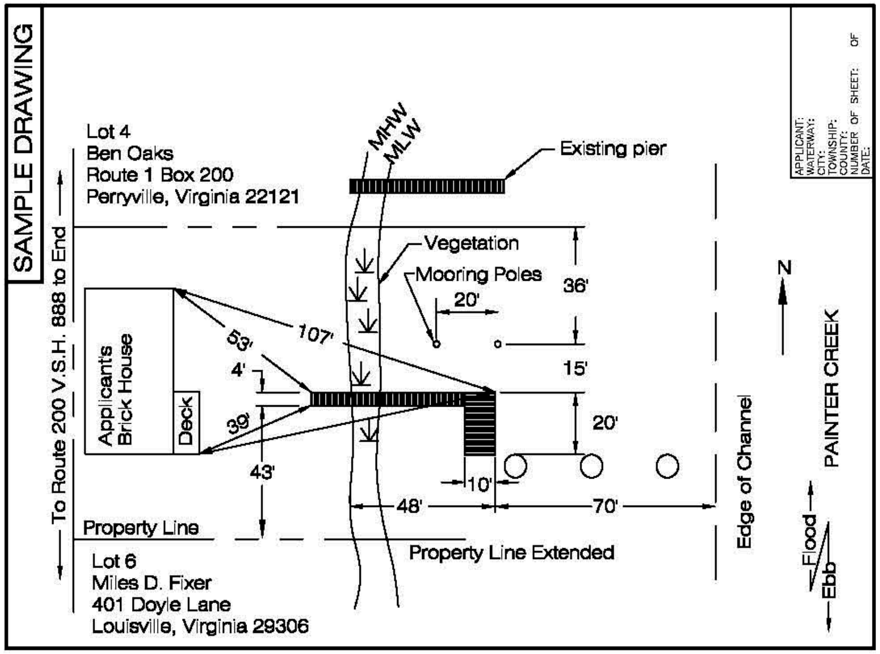
JURISDICTIONAL BOUNDARIES

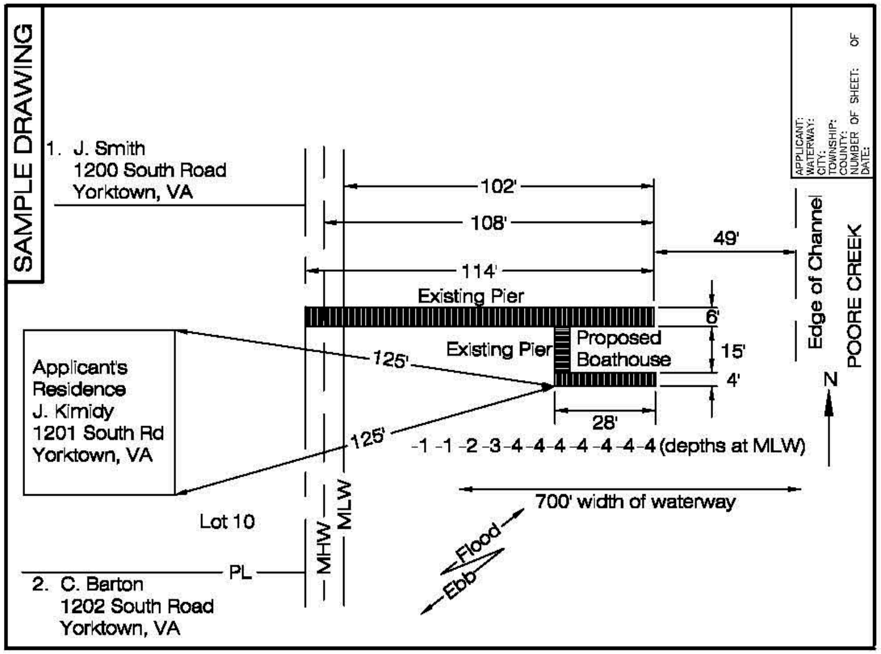


and DEQ (including isolated wetlands)

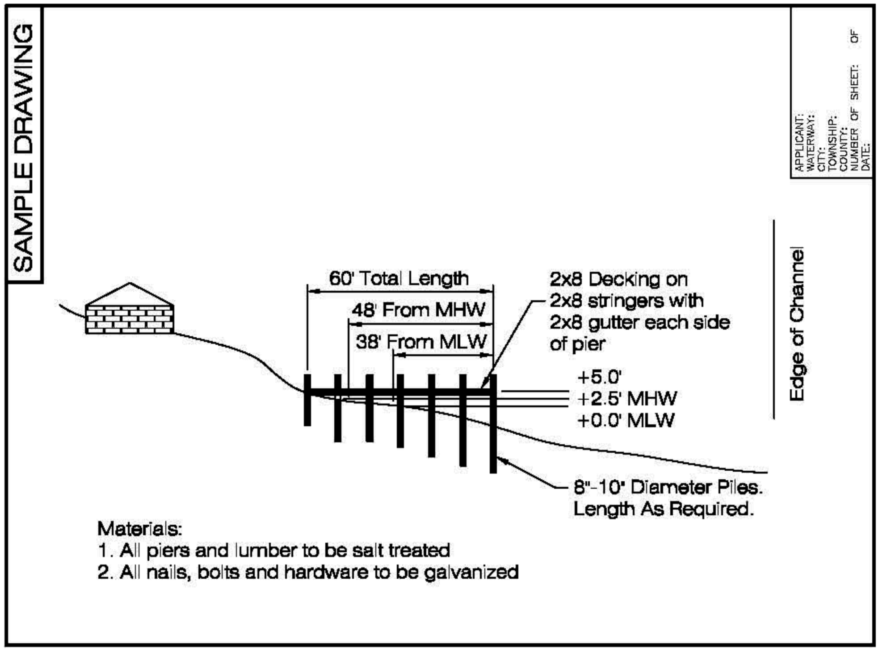
Dune and Beach Boundaries







Private Piers & Marginal Wharves



Materials:
1. All piers and lumber to be salt treated
2. All nails, bolts and hardware to be galvanized

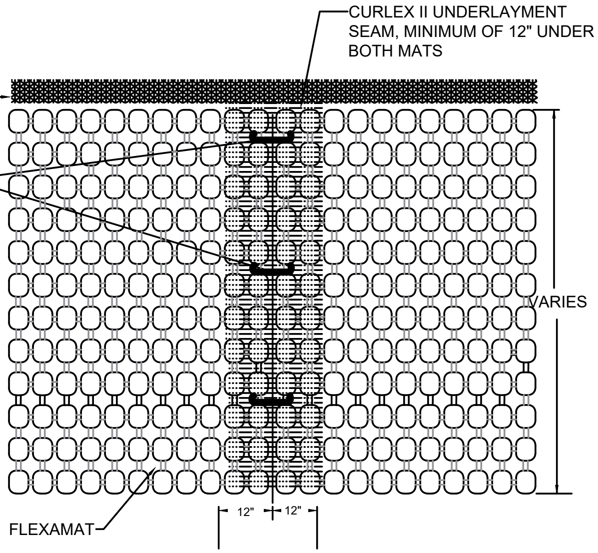
PROFILE VIEW



PROFILE VIEW - LONGITUDINAL SEAM

CONSTRUCTION NOTES:

1. GRADE A UNIFORM SUBGRADE. ALL SUBGRADE SURFACES PREPARED FOR PLACEMENT OF MATS SHALL BE SMOOTH AND FREE OF ALL ROCKS, STICKS, ROOTS, OTHER PROTRUSIONS, OR DEBRIS OF ANY KIND. THE PREPARED SURFACE SHALL PROVIDE A FIRM UNYIELDING FOUNDATION FOR THE MATS.
2. APPLY SEED DIRECTLY TO THE PREPARED SOIL PRIOR TO INSTALLATION OF MATS. USE SEED AND /OR TOPSOIL PER PROJECT SPECIFICATIONS.
3. FLEXAMAT SHALL EXTEND A MINIMUM OF 2' BEYOND THE RIPRAP ALONG TOE OF MAT.
4. AT ANY SEAMS IN THE MAT, THE FLEXAMAT SHALL BE MANUALLY FLIPPED BACK 3' THE LENGTH OF THE SEAM ON BOTH ADJACENT MATS. RECYCLEX TRM UNDERLAYMENT SHALL BE INSTALLED UNDER THE SEAM, WITH A MINIMUM OF 12" OF THE UNDERLAYMENT UNDER EITHER MAT. MAT SHALL THEN BE MANUALLY FLIPPED BACK INTO PLACE SO THAT THE FLEXAMAT SECTIONS FIT TIGHTLY. A CONCRETE SAW MAY BE NECESSARY TO CUT MAT TO FIT TIGHTLY TO ADJACENT SECTION OF MAT.
5. SECURE SEAMS WITH #3 REBAR - 18" "U' ANCHORS IN 3' INCREMENTS. ONE LEG OF THE "U" ANCHORS SHALL EXTEND OVER GEOGRID CORDS ON EITHER SIDE OF THE SEAM. .
6. SECURE INITIAL LEADING EDGE OF THE TOP OF MAT IN 24" DEEP ANCHOR TRENCH.

Flexamat – Tied Concrete Block Mats

1. DESCRIPTION

Flexamat – Tied Concrete Block Erosion Control Mats

This work shall consist of furnishing and placing the Flexamat system in accordance with this specification and conforming with the lines, grades, design, and dimensions shown on the plans.

2. MATERIALS

Flexamat is manufactured from individual concrete blocks tied together with high strength polypropylene bi-axial geogrid. Each block is tapered, beveled and interlocked and includes connections that prevent lateral displacement of the blocks within the mats when they are lifted for placement.

Tied Concrete Block Mats shall be Flexamat, manufactured by Motz Enterprises, Inc. or approved equal (See Section 3, Alternative Products).

2.1. **Blocks.** Furnish blocks manufactured with concrete conforming to the cement requirements of ASTM C150 and to the aggregate requirements of ASTM C33. Meet a minimum compressive strength of 5,000 psi at 28 days. Furnish blocks that have a minimum weight of 3 lb. per block. Blocks shall be placed no further than 2 in. apart.

2.2. **Polypropylene Bi-Axial Geogrid.** Provide revetment mat that is constructed of a high tenacity, low elongating, and continuous filament polypropylene fibers that is securely cast into and embedded within the base of the concrete blocks and obtains connection strength greater than that of the geogrid. Ensure the geogrid meets the requirements of Table 1:

Table1
Polypropylene Bi-Axial Geogrid

Description	Requirement
UV Stabilization	2% Carbon Black
Ultimate Tensile Strength	2055 lb./lf

2.3. **Underlayment Materials** – Three backing options:

- Standard Flexamat – Includes Curlex® II backing
- Flexamat Plus – Includes both Curlex® II and Recyclex TRM-V
- Flexamat with Filter Fabric – Includes non-woven filter fabric backing.

The backing material shall be packaged within roll of Flexamat.

Curlex® II:

Curlex II erosion control blanket (ECB) consists of a specific cut of naturally seed free Great Lakes Aspen curled wood excelsior with 80% six-inch fibers or greater fiber length. It is of consistent thickness with fibers evenly distributed throughout the entire area of the blanket. The top and bottom of each blanket is covered with degradable polypropylene netting.

Index Property	**Test Method**	**Value**
Thickness	ASTM D 6525	0.418 in (10.62 mm)
Light Penetration	ASTM D 6567	34.6%
Resiliency	ASTM D 6524	64%
Mass per Unit Area	ASTM D 6475	0.57 lb/yd^2 (309 g/m^2)
MD-Tensile Strength Max.	ASTM D 6818	127.0 lb/ft (1.9 kN/m)
TD-Tensile Strength Max.	ASTM D 6818	50.9 lb/ft (0.7 kN/m)
MD-Elongation	ASTM D 6818	28.64%
TD-Elongation	ASTM D 6818	29.84%
Swell	ECTC Procedure	89%
Water Absorption	ASTM D 1117/ECTC	199%
Bench-Scale Rain Splash	ECTC Method 2	SLR = 6.84 @ 2 in/hr [2,3]
Bench-Scale Rain Splash	ECTC Method 2	SLR = 7.19 @ 4 in/hr [2,3]
Bench-Scale Rain Splash	ECTC Method 2	SLR = 7.56 @ 6 in/hr [2,3]
Bench-Scale Shear	ECTC Method 3	2.6 lb/ft^2 @ 0.5 in soil loss [3]
Germination Improvement	ECTC Method 4	645%

[1] Weight is based on a dry fiber weight basis at time of manufacture. Baseline moisture content of Great Lakes Aspen excelsior is 22%.

[2] SLR is the Soil Loss Ratio, as reported by NTPEP/AASHTO. [3] Bench-scale index values should not be used for design purposes.

Recyclex® TRM:

Recyclex TRM – V is a permanent non-degradable Turf Reinforcement Mat (TRM), consists of 100% post-consumer recycled polyester (green or brown bottles) with 80% five-inch fibers or greater fiber length. It is of consistent thickness with fibers evenly distributed throughout the entire area of the TRM. The top and bottom of each TRM is covered with heavy duty polypropylene net. Fibers are tightly crimped and curled to allow fiber interlock, and to retain 95% memory of the original shape after loading by hydraulic events. Fibers have a specific gravity greater than 1.0; therefore, the blanket will not float during hydraulic events. Recyclex TRM – V meets Federal Government Executive Order initiatives for use of products made from, or incorporating, recycled materials. Recyclex TRM – V shall be manufactured in the U.S.A. and the fibers shall be made from 100a% recycled post-consumer goods.

Index Property	**Test Method**	**Value**
Thickness	ASTM D 6525	0.294 in (7.47 mm)
Light Penetration	ASTM D 6567	57%
Resiliency	ASTM D 6524	86%
Mass per Unit Area	ASTM D 6566	0.50 lb/yd^2 (271 g/m^2)
MD-Tensile Strength Max.	ASTM D 6818	295.2 lb/ft (4.32 kN/m)
TD-Tensile Strength Max.	ASTM D 6818	194.4 lb/ft (2.85 kN/m)
MD-Elongation	ASTM D 6818	32.2%
TD-Elongation	ASTM D 6818	40.8%
Swell	ECTC Procedure	8%
Water Absorption	ASTM D 1117/ECTC	33.8%
Specific Gravity	ASTM D 792	1.21
UV Stability	ASTM D 4355 (1,000 hr)	80% minimum
Porosity	Calculated	97.5%
Bench-Scale Rain Splash	ECTC Method 2	SLR = 4.13 @ 2 in/hr [1,2]
Bench-Scale Rain Splash	ECTC Method 2	SLR = 4.97 @ 4 in/hr [1,2]
Bench-Scale Rain Splash	ECTC Method 2	SLR = 5.99 @ 6 in/hr [1,2]
Bench-Scale Shear	ECTC Method 3	2.40 lb/ft^2 @ 0.5 in soil loss [2]
Germination Improvement	ECTC Method 4	353%

[1] SLR is the Soil Loss Ratio, as reported by NTPEP/AASHTO. [2] Bench-scale index values should not be used for design purposes

10oz non-woven filter fabric:

The underlayment material shall be packaged in roll of Flexamat and shall meet the following characteristics:

Property	Test Method	English	Metric
Weight - Typical	ASTM D-5261	10 oz/sy	339 g/sm
Tensile Strength	ASTM D-4632	250 lbs	1,112 N
Elongation @ Break	ASTM D-4632	50%	50%
Mullen Burst*	ASTM D-3786*	500 psi	3,447 kPa
Puncture Strength*	ASTM D-4833*	155 lbs	690 N
CBR Puncture	ASTM D-6241	700 lbs	3,115 N
Trapezoidal Tear	ASTM D-4533	100 lbs	444 N
Apparent Opening Size	ASTM D-4751	100 US Sieve	0.150 mm
Permittivity	ASTM D-4491	1.20 Sec-1	1.20 Sec-1
Water Flow Rate	ASTM D-4491	80 g/min/sf	3,251 l/min/sm
UV Resistance @ 500 Hours	ASTM D-4355	70%	70%

2.4. Cover the mat or otherwise protect it during long periods of storage to protect against degradation of the backing material as recommended by the manufacturer.

2.5. Mats will be rolled for shipment and are packaged with handling straps. These handling straps shall only be used for lifting below 2 ft. to place heavy duty lifting straps under rolls. Upon delivery, rolls may be left exposed for up to 30 days. If exposure will exceed 30 days, cover or tarp the rolls to minimize UV exposure.

All mats to be inspected upon delivery. Assure that all units are sound and free of defects that would interfere with the proper placing of the unit or impair the strength or permanence of the construction.

Chipping or missing concrete resulting in a weight loss exceeding 15% of the average weight of a concrete unit is grounds for rejection by the engineer. Replace, repair or patch the damaged areas per the manufacturer’s recommendations.

3. ALTERNATIVE PRODUCTS

Alternative products may be considered if composition matches the materials detailed in Section 2. Such products must be pre-approved in writing by the Engineer prior to bid date. Alternative product packages must be submitted to the Engineer a minimum of fifteen (15) days prior to bid date. Submittal packages for alternate products must include, as a minimum, the following:

a. Product Properties – Composition of materials, stating product is comprised of the following components:

   i. Concrete Blocks - minimum compressive strength of 5,000 psi at 28 days. Furnish blocks that have a minimum weight of 3 lb. per block. Blocks shall be placed no further than 2 in. apart.

   ii. Polypropylene Bi-Axial Geogrid – minimum tensile strength of 2055lbs

   iii. Underlayment - Minimum of a double-net excelsior (wood fiber) blanket, plus additional turf reinforcement or filter fabric as specified by design engineer. Underlayment must be packaged within the Tied Concrete Block Mat rolls.

b. Full-Scale laboratory testing performed by an independent 3rd party testing facility with associated engineered calculations certifying the hydraulic capacity of the proposed Tied-Concrete Block Erosion Control Mat meets the performance requirements listed in Section 4 of this specification.

c. A list of 15 comparable projects in terms of project size, application and material dimensions in the United States, where the results of the specific alternative material's use can be verified and reviewed for system integrity and sustained after a minimum of 5 years of service life.

4. PERFORMANCE

Full-Scale laboratory testing performed by an independent 3rd party testing facility with associated engineered calculations certifying the hydraulic capacity of the proposed Tied-Concrete Block Erosion Control Mat meets the following requirements:

Test	Tested Value	Bed Slope	Soil Classification	Limiting Value
ASTM 6460	Shear Stress	30%	Sandy Loam (USDA)	24lb./ft^2
ASTM 6460	Velocity	20%	Loam (USDA)	30 ft./sec

5. EQUIPMENT

Provide the proper equipment to place the mat that will not damage the mat material or disturb the top soil subgrade and seed bed.

6. CONSTRUCTION

Prior to installing Flexamat, prepare the subgrade as detailed in the plans. All subgrade surfaces to be smooth and free of all rocks, stones, sticks, roots, and other protrusions or debris of any kind that would result in an individual block being raised more than 3/4 in. above the adjoining blocks. When seeding is shown on the plans, provide subgrade material that can sustain growth.

Ensure the prepared subgrade provides a smooth, firm, and unyielding foundation for the mats. The subgrade shall be graded into a parabolic or trapezoidal shape to concentrate flow to middle of mat or mats.

When vegetation is required, distribute seed on the prepared topsoil subgrade before installation of the concrete mats in accordance with the specifications.

Install mats to the line and grade shown on the plans and per the manufacturer's guidelines. The manufacturer or authorized representative will provide technical assistance during the slope preparation and installation of the concrete block mats as needed.

Provide a minimum 18 in. deep concrete mat embedment toe trench at all edges exposed to concentrated flows. Recess exterior edges subject to sheet flow a minimum of 3 in.

When needed, provide fastening or anchoring as recommended by the manufacturer or engineer for the site conditions.

For seams parallel to the flow line in ditch or channel applications, center a minimum 3 ft. wide strip of soil retention blanket under the seam. Fasten along the seam at 5 ft. maximum spacing. Parallel seams in the center of the ditch shall be avoided when possible.

Shingle seams perpendicular to the flow line with the downstream mat recessed a minimum of 2 blocks under the upstream mat and fastened together along the seam at 2 ft. maximum spacing if required by manufacturer or engineer.

7. MEASUREMENT

This Item will be measured by the square foot as shown on the plans, complete in place.

8. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Flexamat". This price is full compensation for loading and transporting, placing concrete block mats; excavation and disposal; furnishing topsoil and bedding; and equipment, labor, materials, tools, and incidentals.

Part 2 - Signatures

1. Applicants and property owners (if different from applicant).
NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT. The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, U.S. Army Corps of Engineers, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.

In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

CONTRACTOR ACKNOWLEDGEMENT

I (we), Fred W. Hodges, have contracted ReadyReef Inc
(Applicant's Name(s)) (Contractor's Name(s))
to perform the work described in this Joint Permit Application, signed and dated

We will read and abide by all conditions set forth in all Federal, State and Local permits as required for this project. We understand that failure to follow the conditions of the permits may constitute a violation of applicable Federal, state and local statutes and that we will be liable for any civil and/or criminal penalties imposed by these statutes. In addition, we agree to make available a copy of any permit to any regulatory representative visiting the project to ensure permit compliance. If we fail to provide the applicable permit upon request, we understand that the representative will have the option of stopping our operation until it has been determined that we have a properly signed and executed permit and are in full compliance with all terms and conditions.

Tidewater Joint Permit Application (JPA)
For Projects Involving Tidal Waters, Tidal Wetlands and/or Dunes and Beaches in Virginia

This application may be used for most commercial and noncommercial projects involving **tidal waters, tidal wetlands and/or dunes and beaches in Virginia** which require review and/or authorization by Local Wetlands Boards (LWB), the Virginia Marine Resources Commission (VMRC), the Department of Environmental Quality (DEQ), and/or the U. S. Army Corps of Engineers (USACE). This application can be used for:

- **Access-related activities**, including piers, boathouses, boat ramps (without associated dredging or excavation*), moorings, marinas.
- **Shoreline stabilization projects** including living shorelines, riprap revetments, marsh toe stabilization, bulkheads, breakwaters, beach nourishment, groins, and jetties. It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1).
- **Crossings** over or under tidal waters and wetlands including bridges and utility lines (water, sewer, electric).
- **Aquaculture structures**, including cages and floats except "oyster gardening"**

***Note:** for all dredging, excavation, or surface water withdrawal projects you **MUST** use the Standard JPA form; for noncommercial, riparian shellfish aquaculture projects (i.e., "oyster gardening") you must use the abbreviated JPA found at https://mrc.virginia.gov/forms/2019/VGP3_Aquaculture_form_2019.pdf or call VMRC for a form.

The DEQ and the USACE use this form to determine whether projects qualify for certain General, Regional, and/or Nationwide permits. If your project does not qualify for these permits and you need a DEQ Virginia Water Protection permit or an individual USACE permit, you must submit the Standard Joint Permit application form. You can find this application at http://www.nao.usace.army.mil/Missions/Regulatory/JPA.aspx. Please note that some health departments and local agencies, such as local building officials and erosion and sediment control authorities, do not use the Joint Permit Application process or forms and may have different informational requirements. The applicant is responsible for contacting these agencies for information regarding those permitting requirements.

HOW TO APPLY

Submit one (1) completed copy of the Tidewater JPA to VMRC:

1. If by mail or courier, use the VMRC address provided on page 1.
2. If by electronic mail, address the package to: **JPA.permits@mrc.virginia.gov**. The application must be provided in the .pdf format and should not exceed 10 MB. If larger than 10 MB you may provide a file transfer protocol (ftp) site for download purposes.

The Tidewater JPA should include the following:

1. **Part 1** – General Information
2. **Part 2** – Signatures
3. **Part 3** - Appendices (A, B, C, and/or D as applicable to your project)
4. **Part 4** – Project Drawings.
   The drawings shall include the following for **ALL** projects:
   - Vicinity Map (USGS topographic map, road map or similar showing project location)
   - Plan View Drawing (overhead, to scale or with dimensions clearly marked)
   - Section View Drawing (side-view, to scale or with dimensions clearly marked)

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Sample drawings are included at the end of Part 4 of this application to show examples of the information needed to consider your application complete and allow for the timely processing.

When completing this form, use the legal name of the applicant, agent, and/or property owner. For DEQ application purposes, *legal name* means the full legal name of an individual, business, or other organization. For an individual, the legal name is the first name, middle initial, last name, and suffix. For an entity authorized to do business in Virginia, the legal name is the exact name set forth in the entity's articles of incorporation, organization or trust, or formation agreement, as applicable. Also provide the name registered with the State Corporation Commission, if required to register. DEQ issues a permit or grants coverage to the so-named individual or business, who becomes the 'permittee'. Correspondence from some agencies, including permits, authorizations, and/or coverage, may be provided via electronic mail. If the applicant and/or agent wishes to receive their permit via electronic mail, please remember to include an e-mail address at the requested place in the application.

In order for projects requiring LWB authorization to be considered complete (Virginia Code § 28.2-1302); "The permit application shall include the following: the name and address of the applicant; a detailed description of the proposed activities; a map, drawn to an appropriate and uniform scale, showing the area of wetlands directly affected, the location of the proposed work thereon, the area of existing and proposed fill and excavation, the location, width, depth and length of any proposed channel and disposal area, and the location of all existing and proposed structures, sewage collection and treatment facilities, utility installations, roadways, and other related appurtenances of facilities, including those on the adjacent uplands; a description of the type of equipment to be used and the means of access to the activity site; the names and addresses of record of adjacent land and known claimants of water rights in or adjacent to the wetland of whom the applicant has notice; an estimate of cost; the primary purpose of the project; and secondary purpose of the proposed project; a complete description of measures to be taken during and after alteration to reduce detrimental offsite effects; the completion date of the proposed work, project, or structure; and such additional materials and documentation as the wetlands board may require."

You may include signed Adjacent Property Owner (APO) Acknowledgement Forms found at the end of this Short Form. You must provide these addresses in Part 1 whether or not you use the APO forms. VMRC will request comments from APOs for projects that require permits for encroachment over state-owned submerged lands. VMRC or your local wetlands board must notify all APO's of public hearings required for all proposals involving tidal wetlands and dunes/beaches that are not authorized by statute. This information will not be used by DEQ to meet the requirements of notifying riparian land owners.

Regional Permit 17 (RP-17), authorizes the installation and/or construction of open-pile piers, mooring structures/devices, fender piles, covered boathouses/boatslips, boatlifts, osprey pilings/platforms, accessory pier structures, and certain devices associated with shellfish gardening, for private use, subject to strict compliance with all conditions and limitations further set out in the RP-17 enclosure located at http://www.nao.usace.army.mil/Missions/Regulatory/RBregional/. In addition to the information required in this JPA, prospective permittees seeking authorization under RP-17 must complete and submit the 'Regional Permit 17 Checklist' with their JPA. A copy of the 'Regional Permit 17 Checklist' is found on pages 13 and 14 of this application package. If the prospective permittee answers "yes" (or "N/A", where applicable) to all of the questions on the 'Regional Permit 17 Checklist', the permittee is in compliance with RP-17 and will not receive any other written authorization from the Corps but may not proceed with construction until they have obtained all necessary state and local permits. ***Note: If the prospective permittee answers "no" to any of the questions on the 'Regional Permit 17 Checklist' then their proposed structure(s) does not meet the terms and conditions of RP-17 and written authorization from the Corps is required before commencement of any work.***

Note: Land disturbance (grading, filling, etc.) or removal of vegetation associated with projects located in Chesapeake Bay Preservation Areas will require approval from local governments. Certain localities utilize this application during their Bay Act review. Part 5 of this application is included to provide assistance for the applicant to comply with Bay Act /or Erosion and Sediment Control requirements concurrent with this application.

WHAT HAPPENS NEXT

Upon receipt of an application, VMRC will assign a permit application number to the JPA and will then distribute a copy of the application and any original plan copies submitted to the other regulatory agencies that are involved in the JPA process. All agencies will conduct separate but concurrent reviews of your project. Please be aware that each agency must issue a separate permit (or a notification that no permit is required). Note that in some cases, DEQ may be taking an action on behalf of the USACE, such as when the State Program General Permit (SPGP) applies. Make sure that you have received all necessary authorizations, or documentation that no permit is required, from each agency prior to beginning the proposed work.

During the JPA review process, site inspections may be necessary to evaluate a proposed project. Failure to allow an authorized representative of a regulatory agency to enter the property, or to take photographs of conditions at the project site, may result in either the withdrawal or denial of your permit application.

For certain federal and state permit applications, a public notice is published in a newspaper having circulation in the project area, is mailed to adjacent and/or riparian property owners, and/or is posted on the agency's web page. The public may comment on the project during a designated comment period, if applicable, which varies depending upon the type of permit being applied for and the issuing agency. In certain circumstances, the project may be heard by a governing board, such as a Local Wetlands Board, the State Water Control Board, or VMRC in cases where a locality does not have a wetlands board and with certain subaqueous cases. You may be responsible for bearing the costs for advertisement of public notices.

Public hearings that are held by VMRC occur at their regularly scheduled monthly commission meetings under the following situations: Protested applications for VMRC permits which cannot be resolved; projects costing over $500,000 involving encroachment over state-owned subaqueous land; and all projects affecting tidal wetlands and dunes/beaches in localities without a LWB. All interested parties will be officially notified regarding the date and time of the hearing and Commission meeting procedures. The Commission will usually make a decision on the project at the meeting unless a decision for continuance is made. If a proposed project is approved, a permit or similar agency correspondence is sent to the applicant. In some cases, notarized signatures, as well as processing fees and royalties, are required before the permit is validated. If the project is denied, the applicant will be notified in writing.

PERMIT APPLICATION OR OTHER FEES

Do not send any fees with the JPA. VMRC is not responsible for accounting for fees required by other agencies. Please consult agency websites or contact agencies directly for current fee information and submittal instructions.

- USACE: Permit application fees are required for USACE Individual (Standard) permits. A USACE project manager will contact you regarding the proper fee and submittal requirements.

- DEQ: Permit application fees required for Virginia Water Protection permits – while detailed in 9VAC25-20 – are conveyed to the applicant by the applicable DEQ office (http://www.deq.virginia.gov/Locations.aspx). Complete the Permit Application Fee Form and submit it per the instructions to the address listed on the form. Instructions for submitting any other fees will be provided to the applicant by DEQ staff.
- VMRC: An application fee of $300 may be required for projects impacting tidal wetlands, beaches and/or dunes when VMRC acts as the LWB. VMRC will notify the applicant in writing if the fee is required. Permit fees involving subaqueous lands are $25.00 for projects costing $10,000 or less and $100 for projects costing more than $10,000. Royalties may also be required for some projects. The proper permit fee and any required royalty is paid at the time of permit issuance by VMRC. VMRC staff will send the permittee a letter notifying him/her of the proper permit fees and submittal requirements.
- LWB: Permit fees vary by locality. Contact the LWB for your project area or their website for fee information and submittal requirements. Contact information for LWBs may be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html.

FOR AGENCY USE ONLY

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 1 - General Information (continued)

1. Applicant's legal name* and complete mailing address:

M.Keith Hodges, PO Box 154, Urbanna, VA
23175 (Lot#A13)

Contact Information:
Home (____)_____________
Work (____)_____________
Fax (____)_____________
Cell (804) 824-4023
e-mail khodges@gloucesterpharmacy.com

State Corporation Commission Name and ID Number (if applicable) _____________

2. Property owner(s) legal name* and complete address, if different from applicant: Contact Information:

Home (____)_____________
Work (____)_____________
Fax (____)_____________
Cell (____)_____________
e-mail ___________________

State Corporation Commission Name and ID Number (if applicable) _____________

3. Authorized agent name* and complete mailing address (if applicable):

Chris Davis (ReadyReef Inc.)
504 Smoketree Court
North Chesterfield, VA 23236

Contact Information:
Home (____)_____________
Work (____)_____________
Fax (____)_____________
Cell (804) 338-3103
e-mail chris.readyreef@gmail.com

State Corporation Commission Name and ID Number (if applicable) _____________

*** If multiple applicants, property owners, and/or agents, each must be listed and each must sign the applicant signature page.**

4. Provide a detailed description of the project in the space below, including the type of project, its dimensions, materials, and method of construction. Be sure to include how the construction site will be accessed and whether tree clearing and/or grading will be required, including the total acreage. If the project requires pilings, please be sure to include the total number, type (e.g. wood, steel, etc), diameter, and method of installation (e.g. hammer, vibratory, jetted, etc). If additional space is needed, provide a separate sheet of paper with the project description.

The project is to install a Living Shoreline using Flexamat installed behind a decaying bulkhead on the York River to protect the eroding bank. Mat sections totaling 16' wide x 75' (1200 ft^2) will be laid on a 3:1 slope and planted with marsh grasses. Flexamat meets the state definition (28.2-104.1) of a Living Shoreline (as required by SB776 passed in 2020) as "a shoreline management practice that provides erosion control and water quality benefits; protects, restores, or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials." Flexamat enhances "coastal resilience and attenuation of wave energy and storm surge."

The Flexamat will be installed from the adjacent yard. Grading the slope will be followed with some sand overlay to create a solid, smooth foundation. No tree clearing is required. The mat is has underlayment to hold the sand on the slope while the concrete serves as revetment.

The mat will be anchored mechanically and with marsh grass plants growing through it over time. The remnants of the existing bulkhead will be cut down and/or removed after the mat is installed.

The mat ends at neighboring bulkhead returns will be overlain with filter cloth and riprap to prevent scouring from wave action against the bulkhead sections.

There will be a gain of 963 ft^2 of Spartina marsh grasses in the mat and a buffer of Spartina Patens will be established at the top of the Flexamat and lawn interface.

Equipment to be used: skid steer, Excavator, dump truck, flatbed truck and trailer, sand compactor, earth anchors driven by hammer drill run off generator.

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 1 - General Information (continued)

5. Have you obtained a contractor for the project? X Yes* ___ No. *If your answer is "Yes" complete the remainder of this question and submit the Applicant's and Contractor's Acknowledgment Form (enclosed)

Contractor's name* and complete mailing address:

ReadyReef Inc
504 Smoketree Court
North Chesterfield, VA 23236

Contact Information:
Home (____)____________
Work (____)____________
Fax (____)____________
Cell (804) 338-3103
email chris.readyreef@gmail.com

State Corporation Commission Name and ID Number (if applicable) ____________________

<u>* If multiple contractors, each must be listed and each must sign the applicant signature page.</u>

6. List the name, address and telephone number of the newspaper having general circulation in the area of the project. Failure to complete this question may delay local and State processing.

Name and complete mailing address:
Tidewater Review
www.tidewaterreview.com

Telephone number
(757) 446-2291

7. Give the following project location information:

Street Address (911 address if available) just South East of 242 Old Farm Drive
Lot/Block/Parcel# 23 131L 396A13 (Keith Hodges)
Subdivision____________________
City / County Shacklefords ZIP Code 23156
Latitude and Longitude at Center Point of Project Site (Decimal Degrees):
37.479031 / -76.732418 (Example: 36.41600/-76.30733)

If the project is located in a rural area, please provide driving directions giving distances from the best and nearest visible landmarks or major intersections. *Note: if the project is in an undeveloped subdivision or property, clearly stake and identify property lines and location of the proposed project. A supplemental map showing how the property is to be subdivided should also be provided.*

From Rt. 17 going north from Gloucester Courthouse, turn left at Adner onto Rt 14 West (Buena Vista Rd). At Plainview, turn left onto Rt. 605 (Plain View Lane).
Shortly after, Rt. 605 takes a sharp right and continues.
Turn left onto Rt 666 (Tuckers Road) before Gressitt.
Turn right onto Cricket Shores Lane.
Near York River, turn right onto Bells Rd. Road ends on undeveloped lot.

8. What are the *primary and secondary purposes of and the need for* the project? For example, the primary purpose <u>may</u> be "to protect property from erosion due to boat wakes" and the secondary purpose <u>may</u> be "to provide safer access to a pier."

The primary purpose is to prevent erosion at the shoreline where an old bulkhead is failing.
The secondary purpose is to install a SB 776 compliant solution to meet the environmental goals of the Chesapeake Bay WIP.

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 1 - General Information (continued)

9. Proposed use (check one):
   _X_ Single user (private, non-commercial, residential)
   ___ Multi-user (community, commercial, industrial, government)

10. Describe alternatives considered and the measures that will be taken to avoid and minimize impacts, to the maximum extent practicable, to wetlands, surface waters, submerged lands, and buffer areas associated with any disturbance (clearing, grading, excavating) during and after project construction. *Please be advised that unavoidable losses of tidal wetlands and/or aquatic resources may require compensatory mitigation.*

    Bulkhead replacement and riprap revetment were eliminated as being non-compliant with the State's new Living Shoreline law (SB 776). Installing Flexamat will allow for marsh grass planting in its grid, and for a migratory path upwards in elevation should Relative Sea Level Rise continue as forecasted. No impacts to Wetlands, SAVs or buffer areas. Marsh grasses will be installed where none exist now.

11. Is this application being submitted for after-the-fact authorization for work which has already begun or been completed? ___Yes _X_No. If yes, be sure to clearly depict the portions of the project which are already complete in the project drawings.

12. Approximate cost of the entire project (materials, labor, etc.): $ $25,000
    Approximate cost of that portion of the project that is channelward of mean low water:
    $ 0

13. Completion date of the proposed work: July 31 - 2022

14. Adjacent Property Owner Information: List the name and complete **mailing address**, including zip code, of each adjacent property owner to the project. (NOTE: If you own the adjacent lot, provide the requested information for the first adjacent parcel beyond your property line.) Failure to provide this information may result in a delay in the processing of your application by VMRC.

    John Gove
    330 Cypress Ave.
    West Point, VA
    2318

    Fred Hodges
    242 Old Farm Drive
    Shacklefords, VA
    23156

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 2 - Signatures

1. Applicants and property owners (if different from applicant).
NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.
CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, USACE, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit. **In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.**

CONTRACTOR ACKNOWLEDGEMENT

I (we), ______________________, have contracted____
(Applicant's legal name(s)) (Contractor's name(s))
to perform the work described in this Joint Permit Application, signed and dated________________________.

We will read and abide by all conditions set forth in all Federal, State and Local permits as required for this project. We understand that failure to follow the conditions of the permits may constitute a violation of applicable Federal, state and local statutes and that we will be liable for any civil and/or criminal penalties imposed by these statutes. In addition, we agree to make available a copy of any permit to any regulatory representative visiting the project to ensure permit compliance. If we fail to provide the applicable permit upon request, we understand that the representative will have the option of stopping our operation until it has been determined that we have a properly signed and executed permit and are in full compliance with all terms and conditions.

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

APPENDIX B

U.S. Army Corps
Of Engineers
Norfolk District

REGIONAL PERMIT 17 CHECKLIST

Expires: September 5, 2023

Please review the 18-RP-17 enclosure before completing this form and note 18-RP-17 can only be used for proposed PRIVATE USE structure(s) that comply with the terms and conditions of 18-RP-17. Copies can be obtained online at http://www.nao.usace.army.mil/Missions/Regulatory/RBregional/.

YES☐ NO☐	**(1)** Has the permittee reviewed the 18-RP-17 enclosure and verified that the proposed structure(s) is in compliance with all the terms, conditions, and limitations of 18-RP-17?
YES☐ NO☐	**(2)** Does the proposed structure(s) extend no more than one-fourth of the distance across the waterway measured from either mean high water (MHW) to MHW (including all channelward wetlands) or ordinary high water (OHW) to OHW (including all channelward wetlands)?
YES☐ NO☐	**(3)** Does the proposed structure(s) extend no more than 300 feet from MHW or OHW (including all channelward wetlands)?
YES☐ NO☐ N/A☐	**(4)** Does the proposed structure(s) attach to the upland at a point landward of MHW or OHW (including all channelward wetlands)?
YES☐ NO☐ N/A☐	**(5)** If the proposed structure(s) crosses wetland vegetation, is it an open-pile design that has a maximum width of five (5) feet and a minimum height of four (4) feet between the decking and the wetland substrate?
YES☐ NO☐ N/A☐	**(6)** Does the proposed structure(s) include no more than two (2) boatlifts and no more than two (2) boat slips?
YES☐ NO☐ N/A☐	**(7)** Is the open-sided roof structure designed to shelter a boat ≤ 700 square feet and/or is the open sided roof structure or gazebo structure designed to shelter a pier ≤ 400 square feet?
YES☐ NO☐ N/A☐	**(8)** Are all piles associated with the proposed structure(s) non-steel, less than or equal to 12” in diameter, and will less than or equal to 25 piles be installed channelward of MHW?
YES☐ NO☐ N/A☐	**(9)** Is all work occurring behind cofferdams, turbidity curtains, or other methods to control turbidity being utilized when operationally feasible and federally listed threatened or endangered species may be present?
YES☐ NO☐ N/A☐	**(10)** If the proposed structure(s) is to be located within an anadromous fish use area, the prospective permittee will adhere to the anadromous fish use area time of year restriction (TOYR) prohibiting in-water work from occurring between February 15 through June 30 of any given year if (1) piles are to be installed with a cushioned impact hammer and there is less than 492 feet between the most channelward pile and mean low water (MLW) on the opposite shoreline or (2) piles are to be installed with a vibratory hammer and there is less than 384 feet between the most channelward pile and MLW on the opposite shoreline.
YES☐ NO☐	**(11)** Is all work occurring outside of submerged aquatic vegetation (SAV) mapped by the Virginia Institute of Marine Sciences’ (VIMS) most recent survey year and 5 year composite?
YES☐ NO☐	**(12)** Has the permittee ensured the construction and/or installation of the proposed structure(s) will not affect federally listed threatened or endangered species or designated critical habitat?
YES☐ NO☐	**(13)** Will the proposed structure be located outside of Broad Creek in Middlesex County, Fisherman’s Cove in Norfolk, or the Salt Ponds in Hampton?
YES☐ NO☐	**(14)** Will the proposed structure(s) be located outside of the waterways containing a Federal Navigation Project listed in Permit Specific Condition 12 of 18-RP-17 and/or will all portions of the proposed structure(s) be located more than 85 feet from the Federal Navigation Project?

YES☐ NO☐ **(15)** Will the proposed structure(s) be located outside a USACE Navigation and Flood Risk Management project area?

YES☐ NO☐ **(16)** Will the proposed structure(s) be located outside of any Designated Trout Waters?

YES☐ NO☐ N/A☐ **(17)** If the proposed structure(s) includes flotation units, will the units be made of materials that will not become waterlogged or sink if punctured?

YES☐ NO☐ N/A☐ **(18)** If the proposed structure(s) includes flotation units, will the floating sections be braced so they will not rest on the bottom during periods of low water?

YES☐ NO☐ **(19)** Is the proposed structure(s) made of suitable materials and practical design so as to reasonably ensure a safe and sound structure?

YES☐ NO☐ **(20)** Will the proposed structure(s) be located on the property in accordance with the local zoning requirements?

YES☐ NO☐ N/A☐ **(21)** If the proposed structure(s) includes a device used for shellfish gardening, will the device be attached directly to a pier and limited to a total of 160 square feet?

YES☐ NO☐ N/A☐ **(22)** If the proposed structure(s) includes a device used for shellfish gardening, does the permittee recognize this RP does not negate their responsibility to obtain an oyster gardening permit (General Permit #3) from Virginia Marina Resources Commission's Habitat Management Division?

YES ☐NO ☐ **(23)** Does the permittee recognize this RP does not authorize any dredging or filling of waters of the United States (including wetlands) and does not imply that future dredging proposals will be approved by the Corps?

YES☐ NO☐ **(24)** Does the permittee understand that by accepting 18-RP-17, the permittee accepts all of the terms and conditions of the permit, including the limits of Federal liability contained in the 18-RP-17 enclosure? Does the permittee acknowledge that the structures permitted under 18-RP-17 may be exposed to waves caused by passing vessels and that the permittee is solely responsible for the integrity of the structures permitted under 18-RP-17 and the exposure of such structures and vessels moored to such structures to damage from waves? Does the permittee accept that the United States is not liable in any way for such damage and that it shall not seek to involve the United States in any actions or claims regarding such damage?

IF YOU HAVE ANSWERED "NO" TO ANY OF THE QUESTIONS ABOVE, REGIONAL PERMIT 17 (18-RP-17) DOES NOT APPLY AND YOU ARE REQUIRED TO OBTAIN WRITTEN AUTHORIZATION FROM THE CORPS PRIOR TO PERFORMING THE WORK.

IF YOU HAVE ANSWERED "YES" (OR "N/A", WHERE APPLICABLE) TO ALL OF THE QUESTIONS ABOVE, YOU ARE IN COMPLIANCE WITH REGIONAL PERMIT 17 (18-RP-17). PLEASE SIGN BELOW, ATTACH, AND SUBMIT THIS CHECKLIST WITH YOUR COMPLETED JOINT PERMIT APPLICATION (JPA). THIS SIGNED CERTIFICATE SERVES AS YOUR LETTER OF AUTHORIZATION FROM THE CORPS. YOU WILL NOT RECEIVE ANY OTHER WRITTEN AUTHORIZATION FROM THE CORPS; HOWEVER, YOU MAY NOT PROCEED WITH CONSTRUCTION UNTIL YOU HAVE OBTAINED ALL OTHER NECESSARY STATE AND LOCAL PERMITS.

I CERTIFY THAT I HAVE READ AND UNDERSTAND ALL CONDITIONS OF THE REGIONAL PERMIT 17 (18-RP-17), DATED SEPTEMBER 2018, ISSUED BY THE US ARMY CORPS OF ENGINEERS, NORFOLK DISTRICT REGULATORY BRANCH (CENAO-WRR), NORFOLK, VIRGINIA.

Proposed work to be located at:

VMRC Number: ____________________

Part 3 – Appendices

Please complete and submit the appendix questions applicable to your project, and attach the required vicinity map(s) and drawings to your application. If an item does not apply to your project, please write "N/A" in the space provided.

Appendix A: (TWO PAGES) Projects for Access to the water such as private and community piers, boathouses, marinas, moorings, and boat ramps. Answer all questions that apply.

1. **Briefly describe your proposed project**.

2. **For private, noncommercial piers:**

Do you have an existing pier on your property? ____Yes____ No
If yes, will it be removed? ____Yes ____No
Is your lot platted to the mean low water shoreline? ____Yes ____No
What is the overall length of the proposed structure? ________feet.
Channelward of Mean High Water? ________feet.
Channelward of Mean Low Water? ________feet.
What is the area of the piers and platforms that will be constructed over
Tidal non-vegetated wetlands __________ square feet.
Tidal vegetated wetlands _________ square feet.
Submerged lands __________square feet.
What is the total size of any and all L- or T-head platforms?_______sq. ft.
For boathouses, what is the overall size of the roof structure? ________sq. ft.
Will your boathouse have sides?_____Yes____ No.

NOTE: All proposals for piers, boathouses and shelter roofs must be reviewed by the Virginia Marine Resources Commission (Commission or VMRC), however, pursuant to § 28.2-1203 A 5 of the Code of Virginia a VMRC permit may not be required for such structures (except as required by subsection D of § 28.2-1205 for piers greater than 100 feet in length involving commercially productive leased oyster or clam grounds), provided that (i) the piers do not extend beyond the navigation line or private pier lines established by the Commission or the United States Army Corps of Engineers (USACE), (ii) the piers do not exceed six feet in width and finger piers do not exceed five feet in width, (iii) any L or T head platforms and appurtenant floating docking platforms do not exceed, in the aggregate, 400 square feet, (iv) if prohibited by local ordinance open-sided shelter roofs or gazebo-type structures shall not be placed on platforms as described in clause (iii), but may be placed on such platforms if not prohibited by local ordinance, and (v) the piers are determined not to be a navigational hazard by the Commission. Subject to any applicable local ordinances, such piers may include an attached boat lift and an open-sided roof designed to shelter a single boat slip or boat lift. In cases in which open-sided roofs designed to shelter a single boat, boat slip or boat lift will exceed 700 square feet in coverage or the open-sided shelter roofs or gazebo structures exceed 400 square feet, and in cases in which an adjoining property owner objects to a proposed roof structure, permits shall be required as provided in § 28.2-1204.

Part 3 – Appendices (continued)

3. **For USACE permits**, in cases where the proposed pier will encroach beyond one fourth the waterway width (as determined by measuring mean high water to mean high water or ordinary high water mark to ordinary high water mark), the following information must be included before the application will be considered complete. For an application to be considered complete:

   a. The USACE MAY require depth soundings across the waterway at increments designated by the USACE project manager. Typically 10-foot increments for waterways less than 200 feet wide and 20-foot increments for waterways greater than 200 feet wide with the date and time the measurements were taken and how they were taken (e.g., tape, range finder, etc.).
   b. The applicant MUST provide a justification as to purpose if the proposed work would extend a pier greater than one-fourth of the distance across the open water measured from mean high water or the channelward edge of the wetlands.
   c. The applicant MUST provide justification if the proposed work would involve the construction of a pier greater than five feet wide or less than four feet above any wetland substrate.

4. Provide the type, size, and registration number of the vessel(s) to be moored at the pier or mooring buoy.

Type	Length	Width	Draft	Registration #

5. For **Marinas, Commercial Piers, Governmental Piers, Community Piers and other non-private piers**, provide the following information:
   A) Have you obtained approval for sanitary facilities from the Virginia Department of Health?___________ (required pursuant to Section 28.2-1205 C of the Code of Virginia).
   B) Will petroleum products or other hazardous materials be stored or handled at your facility?_______________.
   C) Will the facility be equipped to off-load sewage from boats?__________.
   D) How many wet slips are proposed?_______. How many are existing?______.
   E) What is the area of the piers and platforms that will be constructed over
      Tidal non-vegetated wetlands __________ square feet
      Tidal vegetated wetlands _________ square feet
      Submerged lands __________square feet

6. For **boat ramps**, what is the overall length of the structure?________feet.
   From Mean High Water?________feet.
   From Mean Low Water?________feet.

Note: drawings must include the construction materials, method of installation, and all dimensions. If tending piers are proposed, complete the pier portion.

Note: If dredging or excavation is required, you must complete the Standard Joint Point Permit application.

Part 3 – Appendices (continued)

Appendix B: **Projects for Shoreline Stabilization** in tidal wetlands, tidal waters and dunes/beaches including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, and living shoreline projects. Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service or VIMS**.**

NOTE: It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1). **Information on non-structural, vegetative alternatives (i.e., Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html.**

1. Describe each **revetment, bulkhead, marsh toe, breakwater, groin, jetty, other structure, or living shoreline project** separately in the space below. Include the overall length in linear feet, the amount of impacts in acres, and volume of associated backfill below mean high water and/or ordinary high water in cubic yards, as applicable:

   1200 ft² of Flexamat (75' x 16') will be installed in a cut and fill grading behind the decaying bulkhead. An additional 5 cuyds of clean sand will be overlain and compacted prior to mat installation in the space behind MLW and up to 1.5X the tide range, approximately 14' behind the remnants of the existing bulkhead.

2. What is the maximum encroachment channelward of mean high water? 14' feet.
   Channelward of mean low water? 0 feet.
   Channelward of the back edge of the dune or beach? 16' feet.

3. Please calculate the square footage of encroachment over:
   - Vegetated wetlands 0 square feet
   - Non-vegetated wetlands 143 square feet
   - Subaqueous bottom 0 square feet
   - Dune and/or beach 0 square feet

4. For bulkheads, is any part of the project maintenance or replacement of a previously authorized, currently serviceable, existing structure? ____ Yes____ No.

   If yes, will the construction of the new bulkhead be no further than two (2) feet channelward of the existing bulkhead? _____Yes ____No.

   If no, please provide an explanation for the purpose and need for the additional encroachment.

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 3 – Appendices (continued)

5. Describe the type of construction and **all** materials to be used, including source of backfill material, if applicable (e.g., vinyl sheet-pile bulkhead, timber stringers and butt piles, 100% sand backfill from upland source; broken concrete core material with Class II quarry stone armor over filter cloth).
NOTE: **Drawings must include construction details, including dimensions, design and all materials, including fittings if used**.

See attachments for Flexamat Specs and Materials
Clean sand source: upland pit in Middlesex County

6. If using stone, broken concrete, etc. for your structure(s), what is the average weight of the:
Core (inner layer) material__________ pounds per stone Class size ________
Armor (outer layer) material 75 pounds per stone Class size 1

7. For **beach nourishment**, including that associated with breakwaters, groins or other structures, provide the following:

- Volume of material
  0 cubic yards channelward of mean low water
  5 cubic yards landward of mean low water
  5 cubic yards channelward of mean high water
  0 cubic yards landward of mean high water

- Area to be covered
  0 square feet channelward of mean low water
  1200 square feet landward of mean low water
  5 cubic yards channelward of mean high water
  0 cubic yards landward of mean high water

- Source of material, composition (e.g. 90% sand, 10% clay): 93% Sand, 7% clay
- Method of transportation and placement:
  Truck from pit to yard dump. Tracked Skid steer from dump to shoreline.
- Describe any proposed vegetative stabilization measures to be used, including planting schedule, spacing, monitoring, etc. Additional guidance is available at http://www.vims.edu/about/search/index.php?q=planting+guidelines:

Flexamat will be planted 1' on center in the grid between revetment blocks.
It will take up to 2 years to achieve saturation as the marsh grass sends out rhizomes in its second year after planting.

Appendix C: Crossings in, on, over, or under, waters, submerged lands, tidal wetlands and/or dunes and beaches, including but not limited to, bridges, walkways, pipelines and utility lines.

1. What is the purpose and method of installation of the crossing?

2. What is the width of the waterway and/or wetlands to be crossed
    from mean high water to mean high water (tidal waters)? _______ feet.
    from mean low water to mean low water (tidal waters)? _______ feet.
    from ordinary high water to ordinary high water (non-tidal waters)? _______ feet.

3. For bridges (footbridges, golf cart bridges, roadway bridges, etc.), what is the width of the structure over the tidal wetlands, dunes/beaches and/or submerged lands? ____________square feet.

4. For overhead crossings:
    a. What will be the height above mean high water? _______feet.
    b. If there are other overhead crossings in the area, what is the minimum height? _____feet.
    c. If the proposed crossing is an electrical line, please confirm the total number of electrical circuits: _________

5. For buried crossings, what will be the depth below the substrate? __________feet. Will the proposed utility provide empty conduits for any additional utilities that may propose to co-locate at a later date? _____Yes _____No.

6. Will there be any excavation or fill required for placement of abutments, piers, towers, or other permanent structures on State-owned submerged lands, tidal wetlands, and dunes/beaches? ____Yes ____ No.

    If yes, please provide the following:

    a. Amount of excavation in wetlands _________ cubic yards
    _________ square feet

    b. Amount of excavation in submerged land _________ cubic yards
    _________ square feet

    c. Amount of excavation in dune/beach _________ cubic yards
    _________ square feet

    d. Amount of fill in wetlands _________ cubic yards
    _________ square feet

    e. Amount of fill in submerged lands _________ cubic yards
    _________ square feet

    f. Amount of fill in dune/beach ________ cubic yards
    ________ square feet

Appendix D: Aquaculture Related Structures such as cages and floats. Before completing this appendix, please review the aquaculture requirements summary at: http://mrc.virginia.gov/Shellfish_Aquaculture.shtm.

1. Will the activity be for commercial purposes? _____Yes _____ No.

   If Yes and structures will be placed upon an oyster ground lease, you may qualify for the VMRC General Permit #4 for Temporary Protective Enclosures for Shellfish. For more info see: http://www.mrc.virginia.gov/regulations/MRC_Scanned_Regs/Shellfish_Mix/fr1130_12-0107.pdf. If you qualify for the General Permit #4, or if such structures are proposed that are not on an oyster planting ground lease, or for floating structures of any kind, complete this Joint Permit Application and include the necessary information requested below in question 2 through 11.

   If No, you may qualify for the VMRC General Permit #3, for Noncommercial Riparian Shellfish Growing (i.e. "Gardening") For more information see: http://www.mrc.virginia.gov/forms/VGP3_Aquaculture.doc.pdf. If you qualify for this general permit use the Abbreviated Joint Permit Application For Noncommercial Riparian Shellfish Aquaculture Structures available at https://mrc.virginia.gov/forms/2019/VGP3_Aquaculture_form_2019.pdf ***do not use this Joint Permit Application***.

2. Will aquaculture structures be attached to an existing pier or other structure? ____ Yes ____ No.

3. The plat file # if proposed upon oyster planting ground lease(s).___________________________

4. The maximum area where enclosures are proposed. ___________ square feet

5. The maximum number of enclosures being proposed to be deployed. _____________

6. The species of shellfish to be cultured. ____________________________

7. A detailed description of the enclosures to include width, length and height.

8. In addition to the requirements itemized in Part 4 Project Drawings, the following additional information must be included on your project drawings: A general description of the area within 500 feet of deployment area. Provide a drawing that depicts existing marine resources such as SAV, shellfish beds, fixed fishing devices, public grounds, piers, water depths at mean low water, tide range, and the minimum clearance at mean low tide over the enclosures.

9. Provide the date enclosures are proposed to be deployed _______________. How will the structures be secured? ____.

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 3 – Appendices (continued)

10. List of all riparian land owners within 500 feet of the area where enclosures are proposed along with a map (tax map or other suitable map) depicting the locations of such parcels or riparian property owner acknowledgement forms signed by the riparian land owner with any comments concerning the enclosures deployment request.

11. Proof that the applicant holds a current oyster or clam aquaculture product owners permit, and verification that the applicant is in compliance with Mandatory Harvest Reporting requirements, and verification that the current years oyster ground rent is paid, if structures are proposed on an oyster ground lease.

Part 4 - Project Drawings

Plan view and cross-sectional view drawings are required for all projects. Application drawings do not need to be prepared by a professional draftsman, but they must be clear, accurate, and should be to an appropriate scale. If a scale is not used, all dimensions must be clearly depicted in the drawings. If available, a plat of the property should be included, with the existing and proposed structures clearly indicated. Distances from the proposed structure(s) to fixed points of reference (benchmarks) and to the adjacent property lines must be shown. A vicinity map (County road map, USGS Topographic map, etc.) must also be provided to show the location of the property. **NOTE:** The sample drawings have been included at the end of this section to provide guidance on the information required for different types of projects. Clear and accurate drawings are essential for project review and compliance determination. Incomplete or unclear drawings may cause delays in the processing of your application.

The following items must be included on ALL project drawings: (plan and cross-sectional, as appropriate)

- **name of project**
- **north arrow**
- **scale**
- **waterway name**
- **existing and proposed structures, labeled as such**
- **dimensions of proposed structures**
- **mean high water and mean low water lines**
- **all delineated wetlands and all surface waters on the site, including the Cowardin classification (i.e., emergent, scrub-shrub, or forested) for those surface waters (if applicable)**
- **limits of proposed impacts to surface waters, such as fill areas, riprap scour protection placement, and dredged areas, and the amount of such impacts in square feet and acres**
- **ebb/flood direction**
- **adjacent property lines and owner's name**
- **distances from proposed structures to fixed points of reference (benchmarks) and adjacent property lines**

ADDITIONAL INFORMATION/REVISIONS Received by VMRC August 1, 2021 /blh

Part 5 - Chesapeake Bay Preservation Act Information

All proposed development, redevelopment, land disturbance, clearing or grading related to this Tidewater JPA must comply with the Chesapeake Bay Preservation Area Designation and Management Regulations, which are enforced through locally adopted Chesapeake Bay Preservation Area (CBPA) ordinances. Compliance with state and local CBPA requirements mandates the submission of a ***Water Quality Impact Assessment (WQIA)*** for the review and approval of the local government. Contact the appropriate local government office to determine if a WQIA is required for the proposed activity(ies).

Because the 84 local governments within Tidewater Virginia are responsible for enforcing the CBPA Regulations, the completion of the JPA process does not constitute compliance with the Bay Act Regulations nor does it guarantee that the local government will approve encroachments into the RPA that may result from this project. Applicants should contact their local government as early in the design process as possible to ensure that the final design and construction of the proposed project meets all applicable CBPA requirements. Early cooperation with local government staff can help applicants avoid unnecessary and costly delays to construction. Applicants should provide local government staff with information regarding existing vegetation within the Resource Protection Area (RPA) as well as a description and site drawings of any proposed land disturbance, construction, or vegetation clearing. As part of their review and approval processes, local government staff will evaluate the proposed project and determine whether or not approval can be granted. Once the locality has made a decision on the project, they will advise the Local Wetlands Boards and other appropriate parties of applicable CBPA concerns or issues.

Resource Protection Areas (RPAs) are composed of the following features:

1. **Tidal wetlands;**
2. **Nontidal wetlands connected by surface flow and contiguous to tidal wetlands or water bodies with perennial flow;**
3. **Tidal shores;**
4. **Other lands considered by the local government to meet the provisions of subsection A of 9VAC25-830-80 and to be necessary to protect the quality of state waters; and**
5. **A buffer area not less than 100 feet in width located adjacent to and landward of the components listed in subdivisions 1 through 4 above, and along both sides of any water body with perennial flow.**

Notes for all projects in RPAs

Development, redevelopment, construction, land disturbance, or placement of fill within the RPA features listed above requires the approval of the locality and may require an exception or variance from the local Bay Act ordinance. Please contact the appropriate local government to determine the types of development or land uses that are permitted within RPAs.

Pursuant to 9VAC25-830-110, on-site delineation of the RPA is required for all projects in CBPAs. Because USGS maps are not always indicative of actual "in-field" conditions, they may not be used to determine the site-specific boundaries of the RPA.

Notes for shoreline erosion control projects in RPAs

Re-establishment of woody vegetation in the buffer will be required by the locality to mitigate for the removal or disturbance of buffer vegetation associated with your proposed project. Please contact the local government to determine the mitigation requirements for impacts to the 100-foot RPA buffer.

Part 5 - Chesapeake Bay Preservation Act Information (continued)

Pursuant to 9VAC25-830-140 5 a (4) of the Virginia Administrative Code, shoreline erosion projects are a permitted modification to RPAs provided that the project is based on the "best technical advice" and complies with applicable permit conditions. In accordance with 9VAC25-830-140 1 of the Virginia Administrative Code, the locality will use the information provided in this Part V, in the project drawings, in this permit application, and as required by the locality, to make a determination that:

1. Any proposed shoreline erosion control measure is necessary and consistent with the nature of the erosion occurring on the site, and the measures have employed the "best available technical advice"
2. Indigenous vegetation will be preserved to the maximum extent practicable
3. Proposed land disturbance has been minimized
4. Appropriate mitigation plantings will provide the required water quality functions of the buffer (9VAC25-830-140 3)
5. The project is consistent with the locality's comprehensive plan
6. Access to the project will be provided with the minimum disturbance necessary.

Part 2 - Signatures

1. Applicants and property owners (if different from applicant).
NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, U.S. Army Corps of Engineers, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.

In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

CONTRACTOR ACKNOWLEDGEMENT

I (we), M Keith Hodges, have contracted ReadyReef Inc
(Applicant's Name(s)) (Contractor's Name(s))
to perform the work described in this Joint Permit Application, signed and dated

We will read and abide by all conditions set forth in all Federal, State and Local permits as required for this project. We understand that failure to follow the conditions of the permits may constitute a violation of applicable Federal, state and local statutes and that we will be liable for any civil and or criminal penalties imposed by these statutes. In addition, we agree to make available a copy of any permit to any regulatory representative visiting the project to ensure permit compliance. If we fail to provide the applicable permit upon request, we understand that the representative will have the option of stopping our operation until it has been determined that we have a properly signed and executed permit and are in full compliance with all terms and conditions.

Attachment 7: Flood Prevention Project and its Relevance to Other Projects

MPPDC staff have worked throughout the years to understand the policy, research and impacts of flooding (ie. stormwater, coastal, riverine, sea level rise) and coastal resiliency to the region. Below is a list of projects that have built upon each other over the year that have contributed to our understanding.

Climate Change & Sea Level Rise (2009 to 2012)

The MPPDC was funded for a 3 Phase project through the Virginia Coastal Zone Management Program to assess the impacts of climate and sea level rise throughout the region. With over 1,000 miles of linear shoreline, the Middle Peninsula has a substantial amount of coast under direct threat of accelerated climate change and more specifically sea-level. In Phase 1, MPPDC staff assessed the potential anthropogenic and ecological impacts of climate change. Phase 2 focused on the facilitating presentations and develop educational materials about sea level rise and climate change for the public and local elected officials. Finally Phase 3 focused on developing adaptation public policies in response to the assessments.

Phase 1: Middle Peninsula Climate Change Adaptation: Facilitation of Presentations and Discussions of Climate Change Issues with Local Elected Officials and the General Public
Phase 2: Climate Change III: Initiating Adaptation Public Policy Development
Phase 3: Phase 3 Climate Change: Initiating Adaptation Public Policy Development

Emergency Management - Hazard Mitigation Planning (2009 to Present): Since 2009, the Middle Peninsula Planning District Commission has assisted regional localities in meeting the federal mandate to have an adopted local hazard plan. *The Regional All Hazards Mitigation Plan addresses the natural hazards prone to the region, including hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, and earthquakes. This plan also consists of a Hazus assessment of hurricane wind, sea level rise* (ie. Mean High Higher Water and the NOAA 2060 intermediate-high scenario), *and flooding (coastal and riverine flooding) that estimates losses from each hazard.* The Middle Peninsula All-Hazard Mitigation Plan Update 2021 is currently being updated. The 2021 All Hazards Mitigation Plan builds off and updates previous mitigation plans.

Land and Water Quality Protection (2014): In light of changing Federal and State regulations associated with Bay clean up-nutrient loading, nutrient goals, clean water, OSDS management, storm water management, TMDLs, etc, staff from the Middle Peninsula Planning District Commission (MPPDC) will develop a rural pilot project which aims to identify pressing coastal issue(s) of local concern related to Bay clean up and new federal and state legislation which ultimately will necessitate local action and local policy development. Staff has identified many cumulative and secondary impacts that have not been researched or discussed within a local public policy venue. Year 1-3 will include the identification of key concerns related to coastal land use management/water quality and Onsite Sewage Disposal System (OSDS) and

community system deployment. Staff will focus on solution based approaches, such as the establishment of a regional sanitary sewer district to manage the temporal deployment of nutrient replacement technology for installed OSDS systems, assessment of land use classifications and taxation implications associated with new state regulations which make all coastal lands developable regardless of environmental conditions; use of aquaculture and other innovative approaches such as nutrient loading offset strategies and economic development drivers.

Department of Conservation and Recreation Stormwater Management (2014)
The Virginia General Assembly created a statewide, comprehensive stormwater management program related to construction and post-construction activities (HB1065 - Stormwater Integration). The Virginia Department of Conservation and Recreation requires stormwater management for projects with land disturbances of one acre or more. This new state mandate requires all Virginia communities to adopt and implement stormwater management programs by July 1, 2014, in conjunction with existing erosion and sediment control programs. Additionally, the communities within the MPPDC are required to address stormwater quality as stipulated by the Chesapeake Bay TMDL Phase II Watershed Implementation Plan and the Virginia Stormwater Regulations. The MPPDC Stormwater Program helped localities develop tools specific to the region necessary to respond to the state mandate requirement for the development of successful stormwater programs.

Stormwater Management-Phase II (2014): MPPDC staff and Draper Aden Associates worked with localities (i.e. Middlesex, King William, and Mathews Counties and the Town of West Point) interested in participating in a Regional Stormwater Management Program. While each locality sought different services from the regional program, this project coordinated efforts, developed regional policies and procedures, and the proper tools to implement a regional VSMP.

Mathews County Rural Ditch Enhancement Study (2015): In contract with Draper Aden Associates, a comprehensive engineering study was developed to provide recommendations and conceptual opinions of probable costs to improve the conveyance of stormwater and water quality through the ditches in Mathews County.

Drainage and Roadside Ditching Authority (2015): This report explored the enabling mechanism in
which a Regional Drainage and Roadside Ditching Authority could be developed. An Authority would be responsible for prioritizing ditch improvement needs, partnering with Virginia Department of Transportation (VDOT) to leverage available funding, and ultimately working toward improving the functionality of the region's stormwater conveyance system.

Living Shoreline Incentive Program (2016 to present)
In 2011 Virginia legislation was passed designating living shorelines as the preferred alternative for stabilizing Virginia tidal floodplain shorelines. The Virginia Marine Resources Commission, in cooperation with the Virginia Department of Conservation and Recreation and with technical

assistance from the Virginia Institute of Marine Science (VIMS), established and implemented a general permit regulation that authorizes and encourages the use of living shorelines however, no financial incentives were put in place to encourage consumers to choose living shorelines over traditional hardening projects in the Commonwealth. To fill this, need the MPPDC developed the MPPDC Living Shoreline Incentives Program to offer loans and/or grants to private property owners interested in installing living shorelines to stabilize their shoreline. Currently, loans are available to assist homeowners to install living shorelines on suitable properties. Loans up to $10,000 can be financed for up to 5 years (60 months). Loans over $10,000 can be financed for up to 10 years (120 months). Interest is at the published Wall Street Journal Prime rate on the date of loan closing - currently at 5.25% (11/29/18). Minimum loan amount is $1,000. Maximum determined by income and ability to repay the loan. Finally, there are currently no grants available in this program. Since 2016 under the MPPDC Living Shoreline Revolving Loan program, 8 living shorelines have been financed and built to date encumbering ~$500,000 in VRA loan funding and ~$400,000 in NFWF grant funding. Living Shoreline construction cost to date range per job $14,000- $180,000. MPPDC oversees all aspects (planning, financing, constriction, and loan servicing) of these projects from cradle to grave.

Mathews County Ditch Project - VCPC White Papers (2017): This report investigated the challenges presented by the current issues surrounding the drainage ditch network of Mathews County. The study summarized research conducted in the field; examined the law and problems surrounding the drainage ditches; and proposed some next steps and possible solutions.

Mathews County Ditch Mapping and Database Final Report (2017): This project investigated roadside ditch issues in Mathews County through mapping and research of property deeds to document ownership of ditches and outfalls. This aided in understanding the needed maintenance of failing ditches and the design of a framework for a database to house information on failing ditches to assist in the prioritization of maintenance needs.

Virginia Stormwater Nuisance Law Guidance (2018): This report was developed by the Virginia Coastal Policy Center to understand the ability of a downstream recipient of stormwater flooding to bring a claim under Virginia law against an upstream party, particularly a nuisance claim. The report summarizes how Virginia courts determine stormwater flooding liability between two private parties.

Oyster Bag Sill Construction and Monitoring at Two Sites in Chesapeake Bay (2018): VIMS Shoreline Studies Program worked with the PAA to (1) install oyster bag sills as shore protection at two PAA sites with the goal of determining effective construction techniques and placement guidelines for Chesapeake Bay shorelines and (2) assess the effectiveness for shore protection with oyster bags on private property through time.

Fight the Flood Program (2020): The Fight the Flood was launched in 2020 to connect property owners to contractors who can help them protect their property from rising flood waters. FTF also offers a variety of financial tools to fund these projects including but limited to the Septic

Repair revolving loan program, Living Shoreline incentives revolving loan fund program, and plant insurance for living shorelines.

Attachment 8: Project cost estimates

Item					
Demolition	F. Hodge			M.K. Hodge	
Bulkhead removal/haul away	$ 2,000.00			$ 1,000.00	
Overall labor	$ 3,097.38	$ 5,097.38		$ 1,615.13	$ 2,615.13
Prep Work	$ -			$ -	
Excavator rental for 2 wks	$ 5,025.00			$ 2,475.00	
Contracted Excavator Operator	$ 3,216.00			$ 1,584.00	
Skid Steer Rental for 2 wks	$ 1,340.00			$ 660.00	
Overall labor	$ 3,097.38	$ 12,678.38		$ 1,615.13	$ 6,334.13
Installation Work	$ -			$ -	
Flexamat	$ 32,562.00			$ 16,038.00

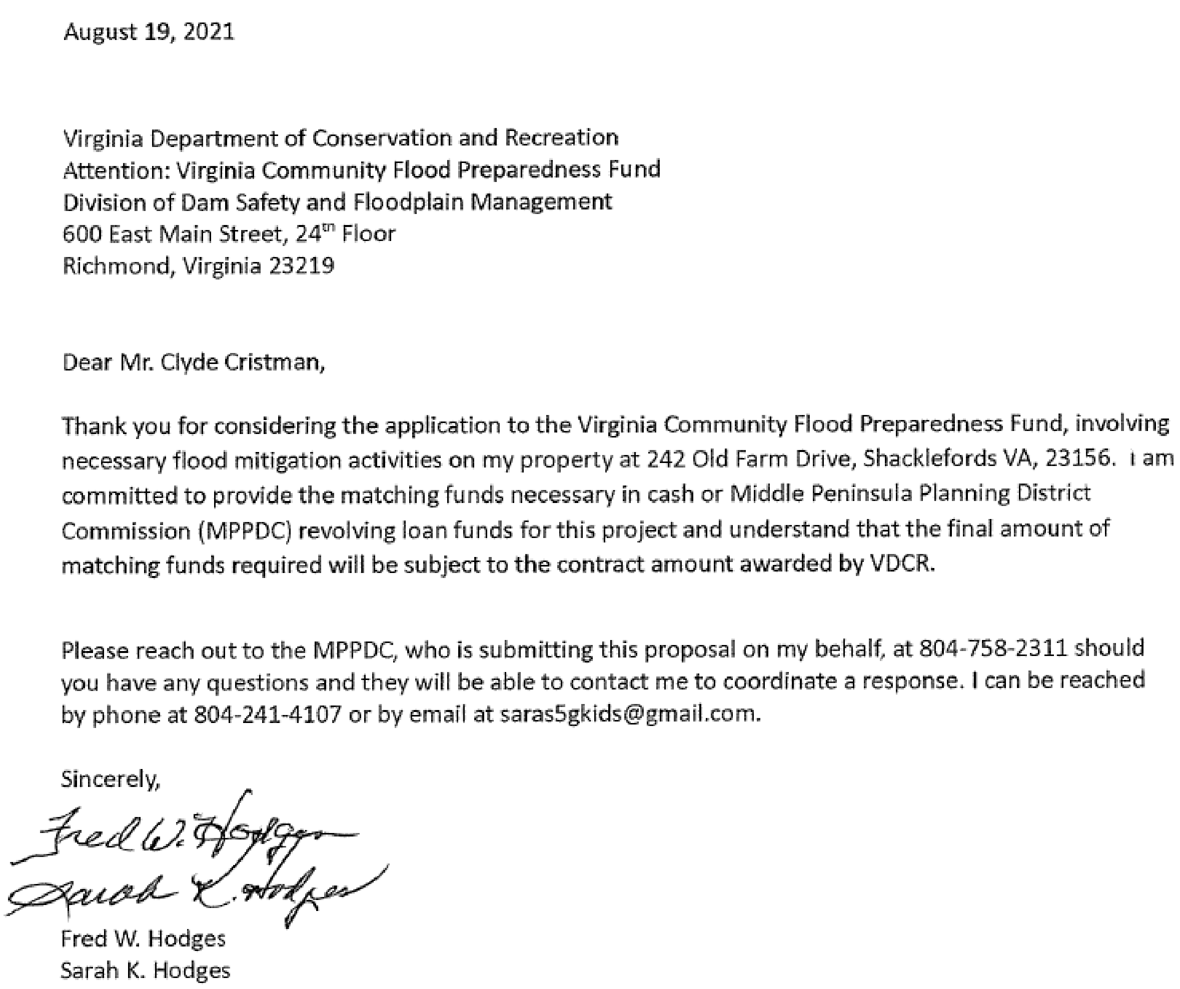
Attachment 9: Match Commitment Letters



August 19, 2021

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Mr. Clyde Cristman,

Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at 242 Old Farm Drive, Shacklefords VA, 23156. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response. I can be reached by phone at 804-241-4107 or by email at saras5gkids@gmail.com.

Sincerely,

Fred W. Hodges

Dear Mr. Clyde Cristman,

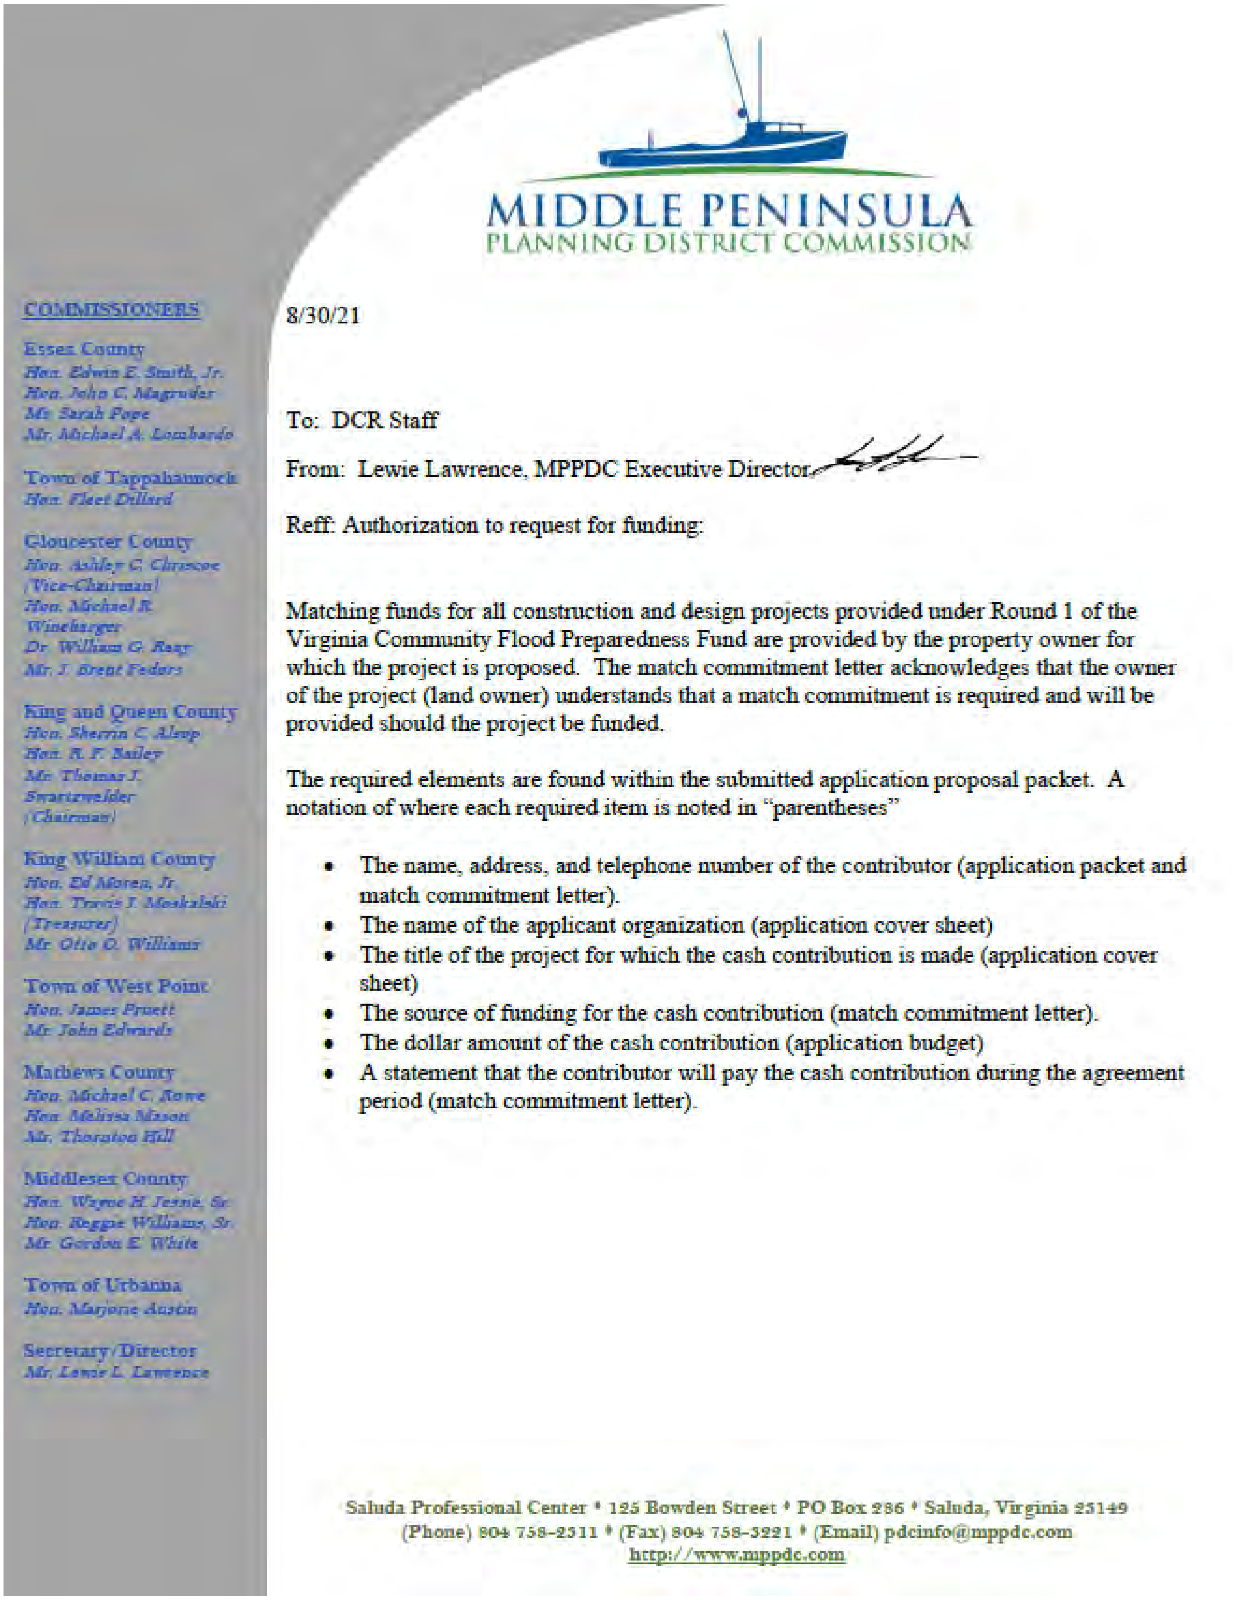
Thank you for considering the application to the Virginia Community Flood Preparedness Fund, involving necessary flood mitigation activities on my property at [property address]. I am committed to provide the matching funds necessary in cash or Middle Peninsula Planning District Commission (MPPDC) revolving loan funds for this project and understand that the final amount of matching funds required will be subject to the contract amount awarded by VDCR.

Please reach out to the MPPDC, who is submitting this proposal on my behalf, at 804-758-2311 should you have any questions and they will be able to contact me to coordinate a response

Sincerely,

Keith Hodges

Attachment 10: Authorization to request for funding



MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

8/30/21

To: DCR Staff

From: Lewie Lawrence, MPPDC Executive Director

Reff: Authorization to request for funding:

Matching funds for all construction and design projects provided under Round 1 of the Virginia Community Flood Preparedness Fund are provided by the property owner for which the project is proposed. The match commitment letter acknowledges that the owner of the project (land owner) understands that a match commitment is required and will be provided should the project be funded.

The required elements are found within the submitted application proposal packet. A notation of where each required item is noted in "parentheses"

- The name, address, and telephone number of the contributor (application packet and match commitment letter).
- The name of the applicant organization (application cover sheet)
- The title of the project for which the cash contribution is made (application cover sheet)
- The source of funding for the cash contribution (match commitment letter).
- The dollar amount of the cash contribution (application budget)
- A statement that the contributor will pay the cash contribution during the agreement period (match commitment letter).

CITY OF SUFFOLK

P.O. BOX 1858, SUFFOLK, VIRGINIA 23439-1858 PHONE: (757) 514-4012

CITY MANAGER

April 6, 2022

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Sir or Ma'am:

Please accept this written correspondence as signed documentation authorizing the City of Suffolk's request for funding from Round 3 of the 2022 Virginia Community Flood Preparedness Fund (CFPF).

The CFPF funding would enable the City of Suffolk to conduct an updated study to the Kimberly Bridge Feasibility Study. The cost of the proposed study is $298,747.16. Following the 90% Fund/10% Match requirements for this category, the City respectfully requests funding from the CFPF in the amount of $268,872.44. Furthermore, the City will provide the 10% matching contribution from the Public Works Professional Services budget, in the amount of $29,874.72

Thank you for your consideration of this grant proposal. If you have any questions about this proposal please contact Matt Fanghella at 757-514-7675 or mfanghella@suffolkva.us or Heather Baggett at 757-514-7627 or hbaggett@suffolkva.us.

Sincerely,

Albert S Moor II

Albert S. Moor, II P.E.

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes **X** No

Categories (select applicable project):

Project Grants (Check All that Apply)

☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.

☐ Wetland restoration.
☐ Floodplain restoration.
☐ Construction of swales and settling ponds.
☐ Living shorelines and vegetated buffers.
☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
☐ Storm water system upgrades.
☐ Medium and large scale Low Impact Development (LID) in urban areas.
☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
☐ Dam restoration or removal.
☐ Stream bank restoration or stabilization.
☐ Restoration of floodplains to natural and beneficial function.
☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Study Grants (Check All that Apply)

☐ Studies to aid in updating floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.

☐ Revising other land use ordinances to incorporate flood protection and mitigation goals, standards and practices.

X Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA). For example, a local government might conduct a hydrologic and hydraulic study for an area that had not been studied because the watershed is less than one square mile. Modeling the floodplain in an area that has numerous letters of map change that suggest the current map might not be fully accurate or doing a detailed flood study for an A Zone is another example.

X Studies and Data Collection of Statewide and Regional Significance.

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard.

X Other relevant flood prevention and protection project or study.

Capacity Building and Planning Grants

☐ Floodplain Staff Capacity.

☐ Resilience Plan Development

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.

  ☐ Resource assessments, planning, strategies and development.
    - Policy management and/or development.
    - Stakeholder engagement and strategies.

Location of Project (Include Maps): Suffolk, Virginia

NFIP Community Identification Number (CID#): (See appendix F 510156

Is Project Located in an NFIP Participating Community? **X** Yes ☐ No

Is Project Located in a Special Flood Hazard Area? **X** Yes ☐ No

Flood Zone(s) (If Applicable): Zone AE

Flood Insurance Rate Map Number(s) (If Applicable): 5101560227E

Total Cost of Project: $ 298,747.16

Total Amount Requested: $ 268,872.44

Appendix C: Scoring Criteria for Studies

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	**City of Suffolk, Virginia**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	**X**
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	
No	Eligible for consideration for studies, capacity building, and planning only	**X**
3. If the applicant is not a town, city, or county, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	**N/A**
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	**X**
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	**X**
No	Not eligible for consideration	
N/A	Match not required	

Studies Eligible for Consideration	**x Yes** **☐ No**
Applicant Name:	**City of Suffolk, Virginia**

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Studies (Select all that apply)		
Revising floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.	**30**	
Creating tools or applications to identify, aggregate, or display information on flood risk or creating a crowd-sourced mapping platform that gathers data points about real-time flooding. This could include a locally or regionally based web-based mapping product that allows local residents to better understand their flood risk.	**15**	
Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA).	**35**	**35**
Studies and Data Collection of Statewide and Regional Significance. Funding of studies of statewide and regional significance and proposals will be considered for the following types of studies:		
☐ Updating precipitation data and IDF information (rain intensity, duration, frequency estimates) including such data at a sub-state or regional scale on a periodic basis.	**45**	
☐ Regional relative sea level rise projections for use in determining future impacts.	**45**	
☐ Vulnerability analysis either statewide or regionally to state transportation, water supply, water treatment, impounding structures, or other significant and vital infrastructure from flooding.	**45**	**45**
☐ Flash flood studies and modeling in riverine regions of the state.	**45**	
☐ Statewide or regional stream gauge monitoring to include expansion of existing gauge networks.	**45**	

☐ New or updated delineations of areas of recurrent flooding, stormwater flooding, and storm surge vulnerability in coastal areas that include projections for future conditions based on sea level rise, more intense rainfall events, or other relevant flood risk factors.	**45**	
☐ Regional flood studies in riverine communities that may include watershed-scale evaluation, updated estimates of rainfall intensity, or other information.	**50**	
☐ Regional hydrologic and hydraulic studies of floodplains.	**45**	
☐ Studies of potential land use strategies that could be implemented by a local government to reduce or mitigate damage from coastal or riverine flooding.	**40**	**40**
☐ Other proposals that will significantly improve protection from flooding on a statewide or regional basis	**35**	**35**
7. Is the study area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	**12**
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed study part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	**0**
9. Is the proposed study in a low-income geographic area as defined in this manual?		
Yes	**10**	**10**
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and the Chesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices with a nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	
No	**0**	**0**
Total Points		**177**

City of Suffolk – Department of Public Works
2022 Virginia Community Flood Preparedness Fund Grant Round 3
Update to Kimberly Bridge Feasibility Study

Part IV

A. Scope of Work Narrative – Studies

The City of Suffolk is submitting this grant application to the Virginia Community Flood Preparedness Fund in the Study category. Specifically, the City is requesting funding to partially fund an updated study of the Kimberly Bridge Feasibility Study.

1. Type of Study and Details of the Study

For several decades, there has been a recurring flooding problem on North Main Street (U.S. Route 32/U.S. Route 460 Business) at the Kimberly Bridge that crosses the Nansemond River in the downtown area of Suffolk. This flooding occurs during large rain events, but flooding also occurs during dry weather as a result of wind-driven, high tides in the Nansemond River. Storm drains on the eastern and western sides of North Main St. north of the Kimberly Bridge discharge stormwater from the roadway to the river, via a network of underground drainage pipes. When tides are high enough, river water enters the pipes causing it to overtop the storm drains and flood the roadway on North Main Street. Often the water is high enough to flood the entire roadway, preventing passage of vehicle and pedestrian traffic. This is of great concern to many Suffolk citizens, as this is a major thoroughfare for vehicle traffic from southern Suffolk to the North Main Street area that is home to many integral businesses, such as grocery stores, gas stations, banks, restaurants, doctor's offices, and specifically Walmart and Lowes. Additionally, the Kimberly Bridge serves as a major route for emergency vehicles to Sentara Obici Hospital, which serves both Suffolk residents as well as residents from northeast North Carolina who rely on this critical infrastructure as their closest medical facility. When this part of North Main Street is impassable, the alternate routes along Portsmouth Blvd, Route 58, Pitchkettle Road, and Wilroy Road often see back-ups of several miles, which can be further exacerbated during peak travel times. Occasionally flooding of the Kimberly Bridge area results in flooding of adjacent properties and businesses. These include a gas station and an automotive service center, both of which have the potential to immediately contaminate the Nansemond River when flooded. The most recent large flooding event in this area occurred on January 3rd, 2022, as a result of a combination of heavy rain, high tides, and windy conditions (see attached photos). During this event there was a release of petroleum product from the automotive service center into the Nansemond River. See attached photos of flooding during the January 3, 2022 event, during Hurricane Matthew in October 2016, and during Hurricane Sandy in October 2012, which are just a few examples of severe and recurrent flooding in this area.

The City of Suffolk is seeking CFPF grant funding to develop a new and updated study of the Kimberly Bridge flooding issue and plans to contract with the engineering consultant Moffatt and Nichol to develop this study. In 2013, the City of Suffolk contracted the engineering firm, RK&K, to conduct a study to determine the cause of recurrent flooding in the Kimberly Bridge area and to develop recommendations for alleviating the flooding issues. The new study will focus more on resiliency by incorporating impacts associated with climate change and sea level rise that were not considered in the previous study. It will include conceptual design phase (10% design) engineering for raising the road and bridge along N. Main Street and the Kimberly Bridge for three (3) design alternatives. Field investigations will include planimetric and topographic mapping of the area, a bathymetric survey of the river, and a bridge survey to confirm existing conditions. Also, a drainage analysis of the area will be completed on the existing infrastructure, as well as a hydrologic and hydraulic analysis. The hydrologic and hydraulic analysis will include an analysis of the natural, existing, and proposed conditions of the project site. This will include an analysis of the impacts of each of three design scenarios, all of which will use a minimum finished grade elevation for the 100-year return period flood event with additional elevation to account for sea level rise and additional freeboard. A hydraulic model will be developed to compare the hydraulic effects of each alternative design with the existing conditions of the river. Additionally, the study will provide updates to construction and property acquisition costs and a Phase I Environmental Site Assessment to determine potential sources of contamination.

2. Benefit of the Study to Community Resilience

Several times per year, depending largely on wind-driven tides in the Nansemond River and also during large rain events, North Main Street immediately north of the Kimberly Bridge in Downtown Suffolk is completely inundated with water, to the point that it is impassable by vehicle traffic. This North Main Street route over the Kimberly Bridge is a major thoroughfare utilized by many residents of Suffolk, connecting southern Suffolk to North Main Street which is the location of many businesses and residences. Also, North Main Street serves as a primary route to Sentara Obici Hospital, for both Suffolk residents and residents of North Carolina who live near the North Carolina – Virginia state line. This portion of North Main Street is one of the most heavily traveled arterial roadways in the city, experiencing an Annual Average Daily Traffic Volume (AADT) of 26,000 vehicles per the 2020 Virginia Department of Transportation Daily Traffic Volume Estimates. This is also a popular route for Suffolk's public transportation system, Suffolk Transit, which enables lower income and disabled residents to reach everyday destinations such as jobs, schools, healthcare, and grocery stores.

While a study of this flooding issue was conducted in 2013, it did not incorporate future impacts from sea level rise and climate change. It considered design alternatives for the 25 and 50-year flood elevations, and these design scenarios do not alleviate the current flooding nor do they mitigate the risk from future flooding. The new study will focus more on resiliency by incorporating future impacts from sea level rise and climate change. All three design alternatives will use a minimum finished grade elevation for the 100-year return period flood event with additional elevation to account for sea level rise and additional freeboard. Additionally, all design alternatives in the new study will increase the hydraulic opening beneath the Kimberly Bridge to prevent future flooding of the bridge and allow larger boats to travel beneath the bridge, which is especially important for emergency boat access, as well as recreational boating activity.

The new study will also include a Phase I Environmental Site Assessment to identify any potential environmental contamination in the area. The Nansemond River is immediately adjacent to the project area, and flood waters directly impact the river. In close proximity to the bridge is a gas station and an automotive service center, which both pose an immediate threat to the Nansemond River when this area floods. Preventing flooding of North Main Street could improve the water quality in the Nansemond River by minimizing potential contamination by receding floodwaters and minimizing the inundation of sewer infrastructure, sewer backups, and overflows. Residents of all income classes enjoy the aesthetic beauty of the river as well as the recreational aspects that include fishing, boating, and kayaking. Minimizing flooding in the area will help preserve the fish and wildlife that thrive in the Nansemond River.

The City plans to convert any properties acquired through the Kimberly Bridge project into green space and/or public outdoor recreational areas. Simultaneously, the Suffolk Parks and Recreation department has plans under development to turn the City-owned area immediately northeast of the Kimberly Bridge into a park with a living shoreline along the riverfront portion of the parcel. This is a nature-based solution that will mitigate flooding and provide a recreational area for Suffolk's citizens, increasing access and enjoyment of the Nansemond River.

Furthermore, the median household income in the study area is $63,386, which is less than 80% of the median household income for the City of Suffolk of $79,899, as identified by Census.gov from 2016 – 2020 data. Hence, the study area meets the definition of a "low-income geographic area" as defined by the *2022 Virginia Community Flood*

Preparedness Fund Round 3 Grant Manual. The adaptation and protection efforts identified by this study will work to enhance equity throughout the project area, which is a key Commonwealth Resilience Planning Principle.

3. Qualifications

The Kimberly Bridge Feasibility Study and grant award will be managed by the City of Suffolk Public Works Engineering Division. Public Works Engineering staff members have a strong knowledge of the City's stormwater system, work with flooding and drainage concerns within the city on a daily basis, and lead resiliency initiatives in the City. Furthermore, two staff members are in training to earn their Certified Floodplain Manager (CFM) Certifications. The City's consultant, Moffatt and Nichol, will conduct this study under the direction of the consultant's Project Manager who is a licensed Professional Engineer (P.E.) with over fourteen years of experience in municipal and state bridge inspection and engineering services. Moffatt and Nichol is a leading engineering-firm in bridge design and resiliency in the region.

4. Objectives of the Study and Regional Resilience

The objectives of the Kimberly Bridge study include:

- Identifying the cause of flooding in this area
- Identifying potential flood protection and flood reduction projects within this area with the following goals:
    - Reduce flooding of the North Main Street and Kimberly Bridge area so that vehicle traffic will be inhibited less frequently, which also allows passage of critical emergency traffic and personnel to Sentara Obici Hospital.
    - Increase resiliency of Suffolk's roadways by incorporating impacts of sea level rise and climate change, raising the project area to the 100-year flood elevation, at a minimum.
    - Reduce flooding of critical infrastructure, ultimately reducing pollution to the Nansemond River.
    - Reduce flooding of properties that have the potential to contaminate the environment, protecting fish and wildlife habitat in the Nansemond River and preserving the recreational benefits of the river that include fishing, boating, and kayaking.
    - Increase the hydraulic opening beneath the Kimberly Bridge to prevent flooding of the bridge and allow larger boats to travel beneath the bridge (for emergency access and recreational use).

The City of Suffolk Public Works Department will vet the proposed design alternatives identified as part of this study. The results of this study will be incorporated into the City-wide Resilience Plan. The flooding issue at the North Main Street crossing of the Nansemond River is also described in the City of Suffolk's May 2004 Stormwater Master Plan (available upon request). Funding for further design and construction of identified design alternatives would be sought through the City's Capital Improvement Plan (CIP) as well as grant programs such as Virginia Department of Conservation and Recreation Community Flood Preparedness Fund, the Federal Emergency Management Building Resilient Infrastructure and Communities Grant, and Virginia Department of Transportation funding sources.

The City of Suffolk, with the assistance of Timmons Group, developed a survey with resilience-based questions that was made available to the public from March 1, 2022 through March 31, 2022. The purpose of the survey was to receive input from citizens to guide projects for the Resilience Plan that is currently under development. In the survey, a total of 84 of 123 survey respondents noted Main Street as a street they travel on that floods. In addition, there was an overwhelming response to the survey on social media, where many residents expressed their frustration with the flooding on N. Main Street.

Improvements to the Kimberly Bridge and the reduction of flooding on N. Main Street will positively impact many communities within Suffolk as well as neighboring communities in northeast North Carolina. This is a main thoroughfare for residents to reach necessities such as grocery stores, banks, gas stations, doctor's offices, schools, etc., and a main route to Sentara Obici Hospital, as well as a hurricane evacuation route. This portion of North Main Street is one of the most heavily traveled arterial roads in the city, experiencing an Annual Average Daily Traffic Volume (AADT) of 26,000 vehicles per the 2020 Virginia Department of Transportation Daily Traffic Volume Estimates. This study will also result in more resilient utility infrastructure and identify opportunities to reduce the impacts of flooding on utility infrastructure within the study corridor.

Throughout the rest of Hampton Roads and the Commonwealth of Virginia, many communities face challenges of infrastructure flooding and tidal influence coupled with sea level rise. The proposed study may provide best practices that could be used as case studies in other settings of this type, while also providing a framework for studies focused on targeted infrastructure flood resilience problems. The City is an active participant on several Hampton Roads Planning District Commission (HRPDC) Committees including The Coastal Resiliency Committee, The Regional Stormwater Workgroup, and The Regional Environmental Committee. The City is also an active participant in the Hampton Roads Transportation Planning Organization (HRTPO) and its sub-committees. City staff are willing to share the results and findings of this study with peers and colleagues from other localities to use as a template for studies in their communities, if they see a benefit and/or need.

5. Statewide Context

The study funded by this grant will improve Virginia's flood protection and prevention capabilities, from a transferability and statewide context. Communities across the Commonwealth face the challenges of infrastructure flooding and tidal influence coupled with sea level rise. The proposed study may provide best practices that could be used as case studies in other settings of this type, while also providing a framework for studies focused on targeted infrastructure flood resilience problems.

D. Budget Narrative – All Grant Categories

The median household income in the study area of zip code 23434 is $63,386, which is less than 80% of the median household income for the City of Suffolk, as identified by Census.gov from 2016 – 2020 data. Hence, the study area meets the definition of a "low-income geographic area" as defined by the *2022 Virginia Community Flood Preparedness Fund Round 3 Grant Manual*. As a result, the City of Suffolk is seeking funding support for 90% of the proposed Finney Outfall to Nansemond River Drainage Study.

The total cost for the proposed study is $298,747.16 According to the guidance outlined in the DCR 2022 Round 3 Grant Manual for the Virginia Community Flood Preparedness Fund, grant matching requirements for the Flood Prevention and Protection studies that are located in and serve a low-income geographic area are eligible for a Fund 90% / Match 10% ratio. Therefore, the City respectfully requests financial assistance from the Fund in the amount of $268,872.44 and the City is committing to fund the remaining $29,874.72 via the Stormwater Utility Fund from the Professional Services line of the annual operating budget for Public Works Engineering. Evidence of the City of Suffolk's ability to obtain these funds to partially fund the proposed study is found on Page 243 of the City of Suffolk FY 2021-2022 Adopted Operating and Capital Budget, which can be found on the City website at the following link: https://www.suffolkva.us/DocumentCenter/View/5717/FY-2021-2022-Adopted-Operating-and-Capital-Budget A summary of the financial costs for the proposed study is shown in Table 1, below.

All match funding will be used towards consultant work to complete the study, along with the $29,874.72 of contributed City funds. In addition to the direct funding included as a match, the City of Suffolk also commits to managing all aspects of project management using existing qualified staff. A detailed breakdown of how the proposed funding for the Kimberly Bridge Feasibility Study will be used is shown in the Table included in the Moffatt and Nichol Scope of Work and Fee documents, attached to this application. Furthermore, signed documentation from the City Manager authorizing the request for funding is included with this application.

Table 1. Costs for Kimberly Bridge Feasibility Study

Flood Prevention and Protection Studies in Low-Income Geographic Areas - Fund 90% / Match 10%			
Item	**Total**	**Request from Grant Fund**	**Match**
Kimberly Bridge Feasibility Study	$ 298,747.16	$ 268,872.44	$ 9,874.72
Total Project Cost:			$ 298,747.16
Amount of funds requested from the Fund			**$ 268,872.44**
Amount of contribution by City:			$ 29,874.72

Mr. Matt Fanghella, EIT
Civil Engineer II - Stormwater
City of Suffolk – Public Works Engineering

RE: Work Order Proposal: North Main Street at Kimberly Bridge Feasibility Study

Dear Mr. Fanghella:

Pursuant to your request, Moffatt & Nichol (M&N) presents this proposal for evaluating alternatives to reduce impacts from current and future flooding of North Main Street in the vicinity of Kimberly Bridge. The primary purpose of this work order is to study the conditions at and around the bridge to determine the cause and extent of the flooding issues and to develop alternative recommendations for address these issues. This proposal will consider three water level events to aid in development of three structural/roadway design alternatives. In order to complete this conceptual work and analysis the M&N team will collect limited topographic and hydrographic survey data along the Kimberly Bridge corridor between US 58 Business Route and north of the Kimberly Bridge as detailed below. The survey data will provide documentation of existing conditions, and that data will continue to be utilized in future development (under future work orders) of more detailed engineering design and preparation of construction documents.

If you should have any questions or need additional information, please do not hesitate to contact Jousha Hill or myself at (757) 628-8222. We look forward to providing these services to the City and we thank you for the opportunity to assist.

Sincerely,
MOFFATT & NICHOL

Ira Brotman, P.E.
Vice President

Attachments:

- Scope of Work

Background

North Main Street (US Route 32) is a primary route for residents of the southern portions of Suffolk and serves as a critical connector for all residents requiring access to Sentara OBICI Hospital. Currently, a segment of North Main Street between Constance Road and just north of the North Main Street Bridge (Kimberly Bridge) shown in Figure 1 is prone to significant flooding during rain and tidal events. **These conditions make it impossible to drive through safely, delaying commutes and slowing down emergency response times.**

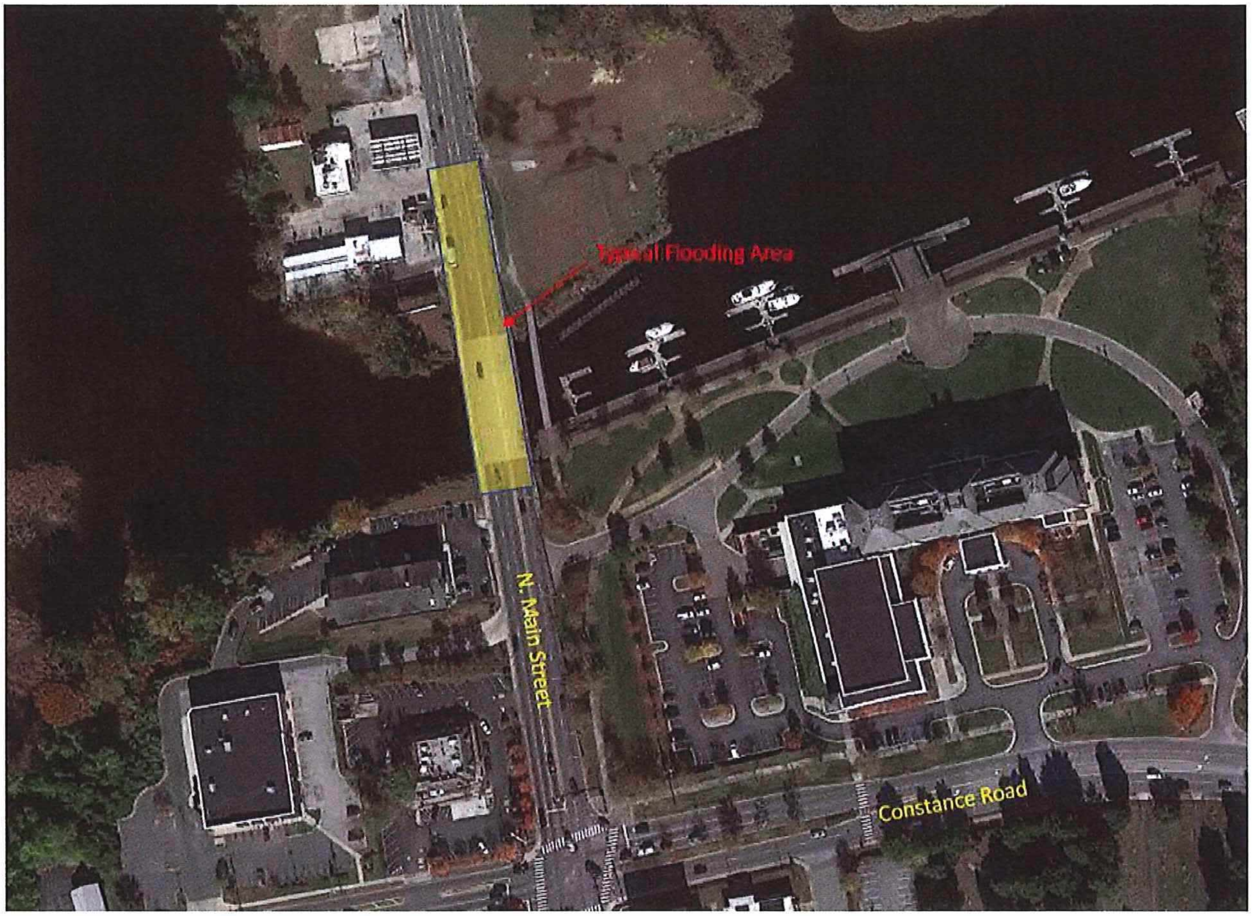

Figure 1 – North Main Street Segment

With the continual increase in frequency and magnitude of rain events in addition to the increase in tidal flooding from sea level rise, M&N has been tasked to develop a sustainable flood mitigation strategy, improving the community's resiliency, for this roadway segment of North Main Street.

Scope of Services

The scope of services included in this work order are organized into the following tasks :

Task 1 – Meetings and Project Management
Task 2 – Review Existing Documentation

Task 3 – Field Investigations
Task 4 – Basis for Feasibility Study
Task 5 – Hydrologic, Hydraulic and Drainage Analyses
Task 6 – Establish Alternatives
Task 7 – Develop Conceptual Design of Alternatives
Task 8 – Conceptual Design Technical Memorandum

Task 1 – Meetings and Project Management

Task 1 includes the unifying coordination, engagement, project management, and quality management tasks necessary for successful development of conceptual designs and the required analysis and reporting necessary to support the City's various goals for this phase of project development.

Task 2 – Review Existing Documentation

Task 2 includes reviewing the following documents:

- Original request for Kimberly Bridge Feasibility Study Reports
    - Phase I Report: Drainage & Bridge Analysis dated July 25, 2013
    - Phase 2 Report: August 13, 2013
    - Phase 3 Report: Property Acquisition
- Review existing roadway and bridge plans, inspection reports, etc.
- 2015 effective FEMA Flood Insurance Study (FIS) report and Flood Insurance Rate Map (FIRM) information

Task 3 – Field Investigations

Summary: Task 3 includes gathering additional field data necessary to confirm existing conditions in the project area that may constrain the spatial limits, sizes or effective capacity of features included in the project design. As described below, field data collected within the limits of the project area will include survey of upland topography, river bed bathymetric survey, bridge structure geometry, surface feature and drainage infrastructure information, along with utility alignments marked by "VA811." Field data gathered will continue to be useful during more detailed design phases of project development that would occur under separate, future scopes of work. Depending on the selected project alternative, additional survey data and other field investigations may be needed in subsequent design phases.

Topographic, Bathymetric, and Bridge Survey. Precision Measurements Inc. (PMI) will provide a topographic survey file, in Microstation format and hard copy sheets, sealed, signed and dated by a licensed Professional Land Surveyor.

Planimetric and topographic mapping shall be captured throughout the project limits from the US Route 58 (Constance Road) / Main Street intersection to 1,500 linear feet (LF) north of the Kimberly

Bridge. The survey effort will include property research, establishing horizontal and vertical control and property ties, and survey and mapping of planimetric features such as buildings and paved surfaces; trees and other above-ground site features; storm drain structures, ditches and swales; utilities as marked by "VA811" Utility Designation; and topographic cross-sections and spot elevations.

Bathymetric survey (cross sections) shall include channel survey of a reach covering approximately 3000 LF upstream and 3000 LF downstream at predetermined locations appropriate for building the HEC-RAS hydraulic model described in Task 5.

Bridge survey shall include high chord, low chord, rail type/height/survey shots, pier type/size/location/spacing, abutments, and internal cross section on the upstream and downstream fascia.

A complete list of items included in the topographic survey is described in detail in PMI's scope and fee proposal, attached to this M&N work order proposal.

The horizontal datum for this project will be referenced to the Virginia State Plane Coordinate System, North American Datum of 1983 (NA2011). Measurements shall be based on the U.S. Survey foot. The vertical datum shall be referenced to the North American Vertical Datum of 1988 (NAVD 88).

Task 4 – Basis of Feasibility Study

Task 4 includes establishing a basis for the feasibility study. At a minimum this will consider the following:

- Water Level Events – (3 Events)
  The first two will be in accordance with the typical adopted VIMS and Hampton Roads Planning District events and include:

  1) 100-year return period with 1.5' Sea Level Rise
  2) 100-year return period with 3' Sea Level Rise.

  The third water level event will be in accordance with the following:

  3) VDOT Manual of The Structure and Bridge Division – Part 2 – Chapter 33 "Considerations of Climate Change and Coastal Storms" dated April 2021

- Magnitude of Sea Level Rise to be accounted for in the design water levels and project elevations
- Roadway – roadway configuration (number of lanes). Roadway elevation will match recommended bottom chord elevations based on water level events.

- Bridge – bridge configuration (number of lanes), rehab vs. replacement; see Task 6 for additional information on the three design alternatives. Alternatives will take into consideration water level events for bottom chord elevation.
- Drainage – storm design size
- H&H – see Task 5 for additional breakdown
- Utilities – identify potential utility impacts for improvements
- Property Acquisition – high level cost summary of property acquisitions for alterative options
- Pollution Control – identify high level potential pollutants that are a concern
- Traffic Impacts / MOT – high level phasing plan based on recommended alternatives
- Environmental (Regulations and Phase I) -
- Resiliency considerations - sea level rise, event frequencies, etc.

For each of the above noted items, assumptions will be identified based on discussions with the City in addition to being defined by the data captured in Tasks 2 and 3. Once these have been established, this information will assist in developing the approaches for the remaining tasks of the feasibility study. The above will be summarized in the Design Technical Memorandum detailed below.

Task 5 – Hydrologic, Hydraulic and Drainage Analyses

5.1 Drainage Study/Analysis. A drainage analysis of the area will be completed on the existing infrastructure. The focus will include:

1. Confirm the existing drainage areas and capacity of conveyance systems using City information (drainage area maps and GIS mapping).
2. Calculate the stormwater runoff for each drainage area to create runoff hydrographs, time of concentration and the acreage of each drainage area.
3. Route the existing conveyance systems for the 10-year storm event using the hydrodynamic method that takes tidal fluctuations into account. Routing results will be utilized in the evaluation of sustainable flood defense strategies and discussed further in Task 6.

5.2 Hydrologic & Hydraulic (H&H) Analyses. M&N Hydraulic Design staff will coordinate with M&N Roadway Design staff during the conceptual plan development for the water level events identified in Task 4 to verify decisions on the roadway grade made in this phase do not negatively impact the development of future design phases. Items of interest and input from the Hydraulic Design staff would be the need for bridge spread, hydraulic opening of the bridge, anticipated low chord, storm drainage, placement of cross pipes, and potential hydroplaning scenarios.

This also includes completing an H&H analysis of the natural, existing, and proposed conditions of the project site for the water level events identified in Task 4. The H&H analysis will investigate and document the impacts of the proposed crossing alternatives on flow velocities and water surface levels in the river from a coastal and riverine flooding control situation. The H&H analysis and results will be summarized in a technical memo.

Steps in the H&H for the bridge shall include:

1. M&N will obtain existing available information on the hydrology and hydraulics of the contributing drainage area to the project site. Currently, the Flood Insurance Study (FIS) dated for release August 3, 2015 shows the project is located in a FEMA AE Zone with a Stillwater elevation of 10.0'.
2. M&N will conduct a site visit, during which bank conditions, flow velocities, and normal creek water surface elevations will be investigated. Photographs of the site and overbank conditions will be taken for documentation.
3. M&N will develop a HEC-RAS hydraulic model of the natural and then the existing conditions of the river as a baseline with which to compare the hydraulic effects of the alternative bridge designs. The HEC-RAS model will be developed by M&N based on bridge and river survey data. The hydraulic model is expected to extend at least 3000 feet upstream and downstream of the project site. Riverine simulations will be run for water level events identified in Task 4. That same model will then be used and converted to an unsteady state model will be run to model the tidal fluctuations and storm surge for same water level events.
4. M&N will also simulate the proposed bridge alternatives in the HEC-RAS model. At the concept design phase, simulations will include bent spacing of the proposed crossings, to evaluate the hydraulic impacts. Long-term scour effects will be analyzed. Stream stability will also be studied and any necessary countermeasures will be designed. Model results, including water surface profile, flow velocities, and scour potential will be reported and compared with the results of the existing conditions model simulations.
5. Hydraulic impacts and scour calculations will be made with recommendations for scour protection at abutments.
6. Recommendations for the hydraulic opening of the bridge will also be provided which will be used to help in determining the bridge concepts identified in Task 6.
7. M&N will prepare a Conceptual (Preliminary) H&H analysis report, including data utilized, assumptions, computations, and recommendations. The report will include all necessary forms and supporting information, such as photographs, survey profiles, and comparison tables.

Task 6 – Establish Alternatives

Summary: Task 6 includes utilizing the results of Tasks 4 and 5 and establishing sustainable and resilient flood defense alternatives to meet the City's needs for this segment of North Main Street. From these alternatives, a meeting will be held with the City to validate Task 5 and determine three (3) alternatives from this task to further develop in Task 7.

In addition, M&N will evaluate the existing bridge components and make recommendations on their use in future improvements to compliment above. The analysis will include considerations of the following concepts.

1. Evaluate raising existing bridge superstructure via phased construction to required minimum water level events identified in Task 4 in addition to including 1 foot of freeboard.

2. Evaluate phased construction bridge replacement in the same alignment as the existing bridge to meet the minimum water level events identified in Task 4 in addition to including 1 foot of freeboard.
3. Evaluate a bridge replacement on a new alignment then dismantle the existing bridge to meet minimum water level events identified in Task 4 in addition to including 1 foot of freeboard.

4. Prepare conceptual plan, elevation and section for each concept.

Task 7 – Develop Conceptual Design of Alternatives

Summary: Task 7 includes conceptual design phase (10% design) engineering for raising of roadway corridor (including the bridge) along Main Street and Kimberly Bridge for the three selected alternatives based on the recommended water level events identified in Task 4 and included below.

7.1 Design Alternative Preliminary Engineering. Each alternative will review the proposed bridge concepts identified in Task 6 and incorporated into their design alternatives as needed.

Design Alternative #1 will be development of preliminary finished grade plans, roadway profiles, and cross sections using a minimum finished grade elevation for the 100-year return period flood event with a sea level rise of 1.5 feet. The concept plans will show major roadway design features and include finished grade typical section (with assumed pavement design) along with conceptual typical sections for staged construction. Conceptual design cross sections will be provided at 200-foot intervals along N Main Street.

Design Alternative #2 will be development of the same information as prepared for Design Alternative #1 using a minimum finished grade elevation for the 100-year return period flood event with a sea level rise of 3.0 feet. .

Design Alternative #3 will be development of the same information as prepared for Design Alternative #1 using a minimum finished grade elevation matching recommended bottom chord bridge elevation defined by the VDOT Manual of The Structure and Bridge Division – Part 2 – Chapter 33 "Considerations of Climate Change and Coastal Storms" dated April 2021.

A planning level opinion of probable construction cost analysis will be provided showing the comparative construction costs of the major design features for Design Alternative #1 thru Alternative #3 as it relates to roadway and bridge improvements. This is intended to just show relative costs between the three alternatives but not be a comprehensive estimate.

An alternatives analysis will be prepared with qualitative screening and ranking of the alternatives relative to: level of protection provided, flexibility, design complexity, land use considerations, construction costs magnitude, land required, and benefit costs related to overall construction costs. Based on this ranking a recommended design approach will be identified.

Deliverables from Task 7 will include:

- Conceptual design Alternative #1 plan drawing in PDF;
- Conceptual design Alternative #2 plan drawing in PDF;
- Conceptual design Alternative #3 plan drawing in PDF;
- Planning level opinion of probable construction cost analysis in PDF format;
- Existing condition H&H model files and stormwater volume capture evaluations documented in a technical note.

Task 8 – Conceptual Design Technical Memorandum

The Conceptual Design Technical Memorandum and supporting data presented with it will provide the City with plan and section graphics and its benefits for resiliency. The report, along with the alternative design drawings, will also form the basis for scoping the remaining field work and detailed engineering and architectural design work that would be needed (under future scopes of work and budgets) to create the plans and specifications for bidding and construction of the projects.

Deliverables:

- Draft Conceptual Design Technical Memorandum
- Final Conceptual Design Technical Memorandum

Assumptions and Exclusions

- This scope of work does not include any new field investigations except for that specifically included in Task 2 and further described in the attached subconsultant proposals.
- No detailed pavement design, geotechnical stability or seepage analysis is included in this scope of services.
- No wetland delineations, wetland impacts assessments, environmental or other permitting or engagement with permitting agencies is included in this scope of services.
- It is assumed that the City will coordinate any and all public outreach and public engagement efforts related to the project. This scope of services does not include significant involvement in coordinating or leading public outreach or public meetings or in crafting a public engagement strategy. The M&N Team will be available to provide interim work products in the form of graphics and slide content for the City's public engagement efforts, and members of the M&N Team will be available to attend up to two public meetings, if requested.
- It is assumed that the City will provide available GIS information, Record Drawings and electronic files pertaining to the work area, including any known utilities.

M&N Team Fees

A breakdown of MN Team Fee is attached for each task in addition to a copy of the survey limits and fee being completed by PMI. The total fee is anticipated to be $298,747.16.

Schedule of Work

The M&N Project Team anticipates the following overall schedule for this effort, including assumed City reviews, with completion times given in weeks after Notice To Proceed (NTP).

M&N Team Deliverable / Milestone	Time from NTP
Task 1 – Meetings and Project Management	Continuous
Task 2 – Review Existing Documentation provide by City	2 weeks
Task 3 – Field Investigation	16 weeks
Task 4 – Basis for Feasibility Study	18 weeks
Task 5 - Hydrologic, Hydraulic and Drainage Analyses	24 weeks
Task 6 – Establish Alternatives	26 weeks
Task 7 – Develop Conceptual Design of Alternatives	30 weeks
Task 8 – Conceptual Design Technical Memorandum	32 weeks

File No. 22219

Mr. Jousha Hill, PE
Moffatt & Nichol
101 W. Main Street, Suite 3000
Norfolk, VA 23510

Re: Kimberly Bridge - Suffolk, VA

Dear Mr. Hill:

The following is our understanding of the scope of services and related fixed fee for the above-mentioned project.

SURVEYING SERVICES

Precision Measurements Inc. (PMI) shall provide to Moffatt & Nichol a topographic survey file, in MicroStation (V8i) digital format and hard sheets, sealed, signed and dated by a Licensed Land Surveyor. The survey limits are from and including the intersection of U.S. Route 58 & Main Street north along Main St. to approximately 1,500'± passed the north side of Kimberly Bridge with a band width of 200' from the edge of pavement on both sides of Main St. and is roughly shown as the yellow line on attachment hereto.

Topographic Survey

The surveying procedure shall be as follows:

- Property Research - Immediately upon receipt of the notice to proceed, the Surveyor shall compile data on all properties affected by the project. Information to be obtained shall include current owner names, deed book and page of conveyance, property lines, right-of-ways, easements and tax parcel information.
- Establish Horizontal Control – The horizontal datum for this project shall be referenced to the Virginia State Plane Coordinate System, North American Datum of 1983 (1994HARN). Measurements shall be based on the U.S. Survey foot. Survey base lines shall be established throughout the project limits. Semi-permanent survey markers (P-K nails, pins, etc.) shall be set at all breakpoints along the survey base lines.
- Establish Vertical Control – The vertical datum shall be referenced to the North American Vertical Datum of 1988 (NAVD 88). Supplemental project benchmarks shall be set at each project site.
- Property Ties – Field ties shall be made to the boundaries of all affected properties. The boundaries of the properties shall be computed and related to the project meridian and coordinate system.
- Topographic Mapping – Planimetric and topographic mapping shall be captured throughout the project limits. Base mapping shall be provided in MicroStation (V8i) digital format at a scale of 1"=25' utilizing the current VDOT Cad Standards. The topographic survey shall include, but is not limited to:
- Existing buildings - type of structure, number of stories, house number

629 Phoenix Drive, Suite 100, Virginia Beach, Virginia 23452 • 11835 Canon Blvd., Suite B-103, Newport News, Virginia 23606
1047 Technology Park Drive, Glen Allen Virginia 23059 • 4215 Lafayette Center Drive, Suite 2A, Chantilly, Virginia 20151
7720 Main Street, Middletown, Virginia 22645 • 9005 Chevrolet Drive, Suite 5, Ellicott City, MD 21042
6750 N. Andrews Avenue, Suite 2032, Fort Lauderdale, FL 33309
www.precisionmeasurements.com

- Existing paved surfaces (excluding pavement markings)
- Curb and/or gutter
- Sidewalks and driveways
- Delineate gravel and dirt driveways and parking areas (excluding pavement markings)
- Pavement and Parking lot markings will be placed per google earth
- Ditches - top of bank, toe of slope, centerline
- *Storm drain facilities (closed) - rims, inverts, and pipe sizes
- *Storm drain facilities (open) - inverts and pipe sizes
- *Gravity sanitary sewer – rims (no invert data required)
- Force mains - valves and any other above ground appurtenances
- Water mains - valves, meters, hydrants and any other above ground appurtenances
- Gas mains - valves and any other visible above ground appurtenances
- Above ground traffic control devices
- Above ground telephone and T.V. - pedestals and any other visible above ground appurtenances
- Above ground electric - any visible above ground appurtenances
- Utility poles - type of service and pole number
- Overhead wires - type of service
- Tree lines - large wooded areas
- Single trees – 8-inch caliper and larger (type and actual caliper), if not in wooded area
- Elevation cross-sections @ 50-foot intervals (all streets and outfalls)
- **Rights-of ways
- **Property lines
- **Property owners - name, deed reference, map reference and GPIN
- Hydro Graphic survey at cross-sections per shape files from Moffatt & Nichol received on 3/31/2022.
- ***“VA811” for underground utility designations (PMI to Locate, Cad)
- Bridge detail (high cord, low cord, rail type/height, pier locations type/size/spacing, abutments)

3D DTM File (xml format) A separate 3D surface model shall be prepared for use in generating a digital terrain model. This drawing shall consist of break lines, contours, and points located at the proper X, Y and Z coordinates. This file shall be based on 1’ contour intervals.

Utility Survey

***”VA811” Utility Designation – PMI shall coordinate with “VA811” utilizing the “dig ticket” process to designate utilities at 5 locations along the project. These locations will only be a 100’ radius around a stake in the ground for them to designate the utilities. PMI cannot guarantee “VA811” will designate any utilities on private property, public property and/or government property. PMI shall research utility information both public and franchise. Utilities that we have record information on and have not been designated shall be shown per record at quality level C/D. You may not have any utilities shown between the 5 dig ticket locations.

Every reasonable effort shall be made to locate all systems of interest whether indicated on records available to us or not. However, we do not guarantee that all existing utility systems can or shall be detected. Further, this service is not intended to detect non-utility structures such as, but not limited to: foundations, irrigation systems, septic systems, wells, tunnels, concrete or metal structures, or the true size and limits of subsurface utility vaults and manholes.

The designation results shall be collected with total station survey and referenced to project datum. The results shall be processed, annotated and merged into the final delivery file.

DELIVERABLES

s(#).dgn – Survey Data File

FEE ESTIMATE

Topographic Survey	$76,894.00
Hydrographic Survey	$ 6,702.00
Underground Utilities	
"VA811" QL-C Designation, Location & Cad	$ 8,868.00
Total	**$92,464.00**

ASSUMPTIONS/EXCLUSIONS

- Not all VDOT standards and requirements will be performed on this project, only VDOT Cad Standards
- *Storm and Gravity Sewer (rims, inverts, size & material). Pipe system shall be traced and shown to next structure outside of the project limits. Pipe inverts, size & material are determined to the best of our ability and if accessible. No confined space entry is included in this scope and fee.
- Problem Manholes, Inspection, location, measurements or inverts of underground sanitary or storm structures if those structures are inaccessible because they are bolted, welded, buried, paved over, broken, under debris, fenced off, unsafe, too deep (over 25'), designated as non-accessible or confined space entry only. Working with Problem Manholes shall be considered beyond the scope of this proposal.
- **Property lines, right-of-way, easements and owner information shall be based on available tax assessor and courthouse information. No title report or title research shall be performed with this scope and fee. All easements, restrictions or encumbrances that may affect the properties may not be reflected.
- PMI request owner notifications letters be sent to all properties adjacent to the survey limits area.
- Any items not listed on in this proposal is not included, such as test hole, wetland flags, soil borings, etc.

- Paint striping will be placed per google earth overlay.

DELIVERY SCHEDULE

Final delivery will be within approximately 55 - 65 business days or sooner after commencing field work. Delivery schedule is subject to change based on current workload, weather conditions and unforeseen obstacles.

Thank you for allowing us the opportunity to provide you with this proposal, utilizing our Surveying services. If I can be of any additional assistance or you have any questions, comments or require additional information, please feel free to contact me. I look forward to working together on this very important project.

Respectfully,
Precision Measurements, Inc.

Richard A. Thomas
Newport News Branch Manager

Good afternoon,

Please find attached the second of 2 applications from the City of Suffolk for the Round 3 2022 CFPF Grant Funding, ahead of the 4/8 deadline.

The City is requesting funding for an updated study for the Kimberly Bridge Feasibility Study. Additionally, may you please confirm the receipt of this correspondence and this application?

Thank you,

Matt Fanghella, EIT

CITY OF SUFFOLK

P.O. BOX 1858, SUFFOLK, VIRGINIA 23439-1858 PHONE: (757) 514-4012

CITY MANAGER

April 6, 2022

Virginia Department of Conservation and Recreation
Attention: Virginia Community Flood Preparedness Fund
Division of Dam Safety and Floodplain Management
600 East Main Street, 24th Floor
Richmond, Virginia 23219

Dear Sir or Ma'am:

Please accept this written correspondence as signed documentation authorizing the City of Suffolk's request for funding from Round 3 of the 2022 Virginia Community Flood Preparedness Fund (CFPF).

The CFPF funding would enable the City of Suffolk to conduct the Finney Outfall to Nansemond River Drainage Area Study in Downtown Suffolk. The total cost of the proposed study is $72,881.36 Following the 90% Fund / 10% Match requirements for this category, the City respectfully requests funding from the CFPF in the amount of $65,593.22 Furthermore, the City will provide the 10% matching contribution from the Public Works Professional Services budget, in the amount of $7,288.14

Thank you for your consideration of this grant proposal. If you have any questions about this proposal please contact Matt Fanghella at 757-514-7675 or mfanghella@suffolkva.us or Heather Baggett at 757-514-7627 or hbaggett@suffolkva.us.

Sincerely,

Albert S. Moor, II P.E.
City Manager

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes No **X**

Categories (select applicable project):

Project Grants (Check All that Apply)

☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.

☐ Wetland restoration.
☐ Floodplain restoration.
☐ Construction of swales and settling ponds.
☐ Living shorelines and vegetated buffers.
☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
☐ Storm water system upgrades.
☐ Medium and large scale Low Impact Development (LID) in urban areas.
☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
☐ Dam restoration or removal.
☐ Stream bank restoration or stabilization.
☐ Restoration of floodplains to natural and beneficial function.
☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Study Grants (Check All that Apply)

☐ Studies to aid in updating floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.

☐ Revising other land use ordinances to incorporate flood protection and mitigation goals, standards and practices.

X Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA). For example, a local government might conduct a hydrologic and hydraulic study for an area that had not been studied because the watershed is less than one square mile. Modeling the floodplain in an area that has numerous letters of map change that suggest the current map might not be fully accurate or doing a detailed flood study for an A Zone is another example.

☐ Studies and Data Collection of Statewide and Regional Significance.

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard.

X Other relevant flood prevention and protection project or study.

Capacity Building and Planning Grants

☐ Floodplain Staff Capacity.

☐ Resilience Plan Development

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.

  ☐ Resource assessments, planning, strategies and development.
  - Policy management and/or development.
  - Stakeholder engagement and strategies.

Location of Project (Include Maps): Suffolk, Virginia

NFIP Community Identification Number (CID#): (See appendix F 510156

Is Project Located in an NFIP Participating Community? **X** Yes □ No

Is Project Located in a Special Flood Hazard Area? **X** Yes □ No

Flood Zone(s) (If Applicable): Zone AE

Flood Insurance Rate Map Number(s) (If Applicable): 5101560227E

Total Cost of Project: $ 72,881.36

Total Amount Requested: $ 65,593.22

Appendix C: Scoring Criteria for Studies

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	**City of Suffolk, Virginia**	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	**X**
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	
No	Eligible for consideration for studies, capacity building, and planning only	**X**
3. If the applicant is not a town, city, or county, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	**N/A**
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	**X**
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	**X**
No	Not eligible for consideration	
N/A	Match not required	

Studies Eligible for Consideration		**X Yes** **☐ No**
Applicant Name:	**City of Suffolk, Virginia**	
Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Studies (Select all that apply)		
Revising floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.	**30**	
Creating tools or applications to identify, aggregate, or display information on flood risk or creating a crowd-sourced mapping platform that gathers data points about real-time flooding. This could include a locally or regionally based web-based mapping product that allows local residents to better understand their flood risk.	**15**	
Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA).	**35**	**35**
Studies and Data Collection of Statewide and Regional Significance. Funding of studies of statewide and regional significance and proposals will be considered for the following types of studies:		
☐ Updating precipitation data and IDF information (rain intensity, duration, frequency estimates) including such data at a sub-state or regional scale on a periodic basis.	**45**	
☐ Regional relative sea level rise projections for use in determining future impacts.	**45**	
☐ Vulnerability analysis either statewide or regionally to state transportation, water supply, water treatment, impounding structures, or other significant and vital infrastructure from flooding.	**45**	**45**
☐ Flash flood studies and modeling in riverine regions of the state.	**45**	
☐ Statewide or regional stream gauge monitoring to include expansion of existing gauge networks.	**45**	

☐ New or updated delineations of areas of recurrent flooding, stormwater flooding, and storm surge vulnerability in coastal areas that include projections for future conditions based on sea level rise, more intense rainfall events, or other relevant flood risk factors.	**45**	
☐ Regional flood studies in riverine communities that may include watershed-scale evaluation, updated estimates of rainfall intensity, or other information.	**50**	
☐ Regional hydrologic and hydraulic studies of floodplains.	**45**	
☐ Studies of potential land use strategies that could be implemented by a local government to reduce or mitigate damage from coastal or riverine flooding.	**40**	
☐ Other proposals that will significantly improve protection from flooding on a statewide or regional basis	**35**	
7. Is the study area socially vulnerable? (Based on [ADAPT VA's Social Vulnerability Index Score.)](#)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	**8**
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed study part of an effort to join or remedy the community's probation or suspension from the NFIP?		
Yes	**10**	
No	**0**	**0**
9. Is the proposed study in a low-income geographic area as defined in this manual?		
Yes	**10**	**10**
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and the Chesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices with a nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	
No	**0**	**0**
Total Points		**98**

City of Suffolk – Department of Public Works
2022 Virginia Community Flood Preparedness Fund Grant Round 3
Finney Outfall to Nansemond River Drainage Study

Part IV

A. Scope of Work Narrative – Studies

The City of Suffolk, Virginia is submitting this grant application to Round 3 of the 2022 Virginia Community Flood Preparedness Fund (CFPF) in the Study category. Specifically, the City is requesting funding to support a study of the drainage system and area that is downstream of the Finney Outfall and ultimately discharges to the Nansemond River. Currently, this area experiences flooding after significant rain events, which impacts critical infrastructure, historic resources, and nature-based resources which are valued and treasured by the citizens of Suffolk.

1. Type of Study and Details of the Study

This Finney Outfall to Nansemond River Drainage Study will address both current and future flooding of the City's drainage system from the Finney Outfall to the drainage system's confluence with the Nansemond River. The Finney Outfall drains stormwater from a 109-acre, highly developed, urban drainage area in the heart of Downtown Suffolk, an area of the city that was built predominantly in the late 1800's and early 1900's. Downstream of the Finney Outfall, the drainage system flows approximately 2,700 feet in a predominantly northward direction to its confluence with the Nansemond River. The drainage system from the Finney Outfall to the Nansemond River consists primarily of open channel flow with a series of culvert crossings at various points. Several critical infrastructure points and community assets suffer from the impacts of flooding through this area. Within this 2,700-foot flow path there is a culvert pipe crossing underneath an active railroad bed which serves a double-track railroad for CSX Transportation, two culvert crossings underneath the Suffolk Seaboard Coastline Trail, and a culvert crossing underneath E. Constance Road (U.S. 58 Business). This flow path also passes the Suffolk Seaboard Station Railroad Museum and the Cedar Hill Cemetery. There have been slope failures along the drainage system adjacent to the cemetery due to the flooding, which prompted the need for emergency repairs. Furthermore, the flooding along this system impacts critical infrastructure including utility infrastructure and road closures due to flooding of E. Constance Road (U.S. 58 Business) which is a major thoroughfare through the City and entrance point for traveling into or out of the City to connect eastern Hampton Roads localities (Chesapeake, Virginia Beach, Norfolk). The flooding also impacts the Suffolk Seaboard Coastline Trail and has slowed City plans to expand this nature-based community asset. Finally, the flow path's end point at its confluence with the Nansemond River is tidally influenced which also increases flooding impacts. In addition to the current flooding issues in the study area, this area is also expected to be negatively impacted by the effects of climate change including sea level rise and more intense storm events.

The City of Suffolk is seeking CFPF grant funding to develop a study of the Finney Outfall to Nansemond River Drainage Area and has contracted the engineering consultant Timmons Group to develop the hydraulic and hydrologic study. The H&H study will include a drainage analysis of the existing storm sewer system utilizing City GIS, additional data provided, and field survey data. The analysis will include storm piping, water quantity conveyance, and storage calculations of the drainage area with detailed analysis along the study area. The analysis shall be conducted in PCSWMM with 1D pipes and storages to start and convert portions as needed from a 1-D analysis to a 2-D analysis that includes overland flow and ponding as needed. The drainage analysis will be based on the 25-yr design storm as well as two (2) other more extreme design storm events which will be paired with two (2) tailwater elevations representing current day MHW and another forward looking option as agreed upon with the City. These more extreme design storms and forward looking tailwater options will enable the City to consider the impacts of climate-change and its consequences and base decision making for potential improvements in this drainage area using the best available science and data. Once the results of this analysis are reviewed, the City will select two (2) design storm/tailwater scenarios to use to identify potential modifications to the system to relieve flooding.

Once the City receives notification of award of grant funding, the City will provide Timmons Group with the Notice to Proceed for The Finney Outfall to Nansemond River Drainage. The approximate time for completion of the drainage study is 23 weeks. Potential modifications and projects identified by this study would be included in the City of Suffolk Resilience Plan, which is currently under development.

2. Benefit of the Study to Community Resilience

The Finney Outfall to Nansemond River Drainage Study will increase community resilience by identifying the cause of the flooding and recommend potential flood reduction projects to reduce both current and future flooding. Reduced flooding in this area would also reduce the impact of flooding on utility infrastructure within the study corridor as well as historic and cherished community assets and alleviate the roadway flooding that occurs on E. Constance Road, all of which would result in increased community resilience.

Furthermore, the median household income in the study area is $63,386, which is less than 80% of the median household income for the City of Suffolk of $79,899, as identified by Census.gov from 2016 – 2020 data. Hence, the study area meets the definition of a “low-income geographic area” as defined by the *2022 Virginia Community Flood Preparedness Fund Round 3 Grant Manual*. The adaptation and protection efforts identified by this study will work to enhance equity throughout the project area which is a key Commonwealth Resilience Planning Principle.

Finally, the proposed study will protect historic and community assets and prioritize nature-based solutions to the maximum extent practical. The project study corridor is home to The Suffolk Seaboard Station Railroad Museum, The Suffolk Seaboard Coastline Trail, and Cedar Hill Cemetery. The Cedar Hill Cemetery is a 25-acre, public cemetery dating back to 1802 and it has been designated as a historic cemetery and a national historic district. The cemetery has suffered from slope failures due to the flooding and drainage issues within the study area. Similarly, the City has additional plans for the expansion and enhancement of the Suffolk Seaboard Coastline Trail; however, these plans are paused due to the impacts of flooding on the trail within the study area. It is the City’s intent that proposed improvements within this area will incorporate nature-based solutions to preserve the natural habitat and community resilience in this area.

3. Qualifications

The Finney Outfall to Nansemond River Drainage Study and the CFPF grant award will be managed by the City of Suffolk Public Works Engineering Division. Public Works Engineering staff members have a strong knowledge of the City’s stormwater system, work with flooding and drainage concerns within the city on a daily basis, and lead resiliency initiatives in the City. Furthermore, two staff members are in training to earn their Certified Floodplain Manager (CFM) Certifications. The City’s contracted consultant, Timmons Group, will conduct this study under the direction of the consultant’s Senior Project Manager who is a licensed Professional Engineer (P.E.) in the Commonwealth of Virginia and a Certified Floodplain Manager (CFM), as recognized by the Association of State Floodplain Managers. Timmons group has previous experience and demonstrated success in developing drainage studies for the City of Suffolk and for other localities in the region.

4. Objectives of the Study and Regional Resilience

The objectives of this study include:

- Identifying the cause(s) of the flooding in this area
- Identifying potential flood protection and flood reduction projects within this area
- Reduce flooding of critical infrastructure: including utility infrastructure and E. Constance Road and historic and natural assets including Cedar Hill Cemetery, Suffolk Seaboard Station Railroad Museum, and Suffolk Seaboard Coastline Trail.

The City of Suffolk Public Works Department will vet the potential flood protection projects identified as part of this study. Agreed upon solutions would be incorporated into the City-wide Resilience Plan which is currently under development. Funding for further design and construction of identified projects and modifications to the drainage system would be sought after through inclusion in the City's Capital Improvement Plan (CIP) as well as potential grant programs such as Virginia Department of Conservation and Recreation Community Flood Preparedness Fund, the Federal Emergency Management Building Resilient Infrastructure and Communities Grant, and Virginia Department of Transportation funding sources.

While this study impacts only a portion of Suffolk, it supports an identified regional need for coastal resiliency and resilient infrastructure. E. Constance Road (U.S. 58 Business) is a major arterial road within the City and serves as a significant entrance point into the city from the East. More importantly, E. Constance Road is a connector road to Sentara Obici Hospital and eastern Hampton Roads cities (Chesapeake, Norfolk, Virginia Beach), and is identified as a Hurricane Evacuation Route by the Virginia Department of Emergency Management. E. Constance Road was identified as a point of interest in the Master Thoroughfare Plan included in Chapter 6 of the 2026 City of Suffolk Comprehensive Plan and experiences an Annual Average Daily Traffic Volume (AADT) of 16,000 vehicles per the 2019 Virginia Department of Transportation Daily Traffic Volume Estimates. This study will also result in more resilient utility infrastructure and identify opportunities to reduce the impacts of flooding on utility infrastructure within the study corridor.

Throughout the rest of Hampton Roads and the Commonwealth of Virginia, many communities face challenges of infrastructure flooding and tidal influence coupled with sea level rise. The proposed study may provide best practices that could be used as case studies in other settings of this type, while also providing a framework for studies focused on targeted infrastructure flood resilience problems. The City is an active participant on several Hampton Roads Planning District Commission (HRPDC) Committees including The Coastal Resiliency Committee, The Regional Stormwater Workgroup, and The Regional Environmental Committee, the Hampton Roads Transportation Planning Organization (HRTPO) and its subcommittees. City staff are willing to share the results and findings of this study with peers and colleagues from other localities to use as a template for studies in their communities, if they see a benefit and/or need.

5. Statewide Context

The study funded by this grant will improve Virginia's flood protection and prevention capabilities, from a transferability and statewide context. Communities across the Commonwealth face the challenges of infrastructure flooding and tidal influence coupled with sea level rise. The proposed study may provide best practices that could be used as case studies in other settings of this type, while also providing a framework for studies focused on targeted infrastructure flood resilience problems.

D. Budget Narrative – All Grant Categories

The median household income in the study area of zip code 23434 is $63,386, which is less than 80% of the median household income of $79,899 for the City of Suffolk, as identified by Census.gov from 2016 – 2020 data. Hence, the study area meets the definition of a "low-income geographic area" as defined by the *2022 Virginia Community Flood Preparedness Fund Round 3 Grant Manual*. As a result, the City of Suffolk is requesting funding support for 90% of the proposed Finney Outfall to Nansemond River Drainage Study.

The total cost for the proposed study is $72,881.36 According to the guidance outlined in the DCR 2022 Round 3 Grant Manual for the Virginia Community Flood Preparedness Fund, grant matching requirements for the Flood Prevention and Protection studies that are located in and serve a low-income geographic area are eligible for a Fund 90% / Match 10% ratio. Therefore, the City respectfully requests financial assistance from the Fund in the amount of $65,593.22 and the City is committing to fund the remaining $7,288.14 via the Stormwater Utility Fund from the Professional Services line of the annual operating budget for Public Works Engineering. Evidence of the City of Suffolk's ability to obtain these funds to partially fund the proposed study is found on Page 243 of the City of Suffolk FY 2021-2022 Adopted Operating and Capital Budget, which can be found on the City website at the following link: https://www.suffolkva.us/DocumentCenter/View/5717/FY-2021-2022-Adopted-Operating-and-Capital-Budget A summary of the financial costs for the proposed study is shown in Table 1, below.

All match funding will be used towards consultant work to complete the study, along with the $7,288.14 of contributed City funds. In addition to the direct funding included as a match, the City of Suffolk also commits to managing all aspects of project management using existing qualified staff A detailed breakdown of how the proposed funding for the proposed Finney Outfall to Nansemond River Drainage Study will be used is shown in Table 2, below. Furthermore, signed documentation from the City Manager authorizing the request for funding is included with this application.

Table 1. Costs for Finney Outfall to Nansemond River Drainage Study

Flood Prevention and Protection Studies in Low-Income Geographic Areas Fund 90% / Match 10%			
Item	**Total**	**Request from Grant Fund**	**Match**
Finney Outfall to Nansemond River Drainage Study	$ 72,881.36	$ 65,593.22	$ 7,288.14
Total Project Cost:			
Amount of funds requested from the Fund			**$ 65,593.22**
Amount of contribution by City			$ 7,288.14

WORK ORDER NUMBER ?

RE: Finney Outfall to Nansemond River Drainage Study

CONTRACT: Agreement between the City of Suffolk (the “City”) and Timmons Group (the “Consultant”) For Engineering Services.

All work to be performed in accordance with the terms, limitations, and conditions of said agreement.

SCOPE OF WORK: The “Consultant” shall provide drainage investigations in accordance with the attached Scope of Work.

SCHEDULE OF WORK: The “Consultant” shall complete the work within twenty-three (23) from execution of this work order.

COMPENSATION: The “Consultant” shall be paid in accordance with the referenced contract, a fee not to exceed $ 72,881.36. See Attachment.

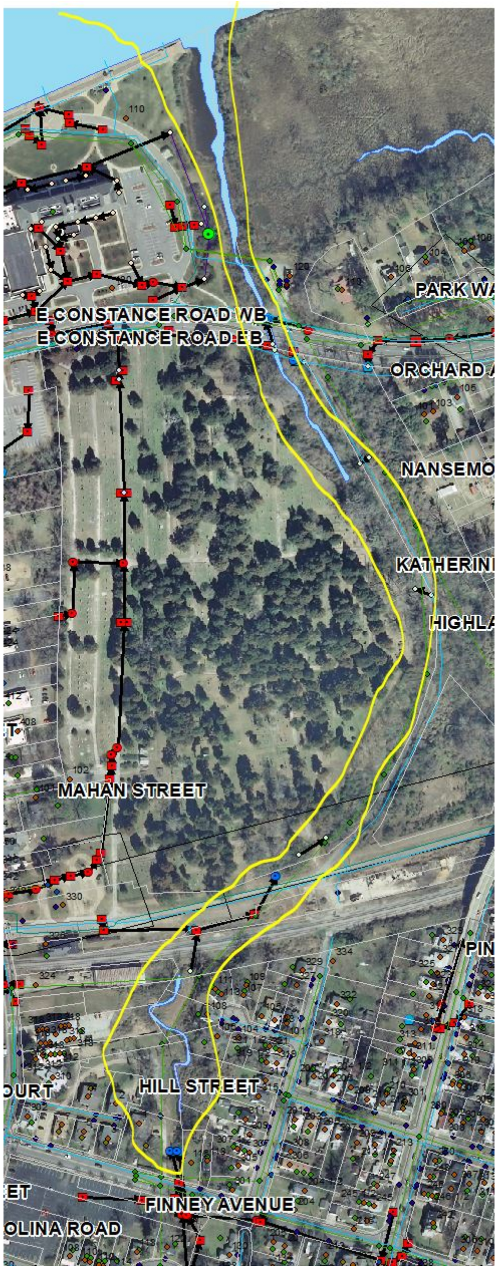
Finney Outfall to Nansemond River Drainage Study

PROJECT DESCRIPTION

The City of Suffolk is interested in addressing current and future flooding along a stretch of the drainage system from the Finney outfall to the confluence with Nansemond River. This area currently experiences flooding which results in flooded infrastructure, including neighboring utilities infrastructure and an adjacent historic cemetery. The figure below shows the area of interest in yellow.

There have been slope failures along the system adjacent to the cemetery. Emergency repairs have been made and a design is underway for additional stabilization.



At the downstream end, there is tidal influence that also impacts system capacity and water levels.

In addition to the current issues along this area of interest, the area is expected to experience impacts related to climate change – such as sea level rise and more intense storm events.

Future hydraulics will also be impacted by drainage improvements in the upstream watershed. Several years ago, the City tasked Timmons Group to develop a Master Plan for drainage improvements for the Finney (Oldetown) drainage area, which is just upstream of the area of interest, to alleviate flooding and relocate the aging storm sewer network into the right-of-way. The initial phase of recommended improvements from that study are about to begin the design stage. Though these improvements are designed to alleviate flooding from the current 10-year design storm, it is important to the City to identify and mitigate impacts to the area of interest for larger storm events and also take into consideration rising water levels in the Nansemond River.

The Consultant shall review available data, provide site observations, perform analysis services to identify problematic stormwater items, and recommend revisions to the network to help alleviate future flooding problems.

SCOPE OF SERVICES

1. Records Review & Site Visit and Supplemental Survey
2. Perform Drainage Analysis
3. Recommend Mitigation Measures

The project schedule is for a period of twenty-three (23) weeks. The project milestones are:

Notice to Proceed	
Records Review, Site Visit, and Survey	10 weeks
Perform Existing Conditions Drainage Analysis	4 weeks
Interim Meeting	1 week
Develop Modification Options	4 weeks
Review Meeting	1 week
Prepare Informal Writeup	3 weeks

The Scope of detailed engineering services provided are grouped into the following:

- Basic Services
- Reimbursable Expenses

Reference Information

The following information has been or will be made available to Timmons Group and will be used as a reference for the work provided in this proposal:

- Historic flooding data - Information on flooding locations, dates, and extents within the study
- City of Suffolk GIS
- Plan documentation if available
- Data on the storm system (ditch and culverts) throughout the project area including:
  - Size/cross section dimensions
  - Length
  - Material
  - Invert Elevations

The following is a detailed discussion of the services proposed:

BASIC SERVICES

1) Records Review, Site Visit, and Survey

The Consultant will review existing record documents and discuss with City operations staff any recurring flooding or maintenance issues. The Consultant shall perform a site investigation of the project site to gather observations. Observations will include, but are not limited to, apparent right of way (ROW) and private property drainage patterns within the vicinity of the potential recommended alignments, typical ditch segment cross sections, visible encroachments and obstructions, system connectivity and inventory data to supplement provided data sources, and general condition assessment. Observations may extend to the boundaries of the contributing drainage area for verification purposes.

The Consultant shall review previous work done within the drainage area including:

- Downstream of Outfall Impact Analysis task from Oldetown – Pinner Street Drainage & Utility Improvements task order (assumed complete)
- Cedar Hill Stream Restoration Concept Plan
- Cedar Hill Slope Stabilization design work (ongoing)
- Train Station Basin BMP Improvements – assuming H&H calcs complete

Based on this and City-provided data, the Consultant shall identify additional topographic survey needs to support the analysis. The Consultant shall perform supplemental topographic survey as needed, up to the allotment that has been incorporated into the fee proposal.

2) Perform Drainage Analysis

The Consultant will perform a drainage analysis of the existing storm sewer system utilizing City GIS, the data provided, and field observation data. The analysis will include storm piping, water quantity conveyance, and storage calculations of the drainage area with detailed analysis along the area of interest as shown in the figure described in the Project Description. The analysis shall be conducted in PCSWMM with 1D pipes and storages to start and convert potions as needed from a 1-D analysis to a 2-D analysis that includes overland flow and ponding as needed. The drainage analysis will be based on the 25-yr (as a surrogate for a current 10-yr) as well as 2 other more extreme design storm events of the City's choosing paired with two (2) tailwater elevations representing current day MHW and another forward-looking option as agreed upon with the City.

Once the no action scenarios have been developed and presented, the Consultant and the City shall select two (2) design storm / tailwater scenarios to use to identify potential modifications to the system to relieve flooding.

The Consultant shall attend up to two (2) meetings with the City: one (1) to present the existing conditions and initial improvement alternatives and the other one (1) to present final improvement options. There will be no formal written deliverable at this point. However, working documents and graphics will be prepared as needed to support the meeting(s).

3) Recommend Mitigation Measures

An informal brief write-up shall be prepared and submitted electronically that summaries the analyses and the resulting recommendations.

The write-up will include:

- Project description
- Drainage analysis methodology, assumptions, and results
- Proposed system recommendations for the selected storm events
- Associated budgetary construction cost estimates

DELIVERABLES

Task 1 – none
Task 2 – Working Documents for Existing Conditions review meeting
Task 3 – Informal Write-up, provided electronically.

REIMBURSABLE EXPENSES

A. Mileage

The Consultant will perform up to three (3) round trips between the Consultant and Owner's offices or project site during the investigations estimated at 72 miles each.

The following additional services are not deemed necessary at this time and are therefore not included in the current scope of services. If, during the course of the work, the Owner requests additional services be performed, the Consultant will provide the services through a contract modification.

ADDITIONAL SERVICES

1. Topographic survey services, beyond the allotment included
2. Easement acquisition plats
3. Additional meetings other than those identified
4. Submittals other than those listed
5. Public relation efforts and Private Property Coordination
6. Permitting efforts
7. Traffic Control
8. Environmental services
9. Design Services
10. Subsurface utility location
11. Construction Services

Good afternoon,

Please find attached the first of 2 applications from the City of Suffolk for the Round 3 2022 CFPF Grant Funding, ahead of the 4/8 deadline.

The City is requesting funding for the Finney Outfall to Nansemond River Drainage Area Study. Additionally, may you please confirm the receipt of this correspondence and this application?

Thank you,

Matt Fanghella, EIT

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes ✓ No ____

Categories (select applicable project):

Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- ☐ Wetland restoration.
- ☐ Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- ☐ Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☑ Storm water system upgrades.
- ☐ Medium and large scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Study Grants (Check All that Apply)

☐ Studies to aid in updating floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.

☐ Revising other land use ordinances to incorporate flood protection and mitigation goals, standards and practices.

☐ Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA). For example, a local government might conduct a hydrologic and hydraulic study for an area that had not been studied because the watershed is less than one square mile. Modeling the floodplain in an area that has numerous letters of map change that suggest the current map might not be fully accurate or doing a detailed flood study for an A Zone is another example.

☐ Studies and Data Collection of Statewide and Regional Significance.

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard.

☐ Other relevant flood prevention and protection project or study.

<u>Capacity Building and Planning Grants</u>

☐ Floodplain Staff Capacity.

☐ Resilience Plan Development

  ☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.
  ☐ Resource assessments, planning, strategies and development.
    ○ Policy management and/or development.
    ○ Stakeholder engagement and strategies.

Location of Project (Include Maps): First Colonial Road and Oceana Boulevard Stormwater Improvements

NFIP Community Identification Number (CID#):(See appendix

F 515531

Is Project Located in an NFIP Participating Community? ☑ Yes ☐ No

Is Project Located in a Special Flood Hazard Area? ☐ Yes ☑ No

Flood Zone(s) (If Applicable): Zone AE (EL 8)

Flood Insurance Rate Map Number(s) (If Applicable): 5155310128G

Total Cost of Project: $3,675,750.00

Total Amount Requested $1,837,875.00

II. Appendix B: Scoring Criteria for Flood Prevention and Protection Projects

Appendix B: Scoring Criteria for Flood Prevention and Protection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	City of Virginia Beach	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	✓
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	✓
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is not a town, city, or county, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	✓
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	✓
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☑ **Yes** ☐ **No**
Applicant Name:	City of Virginia Beach

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	25
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	8
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	10
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and the Chesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices with a nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	
No	**0**	0
11. Does this project provide "community scale" benefits?		
Yes	**20**	20
No	**0**	
Total Points		63

IV. Required Application Components

B. Scope of Work Narrative – Projects

1. Project Information

The City of Virginia Beach is pleased to submit the First Colonial Road and Oceana Boulevard Stormwater Improvements project for consideration under the Flood Prevention and Protection Projects category of the 2022 Virginia Community Flood Preparedness Fund.

The following project information details the project site description including the scope of work to mitigate flooding, and highlights the impacted population, residential and commercial structures, and critical facilities in and around the project site.

a. Project Site Description

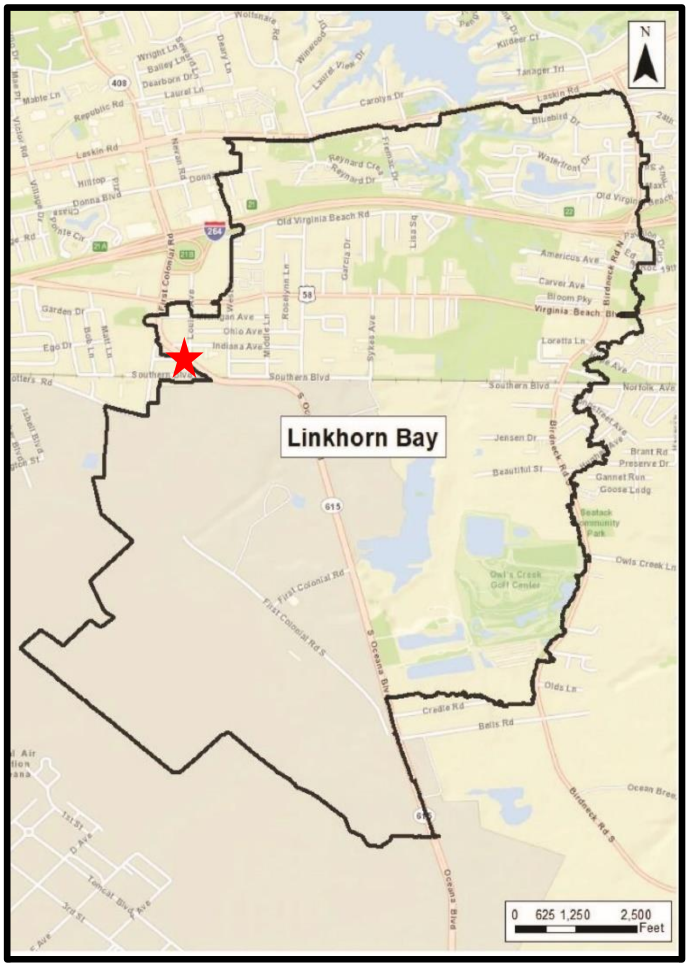

Figure 1: Project Location

The project is located south of Interstate 264, approximately 2.5 miles west of the oceanfront. The project area is included in the Linkhorn Bay drainage basin within the City of Virginia Beach shown in Figure 1. First Colonial Road at the convergence of Oceana Boulevard, experiences frequent flooding, as shown in Figure 4. Street flooding also occurs on Indiana Avenue and South First Colonial Road. Nearby private property experiences flooding, but habitable structures are unaffected. The flooding in this area is caused by inadequate stormwater infrastructure in the neighborhood adjacent to the roads. The City of Virginia Beach's Master Stormwater Management Models (SWMM) indicate First Colonial Road and Oceana Boulevard begin to experience flooding in a 10-year storm event. The location of the Simulated Flooding Area (SFA) is shown in Figure 2.

Figure 2: Location Map of First Colonial Road and Oceana Boulevard SFA

First Colonial Road/Oceana Boulevard is a secondary evacuation route and provides one of the primary access roads to Naval Air Station (NAS) Oceana. The proposed project involves constructing a Stormwater Management Facility (SWMF) on City-owned property between New York Avenue and Southern Boulevard to provide additional runoff storage. Stormwater will be diverted from the stormwater pipes along Oceana Boulevard. The SWMF will slowly release the stormwater back into the South Oceana Boulevard stormwater pipes further downstream. Figure 3 shows a concept plan of the stormwater improvements required. Figure 4 illustrates the simulated flood depths of the existing 100-year storm before and after the proposed stormwater improvements are constructed.

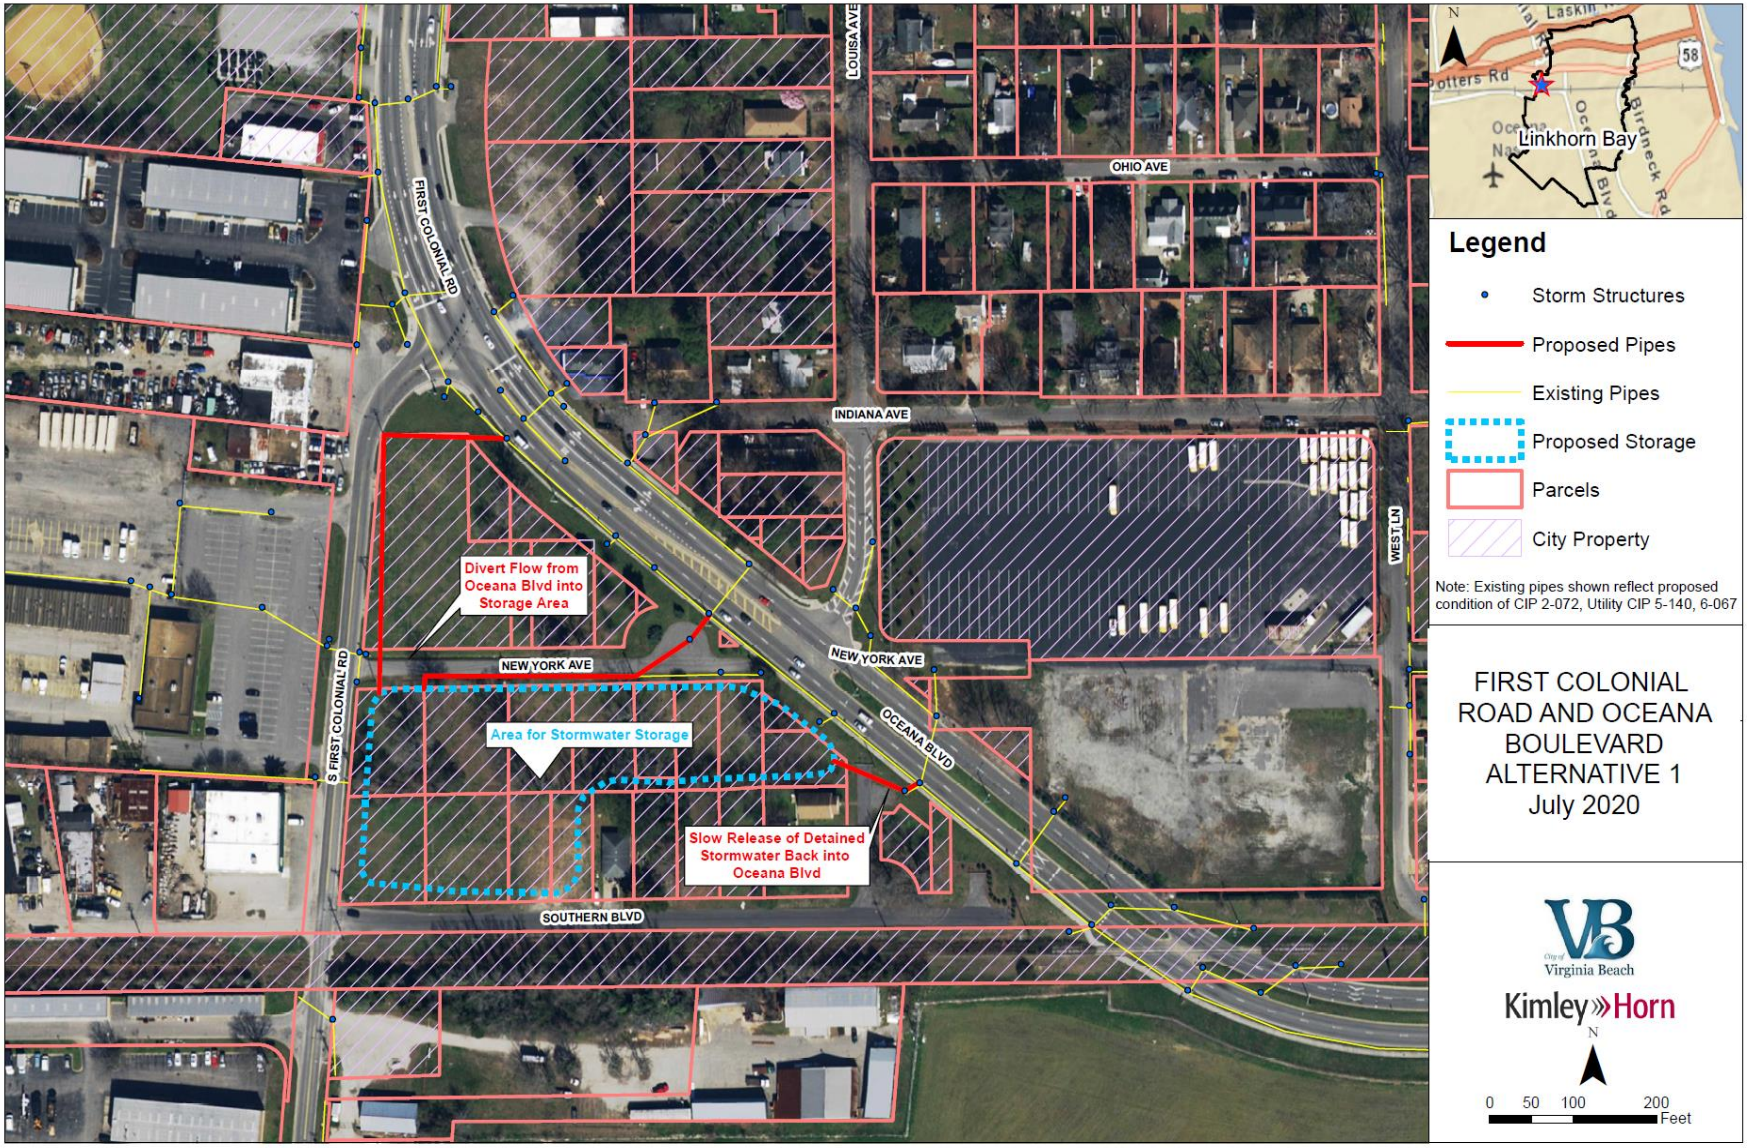

Figure 3: Project Concept Plan

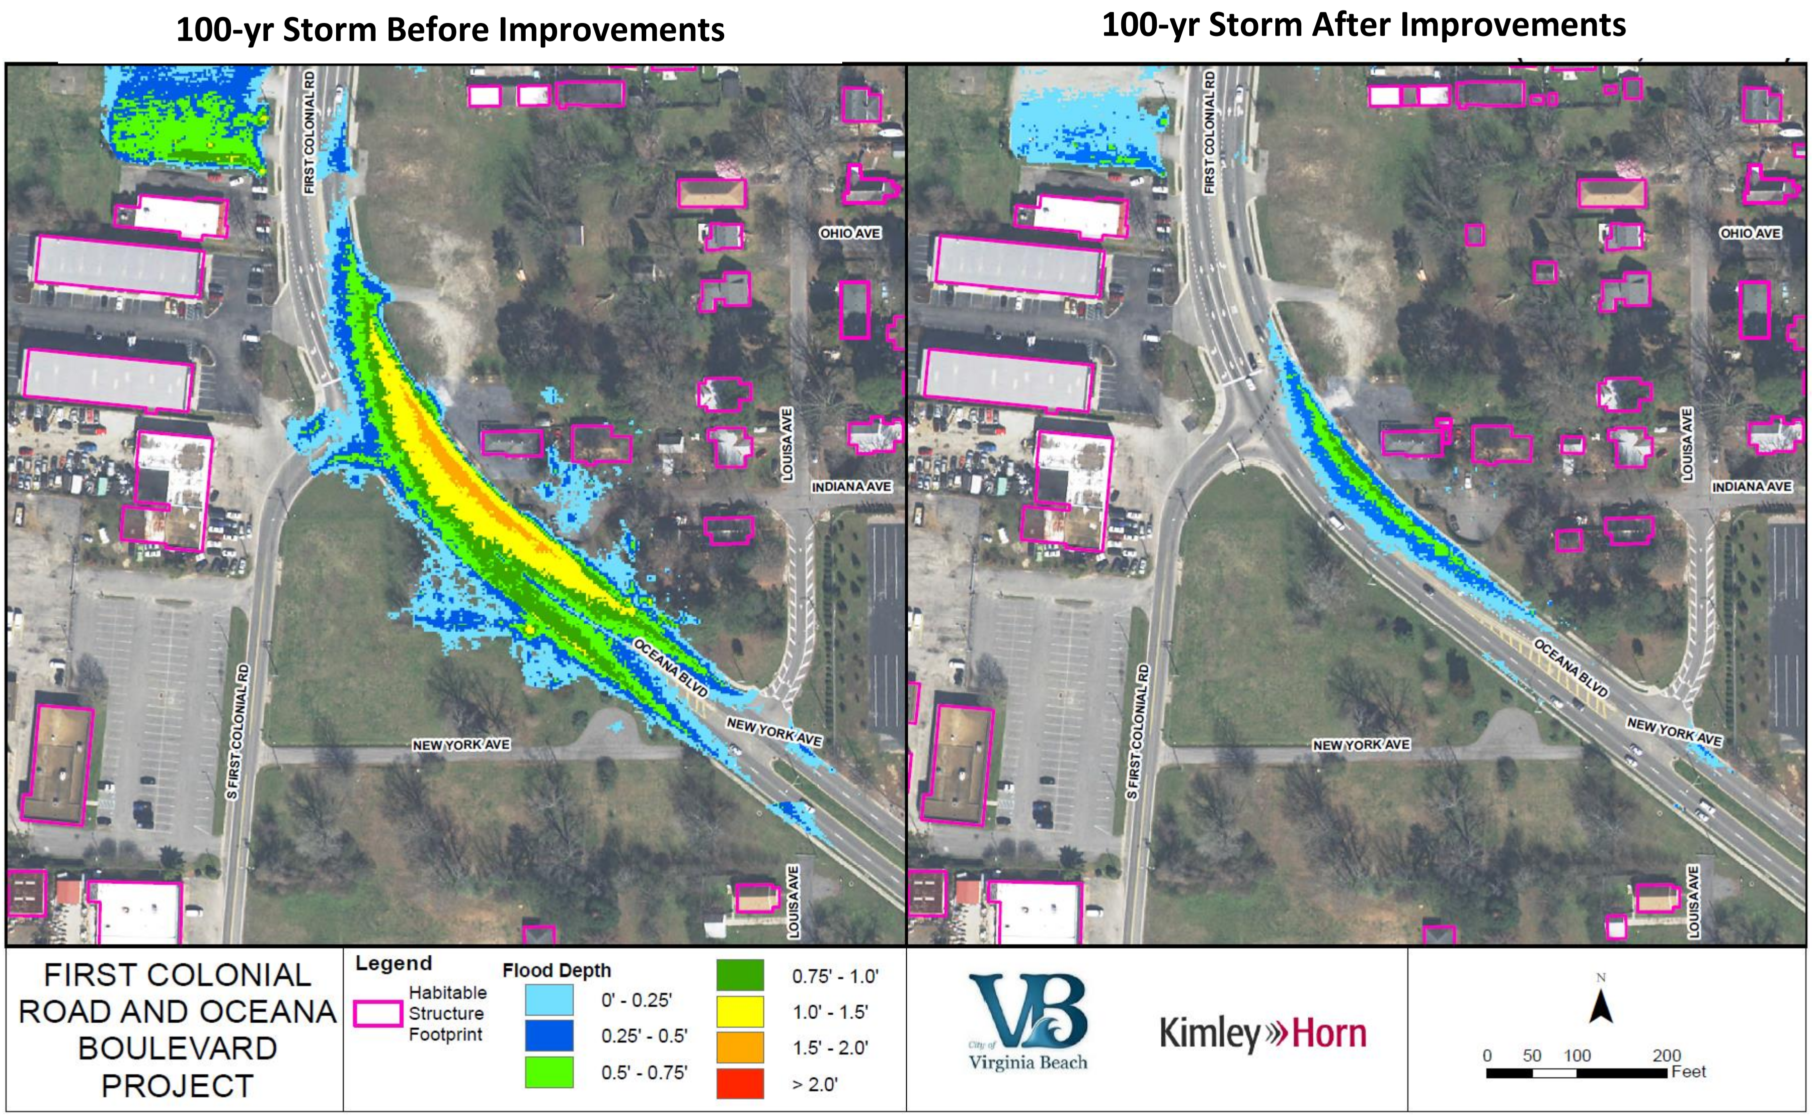

100-yr Storm Before Improvements

100-yr Storm After Improvements

Figure 4: Flood Depth Maps

No habitable structures are impacted in the 100-year storm based on the City of Virginia Beach's Hazus data. Applying the Benefit-Cost Ratio (BCR) methodology, the project is given a BCR of one (1); however, as additional HAZUS data becomes available, the score should be re-evaluated, and the ranking score appropriately adjusted. In addition, the project is given a Benefit Ratio (BR) of one (1) due to mitigation of all street flooding to meet the requirements of the City of Virginia Beach *Public Works Design Standards Manual (PWDSM)*.

Utility relocations for the proposed Stormwater Management Facility and pipe connections are not expected. No property acquisition is required as all construction will occur within the right-of-way (ROW) or on City-owned property.

b. Population

The First Colonial Road and Oceana Boulevard project is located in census block group 518100448.062, as shown in Figure 5, which has a population of 944. The residential population has declined by approximately 14% in the past two decades. The median household income in 2021 dollars is $65,733. There are approximately 427 residential housing units, 37% which are owner-occupied, 51% which are renter-occupied, and 12% which are vacation rentals. Residents are 60% white, 27% black, 12% Hispanic, and 1% other.

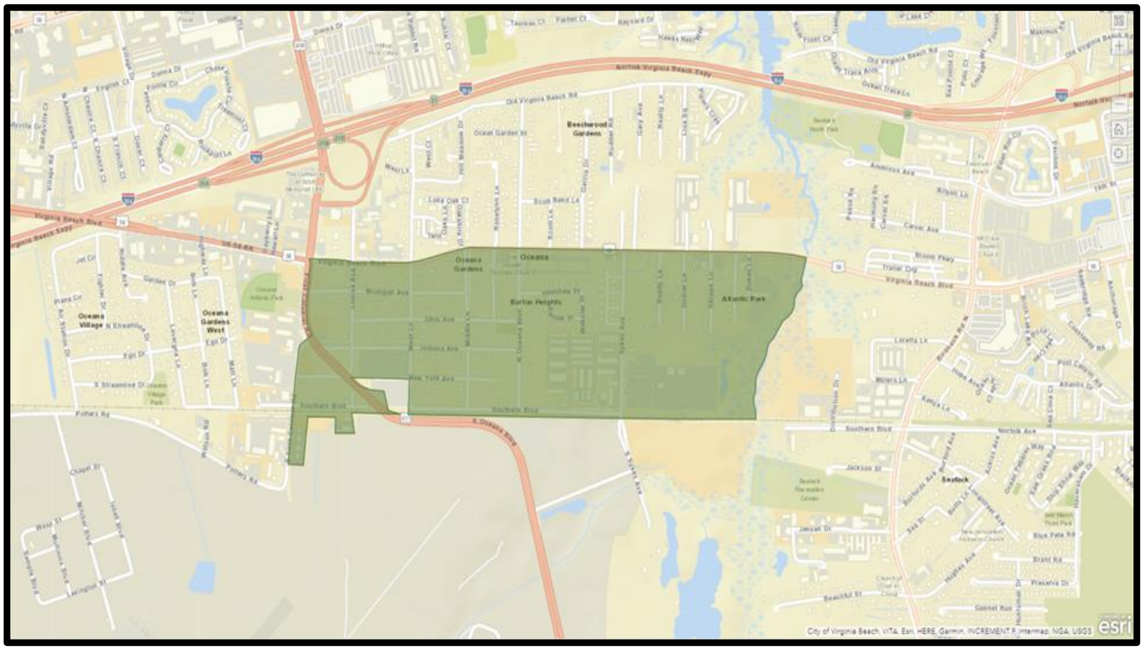

Figure 5: Census Block Group for First Colonial Road and Oceana Boulevard

As shown in Figure 6, the project is located within a designated qualified opportunity zone as determined by the United States Secretary of the Treasury via delegation of authority to the Internal Revenue Service.

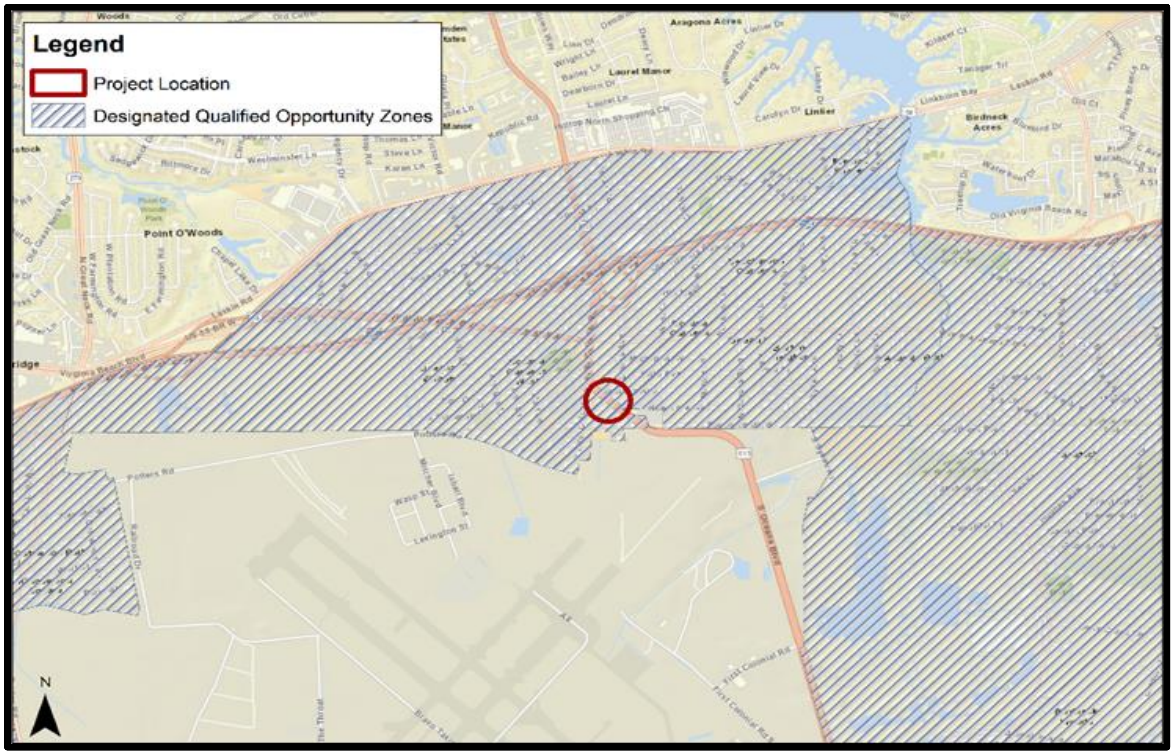

Figure 6: Opportunity Zone for First Colonial Road and Oceana Boulevard
(Source: Virginia Economic Development Partnership (VEDP) GIS Open Data)

c. Historic Flooding Data and Hydrologic Studies Projecting Flood Frequency

The City maintains records of where residents report flood issues, and what type of flooding is causing the issue. Residents regularly report flood issues through a hotline which is then recorded in a flood event database. Within a half-mile radius around the project location, there have been 110 instances of flood reports associated with heavy rain or high tide recorded in the database between 1995 and 2021.

d. Local Government to Provide its Share of the Cost

The City of Virginia Beach is fully prepared to cover the cost share of the proposed project, as highlighted in Section D. Budget Narrative – Amount of Cash Funds Available. The funding for the grant match is contained within the City budget.

e. Local Floodplain Management Regulations

The City recognizes the vital importance of floodplains in the natural movement of water through the community.

Appendix K of the Virginia Code of Ordinances regulates development in the community's floodplains. The City requires that a permit is obtained for any construction or development in the special flood hazard area (SFHA).

For more information and details regarding the City's floodplain management and ordinances, please see:

- Virginia Beach Floodplain Ordinance

In addition, a copy of the floodplain ordinance has been included in Section E: Supporting Documentation.

f. Repetitive Loss and/or Severe Repetitive Loss Properties

The repetitive loss database from 2019-2020 shows one repetitive loss property within a quarter of a mile radius around the project area – see support letter from City of Virginia Beach Floodplain Administrator in Section E: Supporting Documentation.

g. Residential and/or Commercial Structures

The project area consists of 14 residential structures and 15 commercial structures.

h. Critical Facilities

The following six critical facilities are located within a two-mile radius around the proposed project site: NAS Oceana, Virginia Beach Police Department Second Precinct, EMS 14 Virginia Beach, Fire Station #11 Beach Borough, Virginia Beach Convention Center, and Linkhorn Park Elementary School.

NAS Oceana is the sole East Coast Master Jet Base and is home to all east coast strike fighter jet squadrons.

The Virginia Beach Convention Center is used as a command center during severe snowstorms and is used a mass vaccination site.

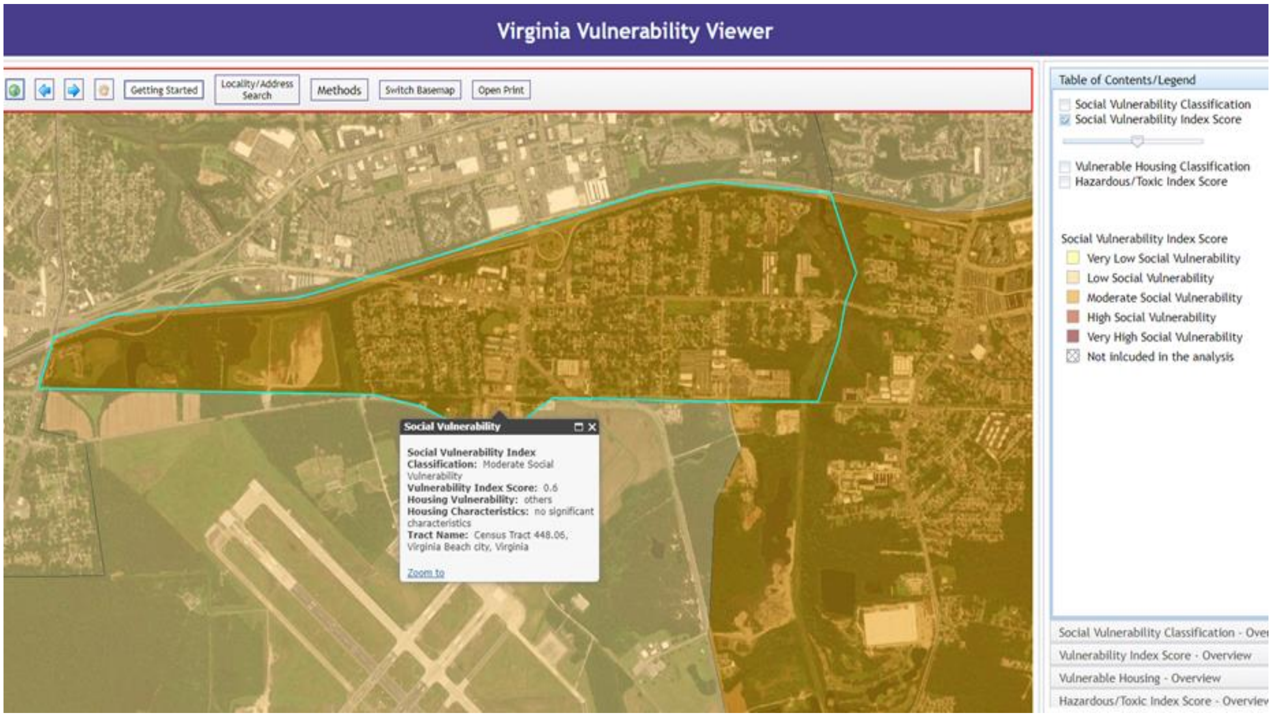
Linkhorn Park Elementary School is used as a secondary emergency shelter.

2. Need for Assistance

The City of Virginia Beach has invested significant time, money, and resources in understanding, planning for and communicating the threats of sea level rise and recurrent flooding to the community. The planning stage is now complete, and the City is ready to turn to implementation. Virginia Beach understands that the costs of mitigating the community are substantial and is seeking funds to support the implementation of vital mitigation projects, alongside dedicated resources that the City is procuring.

Monetary support to implement the proposed project will benefit not only Virginia Beach and the surrounding community members but will have trickle-down impacts for the broader Lynnhaven River Watershed.

The project is in a Moderate social vulnerability classification with an index score of 0.6, per ADAPT Virginia's Vulnerability Viewer, see Figure 7.



Social Vulnerability Index Classification: Moderate Social Vulnerability
Vulnerability Index Score: 0.6
Housing Vulnerability: others
Housing Characteristics: no significant characteristics
Tract Name: Census Tract 448.06, Virginia Beach city, Virginia

Figure 7: ADAPT Virginia Vulnerability Viewer for First Colonial Road and Oceana Boulevard

3. Goals and Objectives

The major benefit of the project is ensuring that First Colonial Road/Oceana Boulevard provides safe access to NAS Oceana and can effectively serve as an evacuation route in a 100-year storm with 3.0 feet sea level rise. The project also relieves flooding in an area that is considered economically disadvantaged and is located within a Strategic Growth Area (SGA), which is identified in the City's Comprehensive plan as an area designated to absorb future growth in the City. Street flooding along South First Colonial Road and Indiana Avenue will be resolved, as well as the flooding that occurs on the private property along Indiana Avenue.

This project is among the highest-ranked projects within the City because it provides a solution to mitigate the flooding and does not require property acquisition since the project is located within the right-of-way (ROW) or on City property.

4. Approach, Milestones, and Deliverables

The following approach, milestones, and deliverables lays out a plan of action.

Our milestone schedule assumes an executed agreement date in September 2022. The expected progression of the project is shown in our milestone schedule, and notable deliverables for each milestone are listed below.

By the end of the grant period, the project will have completed construction.

a. Approach & Deliverables

Activity 1 – Field Investigation

The City will prepare and obtain required authorizations to conduct surveys. The City will then compile existing datasets and coordinate with identified subcontractors to survey baseline field conditions at the identified project site. This baseline field data will support the development of engineering design criteria. The data will also serve as an input for evaluating the most effective design of the project features to meet the project goals and objectives.

Deliverables:

- Field Survey Data Reports and Mapping Database
- List of Project Area Property Owners and Tax Map Parcel Boundary Mapping

Activity 2 – Final Design

The project team will leverage the collected field data in conjunction with the existing hazard outputs from the Sea Level Wise study to develop technical design criteria for existing and future condition scenarios. Hydrologic and Hydraulic Stormwater Management Modeling (SWMM) modeling will also be performed and developed for the Project Area to calibrate field-collected data including tidal levels and flows. Stormwater drainage outfalls will be field evaluated, and analyses performed to determine appropriate pipe sizes and replacement requirements.

Under this activity, the project team will develop engineering and design plans, including a construction schedule and staging plan for implementation. Preliminary cost estimates will be developed at the 60% design level and refined at the 90% design level. Technical specifications and bid quantities will be developed for construction procurements, including proposed materials and quantities.

Deliverables:

- Hydrologic and Hydraulic Analyses- SWMM Modeling
- 30%, 60%, 90% and PS&E design plans
- Design renderings
- Final plans, specifications, and bid sheets
- Construction cost estimates
- Construction schedule estimate

Activity 3 – Construction

Contractor procurement activities will begin which include bid document development, coordination, requests for information and reporting. A construction work plan will be developed to include identification of project staging area, construction phasing sequence, and anticipated construction schedule.

Deliverables:

- Pre-construction survey
- Conduct weekly inspections to monitor construction progress
- Post-construction survey and as-built plans

b. Milestone Schedule

The milestone schedule assumes an executed agreement date in September 2022. The expected progression of the project is shown in the milestone schedule, and notable deliverables for each milestone are listed below:

Year 1:

- *4th Quarter (2022)*
    - Field Investigation
    - 30% Concept Design Submission
- *1st Quarter (2023)*
    - 30% Concept Design Submittal
- *2nd Quarter (2023)*
    - 60% Design Submission
    - Public Engagement Meeting
- *3rd Quarter (2023)*
    - 90% Design PS&E
    - Submit Bid Documents

Year 2:

- *4th Quarter (2023)*
    - 100% Final PS&E
    - Submit Bid Documents
- *1st Quarter (2024)*
    - Final Bid Coordination / Acceptance
- *2nd Quarter (2024)*
    - Construction NTP, Oversight, Management, and Inspection Services

Year 3:

- *4th Quarter (2025)*
    - Project Closeout
    - Begin Warranty Period

Table 1: Schedule Summary

Activity	Schedule	Duration
Design	10/2022 – 01/2024	15 Months
Site Acquisition/Easements	N/A	0 months
Utility Relocation	N/A	0 Months
Total Construction	04/2024-10/2025	18 Months
Contingency	N/A	0 Months

5. Relationship to Other Projects

In addition, the City has several other planned and ongoing efforts that will work in conjunction with this project to provide flood reduction in the drainage basin and surrounding areas. Furthermore, there is an upcoming Public Utilities waterline replacement project within the project area.

Stormwater Master Plan

The City Council initiated an update of the City's Stormwater Master Plan in 2014. This effort is running on a partial parallel track and interchanging information with aspects of the sea level rise study. Existing and future nuisance flooding and decreasing system performance due to sea level rise will be addressed between the Stormwater Master Plan and the recommendations from the Sea Level Wise Adaptation Strategy plan.

Ongoing Flood Protection

Indicators for sea level rise impacts within the City have included nuisance flooding and instances of repetitive losses to coastal flooding. The City has been progressive in addressing flooding issues and fully intends to follow this effort with the adoption of strategies that protect our vitality. In the last five years, the City has completed $43.8 million in flood protection projects, and over the next 10 years, the City expects to spend an additional $135 million on currently identified flood protection projects. We are firmly committed to the implementation of strategies and in-the-ground solutions as it moves forward with these projects - providing measurable returns and case study examples of communities adapting to the changing hazard environment.

6. Maintenance Plan

The City of Virginia Beach has a comprehensive maintenance plan in place to proactively preserve City-owned assets. This includes measures to clean all 1,700 miles of City-maintained pipe at least once every five years and perform CCTV of the system at least once every 15 years as required by the City's Municipal Separate Storm Sewer System (MS4) permit. In addition, there are currently 3,384 City BMP facilities that are inspected every five years, and maintenance and/or repairs are completed as needed. It also includes a contract street sweeping program that aims to sweep all City-maintained streets, excluding the Oceanfront and Town Center areas, seven times per year. The contract street sweeping is supplemented by in-house street sweeping crews that regularly sweep the Oceanfront and Town Center Areas.

In addition, reactive maintenance is completed as needed by in-house crews including cave-in repairs, minor pipe replacement, etc. Dedicated local funds are also available each year to utilize for contract reactive repairs as needed.

The pipe and BMP installed with this project will be added to the City's maintenance inventory and placed on the maintenance cycle as aforementioned.

7. Criteria

The City has demonstrated, through this application, that the grant criteria have been met. For more details and locations of criteria, please see Table 2 below. The completed scoring criteria are included in Appendix B of this application.

Table 2: Grant Criteria

Criteria	Satisfaction?
Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?	Yes.
Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or is a link provided?	Yes. Approved on July 20, 2021. The Virginia Beach Resilience Plan (Sea Level Wise) can be found on our website.
For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?	Not Applicable.
Has the applicant provided evidence of an ability to provide the required match funds?	Yes. Please see Section D: *Budget Narrative Amount of Cash Funds Available* for more information.
Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on the prevention of flooding?	Yes. Please see Section B: *Scope of Work Narrative* for more details.

D: Budget Narrative

The following budget narrative details the proposed project expenditures.

1. Estimated Total Project Cost

A detailed cost breakdown for the project area is provided in Table 3 below. This cost breakdown is based on the 15% design concept.

Table 3: Cost breakdown

Element	Element Sub-Total
Design	$ 390,000
Site Acquisition	$ -
Utility Relocation	$ 195,000
Construction Engineering and Inspection	$ 292,500
Construction Total Construction	$ 1,950,000
Overall Project Contingency (30%)	$ 848,250
Estimated Total Cost	**$ 3,675,750**

2. Funds Requested from the Fund

The City is requesting a total of $1,837,875 (50% of total project cost estimate) in funding over the proposed period of performance, with a cost-share/in-kind contribution by the City of $1,837,875 (50% of total project cost estimate). The funding will support the implementation of the detailed work plan and scope outlined in this narrative.

3. Cash Funds Available

The City has $1,837,875 of cash on hand, contained within the City budget. This amount of cash funds is sufficient, that when combined with the potential grant funding, the City will have all necessary funds available to complete the project.

4. Funding Authorization

Please refer to supporting documentation Section E: Supporting Documentation City Manager Approval, for the documentation authorizing the funding request.

E: Supporting Documentation

1. Detailed Construction Estimate
2. Virginia Beach Resilience Plan DCR Approval
3. City Manager Approval
4. City of Virginia Beach Floodplain Administrator Support Letter

RE: Virginia Beach Resilience Plan Second Submission - CFPF

Dear Ms. Utterback:

Thank you for the resubmission of the Sea Level Wise Adaptation Plan for City of Virginia Beach. After careful review and consideration, the Virginia Department of Conservation and Recreation has deemed the Plan complete and meets all the criteria outlined in the June 2021 Community Flood Preparedness Grant Manual. This approval will remain in effect for a period of three years, ending on July 31, 2024.

The following elements were evaluated as part of this review:

1. **Element 1: It is project-based with projects focused on flood control and resilience. DCR RESPONSE**

    a. Project-based: Four watersheds—each with a defined geographic area, analysis of community social and environmental characteristics, types of flooding, and a tailored flood resilience strategy with <u>discrete projects identified</u>.

Projects focused on flood control and resilience include:

Neighborhood	Flood Control Project
Elizabeth River	City-wide alignment, living shoreline, marsh restoration, land conservation
Lynnhaven	Chesapeake Bay alignment, Lesner Bridge Neighborhood alignment (East & West), beach & dune nourishment, ecological revetments, shellfish reef restoration, seagrass restoration
Oceanfront	Atlantic Oceanfront alignment, Rudee Heights alignment
Southern Rivers	West Neck Creek city-wide alignment, Muddy Creek Road city-wide alignment, Sandbridge city-wide alignment

**additional projects listed within the Sea Level Wise Adaptation Strategy.*

2. **Element 2: It incorporates nature-based infrastructure to the maximum extent possible. DCR RESPONSE**

    a. Nature-based infrastructure: Flood mitigation projects throughout the city incorporate nature-based solutions and were identified for maximum use within specific watersheds.

3. **Element 3: It includes considerations of all parts of a locality regardless of socioeconomics or race. DCR RESPONSE**
    a. All parts of a locality: Locality divided into four watersheds, covering the entirety of the jurisdictional boundary.
    b. Social vulnerability: Social implications of flood hazards and analysis of populations at-risk documented.
    c. Demographic Analysis: Demographic and Population Vulnerability Analysis conducted by Dewberry and incorporated into the Plan.

4. **Element 4: It includes coordination with other local and inter-jurisdictional projects, plans, and activities and has a clearly articulated timeline or phasing for plan implementation. DCR RESPONSE**
    a. Coordination with other projects, plans, and activities: Contains the planning processes and frameworks which outline local and regional plans used by the City and address resilience; and how they have been integrated for flood adaptation planning.
    b. Clearly articulated timeline or phasing for plan implementation: Program phases clearly articulated and described in detail—Impact assessment, Adaptation research, Strategy development, and Long-term implementation.

5. **Element 5: Is based on the best available science, and incorporates climate change, sea level rise, storm surge (where appropriate), and current flood maps.**
    a. Technically backed water-resources analysis, sea level rise projections, storm surge, and climate change incorporated into strategic approach.

VA DCR looks forward to working with you as you work to make Virginia Beach a more resilient community. If you have questions or need additional assistance, please contact us at cfpf@dcr.virginia.gov. Again, thank you for your interest in the Community Flood Preparedness Fund.

Sincerely,

Wendy Howard Cooper

VIRGINIA BEACH, VA 23546-9012

INTER-OFFICE MEMORANDUM

DATE: March 30, 2022

TO: Patrick Duhaney, City Manager

FROM: Kaitlyn James, Budget and Management Services KJ

SUBJECT: **Virginia Community Flood Preparedness Fund Grant – Round III**

The Department of Public Works is requesting permission to submit two applications for the Virginia Community Flood Preparedness Fund Grant from the Virginia Department of Conservation and Recreation. The Virginia Community Flood Preparedness Fund was established in the 2020 session of the General Assembly. Money in this fund comes from the auction of carbon allowances through the Regional Greenhouse Gas Initiative. It was established to provide support to localities across Virginia to reduce the impacts of flooding, including flooding driven by climate change.

The first application is for the First Colonial Road and Oceana Boulevard Stormwater Improvements project in the amount of $1,837,875. This project will provide upgraded stormwater infrastructure to mitigate frequent flooding. First Colonial Road/Oceana Boulevard is a secondary evacuation route and provides one of the primary access roads to Naval Air Station (NAS) Oceana. This project does not require property acquisition since the project is located with the right-of-way or on City property. There is sufficient funding for the fifty percent local match for this grant in CIP 100601, "First Colonial and Oceana Boulevard."

The second application is for $5,000,000 for a Back Bay Wetlands Restoration project to provide march terraces in Back Bay to promote wetland restoration and reduce frequent flooding. If awarded, the grant will require a local match of $24.1 million. There is sufficient funding within CIP 100551, "Stormwater Green Infrastructure," which has appropriations to date of $40 million as a result of the bond referendum.

Budget & Management Services recommends this grant application for approval. Please indicate approval or disapproval below. The application due date is April 8, 2022.

RE: Community Flood Preparedness Fund – First Colonial Rd and Oceana Blvd

Dear Ms. Cooper:

While the proposed project is not located in a Federal Emergency Management Agency (FEMA) mapped Special Flood Hazard Area (SFHA), the area encompassed by the project is considered to be an area subject to recurrent flooding. This particular area begins to experience flooding during the 10-yr storm event due to inadequate stormwater infrastructure. First Colonial Road/Oceana Boulevard is a secondary evacuation route and is one of the primary access roads to Naval Air Station (NAS) Oceana. While there are no repetitive loss properties in the project neighborhood, there is one (1) repetitive loss property located just outside the project neighborhood.

If I can provide any further information or assistance, please call me at 757-385-4621, or e-mail me at wmcnamar@vbgov.com.

Sincerely,

Whitney McNamara

Whitney McNamara, CFM
Floodplain Administrator and CRS Coordinator

5. Copy of Floodplain Ordinance

ORD-3309

AN ORDINANCE TO ADOPT APPENDIX K, (FLOODPLAIN ORDINANCE) OF THE CITY CODE, PERTAINING TO FLOODPLAIN DISTRICTS, PERMITS, VARIANCE CONDITIONS AND ENFORCEMENT

Section Added: Appendix K, Floodplain Ordinance

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF VIRGINIA BEACH, VIRGINIA:

That Appendix K, Floodplain Ordinance, of the Code of the City of Virginia Beach, Virginia, is hereby adopted to read as follows:

ARTICLE I - GENERAL PROVISIONS

Sec. 1.1. Statutory authorization and purpose.

A. This ordinance is adopted pursuant to the authority granted to localities by Va. Code § 10.1 – 600 et seq.

B. The City Council finds the purpose of these provisions is to prevent the loss of life and property, the creation of health and safety hazards, the disruption of commerce and governmental services, the extraordinary and unnecessary expenditure of public funds for flood protection and relief, and the impairment of the tax base by:

1. Regulating uses, activities, and development that, alone or in combination with other existing or future uses, activities, and development, will cause unacceptable increases in flood heights, velocities, and frequencies;

2. Restricting or prohibiting certain uses, activities, and development from locating within districts subject to flooding;

3. Requiring all uses, activities, and developments that do occur in flood-prone districts be protected or flood-proofed against flooding and flood damage;

4. Protecting individuals from buying land and structures that are unsuited for intended purposes because of flood hazards; and

5. Acknowledging that the tide data over the last 100 years shows that Virginia Beach is facing an increased danger of flooding caused by both sea level rise and subsidence.

Sec. 1.2. Applicability.

These provisions shall apply to all privately and publicly owned lands within the jurisdiction of the City of Virginia Beach and identified as areas of special flood hazard according to the Flood Insurance Rate Map (FIRM) that is provided to the City of Virginia Beach by the Federal Emergency Management Agency (FEMA) and dated May 4, 2009 or identified as floodplains subject to special restrictions in Section 4.10 of this ordinance.

Sec. 1.3. Definitions.

Base flood. The flood having a one (1) percent chance of being equaled or exceeded in any given year; also referred to as the one hundred (100) year flood.

Base flood elevation. The FEMA designated one (1) percent annual chance water surface elevation. The water surface elevation of the base flood in relation to the datum specified on the City's FIRM.

Basement. Any area of the building having its floor sub-grade (below ground level) on all sides.

Breakaway wall. A wall that is not part of the structural support of the building and is intended, through its design and construction, to collapse under specific lateral loading forces without causing damage to the elevated portion of the building or the supporting foundation system.

City Council. The body designated to review appeals made by individuals with regard to decisions of the Floodplain Administrator in the interpretation of this ordinance.

City Manager. The City Manager of the City of Virginia Beach, or his designees.

Development. Any man-made change to improved or unimproved real estate, including, but not limited to, buildings or other structures, the placement of manufactured homes, streets, mining, dredging, filling, grading, paving, excavation or drilling operations, storage of equipment or materials, or the subdivision of land.

Elevated building. A non-basement building built to have the lowest floor elevated above the ground level by means of solid foundation perimeter walls, pilings, or columns (posts and piers).

Encroachment. The advance or infringement of uses, plant growth, fill, excavation, buildings, permanent structures, or development into a floodplain, which may impede or alter the flow capacity of a floodplain.

Existing construction. Structures for which the "start of construction" commenced before the effective date of the most recent FIRM (May 4, 2009) "Existing construction" may also be referred to as "existing structures."

Flood or flooding.

1. A general or temporary condition of partial or complete inundation of normally dry land areas from:

    a. The overflow of inland or tidal waters;

    b. The unusual and rapid accumulation or runoff of surface waters from any source; or

    c. Mudflows, which are proximately caused by flooding as defined in paragraph 1.b. of this definition and are akin to a river of liquid and flowing mud on the surfaces of normally dry land areas, as when earth is carried by a current of water and deposited along the path of the current.

2. The collapse or subsidence of land along the shore of a lake or other body of water as a result of erosion or undermining caused by waves or currents of water exceeding anticipated cyclical levels or suddenly caused by an unusually high water level in a natural body of water, accompanied by a severe storm, an unanticipated force of nature such as flash flood or an abnormal tidal surge, or by some similarly unusual and unforeseeable event that results in flooding as defined in paragraph 1.a. of this definition.

Flood Insurance Rate Map (FIRM). An official map of the City, on which FEMA has delineated both the special flood hazard areas and the risk premium zones applicable to the community. A FIRM that has been made available digitally is called a Digital Flood Insurance Rate Map (DFIRM).

Flood Insurance Study (FIS). A report by FEMA that examines, evaluates, and determines flood hazards and, if appropriate, corresponding water surface elevations, or an examination, evaluation, and determination of mudflow and flood-related erosion hazards.

Floodplain. Any land area susceptible to being inundated by water from any source.

Flood proofing. Any combination of structural and non-structural additions, changes, or adjustments to structures which reduce or eliminate flood damage to real estate or improved real property, water and sanitary facilities, or structures and their contents.

Floodway. The channel of a river or other watercourse and the adjacent land areas that shall be reserved to discharge the base flood without cumulatively increasing the water surface elevation more than one (1) foot. The “floodway” may also be referred to as the “regulatory floodway”.

Freeboard. A factor of safety usually expressed in feet above the base flood elevation for purposes of floodplain management. “Freeboard” tends to compensate for the many unknown factors that could contribute to flood heights greater than the height calculated for a selected size flood and floodway conditions, such as wave action, bridge openings, and the hydrological effect of urbanization in the watershed. When a freeboard is included in the height of a structure, the flood insurance premiums may be less expensive.

Highest adjacent grade. The highest natural elevation of the ground surface prior to construction next to the proposed walls of a structure.

Historic structure. Any structure that is:

1. Listed individually in the National Register of Historic Places (a listing maintained by the Department of Interior) or preliminarily determined by the Secretary of the Interior as meeting the requirements for individual listing on the National Register;

2. Certified or preliminarily determined by the Secretary of the Interior as contributing to the historical significance of a registered historic district or a district preliminarily determined by the Secretary to qualify as a registered historic district;

3. Individually listed on a state inventory of historic places in states with historic preservation programs that have been approved by the Secretary of the Interior; or

4. Individually listed on a local inventory of historic places in communities with historic preservation programs that have been certified either:

    a. By an approved state program as determined by the Secretary of the Interior or

    b. Directly by the Secretary of the Interior in states without approved programs.

Hydrologic and Hydraulic Engineering Analysis. Analyses performed by a professional engineer licensed by the Commonwealth of Virginia, in accordance with standard engineering practices that are accepted by the Virginia Department of Conservation and Recreation and FEMA, used to determine the base flood, other frequency floods, flood elevations, floodway information and boundaries, and flood profiles.

Letters of Map Change (LOMC). A Letter of Map Change is an official FEMA determination, by letter, that amends or revises an effective FIRM or FIS. Letters of Map Change include:

1. Letter of Map Amendment (LOMA): An amendment based on technical data showing that a property was incorrectly included in a designated Special Flood Hazard Area (SFHA). A LOMA amends the current effective FIRM and establishes that a land as defined by metes and bounds or a structure is not located in a SFHA.

2. Letter of Map Revision (LOMR): A revision based on technical data that may show changes to flood zones, flood elevations, floodplain and floodway delineations, and planimetric features. A Letter of Map Revision Based on Fill (LOMR-F) is a determination that a structure or parcel of land has been elevated by fill above the base flood elevation and is, therefore, no longer exposed to flooding associated with the base flood. In order to qualify for this determination, the fill must have been permitted and placed in accordance with the City's floodplain management ordinance.

3. Conditional Letter of Map Revision (CLOMR): A formal review and comment as to whether a proposed flood protection project or other project complies with the minimum National Flood Insurance Program (NFIP) requirements for such projects with respect to delineation of SFHAs. A CLOMR does not revise the effective FIRM or FIS.

Lowest floor. The lowest floor of the lowest enclosed area (including basement). An unfinished or flood-resistant enclosure, usable solely for parking of vehicles, building access, or storage in an area other than a basement area is not considered a building's lowest floor, provided that such enclosure is not built so as to render the structure in violation of the applicable non-elevation design requirements of Federal Code 44CFR §60.3.

Manufactured home. A structure, transportable in one or more sections, that is built on a permanent chassis and is designed for use with or without a permanent foundation when connected to the required utilities. For floodplain management purposes the term "manufactured home" also includes park trailers, travel trailers, and other similar vehicles placed on a site for greater than one hundred eighty (180) consecutive days, but does not include a recreational vehicle.

Manufactured home park or subdivision. A parcel (or contiguous parcels) of land divided into two (2) or more manufactured home lots for rent or sale.

Market value. The value of a structure, established prior to the damage in question, as determined by property values used for tax assessment purposes (assessment) as adjusted by the Virginia Beach Real Estate Assessor (market factor) to reflect current market conditions, or as determined by an independent appraisal done by a professional appraiser.

New construction. For the purposes of determining insurance rates, structures for which the "start of construction" commenced on or after October 3, 1970 and includes any subsequent improvements to such structures. For floodplain management purposes, new construction means structures for which the start of construction commenced on or after the effective date of a floodplain management ordinance adopted by the City and includes any subsequent improvements to such structures.

Post-FIRM structures. A structure for which construction or substantial improvement occurred after October 3, 1970.

Pre-FIRM structures. A structure for which construction or substantial improvement occurred on or before October 3, 1970.

Recreational vehicle. A vehicle that is:

1. Built on a single chassis;

2. Four hundred (400) square feet or less when measured at the largest horizontal projection;

3. Designed to be self-propelled or permanently towable by a light duty truck; and

4. Designed primarily not for use as a permanent dwelling but as temporary living quarters for recreational camping, travel, or seasonal use.

Regulatory flood protection elevation (design flood elevation). The base flood elevation plus the freeboard required by this ordinance.

Special flood hazard area (SFHA). The land in the floodplain subject to a one (1) percent or greater chance of being flooded in any given year as set forth in this ordinance. These areas are designated as AE, AO, A, and VE on the FIRM.

Start of construction. For other than new construction and substantial improvement under the Coastal Barrier Resources Act (P.L. 97-348), means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, rehabilitation, addition, placement, substantial improvement, or other improvement was within one hundred eighty (180) days of the permit date. The actual start means either the first placement of permanent construction of a structure on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage of excavation, or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading, and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footings, piers, or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main structure. For a substantial improvement, the actual start of the construction means the first alteration of any wall, ceiling, floor, or other structural part of a building, whether or not that alteration affects the external dimensions of the building.

Structure. For floodplain management purposes, a walled and roofed building, including a gas or liquid storage tank, that is principally above ground, as well as a manufactured home.

Substantial damage. Damage of any origin sustained by a structure whereby the cost of restoring the structure to its before damaged condition would equal or exceed fifty (50) percent of the market value of the structure before the damage occurred.

Substantial improvement. Any reconstruction, rehabilitation, addition, or other improvement of a structure, the cost of which equals or exceeds fifty (50) percent of the market value of the structure before the start of construction of the improvement. This term includes structures that have incurred substantial damage regardless of the actual repair work performed. The term does not, however, include either:

1. Any project for improvement of a structure to correct existing violations of state or local health, sanitary, or safety code specifications that have been identified by the local code enforcement official and are the minimum necessary to assure safe living conditions; or

2. Any alteration of a historic structure provided that the alteration will not preclude the structure's continued designation as a historic structure.

3. Historic structures undergoing repair or rehabilitation that would constitute a substantial improvement as defined above, shall comply with

all ordinance requirements that do not preclude the structure's continued designation as a historic structure. Documentation that a specific ordinance requirement will cause removal of the structure from the National Register of Historic Places or the State Inventory of Historic places shall be obtained from the Secretary of the Interior or the State Historic Preservation Officer. Any exemption from ordinance requirements will be the minimum necessary to preserve the historic character and design of the structure.

Violation. The failure of a structure or other development to be fully compliant with the provisions of the floodplain ordinance in effect at the time of construction or development. A structure or other development without the elevation certificate, other certifications, or other evidence of compliance required in this ordinance is presumed to be in violation until such time as that documentation is provided.

Watercourse. Any natural or artificial lake, river, creek, stream, ditch, channel, waterway, gully, ravine, swale, or wash in which water flows, either continuously, periodically, or intermittently, and which has a definite channel, bed, or banks.

Sec. 1.4. Compliance and liability.

A. No land shall hereafter be developed and no structure shall be located, relocated, constructed, reconstructed, enlarged, or structurally altered except in full compliance with the terms and provisions of this ordinance and any other applicable ordinances and regulations that apply to uses within the City.

B. The degree of flood protection sought by the provisions of this ordinance is considered reasonable for regulatory purposes and is based on acceptable engineering methods of study, but does not imply total flood protection. Larger floods may occur on rare occasions. Flood heights may be increased by man- made or natural causes, such as ice jams and bridge openings restricted by debris. This ordinance does not imply that districts outside the floodplain district or land uses permitted within such district will be free from flooding or flood damages.

C. This ordinance shall not create liability on the part of the City of Virginia Beach or any officer or employee thereof for any flood damages that result from reliance on this ordinance or any administrative decision lawfully made thereunder.

Sec. 1.5. Records.

Records of actions associated with administering this ordinance shall be kept on file and maintained by the Floodplain Administrator.

Sec. 1.6. Abrogation and greater restrictions.

This ordinance supersedes any ordinance currently in effect in the floodplain. Any ordinance, however, shall remain in full force and effect to the extent that its provisions are more restrictive.

Sec. 1.7. Severability.

If any section, subsection, paragraph, sentence, clause, or phrase of this ordinance be declared by the courts to be unconstitutional or invalid for any reason whatsoever, such decision shall not affect the validity of the ordinance as a whole other than the part so declared to be unconstitutional or invalid.

Sec. 1.8. Penalty for violations.

Any person who fails to comply with any of the requirements or provisions of this ordinance or directions of the directors of planning or public works or any authorized employee of the City of Virginia Beach shall be guilty of the appropriate violation and subject to the penalties therefore. Any violation of the provision of this ordinance shall be punishable by a fine of not more than one hundred dollars ($100.00). Each person shall be deemed guilty of a separate offense for each and every day or portion thereof during which any violation of any of the provisions of this ordinance is committed.

The Virginia Uniform Statewide Building Code (VA USBC) addresses building code violations and the associated penalties in Section 104 and Section 115.

In addition to the above penalties, all other actions are hereby reserved, including an action in equity for the proper enforcement of this ordinance. The imposition of a fine or penalty for any violation of, or noncompliance with, this ordinance shall not excuse the violation or noncompliance or permit it to continue, and all such persons shall be required to correct or remedy such violations within a reasonable time. Any structure constructed, reconstructed, enlarged, altered, or relocated in noncompliance with this ordinance may be declared by the City of Virginia Beach to be a public nuisance and abatable as such. Flood insurance may be withheld from structures constructed in violation of this ordinance.

ARTICLE II - ADMINISTRATION

Sec. 2.1. Designation of the floodplain administrator.

The City Manager of the City of Virginia Beach is hereby appointed the Floodplain Administrator to administer and implement this ordinance. The Floodplain Administrator has delegated the duties and responsibilities set forth in this ordinance to the Departments of Public Works and Planning, as specified below.

Sec. 2.2. Duties and responsibilities of the Department of Public Works.

The duties and responsibilities of the Department of Public Works shall include but are not limited to:

A. Interpreting floodplain boundaries and providing available base flood elevation and flood hazard information;

B. Verifying that applicants proposing an alteration of a watercourse have notified adjacent communities, the Department of Conservation and Recreation (Division of Dam Safety and Floodplain Management), and other appropriate agencies (Virginia Department of Environmental Quality (VADEQ), United States Army Corps of Engineers (USACE), etc.) and have submitted copies of such notifications to FEMA;

C. Advising applicants for new construction or substantial improvement of structures that are located within an area of the Coastal Barrier Resources System established by the Coastal Barrier Resources Act that Federal flood insurance is not available on such structures; areas subject to this limitation are shown on FIRMs as Coastal Barrier Resource System Areas or Otherwise Protected Areas;

D. Submitting to FEMA, or requiring applicants to submit to FEMA, data and information necessary to maintain FIRMs, including hydrologic and hydraulic engineering analyses prepared by or for the City, within six (6) months after such data and information becomes available if the analyses indicate changes in base flood elevations;

E. Maintaining and permanently keeping Flood Insurance Studies, FIRMs (including historic studies and maps and current effective studies and maps) and Letters of Map Change;

F. Notifying FEMA when the corporate boundaries of the City of Virginia Beach have been modified and:

    1. Providing a map that clearly delineates the new corporate boundaries or the new area for which the authority to regulate pursuant to this ordinance has either been assumed or relinquished through annexation; and

    2. If the FIRM for any annexed area includes SFHAs that have flood zones with regulatory requirements that are not set forth in this ordinance, prepare amendments to this ordinance to adopt the FIRM and appropriate requirements, and submit the amendments to the City Council for adoption; such adoption shall take place at the same time as or prior to the date of annexation and a copy of the amended ordinance shall be provided to the Department of Conservation and Recreation

(Division of Dam Safety and Floodplain Management) and FEMA.

G. Upon the request of FEMA, completing and submitting a report concerning participation in the NFIP, which may request information regarding the number of buildings in the SFHA, the number of permits issued for development in the SFHA, and the number of variances issued for development in the SFHA.

Sec. 2.3. Duties and responsibilities of the Department of Planning.

The duties and responsibilities of the Department of Planning shall include but are not limited to:

A. Reviewing applications for permits to determine whether proposed activities will be located in the SFHA;

B. Reviewing applications to determine whether proposed activities will be reasonably safe from flooding and requiring new construction and substantial improvements to meet the requirements of this ordinance;

C. Reviewing applications to determine whether all necessary permits have been obtained from the Federal, State, or local agencies from which prior or concurrent approval is required; in particular, permits from state agencies for any construction, reconstruction, repair, or alteration of a dam, reservoir, or waterway obstruction (including bridges, culverts, structures), any alteration of a watercourse, or any change of the course, current, or cross section of a stream or body of water, including any change to the SFHAs of free- flowing non-tidal waters of the State;

D. Approving applications and issuing permits to develop in flood hazard areas if the provisions of this ordinance have been met, or disapproving applications if the provisions of this ordinance have not been met;

E. Granting administrative variances pursuant to Section 6.1 of this ordinance;

F. Inspecting, or causing to be inspected, buildings, structures, and other development for which permits have been issued to determine compliance with this ordinance or to determine if non-compliance has occurred or violations have been committed;

G. Reviewing Elevation Certificates and requiring incomplete or deficient certificates to be corrected;

H. Maintaining and permanently keeping documentation supporting the issuance and denial of permits, Elevation Certificates, documentation of the elevation (in relation to the datum on the FIRM) to which structures have been flood proofed, and other required design certifications, variances, and records of enforcement actions taken to correct violations of this ordinance;

I. Enforcing the provisions of this ordinance, investigating violations, issuing notices of violations or stop work orders, and requiring permit holders to take corrective action;

J. Advising the City Council regarding the intent of this ordinance and, for each application for a variance, preparing a staff report and recommendation; and

K. Administering the requirements related to proposed work on existing buildings:

1. Making determinations as to whether buildings and structures that are located in flood hazard areas and that are damaged by any cause have been substantially damaged; and

2. Making reasonable efforts to notify owners of substantially damaged structures of the need to obtain a permit to repair, rehabilitate, or reconstruct, and prohibit the non-compliant repair of substantially damaged buildings except for temporary emergency protective measures necessary to secure a property or stabilize a building or structure to prevent additional damage.

Sec. 2.4. Shared duties and responsibilities.

The duties and responsibilities shared by the Departments of Public Works and Planning shall include but are not limited to:

A. Undertaking, as determined appropriate by the Floodplain Administrator due to the circumstances, other actions that may include but are not limited to: issuing press releases, public service announcements, and other public information materials related to permit requests and repair of damaged structures; coordinating with other Federal, State, and local agencies to assist with substantial damage determinations; providing owners of damaged structures information related to the proper repair of damaged structures in SFHAs; and assisting property owners with documentation necessary to file claims for Increased Cost of Compliance coverage under National Flood Insurance Program (NFIP) flood insurance policies; and

B. It is the duty of the City Floodplain Administrator to take into account flood, mudslide, and flood-related erosion hazards, to the extent that they are known, in all official actions relating to land management and use throughout the entire jurisdictional area of the city, whether or not those hazards have been specifically delineated geographically (e.g., via mapping or surveying).

Sec. 2.5. Use and Interpretation of FIRMs.

The Floodplain Administrator shall make interpretations, where needed, as to the exact location of SFHAs, floodplain boundaries, and floodway boundaries. The following shall apply to the use and interpretation of FIRMs and data:

A. Where field surveyed topography indicates that adjacent ground elevations:

  1. Are below the base flood elevation, even in areas not delineated as a SFHA on a FIRM, the area shall be considered a SFHA and subject to the requirements of this ordinance;

  2. Are above the base flood elevation, the area shall be regulated as a SFHA unless the applicant obtains a Letter of Map Change that removes the area from the SFHA.

B. In FEMA-identified SFHAs where base flood elevation and floodway data have not been identified and in areas where FEMA has not identified SFHAs, any other flood hazard data available from a Federal, State, local or other source shall be reviewed and reasonably used.

C. Base flood elevations and designated floodway boundaries on FIRMs and in Flood Insurance Studies (FISs) shall take precedence over base flood elevations and floodway boundaries by any other sources if such sources show reduced floodway widths or lower base flood elevations.

D. Other sources of data shall be reasonably used if such sources show increased base flood elevations or larger floodway areas than are shown on FIRMs and in FISs.

E. If a Preliminary FIRM and/or a Preliminary FIS has been provided by FEMA:

  1. Upon the issuance of a Letter of Final Determination by FEMA, the preliminary flood hazard data shall be used and shall replace the flood hazard data previously provided from FEMA for the purposes of administering this ordinance.

  2. Prior to the issuance of a Letter of Final Determination by FEMA, the use of preliminary flood hazard data shall be deemed the best available data pursuant to Section 4.6 and used where no base flood elevations or floodway areas are provided on the effective FIRM.

  3. Prior to issuance of a Letter of Final Determination by FEMA, the use of preliminary flood hazard data is permitted where the preliminary base flood elevations or floodway areas exceed the base flood elevations or designated floodway widths in existing flood hazard data provided by

FEMA. Such preliminary data may be subject to change or appeal to FEMA.

Sec. 2.6. Jurisdictional boundary changes.

A. The City floodplain ordinance in effect on the date of annexation shall remain in effect and shall be enforced by the municipality for all annexed areas. The City shall pass a resolution acknowledging and accepting responsibility for enforcing floodplain ordinance standards prior to annexation of any area containing identified flood hazards. If the FIRM for any annexed area includes SFHAs that have flood zones with regulatory requirements that are not set forth in this ordinance, the City shall prepare amendments to this ordinance to adopt the FIRM and appropriate requirements, and submit the amendments to the City Council for adoption; such adoption shall take place at the same time as or prior to the date of annexation and a copy of the amended ordinance shall be provided to the Department of Conservation and Recreation (Division of Dam Safety and Floodplain Management) and FEMA.

B. In accordance with the Code of Federal Regulations, Title 44 Subpart (B) Section 59.22 (a) (9) (v), all NFIP participating communities shall notify FEMA and, optionally, the Department of Conservation and Recreation in writing whenever the boundaries of the community have been modified by annexation or the community has otherwise assumed or no longer has authority to adopt and enforce floodplain management regulations for a particular area.

C. So that all FIRMs accurately represent the community's boundaries, a copy of a map of the community suitable for reproduction, clearly delineating the new corporate limits or new area for which the community has assumed or relinquished floodplain management regulatory authority shall be included with the notification.

Sec. 2.7. District boundary changes.

The delineation of any of the Floodplain Districts may be revised by the City of Virginia Beach where natural or man-made changes have occurred or where more detailed studies have been conducted or undertaken by the USACE or other qualified agencies, or an individual documents the need for such change. However, prior to any such change, approval shall be obtained from FEMA.

Sec. 2.8. Interpretation of district boundaries.

Initial interpretations of the boundaries of the Floodplain Districts shall be made by the Floodplain Administrator. Should a dispute arise concerning the boundaries of any of the Districts, the City Council shall make the necessary determination. The person questioning or contesting the location of the District boundary shall be given a reasonable opportunity to present his case to the City Council and to submit his own technical evidence if he so desires.

Sec. 2.9. Submitting technical data.

A community's base flood elevations may increase or decrease resulting from physical changes affecting flooding conditions. As soon as practicable, but not later than six (6) months after the date such information becomes available, a community shall notify FEMA of the changes by submitting technical or scientific data. Such a submission is necessary so that upon confirmation of those physical changes affecting flooding conditions, risk premium rates and floodplain management requirements will be based upon current data.

Sec. 2.10. Letters of map revision.

When development in the floodplain causes a change in the base flood elevation, the applicant, including state agencies, shall notify FEMA by applying for a Conditional Letter of Map Revision or a Letter of Map Revision.

Sec. 2.11. Appeals to decisions made by the Floodplain Administrator.

It is further provided that any decision of the Floodplain Administrator or his designee may be modified, reversed, or affirmed by the City Council upon appeal by any aggrieved party to such decision, if such appeal is filed with the Floodplain Administrator within thirty (30) days of such decision.

ARTICLE III - ESTABLISHMENT OF FLOODPLAIN DISTRICTS

Sec. 3.1. Description of Floodplain Districts.

A. Special Flood Hazard Areas (SFHA)

The SFHAs shall include land in the floodplain subject to a one (1) percent or greater chance of being flooded in any given year. The basis for the delineation of these districts shall be the FIS and the FIRM for the City of Virginia Beach prepared by FEMA, Federal Insurance Administration, dated May 4, 2009, and any subsequent revisions or amendments thereto.

The boundaries of the SFHAs are established as shown on the FIRM, which is declared to be a part of this ordinance and shall be kept on file at the City of Virginia Beach Department of Public Works, and include the following districts:

1. The **Floodway District** is in an **AE Zone** and is delineated, for the purposes of this ordinance, using the criterion that certain areas within the floodplain must be capable of carrying the waters of the one (1) percent annual chance flood without increasing the water surface elevation of that flood more than one (1) foot at any point. The areas included in this District are specifically defined in Table 7 of the above-referenced FIS and shown on the accompanying FIRM.

2. The **AE Zones** on the FIRM accompanying the FIS shall be those areas for which one (1) percent annual chance flood elevations have been provided and the floodway has **not** been delineated.

3. The **A Zone** on the FIRM accompanying the FIS shall be those areas for which no detailed flood profiles or elevations are provided, but the one (1) percent annual chance floodplain boundary has been approximated.

4. The **AO Zone** on the FIRM accompanying the FIS shall be those areas of shallow flooding identified as AO on the FIRM.

5. Reserved.

6. The **VE or V Zones** on FIRMs accompanying the FIS shall be those areas that are known as Coastal High Hazard areas, extending from offshore to the inland limit of a primary frontal dune along an open coast and any other area subject to high velocity wave action from storm or seismic sources.

B. Floodplain subject to special restrictions.

The City of Virginia Beach may identify and regulate local flood hazard or ponding areas that are not delineated on the FIRM. These areas are identified in Section 4.10 and may be delineated on a map using best available topographic data and locally derived information such as flood of record, historic high water marks, or approximate study methodologies.

ARTICLE IV – FLOODPLAIN DISTRICT PROVISIONS

Sec. 4.1. Permit and application requirements.

A. Permit Requirement

All uses, activities, and development occurring within any floodplain district, including placement of manufactured homes and structures, shall be undertaken only upon the issuance of the appropriate permit. Such development shall be undertaken only in strict compliance with the provisions of this Ordinance and with all other applicable codes and ordinances, as amended, such as the VA USBC and the City of Virginia Beach development ordinances. Prior to the issuance of any such permit, the Building Official shall require all applications to include compliance with all applicable state and federal laws and shall review all sites to assure they are reasonably safe from flooding. Under no circumstances shall any use, activity, or development adversely affect the capacity of the channels or floodways of any watercourse, drainage ditch, or any other drainage facility or system.

B. Site Plans and Permit Applications

All applications for development within any floodplain district and all building permits issued within the floodplain shall incorporate the following information:

1. The elevation of the base flood at the site;

2. The elevation of the lowest floor (including basement) or, in V zones, the lowest horizontal structural member;

3. For structures to be flood-proofed (non-residential only), the elevation to which the structure will be flood-proofed; and

4. Topographic information showing existing and proposed ground elevations.

Sec. 4.2. General Standards.

A. The following provisions shall apply to all permits issued in all floodplain districts:

1. New construction and substantial improvements of all structures shall be located, elevated, and constructed according to the VA USBC and anchored to prevent flotation, collapse, or lateral movement of the structure.

2. Manufactured homes shall be anchored to prevent flotation, collapse, or lateral movement. Methods of anchoring may include, but are not limited to, use of over-the-top or frame ties to ground anchors. This standard shall be in addition to and consistent with applicable state anchoring requirements for resisting wind forces.

3. New construction and substantial improvements shall be constructed with materials and utility equipment resistant to flood damage.

4. New construction or substantial improvements shall be constructed by methods and practices that minimize flood damage.

5. Electrical, heating, ventilation, plumbing, air conditioning equipment, and other service facilities, including duct work, shall be designed and/or located so as to prevent water from entering or accumulating within the components during conditions of flooding.

6. New and replacement water supply systems shall be designed to minimize or eliminate infiltration of flood waters into the system.

7. New and replacement sanitary sewage systems shall be designed to minimize or eliminate infiltration of flood waters into the systems and discharges from the systems into flood waters.

8. On-site waste disposal systems shall be located and constructed to avoid impairment to them or contamination from them during flooding.

9. No use shall be permitted if such use will increase the amounts of potentially damaging materials, including those likely to be injurious to health, that might be transported in floods.

B. In all SFHAs, the following additional provisions shall apply:

1. Prior to any proposed alteration or relocation of any channels or of any watercourse or stream, within the City a permit shall be obtained from the USACE, VADEQ, the Virginia Marine Resources Commission, and the Wetlands Board through the joint permit application process. Furthermore, notification of the proposal shall be given by the applicant to all affected adjacent jurisdictions, the Department of Conservation and Recreation (Division of Dam Safety and Floodplain Management), other required agencies, and FEMA.

2. The flood carrying capacity within an altered or relocated portion of any watercourse shall be maintained.

3. Sand dunes, barrier beaches, and other natural protective barriers shall remain intact to provide protection against wind, waves, and erosion drainage. Any person who desires to use or alter any coastal primary sand dune, other than for the purpose of conducting the activities specified in section 1602 of the Zoning Ordinance of the City of Virginia Beach, shall first obtain a permit from the USACE, VADEQ, the Virginia Marine Resources Commission, and the Wetlands Board through the joint permit application process.

Sec. 4.3. Elevation and construction requirements.

In all SFHAs where base flood elevations have been provided in the FIS or generated by a licensed professional in accordance with Section 4.6 of this ordinance, the following provisions shall apply:

A. Residential Construction Requirements

New construction or substantial improvement of any residential structure or manufactured home in Zones AE and A with detailed base flood elevations shall have the lowest floor, including basement, elevated to a minimum of two (2) feet above the base flood level.

B. Non-Residential Construction Requirements

New construction or substantial improvement of any commercial, industrial, or non-residential building or manufactured home shall have the lowest floor, including basement, elevated a minimum of two (2) feet above the base flood level. Buildings located in AE zones may be flood-proofed in lieu of being elevated provided that all areas of the building components below the elevation corresponding to the base flood elevation plus a minimum of two (2) feet freeboard are water tight with walls substantially impermeable to the passage of water, and use structural components having the capability of resisting hydrostatic and hydrodynamic loads and the effect of buoyancy. A professional engineer or architect licensed by the Commonwealth of Virginia shall certify that the standards of this subsection are satisfied. Such certification, including the specific elevation (in relation to NAVD88) to which such structures are flood proofed, shall be maintained by the Building Official.

C. Space Below the Lowest Floor Requirements

In zones A, AE, and AO, fully enclosed areas of new construction or substantially improved existing structures that are below the regulatory flood protection elevation shall:

1. Not be designed or used for human habitation, but shall only be used for parking of vehicles, building access, or limited storage of maintenance equipment used in connection with the premises. Access to the enclosed area shall be the minimum necessary to allow for parking of vehicles (garage door), limited storage of maintenance equipment (standard exterior door), or entry to the living area (stairway or elevator).

2. Be constructed entirely of flood resistant materials below the regulatory flood protection elevation.

3. Include measures to automatically equalize hydrostatic flood forces on walls by allowing for the entry and exit of floodwaters. To meet this requirement, the openings shall either be certified by a professional engineer or architect licensed by the Commonwealth of Virginia or meet or exceed the following minimum design criteria:

    a. Provide a minimum of two (2) openings on different sides of each enclosed area subject to flooding.

    b. The total net area of all openings shall be at least one (1) square inch for each square foot of enclosed area subject to flooding.

    c. If a building has more than one (1) enclosed area, each area shall have openings to allow floodwaters to automatically enter and exit.

d. The bottom of all required openings shall be no higher than one (1) foot above the adjacent grade.

e. Openings may be equipped with screens, louvers, or other opening coverings or devices, provided they permit the automatic flow of floodwaters in both directions.

f. Foundation enclosures made of flexible skirting are not considered enclosures for regulatory purposes and, therefore, do not require openings. Masonry or wood underpinning, regardless of structural status, is considered an enclosure and requires openings as outlined above.

D. Manufactured Homes and Recreational Vehicle Requirements

1. All manufactured homes placed, or substantially improved, on individual lots or parcels must meet all the requirements for new construction, including the elevation and anchoring requirements in Article 4, section 4.2, and section 4.3 of this ordinance.

2. All recreational vehicles placed on sites shall either:

a. Be on the site for fewer than one hundred eighty (180) consecutive days; or

b. Be fully licensed and ready for highway use (a recreational vehicle is ready for highway use if it is on its wheels or jacking system, is attached to the site only by quick disconnect type utilities and security devices and has no permanently attached additions); or

c. Meet all the requirements for manufactured homes in Article 4 section 4.3(D)(1).

Sec. 4.4. Floodway requirements.

The following provisions shall apply within the Floodway District of an AE zone:

A. Within any floodway area, no encroachments, including fill, new construction, substantial improvements, or other development shall be permitted unless it has been demonstrated through hydrologic and hydraulic analysis performed in accordance with standard engineering practice that the proposed encroachment will not affect normal flood flow, result in any increase in flood levels within the community, increase erosion within or adjoining to the floodway, cause the diversion of floodwaters during the occurrence of the base flood discharge, increase peak flows or velocities in a manner likely to lead to added property damage or hazards to life, or increase the amounts of damaging materials that might be transported in floods. Hydrologic and hydraulic analyses shall be undertaken only by professional engineers or others of demonstrated qualifications, who shall certify that the technical methods used correctly reflect currently-accepted technical concepts. Studies, analyses, computations, etc., shall be submitted in sufficient detail to allow a thorough review by the Floodplain Administrator.

Encroachments, including fill, new construction, substantial improvements, and other development within the floodway that would result in any increase in flood levels within the community during the occurrence of the base flood discharge is specifically prohibited. No variance shall be granted for any development, use, or activity that would cause any increase in the water surface elevation of the base flood.

If the above provisions are satisfied, all new construction and substantial improvements shall comply with all applicable provisions of Article 4.

B. The placement of new or replacement manufactured homes (mobile homes) is prohibited.

C. The following uses and structures may be permitted in the floodway district, subject to the requirements of Articles III, IV, V, and VI of this ordinance:

1. Public and private outdoor recreational facilities;
2. Agricultural uses, including farming, grazing, and the raising of poultry or livestock; provided, that poultry or livestock shall not be housed within five hundred (500) feet of any residential, apartment, or hotel district;
3. Open uses, such as public and private roadways, off street parking, or loading and unloading areas related to uses in adjoining districts;
4. Commercial mining, soil removal, and sand pits subject to regulations applicable to extractive industries as set forth in the conditional use provisions of the Zoning Ordinance of the City of Virginia Beach;
5. Public improvements, such as dams, levees and channel improvements, and utilities installations and substations, including temporary storage of materials, except flammable, toxic or noxious materials, and temporary location of maintenance installations; and
6. Uses and structures customarily accessory and clearly incidental and subordinate to uses listed above, including in connection with agricultural uses; roadside stands for the sale of agricultural products produced on the premises; provided that:
    a. Only one (1) such stand shall be permitted per lot;
    b. No such stand shall exceed five hundred (500) square feet in floor area; and

c. No such stand on the street frontage shall be erected within twenty (20) feet of the property line.

Sec. 4.5. AE Zone requirements.

The following provisions shall apply within all AE zones:

A. Until a regulatory floodway is designated, no new construction, substantial improvements or other development (including fill) shall be permitted within the areas of special flood hazard, designated as Zone AE on the FIRM, unless it is demonstrated that the cumulative effect of the proposed development, when combined with all other existing and anticipated development, will not increase the water surface elevation of the base flood more than one (1) foot at any point within the City.

B. Notwithstanding the criteria set forth in Section 4.10, development activities in Zones AE on the City of Virginia Beach FIRM that increase the water surface elevation of the base flood by more than one (1) foot may be allowed, provided that the applicant first applies, with the City of Virginia Beach's endorsement, for a Conditional Letter of Map Revision, and receives the approval of FEMA.

Sec. 4.6. A Zone requirements.

The following provisions shall apply within an A zone:

A. For these areas, the Floodplain Administrator shall obtain, review, and reasonably utilize any base flood elevations and floodway information from federal, state, and other acceptable sources, when available. Where the specific one (1) percent annual chance flood elevation cannot be determined for this area using other sources of data, such as the USACE Floodplain Information Reports, the U.S. Geological Survey Floodprone Quadrangles, etc., then the applicant for the proposed use, development, and/or activity shall determine this base flood elevation. For development proposed in the A Zone the applicant shall use technical methods that correctly reflect currently accepted non-detailed technical concepts, such as flood hazard analyses, point on boundary, known high water marks from past floods, or detailed methodologies including hydrologic and hydraulic analyses. Studies, analyses, computations, etc., shall be submitted in sufficient detail to allow a thorough review by the Floodplain Administrator.

B. The Floodplain Administrator reserves the right to require a hydrologic and hydraulic analysis for any development and to determine the base flood elevation. When such base flood elevation data is utilized, the lowest floor shall be elevated to minimum of two (2) feet above the base flood level. During the permitting process, the Floodplain Administrator shall obtain:

1. The elevation of the lowest floor (including the basement) of all new and substantially improved structures; and

2. If the structure has been flood-proofed in accordance with the requirements of this ordinance, the elevation (in relation to NAVD88) to which the structure has been flood-proofed.

C. When the data is not available from any source, the lowest floor of the structure shall be elevated to not less than two (2) feet above the highest adjacent grade.

Sec. 4.7. AO Zone requirements.

The following provisions shall apply within an AO zone:

A. All new construction and substantial improvements of residential structures shall have the lowest floor, including basement, elevated above the highest adjacent grade an amount not less than the depth number specified in feet on the FIRM. If no flood depth number is specified, the lowest floor, including basement, shall be elevated no less than two (2) feet above the highest adjacent grade.

B. All new construction and substantial improvements of non-residential structures shall:

1. Have the lowest floor, including basement, elevated above the highest adjacent grade an amount not less than the depth number specified in feet on the FIRM. If no flood depth number is specified, the lowest floor, including basement, shall be elevated at least two (2) feet above the highest adjacent grade; or

2. Together with attendant utility and sanitary facilities be completely flood-proofed to the specified flood level so that any space below that level is watertight with walls substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy.

C. Adequate drainage paths around structures on slopes shall be provided to guide floodwaters around and away from proposed structures.

Sec. 4.8. Reserved.

Sec. 4.9. V and VE Zone requirements.

The following provisions shall apply within V and VE Zones:

A. All new construction and substantial improvements in Zones V and VE shall be elevated on pilings or columns so that:

1. The bottom of the lowest horizontal structural member of the lowest floor (excluding the pilings or columns) is elevated to a minimum of two (2) feet above the base flood level; and

2. The pile or column foundation and structure attached thereto is anchored to resist flotation, collapse, and lateral movement due to the effects of wind and water loads acting simultaneously on all building components. Wind and water loading values shall each have a one (1) percent chance of being equaled or exceeded in any given year.

B. A professional engineer or architect licensed by the Commonwealth of Virginia shall develop or review the structural design, specifications, and plans for the construction and shall certify that the design and methods of construction to be used are in accordance with accepted standards of practice for meeting the provisions of Article IV, Section 4.6 A.

C. The Floodplain Administrator shall obtain the elevation (in relation to NAVD88) of the bottom of the lowest horizontal structural member of the lowest floor (excluding pilings and columns) of all new and substantially improved structures in Zones V and VE. The Floodplain Administrator shall maintain a record of all such information.

D. All new construction shall be located landward of the reach of mean high tide.

E. All new construction and substantial improvements shall have the space below the lowest floor either free of obstruction or constructed with non-supporting breakaway walls, open wood-lattice work, or insect screening intended to collapse under wind and water loads without causing collapse, displacement, or other structural damage to the elevated portion of the building or supporting foundation system. For the purpose of this section, a breakaway wall shall have a design safe loading resistance of not less than ten (10) and no more than twenty (20) pounds per square foot. Use of breakaway walls that exceed a design safe loading resistance of twenty (20) pounds per square foot may be permitted only if a professional engineer or architect licensed by the Commonwealth of Virginia certifies that the designs proposed meet the following conditions:

1. Breakaway wall collapse shall result from water load less than that which would occur during the base flood; and

2. The elevated portion of the building and supporting foundation system shall not be subject to collapse, displacement, or other structural damage due to the effects of wind and water loads acting simultaneously on all building components (structural and nonstructural). Maximum wind and water loading values to be used in this determination shall each

have a one (1) percent chance of being equaled or exceeded in any given year.

F. The enclosed space below the lowest floor shall be used solely for parking of vehicles, building access, or storage. Such space shall not be partitioned into multiple rooms, temperature-controlled, or used for human habitation.

G. The use of fill for structural support of buildings is prohibited. When non-structural fill is proposed in a coastal high hazard area, appropriate engineering analyses shall be conducted to evaluate the impacts of the fill prior to issuance of a development permit.

H. Existing nonconforming uses and structures located below the level of the base flood elevation, as shown in the FIS and accompanying FIRMs, shall not be expanded.

I. The man-made alteration of sand dunes, which would increase potential flood damage, is prohibited.

Sec. 4.10. Floodplain subject to special restrictions.

A. All FIRM delineated SFHAs located in the following areas shall be identified as a floodplain subject to special restrictions:

1. North Landing River and its tributaries south of Lynnhaven Parkway;

2. West Neck Creek and its tributaries south of Shipps Corner Road, London Bridge Road, and the portion of Dam Neck Road east of its intersection with London Bridge Road; and

3. Bays, creeks, lakes, guts, coves, wetlands, marshes and swamps and their tributaries comprising the Back Bay watershed south of South Birdneck Road and east of Princess Anne Road and General Booth Boulevard.

B. The following provisions shall apply within the floodplain subject to special restrictions:

1. Notwithstanding any provision of this ordinance to the contrary, no filling shall be permitted, including filling with material excavated from the same floodplain except for

    a. The purpose of public roadway or other similar public works construction;

b. The maintenance, alteration, or relocation of bona fide agricultural ditches, swales, or agricultural pathways or those ditches required for proper lot drainage;

c. For shoreline stabilization or maintenance projects, such as riprap revetment, bulkheads, or other treatment used to stabilize and protect the banks of waterways, the City Manager or his designee may approve the placement of fill provided the following criteria are met:

  i. A joint permit application is submitted;

  ii. The alignment of the stabilization structure is along the escarpment or in line with adjacent stabilization structures; and

  iii. Fill must be the minimum necessary to support the stabilization project.

2. The City Manager, or his designee, may approve the placement of fill provided that the following criteria are met:

  a. Proposed fill within the floodplain:

    i. Shall be mitigated to result in no decrease in flood storage volume on the site;

    ii. Shall be mitigated entirely on the same site that will incur the fill;

    iii. Shall be contiguous to the existing floodplain that is being filled; and

    iv. Shall be limited to the smallest amount of area and volume possible to correct irregularities within the boundary of the project.

  b. The combined areas of fill and mitigation shall not exceed five (5) percent of the total area within the floodplain located on the site that will incur the fill.

3. Residential dwelling structures shall not be located within the floodplains subject to special restrictions on lots created after October 23, 2001. Residential dwelling structures located in local flood hazard areas as of October 23, 2001 may be expanded with attached additions to a total footprint of less than one thousand (1,000) square feet; such additions shall also comply with the requirements set forth in Article V of this ordinance.

4. On lots where single family dwellings are permitted by right and which were recorded on or before October 23, 2001 and meet the requirements of section 402(b) of the City Zoning Ordinance, the minimum fill necessary shall be permitted only for the following:

   a. A driveway or other on-site parking area;

   b. To ensure the proper functioning of a septic system;

   c. To ensure proper lot drainage given the existing and proposed development in the immediate area; and

   d. To meet the VA USBC requirements for slab or crawl foundations.

Sec. 4.11. Subdivision proposal requirements.

A. All subdivision proposals shall be consistent with the need to minimize flood damage.

B. All subdivision proposals shall have public utilities and facilities such as sewer, gas, electrical, and water systems located and constructed to minimize flood damage.

C. All subdivision proposals shall have adequate drainage provided to reduce exposure to flood hazards.

D. Base flood elevation data shall be obtained from the most recent FIRM (May 4, 2009) or developed using detailed methodologies, including hydraulic and hydrologic analysis, comparable to those contained in a FIS for all final plats and other development proposals (including manufactured home parks and neighborhoods).

ARTICLE V – EXISTING STRUCTURES IN FLOODPLAIN AREAS

Sec. 5.1. Existing structures.

A structure or use of a structure or premises that lawfully existed prior to the adoption of this ordinance, but which is not in conformity with this ordinance, may be continued subject to the following conditions:

A. Any existing structures in the Floodway Area shall not be expanded or enlarged unless it has been demonstrated through hydrologic and hydraulic analyses performed in accordance with standard engineering practices that the proposed expansion or enlargement would not result in any increase in the base flood elevation.

B. Any modification, alteration, repair, reconstruction, or improvement of any kind to a structure and/or use located in any floodplain areas to an extent or amount of less than fifty (50) percent of its market value shall conform to the VA USBC.

C. Any modification, alteration, repair, reconstruction, or improvement of any kind to a structure and/or use, in a floodplain area to an extent or amount of fifty (50) percent or more of its market value shall be undertaken only in full compliance with this ordinance and shall require the entire structure to conform to the VA USBC.

ARTICLE VI - VARIANCES AND APPEALS

Sec. 6.1. Administrative variances.

The Floodplain Administrator shall approve or deny an application requesting an administrative variance after receipt of a complete application. Administrative variances may only be granted for the following uses, development, or redevelopment:

A. A residential attached garage or detached garages constructed at the elevation corresponding to the base flood elevation may be flood proofed according to the requirements outlined in Section 4.3 B of this ordinance in lieu of the elevation requirements.

B. As defined in Section 4.10 Floodplains subject to special restrictions.

C. Any structure or use sustaining damage not caused by flood to an extent or amount of fifty (50) percent or more of its market value to allow the structure to be rebuilt to the freeboard height in effect at the start of construction for the original structure. If the structure is a Pre-FIRM structure, full compliance with the current VAUSBC freeboard above the base flood elevation is required. Structures that are utilizing an approved land management plan for their on-site waste disposal may be allowed to continue the use of the land management plan as long as it is approved by the City and the Health Department, even for damage or destruction resulting from flood.

Sec. 6.2. City Council variances.

A. Notwithstanding any other provision of this ordinance, the City Council shall have the authority to grant such variances from the terms of this ordinance as will not be contrary to the public interest in cases in which the strict application of the provisions of this ordinance would effectively prohibit or unreasonably restrict the use of the subject property. No variance shall be granted for any proposed use, development, or activity within any Floodway District that will cause any increase of the base flood elevation.

B. In acting upon applications for variances, the City Council shall satisfy all relevant factors and procedures specified in other sections of this ordinance and shall consider the following additional factors:

1. The danger to life and property due to increased flood heights or velocities caused by encroachments.

2. The danger that materials may be swept on to other lands or transported in floods posing the risk of injury to others.

3. The proposed water supply and sanitation systems and the ability of these systems to prevent disease, contamination, and unsanitary conditions.

4. The susceptibility of the proposed facility and its contents to flood damage and the effect of such damage on the individual owners.

5. The importance of the services provided by the proposed facility to the community.

6. The requirements of the facility for a waterfront location.

7. The availability of alternative locations not subject to flooding for the proposed use.

8. The compatibility of the proposed use with existing development and development anticipated in the foreseeable future.

9. The relationship of the proposed use to the comprehensive plan and floodplain management program for the area.

10. The safety of access by ordinary and emergency vehicles to the property in time of flood.

11. The expected heights, velocity, duration, rate of rise, and sediment transport of the flood waters expected at the site.

12. The historic nature of a structure. Variances for repair or rehabilitation of historic structures may be granted upon a determination that the proposed repair or rehabilitation will not preclude the structure's continued designation as a historic structure and the variance is the minimum necessary to preserve the historic character and design of the structure.

13. Such other factors that are relevant to the purposes of this ordinance.

Sec. 6.3. Application process.

A. Applications for variances from the requirements of this ordinance shall be made to the City Council and filed with the director of planning. The fee for such applications shall be six hundred fifty dollars ($650.00). Except in cases in which such fee is waived, the director shall not accept any application not accompanied by payment of the required fee. The procedure for the advertising, hearing and determination of applications for floodplain variances shall be in accordance with the requirements pertaining to applications for subdivision variances, as set forth in Section 9.4 of the Subdivision Ordinance. In cases in which a variance application is filed by reason of a natural disaster that is the subject of a federal declaration of emergency, application and associated advertising fees shall be waived and such application shall be given expedited processing to the maximum practical extent.

B. All applications shall be accompanied by the following:

1. A separate map, on a 1" = 100' or greater scale, identifying all proposed land disturbance, including fill and mitigation areas, and the limits of the existing and proposed SFHAs, tidal and non-tidal wetlands, Southern Watershed Management Area Buffer, and CBPA Resource Protection Area Buffer; and

2. A preliminary floodplain study addressing the physical and environmental characteristics of the floodplain located on adjoining properties and in the general area. Such study shall be sufficient to show that the variance, if granted, will meet the standards defined in Section 6.3 and in addition thereto, shall:

   a. Contain supporting data and calculations as appropriate, given the preliminary nature of the floodplain study;

   b. Comply with all applicable Public Works Specifications and Standards; and

   c. Be certified by a professional engineer, architect, surveyor, landscape architect or practitioner of a related field having a valid license issued by the Commonwealth of Virginia or who is exempt from licensure pursuant to applicable provisions of the Virginia Code.

Sec. 6.4. Requirements.

No variance shall be granted unless the following requirements are met:

A. Such variance will not create or result in:

   1. Unacceptable or prohibited increases in flood heights;

   2. Additional threats to public safety;

   3. Extraordinary public expense;

   4. Nuisances; or

   5. Fraud or victimization of the public.

B. The granting of such variance will not be detrimental to other property in the vicinity.

C. The circumstances giving rise to the variance application are not of a general or recurring nature.

D. Such circumstances arise from the physical character of the property or from the use or development of adjacent property and not from the personal situation of the applicant.

E. The granting of such variance will not be in conflict with any city ordinance or regulation.

F. Variances shall be the minimum necessary to provide relief.

G. All variances shall meet all of the requirements for the Chesapeake Bay Preservation Area Ordinance (Appendix F) and the Southern Watersheds Management Ordinance (Appendix G), unless a variance therefrom is granted.

Sec. 6.5. Notification.

The Floodplain Administrator shall notify the applicant for a variance in writing that the issuance of a variance to construct a structure below the base flood elevation a) increases the risks to life and property and b) will result in increased premium rates for flood insurance.

Sec. 6.6. Records.

A record of all variance actions, including justifications for the granting of variances and notifications issued pursuant to this section shall be maintained by the Floodplain Administrator. Any variances that are issued shall be noted in the annual or biennial report submitted to FEMA.

Sec. 6.7. Appeals to variance decisions.

Appeals of decisions by the City Council under this ordinance shall be subject to review by the Circuit Court of the City of Virginia Beach, if filed within thirty (30) days from the date of City Council action.

Adopted by the Council of the City of Virginia Beach, Virginia, on the 26th day of November, 2013.

City of Virginia Beach CFPF Round 3 Submission

1 message

Stanley F. Smith Jr. <SFSmitJr@vbgov.com> Wed, Apr 6, 2022 at 1:55 PM
To: "cfpf@dcr.virginia.gov" <cfpf@dcr.virginia.gov>

Hello,

Please find attached two CFPF project submission packages for the City of Virginia Beach:

- CID515531_VirginiaBeach_CFPF-1: *March Terrace Creation in Back Bay*
- CID515531_VirginiaBeach_CFPF-2: *First Colonial Road and Oceana Boulevard Stormwater Improvements*

All necessary application forms and required documents for each project are located within the pdfs. Please let us know if you have any questions or require further information. Thank you in advance for your consideration of these projects.

Thanks,

Stanley

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes ____ No ✓

Categories (select applicable project):

Project Grants (Check All that Apply)

☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.

☑ Wetland restoration.
☐ Floodplain restoration.
☐ Construction of swales and settling ponds.
☑ Living shorelines and vegetated buffers.
☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
☐ Storm water system upgrades.
☐ Medium and large scale Low Impact Development (LID) in urban areas.
☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
☐ Dam restoration or removal.
☐ Stream bank restoration or stabilization.
☐ Restoration of floodplains to natural and beneficial function.
☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Study Grants (Check All that Apply)

☐ Studies to aid in updating floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.

☐ Revising other land use ordinances to incorporate flood protection and mitigation goals, standards and practices.

☐ Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA). For example, a local government might conduct a hydrologic and hydraulic study for an area that had not been studied because the watershed is less than one square mile. Modeling the floodplain in an area that has numerous letters of map change that suggest the current map might not be fully accurate or doing a detailed flood study for an A Zone is another example.

☐ Studies and Data Collection of Statewide and Regional Significance.

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard.

☐ Other relevant flood prevention and protection project or study.

Capacity Building and Planning Grants

☐ Floodplain Staff Capacity.

☐ Resilience Plan Development

  ☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.
  ☐ Resource assessments, planning, strategies and development.
    - Policy management and/or development.
    - Stakeholder engagement and strategies.

Location of Project (Include Maps): Bonney Cove in Back Bay

NFIP Community Identification Number (CID#):(See appendix F 515531

Is Project Located in an NFIP Participating Community? ☑ Yes ☐ No

Is Project Located in a Special Flood Hazard Area? ☑ Yes ☐ No

Flood Zone(s) (If Applicable): Zone VE (EL 5 Feet), Zone AE (EL 4 Feet), Zone Open Water

Flood Insurance Rate Map Number(s) (If Applicable): 5155310215G and 5155310220G

Total Cost of Project: $29,126,604.00

Total Amount Requested $5,000,000.00

II. Appendix B – Completed Scoring Criteria Sheet

Appendix B: Scoring Criteria for Flood Prevention and Protection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:		
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	✓
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	✓
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is not a town, city, or county, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	✓
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	✓
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☑ **Yes** ☐ **No**
Applicant Name:	

Scoring Information		
Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☑ Wetland restoration, floodplain restoration ☑ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	45
1.b. any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	0
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	0
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	
No	**0**	0
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and the Chesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices with a nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	
No	**0**	0
11. Does this project provide “community scale” benefits?		
Yes	**20**	20
No	**0**	
Total Points		65

Signed pledge agreement from each contributing organization	☐ Yes ☐ No ☑ N/A

IV. Required Application Components

B: Scope of Work Narrative - Projects

1. Project Information

The City of Virginia Beach ("City") is pleased to submit the Marsh Terrace Creation in Back Bay project for consideration under the Flood Prevention and Protection Projects category in the 2022 Virginia Community Flood Preparedness Fund. The City has made significant investments in the study of historical flooding data, current and future hydrology, and the projected increase in flood frequency due to changing rainfall patterns and sea level rise. These studies culminated in Virginia Beach's Resilience Plan, socialized as "Sea Level Wise,"[1] which includes a conceptual suite of projects focused on flood control and resilience. The Virginia Beach Resilience Plan leverages four overarching adaptation strategies to identify actionable projects for each of the City's four unique major watersheds. This project represents the first adaptation project to advance to construction to implement the City's Resilience Plan.

The adaptation strategy for the Southern Rivers Watershed, which includes Back Bay, focuses on employing natural mitigation methods, an integrated system of defense structures, and complementary measures, such as land-use strategies. Collectively these approaches are designed to strategically reduce flow into and within Back Bay and improve flood storage and overall coastal resiliency (see Part IV: Section E1 – Project Map 1). Marsh restoration was identified as a key resilience-building strategy as part of an extensive evaluation of structural and non-structural alternatives. Marsh restoration provides multiple benefits of flood risk reduction, enhanced habitat, and improved water quality.

As part of the Virginia Coastal Resilience Master Planning Framework, a precursor to the first phase of the Virginia Coastal Resilience Master Plan (CRMP), the Commonwealth of Virginia identified guiding principles for a statewide resilience strategy. One of these guiding principles is recognizing the importance of protecting and enhancing natural infrastructure and prioritizing nature-based infrastructure.[2] The City's marsh restoration project aligns with this principle and was highlighted as an exemplary nature-based project in the CRMP. The CRMP impact assessment shows a high vulnerability of nature-based features to coastal flood hazards that is consistent with the City's analysis. In the Hampton Roads region, the CRMP impact assessment estimates a decrease from 40,600 acres to 2,940 acres of tidal wetlands by 2080, representing a 93% decline in tidal wetlands.[3] Back Bay was identified as a hotspot for tidal wetland loss, emphasizing the critical location of the City's marsh restoration effort (see Part IV: Section E1 – Project Map 2).

---

[2] Office of Governor Ralph S. Northam Commonwealth of Virginia. (2020). Virginia Coastal Resilience Master Planning Framework (PDF).

[3] Office of Governor Ralph S. Northam Commonwealth of Virginia and Virginia Department of Conservation and Recreation (2021). Virginia Coastal Resilience Master Plan Phase 1 (PDF).

The City's design concept for the marsh restoration project leverages "marsh terracing," an innovative coastal engineering technique widely used in Texas and Louisiana to convert shallow subtidal bottom to marsh. This technique has not yet been implemented along the U.S. East Coast and has not yet been implemented in the Mid-Atlantic region. Through the export of proven expertise from successful marsh terraces, this project would lay the foundation for future projects in the region, Virginia, and other states along the East Coast. The project would document detailed cost estimates, demonstrate effective construction practices for large-scale marsh creation projects, identify best sources for local/regional materials, and establish partnerships with permitting officials at various levels of government. The City's development of this project indicates its commitment to nature-based approaches and to taking critical steps to realize its broader resilience efforts.

This project represents a collaborative effort between the City's Department of Public Works alongside other City departments, public constituents, local nonprofits, and state and federal agencies. In selecting the project location and developing the design approach, the City has coordinated closely with the Back Bay National Wildlife Refuge (BBNWR), part of the U.S. Fish and Wildlife Service (USFWS), and the Virginia Department of Wildlife Resources (VDWR). Environmental organizations committed to stewardship of Back Bay have also contributed input throughout the design process, including the Back Bay Restoration Foundation (BBRF), Friends of Back Bay, the Back Bay National Wildlife Refuge Society, and the Albemarle-Pamlico National Estuary Partnership (APNEP). Project field investigations involved local support from Old Dominion University (ODU) and others, and outside expertise from Louisiana. The National Fish and Wildlife Foundation (NFWF) provided grant funding under the National Coastal Resilience Fund (NCRF) to support design, permitting, and environmental assessments. Broad support of the project is demonstrated by contributions from the organizations noted above along with other stakeholders engaged in the restoration effort.

The marsh terrace project design is progressing and will be ready for construction in the CFPF grant timeline. Between 2019 and 2021, the City obligated roughly $781,000 in contracts to support field investigations, environmental assessments, and engineering designs. Following preliminary (30%) designs, the City presented preliminary designs and artistic renderings at a public information meeting held at a local elementary school in October 2021. Participants submitted comments regarding environmental and community impacts. The project is currently progressing from 30% to 60% design, alongside environmental assessments. By winter/early spring 2023, the City anticipates that the project will have 95% designs, and all necessary permits will have been submitted for regulatory agency review. Table 1 summarizes ongoing tasks related to the project and an anticipated schedule for completion.

Table 1: Completed, ongoing, and anticipated activities leading up to construction.

Activity	Description	Schedule
Stakeholder Scoping Workshop	In November 2020, the City hosted a virtual workshop to receive initial input from project stakeholders.	Completed (Fall 2020)
Site Characterization and Vegetation Survey	In fall 2020, a site characterization and vegetation survey within Bonney Cove was conducted under a USFWS Special Use Permit (SUP). The purpose of the survey was to document existing emergent marsh and submerged aquatic vegetation (SAV) species composition and percent coverage within the proposed project area. MAP Environmental, Inc. conducted a literature review of marsh terracing projects in the Gulf Coast region to identify effective practices for project planning and design.	Completed (Fall 2020)
Bathymetric Survey	An updated bathymetric survey of Bonney Cove, also covered under a USFWS SUP, was completed in March 2021. This data serves as an input to identify appropriate design elevations to determine quantities of materials necessary to build the proposed marsh terraces and for numerical modeling of project alternatives.	Completed (Spring 2021)
Geotechnical Investigation	A geotechnical investigation of Bonney Cove was conducted in the spring of 2021. The permitted survey, (Virginia Marine Resources Commission (VMRC) Permit No. 2020-2286, U.S. Army Corps of Engineers (USACE) Permit No. 2020-02439, and USFWS SUP) included the collection of 10 soil borings in locations that avoided aquatic vegetation habitat. The soil samples were retrieved by drilling with a specialized airboat-mounted drill rig which was essential for drilling in shallow areas as it avoids disruption to bottom habitat. The soil samples were analyzed to determine the suitability and physical characteristics of the soils within the project area. Additional soil analysis was conducted to determine the suitability of Back Bay sediments for building components of the marsh terraces.	Completed (Spring 2021)

Activity	Description	Schedule
Water Quality and Hydrodynamic Survey	ODU conducted a water quality and hydrodynamic survey of Bonney Cove in the spring of 2021. The USFWS permitted survey collected water samples and deployment/retrieval of hydrodynamic sensors (pressure sensors, acoustic Doppler current profilers, and optical backscatter sensors) at three sampling points in Bonney Cove. Sensor equipment was deployed during two one-month periods (3/10/2021 – 4/12/2021 and 5/19/2021 – 6/8/2021). The water level, wave, and current data served as an input to the numerical model calibration. The water quality parameters (including pH, salinity, temperature, dissolved oxygen, chlorophyll, and turbidity) will serve as a reference to compare pre-and post-construction water quality conditions.	Completed (Summer 2021)
30% Design	Dewberry leveraged the field-collected data to establish design criteria for the project to ensure that it will be resilient in the face of changing future conditions during wind-tide events. Artistic design renderings were developed to enable stakeholders to visualize the implemented project.	Completed (Fall 2021)
Public Engagement – 30% Design	The City held a public information meeting on October 14, 2021, at Creeds Elementary School. The project team delivered a 10-minute presentation of the proposed project followed by an open-format discussion where participants reviewed the preliminary (30%) designs and artistic renderings and submitted comments regarding environmental and community impacts.	Completed (Fall 2021)
Numerical Modeling	Numerical modeling has been completed to evaluate the proposed project's impact on water levels, wave heights, and flow velocities within and surrounding the project area. Potential water quality impacts were also evaluated. The numerical modeling effort involved the development of an XBeach model, which is a nearshore model that accounts for wave-vegetation interactions based on field-derived drag coefficients.	Completed (Winter 2021)

Activity	Description	Schedule
Environmental Assessment and Scoping	In coordination with the USFWS and with technical assistance from Dewberry, the City evaluated the potential environmental impacts of the project. The draft environmental assessment document was distributed to key stakeholders with jurisdictional authority or a vested interest in the project for review and comment. The City anticipates this document will be finalized in the Spring of 2022.	Anticipated Completion (Spring 2022)
60% Design	Upon approval of the Environmental Assessment document, the project can continue to advance past the 30% preliminary design phase.	Anticipated Completion (Fall 2022)
Construction Permitting	The City will prepare a Joint Permit Application (JPA) for the proposed project, leveraging the 60% design plans. Applications will include general information about the applicant, the amounts and types of waters and wetlands proposed to be impacted (as delineated for the NEPA document), and an alternatives analysis detailing the avoidance and minimization efforts made.	Anticipated JPA Approval (Winter 2022 – Early Spring 2022)
95% Design	The 95% design will progress concurrently during agency review of the JPA.	Anticipated Completion (Winter 2022)

The following sections provide details regarding the project site and highlight the impacted population, residential and commercial structures, and critical facilities. This section also provides an overview of the historical, existing, and projected flood conditions in and around the project site.

a. Project Site Description

Bonney Cove, located within Back Bay of the City's Lower Southern Rivers Drainage Basin, was selected as the site location for this marsh terrace project (Figure 1). Bonney Cove has experienced significant historical ecological degradation. Historical shoreline data from 1869 indicates that approximately 50% of present-day open water in Bonney Cove (260 acres) was previously marsh (Figure 2). Hydraulic modeling analysis identified Bonney Cove as a location where marsh restoration has the potential to reduce the propagation of floodwater through key pathways within Back Bay. This project aims to stabilize two critically eroding marsh islands that serve as a key flood pathway into northern Back Bay, promote the growth of aquatic vegetation, and provide flood risk reduction benefits to communities in the surrounding area.

As mentioned previously, the CRMP impact assessment identified Back Bay as a hotspot for tidal wetland loss, emphasizing the critical location of the City's marsh restoration effort (see Part IV: Section E1 – Project Map 2). In coordination with Audubon North Carolina, the Currituck Sounds Coalition identified the area around the project site as highly suitable for marsh restoration[4] (see Part IV: Section E1 – Project Map 3). ConserveVirginia's Floodplain and Flooding Resilience layer, available through the Virginia Natural Heritage Data Explorer, identified the Back Bay and adjacent areas as having flood resilience value (see Part IV: Section E1 – Project Map 4).[5] The project site is within U.S Fish and Wildlife Service's BBNWR, which has high ecological diversity. The Virginia Natural Heritage Data Explorer illustrates areas within and around Back Bay with "High" and "Very High" ecological core ratings (see Part IV: Section E1 – Project Map 4).[5]

[5] Virginia Department of Conservation and Recreation. (2022). Virginia Natural Heritage Data Explorer.

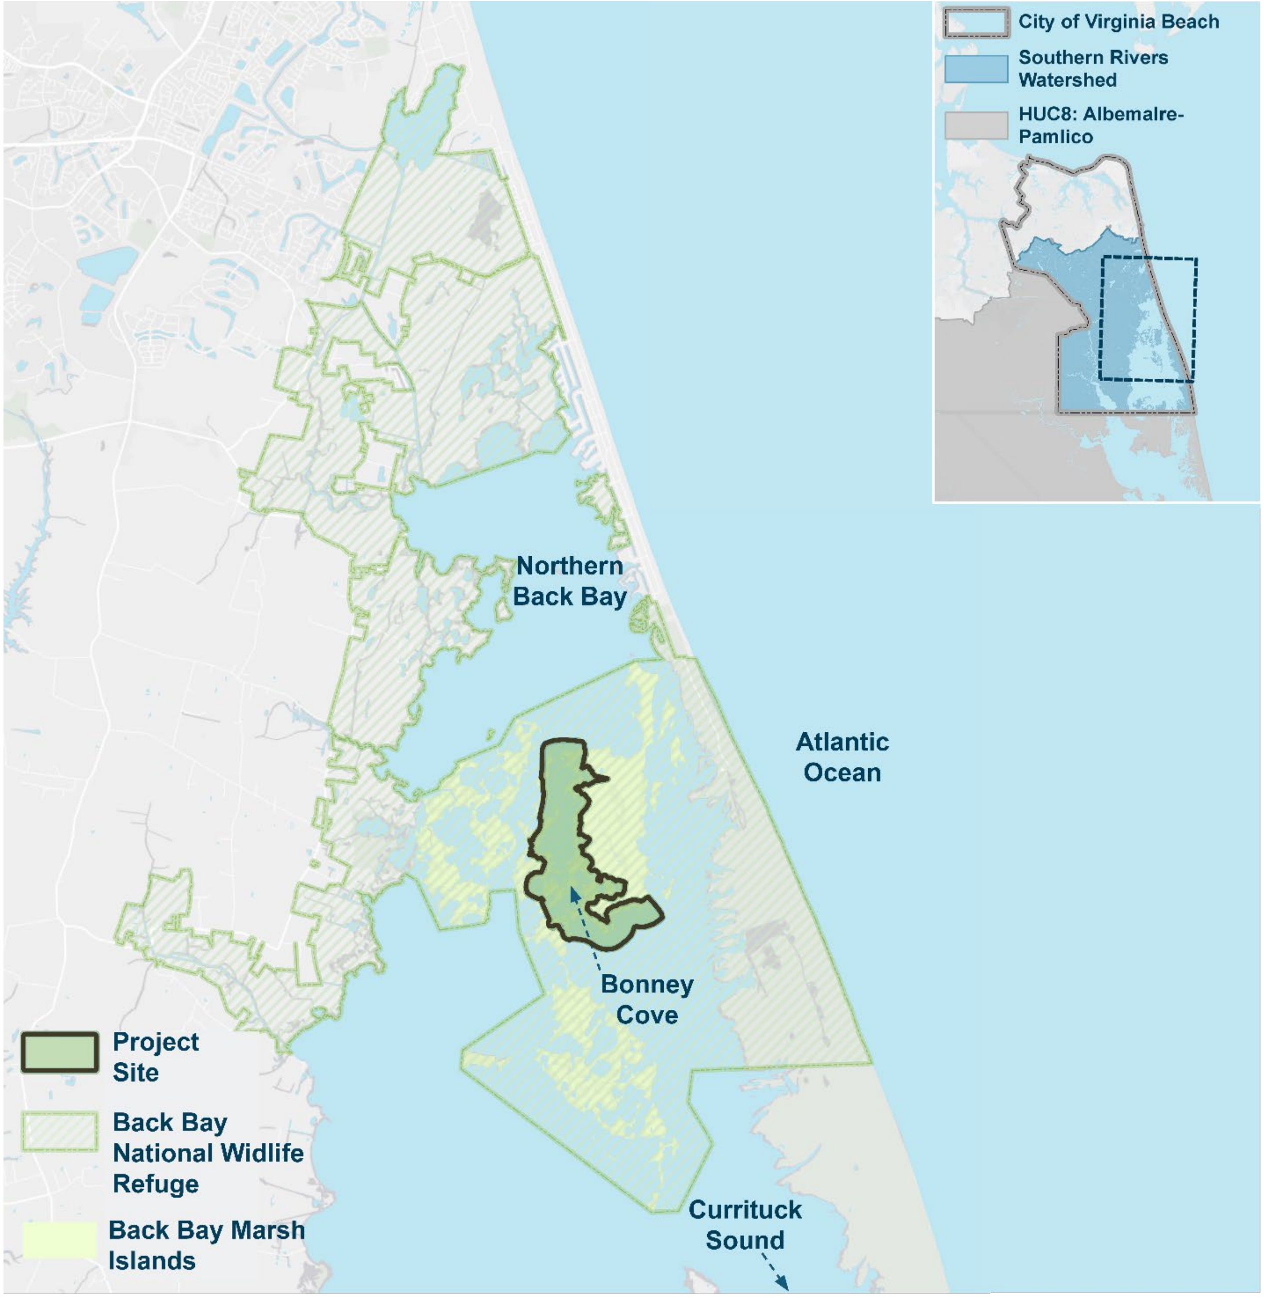

Figure 1: Project site location map.

Figure 2: Historical marsh erosion within the project area.

b. Population

As shown in Figure 3, two census block groups (518100454.121 and 518100464.001) adjacent to Back Bay are within the extent of the anticipated project benefits. The total population of these two block groups is 3,531.[6] The residential population has grown approximately 1.8% in the past two decades. The median household income in 2021 dollars is $99,078. There are approximately 2,500 residential housing units, of which 43.1% are owner-occupied, 11.4% are renter-occupied, and 45.5% are vacant. The high percentage of vacant housing units can likely be attributed to seasonal rentals within the Sandbridge Resort Area. The race and ethnicity demographics of the community are 94.4% White, 1.4% Black, 3.4% Hispanic, and less than 1% Asian and American Indian.

c. Historic Flooding Data and Hydrologic Studies Projecting Flood Frequency

Historical and Existing Flood Data

The project is located within a Federal Emergency Management Agency (FEMA) mapped Special Flood Hazard Area (SFHA), as shown in *Part IV: Section E1 - Project Map 5*. Based on the City's current flood maps (effective January 16, 2015), the project site's flood zones are VE, AE, and Open Water. Portions of the site are within Otherwise Protected areas.

Marshes are vital to the Southern Rivers Watershed for the ecological and flood reduction benefits they provide. The Southern Rivers Watershed contains 90% of the City's land area under an elevation of 3 feet, making this area particularly susceptible to flood impacts. As illustrated in Figure 4, sustained southerly winds push water up from the Albemarle-Pamlico Sound through the Currituck Sound and into Back Bay, creating a phenomenon referred to locally as "wind tide flooding". Marsh habitat loss has contributed to the opening of a secondary channel in Bonney Cove that has increased water flow during wind tide and other flood events to areas with high community exposure.

Within today's marsh system, it takes between two to five days of sustained southerly winds to cause flooding, depending on the wind speed and direction. Over the last four years, more than five wind tide flooding events have occurred in this area. The increasing frequency of flooding events is primarily attributed to a foot of relative sea level rise in the last 50 years and degradation of marsh and seagrass habitat.

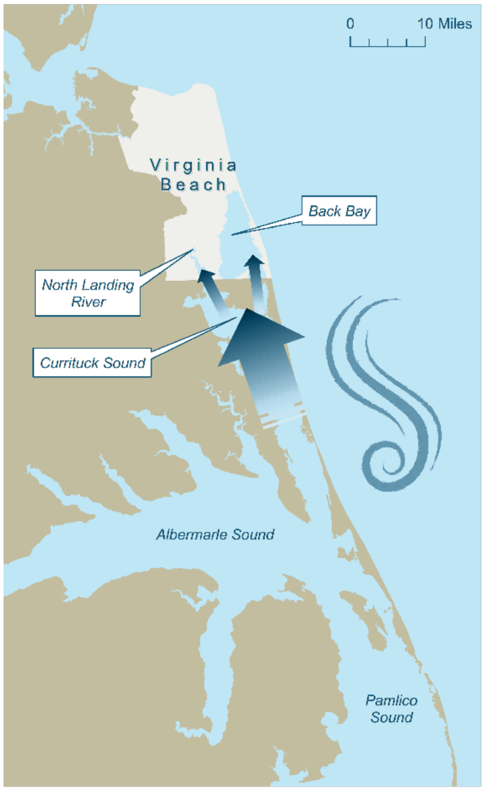

Figure 4: Flood pathways in the Southern Rivers Watershed.

The City maintains records of where residents report flood issues and what type of flooding is causing the issue. Residents regularly report flood issues through a hotline, which are then recorded in a flood event database. The census block groups adjacent to the project area reported 111 flood issues associated with heavy rain or high tide between 2001 and 2019, as shown in *Part IV: Section E1 - Project Map 6*.

Projected Flood Frequency

The USFWS, the City, and other stakeholders have made significant investments in detailed assessments, sophisticated computer models, and water level gauges to better understand historical and future wind tide flooding. Figure 5 displays the projected flood pathways under the 10-year and 100-year storm event under a 3 feet sea level rise scenario surrounding the project site. Unmitigated, the continued loss of these marsh island systems is expected to result in more frequent and intense wind tide events. This effect can be attributed mainly to the reduced friction in the water column from the increased water depth and eroded vegetation, which allows water to move more quickly through key hydraulic pathways. Another term for this is "fetch", which is defined as the open water distance over which a given wind can blow and generate higher waves without obstruction.

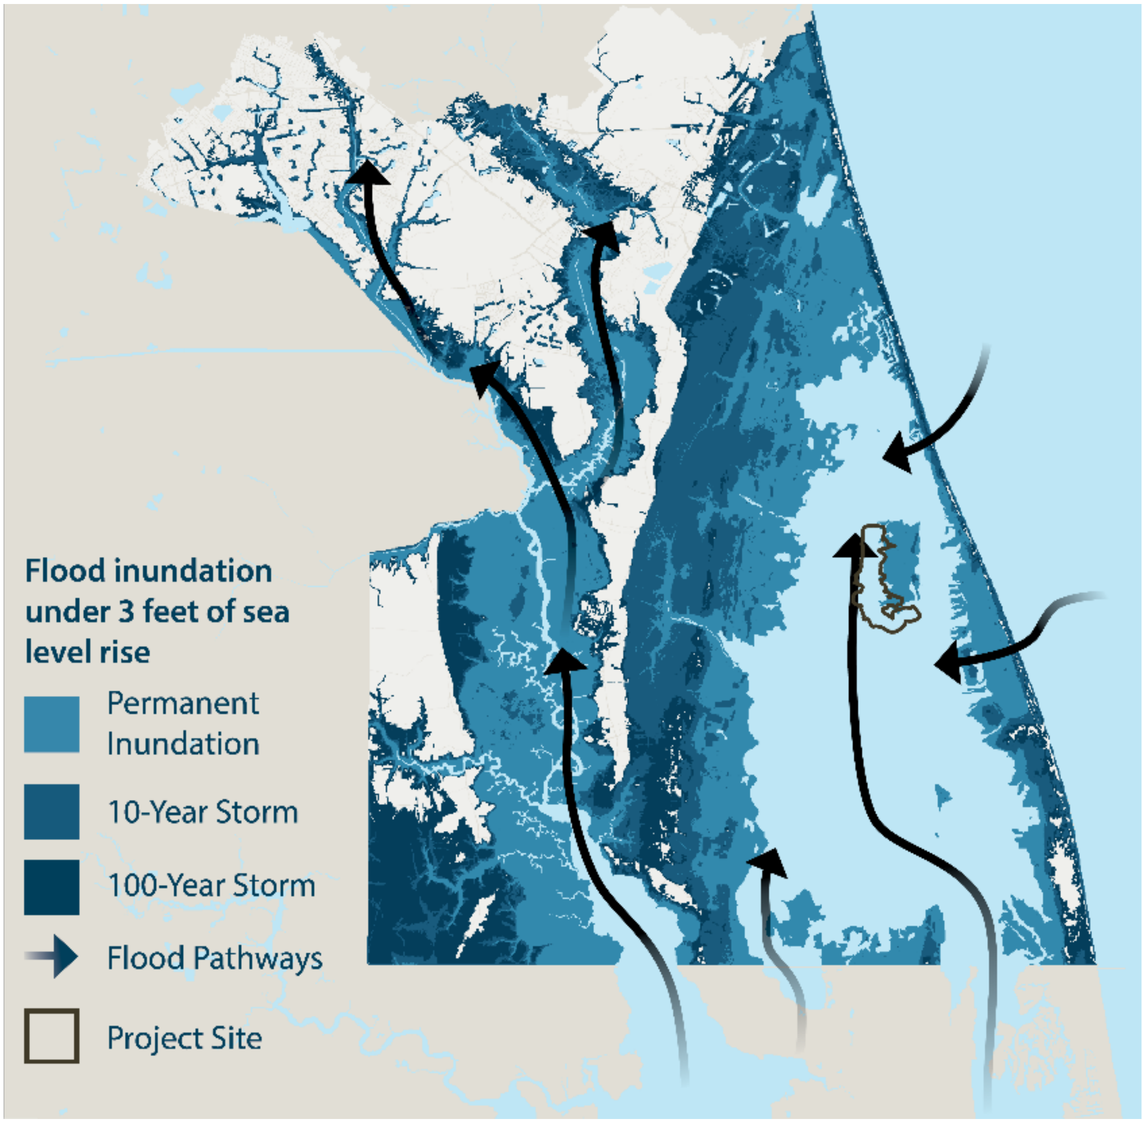

Figure 5: Flood pathways into the Southern Rivers Watershed with 3 feet of sea level rise.

Numerical modeling also shows that as sea levels continue to rise, a shorter duration wind event will produce more wind-induced flooding in less time. The three lines in Figure 6 represent the water level response to a sustained 15-mph wind for each sea level rise scenario. With the existing marsh system today (blue line), it takes approximately five days of sustained southerly wind to cause flooding. With 1.5 feet (yellow line) and 3 feet (red line) of sea level rise, the peak water level could be reached two to three days sooner, respectively. Model simulations showed that marsh island creation across Back Bay would help delay the onset of flooding by several days, which would allow the City and residents more preparation time[7].

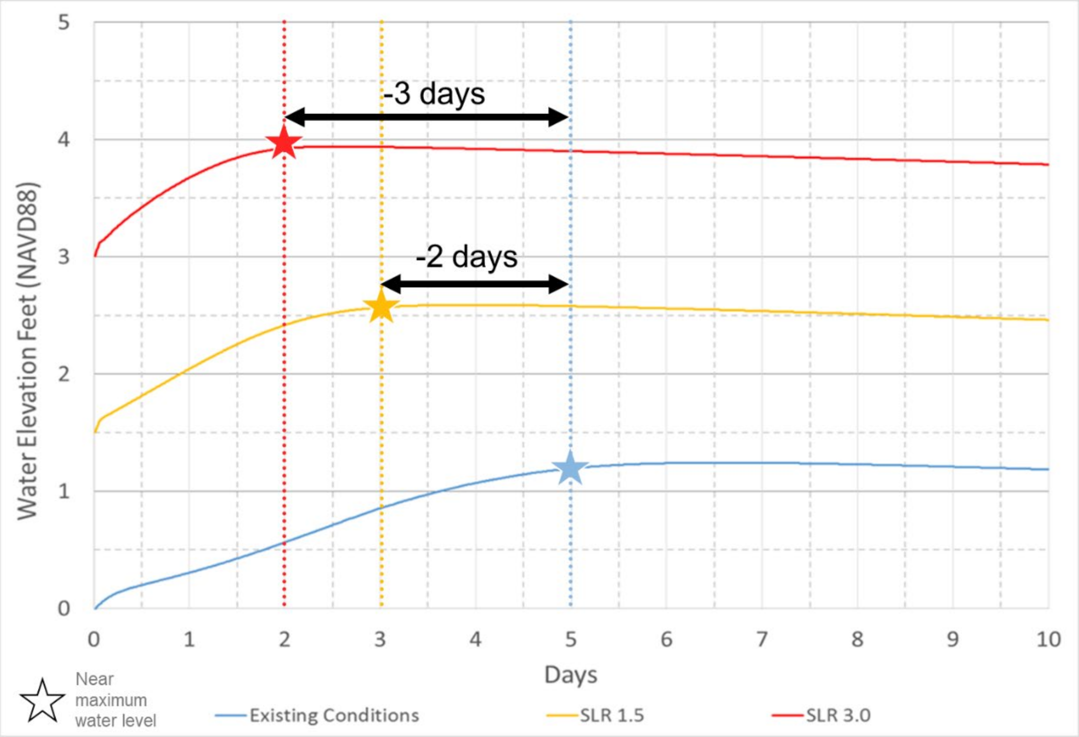

Figure 6: Water-level response under sustained 15-mph southerly wind.

The City analyzed future marsh conditions using the Sea Level Affecting Marshes Model (SLAMM).[7] Figure 7 illustrates areas likely to experience accelerated degradation of marsh in Back Bay due to rising water levels. If no action is taken, substantial marsh loss is projected in Bonney Cove under 3 feet of sea level rise. Within a 1-mile radius of Bonney Cove, the City's SLAMM model predicts that approximately 730 additional acres could be eroded into open water in response to sea level rise. This represents more than a 70% reduction as compared to the existing marsh system surrounding Bonney Cove today. It is also presumed that open water areas would continue to experience high levels of turbidity, which will continue to negatively affect SAV communities in Back Bay.

---

[7] City of Virginia Beach. (2018). Analysis of Marsh Response to Sea Level Rise (PDF).

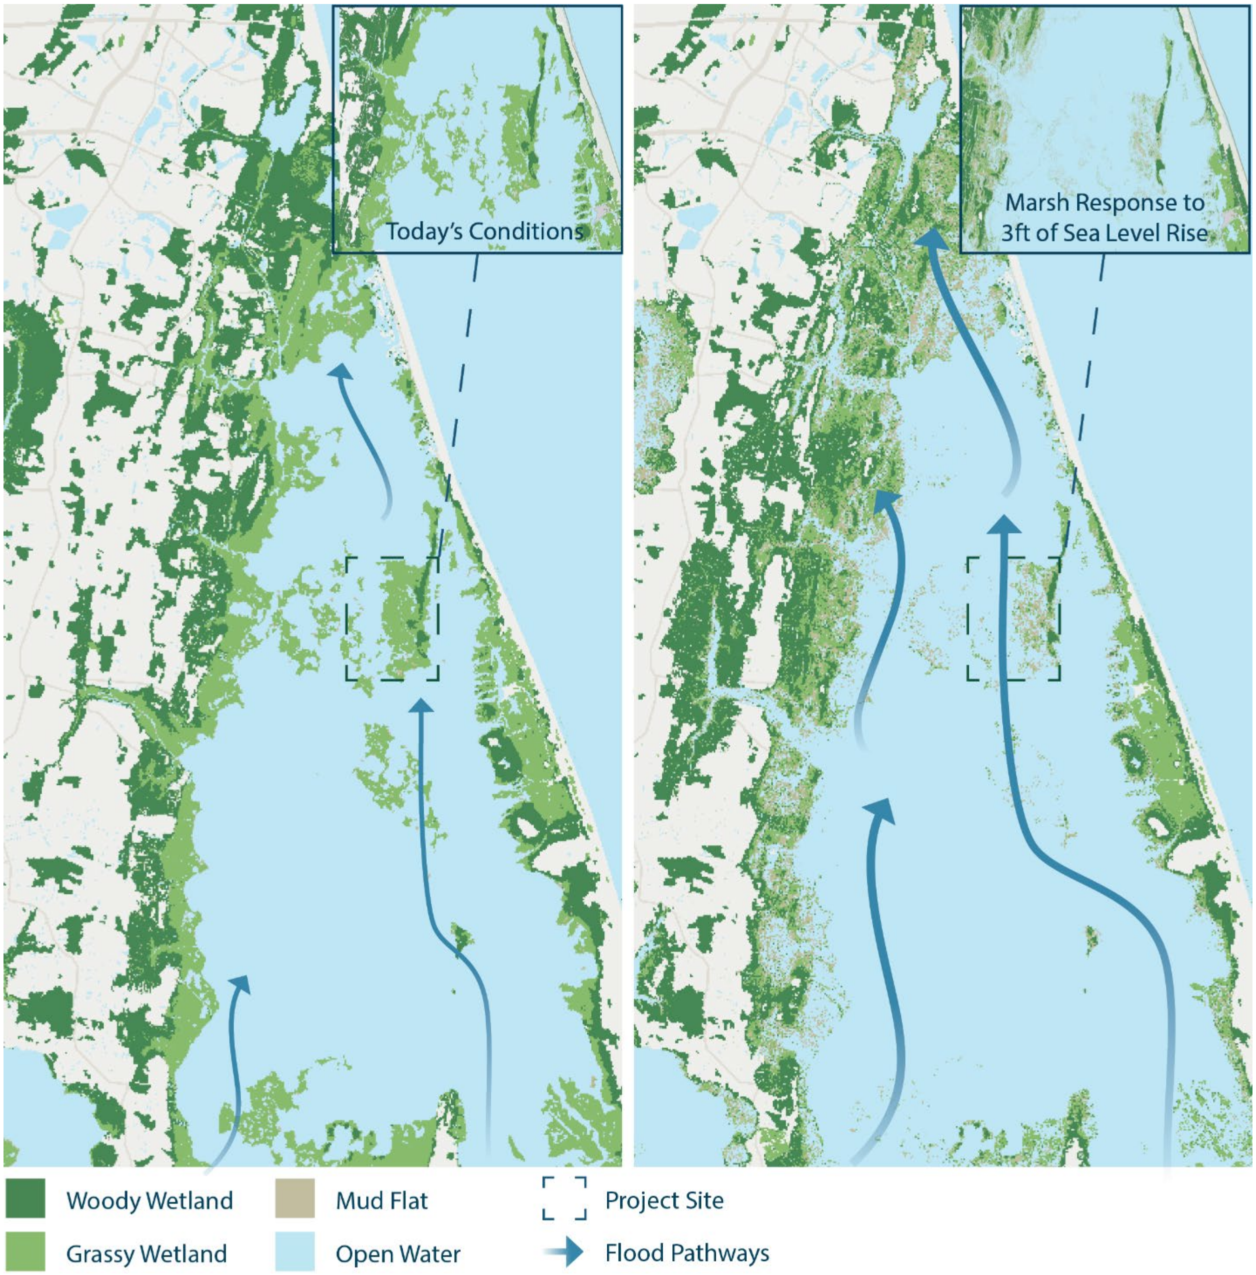

Figure 7: Comparison of current marsh conditions to future marsh conditions with 3 feet of sea level rise.

The proposed project site in Bonney Cove has a predominant south-southwest wind direction, which contributes to significant wave generation in the large unobstructed open-water areas and provides a continuous source of scouring and erosion in those areas. Marsh loss is likely to continue in the project area, creating a negative feedback cycle as continued fragmentation of the marsh would further deteriorate the remaining stands of healthy marsh and increase fetch. Today, the site faces low to medium fetch exposure, but in the future, the site could experience high to very high fetch exposure, as defined by the Virginia Institute of Marine Science (VIMS)

Shoreline Design Guidelines for Shore Protection in Virginia's Estuarine Environments.[8] Projections of increasing fetch at the site are summarized in *Part IV: Section E1 - Project Map 7*.

The proposed marsh terraces are expected to modify the hydrodynamics in Back Bay primarily by shortening wind fetches in the dominant southerly wind direction. Water levels, wave heights, and flow velocity were evaluated with a numerical model under a 50-year wind event for a "no action" scenario and a scenario with the marsh terraces constructed.[9] The marsh terraces are expected to reduce water levels to the north of the project site by approximately 30% (0.2 feet) compared to the "no action" alternative. Within the project site, the marsh terraces are expected to reduce wave heights by 45% (0.2 feet) and decrease flow velocities by 0.1 feet per second. As a result of these factors, the project is anticipated to help offset the impacts of sea level rise. Bonney Cove is an ideal location to apply habitat restoration measures to restore marsh communities, reduce fetch within the Bay, and contribute to local flood resilience.

d. Local Government to Provide its Share of the Cost

The City of Virginia Beach is fully prepared to cover the cost share of the proposed project, as highlighted in the attached budget narrative, "Amount of Cash Funds Available." The funding for the grant match is contained within the City budget.

e. Local Floodplain Management Regulations

The City recognizes the vital importance of floodplains in the natural movement of water through the community. Appendix K of the Virginia Beach Code of Ordinances regulates development in the community's floodplains. The City requires that a permit is obtained for any construction or development in the Special Flood Hazard Area. For more information and details regarding the City's floodplain management and ordinances, please refer to the following:

- Link to current floodplain ordinance: Virginia Beach Floodplain Ordinance.

In addition, a copy of the current floodplain ordinance has been included in *Part IV, Section E5.* For further information regarding the City's hazard mitigation and comprehensive planning, please refer to the following:

- Link to current hazard mitigation plan: Regional Hazard Mitigation Planning.
- Link to current comprehensive plan: Virginia Beach Comprehensive Planning.

---

[8] Virginia Institute of Marine Science. (2010). Living Shoreline Design Guidelines for Shore Protection in Virginia’s Estuarine Environments; Version 1.2 (PDF).

[9] City of Virginia Beach. (2022). Numerical Modeling of Back Bay Marsh Terrace Project.

f. Repetitive Loss and/or Severe Repetitive Loss Properties

The repetitive loss database shows 113 repetitive loss and severe repetitive loss properties within the two census block groups (518100454.121 and 518100464.001) associated with the project area.

g. Residential and/or Commercial Structures

A detailed economic flood loss assessment presented in the City's Resilience Plan showed that approximately 45% of the entire future risk exposure in the City is concentrated in the Southern Rivers watershed. Of that risk, 65% is concentrated in three communities north of Back Bay (Figure 8).[10] Under a "no action" scenario, average annualized flood losses would increase from $974 thousand, representing present day conditions, to $6 million with 1.5 feet of sea level rise as anticipated by 2050. This figure equals an increase of six times present day conditions. With 3 feet of sea level rise as anticipated by 2080, annualized losses are expected to drastically increase to $80 million, more than 80 times today's conditions.

---

[10] City of Virginia Beach. (2020). Coastal Flood and Economic Loss Analysis (PDF).

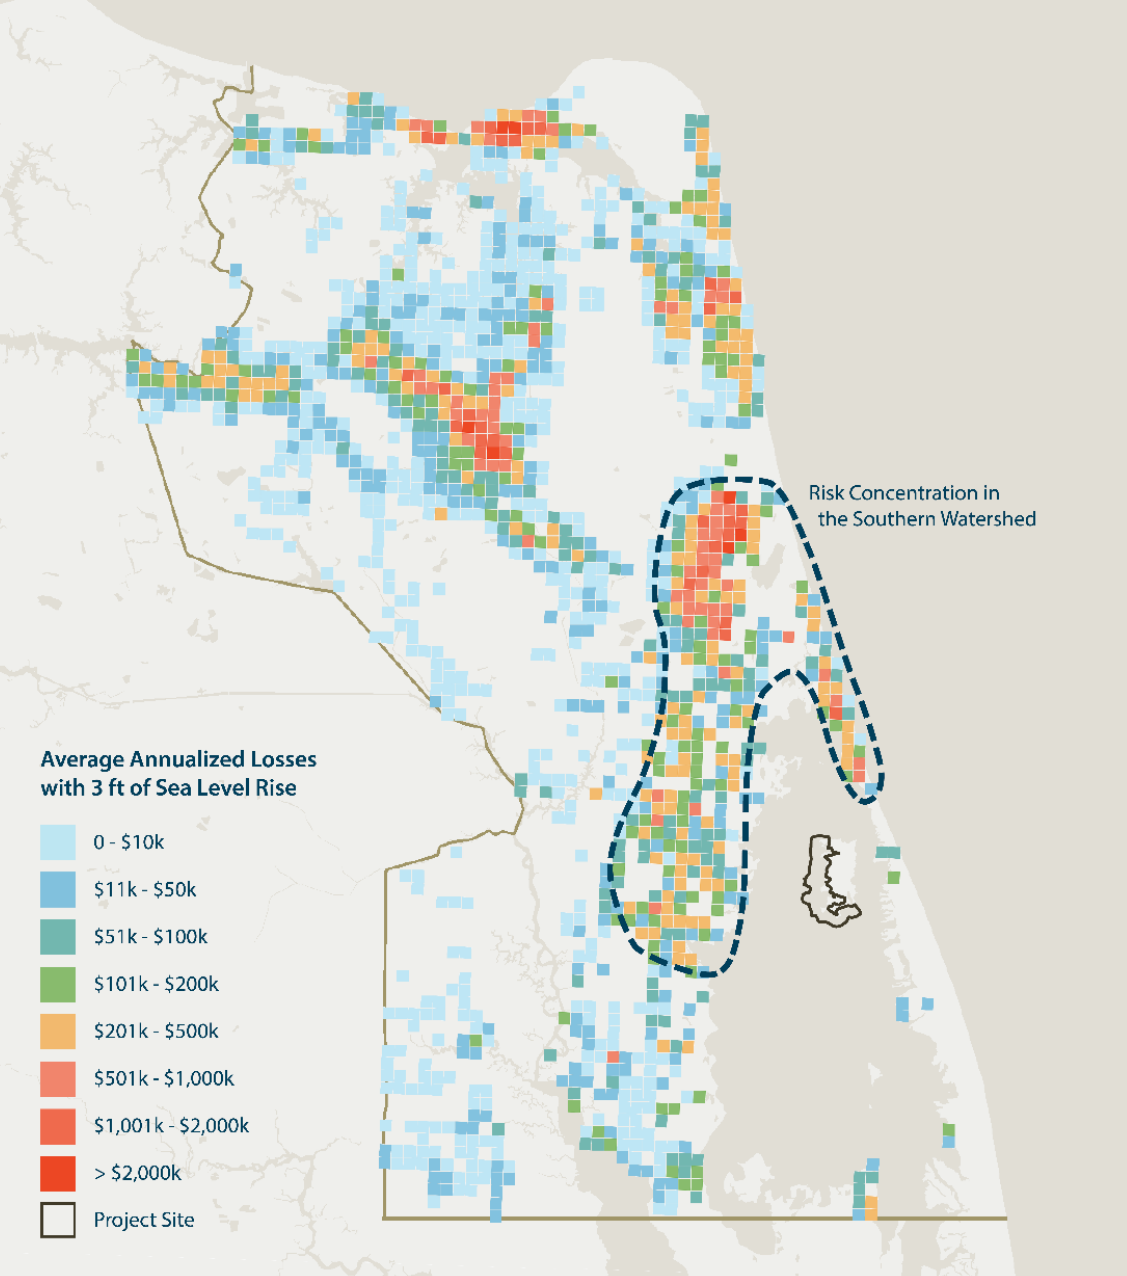

Figure 8: Concentration of average annualized losses estimated with 3 feet of sea level rise under a "no action" scenario presented in the City's Resilience Plan.

Within the two census block groups adjacent to Back Bay near the project area, there are approximately 70 commercial structures and 2,350 residential structures. Of those structures, approximately 635 structures are vulnerable to flooding during a 50-year event today. With 3 feet of sea level rise, approximately 2,060 structures are expected to be vulnerable during a 50-year event, representing approximately 85% of the residential structures within the project vicinity. These numbers underscore the importance of implementing the proposed project alongside complimentary flood risk reduction projects.

h. Critical Facilities

The two census block groups near the project site include 10 critical facilities. Table 2 summarizes critical facilities by type, total number, and the number of facilities exposed to the 50-year storm scenario under current and future "no action" scenarios. Under current 50-year storm conditions, 2 communication facilities and 1 electric power station would be exposed to flooding. With 3 feet of sea level rise, the number of critical facilities exposed to flooding increases to 9 total facilities.

Table 2: Summary of critical facilities located in the selected census block groups and flood hazard exposure to the 50-year storm event under current conditions and with 1.5 feet and 3 feet of sea level rise.

Type of Facility	Number of Facilities	Current 50-year storm	50-year storm with 1.5 feet sea level rise	50-year storm with 3 feet sea level rise
Communication	3	2 (66%)	2 (66%)	3 (100%)
Electric Power	1	1 (100%)	1 (100%)	1 (100%)
Fire Station	1	0	0	0
Potable Water	2	0	2 (100%)	2 (100%)
School	1	0	0	1 (100%)
Wastewater Treatment	2	0	0	2 (100%)

2. Need for Assistance

The City of Virginia Beach has invested significant time, money, and staff resources in understanding, communicating, and planning for the threats of sea level rise and recurrent flooding to the community. The City is ready to begin the implementation of adaptation measures, and the marsh terrace project is the first project to advance to construction from the City's Resilience Plan. The project represents the first step in restoring Back Bay and the larger Albemarle-Pamlico estuary, and serves as a pilot for additional restoration projects. Virginia Beach understands that flood mitigation costs are substantial and is seeking funds to support project implementation alongside dedicated resources procured by the City. The City's Department of Public Works Stormwater Engineering Center has closely coordinated with the City's Department of Planning & Community Development throughout the design and permitting process. The Department of Public Works will oversee the construction of the marsh terrace project, including providing construction inspectors to monitor that the project is built to the City's design standards and technical specifications. Additionally, the City has access to necessary software, including AutoCAD and ArcGIS Desktop, and support from consultants to augment the City’s technical capabilities.

Examples of City staff who will support the project include the following:

- Program Manager for the Technical Services Division of the Stormwater Engineering Center.
- Project Manager for Green Infrastructure Projects for the Technical Services Division of the Stormwater Engineering Center.
- Environmental Planner / Certified Floodplain Manager from the Wetlands & Shoreline Construction Team of the Planning Administration Division of the Department of Planning & Community Development.
- Planning Evaluation Coordinator from the Chesapeake Bay Preservation Area & Southern Rivers Watershed Team of the Planning Administration Division of the Department of Planning & Community Development.
- Full-time Construction Inspector from the City’s Public Works Engineering Division.
- Grant Coordinator from the City’s Public Works Engineering Division.

Additional staffing will be provided as needed to ensure project success.

Monetary support to implement the proposed project will benefit Virginia Beach communities north of the project site. Based on Adapt Virginia's Social Vulnerability Viewer, the Social Vulnerability Index scores of the communities located in the two census block groups adjacent to Back Bay near the project site range from -0.8 to -0.6, which classifies as Low Social Vulnerability.

This project benefits communities in northern Back Bay with a high concentration of flood losses (as shown in Figure 8). These communities contribute significantly to Virginia Beach's rural economy, including agriculture, forestry, fishing, hunting, and eco-tourism. In Hampton Roads, these industries contribute a combined $100 million in gross domestic product.[11] Protection of vulnerable natural infrastructure, such as the marshes in Back Bay, is critical to ensuring these industries can continue to thrive within the region.

3. Goals and Objectives

The overarching goal of this project is to construct the City's first nature-based adaptation project in the Southern Rivers Watershed and one of the CRMP's exemplary nature-based projects. This project aims to stabilize two critically eroding marsh islands from further degradation, decrease turbidity to promote the growth of aquatic vegetation and provide flood risk reduction benefits through increased friction and wave attenuation. The following section summarizes the objectives through which this goal will be realized.

Objective 1 – Sustainable Habitat Creation

The proposed project aims to restore marsh island communities in Bonney Cove that have historically provided environmental and flood reduction benefits to the communities in northern Back Bay. As illustrated in Figure 9, when an intact marsh begins to fragment and convert to open water, fetch increases and enables greater wave energy, increasing marsh erosion rates, and ultimately accelerating conversion to an ever-expanding body of open water. Strategic marsh restoration and creation in Bonney Cove would help mitigate the cycle of marsh island erosion and loss of SAV currently occurring in Back Bay, thereby protecting the remaining marsh islands and reducing fetch and wave energy.

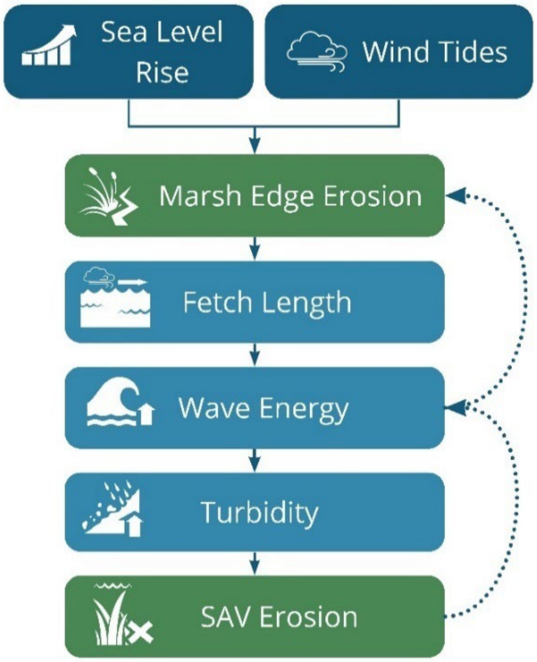

Figure 9: Cycle of marsh erosion, SAV loss, and increased wind-driven flooding.

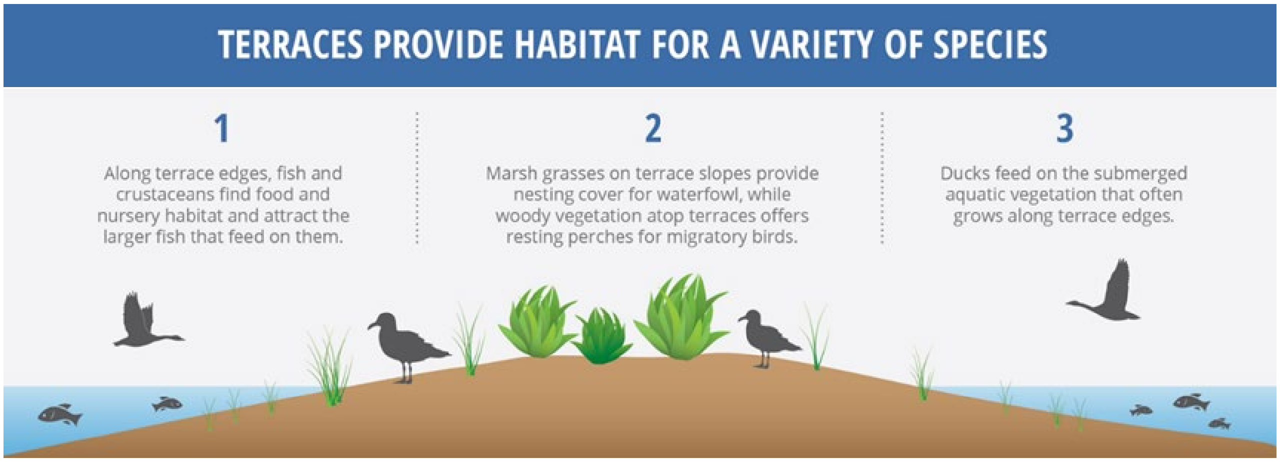
The primary objective of this project is to create a sustainable coastal marsh island system in Back Bay through reclamation of historically lost marsh habitat and protection of existing marsh complexes from erosion. This restoration effort aims to provide multiple benefits of reduced flood impacts, enhanced fish and wildlife habitat, and improved water quality. The project is designed to achieve the following outcomes:

---

[11] Office of Governor Ralph S. Northam Commonwealth of Virginia and Virginia Department of Conservation and Recreation. (2021). Virginia Coastal Resilience Master Plan Phase 1 (PDF); data referenced sourced from the US Bureau of Economic Analysis. (2019).

- Decrease turbidity to create conditions that promote the growth of emergent vegetation and aquatic grasses;
- Maximize habitat value for ecologically important fish and wildlife populations (e.g. Largemouth Bass, Bluegill, Yellow Perch, Striped Bass, Blueback Herring, Alewife, American Eel, etc.); and,
- Reduce fetch, wave heights, and flow velocities to mitigate erosion of fringing marsh systems that provide a buffer for the low-lying neighborhoods and roads that experience frequent flooding in northern Back Bay.

The City selected marsh terracing as the preferred restoration approach because the design is compatible with Back Bay's shallow bottom and the historical loss of habitat. Marsh terraces are narrow, man-made islands placed in shallow open water to restore previous marsh environments. Typically arranged in a chevron pattern, the overall field of marsh terraces dissipates waves, decreases turbidity, and slows down the moving water. The resulting calmer water conditions allow more sunlight to penetrate to the shallow bottom, promoting the establishment and growth of marsh seagrass and ultimately improving habitat quality for fish and wildlife. Further, as opposed to one continuous marsh platform, marsh terraces maximize habitat for a variety of fish and wildlife species, as illustrated in Figure 10.



TERRACES PROVIDE HABITAT FOR A VARIETY OF SPECIES

1 Along terrace edges, fish and crustaceans find food and nursery habitat and attract the larger fish that feed on them.

2 Marsh grasses on terrace slopes provide nesting cover for waterfowl, while woody vegetation atop terraces offers resting perches for migratory birds.

3 Ducks feed on the submerged aquatic vegetation that often grows along terrace edges.

Figure 10: Conceptual diagram of marsh terraces.

Marsh terracing is commonly used in the Gulf Coast region to restore marshes in shallow, open water areas. The proposed project represents the first marsh terracing project in Virginia and the larger Mid-Atlantic region. This project illustrates the City's commitment to nature-based solutions and a critical first step in a more comprehensive vision of restoration in Back Bay and the larger Albemarle-Pamlico estuary, as shown in *Part IV: Section E1 - Project Map 8*.

Based on the current design (30%), the project will create 40 individual marsh terraces totaling approximately 27,000 linear feet (a 51-acre footprint) across Bonney Cove. This includes emergent (low and high marsh) and upland vegetated habitat, submerged terrace habitat, and SAV habitat between the terraces.

Expected Benefits:

- Conversion of 51 acres of open-water subaqueous bottom habitat into marsh terraces, consisting of approximately:
    - 5 acres of low marsh habitat; low marsh plantings would include Big Cordgrass (*Spartina cynosuroides*) and Saltmarsh Cordgrass (*Spartina alterniflora*).
    - 9 acres of high marsh habitat; high marsh plantings would include Black Needlerush (*Juncus roemerianus*) and Salt Meadow Hay (*Spartina patens*).
    - 19 acres of upland vegetated habitat; upland vegetation would include Arrow-leaf Tearthumb (*Persicaria sagittate*), Groundsel Tree (*Baccharis halimifolia*), Wax Myrtle (*Myrica cerifera*), and Bald Cypress (*Taxodium distichum*).
    - 18 acres of unvegetated terrace habitat; anticipated to create suitable conditions for the emergence of SAV.
- Additionally, approximately 310 acres of open water SAV habitat would remain between the proposed marsh terraces, and it is anticipated that construction of the terraces would create conditions within the project area favorable to the re-establishment of SAV populations.

Objective 2 – Mill Landing Road & Boat Ramp Improvements

The project's second objective is to employ a construction approach that is compatible with the shallow nature of Back Bay and the large quantity of material required to build the marsh terraces. The engineering team performed a constructability review of suitable landing sites to stage construction operations for the terraces. The Mill Landing boat ramp, owned by VDWR and located at the end of Mill Landing Road, was identified as the preferred staging and construction access location for the following reasons:

- Mill Landing boat ramp proximity to the site (3 miles); see Figure 11.
- Proximity of Mill Landing boat ramp to identified sand borrow sources.
- Ownership by one of the key project stakeholders, VDWR, who are highly supportive of the project.
- Limited alternative options; the only one other public boat ramp, Back Bay Landing boat ramp (also owned by VDWR), is heavily trafficked and located much further from the site (6 miles).

Furthermore, Mill Landing Road is a low-lying road that experiences frequent inundation and wind-driven flooding (Figure 12). This project was identified as an opportunity to improve the condition of the road as part of the marsh terrace construction activities, bringing additional benefits to the overall project. The City has been in close coordination with VDWR since January 2022 to secure the appropriate approvals for the use of Mill Landing boat ramp and parking lot and ensure compliance with all applicable regulations. Formal approval from VDWR is pending and anticipated in April 2022. Before marsh terrace construction, the City would prepare Mill Landing Road and the boat ramp parking lot as a construction access and staging area through strategic widening of the parking lot and roadway and creation of vehicular pull-offs to allow vehicles to move over safely and allow construction vehicles to pass. After terrace construction is complete, the City would improve the condition of the Mill Landing Road and boat ramp to benefit residents and community stakeholders interested in visiting the project.

Expected Benefits:

- Enables constructability of the marsh terraces.
- Improved condition of the Mill Landing Road and boat ramp/parking lot to enable access to the project post-construction to promote project awareness and educational opportunities.

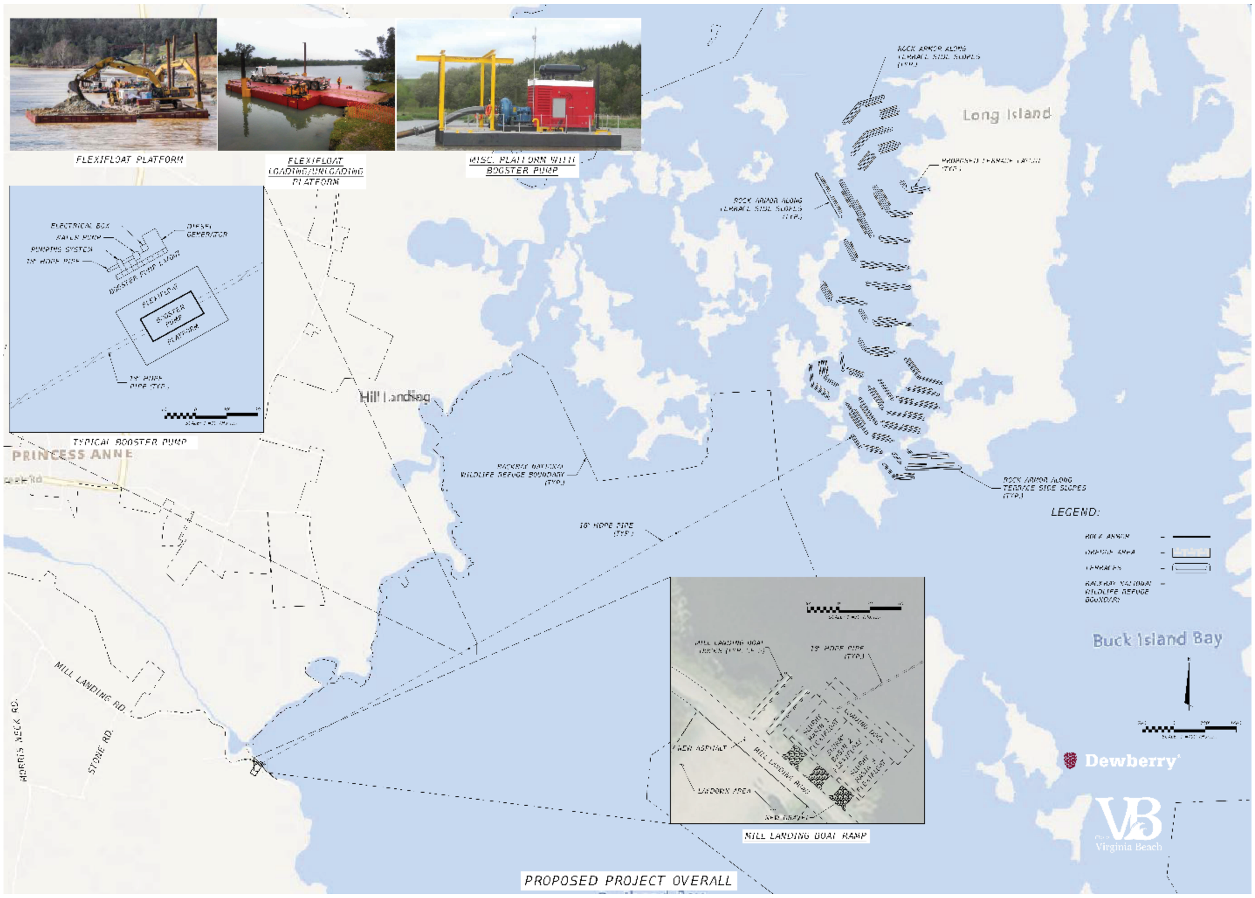


Figure 11: Overall proposed construction approach.

Figure 12: Mill Landing Road and Boat Ramp

Objective 3 – Stakeholder Engagement and Dissemination

The City will continue to meaningfully engage project partners and stakeholders throughout project procurement, construction, and post-construction monitoring. The project's lessons learned and expected benefits will be communicated through local meetings and outreach meetings to other communities, planning entities, and academic institutions within the region and state. Further, the project team intends to seek opportunities to share findings at national conferences and develop materials to facilitate dissemination to multiple audiences identified in the following table:

Table 3: Summary of opportunities for City, regional, state, and national stakeholder engagement; expected benefits.

	Approach
CITY	Host local community engagement meetings throughout construction to keep the public informed. Facilitate internal municipal awareness through presentations to the following staff: • City of Virginia Beach Management Leadership Team (MLT), which includes the City Manager, Deputy City Managers, and Department heads from across the city. • Virginia Beach City Council.
REGION	Share lessons-learned to regional and state stakeholders, improving knowledge-based, awareness, and capacity for future efforts through presentations to the following groups: • Hampton Roads Adaptation Forum – a regional dialogue for academics, non-profits, consultants, and municipalities committed to resilience measures. • The Hampton Roads Planning District Commission (HRPDC) Coastal Resiliency Committee. • Albemarle-Pamlico National Estuarine Partnership (APNEP). • Regional conferences on green infrastructure, coastal resilience, and sea level rise adaptation.
STATE	• Coordinate with DCR to highlight project construction as a success story for the Virginia CRMP, which identifies natural and nature-based solutions and collaboration across state wetland programs as a priority. • Present at state-level conferences on water resources, floodplain management, and resilience, such as Resilient Virginia and Virginia Lakes and Watersheds Association (VLWA). Opportunity to provide a presentation at VLWA as a demonstration project to be captured in the CRMP update.
NATION	• Disseminate as a case study with lessons-learned through presentations at national conferences, such as Restore America's Estuaries, Association of State Floodplain Managers, or the American Shore and Beach Preservation Association, etc. • Leverage working relationships and existing contract work with the U.S. Army Corps of Engineers and partners to integrate lessons learned into the International Natural and Nature-Based Feature Design Guidelines, currently under development. • Disseminate to Georgetown Climate Center's Adaptation Clearinghouse and the Climate Action Knowledge Exchange (CAKE), hosted by EcoAdapt, as additional materials on Virginia Beach's coastal resilience case studies.

4. Approach, Milestones, and Deliverables

The following approach, milestones, and deliverables lay out a plan of action. The milestone schedule follows in *Section B: Milestone Schedule*.

a. Approach & Deliverables

Activity 1 – Contractor Procurement

Contractor procurement activities will begin with the development of 100% Final plans, specifications, and construction estimates (PS&E) and packaging of approved permits. The project team will prepare the bid Request for Proposal (RFP), provide Bid Packages, and assist with reviewing bids obtained. Any Request for Information (RFI) and bid clarifications will be addressed should they arise during the bidding process. Based upon the review of bids, qualifications of the contractor, or identified pre-qualifications and other specification requirements in the bid documents, the engineering consultant will assist the City in their selection of the contractor(s). It is anticipated that contractor procurement will be conducted in three phases:

1. Mill Landing Road/Boat Ramp Construction Preparation Contractor Procurement.
2. Marsh Terrace Contractor Procurement.
3. Final Mill Landing Road/Boat Ramp Improvements Contractor Procurement.

Deliverables:

- 100% Final PS&E.
- Bid Document Development, Coordination, Requests for Information and Reporting.

Assumptions:

- At the time of submission of this grant application, a Joint Permit Application is being prepared; approved permits are anticipated in early 2023.
- It is anticipated that the bidding process, award, and material production will occur over 12 months (Year 1 – 2023) for the first phase (Mill Landing Road and boat ramp construction preparation) and second phase (marsh terrace contractor).
- It is anticipated the third phase (final Mill Landing Road and boat ramp improvements) will begin procurement in summer 2025.

Activity 2 – Mill Landing Road & Boat Ramp Construction

As soon as the Mill Landing Road and boat ramp contractor is selected, construction activities to prepare Mill Landing Road and boat ramp for construction of the marsh terraces can commence. Construction activities will include mobilization, erosion and sediment control, clearing and grubbing, boat ramp lot expansion, construction of a new, improved boat ramp, establishment of temporary construction pull-offs, Mill Landing base stone and parking lot installation, and establishment of construction signage.

Back Bay is too shallow to accommodate conventional barges for material placement. As a result, hydraulic pumping of the sand core through an 18-inch diameter pipe is necessary to avoid extensive impacts to the bottom of Back Bay. The contractor will install the pipe along the bottom of Back Bay for 3 miles from Mill Landing boat ramp to the southern extent of the project site and then an additional mile to the northern extent of the site. The pipe will be marked by a buoy every 10 feet and temporary signage as reasonable. Booster stations would be placed approximately every mile. These booster stations would consist of a pontoon-mounted diesel engine pump capable of moving the sand slurry from the laydown area at Mill Landing boat ramp to the site. Given the distance to the site, 4 or 5 booster stations are anticipated to be necessary to create the sand cores of the terrace. It is estimated that 450 gallons per minute (GPM) of sand slurry would be pumped through the pipe.

After construction of the marsh terraces is complete (see Activity 3), the final construction contractor will make improvements to Mill Landing Road and boat ramp parking lot, including re-paving or graveling the surfaces impacted by construction activities.

Deliverables:

- Conduct weekly inspections to monitor construction progress of the Mill Landing Road and boat ramp portion of the project.

Assumptions:

- It is anticipated that the Mill Landing Road and boat ramp construction activities can occur simultaneously with material production in Year 1 (2023).

Activity 3 – Marsh Terrace Construction

Once the Mill Landing Road and boat ramp construction preparation is complete, marsh terrace construction activities can commence, beginning with the construction of the slurry basins adjacent to the Mill Landing boat ramp parking lot. The Marsh Terrace Construction Contractor will construct the terraces according to the 100% Final PS&E documents. The most recent engineering designs and design report are available upon request; they are not included as an attachment to this proposal due to file size. Figure 13 shows the overall layout of the terraces, and Figure 14 and Figure 15 show the project renderings. Terrace construction will begin in the northern extent of the project site at Terrace #100, noted in Figure 13, and the contractor will work south towards Terrace #140. The contractor will complete each terrace (including installation of plants) before moving onto the next.

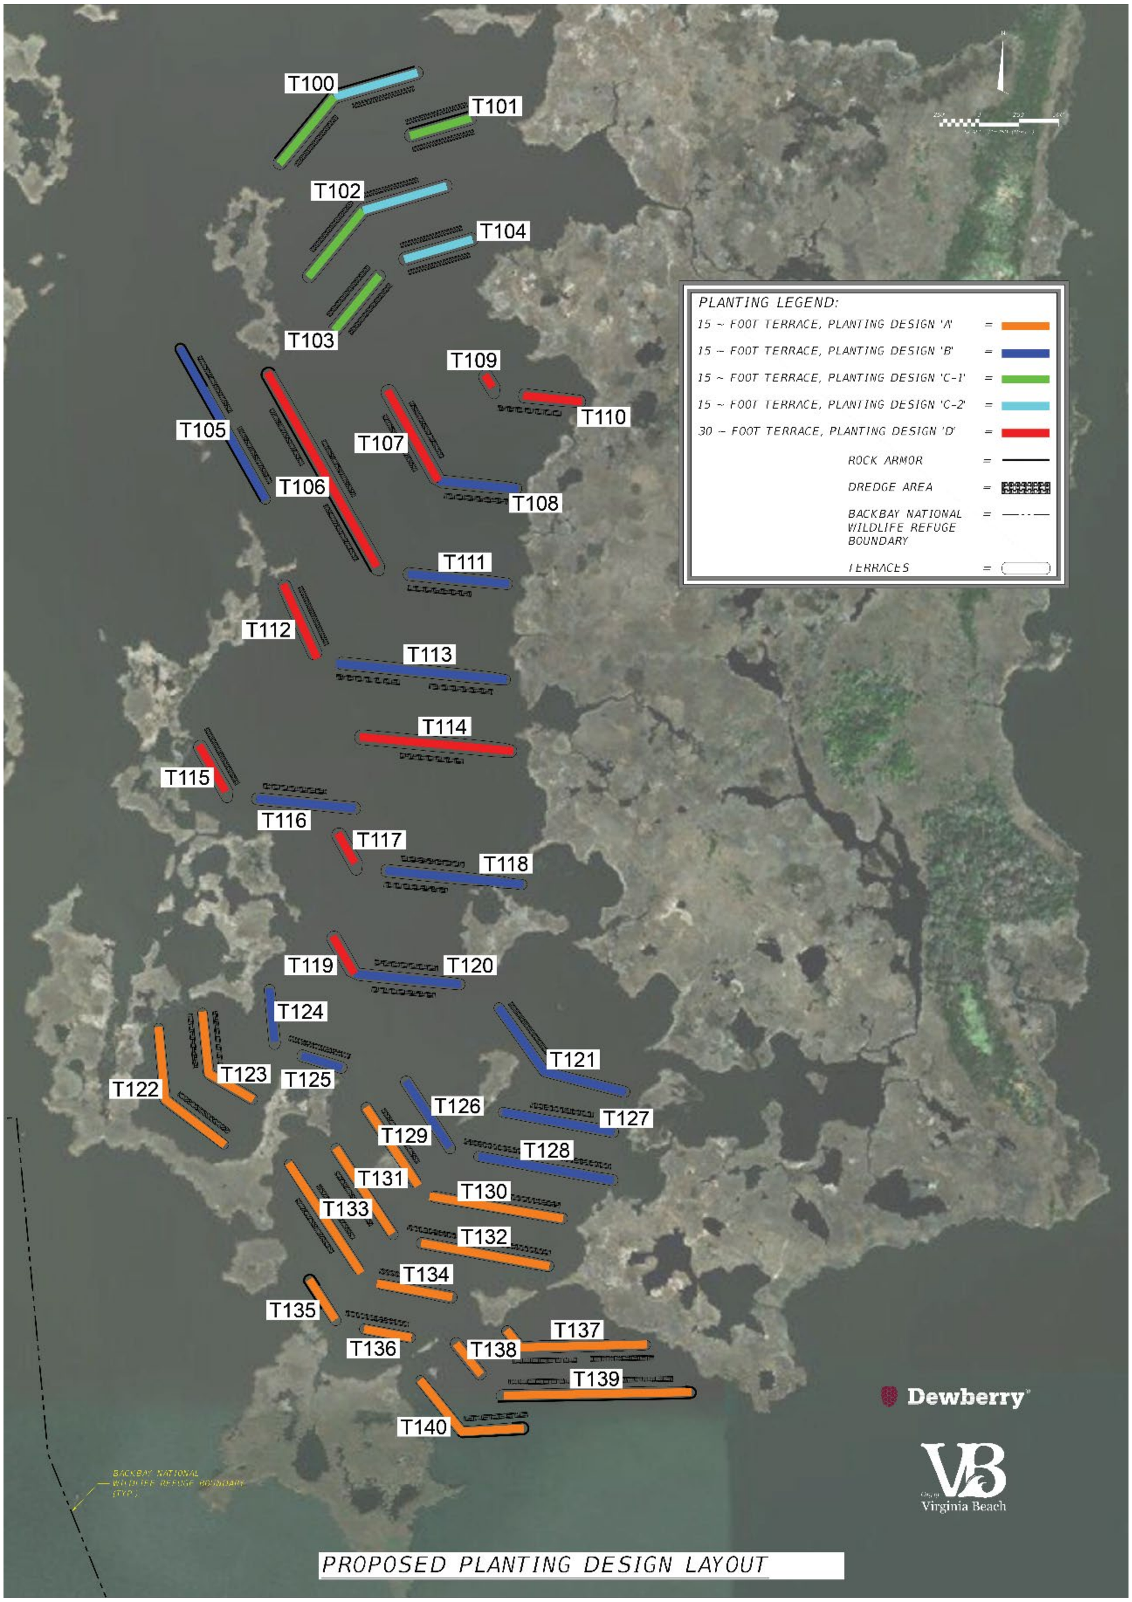

Figure 13: Marsh terrace layout across Bonney Cove.

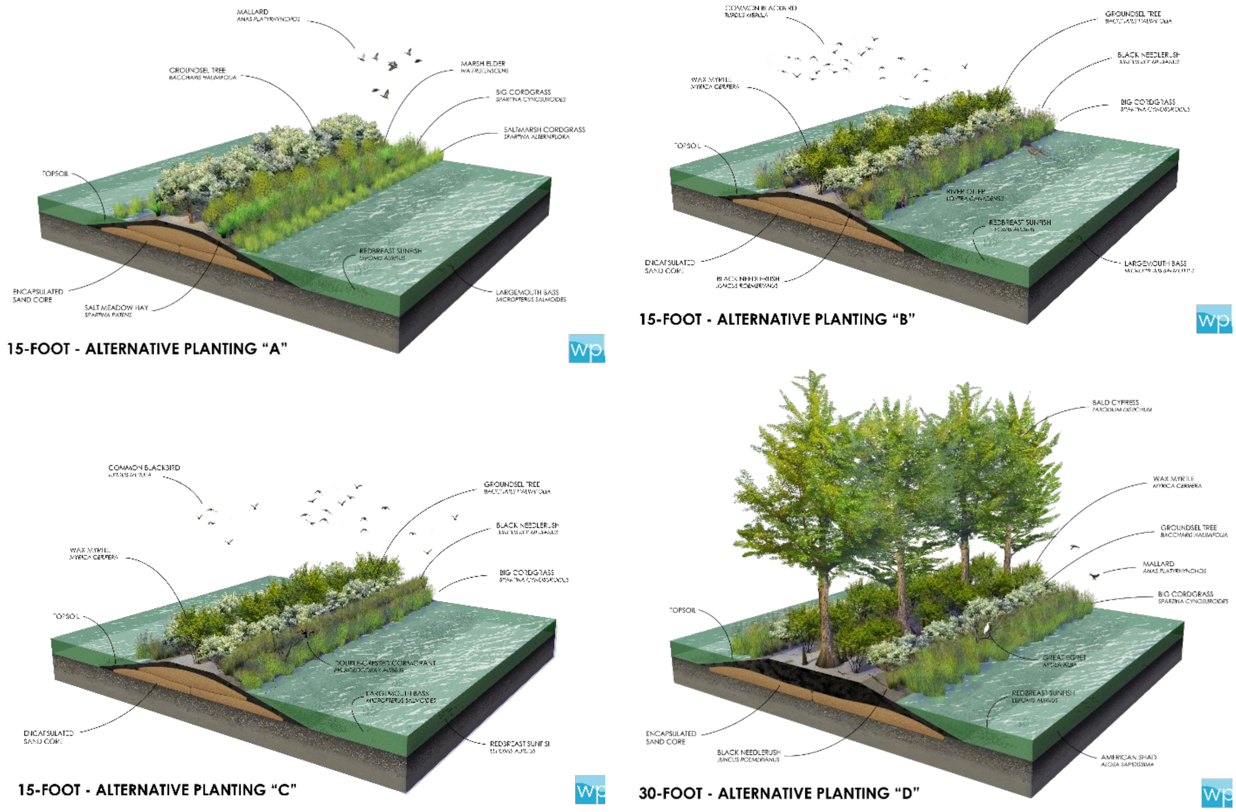
Figure 14: Marsh terrace design rendering.



15-FOOT - ALTERNATIVE PLANTING "A"

15-FOOT - ALTERNATIVE PLANTING "B"

15-FOOT - ALTERNATIVE PLANTING "C"

30-FOOT - ALTERNATIVE PLANTING "D"

Figure 15: Marsh terrace cross-section design renderings.

The following section provides a high-level description of the proposed design and construction approach.

Terrace Orientation:

The orientation of the terraces will be perpendicular to the predominant wind direction (south-southwest) to maximize wave energy reduction. The terraces in the northern extent of the project site will be angled perpendicular to a north-northwest wind direction. The terraces would be segmented in a chevron pattern (duck-wing pattern) to provide the most favorable fish and swimming crustacean (termed "nekton") habitat while also allowing adequate circulation to promote sedimentation and maintaining navigability throughout the project area. The terraces would not be connected to the adjacent marsh; this gap, or physical open water barrier, is intended to deter the invasion of Common Reed (*Phragmites australis*) stands from adjacent marshes.

Spacing:

The terraces would be spaced at approximately 300-foot intervals in the northern and southern quarters, and then 600-foot or greater intervals in the center. This arrangement aims to lessen the open water and subsequent wave action at the northern and southern ends of the site and allow adequate construction space for marine-based construction equipment.

Terrace Elevation and Width:

To achieve a sustainable marsh elevation throughout the project life, the marsh terraces would initially be built to a higher elevation during construction and allowed to settle to the desired target elevation over time. Taller terraces improve the functionality and resiliency of the system while also providing diversified habitat for fish and wildlife. The goal is that, by the end of the 30-year design life and with 1.5 feet of relative sea level rise, the terraces will be at or above the elevation of a moderate wind tide event (when Back Bay water levels are anticipated to reach +3.0 feet NAVD88 over the design water level). This threshold was determined to ensure the terraces would not be fully overtopped during a future wind tide event and maintain resiliency to anticipated sea level rise. The 1.5 feet sea level rise scenario is consistent with the near-term planning scenarios identified in the City's Resilience Plan to represent conditions from 2035 to 2050 and adopted by the Hampton Roads Planning District Commission (HRPDC) as part of resolution number 2018-01.

The terraces would have a top width of 15 or 30 feet and be built to an elevation of +4.5 to +5.0 feet NAVD88, depending on the width of the crest, underlying soils, and local bottom depth, with side slopes of 4 horizontal to 1 vertical (4H:1V). The +4.5- to +5.0-foot elevation is calculated based on a target elevation of +3.0 feet NAVD88 or higher at the end of the project's 30-year design life and an estimated settlement of approximately 1 to 2 feet, depending on where the terrace is located. The geotechnical investigation revealed that terraces in the site's southern portion are expected to experience greater settlement than those to the north.

Terrace Composition:

The terraces would consist of a sand-filled core that is encapsulated by a high-strength blend of woven and non-woven geotextile fabrics. The sand for this material will come from nearby offsite sources and be pumped through the 18-inch diameter pipe described in Activity 2. Once the cores are in place, long-reach excavators would travel along the tops of the terraces and begin to shape the cross slopes. Existing adjacent material devoid of SAV would be mechanically dredged and placed over the sand-filled cores. The marsh terraces would be covered with 1 to 3 feet of suitable fill, depending on crest widths, and then planted with native emergent and brackish plant species to stabilize the terraces and provide wind-driven flood reduction benefits.

Deliverables:

- Conduct daily inspections to monitor construction progress of the marsh terraces.

Assumptions:

- It is anticipated that construction of the terraces will occur over 2 years from 2024 through 2025, with the following assumptions:
    - Construction activities are not permitted within BBNWR from October 31 through February 28, annually, to limit disturbance to wintering waterfowl and migration during those months.
    - Mill Landing boat ramp will return to public use every weekend (beginning at 5:00 p.m. each Friday) during the duration of construction activities.

Activity 4 – Maintenance Plan

The City will prepare a maintenance and management plan for the project to demonstrate how it will be maintained after the lifespan of this grant for a minimum of five (5) years. The Maintenance Plan will establish monitoring goals, objectives, metrics, and success criteria that will be used to identify maintenance needs. The Maintenance Plan will outline the proposed monitoring strategy, such as the establishment of transects, quadrants, and photo stations to enable consistent tracking of the project across each monitoring year. The Maintenance Plan will also include a proposed schedule for annual monitoring inspections, which typically occur during the peak of the growing season, to track vegetation growth and identify any needed nuisance and invasive species management measures.

Deliverables:

- Project Maintenance Plan.

Assumptions:

- Ongoing post-construction monitoring, operation, and maintenance is not covered under this activity (see below).

Activities Not Included Under this Grant

Post-Construction Monitoring:

Post-construction monitoring and inspections will occur for a minimum of five (5) years following construction. Given the period of performance for the CFPF grant, post-construction monitoring activities have not been included in this application.

Stakeholder Engagement and Dissemination:

To achieve Objective 3 (Stakeholder Engagement and Dissemination), the City is committed to continued engagement of project partners and stakeholders throughout project procurement, construction, and post-construction monitoring. No financial support is requested for City personnel time on this project, and these activities are not included in this grant application.

b. Milestone Schedule

The milestone schedule assumes an executed agreement date of September 2022. The scope of work proposed in this grant application will begin in 2023, once the City receives approved permits. The project's expected progression is shown in the following milestone schedule, noting deliverables for each milestone:

Year 1 (2023)

- *1st Quarter*
    - 100% Final PS&E
    - Submit Bid Documents
    - Maintenance Plan
- *2nd Quarter*
    - Final Bid Coordination/Acceptance
    - Construction NTP and Mobilization for Mill Landing Road & Boat Ramp
    - Initiation of Marsh Terrace Material Production
- *3rd Quarter:*
    - Construction NTP and Mobilization for Slurry Basin Installation
    - Oversight, Management, and Inspection Services of Mill Landing Road & Boat Ramp, Pipe, and Slurry Basin Installation
- *4th Quarter:*
    - Completion of Mill Landing Road/Boat Ramp Construction Improvements and Slurry Basin Construction

Year 2 (2024)

- *1st Quarter*
    - Completion of Marsh Terrace Material Production
    - Construction Mobilization for Marsh Terraces (beginning on March 1, 2024)

- *2nd Quarter*
    - Construction of Marsh Terraces #100 – 105
- *3rd Quarter*
    - Construction of Marsh Terraces #106 – 114
- *4th Quarter*
    - Construction of Marsh Terraces #115 – 119
    - Marsh Terrace Construction Demobilization (to accommodate break in construction period from October 31, 2024 – February 28, 2025)

Year 3 (2025)

- *1st Quarter*
    - Construction Re-Mobilization for Marsh Terraces (beginning on March 1, 2025)
- *2nd Quarter*
    - Construction of Marsh Terraces #120 – 134
- *3rd Quarter*
    - Construction of Marsh Terraces #135 – 140
- *4th Quarter*
    - Mill Landing Road & Boat Ramp Final Improvements & Demobilization

c. Potential Project Partners

The following table highlights the specific project partners, their roles, and their capabilities concerning the proposed project.

Table 4: Potential Project Partners.

Entity	Role	Description
U.S. Fish and Wildlife Service, Back Bay National Wildlife Refuge	Project Partner / Advisor / Adjacent Land Owner	BBNWR owns the land adjacent to the project footprint and monitors migratory bird hunting within Presidential Proclamation boundaries. BBNWR has coordinated with the City on project design and will continue to be involved during project construction as a stakeholder and advisor.
Virginia Department of Wildlife Resources	Project Advisory / Stakeholder	As owner of the Mill Landing boat ramp, the City has coordinated closely with VDWR on project design. Furthermore, VDWR has been monitoring SAV distribution in Back Bay for decades and will be a critical partner for identifying native seagrass species and techniques for restoration based on extensive experience from previous SAV restoration projects in Back Bay.

Entity	Role	Description
Virginia Beach Department of Planning & Community Development	Permit Compliance	The City's Department of Public Works has been in close coordination with the City's Department of Planning & Community Development throughout the design and permitting process. Continued involvement and coordination during construction and post-construction monitoring is anticipated.
Dewberry	Engineering Contractor	Engineering consultant to support the City with contractor procurement and construction administration.
To be Determined	Construction Contractors	Construction contractor for the Mill Landing Road and boat ramp and marsh terrace construction activities.
Friends of Back Bay	Project Advisory / Stakeholder	Friends of Back Bay was formed in the 1980s to lead efforts to expand and conserve BBNWR, including securing millions in funding to support the Refuge’s expansion. The City has coordinated with the BBNWR Society throughout the design and permitting process and will continue this coordination through construction and post-construction monitoring.
Back Bay National Wildlife Refuge Society	Project Advisory / Stakeholder	The Back Bay National Wildlife Refuge Society (BBNWR Society) is an independent, 501(c)(3) non-profit group dedicated to supporting the mission of the USFWS National Wildlife Refuge System and specifically promoting awareness of the BBNWR through education and participation. The City has coordinated with BBNWR Society throughout the design and permitting process and will continue this coordination through construction and post-construction monitoring.
Back Bay Restoration Foundation	Project Advisory / Stakeholder	Back Bay Restoration Foundation (BBRF) is an independent, 501(c)(3) non-profit group focusing on growing concerns about issues such as recurrent flooding, sea level rise, and development in the Southern Rivers Watershed. The group aims to serve as an advocate for the Bay and surrounding residents. The City has coordinated with BBRF throughout the design and permitting process and will continue this coordination through construction and post-construction monitoring.

5. Relationship to Other Projects

This project represents the first nature-based project in the Southern Rivers Watershed to advance to design and construction to implement the City's Resilience Plan. As previously mentioned, the City received approximately $135,000 in NFWF NRCF funding in 2020 for the previous phase (design and permitting) for the project. The City continues to meet the obligations and period of performance of this NFWF grant.

In its Resilience Plan, Virginia Beach identifies an adaptation approach for the Southern Rivers Watershed that emphasizes natural mitigation methods and integrated systems of defenses. As a natural mitigation strategy, the marsh terrace project aims to serve as a first line of defense during flood events, reducing wind-driven fetch, wave energy, and flow velocities to protect the important marsh buffer surrounding the shorelines of Back Bay. Other projects are also needed to provide multi-layered flood protection to northern Back Bay communities (Figure 16). Several of these projects are highlighted below. It should be noted that the projects described below are either not yet funded or will be funded in the future through the City’s Capital Improvement Program.

Figure 16: Southern Rivers Watershed Adaptation Vision.

Backside of Sandbridge Flood Defense System

Protection of the Sandbridge resort community from increasing coastal flood hazards would require a complex and expensive structural protection system because of the manufactured land configuration on the backside of Sandbridge. The proposed protection system includes elevating Sandbridge Road and constructing a network of seawalls, levees, and gates along the Back Bay shoreline of Sandbridge. This project does not have designated funding at this time.

Hell Point Creek Flood Defense System

As part of the integrated Sandbridge City-Wide flood defense network, a storm surge barrier across Hell Point Creek could block flood waters originating from Back Bay. Sandbridge Road would also need to be raised to ensure floodwaters could not flank the system. This project does not have designated funding at this time.

Sandbridge/New Bridge Intersection Improvements

Road and shoulder improvements are planned to increase safety at the New Bridge Road/Sandbridge Road intersection and reduce the need for road closures due to flooding from the adjacent Ashville Creek.

Muddy Creek Road Flood Defense System

Muddy Creek Road provides access to important rural and agricultural communities and Back Bay and the Wildlife Refuge. Muddy Creek Road is one of the lowest-lying roadways in all of Virginia Beach and frequently floods. This City-Wide Structural Alternative Flood Protection analysis identified this roadway as a critical location to provide flood protection. The proposed system, known as the Muddy Creek Road Alignment, would transform much of Muddy Creek Road into a levee, with the road on the top. The City's numerical modeling effort shows that the Muddy Creek Road Flood Defense System could potentially increase flood risk to the east of Muddy Creek Road (see *Part IV: Section E1 – Project Map 9*). Therefore, the implementation of nature-based strategies suitable to the low-lying shorelines of Back Bay is essential to mitigate these impacts. This project does not have designated funding at this time.

Voluntary Acquisition Program

Virginia Beach City Council has recently funded a $2.0 million City-wide voluntary acquisition program to encourage flood-prone property owners to apply for a buyout. Parcels acquired by the City, in the Southern Rivers Watershed, would then be converted to open space to serve as flood storage and a marsh migration buffer.

Stormwater Master Plan

The City Council initiated an update of the City's Stormwater Master Plan in 2014. This effort is interchanging information with aspects of the City's Resilience Plan to account for the impact of sea level rise on the stormwater system's performance. Specific stormwater drainage improvement projects are included within the Lower Southern Rivers Watershed Drainage Basin.

Virginia Coastal Resilience Master Plan

The CRMP highlighted the marsh terrace project as an exemplary nature-based resilience project. The CRMP emphasizes Virginia Beach's strategic use of multiple funding streams to implement a large-scale nature-based project. DCR’s contribution to the project’s construction could be highlighted as a success story for implementation of the CRMP.

Audubon North Carolina Currituck Sound Coalition Marsh Conservation Plan

In coordination with Audubon North Carolina, the Currituck Sounds Coalition identified marsh restoration priorities based on criteria for siting restoration projects, including vulnerability to sea level rise, historic increase in surface water, and distance to hardened shorelines. This assessment identified Virginia Beach’s marsh terrace project site as a high-priority area for restoration (see Part IV: Section E1 – Project Map 3). There is an opportunity to highlight this project as a success story in the next iteration of the Audubon's Marsh Conservation Plan, which is slated to be updated every three years.

6. Maintenance Plan

A Maintenance Plan will be developed as part of this project, as described in Section 4a (Activity 4).

7. Criteria

The City has demonstrated, through this application, that the grant criteria have been met. For more details and locations of criteria, refer to Table 5. Appendix B contains the completed scoring criteria.

Table 5: Grant criteria checklist.

Criteria	Satisfaction?
Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?	Yes.
Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or is a link provided?	Yes. Approved by DCR on July 20, 2021. The Virginia Beach Resilience Plan ("Sea Level Wise") can be found on the City's website.
For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?	Not Applicable.
Has the applicant provided evidence of an ability to provide the required match funds?	Yes. Please see *Part IV: Section D3 (Cash Funds Available)* and *Part IV: Section E3.*
Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on the prevention of flooding?	Yes. Please see *Part IV: Section B1 (Project Information)*.

D: Budget Narrative

The following budget narrative details the proposed project expenditures.

1. Estimated Total Project Cost

A detailed cost breakdown for each activity is presented in Table 6. This cost estimate is based on material quantities from the latest design files. The total project cost across all project activities is presented in Table 7.

Table 6: Cost breakdown by activity.

Element	Amount
Activity 1 – Contractor Procurement	
100% Final PS&E Package and Contractor Procurement	$ 30,000.00
Construction Administration	$ 22,000.00
Activity 1 Subtotal	$ 52,000.00
Activity 2 – Mill Landing Road & Boat Ramp Construction	
Mobilization & Demobilization	$ 511,000.00
Mill Landing Road and Boat Ramp Construction Preparation	$ 120,000.00
New Boat Ramp	$ 210,000.00
Mill Landing Parking Lot Expansion	$ 180,000.00
Temporary Pull-offs	$ 300,000.00
Mill Landing Road and Parking Lot Post-Construction Improvements	$ 650,000.00
Activity 2 Subtotal	$ 1,971,000.00
Activity 3 – Marsh Terrace Construction	
Mobilization & Demobilization	$ 8,733,931.00
Construction Equipment	$ 1,735,000.00
Construction Materials	$ 12,156,551.00
Construction Labor	$ 665,000.00
Activity 3 Subtotal	$ 23,290,482.00
Activity 4 – Maintenance Plan	
Development of Maintenance Plan	$ 14,000.00
Activity 4 Subtotal	$ 14,000.00

Table 7: Summary of total costs across all activities.

Activity Totals	Amount
All Activities Subtotal	$ 25,327,482.00
Overall Project Contingency (15%)	$ 3,799,122.00
Total Project Cost Estimate	$ 29,126,604.00

2. Funds Requested from the Fund

The City is requesting a total of **$ 5,000,000.00** (17% of total project cost estimate) in funding from the CFPF Round 3 to support contractual services of the engineering consultant and construction contractor to execute Activity 3 (Marsh Terrace Construction). No support is requested for City personnel.

The City as prime recipient is providing a cash match of **$ 24,126,604.00** (83% of total project cost estimate) to cover contractual services to support Activity 1 (Contractor Procurement), Activity 2 (Mill Landing Road & Boat Ramp Construction), remaining construction costs associated with Activity 3 (Marsh Terrace Construction), Activity 4 (Maintenance Plan), and all direct overhead costs related for the project.

3. Cash Funds Available

The City has **$ 24,126,604.00** in cash on hand, contained within the City budget. This amount of cash funds is sufficient so that when combined with the potential grant funding, the City will have all necessary funds available to complete the project.

4. Funding Authorization

Please refer to *Part IV: Section E3* for the documentation authorizing the funding request.

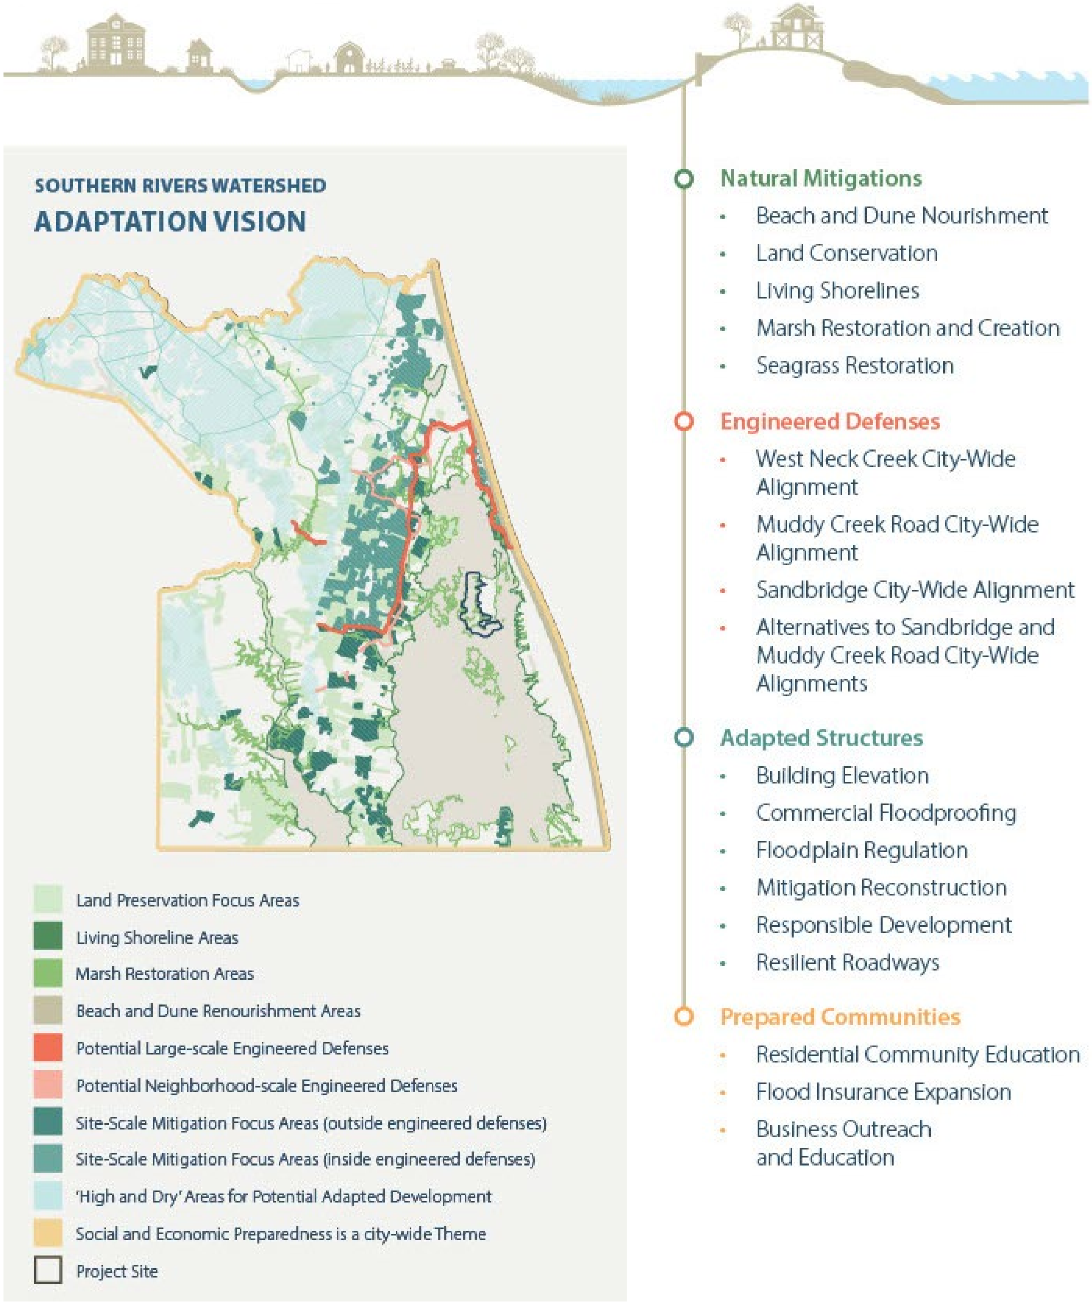
E: Supporting Documentation

1. Project maps, including:
    - FIRMette of the project areas
    - Historic flood reports and projected flooding data
    - Other contextual maps and supporting research referenced in the Scope of Work Narrative
2. Virginia Beach Resilience Plan DCR Approval
3. Authorization to request funding from the Fund from governing body or chief executive of the local government
4. City of Virginia Beach Floodplain Administrator Support Letter
5. Copy of the current Floodplain Ordinance

1. Project Maps

a. Project Map 1: Southern Rivers Watershed Adaptation Vision

Natural and nature-based features are the primary pillar of the adaptation strategy for the Southern Rivers Watershed identified in the City's Resilience Plan. The Plan identified living shorelines, marsh restoration and creation, and land conservation as suitable strategies along the shorelines of Back Bay.



Natural Mitigations
- Beach and Dune Nourishment
- Land Conservation
- Living Shorelines
- Marsh Restoration and Creation
- Seagrass Restoration

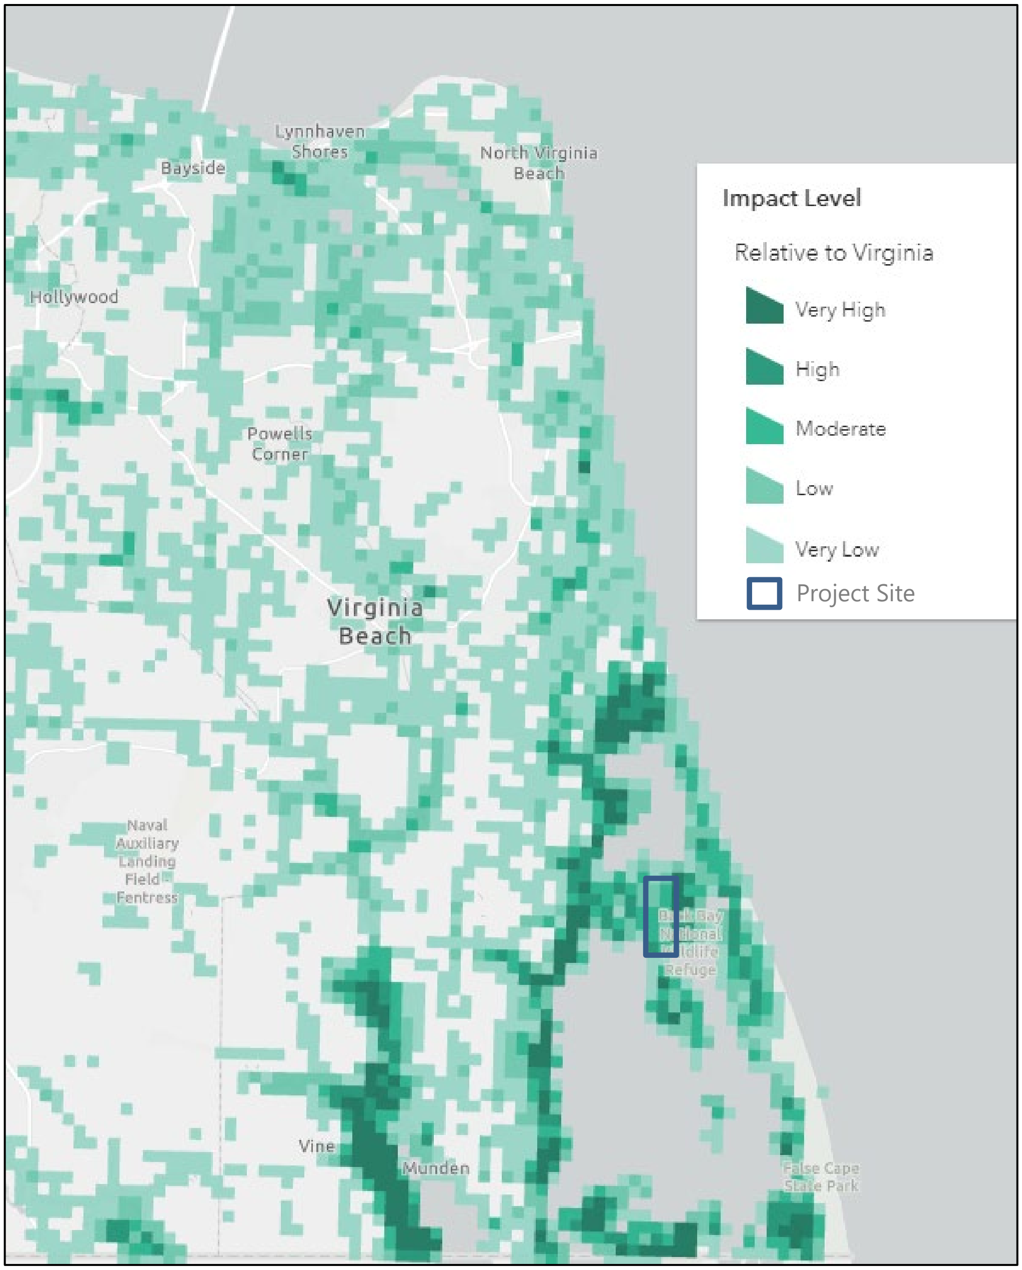
Engineered Defenses
- West Neck Creek City-Wide Alignment
- Muddy Creek Road City-Wide Alignment
- Sandbridge City-Wide Alignment
- Alternatives to Sandbridge and Muddy Creek Road City-Wide Alignments

Adapted Structures
- Building Elevation
- Commercial Floodproofing
- Floodplain Regulation
- Mitigation Reconstruction
- Responsible Development
- Resilient Roadways

Prepared Communities
- Residential Community Education
- Flood Insurance Expansion
- Business Outreach and Education

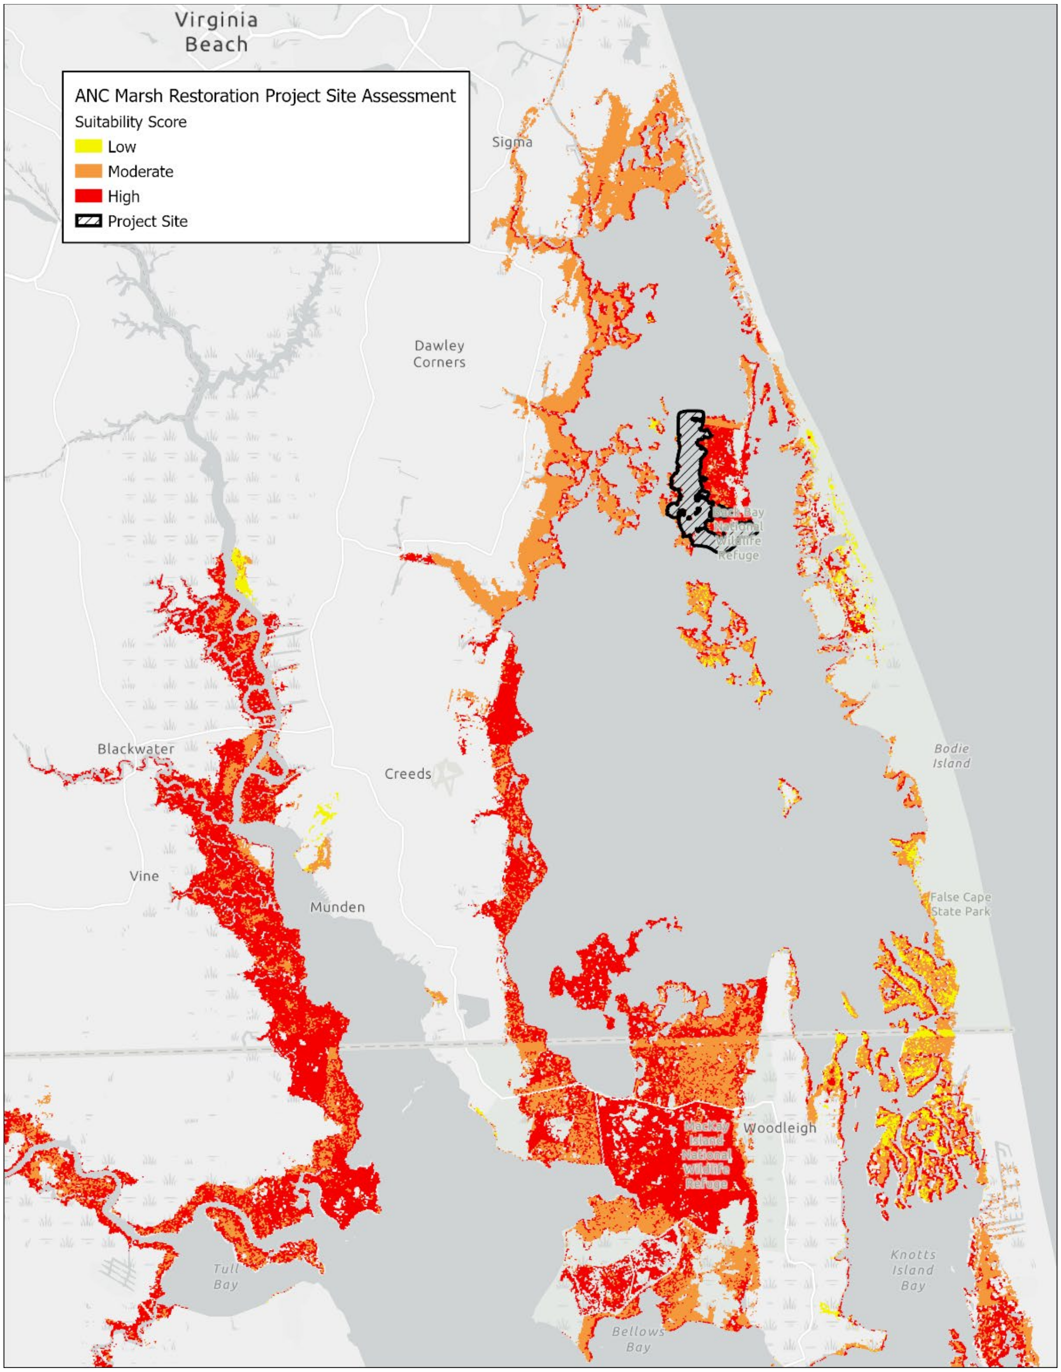
b. Project Map 2: Virginia CRMP Impact Assessment for Tidal Wetlands

The Virginia Coastal Resilience Web Explorer displays impacts on natural infrastructure based on the Virginia CRMP impact assessment. For 2080, portions of tidal wetlands within the project area have "High" and "Very High" impact levels, which indicates areas of tidal marsh that are anticipated to be lost through inundation causing conversion to open water.



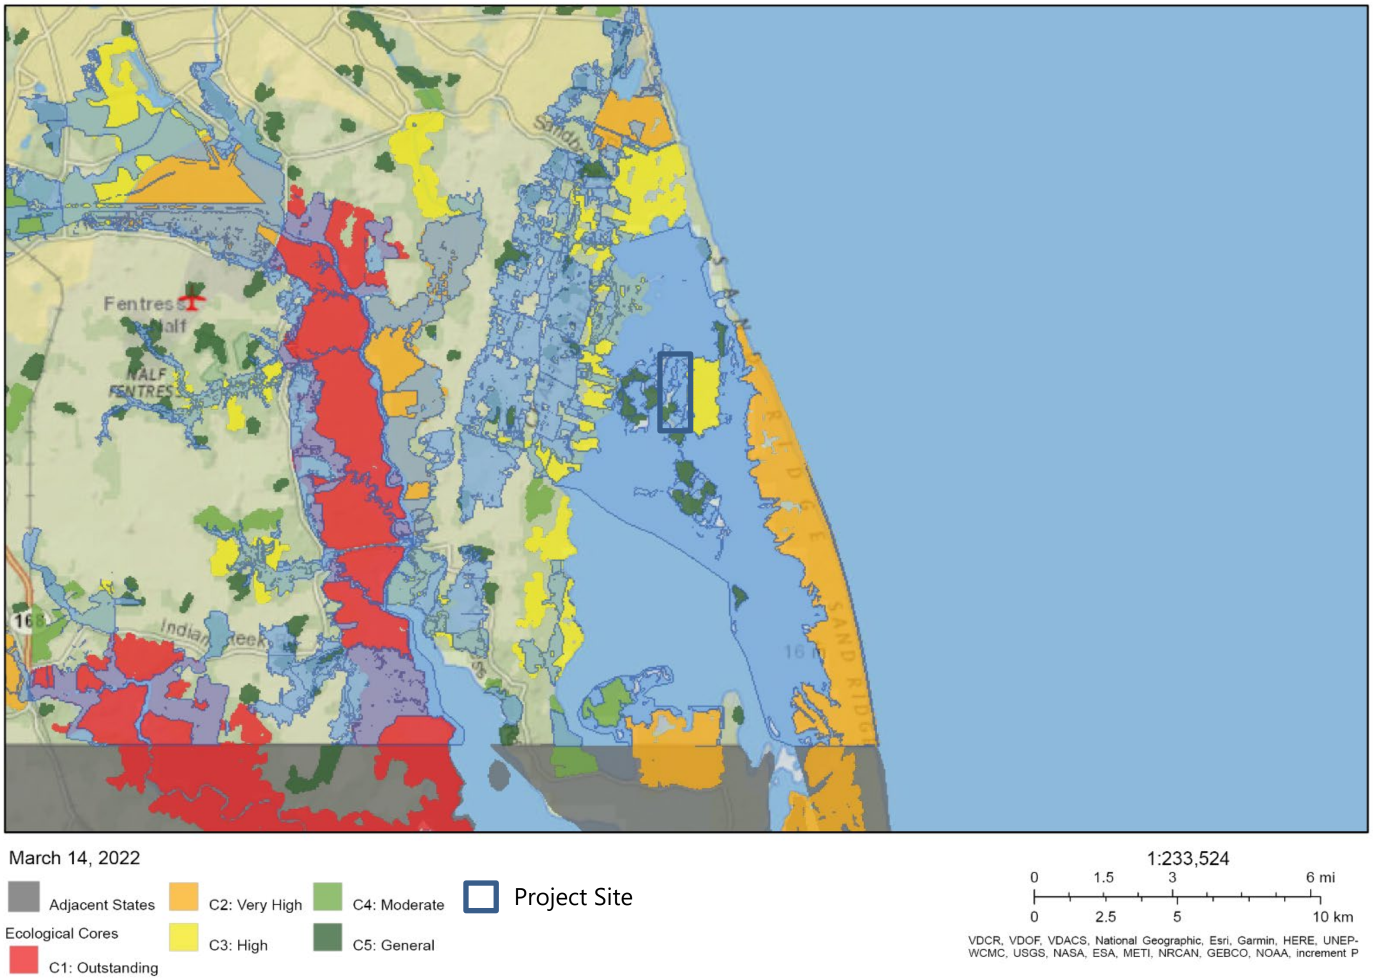
c. Project Map 3: Audubon North Carolina Marsh Restoration Project Site Assessment

Map showing marsh restoration priority areas based on analysis completed by the National Audubon Society. This assessment identified the project site as a high-priority area for restoration.



d. Project Map 4: Virginia Natural Heritage Data Explorer Ecological Cores and ConserveVirginia Data

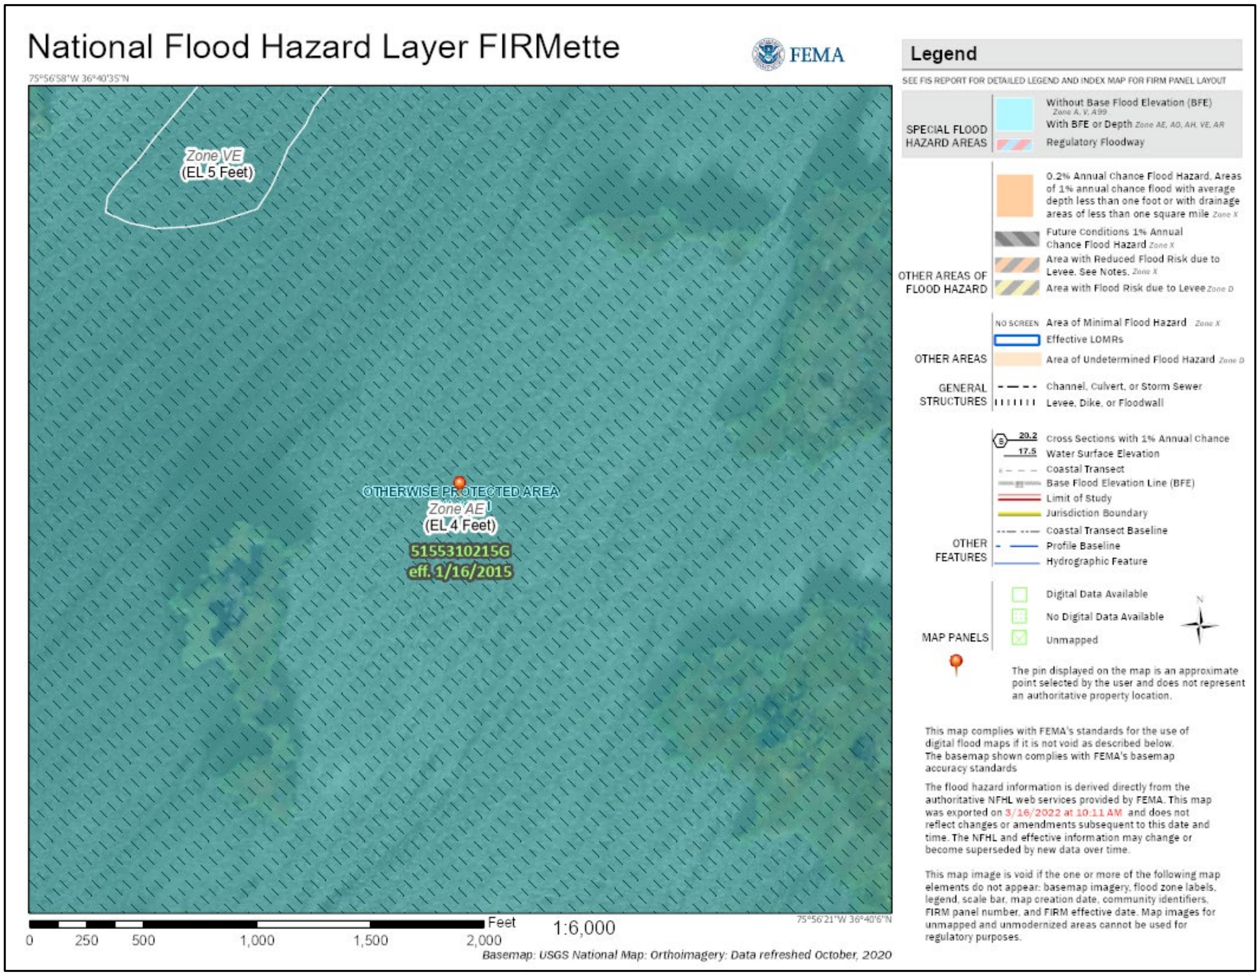
The Virginia Department of Conservation and Recreation Natural Heritage Data Explorer provides data from ConserveVirginia v3.0 and other data to support conservation planning. The following map displays Ecological Cores and the Floodplains and Flooding Resilience Category layer (blue polygon) from ConserveVirginia. The project area contains “High” (C3) and “General” (C5) Ecological Cores and is within the boundaries of the Floodplain and Flooding Resilience area.



e. Project Map 5: FIRMette of the Project Areas

The following maps provide an overview of the existing flood hazards for the project area, including the northern boundary (5A) and southern boundary (5B). Based on the City's current flood maps (effective January 16, 2015), the project site contains VE and AE flood zones and Open Water.

Map 5A – Northern Boundary



National Flood Hazard Layer FIRMette

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

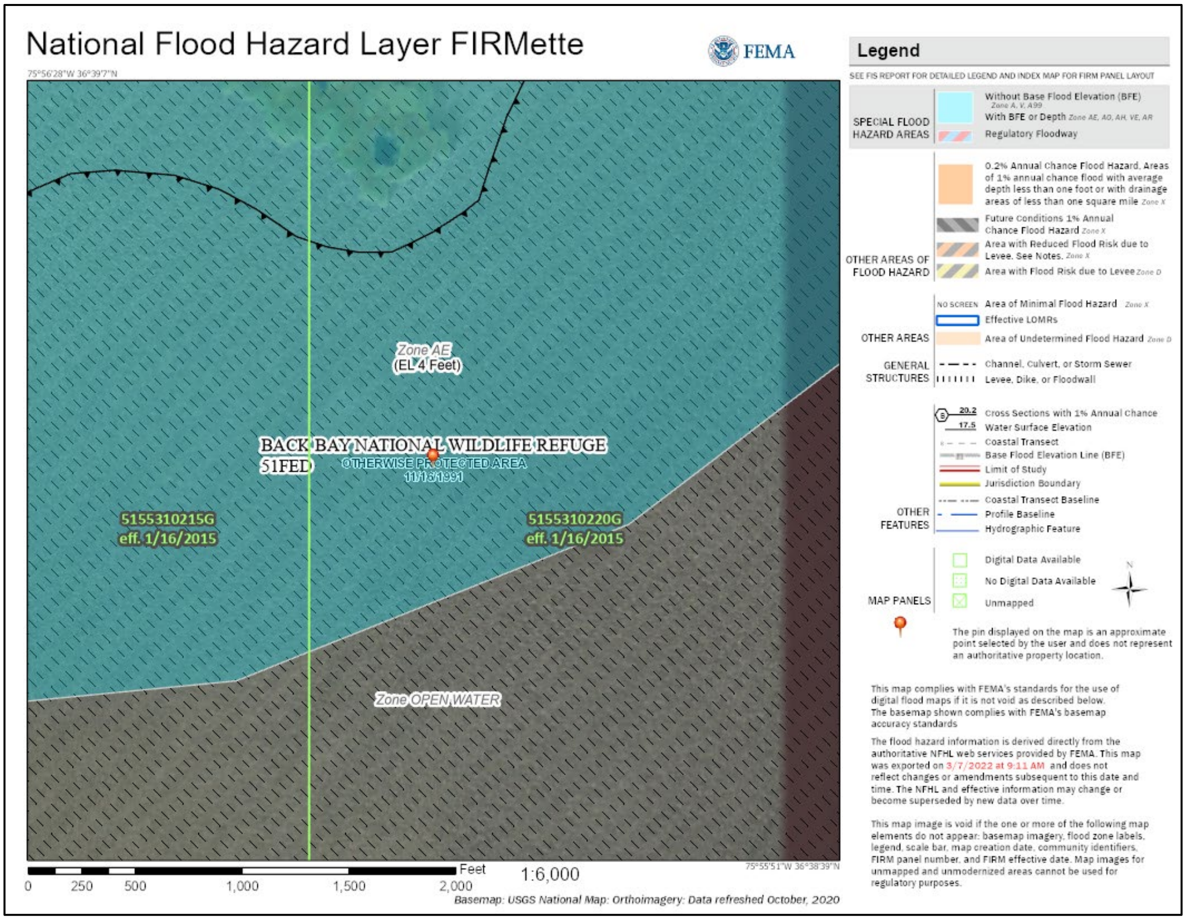
This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 3/16/2022 at 10:11 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Basemap: USGS National Map: Orthoimagery: Data refreshed October, 2020

Map 5B – Southern Boundary



National Flood Hazard Layer FIRMette

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

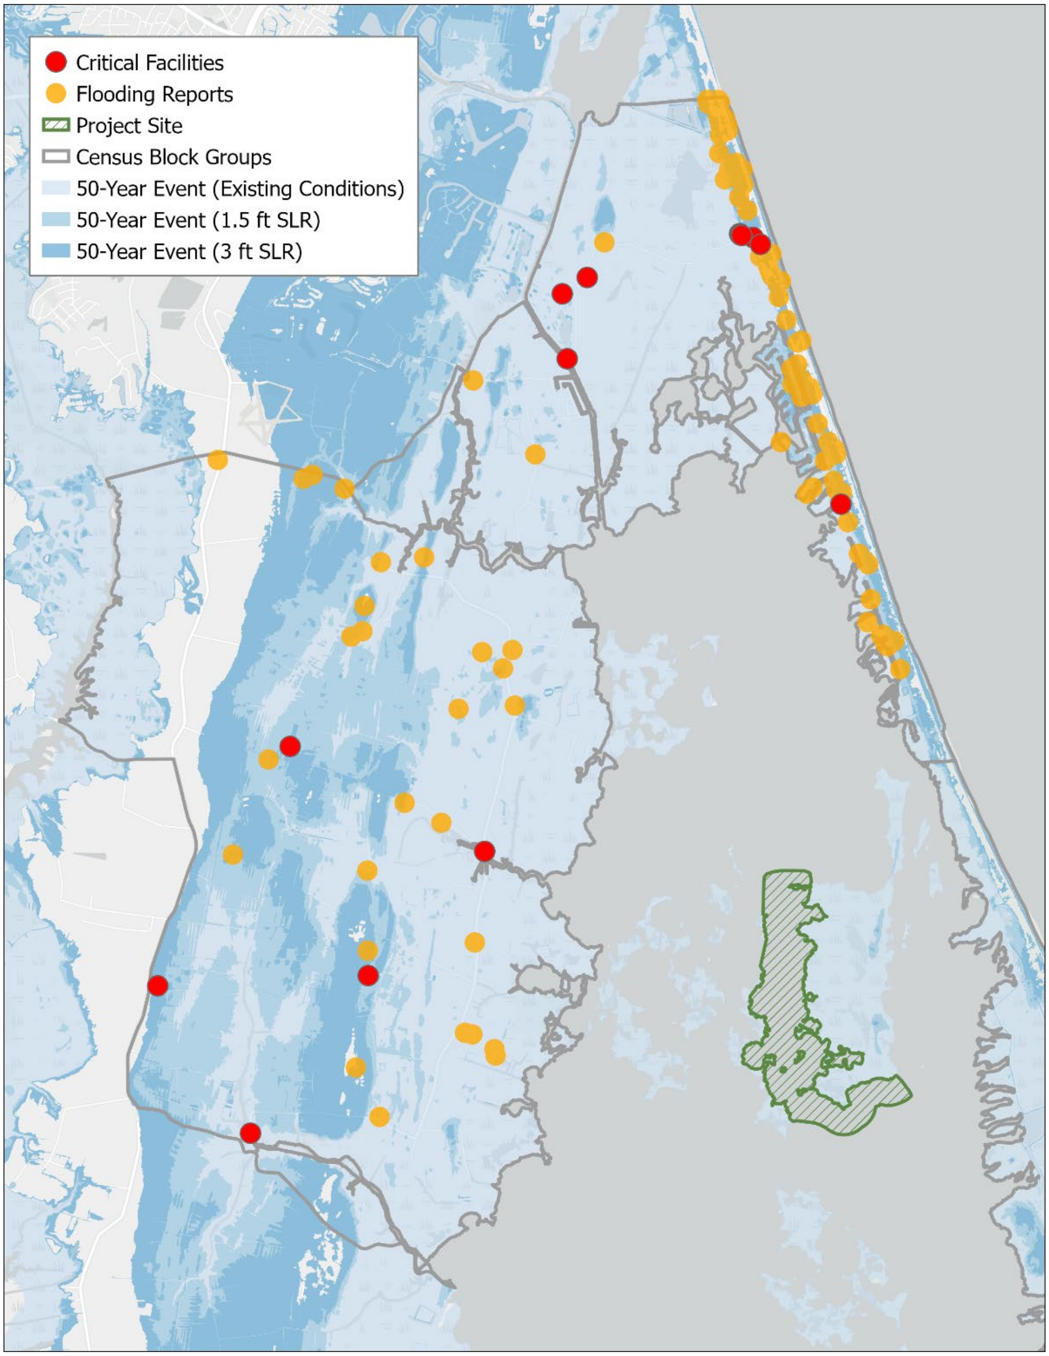
The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 3/7/2022 at 9:11 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Basemap: USGS National Map: Orthoimagery: Data refreshed October, 2020

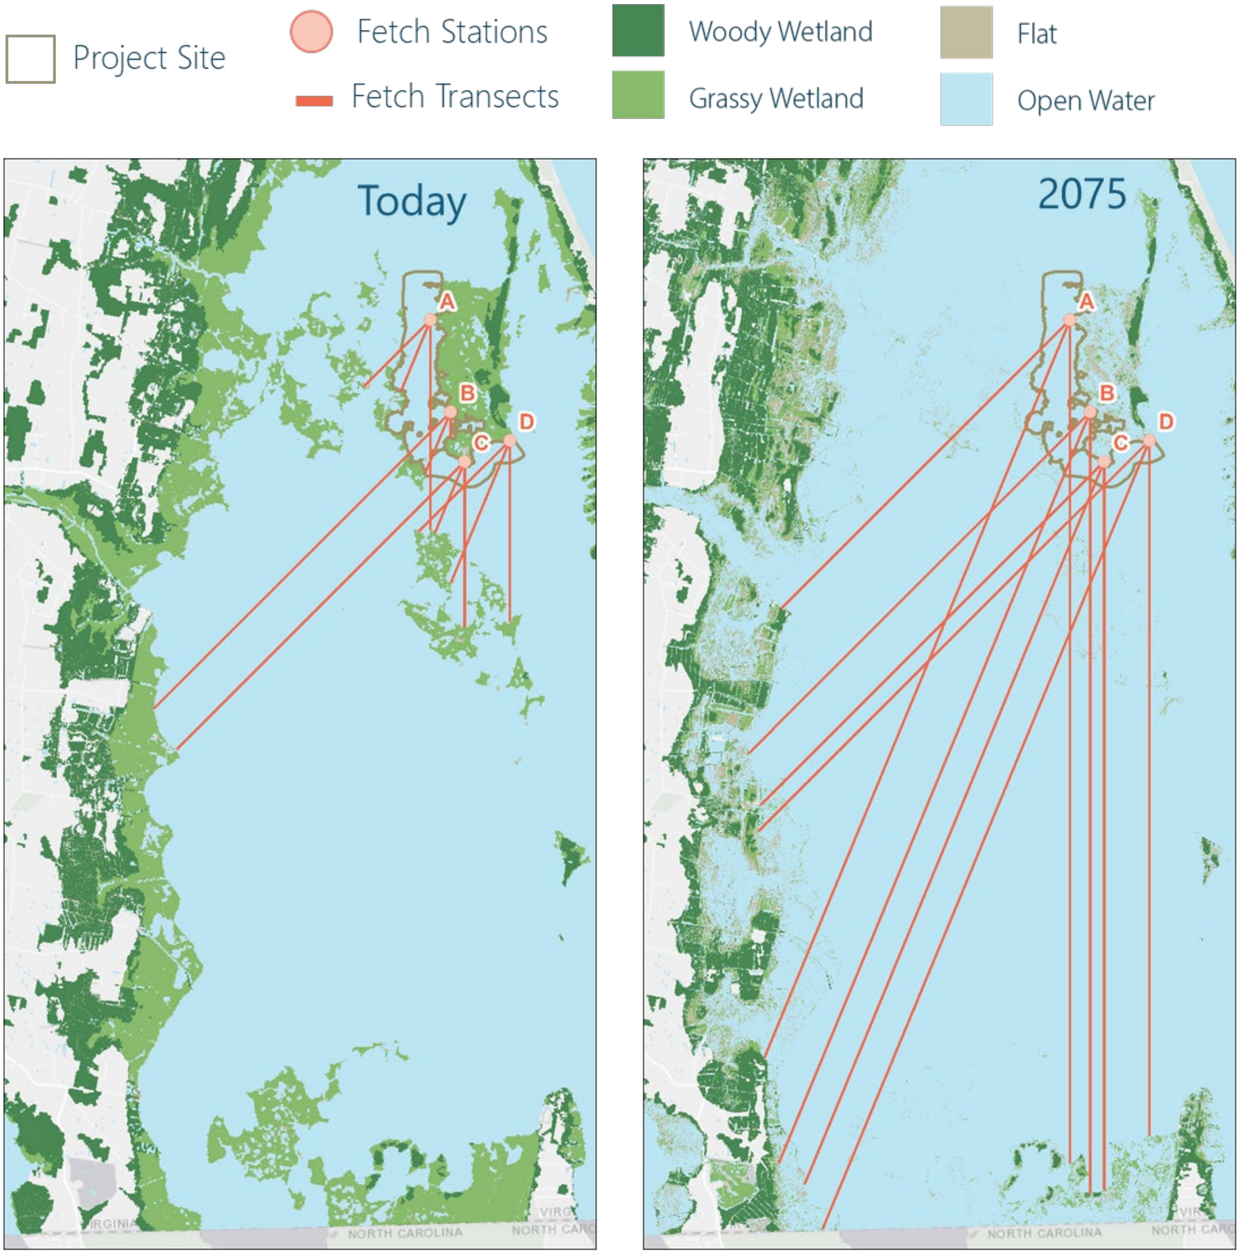
f. Project Map 6: Projected Flood Exposure within Project Areas

The following map highlights the potential flood exposure around the proposed project site during a 50-year storm event under three conditions: existing, 1.5 feet of sea level rise, and 3 feet of sea level rise. The map displays the locations of critical facilities and flood incidents reported by residents between 2001 and 2019 within the two census block groups near the project site. Critical facilities and flood incidences are relatively concentrated in the Sandbridge Resort Area.



g. Project Map 7: Wind Fetch Analysis of Proposed Project Area

The following map displays the transects used for the wind fetch analysis in the project area.



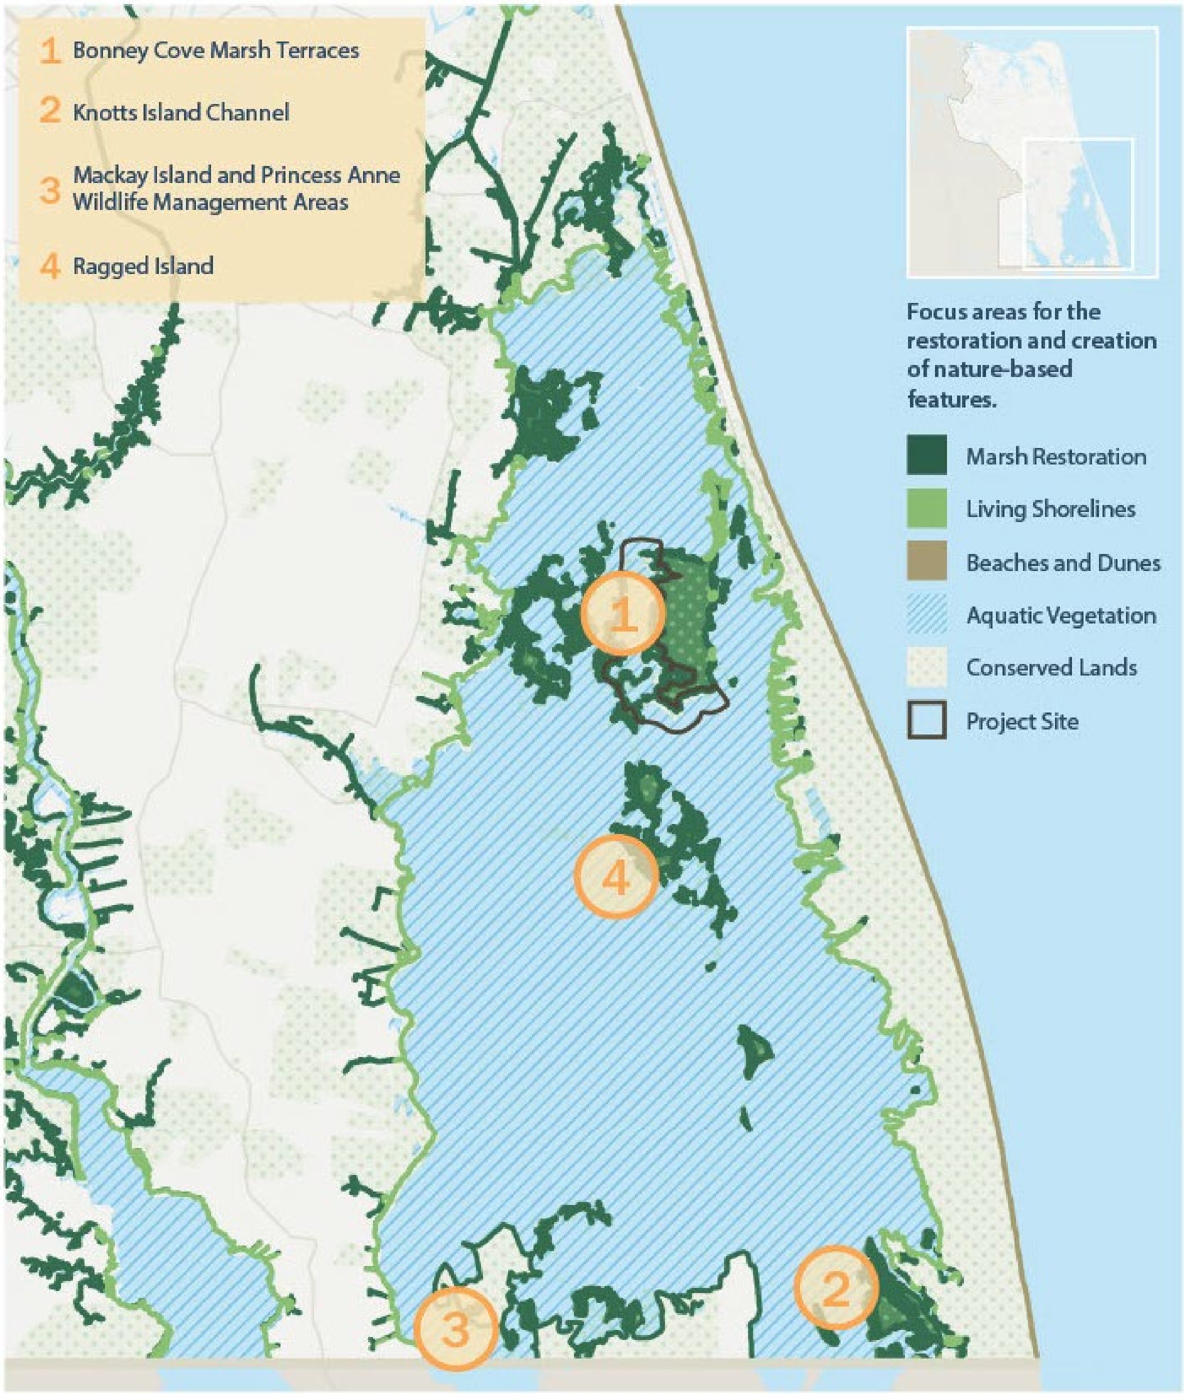
The following table displays specific values of fetch distances and classifications that correspond with the transects displayed in Map 7 above.

Table 8: Measurements of fetch transects referenced in Map 7.

Fetch Transect	Length, Miles (Today)	Classification	Length, Miles (3 feet SLR)	Classification
A-SW	0.9	Low	3.7	High
A-SSW	0.7	Low	7.3	Very High
A-S	1.9	Medium	7.7	Very High
B-SW	3.8	Medium	4.4	High
B-SSW	0.6	Low	7.4	Very High
B-S	0.2	Very Low	7.2	Very High
C-SW	3.7	Medium	4.4	High
C-SSW	0.7	Low	7.2	Very High
C-S	1.5	Medium	6.7	Very High
D-SW	1.2	Medium	5.1	Very High
D-SSW	1.4	Medium	7.8	Very High
D-S	1.7	Medium	6.4	Very High

h. Project Map 8: Preliminary Sequencing Restoration Plan

The City has outlined a preliminary sequencing plan for marsh island restoration projects in Back Bay to strategically close hydraulic pathways and address priority restoration areas. Some of these projects would require coordination with the State of North Carolina.



i. Project Map 9: Relationship to Other Projects

Marsh island restoration serves as a critical first line of defense of the multi-layered protection system in the Southern Rivers Watershed. The following map shows the structural adaptation projects proposed for the Southern Rivers Watershed, including the Muddy Creek Road and Sandbridge flood defense systems. The City's numerical modeling shows that, if implemented, there is potential for small increases in flooding outside of these structural protection systems.[12] This emphasizes the need for complimentary measures, including the marsh terrace project, land acquisition, and conservation efforts, to mitigate this residual risk.

Virginia Beach, VA 23452

RE: Virginia Beach Resilience Plan Second Submission - CFPF

Dear Ms. Utterback:

Thank you for the resubmission of the Sea Level Wise Adaptation Plan for City of Virginia Beach. After careful review and consideration, the Virginia Department of Conservation and Recreation has deemed the Plan complete and meets all the criteria outlined in the June 2021 Community Flood Preparedness Grant Manual. This approval will remain in effect for a period of three years, ending on July 31, 2024.

The following elements were evaluated as part of this review:

1. **Element 1: It is project-based with projects focused on flood control and resilience. DCR RESPONSE**

    a. Project-based: Four watersheds—each with a defined geographic area, analysis of community social and environmental characteristics, types of flooding, and a tailored flood resilience strategy with discrete projects identified.

Projects focused on flood control and resilience include:

Neighborhood	Flood Control Project
Elizabeth River	City-wide alignment, living shoreline, marsh restoration, land conservation
Lynnhaven	Chesapeake Bay alignment, Lesner Bridge Neighborhood alignment (East & West), beach & dune nourishment, ecological revetments, shellfish reef restoration, seagrass restoration
Oceanfront	Atlantic Oceanfront alignment, Rudee Heights alignment
Southern Rivers	West Neck Creek city-wide alignment, Muddy Creek Road city-wide alignment, Sandbridge city-wide alignment

**additional projects listed within the Sea Level Wise Adaptation Strategy.*

2. **Element 2: It incorporates nature-based infrastructure to the maximum extent possible. DCR RESPONSE**

600 East Main Street, 24th Floor | Richmond, Virginia 23219 | 804-786-6124

State Parks • Soil and Water Conservation • Outdoor Recreation Planning
Natural Heritage • Dam Safety and Floodplain Management • Land Conservation

   a. Nature-based infrastructure: Flood mitigation projects throughout the city incorporate nature-based solutions and were identified for maximum use within specific watersheds.

3. **Element 3: It includes considerations of all parts of a locality regardless of socioeconomics or race. DCR RESPONSE**
   a. All parts of a locality: Locality divided into four watersheds, covering the entirety of the jurisdictional boundary.
   b. Social vulnerability: Social implications of flood hazards and analysis of populations at-risk documented.
   c. Demographic Analysis: Demographic and Population Vulnerability Analysis conducted by Dewberry and incorporated into the Plan.

4. **Element 4: It includes coordination with other local and inter-jurisdictional projects, plans, and activities and has a clearly articulated timeline or phasing for plan implementation. DCR RESPONSE**
   a. Coordination with other projects, plans, and activities: Contains the planning processes and frameworks which outline local and regional plans used by the City and address resilience; and how they have been integrated for flood adaptation planning.
   b. Clearly articulated timeline or phasing for plan implementation: Program phases clearly articulated and described in detail—Impact assessment, Adaptation research, Strategy development, and Long-term implementation.

5. **Element 5: Is based on the best available science, and incorporates climate change, sea level rise, storm surge (where appropriate), and current flood maps.**
   a. Technically backed water-resources analysis, sea level rise projections, storm surge, and climate change incorporated into strategic approach.

VA DCR looks forward to working with you as you work to make Virginia Beach a more resilient community. If you have questions or need additional assistance, please contact us at cfpf@dcr.virginia.gov. Again, thank you for your interest in the Community Flood Preparedness Fund.

Sincerely,

Wendy Howard Cooper

INTER-OFFICE MEMORANDUM

DATE: March 30, 2022

TO: Patrick Duhaney, City Manager

FROM: Kaitlyn James, Budget and Management Services KJ

SUBJECT: **Virginia Community Flood Preparedness Fund Grant – Round III**

The Department of Public Works is requesting permission to submit two applications for the Virginia Community Flood Preparedness Fund Grant from the Virginia Department of Conservation and Recreation. The Virginia Community Flood Preparedness Fund was established in the 2020 session of the General Assembly. Money in this fund comes from the auction of carbon allowances through the Regional Greenhouse Gas Initiative. It was established to provide support to localities across Virginia to reduce the impacts of flooding, including flooding driven by climate change.

The first application is for the First Colonial Road and Oceana Boulevard Stormwater Improvements project in the amount of $1,837,875. This project will provide upgraded stormwater infrastructure to mitigate frequent flooding. First Colonial Road/Oceana Boulevard is a secondary evacuation route and provides one of the primary access roads to Naval Air Station (NAS) Oceana. This project does not require property acquisition since the project is located with the right-of-way or on City property. There is sufficient funding for the fifty percent local match for this grant in CIP 100601, “First Colonial and Oceana Boulevard.”

The second application is for $5,000,000 for a Back Bay Wetlands Restoration project to provide march terraces in Back Bay to promote wetland restoration and reduce frequent flooding. If awarded, the grant will require a local match of $24.1 million. There is sufficient funding within CIP 100551, “Stormwater Green Infrastructure,” which has appropriations to date of $40 million as a result of the bond referendum.

Budget & Management Services recommends this grant application for approval. Please indicate approval or disapproval below. The application due date is April 8, 2022.

RE: Community Flood Preparedness Fund – Marsh Terrace Creation, Back Bay

Dear Ms. Cooper:

The proposed project is located in both open water and a Federal Emergency Management Agency (FEMA) mapped Special Flood Hazard Area (SFHA). Hydraulic modeling analysis identified Bonney Cove as a location where marsh restoration has the potential to reduce the propagation of flood water through key pathways within Back Bay. This project aims to stabilize two critically eroding marsh islands that serve as a key flood pathway into northern Back Bay, promote the growth of aquatic vegetation, and provide flood risk reduction benefits to communities in the surrounding area. Within the two census block groups that would benefit from this project, there are 113 repetitive loss and severe repetitive loss properties.

If I can provide any further information or assistance, please call me at 757-385-4621, or e-mail me at wmcnamar@vbgov.com.

Sincerely,

Whitney McNamara

Whitney McNamara, CFM
Floodplain Administrator and CRS Coordinator

5. Copy of the Current Floodplain Ordinance

ORD-3685

AN ORDINANCE TO AMEND SECTIONS 1.1, 1.2, 1.3, 1.8, 2.1, 2.2, 2.3, 2.4, 2.8, 2.11, 3.1, 4.1, 4.2, 4.3, 4.4, 4.6, 4.8, 4.9, 4.10, 5.1, 6.1, AND 6.3 OF APPENDIX K, FLOODPLAIN ORDINANCE OF THE CITY CODE PERTAINING TO HOUSEKEEPING THE DELETION OF PUBLIC WORKS REQUIREMENTS AND THE ADDITION OF A COASTAL A ZONE AND A COASTAL HIGH HAZARD ZONE

Sections Amended: 1.1, 1.2, 1.3, 1.8, 2.1, 2.2, 2.3, 2.4, 2.8, 2.11, 3.1, 4.1, 4.2, 4.3, 4.4, 4.6, 4.8, 4.9, 4.10, 5.1, 6.1, and 6.3 of Appendix K, Floodplain Ordinance

WHEREAS, the public necessity, convenience, general welfare and good zoning practice so require;

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF VIRGINIA BEACH, VIRGINIA:

That Sections 1.1, 1.2, 1.3, 1.8, 2.1, 2.2, 2.3, 2.4, 2.8, 2.11, 3.1, 4.1, 4.2, 4.3, 4.4, 4.6, 4.8, 4.9, 4.10, 5.1, 6.1, and 6.3 of Appendix K, Floodplain Ordinance is hereby amended and reordained to read as follows:

APPENDIX K FLOODPLAIN ORDINANCE

ARTICLE I. GENERAL PROVISIONS

Sec. 1.1. Statutory authorization and purpose.

A. This ordinance is adopted pursuant to the authority granted to localities by Code of Virginia § ~~10.1-600 et seq~~ 15.2-984.

B. The city council finds the purpose of these provisions is to prevent the loss of life and property, the creation of health and safety hazards, the disruption of commerce and governmental services, the extraordinary and unnecessary expenditure of public funds for flood protection and relief, and the impairment of the tax base by:

1. Regulating uses, activities, and development that, alone or in combination with other existing or future uses, activities, and development, will cause unacceptable increases in flood heights, velocities, and frequencies;

2. Restricting or prohibiting certain uses, activities, and development from locating within districts subject to flooding;
3. Requiring all uses, activities, and developments that do occur in flood-prone districts be protected or flood-proofed against flooding and flood damage;

4. Protecting individuals from buying land and structures that are unsuited for intended purposes because of flood hazards; and

5. Acknowledging that the tide data over the last one hundred (100) years shows that Virginia Beach is facing an increased danger of flooding caused by both sea level rise and subsidence and has adopted the Sea Level Wise Adaptation Report as part of the Comprehensive Plan.

Sec. 1.2. Applicability.

These provisions shall apply to all privately and publicly owned lands within the jurisdiction of the City of Virginia Beach and identified as areas ~~of special flood hazard~~ at risk of flooding by the City of Virginia Beach or shown ~~according to~~ on the Flood Insurance Rate Map (FIRM) or included on the flood insurance study (FIS) that ~~is~~ are provided to the City of Virginia Beach by the Federal Emergency Management Agency (FEMA) and dated January 16, 2015 ~~or identified as floodplains subject to special restrictions in section 4.10 of this ordinance~~.

Sec. 1.3. Definitions.

. . . .

City manager. The City Manager of the City of Virginia Beach, or his designees.

Design Flood Elevation (regulatory flood protection elevation). The base flood elevation plus the freeboard required by this ordinance.

. . . .

Recreational vehicle. A vehicle that is:

1. Built on a single chassis;
2. Four hundred (400) square feet or less when measured at the largest horizontal projection;
3. Designed to be self-propelled or permanently towable by a light duty truck; and
4. Designed primarily not for use as a permanent dwelling but as temporary living quarters for recreational camping, travel, or seasonal use.

~~*Regulatory flood protection elevation (design flood elevation)*. The base flood elevation plus the freeboard required by this ordinance.~~

. . . .

Sec. 1.8. Penalty for violations.

Any person who fails to comply with any of the requirements or provisions of this ordinance or directions of the ~~d~~Directors of ~~p~~Planning ~~or public works~~ or any authorized employee of the City of Virginia Beach shall be guilty of the appropriate violation and subject to the penalties therefore. Any violation of the provision of this ordinance shall be punishable by a fine of not more than one hundred dollars ($100.00). Each person shall be deemed guilty of a separate offense for each and every day or portion thereof during which any violation of any of the provisions of this ordinance is committed.

The Virginia Uniform Statewide Building Code (VA USBC) addresses building code violations and the associated penalties in ~~section 104 and section 115~~ VA USBC § 104 and § 115. Violations and associated penalties of the Zoning Ordinance for the City of Virginia Beach are addressed in § 104 of the Zoning Ordinance.

In addition to the above penalties, all other actions are hereby reserved, including an action in equity for the proper enforcement of this ordinance. The imposition of a fine or penalty for any violation of, or noncompliance with, this ordinance shall not excuse the violation or noncompliance or permit it to continue, and all such persons shall be required to correct or remedy such violations within a reasonable time. Any structure constructed, reconstructed, enlarged, altered, or relocated in noncompliance with this ordinance may be declared by the City of Virginia Beach to be a public nuisance and abatable as such. Flood insurance may be withheld from structures constructed in violation of this ordinance.

ARTICLE II. ADMINISTRATION

Sec. 2.1. Designation of the floodplain administrator.

The City Manager of the City of Virginia Beach is hereby appointed the floodplain administrator to administer and implement this ordinance. The floodplain administrator has delegated the duties and responsibilities set forth in this ordinance to the ~~departments of public works and planning, as specified below~~ Department of Planning and Community Development.

Sec. 2.2. Duties and responsibilities of the ~~department of public works~~ floodplain administrator or his designee.

The duties and responsibilities of the ~~department of public works~~ floodplain administrator of his designee shall include but are not limited to:

A. Interpreting floodplain boundaries and providing available base flood elevation and flood hazard information;

B. Verifying that applicants proposing an alteration of a watercourse have notified adjacent communities, the department of conservation and recreation (division of dam safety and floodplain management), and other appropriate agencies (Virginia Department of Environmental Quality (VADEQ), United States Army Corps of Engineers (USACE), etc.) and have submitted copies of such notifications to FEMA;

C. Advising applicants for new construction or substantial improvement of structures that are located within an area of the coastal barrier resources system established by the Coastal Barrier Resources Act that Federal flood insurance is not available on such structures; areas subject to this limitation are shown on FIRMs as coastal barrier resource system areas or otherwise protected areas;

D. Submitting to FEMA, or requiring applicants to submit to FEMA, data and information necessary to maintain FIRMs, including hydrologic and hydraulic engineering analyses prepared by or for the city, within six (6) months after such data and information becomes available if the analyses indicate changes in base flood elevations;

E. Maintaining and permanently keeping records that are necessary for the administration of these regulations, including:

1. ~~flood~~ Flood insurance studies, FIRMs (including historic studies and maps and current effective studies and maps) and letters of map change; and

2. Documentation supporting issuance and denial of permits, Elevation Certificates, documentation of the elevation (in relation to the datum on the FIRM) to which structures have been floodproofed, inspection records, other required design certifications, variances, and records of enforcement actions taken to correct violations of these regulations.

F. Notifying FEMA when the corporate boundaries of the City of Virginia Beach have been modified and:

    1. Providing a map that clearly delineates the new corporate boundaries or the new area for which the authority to regulate pursuant to this ordinance has either been assumed or relinquished through annexation; and

    2. If the FIRM for any annexed area includes SFHAs that have flood zones with regulatory requirements that are not set forth in this

ordinance, prepare amendments to this ordinance to adopt the FIRM and appropriate requirements, and submit the amendments to the city council for adoption; such adoption shall take place at the same time as or prior to the date of annexation and a copy of the amended ordinance shall be provided to the department of conservation and recreation (division of dam safety and floodplain management) and FEMA.

G. Upon the request of FEMA, completing and submitting a report concerning participation in the NFIP, which may request information regarding the number of buildings in the SFHA, the number of permits issued for development in the SFHA, and the number of variances issued for development in the SFHA.

H. Reviewing applications for permits to determine whether proposed activities will be located in the SFHA;

I. Reviewing applications to determine whether proposed activities will be reasonably safe from flooding and requiring new construction and substantial improvements to meet the requirements of this ordinance;

J. Reviewing applications to determine whether all necessary permits have been obtained from the federal, state, or local agencies from which prior or concurrent approval is required; in particular, permits from state agencies for any construction, reconstruction, repair, or alteration of a dam, reservoir, or waterway obstruction (including bridges, culverts, structures), any alteration of a watercourse, or any change of the course, current, or cross section of a stream or body of water, including any change to the SFHAs of free-flowing non-tidal waters of the state;

K. Approving applications and issuing permits to develop in flood hazard areas if the provisions of this ordinance have been met, or disapproving applications if the provisions of this ordinance have not been met;

L. Granting administrative variances pursuant to section 6.1 of this ordinance;

M. Inspecting, or causing to be inspected, buildings, structures, and other development for which permits have been issued to determine compliance with this ordinance or to determine if non-compliance has occurred or violations have been committed;

N. Reviewing elevation certificates and requiring incomplete or deficient certificates to be corrected;

O. Maintaining and permanently keeping documentation supporting the issuance and denial of permits, elevation certificates, documentation of the elevation (in relation to the datum on the FIRM) to which structures have been flood proofed, and other required design certifications, variances, and records of enforcement actions taken to correct violations of this ordinance;

P. Enforcing the provisions of this ordinance, investigating violations, issuing notices of violations or stop work orders, and requiring permit holders to take corrective action;

Q. Advising the city council regarding the intent of this ordinance and, for each application for a variance, preparing a staff report and recommendation; and

R. Administering the requirements related to proposed work on existing buildings:

1. Making determinations as to whether buildings and structures that are located in flood hazard areas and that are damaged by any cause have been substantially damaged; and

2. Making reasonable efforts to notify owners of substantially damaged structures of the need to obtain a permit to repair, rehabilitate, or reconstruct, and prohibit the non-compliant repair of substantially damaged buildings except for temporary emergency protective measures necessary to secure a property or stabilize a building or structure to prevent additional damage.

S. Undertaking, as determined appropriate by the floodplain administrator due to the circumstances, other actions that may include but are not limited to: issuing press releases, public service announcements, and other public information materials related to permit requests and repair of damaged structures; coordinating with other federal, state, and local agencies to assist with substantial damage determinations; providing owners of damaged structures information related to the proper repair of damaged structures in SFHAs; and assisting property owners with documentation necessary to file claims for increased cost of compliance coverage under National Flood Insurance Program (NFIP) flood insurance policies; and

T. It is the duty of the city floodplain administrator to take into account flood, mudslide, and flood-related erosion hazards, to the extent that they are known, in all official actions relating to land management and use throughout the entire jurisdictional area of the city, whether or not those hazards have been specifically delineated geographically (e.g., via mapping or surveying).

~~Sec. 2.3. Duties and responsibilities of the department of planning.~~ Reserved.

~~The duties and responsibilities of the department of planning shall include but are not limited to:~~

~~A.~~ ~~Reviewing applications for permits to determine whether proposed activities will be located in the SFHA;~~

~~B.~~ ~~Reviewing applications to determine whether proposed activities will be reasonably safe from flooding and requiring new construction and substantial improvements to meet the requirements of this ordinance;~~

~~C.~~ ~~Reviewing applications to determine whether all necessary permits have been obtained from the federal, state, or local agencies from which prior or concurrent approval is required; in particular, permits from state agencies for any construction, reconstruction, repair, or alteration of a dam, reservoir, or waterway obstruction (including bridges, culverts, structures), any alteration of a watercourse, or any change of the course, current, or cross section of a stream or body of water, including any change to the SFHAs of free-flowing non-tidal waters of the state;~~

~~D.~~ ~~Approving applications and issuing permits to develop in flood hazard areas if the provisions of this ordinance have been met, or disapproving applications if the provisions of this ordinance have not been met;~~

~~E.~~ ~~Granting administrative variances pursuant to section 6.1 of this ordinance;~~

~~F.~~ ~~Inspecting, or causing to be inspected, buildings, structures, and other development for which permits have been issued to determine compliance with this ordinance or to determine if non-compliance has occurred or violations have been committed;~~

~~G.~~ ~~Reviewing elevation certificates and requiring incomplete or deficient certificates to be corrected;~~

~~H.~~ ~~Maintaining and permanently keeping documentation supporting the issuance and denial of permits, elevation certificates, documentation of the elevation (in relation to the datum on the FIRM) to which structures have been flood proofed, and other required design certifications, variances, and records of enforcement actions taken to correct violations of this ordinance;~~

~~I.~~ ~~Enforcing the provisions of this ordinance, investigating violations, issuing notices of violations or stop work orders, and requiring permit holders to take corrective action;~~

~~J.~~ ~~Advising the city council regarding the intent of this ordinance and, for each application for a variance, preparing a staff report and recommendation; and~~

~~K.~~ ~~Administering the requirements related to proposed work on existing buildings:~~

  ~~1.~~ ~~Making determinations as to whether buildings and structures that are located in flood hazard areas and that are damaged by any cause have been substantially damaged; and~~
  ~~2.~~ ~~Making reasonable efforts to notify owners of substantially damaged structures of the need to obtain a permit to repair, rehabilitate, or reconstruct, and prohibit the non-compliant repair of substantially damaged buildings except for temporary emergency protective measures necessary to secure a property or stabilize a building or structure to prevent additional damage.~~

~~Sec. 2.4. Shared duties and responsibilities.~~ Reserved.

~~The duties and responsibilities shared by the departments of public works and Planning shall include but are not limited to:~~

~~A.~~ ~~Undertaking, as determined appropriate by the floodplain administrator due to the circumstances, other actions that may include but are not limited to: issuing press releases, public service announcements, and other public information materials related to permit requests and repair of damaged structures; coordinating with other federal, state, and local agencies to assist with substantial damage determinations; providing owners of damaged structures information related to the proper repair of damaged structures in SFHAs; and assisting property owners with documentation necessary to file claims for increased cost of compliance coverage under National Flood Insurance Program (NFIP) flood insurance policies; and~~

~~B.~~ ~~It is the duty of the city floodplain administrator to take into account flood, mudslide, and flood-related erosion hazards, to the extent that they are known, in all official actions relating to land management and use throughout the entire jurisdictional area of the city, whether or not those hazards have been specifically delineated geographically (e.g., via mapping or surveying).~~

. . . .

Sec. 2.8. Interpretation of district boundaries.

Initial interpretations of the boundaries of the floodplain districts shall be made by the floodplain administrator. Should a dispute arise concerning the boundaries of any of the districts~~, the city council shall make the necessary determination. The person questioning or contesting the location of the district boundary shall be given a reasonable opportunity to present his case to the city council and to submit his own technical evidence if he so desires~~ a surveyor shall provide either an elevation certificate or recent survey showing topographic elevations and delineating the Special Flood Hazard Area.

. . . .

Sec. 2.11. Appeals to decisions made by the floodplain administrator.

It is further provided that any decision of the floodplain administrator or his designee may be modified, reversed, or affirmed by the city council upon appeal by any aggrieved party to such decision, if such appeal is filed with the floodplain administrator within thirty (30) days of such decision through the application for a Floodplain Variance outlined in Section VI of this ordinance.

ARTICLE III. ESTABLISHMENT OF FLOODPLAIN DISTRICTS

Sec. 3.1. Description of floodplain districts.

A. Special flood hazard areas (SFHA). The SFHAs shall include land in the floodplain subject to a one (1) percent or greater chance of being flooded in any given year. The basis for the delineation of these districts shall be the FIS and the FIRM for the City of Virginia Beach prepared by FEMA, Federal Insurance Administration, dated January 16, 2015, and any subsequent revisions or amendments thereto.

The boundaries of the SFHAs are established as shown on the FIRM, which is declared to be a part of this ordinance and shall be kept on file at the City of Virginia Beach Department of ~~Public Works~~ Planning and Community Development, and include the following districts:

1. The Floodway District is in an AE Zone and is delineated, for the purposes of this ordinance, using the criterion that certain areas within the floodplain must be capable of carrying the waters of the one (1) percent annual chance flood without increasing the water surface elevation of that flood more than one (1) foot at any point. The areas included in this district are specifically defined in Table 7 of the above-referenced FIS and shown on the accompanying FIRM.

2. The AE or AH Zones on the FIRM accompanying the FIS shall be those areas for which one (1) percent annual chance flood elevations have been provided and the floodway has not been delineated.

3. The A Zone on the FIRM accompanying the FIS shall be those areas for which no detailed flood profiles or elevations are provided, but the one (1) percent annual chance floodplain boundary has been approximated.

4. The AO Zone on the FIRM accompanying the FIS shall be those areas of shallow flooding identified as AO on the FIRM.

5. ~~Reserved.~~ The Coastal A Zone on the FIRM accompanying the FIS shall be those areas labeled as AE and are located seaward of the limit of moderate wave action (LiMWA) line.

6. The VE or V Zones on FIRMs accompanying the FIS shall be those areas that are known as coastal high hazard areas, extending from offshore to the inland limit of a primary frontal dune along an open coast and any other area subject to high velocity wave action from storm or seismic sources.

B. ~~Floodplain subject to special restrictions~~ *Local Flood Hazard Areas*. The City of Virginia Beach may identify and regulate local flood hazard or ponding areas that are not delineated on the FIRM. These areas are ~~identified in section 4.10 and may be delineated on a map using best available topographic data and locally derived information such as flood of record, historic high water marks, or approximate study methodologies~~ identified as follows:~~.~~

a. *Other areas of flood risk*. The X and the X(Shaded) Zone on the FIRM where the City of Virginia Beach Stormwater Master Plan has identified areas, outside SFHAs delineated on the FIRM, that area susceptible to flooding. The most recent updated version of the modeling shall be used to identify areas that are likely to experience flooding.

b. *Floodplain Subject to Special Restrictions*. The Floodplain Subject to Special Restrictions is identified in section 4.10 and includes areas in the southern part of the city which are characterized by wind tides, low topography, and poorly draining soils.

ARTICLE IV. FLOODPLAIN DISTRICT PROVISIONS

Sec. 4.1. Permit and application requirements.

. . . .

B. Site plans and permit applications. All applications for development within any floodplain district and all building permits issued within ~~the~~ any floodplain district shall incorporate the following information:

1. For any addition, conversion of any non-habitable space to habitable space, or the construction or installation of a new accessory structure that requires a building permit.

   a. A physical survey, performed after the effective date of the FIRM that:

      i. accurately depicts current improvements on the property;
      ii. provides a flood zone determination and BFE or flood depth at the stie; and
      iii. delineates the location of the flood zones on the property.

   b. For structures located in the SFHA delineated on the FIRM, a current elevation certificate sealed by a licensed design professional.

2. For new construction and any substantial improvement of the principal structure:

   a. a proposed site plan sealed by a registered design professional that provides:

      ~~1~~i. The elevation of the base flood at the site;

      ~~2~~ii. The elevation of the lowest floor (including basement) or, in V Zones, the lowest horizontal structural member;

      ~~3~~iii. For structures to be flood-proofed (non-residential only), the elevation to which the structure will be flood-proofed; and

      4iv. Topographic information showing existing and proposed ground elevations.

Sec. 4.2. General standards.

. . . .

5. Electrical, heating, ventilation, plumbing, air conditioning equipment, and other service facilities, including duct work, shall be designed and/or ~~located so as to prevent water from entering or accumulating within the components during conditions of flooding~~ or above the design flood elevation.

6. New and replacement water supply systems shall be designed to minimize or eliminate infiltration of flood waters into the system.

7. New and replacement sanitary sewage systems shall be designed to minimize or eliminate infiltration of flood waters into the systems and discharges from the systems into flood waters.

8. On-site waste disposal systems shall be located and constructed to avoid impairment to them or contamination from them during flooding.

9. No use shall be permitted if such use will increase the amounts of potentially damaging materials, including those likely to be injurious to health, that might be transported in floods.

10. For properties located in SFHAs delineated on the FIRM, an elevation certificate and, if applicable, a flood-proofing certificate shall be provided to the Floodplain Administrator prior to any foundation inspection, final inspections, and the issuance of any certificates of occupancy, in order to assure compliance with these floodplain regulations.

11. Prior to any proposed alteration or relocation of any channels or of any watercourse or stream within the city, a permit shall be obtained from the USACE, VADEQ, the Virginia Marine Resources Commission, and the Wetlands Board through the joint permit application process. Furthermore, notification of the proposal shall be given by the applicant to all affected adjacent jurisdictions, the department of conservation and recreation (division of dam safety and floodplain management), other required agencies, and FEMA.

12. The flood carrying capacity within an altered or relocated portion of any watercourse shall be maintained.

~~B.~~ ~~In all SFHAs, the following additional provisions shall apply:~~

~~1.~~ ~~Prior to any proposed alteration or relocation of any channels or of any watercourse or stream, within the city a permit shall be obtained from the USACE, VADEQ, the Virginia Marine Resources Commission, and the Wetlands Board through the joint permit application process. Furthermore, notification of the proposal shall be given by the applicant to all affected adjacent jurisdictions, the department of conservation and recreation (division of dam safety and floodplain management), other required agencies, and FEMA.~~

~~2.~~ ~~The flood carrying capacity within an altered or relocated portion of any watercourse shall be maintained.~~

~~3. Sand dunes, barrier beaches, and other natural protective barriers shall remain intact to provide protection against wind, waves, and erosion drainage. Any person who desires to use or alter any coastal primary sand dune, other than for the purpose of conducting the activities specified in section 1602 of the Zoning Ordinance of the City of Virginia Beach, shall first obtain a permit from the USACE, VADEQ, the Virginia Marine Resources Commission, and the Wetlands Board through the joint permit application process.~~

Sec. 4.3. Elevation and construction requirements.

In all ~~SFHAs where base flood elevations have been provided in the FIS or generated by a licensed professional in accordance with section 4.6 of this ordinance~~ floodplain districts, with the exception of Coastal A and Coastal High Hazard (VE) zones, the following provisions shall apply:

A. Residential construction requirements. ~~New construction or substantial improvement of any residential structure or manufactured home in Zones AE, AH, and A with detailed base flood elevations shall have the lowest floor, including basement, elevated to a minimum of two (2) feet above the base flood level.~~ The lowest flood, including basement, shall be set to the higher of the following:

i. A minimum of two (2) feet above the base flood elevation established on the most recent FIRM or by the most recent FIS or,

ii. A minimum of one (1) foot above the 100-year HGL elevation measured at the nearest existing or proposed public drainage structure or BMP, in the City Stormwater Master Plan.

B. Non-residential construction requirements. New construction or substantial improvement of any commercial, industrial, or non-residential building or manufactured home shall have the lowest floor, including basement, elevated as ~~minimum of two (2) feet above the base flood level~~ established in Section 4.3 A of this ordinance. Buildings ~~located in AE or AH Zones~~ may be flood-proofed in lieu of being elevated provided that all areas of the building components below the ~~elevation corresponding to the base flood elevation plus a minimum of two (2) feet freeboard~~ design flood elevation are watertight with walls substantially impermeable to the passage of water, and use structural components having the capability of resisting hydrostatic and hydrodynamic loads and the effect of buoyancy. A professional engineer or architect licensed by the Commonwealth of Virginia shall certify that the standards of this subsection are satisfied. Such certification, including the specific elevation (in relation to NAVD88) to which such structures are flood proofed, shall be maintained by the building official.

C. ~~Space below the lowest floor requirements. In Zones A, AE, AH, and AO,~~ ~~f~~Fully enclosed areas of new construction or substantially improved existing structures that are below the ~~regulatory~~ design flood protection elevation shall:

1. Not be designed or used for human habitation, but shall only be used for parking of vehicles, building access, or limited storage of maintenance equipment used in connection with the premises. Access to the enclosed area shall be the minimum necessary to allow for parking of vehicles (garage door), limited storage of maintenance equipment (standard exterior door), or entry to the living area (stairway or elevator).

2. Be constructed entirely of flood resistant materials below the ~~regulatory~~ design flood ~~protection~~ elevation.

3. Space below the lowest floor of SFHAs delineated on the FIRM shall ~~I~~include measures to automatically equalize hydrostatic flood forces on walls by allowing for the entry and exit of floodwaters. To meet this requirement, the openings shall either be certified by a professional engineer or architect licensed by the Commonwealth of Virginia or meet or exceed the following minimum design criteria:

. . . .

Sec. 4.4. Floodway requirements.

. . . .

B. The placement of new or replacement manufactured homes (mobile homes) is prohibited.

~~C.~~ ~~The following uses and structures may be permitted in the floodway district, subject to the requirements of articles III, IV, V, and VI of this ordinance:~~

~~1.~~ ~~Public and private outdoor recreational facilities;~~

~~2.~~ ~~Agricultural uses, including farming, grazing, and the raising of poultry or livestock; provided, that poultry or livestock shall not be housed within five hundred (500) feet of any residential, apartment, or hotel district;~~

~~3.~~ ~~Open uses, such as public and private roadways, off street parking, or loading and unloading areas related to uses in adjoining districts;~~

~~4.~~ ~~Commercial mining, soil removal, and sand pits subject to regulations applicable to extractive industries as set forth in the conditional use provisions of the Zoning Ordinance of the City of Virginia Beach;~~

~~5.~~ ~~Public improvements, such as dams, levees and channel improvements, and utilities installations and substations, including temporary storage of materials, except flammable, toxic or noxious materials, and temporary location of maintenance installations; and~~

~~6.~~ ~~Uses and structures customarily accessory and clearly incidental and subordinate to uses listed above, including in connection with agricultural uses; roadside stands for the sale of agricultural products produced on the premises; provided that:~~

  ~~a.~~ ~~Only one (1) such stand shall be permitted per lot;~~

  ~~b.~~ ~~No such stand shall exceed five hundred (500) square feet in floor area; and~~

  ~~c.~~ ~~No such stand on the street frontage shall be erected within twenty (20) feet of the property line.~~

. . . .

Sec. 4.6. A Zone requirements.

. . . .

B. The floodplain administrator reserves the right to require a hydrologic and hydraulic analysis for any development and to determine the base flood elevation. When such base flood elevation data is utilized, the lowest floor shall be elevated to minimum of two (2) feet above the base flood level. During the permitting process, the floodplain administrator shall obtain:

  1. The elevation of the lowest floor (including the basement) of all new and substantially improved structures; and

  2. If the structure has been flood-proofed in accordance with the requirements of this ordinance, the elevation (in relation to NAVD88) to which the structure has been flood-proofed.

~~C.~~ ~~When the data is not available from any source, the lowest floor of the structure shall be elevated to not less than two (2) feet above the highest adjacent grade.~~

Sec. 4.8. ~~Reserved~~ X and X(Shaded) Zone requirements. (Other Areas of Flood Risk).

A. *Residential construction requirements*. The lowest floor, including basements, shall be set to a minimum of one (1) foot above the 100-year HGL elevation measured at the nearest existing or proposed public drainage structure or BMP, in the City Stormwater Master Plan.

B. *Non-residential construction requirements*. New construction or substantial improvement of any commercial, industrial, or non-residential building or manufactured home shall have the lowest floor, including basement, elevated as established in Section 4.8 A of this ordinance above. Buildings may be flood-proofed in lieu of being elevated provided that all areas of the building components below the design flood elevation are watertight with walls substantially impermeable to the passage of water, and use structural components having the capability of resisting hydrostatic and hydrodynamic loads and the effect of buoyancy. A professional engineer or architect licensed by the Commonwealth of Virginia shall certify that the standards of this subsection area satisfied. Such certification, including the specific elevation (in relation to NAVD88) to which such structures are flood proofed, shall be maintained by the building official.

Sec. 4.9. – Coastal High Hazard (~~V and~~ VE Zone) requirements.

The following provisions shall apply within ~~V and VE Zones~~ Coastal A Zones and Coastal High Hazard Areas:

A. All new construction and substantial improvements, including to manufactured homes, shall be elevated on pilings or columns so that:

1. The bottom of the lowest horizontal structural member of the lowest floor (excluding the pilings or columns) is elevated to a minimum of ~~two~~ three (~~2~~3) feet above the base flood ~~level~~ elevation; and

2. The pile or column foundation and structure attached thereto is anchored to resist flotation, collapse, and lateral movement due to the effects of wind and water loads acting simultaneously on all building components. Wind and water loading values shall each have a one (1) percent chance of being equaled or exceeded in any given year.

B. A professional engineer or architect licensed by the Commonwealth of Virginia shall develop or review the structural design, specifications, and plans for the construction and shall certify that the design and methods of construction to be used are in accordance with accepted standards of practice for meeting the provisions of article IV, section 4.6 A. A V Zone

Design Certificate shall be submitted to Permits and Inspections with plans for a building permit.

. . . .

I. ~~The man-made alteration of sand dunes, which would increase potential flood damage, is prohibited.~~ Sand dunes, barrier beaches, and other natural protective barriers shall remain intact to provide protection against wind, waves, and erosion drainage. Any person who desires to use or alter any coastal primary sand dune or beaches, other than for the purpose of conducting the activities specified in Article 1600, Section 1602 of the Zoning Ordinance of the City of Virginia Beach, shall first obtain a permit, or authorization, from the USACE, VADEQ, the Virginia Marine Resources Commission, and the Wetlands Board through the joint permit application process.

J. Manufactured homes are prohibited.

Sec. 4.10. Floodplain subject to special restrictions.

A. All ~~FIRM delineated~~ SFHAs that ultimately drain to Back Bay or the Currituck Sound ~~located in the following areas~~ shall be identified as a floodplain subject to special restrictions~~:~~.

~~1. North Landing River and its tributaries south of Lynnhaven Parkway;~~

~~2. West Neck Creek and its tributaries south of Shipps Corner Road, London Bridge Road, and the portion of Dam Neck Road east of its intersection with London Bridge Road; and~~

~~3. Bays, creeks, lakes, guts, coves, wetlands, marshes and swamps and their tributaries comprising the Back Bay and Small Coastal South watersheds south of South Birdneck Road and east of Princess Anne Road and General Booth Boulevard.~~

B. The following provisions shall apply within the floodplain subject to special restrictions:

1. Notwithstanding any provision of this ordinance to the contrary, no filling shall be permitted, including filling with material excavated from the same floodplain except for:

a. The purpose of public roadway or other similar public works construction undertaken by the Department of Public Works or Virginia Department of Transportation, or their agent for construction. This construction includes flood protection and flood mitigation projects;

b. The maintenance, alteration, or relocation of bona fide agricultural ditches, swales, or agricultural pathways or those ditches required for proper lot drainage;

c. For shoreline stabilization or maintenance projects, such as riprap revetment, bulkheads, or other treatment used to stabilize and protect the banks of waterways, the city manager or his designee may approve the placement of fill provided the following criteria are met:

i. A joint permit application is submitted;

ii. The alignment of the stabilization structure is along the escarpment or in line with adjacent stabilization structures; ~~and~~

iii. If there is an existing shoreline stabilization structure, any proposed replacement structure shall be no more than six (6) inches higher than the existing structure; and

~~iii~~iv. Fill must be the minimum necessary to support the stabilization project.

2. The city manager, or his designee, may approve the placement of fill provided that the following criteria are met:

a. Proposed fill within the floodplain:

i. Shall be mitigated to result in no decrease in flood storage volume on the site;

ii. Shall be mitigated entirely on the same site that will incur the fill;

iii. Shall be contiguous to the existing floodplain that is being filled; and

iv. Shall be limited to the smallest amount of area and volume possible to correct irregularities within the boundary of the project.

b. The combined areas of fill and mitigation shall not exceed five (5) percent of the total area within the floodplain located on the site that will incur the fill.

3. Residential dwelling structures shall not be located within the floodplains subject to special restrictions on lots created after October 23, 2001. Residential dwelling structures located in ~~local flood hazard areas as of~~ a SFHA and constructed prior to October 23, 2001 may be expanded with attached additions to a total footprint of less than one thousand (1,000) square feet; such additions shall also comply with the requirements set forth in article V of this ordinance.

. . . .

ARTICLE V. EXISTING STRUCTURES IN FLOODPLAIN AREAS

Sec. 5.1. Existing structures.

A structure or use of a structure or premises that lawfully existed prior to the adoption of this ordinance, but which is not in conformity with this ordinance, may be continued subject to the following conditions:

A. Any existing structures in the floodway area shall not be expanded or enlarged unless it has been demonstrated through hydrologic and hydraulic analyses performed in accordance with standard engineering practices that the proposed expansion or enlargement would not result in any increase in the base flood elevation.

B. Any modification, alteration, repair, reconstruction, or improvement of any kind to a structure and/or use located in any floodplain ~~areas~~ district to an extent or amount of less than fifty (50) percent of its market value shall conform to the VA USBC and meet the freeboard height in effect at the start of construction for the original structure.

C. Any modification, alteration, repair, reconstruction, or improvement of any kind to a structure and/or use, in any floodplain ~~area~~ district to an extent or amount of fifty (50) percent or more of its market value shall be undertaken only in full compliance with this ordinance and shall require the entire structure to conform to the VA USBC.

ARTICLE VI. VARIANCES AND APPEALS

Sec. 6.1. Administrative variances.

The floodplain administrator shall approve or deny an application requesting an administrative variance after receipt of a complete application. Administrative variances may only be granted for the following uses, development, or redevelopment:

A. As defined in section 4.10, floodplains subject to special restrictions, for filling only.

B. Any structure or use sustaining damage not caused by flood to an extent or amount of fifty (50) percent or more of its market value to allow the structure to be rebuilt to the freeboard height in effect at the start of construction for the original structure. If the structure is a pre-FIRM structure, full compliance with the current VAUSBC freeboard above the base flood elevation is required. Structures that are utilizing an approved land management plan for their on-site waste disposal may be allowed to continue the use of the land management plan as long as it is approved by the city and the health department, even for damage or destruction resulting from flood.

C. As defined in section 4.8 B, X and X(Shaded) Zone requirements. (Other Areas of Flood Risk), and 4.3 A(ii) when the required finished floor is higher than the BFE plus two feet of freeboard, where the floodplain administrator, in consultation with the Development Services Center, has determined that the proposed stormwater engineering design will approximately mitigate any impacts to the finished floor of the nonresidential development.

Sec. 6.3. Application process.

A. Applications for variances from the requirements of this ordinance shall be made to the city council and filed with the director of planning. The fee for such applications shall be ~~six hundred fifty dollars~~ seven hundred eighty ($~~650~~780.00). Such fee shall include all costs of notifications and advertising. Except in cases in which such fee is waived, the director shall not accept any application not accompanied by payment of the required fee. The procedure for the advertising, hearing and determination of applications for floodplain variances shall be in accordance with the requirements pertaining to applications for subdivision variances, as set forth in section 9.4 of the subdivision ordinance. In cases in which a variance application is filed by reason of a natural disaster that is the subject of a federal declaration of emergency, application and associated advertising fees shall be waived and such application shall be given expedited processing to the maximum practical extent.

B. All applications shall be accompanied by the following:

1. A separate map, on a 1″ = 100′ or greater scale, identifying all proposed land disturbance, including fill and mitigation areas, and the limits of the existing and proposed SFHAs, tidal and non-tidal wetlands, Southern Rivers Watershed Management Area Buffer, and CBPA Resource Protection Area Buffer; and

2. A preliminary floodplain study addressing the physical and environmental characteristics of the floodplain located on adjoining properties and in the general area. Such study shall be sufficient to show that the variance, if granted, will meet the standards defined in section 6.~~3~~4 and in addition thereto, shall:

   a. Contain supporting data and calculations required for a Preliminary Stormwater Engineering Analysis as appropriate~~,~~ ~~given the preliminary nature of the floodplain study~~;

   b. Comply with the Public Works Design Standards Manual; and

   c. Be certified by a professional engineer, architect, surveyor, landscape architect or practitioner of a related field having a valid license issued by the Commonwealth of Virginia or who is exempt from licensure pursuant to applicable provisions of the Virginia Code.

Adopted by the Council of the City of Virginia Beach, Virginia, on the 1st day of February, 2022.

City of Virginia Beach CFPF Round 3 Submission

1 message

Stanley F. Smith Jr. <SFSmitJr@vbgov.com> Wed, Apr 6, 2022 at 1:55 PM
To: "cfpf@dcr.virginia.gov" <cfpf@dcr.virginia.gov>

Hello,

Please find attached two CFPF project submission packages for the City of Virginia Beach:

- CID515531_VirginiaBeach_CFPF-1: *March Terrace Creation in Back Bay*
- CID515531_VirginiaBeach_CFPF-2: *First Colonial Road and Oceana Boulevard Stormwater Improvements*

All necessary application forms and required documents for each project are located within the pdfs. Please let us know if you have any questions or require further information. Thank you in advance for your consideration of these projects.

Thanks,

Stanley

Categories (select applicable project):

Project Grants (Check All that Apply)

- ☒ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- ☐ Wetland restoration.
- ☐ Floodplain restoration.
- ☒ Construction of swales and settling ponds.
- ☐ Living shorelines and vegetated buffers.
- ☒ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☒ Storm water system upgrades.
- ☒ Medium and large scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☐ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Study Grants (Check All that Apply)

☐ Studies to aid in updating floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.

☐ Revising other land use ordinances to incorporate flood protection and mitigation goals, standards and practices.

☐ Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA). For example, a local government might conduct a hydrologic and hydraulic study for an area that had not been studied because the watershed is less than one square mile. Modeling the floodplain in an area that has numerous letters of map change that suggest the current map might not be fully accurate or doing a detailed flood study for an A Zone is another example.

☐ Studies and Data Collection of Statewide and Regional Significance.

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard.

☐ Other relevant flood prevention and protection project or study.

Capacity Building and Planning Grants

☐ Floodplain Staff Capacity.

☐ Resilience Plan Development

  ☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.

  ☐ Resource assessments, planning, strategies and development.

    ○ Policy management and/or development.

    ○ Stakeholder engagement and strategies.

Location of Project (Include Maps): Fairfax County Pimmit Run Watershed - Tucker Avenue Neighborhood

NFIP Community Identification Number (CID#):(See appendix F 515525

Is Project Located in an NFIP Participating Community? ☒ Yes ☐ No

Is Project Located in a Special Flood Hazard Area? ☒ Yes ☐ No

Flood Zone(s) (If Applicable): SFHA Zone A

Flood Insurance Rate Map Number(s) (If Applicable): 51059C0166F A map is included in the next page

Total Cost of Project: $9,834,000

Total Amount Requested $5,900,000

NOTES TO USERS

For information and questions about this Flood Insurance Rate Map (FIRM), available products associated with this FIRM, including historic versions, the current map date for each FIRM panel, how to order products, or the National Flood Insurance Program (NFIP) in general, please call the FEMA Map Information eXchange at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA Flood Map Service Center website at https://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the website.

Communities annexing land on adjacent FIRM panels must obtain a current copy of the adjacent panel as well as the current FIRM Index. These may be ordered directly from the Flood Map Service Center at the number listed above.

For community and countywide map dates refer to the Flood Insurance Study Report for this jurisdiction.

To determine if flood insurance is available in this community, contact your Insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

Base map information shown on this FIRM was provided in digital format by the United States Department of Agriculture - Aerial Photography Field Office (USDA - APFO), National Agriculture Imagery Program (NAIP). This information was derived from digital orthophotography at a 2-foot resolution from photography dated 2019.

Appendix B: Scoring Criteria for Flood Prevention and Protection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Fairfax County	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is not a town, city, or county, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☐ **Yes** ☐ **No**
Applicant Name:	

Scoring Information

Criterion	Point Value	Points Awarded
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	X
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	
No	**0**	
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and the Chesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices with a nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	X
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	X
No	**0**	
Total Points		60

FAIRFAX COUNTY

Tucker Avenue Neighborhood Stormwater Improvement

Virginia Community Flood Preparedness Fund

FY 2022 ROUND 3 GRANT APPLICATION

Contents

Attachments

Executive Summary

Fairfax County is applying for grant assistance under the Virginia Department of Conservation and Recreation (DCR) Community Flood Preparedness Fund (CFPF) Round 3 'Project' category to help mitigate flooding in the Tucker Avenue Neighborhood in McLean within the Dranesville Magisterial District. The project, *Tucker Avenue Neighborhood Stormwater Improvement*, is focused on implementing a neighborhood-wide conveyance system that can collect stormwater flow that currently overwhelms existing roads and a limited storm drainage system.

Virginia DCR approved the County's Resilience Plan on January 10, 2022. The County has integrated flood mitigation and resilience goals across areas of the local government, with flood resilience a priority addressed holistically through watershed and countywide comprehensive planning. The County has established requirements for development controls in the floodplain through zoning and the local floodplain ordinance. In order to address recent repetitive floodings, the County has prepared a draft flood response plan. The County is also developing a comprehensive regulated floodplain to assess and implement future projects.

The proposed project addresses the community concerns and supports resilience goals by addressing the entire watershed drainage problem within the project area.

Scope of Work Narrative

The County has participated in regional efforts in the development of several regional strategies and plans to **address resiliency**, mitigation, and impacts of climate change. These are described below.

1. Project Information

Background

Tucker Avenue Stormwater Neighborhood Improvement project is located in the Chesterfield and Chesterbrook Garden neighborhoods in Fairfax County (Map 1 below). These neighborhoods were built prior to the requirements for post construction stormwater management and very little infrastructure exists to carry the runoff from numerous residential lots and roadways. Infill lot development is occurring throughout the neighborhoods and as a result cumulative stormwater impacts are increasing across the drainage area. The existing drainage systems are inadequate. Much of the flow in the project area drains toward Tucker Avenue where no storm sewers or roadside ditches exist (Map 2). Runoff from Chesterfield Avenue and connected roads flows through the back of homes in Tucker Avenue resulting in rear yard flooding.

Population

Fairfax County has a population of about 1.17 million. The proposed project is in the Dranesville Magisterial District in McLean. The project impacts 222 single family homes and approximately 820 residents.

Historic Flooding Data and Hydrologic Studies

The project area has recorded multiple events of flooding in the past, most recently on July 8, 2019. Map 2 below also shows the reported storm drainage issues in the project drainage shed (houses highlighted by yellow color). Fifteen homes reported structural flooding because of the July 8, 2019, event.

Local Government Cost Share

Construction of the project is included in the County's FY23 stormwater capital improvement plan (CIP) and funding for the project is available in Regulatory Program Support under Fund 40100 Stormwater Services in the Fairfax County Fiscal Year 2023 budget (see Attachment 1 for the County's stormwater budget document)

County Floodplain Management Regulations

Fairfax County participates in the National Flood Insurance Program as well as Community Rating System Program (Attachment 2). Floodplains are regulated under article 5104 of the County's Zoning Ordinance. The Zoning Ordinance is included in the link below: https://online.encodeplus.com/regs/fairfaxcounty-va/doc-viewer.aspx#secid-462

Fairfax County regulates proposed uses and disturbances in the 100-year flood inundation area
associated with all channels or conveyance systems that have a contributing drainage area of
70 acres or more. Currently, existing floodplain boundaries and water surface elevations are available from several sources and a significant portion of regulated floodplain is not mapped.
A separate effort of developing a comprehensive regulated floodplain map is currently underway.

Based on the 2010 mapping of the Special Flood Hazard Areas (SFHAs) by FEMA, the floodplain immediately downstream of the project area is classified as SFHA Zone-A.

Project Priority

This project was prioritized in the district as a result of numerous structural and yard flooding complaints. The project area is a typical residential neighborhood where homes were built in the 1950's prior to floodplain regulations. There are two properties in this neighborhood which are not in FEMA mapped floodplain but have reported repetitive flooding and multiple homes that report yard flooding. Photos of recent flooding are shown in Figure 1 below.

During a recent extreme event on July 8, 2019, severe storms were recorded by the County's Contrail system. Actual accumulation of over 3.95-inches was recorded in one hour. Weather Underground recorded 3.48" within 45 minutes, and NOAA Atlas predicated 500-year 60-minute rainfall to be 3.98 inches.

Critical Facilities

Youngblood and Barbee Streets, which provide cross neighborhood access to the community, flood severely at the intersection of Tucker Avenue. During the July 8, 2019, event, the intersection was inundated with several feet of water due to an overwhelmed drainage system.

Map 1: Tucker Avenue Neighborhood location

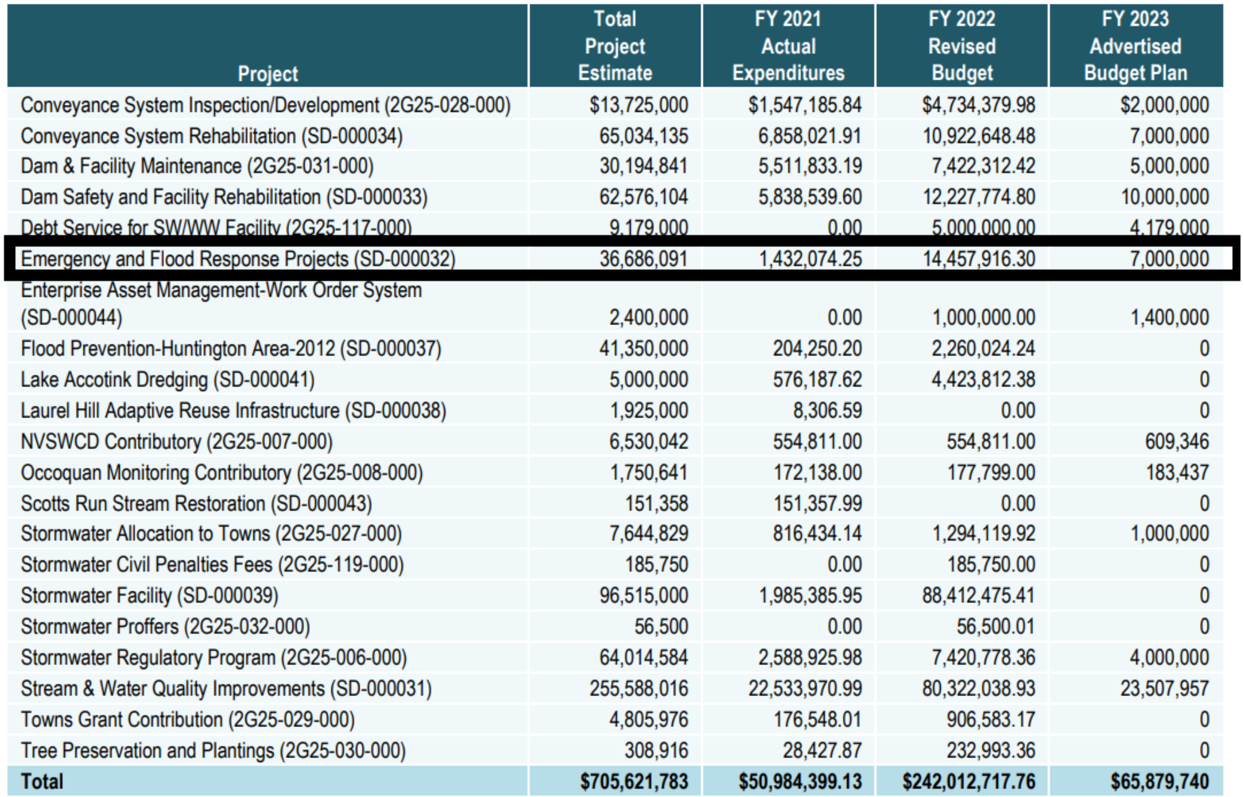
2. Need for Assistance

Financial and Staff Resources

The Stormwater Services Emergency and Flood Response Projects program supports flood control projects for unanticipated flooding events that impact storm systems and structural flooding. The program provides annual funding for scoping, design, and construction activities related to flood mitigation projects. Fairfax County's advertised Fiscal Year 2023 Stormwater Services budget includes $7.0 million for emergency and flood response projects, but there is an estimated total cost of $36.7 million for active flood mitigation projects (see Figure 2). With the increase in the frequency and intensity of storms due to climate change, we expect the number of flood mitigation projects to grow and the associated project design and construction costs will extend well beyond what the County's current emergency and flood response program can support.

Figure 2. Fiscal Year 2023 Advertised Budget- Stormwater Services Summary of Capital Projects



Project	Total Project Estimate	FY 2021 Actual Expenditures	FY 2022 Revised Budget	FY 2023 Advertised Budget Plan
Conveyance System Inspection/Development (2G25-028-000)	$13,725,000	$1,547,185.84	$4,734,379.98	$2,000,000
Conveyance System Rehabilitation (SD-000034)	65,034,135	6,858,021.91	10,922,648.48	7,000,000
Dam & Facility Maintenance (2G25-031-000)	30,194,841	5,511,833.19	7,422,312.42	5,000,000

Tree Preservation and Plantings (2G25-030-000)	308,916	28,427.87	232,993.36	0
Total	**$705,621,783**	**$50,984,399.13**	**$242,012,717.76**	**$65,879,740**

Low Income Geographic Areas

The project does not fall in a low-income geographic area.

Vulnerability Index

Based on the Vulnerability Index Mapping (Attachment 3), the project is not in a socially vulnerable area.

Alternatives

The project is a hybrid solution.

3. Goals and Objectives

Following are the primary goals and objectives of the project:

- Improve drainage system and reduce localized flooding and erosion by designing an adequate drainage system as defined in the County codes and Public Facilities Manual. The design will evaluate the cumulative increases in runoff from infill development based on existing and future buildout conditions.
- Address public safety concerns.

- Improve water quality and stream protection. Stormwater runoff from the drainage area to this unnamed tributary to Little Pimmit Run is incised and causing the stream to erode. The downstream Pimmit Run is listed as impaired (does not meet water quality standards) by Virginia Department of Environmental Quality (DEQ).
- Use innovative, sustainable, and functional designs.
- Partner with the Virginia Department of Transportation and Fairfax County Department of Transportation to develop a sound, cost effective solution that can be collaboratively implemented and maintained.

Project details, goals and objectives, and activities are also included in the following project website:

https://www.fairfaxcounty.gov/publicworks/tucker-ave-stw

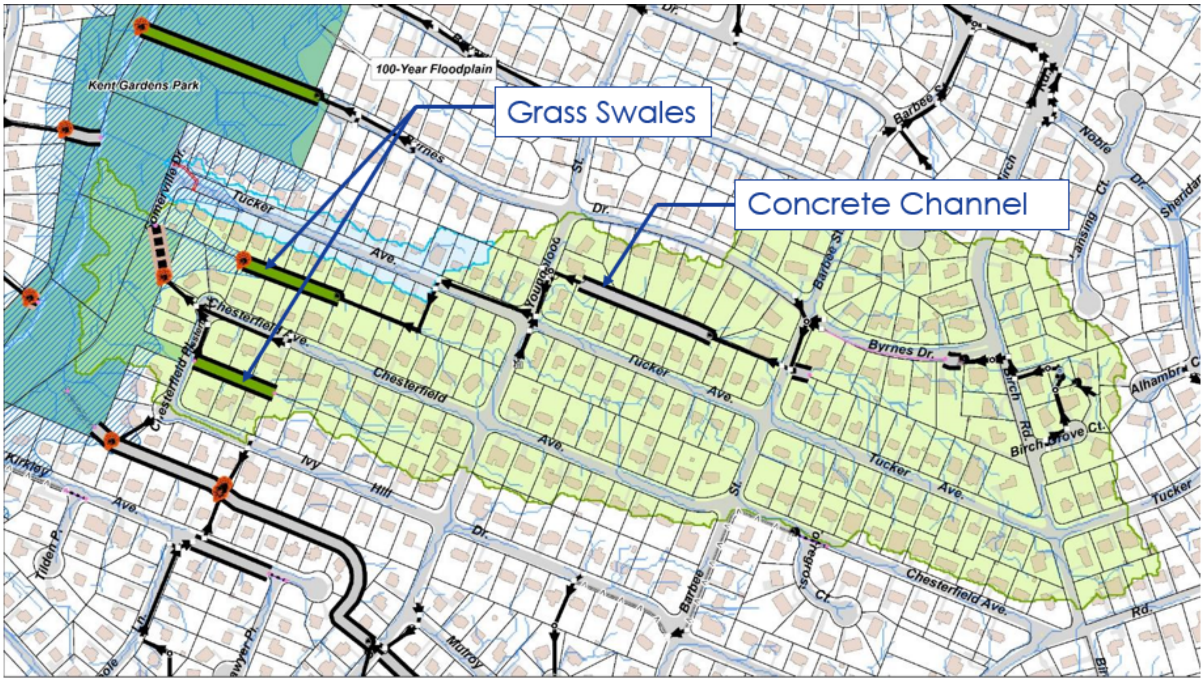
4. Approach, Milestones, and Deliverables

The existing conveyance system in the project drainage area is limited (Map 3 below). During a significant storm event the Tucker Avenue right of way serves as the overland relief path.

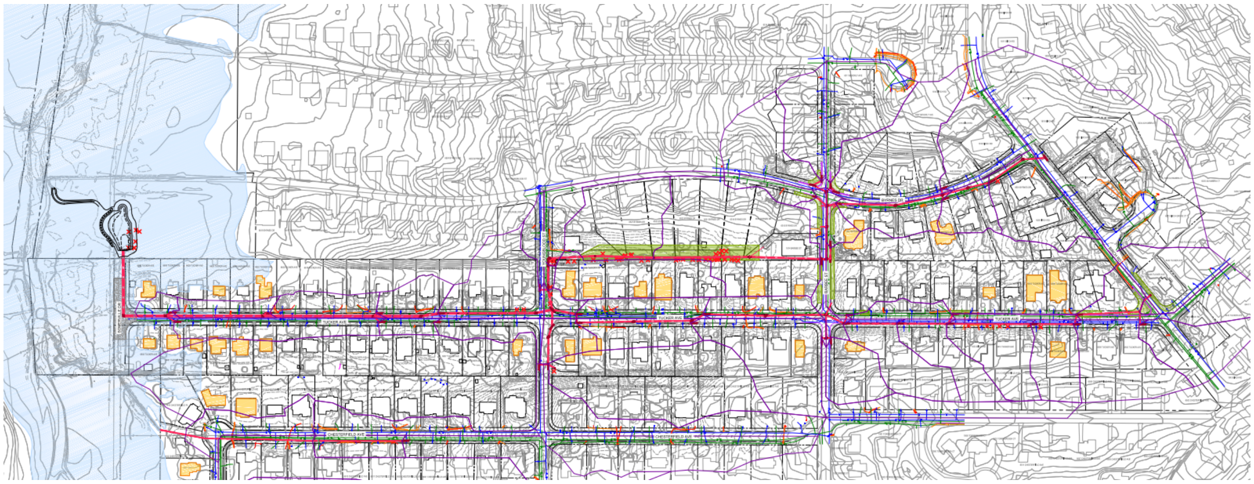
This project will design stormwater management facilities and conveyance systems in the neighborhood serving a drainage area of approximately 67 acres. A new storm sewer main will be constructed down Tucker Avenue, as well as improvements to the existing storm sewer system throughout the watershed. Green infrastructure facilities (four) will be constructed in strategic locations to provide water quality, quantity, and overland relief benefits. Map 4 below shows the proposed stormwater infrastructures in the project drainage area.

Typically, closed stormwater conveyance systems are designed to carry the 10-year flow. Due to repeated flooding in this neighborhood and to build resilience, the closed conveyance system is being designed to accommodate the 100-year flow capacity within the pipe.

Map 3: Existing conveyance system



Map 4: Proposed conveyance and green infrastructures system



A final design for the project is currently under review. Coordination with utility companies is currently underway to relocate their lines within areas of conflicts. The project is currently scheduled to go to construction in Fall of 2022. The construction is estimated to be complete in two (2) years once the contractor has mobilized.

5. Relationship to Other Projects

Fairfax County's Pimmit Run watershed management plan identified PM9814 as a neighborhood project that includes the El Nido, Chesterfield, Chesterbrook Garden, and Grass Ridge neighborhoods. This project was chosen from a portion of the larger project (PM9814) as the most severe flooding occurs in the Chesterfield and Chesterbrook Garden neighborhoods. Another neighborhood project is currently in conceptual design adjacent to this to address flooding. These projects are proposed to address the most severe flooding situations in their respective neighborhoods independent of each other.

The Pimmit Run watershed management plan can be found in the following link for the Middle Potomac Watershed management plan:

https://www.fairfaxcounty.gov/publicworks/stormwater/middle-potomac-watersheds

6. Maintenance Plan

Fairfax County has a dedicated maintenance program. The Maintenance and Stormwater Management Division (MSMD) maintains all public stormwater infrastructure and facilities. Since this project will be constructed by the County, it will be maintained by MSMD.

Scoring Criteria

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?
   The applicant (Fairfax County) is a local jurisdiction in the Commonwealth of Virginia

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?
   The County has an approved resilience plan (see Attachment 4)

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?
   This criterion is not applicable. The applicant is a local jurisdiction.

4. Has the applicant provided evidence of an ability to provide the required match funds?
   The project is included in the FY23 CIP for construction (see Attachment 1).

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?
   The main objective of this project is to reduce the flooding in the neighborhood. The project has been designed to provide resiliency in the closed system to handle the 100-year storm event. Green infrastructure has been proposed to provide water quality benefits and detention.

Budget Narrative

Estimated total project cost: $9,834,000
Encumbered: $1,897,964
Design & Construction Administration: $1,482,000
Land Acquisition: $211,465
Utilities: $204,499

Un-encumbered:
FFX Water relocation: $540,123
Construction: $7,395,913

See Attachment 7 for the project encumbrances and Attachment 8 for the construction estimate.

Amount of funds requested from the Fund: $5,900,000
This is the total amount of any grant assistance sought from the Fund. 100% of this grant will be applied to the construction of the project.

Amount of cash funds available (for construction): $2,037,000
Fairfax County already encumbered funds for the design task order, land acquisition and utilities designation. Additional funds are available in *Regulatory Program Support* under Fund 40100 Stormwater Services in the Fairfax County Fiscal Year 2023 budget (Attachment 1).

Authorization to request for funding: See Attachment 9 for the Not In Package (NIP) item to the Board of Supervisors authorizing a request for funding through the grant program.

Authorization to request funding from the Fund from governing body or chief executive of the local government	Attachment 9

Conclusion

Fairfax County has many older neighborhoods which were built prior to current floodplain regulations. Due to the global influence of climate change, rainfall intensity has changed over time resulting in the flooding of more and more neighborhoods like Tucker. On average, the Tucker Avenue neighborhood experiences structural or yard flooding 5-7 times a year. The implementation of this project, where limited conveyance exists, will provide the greatest relief to the neighborhood. The project not only provides a resilient conveyance system, but also improves water quality for the drainage shed. Fairfax County is therefore requesting funding support for the implementation of the project to reduce flooding threats to the neighborhood.

Attachments

Fund 40100: Stormwater Services

Mission

To develop and maintain a comprehensive watershed and infrastructure management program to protect property, health, and safety; to enhance the quality of life; and to preserve and improve the environment for the benefit of the public. To plan, design, construct, operate, maintain, and inspect stormwater infrastructure; perform environmental assessments through coordinated stormwater and maintenance programs in compliance with all government regulations utilizing innovative techniques, customer feedback and program review; and to be responsive and sensitive to the needs of the residents, customers, and public partners.

Focus

Stormwater Services are essential to protect public safety, preserve property values and support environmental mandates such as those aimed at protecting the Chesapeake Bay and the water quality of other local jurisdictional waterways. Projects in this fund include repairs to stormwater infrastructure, measures to improve water quality such as stream stabilization, rehabilitation, safety upgrades of state regulated dams, repair and rehabilitation of underground pipe systems, surface channels, flood mitigation, site retrofits and best management practices (BMP), and other stormwater improvements.

The Board of Supervisors approved a special service district to support the Stormwater Management Program as part of the FY 2010 Adopted Budget Plan. This service district provides a dedicated funding source for both operating and capital project requirements by levying a service rate per $100 of assessed real estate value, as authorized by Code of Virginia Ann. Sections 15.2-2400. Since FY 2010, staff has made significant progress in the implementation of watershed master plans, public outreach efforts, stormwater monitoring activities, water quality and flood mitigation project implementation and operational maintenance programs related to existing storm drainage infrastructure including stormwater conveyance, and regulatory requirements.

A rate of $0.0400 per $100 of assessed value has been estimated to be required to fully support the stormwater program in the future; however, staff is currently evaluating the long-term requirements for the program to address the growth in inventory and other community needs. Some of the additional community needs under evaluation include debt service to support the Board's approval of the dredging of Lake Accotink, the anticipation of additional flood mitigation requirements, and strengthening the role and financial support for the implementation of stormwater requirements associated with Fairfax County Public Schools sites under renovation. This enhanced program may require incremental changes to the rate over time and may result in a higher rate to fully support the program. Staff continues to evaluate these requirements, as well as the staffing to support them, and analyze the impact of increased real estate values and revenue projections.

One of the recent initiatives being funded by the Stormwater Fund is the new Public Works complex which will consolidate functions and operations and maximize efficiencies between the Stormwater and Wastewater Divisions. Stormwater operations are currently conducted from various locations throughout the County, and a new colocation of both Stormwater and Wastewater staff will provide efficiencies and sharing of resources. Another initiative in progress is the planned dredging of Lake Accotink. Lake Accotink is a 55-acre lake surrounded by managed conservation areas, wetlands, deciduous and evergreen forests, and historic and prehistoric sites. Over 300,000 patrons visit the park annually to enjoy a variety of facilities and activities that vary with the season. Sediment from the upstream areas of the watershed has continued to be deposited in Lake Accotink over the years filling in the lake and limiting recreational use. Estimates for the cost of dredging including sediment disposal are still under review. Staff has identified the option of a low interest loan via the Virginia Clean Water Revolving Loan Fund (VCWRLF) as the preferred funding mechanism to fund the dredging project costs. The Stormwater fund will pay the future debt costs.

While staff continues to further evaluate the impact of recent initiatives and the long-term requirements for the Stormwater Program, the FY 2023 rate will remain the same as the FY 2022 Adopted Budget Plan level of $0.0325 per $100 of assessed value. However, based on capital project costs and projected revenues, it is anticipated that in the next several years, incremental rate increases will be required based on continued growth of stormwater facilities and infrastructure that must be inspected and maintained by the County, the implementation of flood mitigation projects, and additional requirements in the forthcoming Municipal Separate Storm Sewer System (MS4) Permit. On an annual basis, staff will continue to evaluate the program, analyze future requirements, and develop Stormwater operational and capital resource needs.

The FY 2023 levy of $0.0325 will generate $94,393,055, supporting $27,113,315 for staff and operational costs; $65,879,740 for capital project implementation including, infrastructure reinvestment, regulatory requirements, dam safety, and contributory funding requirements; and $1,400,000 transferred to the General Fund to partially offset central support services such as Human Resources, Purchasing, Budget and other administrative services supported by the General Fund, which benefit this fund.

Stormwater Services Operational Support

Stormwater Services operational support includes funding for staff salaries, Fringe Benefits, and Operating Expenses for all stormwater operations. In addition, Fund 40100 includes positions related to transportation operations maintenance provided by the Maintenance and Stormwater Management Division. Beginning in FY 2023, all funding for the transportation related salary expenses and equipment previously supported by Agency 87, Unclassified Administrative Expenses - Public Works Programs will be supported by capital projects in Fund 30010, General Construction and Contributions, as they do not qualify for expenses related to the stormwater service district. The transfer of funding to Fund 30010, General Construction and Contributions, will provide more transparency and the carryforward of balances at year-end.

Fund 40100 also supports the Urban Forestry Management Division (UFMD). The UFMD was established to mitigate tree loss and maximize tree planting during land development, enforce tree conservation requirements and monitor and suppress populations of Gypsy Moth, Emerald Ash Borer, and other forest pests. The division also implements programs needed to sustain the rich level of environmental, ecological, and socio-economic services provided by the County's tree canopy. The UFMD is aligned with the mission of Stormwater Services as it strives to "improve water quality and stormwater management through tree conservation." Tree canopy and forest soils function to mitigate significant levels of water pollution and stormwater runoff.

FY 2023 Stormwater Capital Project Support

Conveyance System Inspections, Development and Rehabilitation

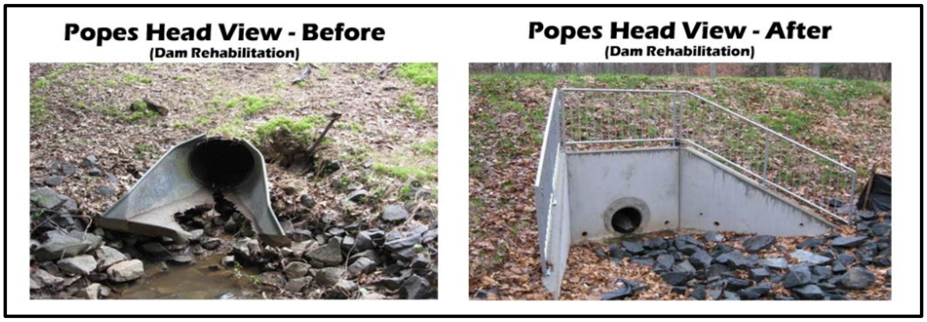
The County owns and operates approximately 1,500 miles of underground stormwater pipes and improved channels with an estimated replacement value of over one billion dollars. The County

Barnack Drive – Before
(Outfall Restoration)
Barnack Drive – After
(Outfall Restoration)

began performing internal inspections of the pipes in FY 2006. The initial results showed that approximately 5 percent of the pipes exhibit conditions of failure, and an additional 5 percent required maintenance or repair. MS4 Permit regulations require inspection and maintenance of these 1,500 miles of existing conveyance systems, 69,000 stormwater structures, and a portion of the immediate downstream channel at the 7,000 regulated pipe outlets. Acceptable industry standards indicate that one dollar reinvested in infrastructure saves seven dollars in the asset's life and 70 dollars if asset failure occurs. Once the initial internal inspections are complete, the goal of this program is to inspect pipes on a 20-year cycle and rehabilitate pipes and improve outfall channels before total failure occurs. Total funding in the amount of $9.0 million is included for Conveyance System Inspections, Development and Rehabilitation in FY 2023, including $2.0 million for inspections and development and $7.0 million for rehabilitation and outfall restoration.

Dam Safety and Facility Rehabilitation

There are approximately 7,900 stormwater management facilities in service that range in size from small rain gardens to large state regulated flood control dams. The County is responsible for inspecting approximately 5,500 privately-owned facilities and maintaining over 2,400 County owned facilities. This inventory increases annually and is projected to continually increase as new development and redevelopment sites occur in the County. This initiative also includes the removal of sediment that occurs in both wet and dry stormwater management facilities to ensure that adequate capacity is maintained to treat the stormwater. The program results in approximately 50 projects annually that require design and construction management activities as well as contract management and maintenance responsibilities. This program maintains the structures and dams that control and treat the water flowing through County owned facilities. This program improves dam safety by supporting annual inspections of 20 state-regulated dams and the Huntington Levee and by developing Emergency Action Plans required by the state. The Emergency Action Plans are updated annually. In addition, these plans include annual emergency drills and exercises, and flood monitoring for each dam. Total funding in the amount of $15.0 million is included in FY 2023, including $5.0 million for maintenance and $10.0 million for rehabilitation.



Popes Head View - Before
(Dam Rehabilitation)

Popes Head View - After
(Dam Rehabilitation)

Stormwater/Wastewater Facility

This project will provide funding for a Stormwater/Wastewater Facility which will consolidate functions and operations and maximize efficiencies between the Stormwater and Wastewater Divisions. Currently, Stormwater operations are conducted from various locations throughout the County, with the majority of staff located at the West Drive facility. Facilities for field maintenance operations and for field/office-based staff are inadequate and outdated for the increased scope of the stormwater program, and inadequate to accommodate future operations. This project is currently in design with construction anticipated to begin in early 2022. The facility is financed by EDA bonds with the Stormwater Services Fund and Wastewater Fund supporting the debt service. Funding in the amount of $4.2 million is included in FY 2023 to support the second year of debt service for the Stormwater/Wastewater Facility.

Emergency and Flood Response Projects
This program supports flood control projects for unanticipated flooding events that impact storm systems and structural flooding. The program provides annual funding for scoping, design, and construction activities related to flood mitigation projects. Funding in the amount of $7.0 million is included for the Emergency and Flood Response Projects in FY 2023.

Enterprise Asset Management-Work Order System
This project will provide funding for the transition from an Enterprise Asset Management (EAM) system to a more functional Asset Management Program (AMP). This funding will support the acquisition of software, servers and consultant services to migrate asset management and related work order management into the new system. The current system tracks assets, inspections, daily work management and associated contractor costs. Features of the replacement system include geographic information system (GIS) integration and field mobility. The Department of Public Works and Environmental Services (DPWES) Information Technology staff have collaborated with the Stormwater Management and the Wastewater Management staff to promote interagency capabilities, optimize performance, and improve system lifecycle management for the new system. This new system will meet the future expectations for both divisions and optimize service delivery for DPWES. Funding in the amount of $1.4 million is included in Capital Projects and an amount of $800,000 is included in Operating Expenses for this project in FY 2023.

Stormwater-Related Contributory Program
Contributory funds are provided to the Northern Virginia Soil and Water Conservation District (NVSWCD) and the Occoquan Watershed Monitoring Program (OWMP). The NVSWCD is an independent subdivision of the Commonwealth of Virginia that provides leadership in the conservation and protection of Fairfax County's soil and water resources. It is governed by a five-member Board of Directors - three members are elected every four years by the voters of Fairfax County and two members are appointed by the Virginia Soil and Water Conservation Board. Accordingly, the work of NVSWCD supports many of the environmental goals established by the Board of Supervisors. The goal of the NVSWCD is to continue to improve the quality of the environment and general welfare of the citizens of Fairfax County by providing them with a means of dealing with soil, water conservation and related natural resource problems. It provides County agencies with comprehensive environmental evaluations for proposed land use changes with particular attention to the properties of soils, erosion potential, drainage, and the impact on the surrounding environment. NVSWCD has consistently been able to create partnerships and leverage state, federal and private resources to benefit natural resources protection in Fairfax County. FY 2023 funding of $0.6 million is included in Fund 40100 for the County contribution to the NVSWCD.

The OWMP and the Occoquan Watershed Monitoring Laboratory (OWML) were established to ensure that water quality is monitored and protected in the Occoquan Watershed. Given the many diverse uses of the land and water resources in the Occoquan Watershed (agriculture, urban residential development, commercial and industrial activity, water supply, and wastewater disposal), the OWMP plays a critical role as the unbiased interpreter of basin water quality information. FY 2023 funding of $0.2 million is included in Fund 40100 for the County contribution to the OWMP.

Stormwater Allocation to Towns
On April 18, 2012, the State Legislature passed SB 227, which entitles the Towns of Herndon and Vienna to all revenues collected within their boundaries by Fairfax County's stormwater service district. An agreement was developed for a coordinated program whereby the Towns remain part of the County's service district and the County returns 25 percent of the revenue collected from properties within each town. This allows for the Towns to provide services independently such as

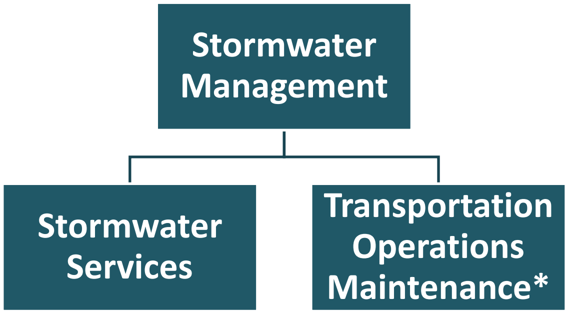
maintenance and operation of stormwater pipes, manholes, and catch basins. The remaining 75 percent remains with the County and the County takes on the responsibility for the Towns' Chesapeake Bay Total Maximum Daily Load (TMDL) requirements as well as other TMDL and MS4 requirements. This provides for an approach that is based on watersheds rather than on jurisdictional lines. Funding in the amount of $1.0 million is included for the Stormwater Allocations to Towns project in FY 2023.

Regulatory Program
The County is required by federal law to operate under the conditions of a state issued MS4 Permit. Stormwater staff annually evaluates funding required to meet the increasing federal and state regulatory requirements pertaining to the MS4 Permit, and State and Federal mandates associated with controlling water pollution delivered to local streams and the Chesapeake Bay. The MS4 Permit allows the County to discharge stormwater from its stormwater systems into state and federal waters. The County currently owns and/or operates approximately 15,000 outfalls, and 7,000 of these outfalls are regulated outfalls governed by the permit. The current permit was issued to the County in April 2015 and expired in April 2020. The County is operating under an administrative continuance until a new permit is issued. The permit requires the County to document the stormwater management facility inventory, enhance public outreach and education efforts, increase water quality monitoring efforts, provide stormwater management and stormwater control training to all appropriate County employees. The permit requires the County to implement sufficient stormwater projects that will reduce the nutrients and sediment to comply with the Chesapeake Bay and local stream TMDL requirements. Funding in the amount of $4.0 million is included for the Stormwater Regulatory Program in FY 2023.

Stream and Water Quality Improvements
This program funds water quality improvement projects necessary to mitigate the impacts to local streams and the Chesapeake Bay resulting from urban stormwater runoff. This includes water quality projects such as construction and retrofit of stormwater management ponds, implementation of green stormwater infrastructure facilities, stream restoration, and water quality projects identified in the completed Countywide Watershed Management Plans. These projects will aid in the reduction of pollutants and improve water quality in county streams that are considered to be in fair to very poor condition and likely do not meet CWA water quality standards. In addition, Total Maximum Daily Load (TMDL) requirements for local streams and the Chesapeake Bay are the regulatory drivers by which pollutants entering impaired water bodies must be reduced. The Chesapeake Bay TMDL was established by the EPA and requires that MS4 communities as well as other dischargers implement measures to significantly reduce the nitrogen, phosphorous and sediment loads in waters that drain to the Chesapeake Bay by 2025. MS4 Permit holders must achieve 35 percent of the required reductions within the current five-year permit cycle and 60 percent of the required reductions in the

next five-year permit cycle. In addition, compliance with the Chesapeake Bay TMDL requires that the County undertake construction of new stormwater facilities and retrofit existing facilities and properties. The EPA continually updates the Chesapeake Bay compliance targets and credits. It is anticipated that the changes to the assigned targets as well as how projects are credited will likely impact future compliance requirements. In addition to being required to meet the Chesapeake Bay TMDL targets, the current MS4 Permit requires the County to develop and implement action plans to address local impairments. Most of the 1,900 watershed management plan projects contribute toward achieving the Chesapeake Bay and local stream TMDL requirements. Funding in the amount of $23.5 million is included for Stream and Water Quality Improvements in FY 2023.

Organizational Chart



*Denotes functions that are included in both Fund 30010, General Construction and Contributions, and Fund 40100, Stormwater Services.

FY 2023 Funding Adjustments

The following funding adjustments from the FY 2022 Adopted Budget Plan are necessary to support the FY 2023 program:

Employee Compensation **$1,214,199**

An increase of $ 1,214,199 in Personnel Services includes $850,684 for a 4.01 percent market rate adjustment (MRA) for all employees and $363,515 for performance-based and longevity increases for non-uniformed merit employees, both effective July 2022.

Other Post-Employment Benefits **($106,403)**

A decrease of $106,403 in Personnel Services reflects required adjustments associated with providing Other Post-Employment Benefits (OPEBs) to retirees, including the Retiree Health Benefits Subsidy. For more information on Other Post-Employment Benefits, please refer to Fund 73030, OPEB Trust, in Volume 2 of the FY 2023 Advertised Budget Plan.

New Positions **$885,195**

An increase of $885,195 including Personnel Services of $857,195 and Operating Expenses of $28,000 is necessary to fund requirements associated with 8/8.0 FTE new positions, including 1/1.0 Engineering Technician III, 1/1.0 FTE Planner III, 1/1.0 FTE Project Manager I, 1/1.0 FTE Senior Engineering Inspector, 1/1.0 FTE Senior Engineer III, and 3/3.0 FTE Senior Maintenance Workers. The Engineering Technician III position will support address the increased workload of permit required pond inspections and maintenance. The Planner III position will review and provide needed stormwater expertise, advanced technical analysis, support and recommendations on planning and development efforts during planning, pre-zoning and rezoning processes. The Project Manager I position will support the Tree Preservation and Planting Program and manage projects that support the tree planting goals of Virginia's Final Phase III Watershed Implementation Plan. The projects will be geared towards increasing tree canopy through street and landscape tree plantings, afforestation and reforestation, and assisting with outreach and education programs. The Senior Engineering Inspector position will be responsible for reviewing erosion and sediment control plans, reviewing project designs, understanding job specifications, inspecting County stormwater infrastructure, updating work orders and keeping a daily log of work performed on construction sites. The Senior Engineer III position will initiate flood mitigation projects, coordinate with property owners to address their flooding concerns, and execute flood mitigation project design and implementation services. The three Senior Maintenance Worker positions will form an additional crew that will be deployed into the field to perform maintenance on the storm drainage system throughout the County.

Asset Management Program **$800,000**

An increase of $800,000 in Operating Expenses will support a new Asset Management Program (AMP). Funding will support the acquisition of software, servers, and consultant services to migrate asset management and related work order management into the new system. This new system will meet the future expectations for both Stormwater and Wastewater divisions and optimize service delivery for the Department of Public Works and Environmental Services.

Capital Equipment **($130,000)**

Funding of $652,000 in Capital Equipment, a decrease of $130,000 from the FY 2022 Adopted Budget Plan, is included primarily associated with replacement equipment that has outlived its useful life and is critical to stormwater services activities. Replacement equipment includes: $390,000 to replace two dump trucks that support all maintenance and emergency response programs and $40,000 to replace three equipment trailers that support all maintenance and emergency response programs in transporting construction materials, light duty and snow removal equipment. New equipment includes $222,000 for the purchase of three new pickup trucks and one new utility truck to support the new positions in FY 2023.

Capital Projects **$4,279,326**

Funding of $65,879,740 in Capital Projects, an increase of $4,279,326 from the FY 2022 Adopted Budget Plan, has been included in FY 2023 for priority stormwater capital projects.

Changes to FY 2022 Adopted Budget Plan

The following funding adjustments reflect all approved changes in the FY 2022 Revised Budget Plan since passage of the FY 2022 Adopted Budget Plan. Included are all adjustments made as part of the FY 2021 Carryover Review, FY 2022 Mid-Year Review, and all other approved changes through December 31, 2021:

Carryover Adjustments **$182,312,873**

As part of the *FY 2021 Carryover Review*, the Board of Supervisors approved funding of $182,312,873 based on the carryover of unexpended project balances in the amount of $179,413,809 and a net adjustment of $2,899,064. This adjustment includes the carryover of $1,312,110 in operating and capital equipment encumbrances, an increase of $197,626 to Personnel Services to support a one-time compensation adjustment of $1,000 for merit employees and $500 for non-merit employees to be paid no later than November 2021, and an increase to capital projects of $1,389,328. The adjustment to capital projects is based on the appropriation of the remaining operational savings of $783,662, higher than anticipated revenues of $304,634, revenues of $203,600 collected through the land development process that will support tree preservation and planting projects in FY 2022, revenues of $44,841 associated with dam and facility maintenance projects, miscellaneous revenues in the amount of $45,652, and the appropriation of $6,939 from the ending balance that was due to an FY 2021 audit adjustment.

Mid-Year Adjustments **($1,555)**

As part of the *FY 2022 Mid-Year Review*, the Board of Supervisors approved a decrease of $1,555 due to an FY 2021 audit adjustment.

Position Detail

The FY 2023 Advertised Budget Plan includes the following positions:

STORMWATER SERVICES – 208 Positions			
MSMD Administration (10 positions)			
1	Director, Maintenance and SW	1	Safety Analyst I
1	HR Generalist II	1	Administrative Assistant IV
1	HR Generalist I	4	Administrative Assistants III
1	Safety Analyst II		
IT – Director's Office/Stormwater (1 position)			
1	Network/Telecom. Analyst I		
Finance – Wastewater and Stormwater (4 positions)			
1	Financial Specialist IV	1	Financial Specialist I
1	Financial Specialist II	1	Administrative Assistant III
Contracting Services/Material Support (5 positions)			
1	Material Mgmt. Specialist III	1	Financial Specialist II
2	Contract Analysts I	1	Inventory Manager
Dam Safety and Maintenance Projects/Projects and LID/Inspection and Maintenance (19 positions)			
1	Public Works-Env. Serv. Manager	5	Engineering Technicians III [+1]
1	Engineer IV	2	Engineering Technicians II
1	Senior Engineer III	1	Project Manager II
3	Engineers III	2	Project Managers I
1	Ecologist III	1	Assistant Project Manager
1	Ecologist II		
Field Operations (74 positions)			
2	Env. Services Supervisors	3	Masons
1	Public Works-Env. Serv. Manager	1	Vehicle Maintenance Coordinator
2	Public Works-Env. Bus. Operations	5	Engineering Technicians III
2	Public Works-Env. Serv. Specialists	2	Engineering Technicians II
8	Senior Maintenance Supervisors	1	Carpenter II
5	Maintenance Supervisors	2	Equipment Repairers

Field Operations			
2	Maintenance Crew Chiefs	1	Welder II
15	Senior Maintenance Workers [+3]	1	Welder I
10	Heavy Equipment Operators	1	Trades Supervisor
10	Motor Equipment Operators		
Stormwater Infrastructure Branch (16 positions)			
1	Public Works-Env. Serv. Manager	1	Senior Engineering Inspector [+1]
3	Engineers IV	2	Engineering Technicians II
2	Senior Engineers III [+1]	2	Engineering Technicians I
4	Engineers III	1	Project Manager I
Transportation Infrastructure Branch (7 positions)			
1	Engineer V	3	Project Managers I
1	Engineer IV	1	Engineering Technician II
1	Project Manager II		
Stormwater Planning Division (56 positions)			
1	Director, Stormwater Planning	1	Emergency Mgmt. Specialist III
1	Engineer V	1	Planner IV
4	Engineers IV	1	Planner III [+1]
1	Senior Engineer III	2	Landscape Architects III
8	Engineers III	1	Engineering Technician III
5	Project Managers II	1	Management Analyst II
2	Project Managers I	2	Code Specialists II
4	Ecologists IV	1	Financial Specialist II
5	Ecologists III	1	Financial Specialist I
3	Ecologists II	1	Contract Specialist II
2	Ecologists I	1	Assistant Contract Specialist
3	Project Coordinators	3	Administrative Assistants III
1	Public Works-Env. Serv. Manager		
Urban Forestry (16 positions)			
1	Director, Urban Forestry Division	3	Urban Foresters I
1	Urban Forester IV	1	Project Manager I [+1]
4	Urban Foresters III	1	Administrative Assistant II
5	Urban Foresters II		
+	**Denotes New Position(s)**		

Performance Measurement Results

The objective to receive no MS4 Permit violations related to inspection and maintenance of public and private stormwater management facilities was met in FY 2019, FY 2020, and FY 2021. It is expected that this objective will also be met in FY 2022 and FY 2023. The objective to update 100 percent of the Stormwater emergency action plans was met in prior years. It is expected that this trend will continue in both FY 2022 and FY 2023. Lastly, the objective to keep 100 percent of the commuter facilities operational for 365 days was met in prior years. It is expected that this goal will be met in FY 2022 and FY 2023.

Indicator	FY 2019 Actual	FY 2020 Actual	FY 2021 Estimate	FY 2021 Actual	FY 2022 Estimate	FY 2023 Estimate
MS4 permit violations received	0	0	0	0	0	0
Percent of Emergency Action Plans current	100%	100%	100%	100%	100%	100%
Percent of commuter facilities available 365 days per year	100%	100%	100%	100%	100%	100%

[1] In FY 2022, Economic Development Authority (EDA) Bonds were issued to support the construction of a Stormwater/Wastewater facility to consolidate functions and operations and maximize efficiencies between the Stormwater and Wastewater Divisions.

[2] Represents Virginia Department of Environmental Quality (VDEQ) Stormwater Local Assistance Fund (SLAF) grants which support stream and water quality improvement projects. An amount of $1,876,476 was received in FY 2021 and an amount of $3,596,793 is anticipated in FY 2022 and beyond.

[3] Reflects revenues collected through the land development process that will support tree preservation and planting projects in FY 2022.

[4] In order to account for revenues and expenditures in the proper fiscal year, audit adjustments were reflected as an increase of $1,555.35 to FY 2021 Personnel Services expenditures to record expenditure accruals and an increase of $389,278.17 to FY 2021 Capital Projects expenditures to record expenditure accruals. This impacted the amount carried forward resulting in a decrease of $389,278.17 to the *FY 2022 Revised Budget Plan*. The projects affected by this adjustment were 2G25-006-000, Stormwater Regulatory Program, SD-000031, Stream & Water Quality Improvements, and SD-000033, Dam Safety and Facility Rehabilitation. The Annual Comprehensive Financial Report (ACFR) reflects all audit adjustments in FY 2021. Details of the audit adjustments were found in Attachment VI of the *FY 2022 Mid-Year Review*.

[5] Funding in the amount of $1,400,000 is transferred to the General Fund to partially offset central support services supported by the General Fund, which benefit Fund 40100. These indirect costs include support services such as Human Resources, Purchasing, Budget and other administrative services.

[6] Capital projects are budgeted based on the total project costs. Most projects span multiple years, from design to construction completion. Therefore, funding for capital projects is carried forward each fiscal year, and ending balances fluctuate, reflecting the carryover of these funds.

[7] The FY 2022 Adopted Budget Plan ending balance of $6,939 was due to an adjustment made to FY 2020, and it was adjusted as part of the *FY 2021 Carryover Review*.

SUMMARY OF CAPITAL PROJECTS

Project	Total Project Estimate	FY 2021 Actual Expenditures	FY 2022 Revised Budget	FY 2023 Advertised Budget Plan
Conveyance System Inspection/Development (2G25-028-000)	$13,725,000	$1,547,185.84	$4,734,379.98	$2,000,000

Washington, DC 20472

FEMA

October 21, 2020

Mr. Bryan Hill
Fairfax County Executive
12000 Government Center Parkway, Suite 552
Fairfax, Virginia 22035-0066

Dear Mr. Hill:

The purpose of this letter is to provide you with the results of the National Flood Insurance Program (NFIP) Community Rating System (CRS) field verification findings based on your 5-year cycle verification. The field verification report is enclosed for your records.

I am pleased to inform you that the Department of Homeland Security, Federal Emergency Management Agency (FEMA), has determined that Fairfax County will retain its current rating as a Class 6 in the NFIP CRS. The floodplain management activities implemented by your community qualify it for a 20 percent discount on flood insurance premiums for NFIP policies issued or renewed in Special Flood Hazard Areas on or after April 1, 2021. This savings is a tangible result of the flood mitigation activities your community implements to protect lives and reduce property damage.

Please note that Preferred Risk Policies, applicable in Zones B, C, and X on your community's NFIP Flood Insurance Rate Map, are not eligible for the CRS discount. Standard rated flood insurance policies in Zones B, C, X, D, AR, and A99 are limited to a CRS discount of 10 percent in Class 1–6 communities and 5 percent in Class 7–9 communities. The rates for the above-mentioned policies already reflect significant premium reductions.

The CRS rating for your community will automatically be renewed annually as long as there are no NFIP noncompliance actions, so a notification letter will not be sent every year. This annual renewal will take place as long as your community continues to implement the CRS activities you certify in your annual recertification documentation. If no additional modifications or new CRS activities are added, the next verification visit for your community will be in accordance with its established 5-year cycle. In the interim, FEMA will periodically send the *NFIP/CRS Update* newsletter and other notices to your CRS Coordinator to keep your community informed.

I commend you on your community actions and your determination to lead your community to be more disaster resistant. This commitment enhances public safety, property protection, and protects the natural functions of floodplains, and reduces flood insurance premiums.

If you have any questions or need additional information, please contact the FEMA Region III Office, CRS Coordinator Richard Sobota, by telephone at (215) 931-5514.

Sincerely,

William H Lesser

William H. Lesser, CRS Coordinator

VERIFICATION REPORT

Fairfax County, VA **Verified Class 6**

NFIP Number: 515525 Cycle

Date of Verification Visit: December 18, 2019

This Verification Report is provided to explain the recommendations of Insurance Services Office, Inc. (ISO) to DHS/FEMA concerning credits under the Community Rating System (CRS) for the above named community.

A total of 2456 credit points are verified which results in a recommendation that the community remain classified as a CRS Class 6. The community has met the Class 6 prerequisite with a Building Code Effectiveness Grading Schedule (BCEGS) Classification of 2/1. The following is a summary of our findings with the total CRS credit points for each activity listed in parenthesis:

Activity 310 – Elevation Certificates: The Environmental Services Division maintains elevation certificates for new and substantially improved buildings. Copies of elevation certificates are made available upon request. (0 points)

Activity 320 – Map Information Service: Credit is provided for furnishing inquirers with basic flood zone information from the community's latest Flood Insurance Rate Map (FIRM). Credit is also provided for the community furnishing flood depth data, historical flood information, and natural floodplain functions. The service is publicized annually, and records are maintained. (90 points)

Activity 330 – Outreach Projects: Credit is provided for informational outreach projects (general outreach projects) and targeted outreach projects. These projects are disseminated annually. Credit is also provided for having a pre-flood plan for public information. (164 points)

Activity 350 – Flood Protection Information: Documents relating to floodplain management are available in the reference section of the Fairfax County Public Library. Credit is also provided for floodplain information displayed on the community's website. (51 points)

Activity 360 – Flood Protection Assistance: Credit is provided for offering one-on-one advice regarding property protection. (25 points)

Activity 410 – Floodplain Mapping: Credit is provided for conducting and adopting flood studies for areas not included on the FIRM and that exceed minimum mapping standards. (90 points)

Activity 420 – Open Space Preservation: Credit is provided for preserving approximately 63 percent of the Special Flood Hazard Area (SFHA) as open space and preserving open space land in a natural state. Credit is also provided for regulations that minimize development in the SFHA. (1036 points)

Activity 430 – Higher Regulatory Standards: Credit is provided for enforcing regulations that require development limitations, freeboard for new and substantial improvement construction, foundation protection, and local drainage protection. Credit is also provided for the enforcement of building codes, a BCEGS Classification of 2/1, state mandated regulatory standards, and regulations administration. (246 points)

Activity 440 – Flood Data Maintenance: Credit is provided for maintaining and using additional map data in the day to day management of the floodplain. Credit is also provided for establishing and maintaining a system of benchmarks and maintaining copies of all previous FIRMs and Flood Insurance Study Reports. (179 points)

Activity 450 – Stormwater Management: The community enforces regulations for stormwater management, soil and erosion control, and water quality. (137 points)

Section 502 – Repetitive Loss Category: Based on the updates made to the NFIP Report of Repetitive Losses as of December 18, 2017, Fairfax County, VA has 76 repetitive loss properties and is a Category C community for CRS purposes. The community is required to submit either a Repetitive Loss Area Analysis or Floodplain Management Plan. (No credit points are applicable to this section)

Activity 510 – Floodplain Management Planning: Credit is provided for the adoption and implementation of the NOVA Hazard Mitigation Plan adopted April 4, 2017. A progress report must be submitted on an annual basis. (50 points)

Activity 520 – Acquisition and Relocation: Credit is provided for acquiring 2 buildings from the community's regulatory floodplain. (12 points)

Activity 540 – Drainage System Maintenance: Credit is provided for listing problem sites that are inspected more frequently and for implementing an ongoing Capital Improvements Program. (80 points)

Activity 610 – Flood Warning and Response: Credit is provided for a program that provides timely identification of impending flood threats, disseminates warnings to appropriate floodplain residents, and coordinates flood response activities. Credit is also provided for the designation as a Storm Ready Community by the National Weather Service. (259 points)

Activity 630 – Dams: Credit is provided for a State Dam Safety Program. (37 points)

Activity 710 – County Growth Adjustment: A credit in the 400 series is multiplied by the growth rate of the county to account for growth pressures. The growth rate for Fairfax County, VA is 1.04.

Attached is the Community Calculations Worksheet that lists the verified credit points for the Community Rating System.

RE: Fairfax County Resilience Plan Submission - CFPF

Dear Ms. Calmbacher,

Thank you for providing an overview of your Resilience Plan, and informing DCR of the various plans that Fairfax County will be utilizing to fulfill the Resilience Plan submission requirements. After careful review and consideration, the Virginia Department of Conservation and Recreation has deemed the Plan complete and meets all the criteria outlined in the 2021 Community Flood Preparedness Grant Manual. This approval will remain in effect for a period of three years, ending on January 11, 2025.

The following elements were evaluated as part of this review:

1. **Element 1: It is project-based with projects focused on flood control and resilience. DCR RESPONSE**

   Meets criteria as written.

   a. Project-based: Fairfax County is divided into 30 watersheds which have been addressed in 11 major watershed management plans. Each of the watershed management plans contains projects and watershed management area restoration strategies. The 2017 *Northern Virginia Hazard Mitigation Plan* was a regional effort involving nineteen counties, including Fairfax County, and outlines specific mitigation projects for each participating community in order to reduce vulnerability and exposure to future hazards, including flooding events. The *Fairfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management* contains projects at various locations throughout Fairfax County. The projects included and described in the *Fairfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management* align with the established *Comprehensive Plan* objectives. The *Resilient Critical*

600 East Main Street, 24th Floor | Richmond, Virginia 23219 | 804-786-6124

State Parks • Soil and Water Conservation • Outdoor Recreation Planning
Natural Heritage • Dam Safety and Floodplain Management • Land Conservation

Infrastructure Roadmap for Northern Virginia contains a database of resilience projects throughout northern Virginia, including Fairfax County.

2. **Element 2: It incorporates nature-based infrastructure to the maximum extent possible. DCR RESPONSE**

   Meets criteria as written.

   a. The 2020 R*egional Collaboration to Build Community Resilience in Northern Virginia* expanded upon *The Roadmap*, to include maximization of green infrastructure. Nature-based solutions are also presented in the *Fairfax County Watershed Management Plan* and the *Fairfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management*.

3. **Element 3: It includes considerations of all parts of a locality regardless of socioeconomics or race. DCR RESPONSE**

   Meets criteria as written.

   a. All parts of a locality: The *Northern Virginia Hazard Mitigation Plan* discusses the demographic and economic trends throughout the entirety of Fairfax County.

   b. Social vulnerability: The R*egional Collaboration to Build Community Resilience in Northern Virginia* presents a more comprehensive approach that includes an assessment of the socioeconomic impacts of infrastructure disruptions on vulnerable populations that will be taken into account as well as the socioeconomic benefits of infrastructure investment. This expanded upon objectives contained within *The Roadmap*, to ensure equitable access to resilient critical infrastructure.

   c. Demographic Analysis: Population and demographic characteristics outlined within the *Northern Virginia Hazard Mitigation Plan*. The *Fairfax County Comprehensive Plan* also looks at demographics and social factors and utilizes this information to support the Human Services section of the *Comprehensive Plan*.

4. **Element 4: It includes coordination with other local and inter-jurisdictional projects, plans, and activities and has a clearly articulated timeline or phasing for plan implementation. DCR RESPONSE**

   Meets criteria as written.

   a. Coordination with other local and inter-jurisdictional projects, plans and activities: Objective 4: Strengthen Regional Resilience Through Innovative Partnerships, Programs, and Pilots contained within *Resilient Critical Infrastructure Roadmap for Northern Virginia* focuses on coordination with local and inter-jurisdictional agencies and aligning strategies and programs. The *Comprehensive Plan for Fairfax County, Virginia* was adopted by the Board of Supervisors, Planning Commision, The Department of Planning and Zoning, and the Department of Transportation, and guides all of the plans presented in the Resilience Plan

submission for Fairfax County. The *Northern Virginia Hazard Mitigation Plan* was a collaborative effort that was adopted by all impacted localities.

   b. Clearly articulated timeline or phasing plan for implementation: Timeline for deliverables is presented within the R*egional Collaboration to Build Community Resilience in Northern Virginia*. Timeline presented within the F*airfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management*. Phased implementation plans presented in the *Fairfax County Watershed Management Plans*.

5. **Element 5: Is based on the best available science, and incorporates climate change, sea level rise, storm surge (where appropriate), and current flood maps.**

   Meets criteria as written.

   a. The 2018 *Resilient Critical Infrastructure Roadmap for Northern Virginia (Roadmap)* incorporates best available science and identifies actions to potentially decrease the severity of future consequences emanating from climate and extreme weather, to include sea level rise and storm surge. *Sea Level Rise: Impact on Northern Virginia* is an interactive story map and dashboard that was created in 2019 to convey the impact of sea level rise scenarios. The *Northern Virginia Hazard Mitigation Plan* includes analyses of natural hazards based on best available science to include flooding, sea level rise and land subsidence, tropical and coastal storms, and shoreline erosion.

VA DCR looks forward to working with you as you work to make Fairfax County a more resilient community. If you have questions or need additional assistance, please contact us at cfpf@dcr.virginia.gov. Again, thank you for your interest in the Community Flood Preparedness Fund.

Sincerely,

Wendy Howard Cooper

Wendy Howard Cooper, Director
Dam Safety and Floodplain Management

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 2/24/2022 at 8:58 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

	TOTAL AMOUNT				$7,395,165.33

[1] Private Lot Restoration represents an average cost per disturbed private property for the removal and replacement of items including, but not limited to, driveway, sidewalk, mailbox, irrigation, landscaping, and lighting features.

[2] Lump sum is reflected in overall cost estimate, see attached Construction Plan design sanitary sewer relocation estimate for detailed estimate.

[3] Materials Management includes a 10% contingency for the estimated project cost to account for unforeseen project costs as well as line items that have not been accounted for at the 95% design phase.

Stantec Consulting Services Inc. does not guarantee the accuracy of this opinion of probable cost.
The actual final cost of the project will be determined through the bidding and construction process.

Attachment 9

County of Fairfax, Virginia

MEMORANDUM

DATE: april 5, 2022

TO: Board of Supervisors

FROM: Bryan J. Hill
County Executive

SUBJECT: Department of Conservation and Recreation, Virginia Community Flood Preparedness Fund

The Virginia Community Flood Preparedness Fund (CFPF) was "established to provide support for regions and localities across Virginia, to reduce the impacts of flooding, including flooding driven by climate change." The Department of Conservation and Recreation (DCR) administers loans and grants from the CFPF to local governments. DCR has advertised that approximately $40,000,000 in matching CFPF funds is available this grant cycle. The minimum grant amount is $50,000 for project grants and $1,000 for study grants. Project grants will not be capped and final awards will be determined based on available funds following review by DCR. The grant amount per application will be determined based on scoring, amount requests from eligible applications, and available funds.

DCR is soliciting applications for flood prevention and protection project types including, but not limited to: i) nature-based solutions; ii) flood control solutions; and iii) preservation and creation of open space. DCR is also soliciting applications for the following study types including, but not limited to: i) floodplain ordinance revisions; ii) hydrologic and hydraulic floodplain studies with historic and predicted floods; iii) hydrologic and hydraulic floodplain studies to clarify or update FEMA Flood Insurance Rate Maps; and iv) studies and data collection of statewide and regional significance. Applications must be for discrete projects to be completed after the beginning of the application period and not later than three years from the date of an executed grant agreement or by an extension date approved by DCR. Applications for this grant cycle are due on April 8, 2022.

DCR will review applications and award grant assistance by category (project, study, and capacity building and planning) on a competitive scoring basis. Priority is given to applications that are in concert with local, state, and federal floodplain management standards, local resilience plans, and the Virginia Coastal Resilience Master Plan. Based on that ranking process, DCR will select and approve applications. The approved applications will be

Office of the County Executive
12000 Government Center Parkway, Suite 552
Fairfax, VA 22035-0066
703-324-2531, TTY 711, Fax 703-324-3956
www.fairfaxcounty.gov

forwarded to the Virginia Resources Authority for the execution of a grant agreement and funding.

For this grant cycle, Fairfax County (County) proposes submitting the following five applications:

Project/Study Title	**Project/Study Estimate**	**Grant Amount Requested**
1. Tucker Avenue Neighborhood Stormwater Improvements	$9,834,000	$5,900,000
2. Chowan Avenue Flood Mitigation	$2,000,000	$1,200,000
3. Little Pimmit Run Tributary at Woodland Terrace	$4,279,000	$2,567,000
4. Tripps Run at Barrett Road Flood Mitigation	$12,836,000	$8,985,200
5. County Regulated Floodplain Map Updates	$1,200,000	$600,000
Total	$30,149,000	$19,252,200

The County is under no financial obligation to apply for CFPF grants. If DCR selects one or more of these applications, the grant(s) will be presented to the Board of Supervisors for approval.

Good afternoon,

Fairfax County is pleased to submit the following five applications for grant round 3 of the Virginia Community Flood Preparedness Fund:

1. CID515525_FairfaxCounty_CFPF-1 Tucker Avenue Neighborhood Stormwater Improvement Project Application
2. CID515525_FairfaxCounty_CFPF-2 Chowan Avenue Stormwater Improvement Project Application
3. CID515525_FairfaxCounty_CFPF-3 Little Pimmit Run Tributary at Woodland Terrace Project Application
4. CID515525_FairfaxCounty_CFPF-4 Tripps Run at Barrett Road Flood Mitigation Project Application
5. CID515525_FairfaxCounty_CFPF-5 Regulated Floodplain Map Updates Study Application

The applications are available for download at the following Sharefile link: https://fairfaxcounty-ent.sharefile.com/d-s52b8f9fb46c444d8a5ecbe1f4ad3dd45

Please let me know if you are unable to download the applications or if you have any questions.

Thank you,

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes ____ No X

Categories (select applicable project):

Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- ☐ Wetland restoration.
- ☐ Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- ☐ Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☒ Storm water system upgrades.
- ☐ Medium and large scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☒ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Study Grants (Check All that Apply)

☐ Studies to aid in updating floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.

☐ Revising other land use ordinances to incorporate flood protection and mitigation goals, standards and practices.

☐ Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA). For example, a local government might conduct a hydrologic and hydraulic study for an area that had not been studied because the watershed is less than one square mile. Modeling the floodplain in an area that has numerous letters of map change that suggest the current map might not be fully accurate or doing a detailed flood study for an A Zone is another example.

☐ Studies and Data Collection of Statewide and Regional Significance.

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard.

☐ Other relevant flood prevention and protection project or study.

Capacity Building and Planning Grants

☐ Floodplain Staff Capacity.

☐ Resilience Plan Development

- ☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.
- ☐ Resource assessments, planning, strategies and development.
  - Policy management and/or development.
  - Stakeholder engagement and strategies.

Location of Project (Include Maps): Near the intersection of Chowan Avenue and 8th Street, Fairfax County

NFIP Community Identification Number (CID#):(See appendix F 515525

Is Project Located in an NFIP Participating Community? ☒ Yes ☐ No

Is Project Located in a Special Flood Hazard Area? ☐ Yes ☒ No

Flood Zone(s) (If Applicable): Discharged to Zone A

Flood Insurance Rate Map Number(s) (If Applicable): 51059C0285E

Total Cost of Project: $2,000,000

Total Amount Requested $1,200,000

Appendix B: Scoring Criteria for Flood Prevention and Protection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Fairfax County	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	N/A
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☐ **Yes** ☐ **No**
Applicant Name:	Fairfax County

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	X
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	X
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	X
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	
No	**0**	X
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and the Chesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices with a nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	X
No	**0**	
11. Does this project provide "community scale" benefits?		
Yes	**20**	X
No	**0**	
Total Points		**60**

FAIRFAX COUNTY

Chowan Avenue Stormwater Improvement

Virginia Community Flood Preparedness Fund

FY 2022 Round 3 Grant Application
April 8, 2022

Overtopping at 8th Street (May 16, 2014) (image from VDOT)

Overtopping at Chowan Avenue (September 08, 2011) (image from VDOT)

Contents

A. Executive Summary

Fairfax County is pleased to submit the Chowan Avenue Stormwater Improvement project, here after referred to as the Project, for consideration under Community Flood Preparedness Fund (CFPF) Round 3 'Project' category to help mitigate flooding in the Chowan Avenue Neighborhood in Mason Magisterial District. The Project is focused on implementing a conveyance system and a channel stabilization using natural channel design method to convey runoff that currently overwhelms existing roads and culverts.

Virginia Department of Conservation and Recreation (DCR) approved the County's Resilience Plan on January 10, 2022. The County has integrated flood mitigation and resilience goals across areas of the local government, with flood resilience a priority addressed holistically through watershed and countywide comprehensive planning. The County has established requirements for development controls in the floodplain through zoning and the local floodplain ordinance. In order to address recent repetitive floodings, the County is in the process of preparing a draft flood risk reduction plan. The County is also developing a comprehensive regulated floodplain map to assess and implement future projects.

The Project will address the community concerns and supports resilience goals by designing and constructing a conveyance system to contain the 100-year storm and integrating stream restoration through natural channel design.

B. Scope of Work Narrative

1. Project Information

The Project is located in the Cameron Run watershed (Figure 1) and conveys runoff from approximately 185 acres of land and enters the Turkeycock Run. The Project is near the intersection of Chowan Avenue and 8th Street (Figure 2a or attachment 1). Residents of Fairfax County, Virginia, living near the Project area, experience frequent flooding due to the overtopping of Chowan Avenue and 8th Street during storm events. These are public streets and avenues that residents frequently use; therefore, flooding can significantly impact society and the economy. As a result, Fairfax County's Capital Improvement Projects (CIP) included the Project to mitigate flooding in the neighborhood. The existing stormwater conveyance system in the neighborhood is inadequate. Therefore, the County plans to implement a hybrid solution (Figure 2a &2b or attachment 1). The Project will contain an additional conveyance system to convey up to 100-year in a non-erosive manner to the existing floodplain, enhance existing infrastructure, stabilize stream channel based on natural channel design methodology. The proposed project will mitigate residential flooding, improve stream ecology, address public safety, and improve resiliency.

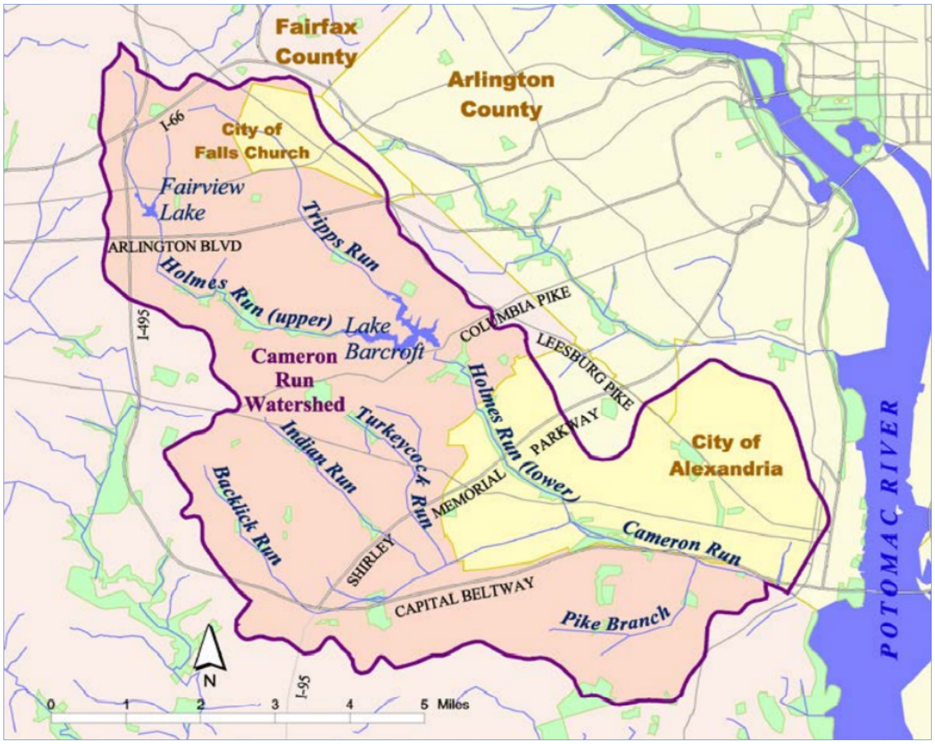

Figure 1. Cameron Run Watershed

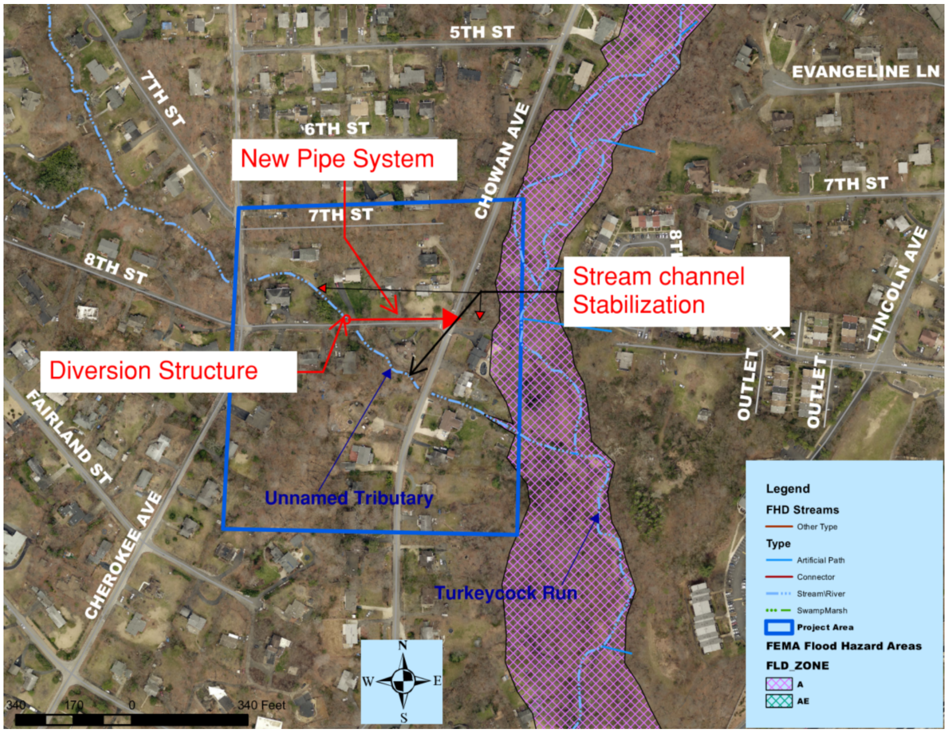

Figure 2a. Location of the Project

Figure 2b. Photo looking downstream toward the 8th street culvert

Population

Fairfax County has a population of about 1.17 million as of 2021. The Project is located in census blocks 1000,1002, and 1006 (Census Block group 1), as shown in Figure 3. The Project is located in Mason District and directly impacts 15 residential homes in addition to other residents who use Chowan Avenue and 8th Street for daily activities.

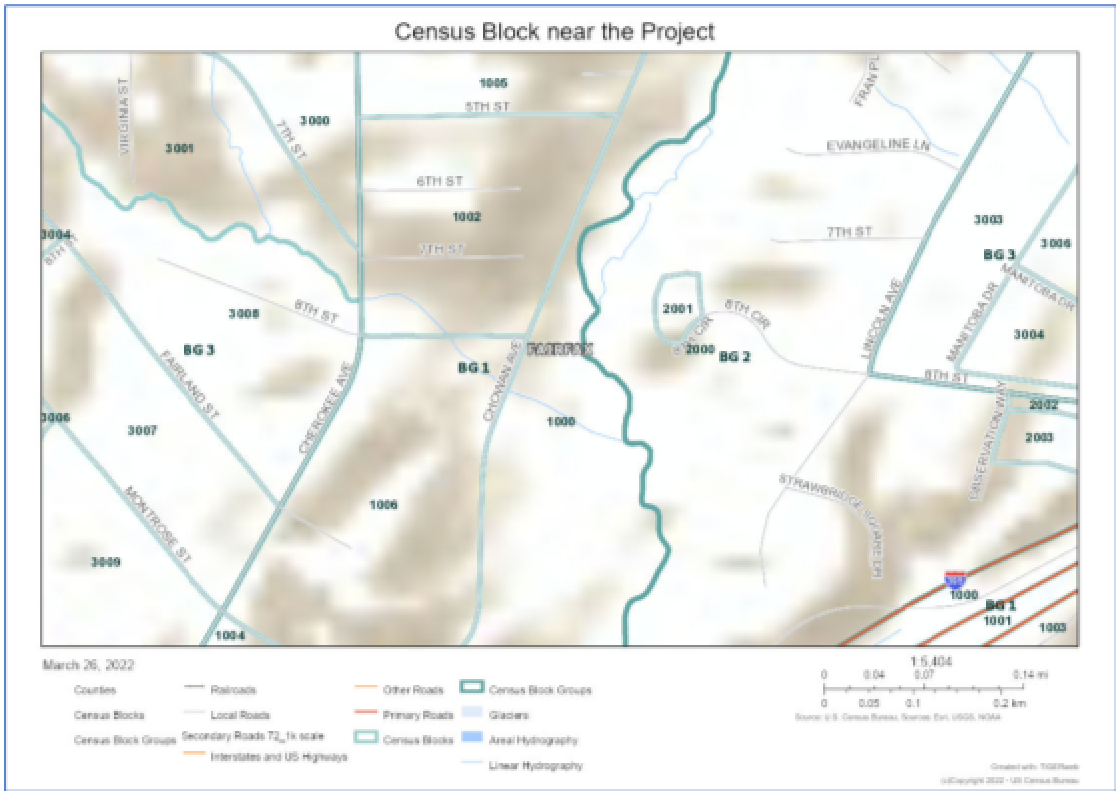

Figure 3. Census Block near the Project

Historic Flooding Data and Hydrologic Studies

Flooding along Chowan Avenue is a long-standing concern. As shown in Figure 4, the 1977 Cameron Run Watershed Immediate Action Plan recommended the construction of a floodwall to address flooding at 5103 and 5105 Chowan Avenue. The floodwall was not constructed.

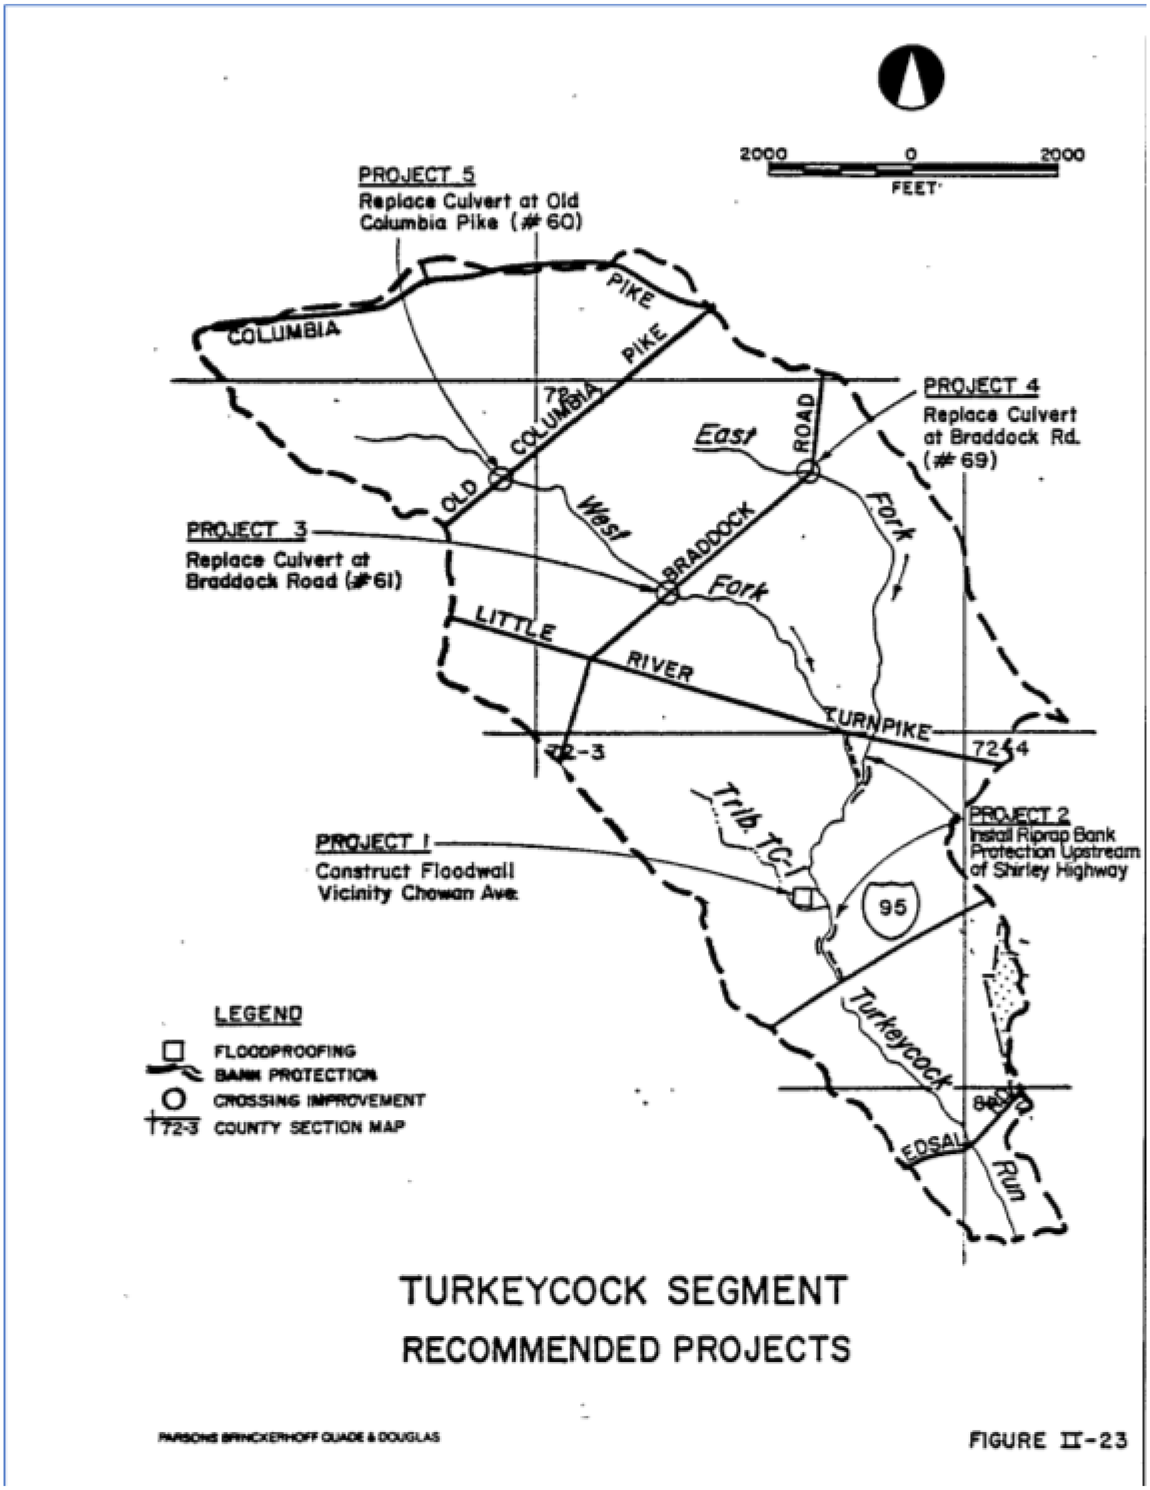

Figure 4. Cameron Run Watershed Immediate Action Plan recommended projects (December 1977)

The Fairfax County Maintenance and Stormwater Management Division (MSMD) maintains records of complaints and has several reports of frequent flooding and erosion problems in the Project area (see Table 1). The project area is located near the Federal Emergency Management Agency (FEMA) Special Flood Hazard Area (SFHA) Zone A. The effective date of the Flood Insurance Rate Map (FIRM) is September 17, 2010. A copy of the FIRMette is included as Attachment 2.

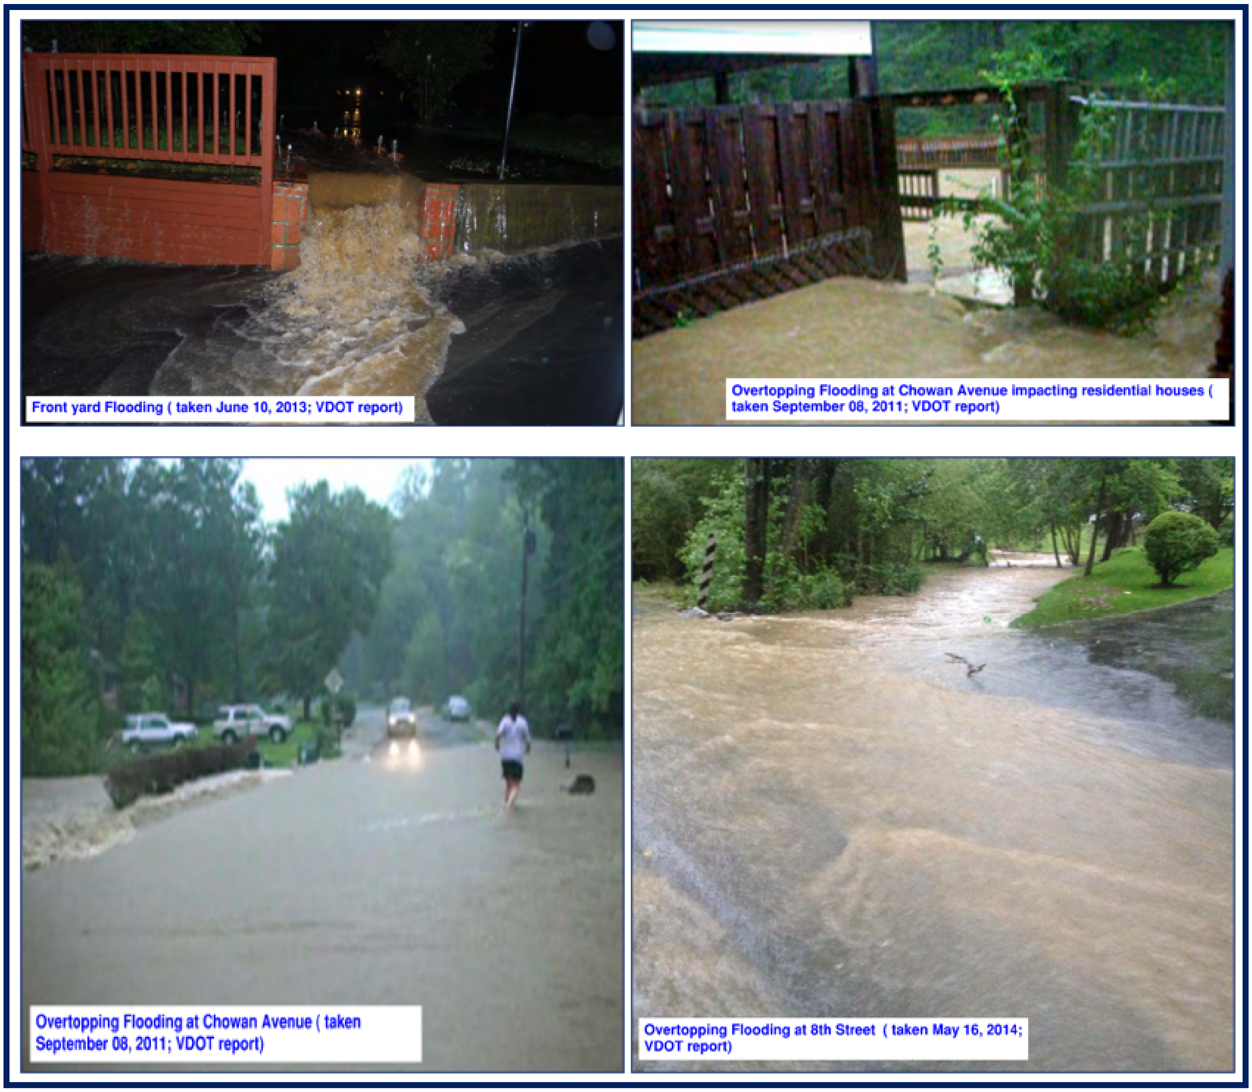
Residents near Chowan Avenue and 8th Street have reported that the unnamed tributary to Turkeycock Run overtops the roads and floods adjacent properties with multiple storm events. Examples of the previous flooding in the neighborhood are shown in Figure 5, and more pictures with the dates of past flood events are included in Attachment 3.



Front yard Flooding (taken June 10, 2013; VDOT report)

Overtopping Flooding at Chowan Avenue impacting residential houses (taken September 08, 2011; VDOT report)

Overtopping Flooding at Chowan Avenue (taken September 08, 2011; VDOT report)

Overtopping Flooding at 8th Street (taken May 16, 2014; VDOT report)

Figure 5. Examples of past flooding

In 2015 Virginia Department of Transportation (VDOT) conducted preliminary hydrologic and hydraulic analyses of the unnamed Tributary to Turkeycock Run and discussed a potential solution. The report also identified the adverse conditions of the neighborhood:

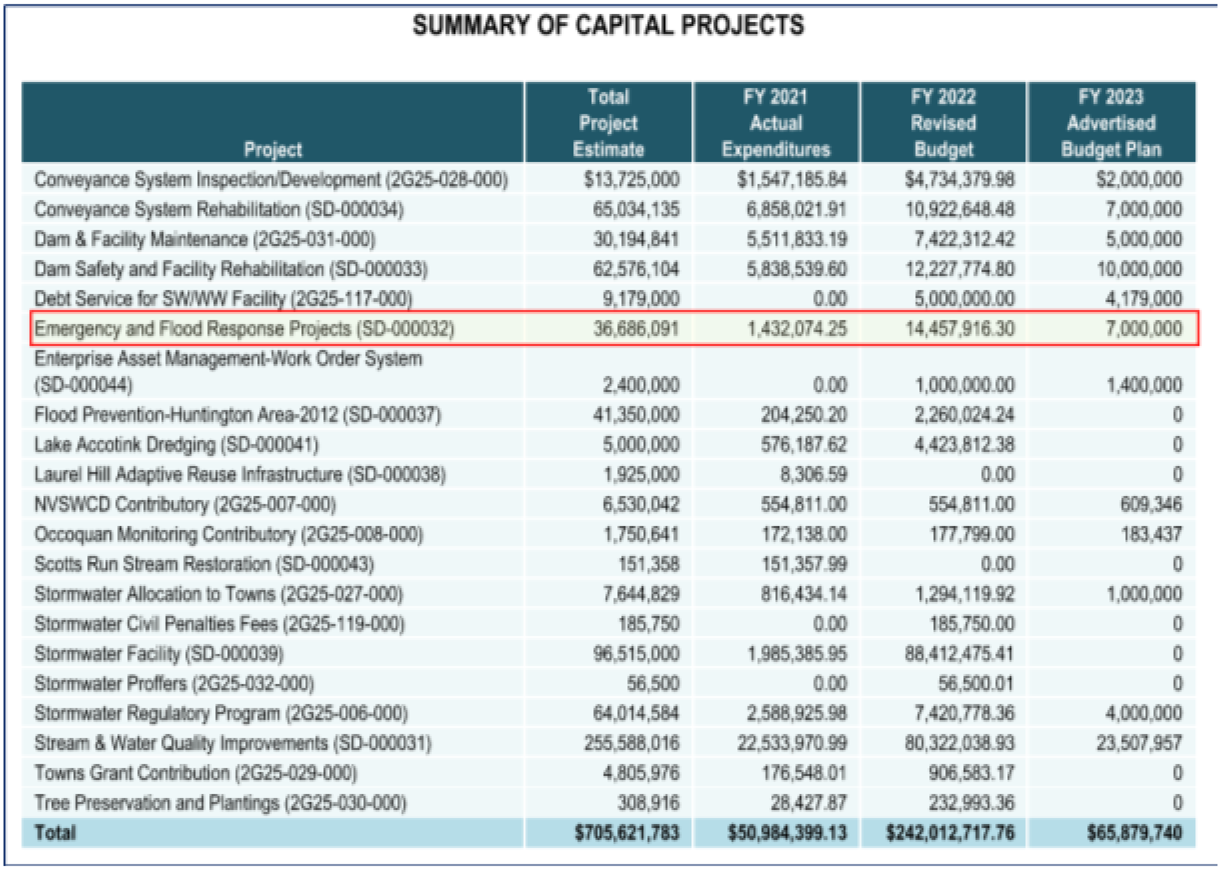
- Overtopping of 8th Street and Chowan Avenue at the existing culvert crossing;
- Backflow through private driveway culvert during high water conditions;
- Overflow from 8th Street channelizing and flowing over the private property driveway;
- Overflow from 8th Street increases the flow to the culvert crossing north of the intersection of Chowan Avenue and 8th Street;
- Flow from the culvert traveling across the private property driveway and through the open segment of the garage;
- Ponding at the private property driveway grate inlet;
- Overflow from Chowan Avenue traveling across the private property front yards, driveway, and through the open segment of the garage;
- Eroded slopes along the stream.

Local Government Cost Share

The total project cost for design and construction is estimated to be $2,000,000. The Project will be completed under the framework established by the Flood Mitigation and Monitoring & Dam Safety Program Services, Basic Ordering Agreement, Contract Award Basic Ordering Agreement (BOA). The County's cost share would be provided from the stormwater capital improvement program fund through the Emergency and Flood Response Project (SD-000032) under Fund 40100 Stormwater Services. A summary of Stormwater Services Capital Projects under Fund 40100 is shown in Table 2. The County's Stormwater Services Adopted Budget Plan can be accessed at:

Fund 40100: Stormwater Services - FY 2023 Advertised Budget Plan (fairfaxCounty.gov)

Table 2. Summary of Capital Project under Fund 40100 Stormwater Services



SUMMARY OF CAPITAL PROJECTS

Project	Total Project Estimate	FY 2021 Actual Expenditures	FY 2022 Revised Budget	FY 2023 Advertised Budget Plan
Conveyance System Inspection/Development (2G25-028-000)	$13,725,000	$1,547,185.84	$4,734,379.98	$2,000,000
Conveyance System Rehabilitation (SD-000034)	65,034,135	6,858,021.91	10,922,648.48	7,000,000
Dam & Facility Maintenance (2G25-031-000)	30,194,841	5,511,833.19	7,422,312.42	5,000,000
Dam Safety and Facility Rehabilitation (SD-000033)	62,576,104	5,838,539.60	12,227,774.80	10,000,000
Debt Service for SW/WW Facility (2G25-117-000)	9,179,000	0.00	5,000,000.00	4,179,000
Emergency and Flood Response Projects (SD-000032)	36,686,091	1,432,074.25	14,457,916.30	7,000,000
Enterprise Asset Management-Work Order System (SD-000044)	2,400,000	0.00	1,000,000.00	1,400,000
Flood Prevention-Huntington Area-2012 (SD-000037)	41,350,000	204,250.20	2,260,024.24	0
Lake Accotink Dredging (SD-000041)	5,000,000	576,187.62	4,423,812.38	0
Laurel Hill Adaptive Reuse Infrastructure (SD-000038)	1,925,000	8,306.59	0.00	0
NVSWCD Contributory (2G25-007-000)	6,530,042	554,811.00	554,811.00	609,346
Occoquan Monitoring Contributory (2G25-008-000)	1,750,641	172,138.00	177,799.00	183,437
Scotts Run Stream Restoration (SD-000043)	151,358	151,357.99	0.00	0
Stormwater Allocation to Towns (2G25-027-000)	7,644,829	816,434.14	1,294,119.92	1,000,000
Stormwater Civil Penalties Fees (2G25-119-000)	185,750	0.00	185,750.00	0
Stormwater Facility (SD-000039)	96,515,000	1,985,385.95	88,412,475.41	0
Stormwater Proffers (2G25-032-000)	56,500	0.00	56,500.01	0
Stormwater Regulatory Program (2G25-006-000)	64,014,584	2,588,925.98	7,420,778.36	4,000,000
Stream & Water Quality Improvements (SD-000031)	255,588,016	22,533,970.99	80,322,038.93	23,507,957
Towns Grant Contribution (2G25-029-000)	4,805,976	176,548.01	906,583.17	0
Tree Preservation and Plantings (2G25-030-000)	308,916	28,427.87	232,993.36	0
Total	**$705,621,783**	**$50,984,399.13**	**$242,012,717.76**	**$65,879,740**

County Floodplain Management Regulations

Fairfax County participates in the National Flood Insurance Program (NFIP) and in the Community Rating System (CRS) administrated by Federal Emergency Management Agency (FEMA). Currently, Fairfax County maintains a class 6 CRS rating by demonstrating to FEMA that the County goes beyond the minimum requirements of the NFIP requirements. In addition, FEMA conducted a Community Assistance Visit (CAV) and determined the County is in good standing with NFIP.

Construction in a floodplain is not allowed under most circumstances. Therefore, before building, filling, or excavating in a floodplain, it is advised to get more information on the floodplain management requirements. Below are some of the important links regarding floodplain developments/permits:

- The Fairfax County Land Development Services web page: https://www.fairfaxcounty.gov/landdevelopment/

Section 5105 Floodplain Regulations of the Fairfax County Zoning Ordinance: https://online.encodeplus.com/regs/fairfaxcounty-va/doc-viewer.aspx#secid-251

- Fairfax County's Flood Information webpage: https://www.fairfaxcounty.gov/publicworks/stormwater/flood-information

- Fairfax County's Digital Flood Insurance Rate Map webpage: https://www.fairfaxcounty.gov/publicworks/dfirm

Project Priority

The project was prioritized in the district as a result of several neighborhood resident reports of flooding issues. Fairfax County participated in the development of the Northern Virginia Hazard Mitigation Plan, and this plan identified flooding as one of the highest-ranked hazards for the County. Table 3 shows the hazard rankings for Fairfax County from the current 2017 Northern Virginia Hazard Mitigation Plan. A copy of the hazard mitigation plan is included as Attachment 5 or can be found at https://www.fairfaxcounty.gov/emergencymanagement/sites/emergencymanagement/files/assets/documents/pdf/hazard%20mitigation%20plan%2010.22.19.pdf

Table 3. Hazard ranking for Fairfax County from Northern Virginia Hazard Mitigation Plan

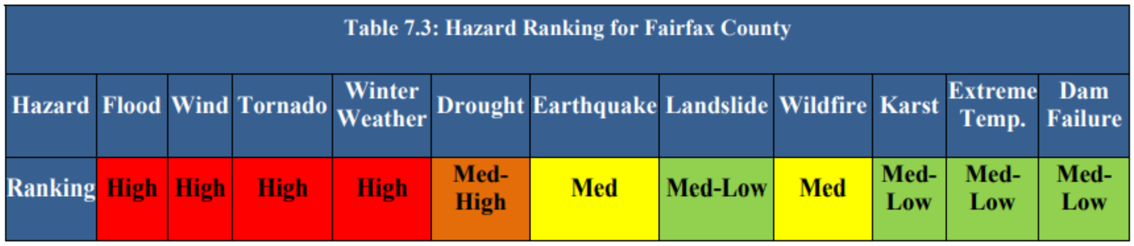


Table 7.3: Hazard Ranking for Fairfax County

Hazard	Flood	Wind	Tornado	Winter Weather	Drought	Earthquake	Landslide	Wildfire	Karst	Extreme Temp.	Dam Failure
Ranking	High	High	High	High	Med-High	Med	Med-Low	Med	Med-Low	Med-Low	Med-Low

The Project is located in Mason District and directly impacts 15 residential homes and several residents who use these roads for daily activities. The residents report that Chowan Avenue and 8th Street are frequently overtopped during rainfall events, which means it impacts anyone who uses these roads for access.

There is no repetitive loss property, severe repetitive loss property, or critical facility located within the vicinity of the project area.

2. Need for Assistance

Financial and Staff Resources

The Stormwater Services Emergency and Flood Response Projects program supports flood control projects for unanticipated flooding events that impact storm systems and structural flooding. The program provides annual funding for scoping, design, and construction activities related to flood mitigation projects. Fairfax County's advertised Fiscal Year 2023 Stormwater Services budget includes $7.0 million for emergency and flood response projects, but there is an estimated total cost of $36.7 million for active flood mitigation projects (see Table 2). With the increase in the frequency and intensity of storms due to climate change, we expect the number of flood mitigation projects to grow, and the associated project design and construction costs will extend well beyond what the County's current emergency and flood response program can support.

Low Income Geographic Areas

The project does not fall in a low-income geographic area.

Vulnerability Index

Based on the Vulnerability Index Mapping (Attachment 7), the project is not in a socially vulnerable area.

Alternatives

The project is a hybrid solution.

3. Goals and Objectives

The objective of the Project is to mitigate the flooding and erosion problems discussed in the previous sections of this application. Therefore, the primary goals of the Project are to:

- Improve the drainage system and reduce localized flooding and erosion by designing adequate drainage systems in accordance with Fairfax County code, Fairfax County Public Facilities Manual (PFM), and VDOT requirements.
- Convey the peak flow for the 100-year, 24-hour storm within the conveyance system, if possible, and provide adequate overland relief.
- Stabilize the eroded natural channel and improve the stream ecology.
- Address public safety concerns.
- Partner with the community to develop sound, cost-effective solutions that can be collaboratively implemented and maintained.
- Use innovative, sustainable, and functional designs.

The expected results of the completed project are to reduce the risk of structural and road flooding problems in the neighborhood, reduce the flood damage repair cost, and improve water quality.

4. Approach, Milestones, and Deliverables

The County submitted a request for proposal (RFP) to the design consultant firm on February 15, 2022. The County anticipates a proposal for the design services by April 15, 2022. Upon grant approval, the County would issue Notice to Proceed (NIP) and the consultant would immediately begin project activities. The design plan is expected to be completed within 12 to 15 months from NTP. While the design plans are being developed, the County would concurrently conduct the property acquisition process. The County anticipates that the construction of the Project will take from 12 months to 15 months. Table 4 summarizes the approach deliverables. The milestones for the Project include the completion of final design plans and completion of the construction work. See Table 4 for a more detailed summary of the Project approach and deliverables.

Table 4. Project Deliverables

Activity	Description	Deliverables
Design		
Survey	The consultant will provide a field run topographic survey	CAD file of field survey and mapping data; survey information needed to perform the hydrologic & hydraulic analyses, and other data for the design & construction purposes
Soil characterization	The consultant will provide geotechnical services	A report of findings
Assessment of adequate drainage and capacity analysis	The consultant will perform hydrologic and hydraulic (H&H) analyses of the existing and proposed conditions to determine whether the project goals are feasible	A drainage report in the form of a PDF to include drainage area map and model links used for the hydrologic analysis; Storm pipe and channel capacity and max hydraulic grade line (HGL) tables for existing and proposed conditions; HGL profiles in pipe and channel segments for the 100-year, 24-hour storm events for the existing and proposed conditions; Top 3 rated design recommendations to convey the peak flow rate for the 100 year, 24-hour storm; H&H files
Concepts design & analysis (35%)	The consultant will evaluate the three (3) approaches within the project area to achieve the project goals	A concept layout plan will be provided including several information such as: existing conditions; proposed improvements; preliminary grading; limits of disturbance; staging Area; access entrances; etc.

65% design plan	Based upon concept design decision review and comments, the consultant will prepare a 65% design plan	65% design report will include information such as: design narrative, all computations, preliminary engineer’s cost estimate; overall site plan of proposed improvements; H&H models; stormwater narrative; adequate outfall narrative; tree condition and preservation plan; and preliminary erosion and sediment control plan
95% final design	Based on the 65% design review comments and meeting, the consultant will prepare the 95% final design	A complete package for construction such as: 95% final design plans; final design report; and engineer’s cost estimate
Final design plan	Based on the 95% design review meeting and input provided, the consultant will develop final design plan	Final Design plan. All copies of final plans shall be signed and sealed by a professional engineer registered in the Commonwealth of Virginia
Construction		
Construction	Construction consultant firm selection	Substantial completion of the project

5. Relationship to Other Projects

The Project is located in the Cameron Run Watershed. Fairfax County has developed comprehensive watershed management plans for each of the County's 30 watersheds. The plans identify issues affecting our environment and guide protecting and restoring the County's stream corridors. The Cameron Run watershed management plan identified two neighborhood projects along Turkeycock Creek (Turkeycock Creek @ Fran PL (CA82-0018) and Turkeycock Creek @ 8th St (CA82-0015)). Though the Project is not identified in the Cameron Run watershed management plan, it will address the most frequent flooding situations near the Chowan Avenue neighborhood. Detailed information about the Cameron Run watershed management plan can be found at Cameron Run Watershed | Public Works and Environmental Services (fairfaxCounty.gov)

6. Maintenance Plan

The Fairfax County MSMD inspects stormwater management facilities and infrastructure assets to ensure proper maintenance is performed and facilities are functioning according to the approved design plan. Since the owner of the Project will be Fairfax County, the Project will be added to the MSMD’s maintenance inventory and MSMD will perform maintenance inspections to meet regulatory requirements and practice good environmental stewardship.

Additional information about the Fairfax County MSMD can be accessed at: https://www.fairfaxcounty.gov/publicworks/stormwater/maintenance-and-inspections

C. Scoring Criteria

Through this application and Table 5 below, Fairfax County has demonstrated that the grant criteria for the Project are met.

Appendix B is completed and included in the Supporting Document Section Attachment 8.

Table 5. Summary of criterion

Number	Criterion	Meet?
1	Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?	**Yes**. Fairfax County is the applicant and is a local government.
2	Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached, or a link provided?	**Yes**. It was approved on **January 10, 2022**. A copy of the DCR approval in included in Attachment 10.
3	For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?	Not Applicable
4	Has the applicant provided evidence of an ability to provide the required match funds?	**Yes.** Please refer to Section “The ability of the local government to provide its share of the cost” of this document.
5	Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?	**Yes,** please refer to Section A of this document "Scope of Work Narrative – Project"

D. Budget Narrative

Table 6 shows the budget narratives and the estimated project expenditures.
The estimated total project cost is **$2,000,000.**

Estimated total project cost:

Table 6 summarizes the estimated detailed breakdown of the Project cost. The cost is based on the pre-design concept level estimate.

Table 6. Summary of Expenditures

Number	Item	Estimated Cost
1	Land Acquisition	$ 43,000
2	Design	$ 304,000
3	Construction	$ 1,257,730
4	Construction Contingency (25%)	$ 395,270
Total Project Cost		**$ 2,000,000**

Amount of funds requested from the Fund

The total amount of the grant assistance sought from the Fund is **$1,200,000** (60% of the total project cost). The County will use the grant funding the design of the proposed project and construction as appropriate.

Amount of cash funds available

The Project is included in the five-year stormwater workplan with grant matching funds available for the Project in the Emergency and Flood Response Project under Fund 40100 Stormwater Services (Table 2). The County has $800,000 contained within the Emergency and Flood Response Project fund. With the potential grant funding, the County will have the necessary funds to complete the design and construction of the Project.

Authorization to request for funding

The signed documentation authorizing the request for funding is included in the Supporting Document Section. Please refer to Attachment 9.

Attachment 4_ Floodplain Zoning Ordinance

5105. Floodplain Regulations

These regulations are intended to further the County's participation in the National Flood Insurance Program authorized under the National Flood Insurance Act of 1968, as amended (42 U.S.C. § 4001 et seq.); provide for safety from flood and other dangers; protect against loss of life, health, or property from flood or other dangers; and preserve and protect floodplains in as natural a state as possible to preserve wildlife habitats, to maintain the natural integrity and function of the streams, to protect water quality, and to promote ground water recharge.

1. Applicability and Disclaimer

A. The floodplain regulations apply to all land within a floodplain as defined in Article 9. In addition, in accordance with subsections 5105.5 and 5105.6.B, these regulations apply to land outside the floodplain on lots that contain floodplain and on lots that abut a lot containing floodplain.

B. The degree of flood protection required by these regulations, the USBC, and the Public Facilities Manual is considered reasonable for regulatory purposes. Larger floods may occur on rare occasions or flood heights may be increased by man-made or natural causes, such as bridge openings restricted by debris. These regulations do not imply that areas outside the floodplain, or land uses permitted within such areas, will be free from flooding and flood damages under all conditions. The granting of a permit or approval of a site, subdivision, or land development plan in an identified floodplain area does not constitute a representation, guarantee, or warranty of any kind by any official or employee of the County of the practicability or safety of the proposed use, and does not create any liability upon the County, its officials, or employees.

2. Administration of the Floodplain Regulations

A. Director Determination

The Director is responsible for the administration of the floodplain regulations. The Director must review all proposed uses and development to determine whether the land on which the proposed use or development is located is within a floodplain. The Director may require additional information from the applicant, including an engineering study of the floodplain. The Director will determine whether the proposed use or development may be permitted in accordance with subsection 3 or if it requires the approval of a special exception in accordance with subsection 4 below. Any approval by the Director must be in writing and must specify conditions deemed necessary to ensure that the proposed construction and use conform to these regulations.

B. Review Criteria

Any decision of the Director or Board regarding a use in a floodplain must be based on consideration of the following:

(1) Type and location of proposed structure and use;

(2) Site access;

(3) Frequency and nature of flooding;

(4) Nature and extent of any proposed grading or fill;

(5) Impact of proposal on the floodplain on properties upstream and downstream;

(6) Potential of proposal to cause or increase flooding or to jeopardize human life;

(7) Impact of the proposed use on the natural environment and on water quality; and

(8) Other site-specific factors deemed relevant for consideration by the Director or the Board.

C. Compliance with National Flood Insurance Program

The Director of the Department of Public Works and Environmental Services (DPWES) must collect and maintain records necessary for the County's participation in the National Flood Insurance Program. Base flood elevations may increase or decrease resulting from physical changes affecting flooding conditions. As soon as practicable, but not later than six months after the date such information becomes available, the Director of DPWES or designee must notify the Federal Insurance Administrator or require the applicant to notify the Federal Insurance Administrator of any change in base flood elevation in any Special Flood Hazard Area (SFHA) depicted on the County's Flood Insurance Rate Map (FIRM) by submitting technical and scientific data to the Federal Emergency Management Agency (FEMA) for a Letter of Map Revision.

3. Permitted Uses

A. Except as provided in subsection (10) below for cluster subdivisions, the uses and changes to topography identified below may be permitted in a floodplain upon a determination by the Director that the use is permitted in the zoning district in which it is located, and the use or change to topography is in accordance with these floodplain regulations and the Public Facilities Manual. Any use or change to topography not meeting the qualifications below may be permitted by the Board with the approval of a special exception.

(1) Changes to topography that do not require major fill. For the purpose of this subsection, major fill includes any fill, regardless of amount, in an area greater than 5,000 square feet, or any fill in excess of 278 cubic yards below the existing 100-year flood elevation in an area of 5,000 square feet or less. The cumulative area of any fill and pavement permitted under (1) through (6) may not exceed an area of 5,000 square feet for all uses on a lot.

(2) Any use or change to topography within a minor floodplain. A minor floodplain, as established in the floodplain definition in Article 9, is a floodplain with a drainage area greater than 70 acres but less than 360 acres.

(3) Agricultural operations if the use does not require the approval of a building permit or require major fill. Such uses must be operated in accordance with a conservation plan prepared in accordance with the standards of the Northern Virginia Soil and Water Conservation District.

(4) Uses and structures accessory to single-family detached, attached, and stacked townhouse dwellings and manufactured homes, such as play areas, lawns, paved tennis or play courts, trails, gardens, patios, decks, and docks, that do not require major fill; and accessory structures such as children's playhouses, doghouses, storage structures, and other similar structures that do not require approval of a building permit or require major fill. All structures must be anchored to prevent flotation.

(5) Community, commercial, and public recreational uses such as golf courses, driving ranges, picnic grounds, boat launching ramps, parks, wildlife and nature preserves, hunting and fishing areas, and hiking, bicycle, and equestrian trails. This provision does not permit a paved tennis or play court exceeding 5,000 square feet in area, swimming pool, or any use requiring the approval of a building permit or requiring major fill.

(6) Off-street parking and loading areas including aisles and driveways that do not exceed 5,000 square feet in area, that will have one foot or less depth of flooding and that will not require major fill.

(7) Metrorail, railroad track, and roadway floodplain crossings meeting applicable WMATA, VDOT, and Fairfax County design requirements and where any additional rise in water surface will not have an adverse effect upon the floodplain or will be set aside in an easement. A stream channel relocation proposed in conjunction with a crossing is subject to the provisions of the Public Facilities Manual.

(8) Public and private utility lines, and all public uses and public improvements performed by or at the direction of the County, including channel improvements and erosion control, reservoirs, storm water management, and best management practice facilities and similar uses. The installation of such facilities must be accomplished with appropriate easements or agreements and with the minimum necessary disruption to the floodplain. Ponds, reservoirs, storm water management, and best management practice (BMP) facilities in floodplains with a drainage area of 360 acres or greater that are designed to serve a specific private development may be permitted only with Board approval of a special exception in accordance with these floodplain regulations.

(9) Permitted accessory structures, other than those specified in subsection (4) above, and additions to single-family detached and attached dwellings constructed before August 14, 1978, subject to the following conditions:

- **(a)** The estimated cost of the addition or accessory structure is less than 50 percent of the market value as determined by the Department of Tax Administration of the existing structure.
- **(b)** The lowest part (i.e., the bottom of the floor joists or top of a concrete slab on grade) of the lowest floor including the basement of any such structure may be constructed less than 18 inches above the 100-year flood level if it is determined that there is less than one percent chance of flooding the structure in any given year, i.e., the structure is higher than the 100-year flood level.
- **(c)** The lowest part of the lowest floor of any accessory structure not meeting the requirements of subsection (9)(b) above may be constructed below the base flood elevation provided the following standards are met:
  - ***1.*** The size of the accessory structure does not exceed 1,000 square feet of gross floor area.
  - ***2.*** The accessory structure will only be used for parking or storage purposes.
  - ***3.*** The accessory structure will be constructed using flood-damage resistant materials and all interior walls and floors constructed using unfinished material.
  - ***4.*** The accessory structure will be anchored and floodproofed in accordance with the USBC.
  - ***5.*** Any mechanical, electrical, and utility equipment in the accessory structure must be elevated to or above the base flood elevation.
- **(d)** The Director may require the applicant and owners to sign an agreement holding Fairfax County harmless from all adverse effects that may arise from the construction and establishment of the proposed use within the floodplain. Such hold harmless agreement must be recorded with the land records of Fairfax County.

(10) For all cluster subdivisions in the R-2 District, and cluster subdivisions in the R-3 and R-4 Districts with a minimum district size of three and one-half acres or greater, only the following uses and improvements may be permitted by the Director, if the encroachments for those uses and improvements are the minimum necessary and minimize disturbance to the floodplain to the greatest practical extent:

- **(a)** No residential lot may extend into a floodplain and adjacent slopes in excess of 15 percent grade or Resource Protection Area, except to accommodate driveways when it is determined by the Director that there is no other option available to provide driveway access to the lot. The fill and pavement for driveway access may not exceed 5,000 square feet in area and may not be major fill;
- **(b)** Extension of or connection to existing public and private utilities;
- **(c)** Trails depicted on the Comprehensive Plan trails map or trails connecting to trails depicted on the Comprehensive Plan trails map;
- **(d)** Channel improvements and erosion control measures performed by or at the direction of, or as required by the County;
- **(e)** Regional stormwater management facilities included in the regional stormwater management plan; or
- **(f)** Roadway floodplain crossings, as qualified by (7) above.

B. The provisions above that exclude uses requiring a building permit do not apply when a building permit is required for structures such as retaining walls, fences, ramps, or trail bridges.

4. Special Exception Uses

A. All uses permitted by right, special exception, or special permit that are not approved by the Director under subsection 3 above may be permitted in the floodplain with the approval of a special exception by the Board. The special exception is subject to conformance with the provisions of these floodplain regulations, the applicable special exception or special permit standards, and the standards and criteria set forth in the Public Facilities Manual.

B. In addition to the submission requirements for all special exception uses set forth in Section 8101, the following information must be submitted for all special exception applications for uses in a floodplain:

- **(1)** The following must be shown and certified on the plat provided with the application:
  - **(a)** Delineation of the floodplain and the source of floodplain information, such as Federal Emergency Management Agency, United States Geological Survey, Fairfax County, or other;
  - **(b)** Existing and proposed topography with a maximum contour interval of two feet;
  - **(c)** Both normal and emergency ingress and egress from highway or street;
  - **(d)** Nature and extent of any proposed fill and any proposed compensatory cut areas with quantities;
  - **(e)** The location and dimensions of any structure or part of any structure that is proposed to be located in the floodplain;
  - **(f)** Elevation of the nearest 100-year floodplain, and the exact distance from the structure to the floodplain line at the nearest point; and
  - **(g)** Lowest floor elevation, including basement, of all existing and proposed buildings, and information relative to compliance with Federal and State floodproofing requirements.
- **(2)** A written statement providing the following information:
  - **(a)** Any existing or anticipated problems of flooding or erosion in the area of the application, including upstream and downstream from the application property; and
  - **(b)** Whether additional Federal or State permits are required.
- **(3)** When structures are proposed, the following information must be provided:
  - **(a)** The proposed use of the structure;
  - **(b)** A statement certifying all floodproofing proposed and indicating compliance with all County, State, and Federal requirements. This certification must be signed, sealed, and indicate the address of the certifying professional and it must cover all structural, electrical, mechanical, plumbing, water, and sanitary facilities connected with the use; and
  - **(c)** A signed affidavit acknowledging that the applicant is aware that flood insurance may be required by the applicant's lending institution and that the flood insurance rates may increase because of increases in risks to life and property.
- **(4)** Any additional information as may be deemed necessary by the Director, including engineering studies or detailed calculations for any proposed drainage improvement.

C. The BZA may approve a special permit or the Board may approve, only in conjunction with the approval of a rezoning or special exception for another use, a special exception for the modification of grade as it applies to the height measurement of a single-family detached dwelling that is located within or in proximity to a floodplain and when that structure must be elevated to meet all applicable floodplain regulations. In those cases the Board may approve a special exception that allows a grade elevation to be established that permits a dwelling to be constructed in compliance with all applicable floodplain regulations. Any applicant seeking grade modification approval must demonstrate that the requested increase in grade is the minimum amount required to meet the floodplain regulations.

5. Setbacks from the Floodplain

A. No dwelling or portion of a dwelling may be located within 15 feet of the edge of a floodplain, unless it is allowed under subsection 5100.2.D(5). The location of a property line between the floodplain and a dwelling does not eliminate the need to meet this minimum 15-foot setback. The Director may approve the following additional exceptions:

- **(1)** The location of dwellings within 15 feet of a permanent water surface of any appropriately designed impoundment; or
- **(2)** The location of additions within 15 feet of the edge of a floodplain for single-family detached and attached dwellings constructed before August 14, 1978, based on consideration of the following factors:
    - **(a)** Type and location of proposed structure;
    - **(b)** Nature and extent of any proposed grading or fill;
    - **(c)** Impact of proposal on the floodplain on properties upstream and downstream;
    - **(d)** Potential of proposal to cause or increase flooding or to jeopardize human life;
    - **(e)** Impact of the proposed use on the natural environment and on water quality; and
    - **(f)** Other site-specific factors deemed relevant for consideration by the Director.

B. For the purpose of this section, 15 feet is considered the minimum setback from the floodplain. However, dwellings and additions proposed within a floodplain under subsections 5105.3.A(9) and 5105.4 may be permitted without this 15-foot setback.

6. Use Limitations

All permitted and special exception uses in a floodplain must comply with the following use limitations:

A. Any new construction, substantial improvements, or other development, including fill, when combined with all other existing, anticipated, and planned development, may not increase the water surface elevation above the 100-year flood level upstream and downstream, calculated in accordance with the Public Facilities Manual, unless it is permitted under subsections 5105.3.A(7) and 5105.3.A(8) above.

B. The lowest part (i.e., the bottom of the floor joists or top of a concrete slab on grade) of the lowest floor, including any basement must be at least 18 inches above the water-surface elevation of the 100-year flood level calculated in accordance with the Public Facilities Manual. This requirement for an 18-inch vertical separation applies to development within a floodplain, any lot where a floodplain is located, or on any lot that abuts a lot where a floodplain is located, for the following:

- **(1)** Any new or substantially improved dwelling or manufactured home.
- **(2)** Any proposed addition to an existing dwelling, unless it is permitted under subsection 3.A(9)(b) above.

For development on land outside the floodplain, this subsection B may be modified by the Director in accordance with the standards set forth in the Public Facilities Manual.

C. No structure or substantial improvement to any existing structure may be allowed unless adequate floodproofing is provided in accordance with this section or under the USBC.

D. Stable vegetation must be protected and maintained in the floodplain to the extent possible.

E. Storage of herbicides, pesticides, or toxic or hazardous substances as set forth in Title 40, Code of Federal Regulations, Parts 116.4 and 261.30 et seq., is prohibited in a floodplain.

F. For uses located in a floodplain, other than those specified in subsections 3.A(3) and 3.A(4) above, the applicant must demonstrate the extent to which:

(1) There are no other feasible options available to achieve the proposed use;

(2) The proposal is the option that is least disruptive to the floodplain; and

(3) The proposal meets the environmental goals and objectives of the Comprehensive Plan for the property.

G. Nothing in these floodplain regulations is deemed to prohibit the refurbishing, refinishing, repair, reconstruction, or other similar improvements of the structure for an existing use provided such improvements are done in conformance with the USBC, Section 8104 of this Ordinance, and the requirements of subsection 5105.6.F above.

H. All uses and activities are subject to the provisions of Chapter 118 of the County Code.

I. As-built floor elevations must be submitted to the Land Development Services Department on a standard Federal Emergency Management Agency (FEMA) Elevation Certificate upon placement of the lowest floor, including basement, and before further vertical construction if they are required by federal regulations or the USBC. A FEMA Floodproofing Certificate must be completed in addition to the Elevation Certificate for a nonresidential building that is being floodproofed. In the case of special exception uses, the Elevation Certificate must demonstrate compliance with the approved special exception elevations.

J. The construction of all buildings and structures are subject to the requirements of the USBC.

K. All recreational vehicles within a floodplain must either:

(1) Be on-site for fewer than 180 consecutive days;

(2) Meet the requirements of this section and the USBC for anchoring and elevation of manufactured homes; or

(3) Be fully licensed and ready for highway use. A recreational vehicle is deemed ready for highway use if it is on wheels or a jacking system, is attached to the site only by quick disconnect type utilities and security devices and has no permanently attached additions.

L. All necessary permits required by Federal or State law, including Section 404 of the Federal Water Pollution Control Act Amendments of 1972, as amended, 33 U.S.C. § 1334, must be obtained.

M. Areas designated as floodplains by FEMA must not have their base flood elevations altered without approval from FEMA. If any new construction, substantial improvements, or other development, including fill, when combined with all other existing, anticipated, and planned development, results in change in the base flood elevation in any Special Flood Hazard Area (SFHA) depicted on the County's Flood Insurance Rate Map (FIRM), the applicant must notify the Federal Insurance Administrator of the changes by submitting technical or scientific data to FEMA for a Letter of Map Revision, as soon as practicable but, not later than 6 months after the date such information becomes available or the placement of fill, whichever comes first. If the projected increase in the base flood elevation is greater than one foot, the applicant must also obtain approval of a Conditional Letter of Map Revision from the Federal Insurance Administrator before the approval of construction.

N. In riverine situations, adjacent communities and the Virginia Department of Conservation and Recreation must be notified before any alteration or relocation of a watercourse depicted on the Flood Insurance Rate Map (FIRM) and copies of such notifications must be submitted to the Federal Insurance Administrator. The flood carrying capacity within the altered or relocated portion of any watercourse must be maintained.

7. Definitions

Definitions pertaining to the interpretation and administration of these floodplain regulations are in Section 9104.

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes ____ No X

Categories (select applicable project):

Project Grants (Check All that Apply)

- ☐ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- ☐ Wetland restoration.
- ☐ Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- ☐ Living shorelines and vegetated buffers.
- ☐ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☒ Storm water system upgrades.
- ☐ Medium and large scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☒ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Study Grants (Check All that Apply)

☐ Studies to aid in updating floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.

☐ Revising other land use ordinances to incorporate flood protection and mitigation goals, standards and practices.

☐ Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA). For example, a local government might conduct a hydrologic and hydraulic study for an area that had not been studied because the watershed is less than one square mile. Modeling the floodplain in an area that has numerous letters of map change that suggest the current map might not be fully accurate or doing a detailed flood study for an A Zone is another example.

☐ Studies and Data Collection of Statewide and Regional Significance.

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard.

☐ Other relevant flood prevention and protection project or study.

Capacity Building and Planning Grants

☐ Floodplain Staff Capacity.

☐ Resilience Plan Development

  ☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.
  ☐ Resource assessments, planning, strategies and development.
    - Policy management and/or development.
    - Stakeholder engagement and strategies.

Location of Project (Include Maps): Near the intersection of Chowan Avenue and 8th Street, Fairfax County

NFIP Community Identification Number (CID#):(See appendix F 515525

Is Project Located in an NFIP Participating Community? ☒ Yes ☐ No

Is Project Located in a Special Flood Hazard Area? ☐ Yes ☒ No

Flood Zone(s) (If Applicable): Discharged to Zone A

Flood Insurance Rate Map Number(s) (If Applicable): 51059C0285E

Total Cost of Project: $2,000,000

Appendix B: Scoring Criteria for Flood Prevention and Protection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name:	Fairfax County	
Eligibility Information		
Criterion	**Description**	**Check One**
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	N/A
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☐ **Yes** ☐ **No**
Applicant Name:	Fairfax County

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☐ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	
1.b. any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	X
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	X
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	10	
No	0	X
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	10	
No	0	X
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and the Chesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices with a nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	5	X
No	0	
11. Does this project provide “community scale” benefits?		
Yes	20	X
No	0	
Total Points		60

1742

County of Fairfax, Virginia

MEMORANDUM

DATE: april 5, 2022

TO: Board of Supervisors

FROM: Bryan J. Hill
County Executive

SUBJECT: Department of Conservation and Recreation, Virginia Community Flood Preparedness Fund

The Virginia Community Flood Preparedness Fund (CFPF) was “established to provide support for regions and localities across Virginia, to reduce the impacts of flooding, including flooding driven by climate change.” The Department of Conservation and Recreation (DCR) administers loans and grants from the CFPF to local governments. DCR has advertised that approximately $40,000,000 in matching CFPF funds is available this grant cycle. The minimum grant amount is $50,000 for project grants and $1,000 for study grants. Project grants will not be capped and final awards will be determined based on available funds following review by DCR. The grant amount per application will be determined based on scoring, amount requests from eligible applications, and available funds.

DCR is soliciting applications for flood prevention and protection project types including, but not limited to: i) nature-based solutions; ii) flood control solutions; and iii) preservation and creation of open space. DCR is also soliciting applications for the following study types including, but not limited to: i) floodplain ordinance revisions; ii) hydrologic and hydraulic floodplain studies with historic and predicted floods; iii) hydrologic and hydraulic floodplain studies to clarify or update FEMA Flood Insurance Rate Maps; and iv) studies and data collection of statewide and regional significance. Applications must be for discrete projects to be completed after the beginning of the application period and not later than three years from the date of an executed grant agreement or by an extension date approved by DCR. Applications for this grant cycle are due on April 8, 2022.

DCR will review applications and award grant assistance by category (project, study, and capacity building and planning) on a competitive scoring basis. Priority is given to applications that are in concert with local, state, and federal floodplain management standards, local resilience plans, and the Virginia Coastal Resilience Master Plan. Based on that ranking process, DCR will select and approve applications. The approved applications will be

Office of the County Executive
12000 Government Center Parkway, Suite 552
Fairfax, VA 22035-0066
703-324-2531, TTY 711, Fax 703-324-3956
www.fairfaxcounty.gov

forwarded to the Virginia Resources Authority for the execution of a grant agreement and funding.

For this grant cycle, Fairfax County (County) proposes submitting the following five applications:

Project/Study Title	Project/Study Estimate	Grant Amount Requested
1. Tucker Avenue Neighborhood Stormwater Improvements	$9,834,000	$5,900,000
2. Chowan Avenue Flood Mitigation	$2,000,000	$1,200,000
3. Little Pimmit Run Tributary at Woodland Terrace	$4,279,000	$2,567,000
4. Tripps Run at Barrett Road Flood Mitigation	$12,836,000	$8,985,200
5. County Regulated Floodplain Map Updates	$1,200,000	$600,000
Total	$30,149,000	$19,252,200

The County is under no financial obligation to apply for CFPF grants. If DCR selects one or more of these applications, the grant(s) will be presented to the Board of Supervisors for approval.

RE: Fairfax County Resilience Plan Submission - CFPF

Dear Ms. Calmbacher,

Thank you for providing an overview of your Resilience Plan, and informing DCR of the various plans that Fairfax County will be utilizing to fulfill the Resilience Plan submission requirements. After careful review and consideration, the Virginia Department of Conservation and Recreation has deemed the Plan complete and meets all the criteria outlined in the 2021 Community Flood Preparedness Grant Manual. This approval will remain in effect for a period of three years, ending on January 11, 2025.

The following elements were evaluated as part of this review:

1. **Element 1: It is project-based with projects focused on flood control and resilience. DCR RESPONSE**

   Meets criteria as written.

   a. Project-based: Fairfax County is divided into 30 watersheds which have been addressed in 11 major watershed management plans. Each of the watershed management plans contains projects and watershed management area restoration strategies. The 2017 *Northern Virginia Hazard Mitigation Plan* was a regional effort involving nineteen counties, including Fairfax County, and outlines specific mitigation projects for each participating community in order to reduce vulnerability and exposure to future hazards, including flooding events. The *Fairfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management* contains projects at various locations throughout Fairfax County. The projects included and described in the *Fairfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management* align with the established *Comprehensive Plan* objectives. The *Resilient Critical*

Infrastructure Roadmap for Northern Virginia contains a database of resilience projects throughout northern Virginia, including Fairfax County.

2. **Element 2: It incorporates nature-based infrastructure to the maximum extent possible. DCR RESPONSE**

   Meets criteria as written.

   a. The 2020 R*egional Collaboration to Build Community Resilience in Northern Virginia* expanded upon *The Roadmap*, to include maximization of green infrastructure. Nature-based solutions are also presented in the *Fairfax County Watershed Management Plan* and the *Fairfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management*.

3. **Element 3: It includes considerations of all parts of a locality regardless of socioeconomics or race. DCR RESPONSE**

   Meets criteria as written.

   a. All parts of a locality: The *Northern Virginia Hazard Mitigation Plan* discusses the demographic and economic trends throughout the entirety of Fairfax County.

   b. Social vulnerability: The R*egional Collaboration to Build Community Resilience in Northern Virginia* presents a more comprehensive approach that includes an assessment of the socioeconomic impacts of infrastructure disruptions on vulnerable populations that will be taken into account as well as the socioeconomic benefits of infrastructure investment. This expanded upon objectives contained within *The Roadmap*, to ensure equitable access to resilient critical infrastructure.

   c. Demographic Analysis: Population and demographic characteristics outlined within the *Northern Virginia Hazard Mitigation Plan*. The *Fairfax County Comprehensive Plan* also looks at demographics and social factors and utilizes this information to support the Human Services section of the *Comprehensive Plan*.

4. **Element 4: It includes coordination with other local and inter-jurisdictional projects, plans, and activities and has a clearly articulated timeline or phasing for plan implementation. DCR RESPONSE**

   Meets criteria as written.

   a. Coordination with other local and inter-jurisdictional projects, plans and activities: Objective 4: Strengthen Regional Resilience Through Innovative Partnerships, Programs, and Pilots contained within *Resilient Critical Infrastructure Roadmap for Northern Virginia* focuses on coordination with local and inter-jurisdictional agencies and aligning strategies and programs. The *Comprehensive Plan for Fairfax County, Virginia* was adopted by the Board of Supervisors, Planning Commision, The Department of Planning and Zoning, and the Department of Transportation, and guides all of the plans presented in the Resilience Plan

submission for Fairfax County. The *Northern Virginia Hazard Mitigation Plan* was a collaborative effort that was adopted by all impacted localities.

b. Clearly articulated timeline or phasing plan for implementation: Timeline for deliverables is presented within the R*egional Collaboration to Build Community Resilience in Northern Virginia*. Timeline presented within the F*airfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management*. Phased implementation plans presented in the *Fairfax County Watershed Management Plans*.

5. **Element 5: Is based on the best available science, and incorporates climate change, sea level rise, storm surge (where appropriate), and current flood maps.**

   Meets criteria as written.

   a. The 2018 *Resilient Critical Infrastructure Roadmap for Northern Virginia (Roadmap)* incorporates best available science and identifies actions to potentially decrease the severity of future consequences emanating from climate and extreme weather, to include sea level rise and storm surge. *Sea Level Rise: Impact on Northern Virginia* is an interactive story map and dashboard that was created in 2019 to convey the impact of sea level rise scenarios. The *Northern Virginia Hazard Mitigation Plan* includes analyses of natural hazards based on best available science to include flooding, sea level rise and land subsidence, tropical and coastal storms, and shoreline erosion.

VA DCR looks forward to working with you as you work to make Fairfax County a more resilient community. If you have questions or need additional assistance, please contact us at cfpf@dcr.virginia.gov. Again, thank you for your interest in the Community Flood Preparedness Fund.

Sincerely,

Wendy Howard Cooper

Good afternoon,

Fairfax County is pleased to submit the following five applications for grant round 3 of the Virginia Community Flood Preparedness Fund:

1. CID515525_FairfaxCounty_CFPF-1 Tucker Avenue Neighborhood Stormwater Improvement Project Application
2. CID515525_FairfaxCounty_CFPF-2 Chowan Avenue Stormwater Improvement Project Application
3. CID515525_FairfaxCounty_CFPF-3 Little Pimmit Run Tributary at Woodland Terrace Project Application
4. CID515525_FairfaxCounty_CFPF-4 Tripps Run at Barrett Road Flood Mitigation Project Application
5. CID515525_FairfaxCounty_CFPF-5 Regulated Floodplain Map Updates Study Application

The applications are available for download at the following Sharefile link: https://fairfaxcounty-ent.sharefile.com/d-s52b8f9fb46c444d8a5ecbe1f4ad3dd45

Please let me know if you are unable to download the applications or if you have any questions.

Thank you,

Catie Torgersen

_X_ **Project**

_____**Study**

NFIP/DCR Community Identification Number (CID) 515525

If a state or federally recognized Indian tribe, Name of tribe N/A

Name of Authorized Official: Bryan J. Hill, County Executive

Signature of Authorized Official: J Hill

Mailing Address (1): 12000 Government Center Parkway

Mailing Address (2): Suite 552

City: Fairfax **State:** VA **Zip:** 22035

Telephone Number: (703) 324-2531 **Cell Phone Number:** (___) N/A

Email Address: CEXBryanHill@fairfaxcounty.gov

Contact Person (If different from authorized official): Craig Carinci

Mailing Address (1): 12000 Government Center Parkway

Mailing Address (2): Suite 449

City: Fairfax **State:** VA **Zip:** 22035

Telephone Number: (703) 324-5500 **Cell Phone Number:** (____) N/A

Email Address: Craig.Carinci@fairfaxcounty.gov

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes ____ No X

Categories (select applicable project):

Project Grants (Check All that Apply)

- ☒ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- ☐ Wetland restoration.
- ☐ Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- ☐ Living shorelines and vegetated buffers.
- ☒ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☒ Storm water system upgrades.
- ☐ Medium and large scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☒ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Study Grants (Check All that Apply)

☐ Studies to aid in updating floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.

☐ Revising other land use ordinances to incorporate flood protection and mitigation goals, standards and practices.

☐ Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA). For example, a local government might conduct a hydrologic and hydraulic study for an area that had not been studied because the watershed is less than one square mile. Modeling the floodplain in an area that has numerous letters of map change that suggest the current map might not be fully accurate or doing a detailed flood study for an A Zone is another example.

☐ Studies and Data Collection of Statewide and Regional Significance.

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard.

☐ Other relevant flood prevention and protection project or study.

Capacity Building and Planning Grants

☐ Floodplain Staff Capacity.

☐ Resilience Plan Development

  ☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.

  ☐ Resource assessments, planning, strategies and development.
    - Policy management and/or development.
    - Stakeholder engagement and strategies.

Executive Summary

Fairfax County is applying for grant assistance under the Virginia Department of Conservation and Recreation (DCR) Community Flood Preparedness Fund (CFPF) Round 3 'Project' category to help mitigate flooding at the North Albemarle Street and Chesterbrook Road intersection in McLean within the Dranesville Magisterial District. The project, *Little Pimmit Run Tributary at Woodland Terrace*, is focused on upgrading the inadequate storm drainage system at the intersection and stabilizing the eroding stream channel immediately upstream.

DCR approved the County's Resilience Plan on January 10, 2022. The County has integrated flood mitigation and resilience goals across areas of the local government, with flood resilience a priority addressed holistically through watershed and countywide comprehensive planning. The County has established requirements for development controls in the floodplain through zoning and the local floodplain ordinance. In order to address recent repetitive floodings, the County is in the process of preparing a draft flood risk reduction plan. The County is also developing a comprehensive regulated floodplain map to assess and implement future projects.

The proposed project addresses the community concerns and supports resilience goals by addressing the entire watershed drainage problem within the project area.

A. Scope of Work Narrative

1. Project Information

Little Pimmit Run Tributary at Woodland Terrace stream restoration project is located near the Chesterbrook Woods, Chesterbrook Hills, and the Chesterbrook Mews neighborhoods in Fairfax County. These neighborhoods were built prior to many stormwater management requirements and contain little infrastructure to adequately convey runoff from numerous residential lots and roadways. Cumulative stormwater management impacts from lot-by-lot residential infill development continue to impact the drainage area. Flow in the project area drains through an eroded stream channel into an undersized single culvert at the North Albemarle Street and Chesterbrook Road intersection (Map 1 and Map 2). Sediment from the unstable stream channel enters the drainage system and partially blocks the culvert, thereby further reducing the capacity of the system.

Population

Fairfax County has a population of about 1.17 million. The proposed project is in the Dranesville Magisterial District in McLean. The project impacts approximately 25 single family homes and thousands of people that pass through the Chesterbrook Road and North Albemarle Street intersection daily.

Historic Flooding Data and Hydrologic Studies

The project area has recorded multiple events of flooding in the past, most recently on July 8, 2019. Figure 1 below shows the reported storm drainage issues in the project drainage shed. One home has reported at least two instances of structural flooding including the July 8, 2019, event.

Local Government Cost Share

Construction of the project is identified in the County's FY24 stormwater capital improvement plan (CIP). It is currently anticipated that the County's cost-share would be provided through Regulatory Program Support under Fund 40100 Stormwater Services in the Fairfax County Fiscal Year 2024 budget (see Attachment 1 for the County's stormwater CIP plan and County budget document).

County Floodplain Management Regulations

Fairfax County, CID #515525, is listed in FEMA's Community Status Book Report as a community participating in the National Flood Insurance Program (NFIP). In addition, Fairfax County participates in the Community Rating System (CRS) and received a Class 6 rating in the most recent verification process (Figure 2). Floodplains are regulated under article 5104 of the county's Zoning Ordinance. The Zoning Ordinance is included in the link below:
https://online.encodeplus.com/regs/fairfaxcounty-va/doc-viewer.aspx#secid-462

Fairfax County regulates proposed uses and disturbances in the 100-year flood inundation area associated with all channels or conveyance systems that have a contributing drainage area of 70 acres or more. Currently, existing floodplain boundaries and water surface elevations are available from several sources and a significant portion of regulated floodplain is not mapped. A separate effort to develop a comprehensive regulated floodplain map is currently underway.

Based on the 2010 mapping of the Special Flood Hazard Areas (SFHAs) by FEMA, the floodplain immediately downstream of the project area is classified as SFHA Zone-A.

Project Priority

Flood Damage and Repetitive Loss Properties

This project was prioritized in the district due to numerous structural and yard flooding complaints, as well as channel erosion complaints. Residences in the project area were constructed in the 1950s prior to floodplain and stormwater management regulations. There is one property in this area outside of the FEMA mapped floodplain that has reported two instances of structural flooding and multiple homes that report erosion of the stream channel just upstream of the storm drain at the North Albemarle Street and Chesterbrook Road intersection. Photos of recent flooding are shown in Figure 1 below.

Project Area Structures and Critical Facilities

Chesterbrook Road is identified by the Virginia Department of Transportation (VDOT) as a "Major Collector" road that has an annual average daily traffic volume estimate of 5,700 vehicles. The Chesterbrook Road and North Albemarle Street intersection regularly floods during rainstorms. During the July 8, 2019, event, the intersection was inundated with approximately 5 feet of water due to the drainage system being overwhelmed.

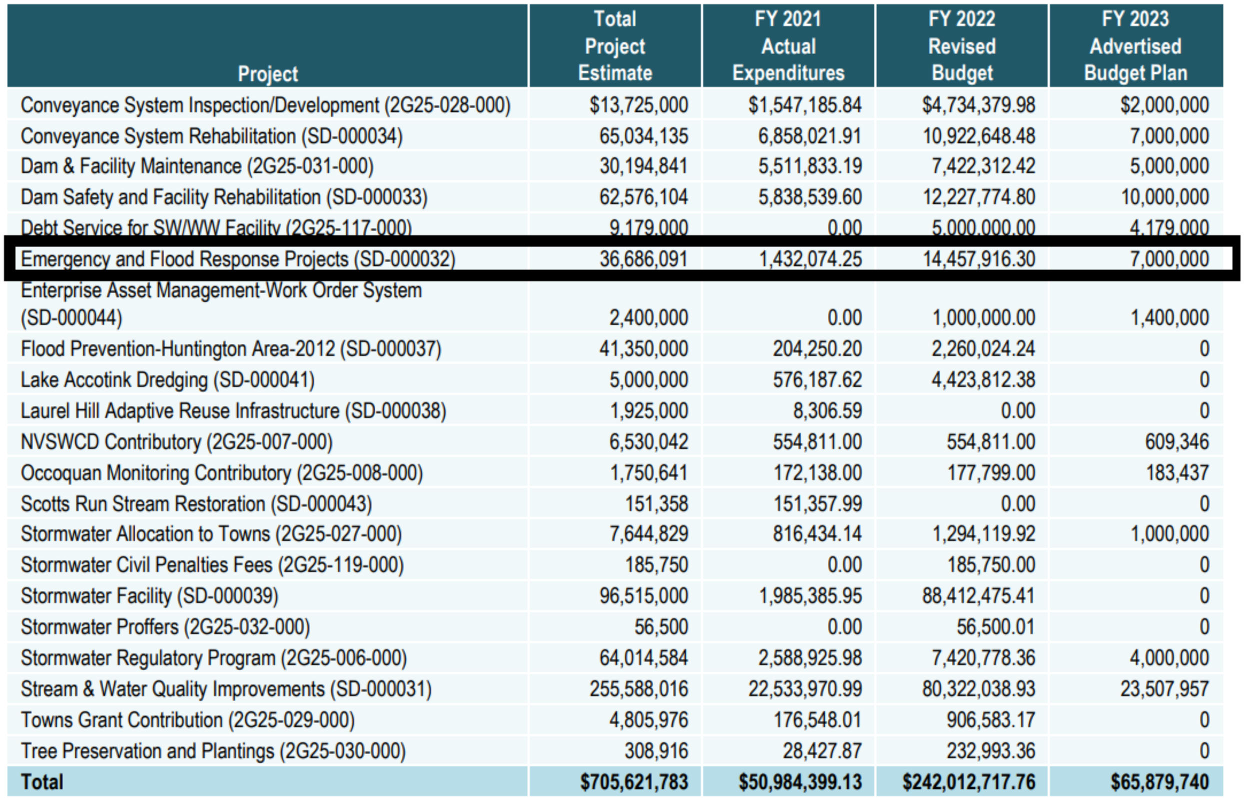
2. Need for Assistance

Financial and Staff Resources

The Stormwater Services Emergency and Flood Response Projects program supports flood control projects for unanticipated flooding events that impact storm systems and structural flooding. The program provides annual funding for scoping, design, and construction activities related to flood mitigation projects. Fairfax County's advertised Fiscal Year 2023 Stormwater Services budget includes $7.0 million for emergency and flood response projects, but there is an estimated total cost of $36.7 million for active flood mitigation projects (see Figure 3). With the increase in the frequency and intensity of storms due to climate change, we expect the number of flood mitigation projects to grow, and the associated project design and construction costs will extend well beyond what the county's current emergency and flood response program can support.

Figure 3. Fiscal Year 2023 Advertised Budget- Stormwater Services Summary of Capital Projects



Project	Total Project Estimate	FY 2021 Actual Expenditures	FY 2022 Revised Budget	FY 2023 Advertised Budget Plan
Conveyance System Inspection/Development (2G25-028-000)	$13,725,000	$1,547,185.84	$4,734,379.98	$2,000,000
Conveyance System Rehabilitation (SD-000034)	65,034,135	6,858,021.91	10,922,648.48	7,000,000
Dam & Facility Maintenance (2G25-031-000)	30,194,841	5,511,833.19	7,422,312.42	5,000,000
Dam Safety and Facility Rehabilitation (SD-000033)	62,576,104	5,838,539.60	12,227,774.80	10,000,000

Total	**$705,621,783**	**$50,984,399.13**	**$242,012,717.76**	**$65,879,740**

Low Income Geographic Areas

The project does not fall in a low-income geographic area.

Vulnerability Index

Based on the Vulnerability Index Map (Attachment 8), the project is not in a socially vulnerable area.

Alternatives

The project is a hybrid solution.

3. Goals and Objectives

The following are the primary goals and objectives of the project:

- Improve the drainage system and reduce localized flooding and erosion by designing an adequate drainage system as defined in the County codes and Public Facilities Manual. The design will evaluate the cumulative increases in runoff from infill development based on existing and future buildout conditions.
- Address public safety concerns.
- Improve water quality and stream protection. Stormwater runoff from the drainage area to this unnamed tributary to Little Pimmit Run is causing the stream to erode and incise. Sediment

from the channel is settling in the downstream storm drainage system, thereby reducing the system's overall capacity. Pimmit Run is listed as impaired (does not meet water quality standards) by Virginia Department of Environmental Quality (DEQ).

- Use innovative, sustainable, and functional designs.
- Partner with VDOT and Fairfax County Department of Transportation to develop a sound, cost effective solution that can be collaboratively implemented and maintained.

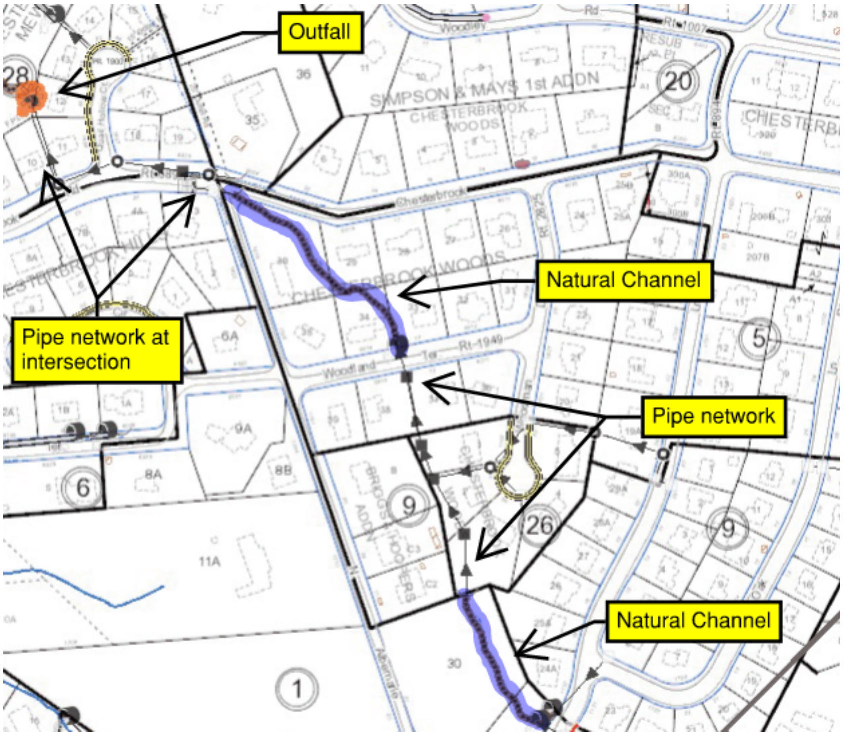
Project details, goals and objectives, and activities are also included in the following project website: https://www.fairfaxcounty.gov/publicworks/stormwater/plans-projects/little-pimmit-run-tributary-woodland-terrace-stream-restoration

4. Approach, Milestones, and Deliverables

The existing conveyance system in the project area, which serves a drainage area of approximately 63 acres, is limited (Map 3 below). This project will design a more resilient stormwater management conveyance system in the neighborhood. The existing storm drainage system at the intersection will be replaced with a significantly larger box culvert. The project will also restore up to 900 feet of eroded stream channel upstream of the intersection.

Typically, closed stormwater conveyance systems are designed to carry the 10-year flow. Due to repeated flooding in the intersection and the County's desire to integrate resiliency into the design, the closed conveyance system will be designed to accommodate up to the 100-year flow capacity within the system.

Map 3: Existing conveyance system



A final design for the project is currently in development. Coordination with utility companies is underway to relocate service lines within areas of conflicts. Upon grant approval, the project is anticipated to go to construction in Fiscal Year 2024. The construction is estimated to be completed in two years once the contractor has mobilized.

5. Relationship to Other Projects

Fairfax County's Pimmit Run Watershed Management Plan identified the area immediately downstream of this project for stream restoration. The Little Pimmit Run Tributary at Woodland Terrace project site was chosen due to the severe flooding that occurs at the intersection, but the project will also benefit the downstream stream restoration project (identified as PM9203). PM9203, located inside a FEMA Special Flood Hazard Area Zone A, is currently in design and will restore over 7,000 feet of degraded stream channel.

The Pimmit Run Watershed Management Plan can be found in the following link for the Middle Potomac Watershed Management Plan:
https://www.fairfaxcounty.gov/publicworks/stormwater/middle-potomac-watersheds

6. Maintenance Plan

Fairfax County has a dedicated maintenance program. The Maintenance and Stormwater Management Division (MSMD) maintains all public stormwater infrastructure and facilities, including stream restoration projects. Since this project will be constructed by the county, it will be maintained by MSMD. An official post construction maintenance plan will be developed during the final design phase of the project.

Scoring Criteria

Appendix B is completed and included in the Appendix section at the end of this application.

1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these or a recognized state or federal Indian tribe?
   The applicant (Fairfax County) is a local jurisdiction in the Commonwealth of Virginia

2. Does the local government have an approved resilience plan meeting the criteria as established by this grant manual? Has it been attached or a link provided?
   The County has an approved resilience plan (see Attachment 2)

3. For local governments that are not towns, cities, or counties, have letters of support been provided from affected local governments?
   This criterion is not applicable. The applicant is a local jurisdiction.

4. Has the applicant provided evidence of an ability to provide the required match funds?
   The project is included in the advertised Fiscal Year 2023 CIP for construction (see Attachment 1).

5. Has the applicant demonstrated to the extent possible, the positive impacts of the project or study on prevention of flooding?
   The main objective of this project is to reduce the flooding in the neighborhood. The project has been designed to provide resiliency in the closed system to handle the 100-year storm event. Green stormwater infrastructure has been proposed to provide water quality benefits and detention.

Completed Scoring Criteria Sheet Appendix B, C, D	Included in Appendices at the end of the application

B. Budget Narrative

1. Estimated Total Project Cost

The total project cost for design and construction is $4,279,000. The County has already funded $979,400 for the design, utilities relocation (except for water), and construction administration. $3,299,600 for the water line relocation and project construction remain unfunded.

Estimated total project cost: $4,279,000

Encumbered: $979,400
Design & Construction Administration: $689,000
Land Acquisition: $266,400
Utilities: $24,000

Un-encumbered: $3,299,600
FFX Water relocation: $200,000
Construction: $3,099,600

See Attachment 3 for the project encumbrances and Attachment 4 for the total project estimate.

2. Funds Requested

The County requests $2,567,000 from the Fund (60% of the total project cost). This is the total amount of any grant assistance sought from the Fund. 100% of this grant will be applied to the construction of the project.

3. Available Funds

Fairfax County already encumbered $979,400 for the design task order, land acquisition and utilities designation. The County currently has $732,600 available for the remaining construction and water line relocation cost. Additional funds for the cost-share are available in Regulatory Program Support under Fund 40100 Stormwater Services in the advertised Fairfax County Fiscal Year 2023 budget (Attachment 1).

See Attachment 5 for the Not In Package (NIP) item to the Board of Supervisors authorizing a request for funding through the grant program.

C. Conclusion

Fairfax County has many older neighborhoods which were built prior to current floodplain regulations. Due to the global influence of climate change, rainfall intensity has changed over time resulting in the flooding of more and more neighborhoods and roadways. The implementation of this project, where limited conveyance exists, will provide the greatest relief to the neighborhood. The project not only provides a resilient conveyance system, but also improves water quality for the drainage shed. Fairfax County is therefore requesting funding support for the implementation of the project to reduce flooding threats to the neighborhood.

Attachment 1

Fund 40100: Stormwater Services

Mission

To develop and maintain a comprehensive watershed and infrastructure management program to protect property, health, and safety; to enhance the quality of life; and to preserve and improve the environment for the benefit of the public. To plan, design, construct, operate, maintain, and inspect stormwater infrastructure; perform environmental assessments through coordinated stormwater and maintenance programs in compliance with all government regulations utilizing innovative techniques, customer feedback and program review; and to be responsive and sensitive to the needs of the residents, customers, and public partners.

Focus

Stormwater Services are essential to protect public safety, preserve property values and support environmental mandates such as those aimed at protecting the Chesapeake Bay and the water quality of other local jurisdictional waterways. Projects in this fund include repairs to stormwater infrastructure, measures to improve water quality such as stream stabilization, rehabilitation, safety upgrades of state regulated dams, repair and rehabilitation of underground pipe systems, surface channels, flood mitigation, site retrofits and best management practices (BMP), and other stormwater improvements.

The Board of Supervisors approved a special service district to support the Stormwater Management Program as part of the FY 2010 Adopted Budget Plan. This service district provides a dedicated funding source for both operating and capital project requirements by levying a service rate per $100 of assessed real estate value, as authorized by Code of Virginia Ann. Sections 15.2-2400. Since FY 2010, staff has made significant progress in the implementation of watershed master plans, public outreach efforts, stormwater monitoring activities, water quality and flood mitigation project implementation and operational maintenance programs related to existing storm drainage infrastructure including stormwater conveyance, and regulatory requirements.

A rate of $0.0400 per $100 of assessed value has been estimated to be required to fully support the stormwater program in the future; however, staff is currently evaluating the long-term requirements for the program to address the growth in inventory and other community needs. Some of the additional community needs under evaluation include debt service to support the Board's approval of the dredging of Lake Accotink, the anticipation of additional flood mitigation requirements, and strengthening the role and financial support for the implementation of stormwater requirements associated with Fairfax County Public Schools sites under renovation. This enhanced program may require incremental changes to the rate over time and may result in a higher rate to fully support the program. Staff continues to evaluate these requirements, as well as the staffing to support them, and analyze the impact of increased real estate values and revenue projections.

One of the recent initiatives being funded by the Stormwater Fund is the new Public Works complex which will consolidate functions and operations and maximize efficiencies between the Stormwater and Wastewater Divisions. Stormwater operations are currently conducted from various locations throughout the County, and a new colocation of both Stormwater and Wastewater staff will provide efficiencies and sharing of resources. Another initiative in progress is the planned dredging of Lake Accotink. Lake Accotink is a 55-acre lake surrounded by managed conservation areas, wetlands, deciduous and evergreen forests, and historic and prehistoric sites. Over 300,000 patrons visit the park annually to enjoy a variety of facilities and activities that vary with the season. Sediment from the upstream areas of the watershed has continued to be deposited in Lake Accotink over the years filling in the lake and limiting recreational use. Estimates for the cost of dredging including sediment disposal are still under review. Staff has identified the option of a low interest loan via the Virginia Clean Water Revolving Loan Fund (VCWRLF) as the preferred funding mechanism to fund the dredging project costs. The Stormwater fund will pay the future debt costs.

While staff continues to further evaluate the impact of recent initiatives and the long-term requirements for the Stormwater Program, the FY 2023 rate will remain the same as the FY 2022 Adopted Budget Plan level of $0.0325 per $100 of assessed value. However, based on capital project costs and projected revenues, it is anticipated that in the next several years, incremental rate increases will be required based on continued growth of stormwater facilities and infrastructure that must be inspected and maintained by the County, the implementation of flood mitigation projects, and additional requirements in the forthcoming Municipal Separate Storm Sewer System (MS4) Permit. On an annual basis, staff will continue to evaluate the program, analyze future requirements, and develop Stormwater operational and capital resource needs.

The FY 2023 levy of $0.0325 will generate $94,393,055, supporting $27,113,315 for staff and operational costs; $65,879,740 for capital project implementation including, infrastructure reinvestment, regulatory requirements, dam safety, and contributory funding requirements; and $1,400,000 transferred to the General Fund to partially offset central support services such as Human Resources, Purchasing, Budget and other administrative services supported by the General Fund, which benefit this fund.

Stormwater Services Operational Support

Stormwater Services operational support includes funding for staff salaries, Fringe Benefits, and Operating Expenses for all stormwater operations. In addition, Fund 40100 includes positions related to transportation operations maintenance provided by the Maintenance and Stormwater Management Division. Beginning in FY 2023, all funding for the transportation related salary expenses and equipment previously supported by Agency 87, Unclassified Administrative Expenses - Public Works Programs will be supported by capital projects in Fund 30010, General Construction and Contributions, as they do not qualify for expenses related to the stormwater service district. The transfer of funding to Fund 30010, General Construction and Contributions, will provide more transparency and the carryforward of balances at year-end.

Fund 40100 also supports the Urban Forestry Management Division (UFMD). The UFMD was established to mitigate tree loss and maximize tree planting during land development, enforce tree conservation requirements and monitor and suppress populations of Gypsy Moth, Emerald Ash Borer, and other forest pests. The division also implements programs needed to sustain the rich level of environmental, ecological, and socio-economic services provided by the County's tree canopy. The UFMD is aligned with the mission of Stormwater Services as it strives to "improve water quality and stormwater management through tree conservation." Tree canopy and forest soils function to mitigate significant levels of water pollution and stormwater runoff.

FY 2023 Stormwater Capital Project Support

Conveyance System Inspections, Development and Rehabilitation

The County owns and operates approximately 1,500 miles of underground stormwater pipes and improved channels with an estimated replacement value of over one billion dollars. The County

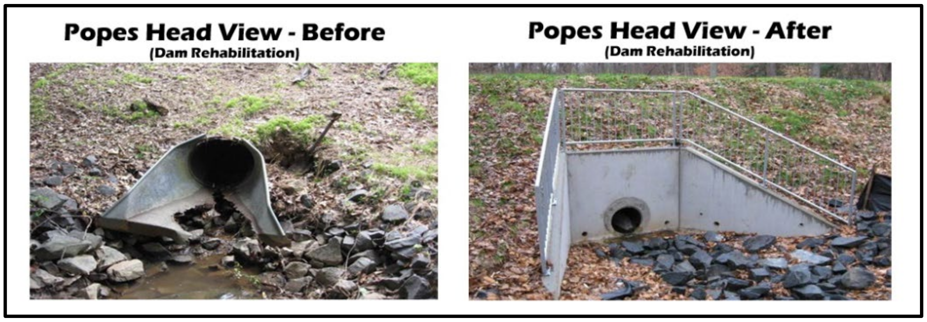
Barnack Drive – Before
(Outfall Restoration)

Barnack Drive – After
(Outfall Restoration)

began performing internal inspections of the pipes in FY 2006. The initial results showed that approximately 5 percent of the pipes exhibit conditions of failure, and an additional 5 percent required maintenance or repair. MS4 Permit regulations require inspection and maintenance of these 1,500 miles of existing conveyance systems, 69,000 stormwater structures, and a portion of the immediate downstream channel at the 7,000 regulated pipe outlets. Acceptable industry standards indicate that one dollar reinvested in infrastructure saves seven dollars in the asset's life and 70 dollars if asset failure occurs. Once the initial internal inspections are complete, the goal of this program is to inspect pipes on a 20-year cycle and rehabilitate pipes and improve outfall channels before total failure occurs. Total funding in the amount of $9.0 million is included for Conveyance System Inspections, Development and Rehabilitation in FY 2023, including $2.0 million for inspections and development and $7.0 million for rehabilitation and outfall restoration.

Dam Safety and Facility Rehabilitation

There are approximately 7,900 stormwater management facilities in service that range in size from small rain gardens to large state regulated flood control dams. The County is responsible for inspecting approximately 5,500 privately-owned facilities and maintaining over 2,400 County owned facilities. This inventory increases annually and is projected to continually increase as new development and redevelopment sites occur in the County. This initiative also includes the removal of sediment that occurs in both wet and dry stormwater management facilities to ensure that adequate capacity is maintained to treat the stormwater. The program results in approximately 50 projects annually that require design and construction management activities as well as contract management and maintenance responsibilities. This program maintains the structures and dams that control and treat the water flowing through County owned facilities. This program improves dam safety by supporting annual inspections of 20 state-regulated dams and the Huntington Levee and by developing Emergency Action Plans required by the state. The Emergency Action Plans are updated annually. In addition, these plans include annual emergency drills and exercises, and flood monitoring for each dam. Total funding in the amount of $15.0 million is included in FY 2023, including $5.0 million for maintenance and $10.0 million for rehabilitation.



Popes Head View - Before
(Dam Rehabilitation)

Popes Head View - After
(Dam Rehabilitation)

Stormwater/Wastewater Facility

This project will provide funding for a Stormwater/Wastewater Facility which will consolidate functions and operations and maximize efficiencies between the Stormwater and Wastewater Divisions. Currently, Stormwater operations are conducted from various locations throughout the County, with the majority of staff located at the West Drive facility. Facilities for field maintenance operations and for field/office-based staff are inadequate and outdated for the increased scope of the stormwater program, and inadequate to accommodate future operations. This project is currently in design with construction anticipated to begin in early 2022. The facility is financed by EDA bonds with the Stormwater Services Fund and Wastewater Fund supporting the debt service. Funding in the amount of $4.2 million is included in FY 2023 to support the second year of debt service for the Stormwater/Wastewater Facility.

Emergency and Flood Response Projects
This program supports flood control projects for unanticipated flooding events that impact storm systems and structural flooding. The program provides annual funding for scoping, design, and construction activities related to flood mitigation projects. Funding in the amount of $7.0 million is included for the Emergency and Flood Response Projects in FY 2023.

Enterprise Asset Management-Work Order System
This project will provide funding for the transition from an Enterprise Asset Management (EAM) system to a more functional Asset Management Program (AMP). This funding will support the acquisition of software, servers and consultant services to migrate asset management and related work order management into the new system. The current system tracks assets, inspections, daily work management and associated contractor costs. Features of the replacement system include geographic information system (GIS) integration and field mobility. The Department of Public Works and Environmental Services (DPWES) Information Technology staff have collaborated with the Stormwater Management and the Wastewater Management staff to promote interagency capabilities, optimize performance, and improve system lifecycle management for the new system. This new system will meet the future expectations for both divisions and optimize service delivery for DPWES. Funding in the amount of $1.4 million is included in Capital Projects and an amount of $800,000 is included in Operating Expenses for this project in FY 2023.

Stormwater-Related Contributory Program
Contributory funds are provided to the Northern Virginia Soil and Water Conservation District (NVSWCD) and the Occoquan Watershed Monitoring Program (OWMP). The NVSWCD is an independent subdivision of the Commonwealth of Virginia that provides leadership in the conservation and protection of Fairfax County's soil and water resources. It is governed by a five-member Board of Directors - three members are elected every four years by the voters of Fairfax County and two members are appointed by the Virginia Soil and Water Conservation Board. Accordingly, the work of NVSWCD supports many of the environmental goals established by the Board of Supervisors. The goal of the NVSWCD is to continue to improve the quality of the environment and general welfare of the citizens of Fairfax County by providing them with a means of dealing with soil, water conservation and related natural resource problems. It provides County agencies with comprehensive environmental evaluations for proposed land use changes with particular attention to the properties of soils, erosion potential, drainage, and the impact on the surrounding environment. NVSWCD has consistently been able to create partnerships and leverage state, federal and private resources to benefit natural resources protection in Fairfax County. FY 2023 funding of $0.6 million is included in Fund 40100 for the County contribution to the NVSWCD.

The OWMP and the Occoquan Watershed Monitoring Laboratory (OWML) were established to ensure that water quality is monitored and protected in the Occoquan Watershed. Given the many diverse uses of the land and water resources in the Occoquan Watershed (agriculture, urban residential development, commercial and industrial activity, water supply, and wastewater disposal), the OWMP plays a critical role as the unbiased interpreter of basin water quality information. FY 2023 funding of $0.2 million is included in Fund 40100 for the County contribution to the OWMP.

Stormwater Allocation to Towns
On April 18, 2012, the State Legislature passed SB 227, which entitles the Towns of Herndon and Vienna to all revenues collected within their boundaries by Fairfax County’s stormwater service district. An agreement was developed for a coordinated program whereby the Towns remain part of the County’s service district and the County returns 25 percent of the revenue collected from properties within each town. This allows for the Towns to provide services independently such as

maintenance and operation of stormwater pipes, manholes, and catch basins. The remaining 75 percent remains with the County and the County takes on the responsibility for the Towns' Chesapeake Bay Total Maximum Daily Load (TMDL) requirements as well as other TMDL and MS4 requirements. This provides for an approach that is based on watersheds rather than on jurisdictional lines. Funding in the amount of $1.0 million is included for the Stormwater Allocations to Towns project in FY 2023.

Regulatory Program

The County is required by federal law to operate under the conditions of a state issued MS4 Permit. Stormwater staff annually evaluates funding required to meet the increasing federal and state regulatory requirements pertaining to the MS4 Permit, and State and Federal mandates associated with controlling water pollution delivered to local streams and the Chesapeake Bay. The MS4 Permit allows the County to discharge stormwater from its stormwater systems into state and federal waters. The County currently owns and/or operates approximately 15,000 outfalls, and 7,000 of these outfalls are regulated outfalls governed by the permit. The current permit was issued to the County in April 2015 and expired in April 2020. The County is operating under an administrative continuance until a new permit is issued. The permit requires the County to document the stormwater management facility inventory, enhance public outreach and education efforts, increase water quality monitoring efforts, provide stormwater management and stormwater control training to all appropriate County employees. The permit requires the County to implement sufficient stormwater projects that will reduce the nutrients and sediment to comply with the Chesapeake Bay and local stream TMDL requirements. Funding in the amount of $4.0 million is included for the Stormwater Regulatory Program in FY 2023.

Stream and Water Quality Improvements

This program funds water quality improvement projects necessary to mitigate the impacts to local streams and the Chesapeake Bay resulting from urban stormwater runoff. This includes water quality projects such as construction and retrofit of stormwater management ponds, implementation of green stormwater infrastructure facilities, stream restoration, and water quality projects identified in the completed Countywide Watershed Management Plans. These projects will aid in the reduction of pollutants and improve water quality in county streams that are considered to be in fair to very poor condition and likely do not meet CWA water quality standards. In addition, Total Maximum Daily Load (TMDL) requirements for local streams and the Chesapeake Bay are the regulatory drivers by which pollutants entering impaired water bodies must be reduced. The Chesapeake Bay TMDL was established by the EPA and requires that MS4 communities as well as other dischargers implement measures to significantly reduce the nitrogen, phosphorous and sediment loads in waters that drain to the Chesapeake Bay by 2025. MS4 Permit holders must achieve 35 percent of the required reductions within the current five-year permit cycle and 60 percent of the required reductions in the

next five-year permit cycle. In addition, compliance with the Chesapeake Bay TMDL requires that the County undertake construction of new stormwater facilities and retrofit existing facilities and properties. The EPA continually updates the Chesapeake Bay compliance targets and credits. It is anticipated that the changes to the assigned targets as well as how projects are credited will likely impact future compliance requirements. In addition to being required to meet the Chesapeake Bay TMDL targets, the current MS4 Permit requires the County to develop and implement action plans to address local impairments. Most of the 1,900 watershed management plan projects contribute toward achieving the Chesapeake Bay and local stream TMDL requirements. Funding in the amount of $23.5 million is included for Stream and Water Quality Improvements in FY 2023.

FY 2023 Funding Adjustments

The following funding adjustments from the FY 2022 Adopted Budget Plan are necessary to support the FY 2023 program:

Employee Compensation **$1,214,199**

An increase of $ 1,214,199 in Personnel Services includes $850,684 for a 4.01 percent market rate adjustment (MRA) for all employees and $363,515 for performance-based and longevity increases for non-uniformed merit employees, both effective July 2022.

Other Post-Employment Benefits	**($106,403)**

A decrease of $106,403 in Personnel Services reflects required adjustments associated with providing Other Post-Employment Benefits (OPEBs) to retirees, including the Retiree Health Benefits Subsidy. For more information on Other Post-Employment Benefits, please refer to Fund 73030, OPEB Trust, in Volume 2 of the FY 2023 Advertised Budget Plan.

New Positions	**$885,195**

An increase of $885,195 including Personnel Services of $857,195 and Operating Expenses of $28,000 is necessary to fund requirements associated with 8/8.0 FTE new positions, including 1/1.0 Engineering Technician III, 1/1.0 FTE Planner III, 1/1.0 FTE Project Manager I, 1/1.0 FTE Senior Engineering Inspector, 1/1.0 FTE Senior Engineer III, and 3/3.0 FTE Senior Maintenance Workers. The Engineering Technician III position will support address the increased workload of permit required pond inspections and maintenance. The Planner III position will review and provide needed stormwater expertise, advanced technical analysis, support and recommendations on planning and development efforts during planning, pre-zoning and rezoning processes. The Project Manager I position will support the Tree Preservation and Planting Program and manage projects that support the tree planting goals of Virginia's Final Phase III Watershed Implementation Plan. The projects will be geared towards increasing tree canopy through street and landscape tree plantings, afforestation and reforestation, and assisting with outreach and education programs. The Senior Engineering Inspector position will be responsible for reviewing erosion and sediment control plans, reviewing project designs, understanding job specifications, inspecting County stormwater infrastructure, updating work orders and keeping a daily log of work performed on construction sites. The Senior Engineer III position will initiate flood mitigation projects, coordinate with property owners to address their flooding concerns, and execute flood mitigation project design and implementation services. The three Senior Maintenance Worker positions will form an additional crew that will be deployed into the field to perform maintenance on the storm drainage system throughout the County.

Asset Management Program	**$800,000**

An increase of $800,000 in Operating Expenses will support a new Asset Management Program (AMP). Funding will support the acquisition of software, servers, and consultant services to migrate asset management and related work order management into the new system. This new system will meet the future expectations for both Stormwater and Wastewater divisions and optimize service delivery for the Department of Public Works and Environmental Services.

Capital Equipment	**($130,000)**

Funding of $652,000 in Capital Equipment, a decrease of $130,000 from the FY 2022 Adopted Budget Plan, is included primarily associated with replacement equipment that has outlived its useful life and is critical to stormwater services activities. Replacement equipment includes: $390,000 to replace two dump trucks that support all maintenance and emergency response programs and $40,000 to replace three equipment trailers that support all maintenance and emergency response programs in transporting construction materials, light duty and snow removal equipment. New equipment includes $222,000 for the purchase of three new pickup trucks and one new utility truck to support the new positions in FY 2023.

Capital Projects	**$4,279,326**

Funding of $65,879,740 in Capital Projects, an increase of $4,279,326 from the FY 2022 Adopted Budget Plan, has been included in FY 2023 for priority stormwater capital projects.

Changes to FY 2022 Adopted Budget Plan

The following funding adjustments reflect all approved changes in the FY 2022 Revised Budget Plan since passage of the FY 2022 Adopted Budget Plan. Included are all adjustments made as part of the FY 2021 Carryover Review, FY 2022 Mid-Year Review, and all other approved changes through December 31, 2021:

Carryover Adjustments **$182,312,873**

As part of the *FY 2021 Carryover Review*, the Board of Supervisors approved funding of $182,312,873 based on the carryover of unexpended project balances in the amount of $179,413,809 and a net adjustment of $2,899,064. This adjustment includes the carryover of $1,312,110 in operating and capital equipment encumbrances, an increase of $197,626 to Personnel Services to support a one-time compensation adjustment of $1,000 for merit employees and $500 for non-merit employees to be paid no later than November 2021, and an increase to capital projects of $1,389,328. The adjustment to capital projects is based on the appropriation of the remaining operational savings of $783,662, higher than anticipated revenues of $304,634, revenues of $203,600 collected through the land development process that will support tree preservation and planting projects in FY 2022, revenues of $44,841 associated with dam and facility maintenance projects, miscellaneous revenues in the amount of $45,652, and the appropriation of $6,939 from the ending balance that was due to an FY 2021 audit adjustment.

Mid-Year Adjustments **($1,555)**

As part of the *FY 2022 Mid-Year Review*, the Board of Supervisors approved a decrease of $1,555 due to an FY 2021 audit adjustment.

Position Detail

The FY 2023 Advertised Budget Plan includes the following positions:

STORMWATER SERVICES – 208 Positions			
MSMD Administration (10 positions)			
1	Director, Maintenance and SW	1	Safety Analyst I
1	HR Generalist II	1	Administrative Assistant IV
1	HR Generalist I	4	Administrative Assistants III
1	Safety Analyst II		
IT – Director's Office/Stormwater (1 position)			
1	Network/Telecom. Analyst I		
Finance – Wastewater and Stormwater (4 positions)			
1	Financial Specialist IV	1	Financial Specialist I
1	Financial Specialist II	1	Administrative Assistant III

Performance Measurement Results

The objective to receive no MS4 Permit violations related to inspection and maintenance of public and private stormwater management facilities was met in FY 2019, FY 2020, and FY 2021. It is expected that this objective will also be met in FY 2022 and FY 2023. The objective to update 100 percent of the Stormwater emergency action plans was met in prior years. It is expected that this trend will continue in both FY 2022 and FY 2023. Lastly, the objective to keep 100 percent of the commuter facilities operational for 365 days was met in prior years. It is expected that this goal will be met in FY 2022 and FY 2023.

Indicator	FY 2019 Actual	FY 2020 Actual	FY 2021 Estimate	FY 2021 Actual	FY 2022 Estimate	FY 2023 Estimate
MS4 permit violations received	0	0	0	0	0	0
Percent of Emergency Action Plans current	100%	100%	100%	100%	100%	100%
Percent of commuter facilities available 365 days per year	100%	100%	100%	100%	100%	100%

Total Disbursements	**$75,723,088**	**$87,175,738**	**$269,097,778**	**$94,393,055**
Ending Balance[6,7]	**$90,244,247**	**$6,939**	**$0**	**$0**
Tax Rate Per $100 of Assessed Value	**$0.0325**	**$0.0325**	**$0.0325**	**$0.0325**

[1] In FY 2022, Economic Development Authority (EDA) Bonds were issued to support the construction of a Stormwater/Wastewater facility to consolidate functions and operations and maximize efficiencies between the Stormwater and Wastewater Divisions.

[2] Represents Virginia Department of Environmental Quality (VDEQ) Stormwater Local Assistance Fund (SLAF) grants which support stream and water quality improvement projects. An amount of $1,876,476 was received in FY 2021 and an amount of $3,596,793 is anticipated in FY 2022 and beyond.

[3] Reflects revenues collected through the land development process that will support tree preservation and planting projects in FY 2022.

[4] In order to account for revenues and expenditures in the proper fiscal year, audit adjustments were reflected as an increase of $1,555.35 to FY 2021 Personnel Services expenditures to record expenditure accruals and an increase of $389,278.17 to FY 2021 Capital Projects expenditures to record expenditure accruals. This impacted the amount carried forward resulting in a decrease of $389,278.17 to the *FY 2022 Revised Budget Plan*. The projects affected by this adjustment were 2G25-006-000, Stormwater Regulatory Program, SD-000031, Stream & Water Quality Improvements, and SD-000033, Dam Safety and Facility Rehabilitation. The Annual Comprehensive Financial Report (ACFR) reflects all audit adjustments in FY 2021. Details of the audit adjustments were found in Attachment VI of the *FY 2022 Mid-Year Review*.

[5] Funding in the amount of $1,400,000 is transferred to the General Fund to partially offset central support services supported by the General Fund, which benefit Fund 40100. These indirect costs include support services such as Human Resources, Purchasing, Budget and other administrative services.

[6] Capital projects are budgeted based on the total project costs. Most projects span multiple years, from design to construction completion. Therefore, funding for capital projects is carried forward each fiscal year, and ending balances fluctuate, reflecting the carryover of these funds.

[7] The FY 2022 Adopted Budget Plan ending balance of $6,939 was due to an adjustment made to FY 2020, and it was adjusted as part of the *FY 2021 Carryover Review*.

Attachment 1

Fund 40100: Stormwater Services

SUMMARY OF CAPITAL PROJECTS

Project	Total Project Estimate	FY 2021 Actual Expenditures	FY 2022 Revised Budget	FY 2023 Advertised Budget Plan
Conveyance System Inspection/Development (2G25-028-000)	$13,725,000	$1,547,185.84	$4,734,379.98	$2,000,000

RE: Fairfax County Resilience Plan Submission - CFPF

Dear Ms. Calmbacher,

Thank you for providing an overview of your Resilience Plan, and informing DCR of the various plans that Fairfax County will be utilizing to fulfill the Resilience Plan submission requirements. After careful review and consideration, the Virginia Department of Conservation and Recreation has deemed the Plan complete and meets all the criteria outlined in the 2021 Community Flood Preparedness Grant Manual. This approval will remain in effect for a period of three years, ending on January 11, 2025.

The following elements were evaluated as part of this review:

1. **Element 1: It is project-based with projects focused on flood control and resilience. DCR RESPONSE**

   Meets criteria as written.

   a. Project-based: Fairfax County is divided into 30 watersheds which have been addressed in 11 major watershed management plans. Each of the watershed management plans contains projects and watershed management area restoration strategies. The 2017 *Northern Virginia Hazard Mitigation Plan* was a regional effort involving nineteen counties, including Fairfax County, and outlines specific mitigation projects for each participating community in order to reduce vulnerability and exposure to future hazards, including flooding events. The *Fairfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management* contains projects at various locations throughout Fairfax County. The projects included and described in the *Fairfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management* align with the established *Comprehensive Plan* objectives. The *Resilient Critical*

Infrastructure Roadmap for Northern Virginia contains a database of resilience projects throughout northern Virginia, including Fairfax County.

2. **Element 2: It incorporates nature-based infrastructure to the maximum extent possible. DCR RESPONSE**

   Meets criteria as written.

   a. The 2020 R*egional Collaboration to Build Community Resilience in Northern Virginia* expanded upon *The Roadmap*, to include maximization of green infrastructure. Nature-based solutions are also presented in the *Fairfax County Watershed Management Plan* and the *Fairfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management*.

3. **Element 3: It includes considerations of all parts of a locality regardless of socioeconomics or race. DCR RESPONSE**

   Meets criteria as written.

   a. All parts of a locality: The *Northern Virginia Hazard Mitigation Plan* discusses the demographic and economic trends throughout the entirety of Fairfax County.

   b. Social vulnerability: The R*egional Collaboration to Build Community Resilience in Northern Virginia* presents a more comprehensive approach that includes an assessment of the socioeconomic impacts of infrastructure disruptions on vulnerable populations that will be taken into account as well as the socioeconomic benefits of infrastructure investment. This expanded upon objectives contained within *The Roadmap*, to ensure equitable access to resilient critical infrastructure.

   c. Demographic Analysis: Population and demographic characteristics outlined within the *Northern Virginia Hazard Mitigation Plan*. The *Fairfax County Comprehensive Plan* also looks at demographics and social factors and utilizes this information to support the Human Services section of the *Comprehensive Plan*.

4. **Element 4: It includes coordination with other local and inter-jurisdictional projects, plans, and activities and has a clearly articulated timeline or phasing for plan implementation. DCR RESPONSE**

   Meets criteria as written.

   a. Coordination with other local and inter-jurisdictional projects, plans and activities: <u>Objective 4: Strengthen Regional Resilience Through Innovative Partnerships, Programs, and Pilots</u> contained within *Resilient Critical Infrastructure Roadmap for Northern Virginia* focuses on coordination with local and inter-jurisdictional agencies and aligning strategies and programs. The *Comprehensive Plan for Fairfax County, Virginia* was adopted by the Board of Supervisors, Planning Commision, The Department of Planning and Zoning, and the Department of Transportation, and guides all of the plans presented in the Resilience Plan

Attachment 2

submission for Fairfax County. The *Northern Virginia Hazard Mitigation Plan* was a collaborative effort that was adopted by all impacted localities.

b. Clearly articulated timeline or phasing plan for implementation: Timeline for deliverables is presented within the R*egional Collaboration to Build Community Resilience in Northern Virginia*. Timeline presented within the F*airfax County FY 2022 - FY 2026 Capital Improvement Program, Stormwater Management*. Phased implementation plans presented in the *Fairfax County Watershed Management Plans*.

5. **Element 5: Is based on the best available science, and incorporates climate change, sea level rise, storm surge (where appropriate), and current flood maps.**

   Meets criteria as written.

   a. The 2018 *Resilient Critical Infrastructure Roadmap for Northern Virginia (Roadmap)* incorporates best available science and identifies actions to potentially decrease the severity of future consequences emanating from climate and extreme weather, to include sea level rise and storm surge. *Sea Level Rise: Impact on Northern Virginia* is an interactive story map and dashboard that was created in 2019 to convey the impact of sea level rise scenarios. The *Northern Virginia Hazard Mitigation Plan* includes analyses of natural hazards based on best available science to include flooding, sea level rise and land subsidence, tropical and coastal storms, and shoreline erosion.

VA DCR looks forward to working with you as you work to make Fairfax County a more resilient community. If you have questions or need additional assistance, please contact us at cfpf@dcr.virginia.gov. Again, thank you for your interest in the Community Flood Preparedness Fund.

Sincerely,

Wendy Howard Cooper

County of Fairfax, Virginia

MEMORANDUM

DATE: april 5, 2022

TO: Board of Supervisors

FROM: Bryan J. Hill
County Executive

SUBJECT: Department of Conservation and Recreation, Virginia Community Flood Preparedness Fund

The Virginia Community Flood Preparedness Fund (CFPF) was "established to provide support for regions and localities across Virginia, to reduce the impacts of flooding, including flooding driven by climate change." The Department of Conservation and Recreation (DCR) administers loans and grants from the CFPF to local governments. DCR has advertised that approximately $40,000,000 in matching CFPF funds is available this grant cycle. The minimum grant amount is $50,000 for project grants and $1,000 for study grants. Project grants will not be capped and final awards will be determined based on available funds following review by DCR. The grant amount per application will be determined based on scoring, amount requests from eligible applications, and available funds.

DCR is soliciting applications for flood prevention and protection project types including, but not limited to: i) nature-based solutions; ii) flood control solutions; and iii) preservation and creation of open space. DCR is also soliciting applications for the following study types including, but not limited to: i) floodplain ordinance revisions; ii) hydrologic and hydraulic floodplain studies with historic and predicted floods; iii) hydrologic and hydraulic floodplain studies to clarify or update FEMA Flood Insurance Rate Maps; and iv) studies and data collection of statewide and regional significance. Applications must be for discrete projects to be completed after the beginning of the application period and not later than three years from the date of an executed grant agreement or by an extension date approved by DCR. Applications for this grant cycle are due on April 8, 2022.

DCR will review applications and award grant assistance by category (project, study, and capacity building and planning) on a competitive scoring basis. Priority is given to applications that are in concert with local, state, and federal floodplain management standards, local resilience plans, and the Virginia Coastal Resilience Master Plan. Based on that ranking process, DCR will select and approve applications. The approved applications will be

Office of the County Executive
12000 Government Center Parkway, Suite 552
Fairfax, VA 22035-0066
703-324-2531, TTY 711, Fax 703-324-3956
www.fairfaxcounty.gov

forwarded to the Virginia Resources Authority for the execution of a grant agreement and funding.

For this grant cycle, Fairfax County (County) proposes submitting the following five applications:

Project/Study Title	Project/Study Estimate	Grant Amount Requested
1. Tucker Avenue Neighborhood Stormwater Improvements	$9,834,000	$5,900,000
2. Chowan Avenue Flood Mitigation	$2,000,000	$1,200,000
3. Little Pimmit Run Tributary at Woodland Terrace	$4,279,000	$2,567,000
4. Tripps Run at Barrett Road Flood Mitigation	$12,836,000	$8,985,200
5. County Regulated Floodplain Map Updates	$1,200,000	$600,000
Total	$30,149,000	$19,252,200

The County is under no financial obligation to apply for CFPF grants. If DCR selects one or more of these applications, the grant(s) will be presented to the Board of Supervisors for approval.

cc: Rachel Flynn, Deputy, County Executive
Christopher Herrington, Director, Department of Public Works and Environmental Services (DPWES)
Eleanor Ku Codding, Deputy Director DPWES, Stormwater and Wastewater Divisions

📍 The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 3/31/2022 at 1:44 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes ____ No X

Categories (select applicable project):

Project Grants (Check All that Apply)

- ☒ Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development.
- ☐ Wetland restoration.
- ☐ Floodplain restoration.
- ☐ Construction of swales and settling ponds.
- ☐ Living shorelines and vegetated buffers.
- ☒ Structural floodwalls, levees, berms, flood gates, structural conveyances.
- ☒ Storm water system upgrades.
- ☐ Medium and large scale Low Impact Development (LID) in urban areas.
- ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool.
- ☐ Dam restoration or removal.
- ☒ Stream bank restoration or stabilization.
- ☐ Restoration of floodplains to natural and beneficial function.
- ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.

Study Grants (Check All that Apply)

☐ Studies to aid in updating floodplain ordinances to maintain compliance with the NFIP or to incorporate higher standards that may reduce the risk of flood damage. This must include establishing processes for implementing the ordinance, including but not limited to, permitting, record retention, violations, and variances. This may include revising a floodplain ordinance when the community is getting new Flood Insurance Rate Maps (FIRMs), updating a floodplain ordinance to include floodplain setbacks or freeboard, or correcting issues identified in a Corrective Action Plan.

☐ Revising other land use ordinances to incorporate flood protection and mitigation goals, standards and practices.

☐ Conducting hydrologic and hydraulic studies of floodplains. Applicants who create new maps must apply for a Letter of Map Revision or a Physical Map Revision through the Federal Emergency Management Agency (FEMA). For example, a local government might conduct a hydrologic and hydraulic study for an area that had not been studied because the watershed is less than one square mile. Modeling the floodplain in an area that has numerous letters of map change that suggest the current map might not be fully accurate or doing a detailed flood study for an A Zone is another example.

☐ Studies and Data Collection of Statewide and Regional Significance.

☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard.

☐ Other relevant flood prevention and protection project or study.

Capacity Building and Planning Grants

☐ Floodplain Staff Capacity.

☐ Resilience Plan Development

  ☐ Revisions to existing resilience plans and modifications to existing comprehensive and hazard mitigation plans.

  ☐ Resource assessments, planning, strategies and development.
    - Policy management and/or development.
    - Stakeholder engagement and strategies.

Location of Project (Include Maps): Fairfax County Pimmit Run Watershed - North Albemarle St./Chesterbrook Rd. intersection

Appendix B: Scoring Criteria for Flood Prevention and Protection Projects

Virginia Department of Conservation and Recreation
Virginia Community Flood Preparedness Fund Grant Program

Applicant Name: Fairfax County

Eligibility Information

Criterion	Description	Check One
1. Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
2. Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?		
Yes	Eligible for consideration under all categories	X
No	Eligible for consideration for studies, capacity building, and planning only	
3. If the applicant is <u>not a town, city, or county</u>, are letters of support from all affected local governments included in this application?		
Yes	Eligible for consideration	
No	Not eligible for consideration	
4. Has this or any portion of this project been included in any application or program previously funded by the Department?		
Yes	Not eligible for consideration	
No	Eligible for consideration	X
5. Has the applicant provided evidence of an ability to provide the required matching funds?		
Yes	Eligible for consideration	X
No	Not eligible for consideration	
N/A	Match not required	

Project Eligible for Consideration	☒ **Yes** ☐ **No**
Applicant Name:	Fairfax County

Scoring Information

Criterion	**Point Value**	**Points Awarded**
6. Eligible Projects (Select all that apply)		
Projects may have components of both 1.a. and 1.b. below; however, only one category may be chosen. The category chosen must be the primary project in the application.		
1.a. Acquisition of property consistent with an overall comprehensive local or regional plan for purposes of allowing inundation, retreat, or acquisition of structures.	**50**	
☐ Wetland restoration, floodplain restoration ☐ Living shorelines and vegetated buffers. ☐ Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool ☐ Dam removal ☒ Stream bank restoration or stabilization. ☐ Restoration of floodplains to natural and beneficial function. ☐ Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.	**45**	X
1.b. any other nature-based approach	**40**	
All hybrid approaches whose end result is a nature-based solution	**35**	
All other projects	**25**	
7. Is the project area socially vulnerable? (Based on ADAPT VA's Social Vulnerability Index Score.)		
Very High Social Vulnerability (More than 1.5)	**15**	
High Social Vulnerability (1.0 to 1.5)	**12**	
Moderate Social Vulnerability (0.0 to 1.0)	**8**	
Low Social Vulnerability (-1.0 to 0.0)	**0**	
Very Low Social Vulnerability (Less than -1.0)	**0**	X
8. Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NFIP?		

Yes	**10**	
No	**0**	X
9. Is the proposed project in a low-income geographic area as defined in this manual?		
Yes	**10**	
No	**0**	X
10. Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and the Chesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices with a nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?		
Yes	**5**	X
No	**0**	
11. Does this project provide “community scale” benefits?		
Yes	**20**	X
No	**0**	
Total Points		70

Good afternoon,

Fairfax County is pleased to submit the following five applications for grant round 3 of the Virginia Community Flood Preparedness Fund:

1. CID515525_FairfaxCounty_CFPF-1 Tucker Avenue Neighborhood Stormwater Improvement Project Application
2. CID515525_FairfaxCounty_CFPF-2 Chowan Avenue Stormwater Improvement Project Application
3. CID515525_FairfaxCounty_CFPF-3 Little Pimmit Run Tributary at Woodland Terrace Project Application
4. CID515525_FairfaxCounty_CFPF-4 Tripps Run at Barrett Road Flood Mitigation Project Application
5. CID515525_FairfaxCounty_CFPF-5 Regulated Floodplain Map Updates Study Application

The applications are available for download at the following Sharefile link: https://fairfaxcounty-ent.sharefile.com/d-s52b8f9fb46c444d8a5ecbe1f4ad3dd45

Please let me know if you are unable to download the applications or if you have any questions.

Thank you,

Executive Summary

The Fairfax County regulated floodplain mapping study will consolidate multiple flood hazard data sources into one comprehensive map for regulatory use, increase community flood risk awareness, and allow the County to integrate the impacts of climate change into its floodplain management program. To be able to complete the first phase of the study, the County is requesting 50% of the total cost of the project ($1,200,000) or $600,000. If the grant is awarded and the study moves forward, the County can develop preliminary HEC-RAS hydraulic models for 27 watersheds, approximately 757 stream miles (excluding the 56 stream miles that are currently being completed as part of the pilot), and advance the mapping of all floodplains 70 acres or greater in the County.

A. Scope of Work Narrative

Fairfax County regulates proposed uses and disturbances in the 100-year flood inundation area associated with open channel conveyance systems that have a contributing drainage area of 70 acres or more. The location of the base flood elevation (BFE) is required for demonstrating compliance with all applicable Federal, State, and County floodplain regulations.

There are three distinct types of regulated floodplains in Fairfax County:

- Minor floodplains include drainage areas between 70 acres and 360 acres.
- Major floodplains consist of drainage areas 360 acres or greater.
- Areas that are designated as floodplain by the National Flood Insurance Program (NFIP) are shown on the Flood Insurance Rate Maps (FIRMs) issued by the Federal Emergency Management Agency (FEMA) – generally, for areas 1 square mile (640 acres) or greater.

Currently, existing floodplain boundaries and water surface elevations are available from several sources and a significant portion of County regulated floodplain is not mapped. This missing or conflicting flood hazard data creates confusion during floodplain study development, review, and enforcement. Rather than having multiple sources for flood hazard data, the County plans to develop a comprehensive regulated floodplain map. The updated map and water surface elevations will be used to provide clear and consistent BFEs for proposed development in or adjacent to all regulated floodplains, increase community flood risk awareness, and allow for the incorporation of future climate projection conditions.

<u>Background</u>

Unlike FIRMs which are developed using existing land use conditions, major and minor floodplains developed by the County reflect ultimate (future) conditions. The County's floodplain ordinance requires that new and substantially improved existing dwellings located on parcels with floodplain must elevate the lowest part of the lowest floor of all living space, including basements, at least 18 inches above the applicable BFE for the property, and the dwellings must be at least 15 feet from the floodplain boundary. For development in the regulated floodplain, the floodplain water surface elevation must be computed to establish the actual floodplain boundary and a floodplain easement must typically be dedicated to the County.
