

Virginia Conservation Vision

Recreation Access Model: Terrestrial Recreation Score

The Virginia Recreation Access Model is a vector dataset that quantifies access to outdoor recreation opportunities in Virginia. The dataset contains 1.5-mile-diameter hexagons, with attributes quantifying access to parks, trails, boating, fishing, and swimming.

The "Terrestrial Recreation Score" is a composite score of terrestrial recreation access, based on status of regional parks, local parks, regional trails, and local trails relative to baseline benchmarks, as well as travel time to nearest terrestrial recreation resources.

Model date: March 2019
