Enter a description of the project for which you are applying to this funding opportunity

Project Description*:

This proposal requests funding for construction of a living shoreline that will include widening of the beach, heightening dunes, installation of plants and rock sills at Gloucester Point Beach Park in Gloucester County, to reduce flooding to this county-owned local and regional asset.

Low-income geographic area means any locality, or community within a locality, that has a median household income that is not greater than 80 percent of the local median household income, or any area in the Commonwealth designated as a qualified opportunity zone by the U.S. Secretary of the Treasury via his delegation of authority to the Internal Revenue Service. A project of any size within a low-income geographic area will be considered.

Is the proposal in this application intended to benefit a low-income geographic area as defined above?

Benefit a low-income geographic area*: Yes

Information regarding your census block(s) can be found at [census.gov](https://www.census.gov)

Census Block(s) Where Project will Occur*: 1034

Is Project Located in an NFIP Participating Community?* Yes

Is Project Located in a Special Flood Hazard Area?* Yes

Flood Zone(s) (if applicable): VE

Flood Insurance Rate Map Number(s) (if applicable): 51073C0257F

Eligibility CFPF - Round 4 - Projects

Eligibility

Is the applicant a local government (including counties, cities, towns, municipal corporations, authorities, districts, commissions, or political subdivisions created by the General Assembly or pursuant to the Constitution or laws of the Commonwealth, or any combination of these)?

Local Government*: Yes
Yes - Eligible for consideration
No - Not eligible for consideration

Does the local government have an approved resilience plan and has provided a copy or link to the plan with this application?

Resilience Plan*: Yes
Yes - Eligible for consideration under all categories
No - Eligible for consideration for studies, capacity building, and planning only

If the applicant is not a town, city, or county, are letters of support from all affected local governments included in this application?

Letters of Support*: Yes
Yes - Eligible for consideration
No - Not eligible for consideration
N/A - Not applicable

Has this or any portion of this project been included in any application or program previously funded by the Department?

Previously Funded*: No
Yes - Not eligible for consideration
No - Eligible for consideration

Has the applicant provided evidence of an ability to provide the required matching funds?

Evidence of Match Funds*: Yes
Yes - Eligible for consideration
No - Not eligible for consideration
N/A - Match not required

Scoring Criteria for Flood Prevention and Protection Projects - Round 4

Scoring

Category Scoring:

Hold CTRL to select multiple options

Project Category*: Any other nature-based approach

Is the project area socially vulnerable? (based on [ADAPT Virginia's Social Vulnerability Index Score](#))

Social Vulnerability Scoring:

Very High Social Vulnerability (More than 1.5)

High Social Vulnerability (1.0 to 1.5)

Moderate Social Vulnerability (0.0 to 1.0)

Low Social Vulnerability (-1.0 to 0.0)

Very Low Social Vulnerability (Less than -1.0)

Socially Vulnerable*: Low Social Vulnerability (-1.0 to 0.0)

Is the proposed project part of an effort to join or remedy the community's probation or suspension from the NRP?

NFIP*: Yes

Is the proposed project in a low-income geographic area as defined below?

"Low-income geographic area" means any locality, or community within a locality, that has a median household income that is not greater than 80 percent of the local median household income, or any area in the Commonwealth designated as a qualified opportunity zone by the U.S. Secretary of the Treasury via his delegation of authority to the Internal Revenue Service. A project of any size within a low-income geographic area will be considered.

Low-Income Geographic Area*: Yes

Projects eligible for funding may also reduce nutrient and sediment pollution to local waters and the Chesapeake Bay and assist the Commonwealth in achieving local and/or Chesapeake Bay TMDLs. Does the proposed project include implementation of one or more best management practices with a nitrogen, phosphorus, or sediment reduction efficiency established by the Virginia Department of Environmental Quality or the Chesapeake Bay Program Partnership in support of the Chesapeake Bay TMDL Phase III Watershed Implementation Plan?

Reduction of Nutrient and Sediment Pollution*: Yes

Does this project provide ?community scale? benefits?

Community Scale Benefits*: More than one census block

Expected Lifespan of Project

Expected Lifespan of Project*: Over 20 Years

Comments:

Projects will be designed to the 50-year FEMA flood level standard and the living shorelines are designed to adapt and migrate to changing flooding/sea level rise conditions. This ensures that the lifespan of the project.

Scope of Work - Projects - Round 4

Scope of Work

Upload your Scope of Work

Please refer to Part IV, Section B. of the grant manual for guidance on how to create your scope of work

Scope of Work*: [Glo. Point Beach Con_SCOPE OF WORK 11-8.pdf](#)

Comments:

Scope of Work for the project at the Gloucester Point Beach project.

Budget Narrative

Budget Narrative Attachment*: [Glo. Point Beach Con_BUDGET NARRATIVE.pdf](#)

Comments:

Budget for the project at the Gloucester Point Beach project.

Scope of Work Supporting Information - Projects

Supporting Information - Projects

Provide population data for the local government in which the project is taking place

Population*: 38711.00

Provide information on the flood risk of the project area, including whether the project is in a mapped floodplain, what flood zone it is in, and when it was last mapped. If the property or area around it has been flooded before, share information on the dates of past flood events and the amount of damage sustained

Historic Flooding data and Hydrologic Studies*: [Historic flooding data.pdf](#)

Include studies, data, reports that demonstrate the proposed project minimizes flood vulnerabilities and does not create flooding or increased flooding (adverse impact) to other properties

No Adverse Impact*: [No adverse impact.pdf](#)

Include supporting documents demonstrating the local government's ability to provide its share of the project costs. This must include an estimate of the total project cost, a description of the source of the funds being used, evidence of the local government's ability to pay for the project in full or quarterly prior to reimbursement, and a signed pledge agreement from each contributing organization

Ability to Provide Share of Cost*: [231108 DCR regional support letter from Gloucester.pdf](#)

A benefit-cost analysis must be submitted with the project application

Benefit-Cost Analysis*: [Benefit Analysis.pdf](#)

Provide a list of repetitive loss and/or severe repetitive loss properties. Do not provide the addresses for the properties, but include an exact number of repetitive loss and/or severe repetitive loss structures within the project area

Repetitive Loss and/or Severe Repetitive Loss Properties*: [RL and SRL properties.pdf](#)

Describe the residential and commercial structures impacted by this project, including how they contribute to the community such as historic, economic, or social value. Provide an exact number of residential structures and commercial structures in the project area

Residential and/or Commercial Structures*:

Gloucester Beach Point Park does not contain any residential structures. However, the site includes a County-owned and operated 2,000 square foot facility that provides public restrooms and showers, employee storage, and seasonal concession.

The Park also includes two boat landings that support commercial seafood activity, as well as a no-cost use fishing pier, which is believed to be a supplemental food source for many low-income families in the region.

If there are critical facilities/infrastructure within the project area, describe each facility

Critical Facilities/Infrastructure*:

Gloucester Beach Point Park is critical site for the county and region's water based recreational and commercial economies. Investing in a more resilient living shoreline system is a top priority step for protecting this valuable asset and ensuring it continues to provide direct, indirect and induced benefits to the county, region, and beyond.

Explain the local government's financial and staff resources. How many relevant staff members does the local government have? To what relevant software does the local government have access? What are the local government's capabilities?

Financial and Staff Resources*:

The Middle Peninsula Planning District Commission (MPPDC) is a political subdivision of the Commonwealth of Virginia formed under VA Code §15.2-4203 to provide solutions to problems of greater than local significance and cost-savings through economies of scale. The MPPDC serves nine localities of the Middle Peninsula including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, West Point, and Urbanna. MPPDC is staffed using multiple methods including co-operative procurement, hourly, and burdened staff. MPPDC staff consists of Executive Director, Deputy Director, Chief Financial Officer, Senior Project Planner, clerical support staff; co-operative procured Director of Planning, General Planner, Certified Flood Plain Manager, Transportation Planner, Emergency Planner; Hourly staff for Housing, Community Development Planner and Public relations. The PDC staffing team assists localities with long-term and/or regional planning efforts.

Gloucester County has planners, emergency managers, building officials, and engineers in the Flood Management Department. These staff will oversee the permitting process and attain all necessary permits for construction, procure a qualified contractor for construction, and oversee construction and ensure compliance with all grant terms and conditions.

The MPPDC manages annually 25-70 concurrent federal and state grants utilizing industry standard Grants Management Software. Staff utilize GIS and all Microsoft software as well as other software as required by different grants. The MPPDC operates service centers in the topical areas of coastal zone management, emergency planning, housing, transportation planning and transportation demand management, economic development, social assistance, small business development, general planning and technical assistance and other areas as determined by the Commission.

Gloucester County staff successfully administer these programs locally:
? Chesapeake Bay Preservation,

- ? Erosion and Sediment Control,
- ? Floodplain Management Plan,
- ? Hazard Mitigation Open Space Plan,
- ? Wetlands Protection, and
- ? National Flood Insurance Program's Community Ratings System.

Through the County's efforts, the CRS program provides a 20% discount to NFIP policies. The County aims to increase this discount higher in coming years.

Identify and describe the goals and objectives of the project. Include a description of the expected results of the completed project and explain the expected benefits of the project. This may include financial benefits, increased awareness, decreased risk, etc.

Goals and Objectives*:

Goal 1: Reduce flooding and sustain the use of the Gloucester Point Beach Park facility for continued, or increased, public access to local coastal waterways and recreational areas to the greatest extent.

Goal 1: Objective 1: Project Permitting (January 2024 - September 2024)

- Gloucester County staff will oversee the permitting process and attain all necessary permits for construction (DCR grant funds will not be utilized for this).
- VIMS Shoreline Studies Program, who developed the project design, will be contracted to provide assistance to Gloucester County staff regarding technical aspects of the project design and will provide modifications to the project design, as necessary.

Goal 1: Objective 2: Project Procurement (October 2024-December 2024)

- Gloucester County staff will procure a qualified contractor for construction of the permitted project (DCR grant funds will not be utilized for this).
- VIMS-SSP will provide assistance and guidance throughout the procurement stages of the project regarding technical aspects of the project design and will provide modifications to the project design, as necessary.

Goal 1: Objective 3: Living Shoreline Construction (January 2025-August 2025)

- Contract with Gloucester County for construction of the living shoreline, the widening of the beach and heightening of dunes and installation of plants and rock sills as permitted, and other grant related activities. DCR funds will be used for construction labor and materials. Gloucester County will oversee construction and ensure compliance with all grant terms and conditions.

Goal 1: Objective 4: Post construction monitoring of living shoreline

- MPPDC staff will contract with VIMS to conduct post-construction monitoring of the site by capturing ground and drone imagery.

Goal 2: support the local economy through increased tourism to the recreational site and enhanced accessibility for commercial users at the boat ramp.

The MPPDC expects the following results and benefits of the completed project:

1. Foster economic growth in the area over the useful life of site infrastructure and most likely, beyond.
2. Prevent loss of property without cementing an alternative.
3. Provide ecosystem services to the community toward increased quality of life.

Outline a plan of action laying out the scope and detail of how the proposed work will be accomplished with a timeline identifying expected completion dates. Determine milestones for the project that will be used to track progress. Explain what deliverables can be expected at each milestone, and what the final project deliverables will be. Identify other project partners

Approach, Milestones, and Deliverables*: [Approach Milestones and Deliverables.pdf](#)

Where applicable, briefly describe the relationship between this project and other past, current, or future resilience projects. If the applicant has received or applied for any other grants or loans, please identify those projects, and, if applicable, describe any problems that arose with meeting the obligations of the grant and how the obligations of this project will be met

Relationship to Other Projects*:

This project relates to Middle Peninsula regional resilience efforts. For more than 40 years, the Middle Peninsula Planning District Commission (MPPDC) and its participating localities have worked diligently on topics associated with the land water interface, including coastal use conflicts and policies, sea level rise, stormwater flooding, roadside ditch flooding, erosion, living shorelines, coastal storm hazards (e.g., hurricanes, tropical storms), riverine and coastal flooding, and coastal resiliency.

The proposed project is a priority project generated from the Middle Peninsula Regional Flood Resilience Plan, which was approved by DCR in August of 2021. This Flood Resiliency Plan serves as the MPPDC's guiding document for its flood resiliency programs and is comprised of two primary MPPDC-approved policy documents. These documents frame the foundation and implementation of the Middle Peninsula flood protection

approach and are indirectly and directly supported by specific regional planning documents each approved by federal, regional, and/or local partners as required by statute.

Other plans and resources integral to the implementation of the Flood Resiliency Plan include:

Long Term Planning

? Middle Peninsula All Hazard Mitigation Plan - FEMA and Middle Peninsula locality, approved 2021 (MPPDC Website)

o This overarching project provides updates every five years on the hazards within the region; it identifies the top hazards within the region and provides a HAZUS assessment that analyzes flooding (riverine and coastal), sea-level rise and hurricane storm surge impacts in the region.

Additionally, this plan lists strategies and objectives that guide member localities to mitigate these strategies.

? Middle Peninsula Comprehensive Economic Development Strategy ? MPPDC, approved June 2022

? Middle Peninsula VDOT Rural Long Range Transportation Plan ? MPPDC, approved annually

Short Term Implementation

? Middle Peninsula Planning District Commission Fight the Flood Program Design - MPPDC Commission, approved June 2020; Chairman approved update 8/6/21

? Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program - Virginia Revolving Loan Fund Program Design and Guidelines, approved 2015

The MPPDC has a history of continuous work on flooding and coastal resiliency topics, as described is the uploaded document titled "RELATION TO OTHER PROJECTS."

For ongoing projects or projects that will require future maintenance, such as infrastructure, flood warning and response systems, signs, websites, or flood risk applications, a maintenance, management, and monitoring plan for the projects must be provided

Maintenance Plan*: [MAINTENANCE PLAN.pdf](#)

Describe how the project meets each of the applicable scoring criteria contained in Appendix B. Documentation can be incorporated into the Scope of Work Narrative

Criteria*:

Scoring Criteria:

? Under Eligible Projects, this proposal scores 25 of the 30 points for floodplain restoration and living shorelines.

? Under Social Vulnerability Index Score, this proposal scores 0 out of 10 points for serving an area with a Low Social Vulnerability index.

? Under Community Scale of Benefits, this proposal scores 30 out of 30 points for serving more than one census block.

? Under Expected Lifespan of Project, this proposal scores 10 out of 10 points for providing mitigation with a lifespan of Over 20 Years.

? Under Remedy for NFIP probation or suspension, the proposal scores 0 out of 5 points.

? Under Low-income geographic area, the proposal scores 10 out of 10 points.

? Under implementing a Chesapeake Bay TMDL BMP, the proposal scores 5 out of 5 points.

The total score for this proposal is 80 out of 100 points.

Re: MPPDC Resilience Plan Second Submission - CFPF

Dear Mr. Lawrence:

Thank you for the resubmission of the Middle Peninsula Planning District Commission's (MPPDC) Regional Flood Resiliency Plan. After careful review and consideration, the Virginia Department of Conservation and Recreation has deemed the Plan meets the criteria outlined in the June 2021 Community Flood Preparedness Grant Manual. This approval will remain in effect for a period of three years, ending on August 20, 2024.

1. **Element 1: It is project-based with projects focused on flood control and resilience. VA-DCR RESPONSE:**
 - a. Meets criteria as written.
2. **Element 2: It incorporates nature-based infrastructure to the maximum extent possible. VA-DCR RESPONSE:**
 - a. Meets criteria as written.
3. **Element 3: It includes considerations of all parts of the local government regardless of socioeconomics or race. VA-DCR RESPONSE:**
 - a. Meets criteria as written.
 - i. The provided plan meets the requirements of Element 3 in Appendix G of the Grant Manual. However, flood data referenced in the MPPDC portrays the majority of flooding as coastal. As we discussed during our meeting with you on August 4, 2021, there are additional types of flooding in MPPDC localities. DCR recommends the commission develop a more comprehensive planning document(s) addressing the MPPDC's overarching approach to furthering flood resilience beyond shoreline protection in all nine member localities.

600 East Main Street, 24th Floor | Richmond, Virginia 23219 | 804-786-6124

*State Parks • Soil and Water Conservation • Outdoor Recreation Planning
Natural Heritage • Dam Safety and Floodplain Management • Land Conservation*

4. Element 4: It includes coordination with other local and inter-jurisdictional projects, plans, and activities and has a clearly articulated timeline or phasing for plan implementation. VA-DCR RESPONSE:

a. Meets criteria as written.

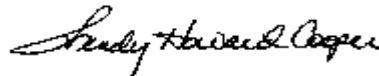

- i. DCR recognizes that both program designs make participation available to residents of all MPPDC member localities who have the ability to qualify, and that the individual program designs offer detailed breakdowns of the timeline and terms for loans disbursed pursuant to individual projects once accepted. This does not constitute a project-based timeline or phasing plan for addressing flooding resilience at the regional, locality, or community level. DCR recommends additional consideration be given to how all flooding, regardless of ability to pay, will be addressed in the MPPDC.

5. Element 5: Is based on the best available science, and incorporates climate change, sea level rise, storm surge (where appropriate), and current flood maps. VA-DCR RESPONSE:

a. Meets criteria as written.

VA DCR looks forward to working with the MPPDC in its efforts to develop a resilience plan that addresses flooding for its nine member communities.

Sincerely,

Wendy Howard Cooper, Director
Dam Safety and Floodplain Management

cc: Darryl M. Glover, DCR

Middle Peninsula Regional Flood Resiliency Plan

Resubmittal #3 8/6/21

Approved DCR 8/19/21 until 8/20/24

The Middle Peninsula is located on the western shore of the Chesapeake Bay, bound to the north by the Rappahannock River and to the south by the York River. As the region is in the Virginia coastal plain, it has a relatively flat topography with approximately 4,000 National Flood Insurance policies, approximately 415 repetitive loss and 30 severe repetitive loss structures, all of which are located along or near 1,000 miles of privately-owned shorelines generating necessary tax revenue to fund essential local governmental services. The southeastern portions of the region are located at or close to sea level, while elevation rises to approximately 200 feet above sea level moving in a northwesterly direction. Flooding is the most frequent and costly natural hazard in the United States as well as the Middle Peninsula. Since 1978 more than \$60,000,000 in Federal Flood Insurance losses have been paid due to all forms of flooding in the region.

Flooding impacts all socioeconomic groups (regardless of race, gender, age, ethnicity, diversity, or income). All land uses are subject to the destructive forces of water including, but not limited to residential, commercial, industrial, retail, agricultural, silvicultural, recreational, and publicly owned assets. All of the Middle Peninsula is subject to all types of flooding including but not limited to coastal, riverine, storm surge, inland, stormwater, flash flooding, groundwater, areal, ponding (pluvial), or urban.

The Middle Peninsula Planning District Commission (MPPDC) recognizes the need to better secure the tax base of coastal localities against the risk of flooding and the expectation to deliver essential governmental services, including public safety. All of which are more frequently challenged by coastal storms and recurrent flooding of all types. There is an unfortunate and eroding relationship between at-risk real estate values and funding of essential governmental services. Without proactive flood mitigation for coastal lands and structures, the rural coastal tax base will literally and figuratively erode into the Chesapeake Bay. Revenue will continue to decline with flood insurance claims, agricultural claims and uninsured costs will continue to increase.

In response to emerging flood challenges, the MPPDC Commission has authorized staff to develop the **Middle Peninsula Fight the Flood (FTF) Program** which leverages state and federal funding to deliver flood mitigation solutions directly to constituents, for both the built environment and the natural environment with an emphasis on nature-based flood mitigation solutions. The Middle Peninsula **Living Shoreline Resiliency Incentive Funding Program** has been the only structured program in the Commonwealth offering loan and grants to all qualified waterfront citizens and waterfront businesses since its establishment in 2015.

The Middle Peninsula **FTF** program helps property owners gain access to programs and services to better manage challenges posed by flood water.

The Middle Peninsula's Regional Flood Resiliency Plan is comprised of two primary approved policy documents which form the implementation and foundation of the Middle Peninsula flood protection approach and are indirectly and directly supported by multiple specific regional planning documents, both approved by various required federal, regional or local partners as required by statute. These documents contain the elements described in the DCR Virginia Community Flood Preparedness Fund to qualify as the region's Resiliency Plan.

Long Term Planning

- **Middle Peninsula All Hazard Mitigation Plan, FEMA and Middle Peninsula locality approved 2016 (MPPDC Website)**
- **Middle Peninsula Comprehensive Economic Development Strategy, MPPDC Approved March 2021 (MPPDC Website)**
- **Middle Peninsula VDOT Rural Long Range Transportation Plan - MPPDC Approved ~annually**

Short Term Implementation

- **Middle Peninsula Planning District Commission Fight the Flood Program Design MPPDC Commission approved June 2020 (Attached) Chairman approved 8/6/21 update**
- **Middle Peninsula Planning District Commission Living Shoreline Resiliency Incentive Funding Program-Virginia Revolving Loan Fund Program Design and Guidelines approved 2015 (Attached)**

These five documents contain the required elements described in the 2021 Grant manual for the Virginia Community Flood Preparedness Fund.

For applications made under the Virginia Community Flood Preparedness Fund and if grants and loans are made available, it is the policy of the MPPDC to provide such to qualified participants based on the terms and conditions associated with flood risk, as well as providing various grant and loan funds available to support the public purpose(s) for which the funds have been allocated. The program utilizes income guidelines for residential participation based on household income and ability to pay. Businesses will provide documentation such as profit and loss statement and/or other documentation of adequate business equity to collateralize the public investment). Grant/Loan awards, if available will be based on the program requirements of the source of the funds, if any. Unless otherwise dictated by the source of the grant funds, MPPDC will distribute grant funds on a sliding scale according to FEMA Flood insurance zones for any qualified resiliency project that meets the definition of a living shoreline found in § 28.2-104.1 of

the Code of Virginia and is designed to attenuate the impinging wave climate across the sill and marsh system during significant storm events. FEMA flood zone determination is based on the best available science recognized by FEMA. Unless prohibited by the funding source or type of project, at a minimum, project designs shall be designed to and based on site conditions identified within the locality FEMA Flood Insurance Study (FIS) which use statistical water levels, wave heights and fetch exposure.

FEMA FIS: A compilation and presentation of flood risk data for specific watercourses, lakes, and coastal flood hazard areas within a community. When a flood study is completed for the NFIP, the information and maps are assembled into an FIS. The FIS report contains detailed flood elevation data in flood profiles and data tables.

Projects funded must have a primary purpose of prevention or protection to reduce coastal, riverine or inland flooding and focus on:

Nature-based solutions: including but not limited to: wetland restoration, floodplain restoration, swales and settling ponds, living shorelines and vegetated buffers.

Additional flood control solutions: including, but not limited to: floodwalls, levees, berms, flood gates, structural conveyances and storm water systems.

Preservation and creation of open space: including property acquisition and relocation and the permanent conservation of lands identified as having flood resilience value by the Conserve Virginia Floodplain and Flooding Resilience layer or a similar data driven analytic tool.

Designs will be recognized and considered that are sourced to other qualified metrics which include:

- Appropriate company certification illustrating and documentation of
 - nature based solution and
 - flood control solutions including documentation of BMP approval for erosion control, water quality or flood protection.
- Designed and certified by a licensed professional who routinely designs projects for the flood mitigation space.

Designs shall take into consideration any additional requirements, such as required sea-level rise rates.

Unless prohibited or directed by the funding program, MPPDC has established grant funding thresholds based on flood risk established by FEMA.

Living Shoreline Resiliency Grant Limits

The DCR guidelines require that an approved plan shall meet the following criteria:

- It is project-based with projects focused on flood control and resilience. MPPDC YES
- It incorporates nature-based infrastructure in specific projects. MPPDC YES
- It includes considerations of all parts of a locality regardless of socioeconomics or race. MPPDC YES
- It includes coordination with other local and inter-jurisdictional projects, plans, and activities and has a clearly articulated timeline or phasing for plan implementation. MPPDC YES
- Is based on the best available science, and incorporates climate change, sea-level rise, and storm-surge (where appropriate), and current flood map MPPDC YES

The following MPPDC program designs for the Middle Peninsula Planning District Commission **Fight the Flood Program** and the **Living Shoreline Resiliency Incentive Funding Program** are the implementation structure for administering the expenditure of funding provided by the Virginia Community Flood Preparedness Fund

Middle Peninsula Planning District Commission
Fight the Flood Program
Program Design
MPPDC Commission Approved
6/24/20
Amended Per PDC Chairman 8/6/21
OVERVIEW

The Program Design for the Middle Peninsula Fight the Flood Program (FTF) outlines marketing strategies, loan application, review process, funds management, administration, and loan agreements with property and business owners. This document can be administratively reviewed with minor programmatic amendments subject to MPPDC Chairman approval. Significant programmatic changes require Commission approval.

Fight the Flood: Public Purpose Statement

The MPPDC Fight the Flood (FTF) program recognizes the need to better secure the tax base of coastal localities; the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types; and the relationship between at-risk waterfront real estate values and funding of

essential governmental services. The FTF program exists to help flood-prone property owners access programs and services to better manage challenges posed by flood water. When grants and loans are available, it is the policy of the MPPDC to provide such to qualified participants based on the terms and conditions associated with flood risk, as well as providing various grant and loan funds available to support the public purpose(s) for which the funds have been allocated.

The Fight the Flood program goals are to generate and facilitate community resiliency by addressing all types of flooding which impact all socioeconomic groups (regardless of race, gender, age, ethnicity, diversity, or income). All land uses are subject to the destructive forces of water including, but not limited to residential, commercial, industrial, retail, agricultural, silvicultural, recreational, and publicly owned assets. All of the Middle Peninsula is subject to all types of flooding including but not limited to coastal, riverine, storm surge, inland, stormwater, flash flooding, groundwater, areal, ponding (pluvial), or urban.

Water impacts the Middle Peninsula from a variety of sources and conditions including velocity, duration, frequency, and volume.

Fast Moving: Hurricane Camille was a fast-moving storm with massive rainfall over a quick time period. This type of event has major and widespread flooding impacts across the entire Middle Peninsula.

Slow Moving: According to the USGS, all of the Middle Peninsula experiences stormwater runoff between the 10-75% range causing water to move over the landscape with the ability to cause erosion.

Storm Surge: Land uses along the riverfront, Chesapeake Bay front and streams subject to tidal influence will experience surge that encompasses all land area, including the built and natural environment for the duration of the surge.

Sea-Level Rise: Land uses along the riverfront, Chesapeake Bay front and streams are subject to increasing sunny day flooding events and more frequent flooding due to sea-level rise and subsidence. By 2040, the estimates 16,567 Middle Peninsula parcels will be impacted by sea level rise [Commonwealth Center for Recurrent Flooding Resiliency](#)

The Fight the Flood program looks to help mitigate flooding issues which impact all socioeconomic groups while also enhancing water quality, and to encourage economic growth by targeting and attracting businesses to provide flood mitigation products and services for flood-prone properties, including shorelines and buildings. When appropriate, projects should be designed not only for today's flooding challenges, but also designed for future flooding challenges by extrapolating FEMA flood risk using FEMA Insurance Studies or other appropriate methodologies.

To accomplish its stated goal, the Fight the Flood program identified three core **Objectives** that develop the program's policy framework:

Objectives

1. Provide financial products to influence consumer behavior for managing and mitigating flood risk
 - a. Offer a suite of financial products (i.e. loans, grants, insurance) with a correlation to lower interest rates and grants for shorelines under greater risk; higher rates and less grant funding for lower risk shorelines using FEMA flood zones
 - b. **When possible, leverage General Assembly legislation such as § 58.1-3228.1. Partial exemption from real property taxes for flood mitigation efforts for grant matching funds.**
2. Provide consumer to professional services connections through the Fight the Flood program
 - a. Registered consumers with a flood mitigation issue will have direct access to a pool of established resiliency professionals.
 - b. Participating companies are evaluated on a regular basis
 - c. Resiliency professional registered under Fight the Flood may provide discounted professional services to consumers in need.

3. Utilize reach-based Shoreline Implementation “Battle Plans” to facilitate multi parcel mitigation projects for economy of scale. These plans will be prepared and or reviewed by qualified professionals in the field of coastal flooding, such as Virginia Institute of Marine Science Shoreline Studies Program or plans funded under the Virginia Coastal Zone Management Program
-

I. Marketing Strategy

- A. Geographic Area of Program:** The Program shall be available to homeowners located in the Middle Peninsula Planning District Commission (“MPPDC”). The MPPDC comprises of the following member-localities: counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex; and the towns of Tappahannock, Urbanna, and West Point.
- B. Solicitation of Fight the Flood/Marketing:**
 1. Referrals from private sector contractors, design professionals, flood mitigations companies and engineers
 2. Referrals from local governments, including local wetland boards and/or other State agencies
 3. Social Media Channels, Websites, News releases, Public Information Notices, i.e. newspapers, fliers at public locations, educational displays
- C. Outcomes from FTF Participation:**
 1. Encourage homeowners to purchase flood insurance;
 2. Encourage homeowners with existing flood insurance to evaluate cost effectiveness for premium relief;
 3. Encourage homeowners to practice coastal resilience to manage flood risk and reduce damage
- D. Available FTF financial & insurance products:**

Current existing products are included in the FTF program

 1. MPPDC Revolving Loan Program Funding
 - Living Shorelines Resiliency Incentive Funding Program
 - a. Nature-based shoreline BMP construction
 - b. Coastal stormwater BMP construction
 - Septic Repair Program
 - Energy Efficiency Revolving Loan Program
 - Small Business Financing, Training, loan and grants
 - Other loans programs as available
 2. MPPDC Grants

- Grants shall be leveraged and utilized to provide protection for hazard and flood prone areas with an enhanced focus on socioeconomically vulnerable property owners.
 - a. Nature-based shoreline BMP construction
 - b. Coastal stormwater BMP construction
 - c. Residential infrastructure resiliency improvements (i.e. structures, septic systems, utilities, etc.)
 - Loan Forgiveness options when available
 - VCAP Grants (offered by the Soil Water and Conservation District) when available
 - Other grants and grant programs as available
- 3. MPPDC Insurance**
- Parametric insurance for living shorelines and septic systems
 - MPPDC Living Shoreline Plant Insurance Program
 - Other insurance products as available
- E. Income Guideline:** Residential participation will be based on the household income and ability to pay. Businesses shall provide documentation such as profit-and-loss statements and/or other documentation of adequate business equity to collateralize the public investment. Grant/loan awards, if available will be based on the program requirements of the source of the funds, if any.
- F. Terms of Loan:**
Homeowners who are eligible to receive a revolving loan from the existing MPPDC Living Shoreline Loan program (see MPPDC program design for specific requirement) shall be subject to the following terms:
1. All loans over \$3,000 shall be secured with a Deed of Trust granted to the Middle Peninsula Planning District Commissioner. Businesses may use a deed of trust, security agreement, UCC liens, etc.
 2. The owner of the property must agree that, if the property is sold, transferred, or otherwise conveyed voluntarily, when the owner is living, or if the real estate ceases for any reason to be the owner's principal place of residence, any outstanding balance must be paid back to the Middle Peninsula Planning District Commission.
 3. If a business is sold and the Living Shoreline Loan program debt is to be assumed, a business may carry forward the loan debt as part of the business sale, assuming approval is granted by the MPPDC prior to the sale.
 - If not, any outstanding principal (and grant) amount must be paid back to the Middle Peninsula Planning District Commission.
- G. All beneficiaries must make monthly loan payments by automated clearing house debit from a valid checking or savings account.**

II. Vendors: Qualifications & Expectations

- A. The MPPDC has a fiduciary responsibility to protect the expenditure of loans/grants. Thus, it sets forth the following qualifying criteria and expectations for vendors to comply.
- B. Qualifying businesses need not be located within the Middle Peninsula region, although we encourage and invite businesses with physical footprints within the Middle Peninsula to join.
- C. Prospective vendors to be listed on the FTF website must match at least one of the qualifying criteria below to participate in the Fight the Flood business marketplace and have taken and completed appropriate professional training(s), from the Virginia Institute of Marine Science or other universities, colleges, government or other professional programs offering certifications or credentials related to professional trade or profession directly related to the services to be provided.
 1. Class A Contractors License
 - Automatically accepted upon proof of successful project completion (project completion statement, closed permit, release of performance bond, etc.)
 2. Class B or C licenses
 - Proof of permitted and completed similar jobs, at least 3 jobs within the last 24 months in a Tidewater locality.
 3. Other applicable methods presented and accepted by Fight the Flood program manager.
- D. To be listed on the FTF website, qualifying vendors shall complete the “Fight the Flood Business Survey” as provided by the MPPDC.
 1. The MPPDC shall maintain a database of qualifying vendors and made available to FTF registered property owners who request financial assistance. Property owners are not required to use qualified FTF vendors but are encouraged to.
 2. It is mutually understood by all parties that the homeowners select the vendor
- E. Participating FTF qualified vendors are encouraged to:
 1. Support the FTF program by offering services on discount (5%–15%+) to only those homeowners who are registered in the FTF program;
 2. Carry necessary insurance such commercial general liability. Homeowners using any contractor are encourage to ask for proof of insurance: For example, Class A Contractors \$1,000,000 Class B and C \$500,000-\$250,000.

3. Acknowledgement that all financial payments from the MPPDC are released to the homeowner when approval is granted from the appropriate permitting agency denoting the completion of the work.
 - Loan proceeds can be released upon recordation of loan documents
 - Grant proceeds can be released upon satisfactory completion of the job, with proof of acceptance by the permitting agency
 - Some cost can be pre-paid under the program upon issuance of required permits or cost necessary to apply for permits such as design and engineering, etc.
 4. Commit to prompt communication with the homeowners
-

**Middle Peninsula Planning District Commission
Living Shoreline Resiliency Incentive Funding Program**

**Virginia Revolving Loan Fund Program Design
And Guidelines – December, 2015
Amended 6/24/2020**

OVERVIEW

The Program Design and Guidelines for the Middle Peninsula Living Shoreline Resiliency Incentive Funding Program (LSIP) will delineate marketing strategies, loan application and review process, environmental review, funds management and administration, and loan agreements with property (residential and business) owners.

This program will provide incentives in the form of funding and insurance for homeowners to install living shorelines in lieu of shore hardening approaches for shoreline stabilization on private property.

I. Marketing Strategy

- Geographic Area of Program: The Program will be available to homeowners of property located in the Middle Peninsula Planning District of Virginia. The localities of the Middle Peninsula are the counties of Essex, Gloucester, King and

Queen, King William, Mathews, and Middlesex; and the towns of Tappahannock, Urbanna, and West Point.

- Solicitation of Applications: Loan applications will be sought through the following means:
 - Referrals from private sector contractors and engineers.
 - Referrals from Local Governments or other agencies.
 - News releases, Public Information Notices-Newspapers, fliers at public locations, educational displays at Captain Sinclair Landing
- Income Guideline –Residential participation will be based on the household income and ability to pay. Businesses will provide documentation such as profit and loss statement and/or other documentation of adequate business equity to collateralize the public investment). Grant/Loan awards, if available will be based on the program requirements of the source of the funds, if any.

Unless otherwise dictated by the source of the grant funds, MPPDC will distribute grant funds on a sliding scale according to FEMA Flood insurance zones for any qualified resiliency project that meets the definition of a living shoreline found in § 28.2-104.1 of the Code of Virginia and is designed to attenuate the impinging wave climate across the sill and marsh system during significant storm events. A design will use statistical water levels and wave heights per FEMA flood zones and the fetch exposure referenced in FEMA flood insurance rate study or other qualified study.

- Terms of Loan:

All loans over \$3,000 will be secured with a deed of trust granted to the Middle Peninsula Planning District Commission. Businesses may use a deed of trust, security agreement, UCC Liens etc . The owner of the property must agree that, if the property is sold, transferred, or otherwise conveyed voluntarily, when the owner is living, or if the real estate ceases for any reason to be the owner’s principal place of residence, any outstanding principal amount must be paid back to the Middle Peninsula Planning District Commission. If a business is sold and the living shoreline debt is to be assumed, a business may carry forward loan debt as part of the business

sale, assuming approval is granted by the MPPDC prior to sale. If not, any outstanding principal (and grant) amount must be paid back to the Middle Peninsula Planning District Commission

- All beneficiaries must make monthly loan payments by automated clearing house debit from a valid checking or savings account.
- 1. Interest and principal payments will commence as soon as funds are released. Final payment to owner or contractor will not be released until review by VMRC or local wetlands board staff to ensure the project has been completed consistent with the terms and conditions of the VMRC or wetlands permit.
 2. Loan interest rates will be at the WSJ Prime Rate as published at <http://www.bankrate.com/rates/interest-rates/wall-street-prime-rate.aspx>
 3. Alternatively, if the applicant has a banking relationship with a lending institution with a physical foot print within the Middle Peninsula, the program will match a verified HELOC rate to a floor of 2% rate. An additional ¼% rate reduction below a verified HELOC rate can be included for any project located in a FEMA A, AE, AH, AR, A99, VorVE flood zone designed to attenuate wave energy and storm surge.
 4. In order to close out lending on an existing MPPDC-DEQ-VRA loan, the applicant may negotiate an interest rate to facilitate the closure of any outstanding loan balance to assist the Commission with refunding of the program. A rate floor of 1.5% is established.
 5. Low income homeowners may be offered grants and lower interest rates based on household income.
- Loan Process
 - Applicant shall complete application provided by MPPDC
 - MPPDC staff can assist with application as needed
 - Loan terms and payments options will be discussed with client. Loans shall be amortized by monthly installment payments.
 - Completed application will be provided to MPPDC Closing Agent for loan processing and loan closing
 - Applicant and MPPDC will close loan. Loan Closing will take place at the office of the Middle Peninsula Planning District Commission, loan closing agents office or other agreed to location.
- Loan term:
 - Loans of \$10,000 or less will be financed for up to 60 months.

- Loans over \$10,000 to \$35,000 will have the option of financing for up to 120 months.
 - Loans over \$35,000 will have the option of financing for up to 180 months, with approval from VRA.
 - For eligible applicants receiving VRA loan forgiveness, terms of forgiveness will be included within the promissory note. If the applicant pays off the note before maturity, any outstanding loan forgiveness must be repaid and included as part of the payoff calculations. VRA funding for reach based, multi parcel projects will be handled on a case by case basis with terms included in the promissory note(s)
- Property transfer criteria: Balance of the principal of the loan shall be due and payable to The Middle Peninsula Planning District Commission upon sale or transfer of the property.
 - Identification of Prior Existing Debt:
 - No subordination of loan shall be done for equity mortgage requests by beneficiary.
 - Applications found to carry a delinquent or defaulted first mortgage shall be ineligible for assistance. Applicants whose property is financed must carry a current first mortgage in good standing. This mortgage must have been current for at least the 12-month period prior to application or since inception of mortgage if in existence less than 12 months.
 - Size of Loan: Loans shall not be less than \$1,000.
 - Fees and Service Charges:
 - Application Fee-\$40 required at time of application.
 - Administrative Fee – To be determined based on cost of necessary documentation and closing costs. May be amortized with loan funds.
 - Late Fee-5% charged on unpaid payment due applies when 7 days past due date of payment.
 - Security: Individual property owners receiving loans will sign a promissory note for the term of the loan. Loans over \$3,000 are to be secured by a Deed of Trust.

- Financing, Permits, Inspections, Contractor Selection and Certification, Disbursement of Funds

The Middle Peninsula Planning District Commission Living Shoreline Incentive and Funding Program will authorize VRA financing of any project not prohibited by any local ordinance and approved by VMRC or the applicable local wetlands board that satisfies the definition of a living shoreline consistent with § 28.2-104.1 of the Code of Virginia.

If required by either the permitting agency or terms of a grant award, monitoring of the site, absent other requirements will be required for 3 years after installation following protocol elements outlined in Milligan et al 2019. Monitoring cost can be financed as part of the project.

Applicants are encouraged to review the MPPDC Fight the Flood Program Design for access to information related to contractor services

Contractor may request partial reimbursement payment for ordering of materials necessary for the job. Pre-draws will collect interest at the rate agreed to in the promissory note. Accrued interest for pre-draws will be added to the final note payment. Principal and interest payments will commence when the project has been completed.

Final funds will be disbursed to homeowners/contractor only after acknowledgement by local wetlands board and/or VMRC of satisfactory completion of projects.

Homeowner/Contractor shall provide to MPPDC a statement of final project completion

- Insurance Program: Dependent on securing the necessary funding, the Middle Peninsula Planning District Commission Living Shoreline Incentive and Funding Program will “insure” the plants of eligible living shoreline installations for up to two (2) years following initial construction dependent on funds available in the insurance pool program at the time of claim. In the event the plants die, the reason must be explained for the need to be replaced. If applicable, the program will provide grant funds necessary to purchase and replant the same or similar plants in any installation that was previously funded by the program. This insurance can be utilized up to 2 times per project as long as insurance funds remain in the program. All claims must be certified by program partners (VIMS/VMRC)
- Parametric Living Shoreline Insurance policies can be financed as part of the loan package. The applicant may choose how many years of insurance to finance.

II. Loan Application and Review

- Application Guidelines:

- Income Eligibility: An applicant shall complete an Income Eligibility worksheet to determine income qualification for determination of ability to repay loan.
 - Application Fee: A \$40 application fee shall be charged at the time of application. The fee shall be nonrefundable.
 - Place and Time of Application: Applications are available at the offices of the Middle Peninsula Planning District Commission,
Saluda Professional Center, 125 Bowden Street,
Saluda, Virginia between the hours of 8:30 a.m. to 4:30 p.m.,
Monday through Friday, except holidays, by mail request at PO
Box 286, Saluda VA 23149, and by phone at (804) 758-2311. A
downloadable application is also available at www.mppdc.com
- Review and Approval of Applications:
1. Staff Review- The staff of the Middle Peninsula Planning District Commission will review each application for Completeness and to verify income eligibility.
 2. Project Management Committee- The Middle Peninsula Planning District Commission will designate a committee to review and approve each application. If grant funds are available the Committee will determine eligibility for grant funding following the criteria required by the funder or the program design. The Committee shall consider the following in determining project priorities:
 - Need for shoreline management at the project site (in consultation with VMRC staff)
 - FEMA Flood zone
 - Number of projects funded in a jurisdiction - Localities that have never received funding for a project will be given priority
 - Ability to pay – the ability of the homeowner to repay the loan
 3. The MPPDC Board may authorize the Executive Director to complete all loan agreements and notes pursuant to approved loans.

III. Administration of VRA Financing Funds

- Security: The Living Shoreline Incentive Funding Program will secure the loan with the Virginia Revolving Loan Fund through the revenues generated through loan payments made by individual property owners and through investment of capital funds.

1. Interest Security- The Program will offer loans at interest rates of WSJ Prime as published at www.bankrate.com

B. Alternatively, if the applicant has a banking relationship with a lending institution with a physical foot print within the Middle Peninsula, the program will match a verified HELOC rate to a floor of 2% rate. An additional ¼% rate reduction below a verified HELOC rate can be included for any project located in a FEMA A,AE,AH,AR,A99,VorVE flood zone designed to attenuate wave energy and storm surge

C. In order to close out lending on an existing MPPDC-DEQ-VRA loan, the applicant may negotiate an interest rate to facilitate the closure of any outstanding loan balance to assist the Commission with refunding of the program. A rate floor of 1.5% is established.

2. Principal Security- The MPPDC Program will borrow funds from the Virginia Resource Authority under terms and conditions agreeable to each party. Historically, VRA has loaned the Commission \$250,000 for a period of 15 years at a 0% interest rate, but terms and conditions will vary as the Commission recapitalizes its program over time.

3. Total Annual Security/Annual Debt Payments- At program start up, annual debt payments will be \$16,667, to be paid in semi-annual payments of \$8,333. Future annual debt payments will vary based on recapitalization of the fund and terms offered by VRA. MPPDC will manage the loan fund and portfolio to ensure repayment of indebtedness.

4. MPPDC will establish a Loan Loss Reserve in the amount of \$16,667 or an amount equal to one (1) year debt service payments. These funds will be designated as "Restricted Cash – MPPDC Series 2017 Reserve Fund" on the MPPDC balance sheet until such time as the loan is repaid in full.

B. Administration:

1. The Middle Peninsula Planning District Commission will dedicate staff personnel to administer the Program. The Executive Director will provide supervisory guidance to the program.
2. The MPPDC will work closely with the State agencies involved in the protection of water quality. The Department of Environmental Quality and the Virginia Marine Resources Council will provide project guidance and assist through the permitting process.

3. The MPPDC Board will designate a Project Management Committee to provide input into the loan review and financial management aspects of the Program. The Board will also be involved in oversight of the entire program.
4. Fund Administration-The Program will invest any undisbursed portion of the loan proceeds with banks operating in the region or the Commonwealth of Virginia Department of the Treasury Local Government Investment Pool. Revenues from loan payments will be invested in said accounts providing liquidity to coincide with debt payments to the VRLF. Interest earnings from the Program will be available for administration costs and loan security. All revenues available after debt payments and administration costs may be utilized to provide additional assistance through the form of additional loans and/or grants to qualified applicants.

IV. Notification of Changes to the Local Program

The MPPDC will notify the Department of Environmental Quality and the Virginia Resources Authority of any anticipated changes to the Program Design at least 60 days prior to the effective date of such changes.

MAINTENANCE, MANAGEMENT, AND MONITORING PLAN

The MPPDC and project partners propose the following activities as required by the DCR CFPF Round 4 Manual, which will ensure that the public investment of DCR CFPF funds is protected.

MPPDC staff will utilize the below maintenance agreement template, which includes explanation of the responsibilities for monitoring, replacement (as necessary), and reporting of the project following construction. Each property owner will sign this document and MPPDC staff will submit the signed document to DCR prior to any construction occurring. MPPDC staff is willing to work with DCR to modify the agreement and related maintenance, management, and monitoring activities should DCR wish to see these matters handled differently.

DCR Provided CERTIFICATION OF PROPERTY OWNER Property Protection Project

Grant No. [Insert Number]

Name: [Name of Property Owner/Entity]

County, State Zip: [Address of Property]

Phone: [Insert Phone Number]

Email: [Insert Email]

The undersigned certifies to the Middle Peninsula Planning Commission District (PDC), that

1. I am/we are the owner/co-owner of [Insert address of Property where project is taking place].
2. I am/we are the recipient of Grant [Insert Grant Number] for the purpose of deploying a nature-based solution on my real property or at [Insert Address] for the purposes of flood prevention or mitigation.
3. I/we received [Insert Award Amount] (DCR Funds) to fund, in whole or in part, the stormwater protection activities including construction of a stormwater collection system on the Historic Antioch Rosenwald School Building.
4. I/we understand that it is my/our obligation to maintain the stormwater collection system for a minimum of 10 years.
5. I/we have the necessary resources to maintain the stormwater collection system for a minimum of ten (10) years.
6. That I agree to annually inspect and certify to both the PDC and the Virginia Department of Conservation and Recreation that the project is maintained in good order for no fewer than ten (10) years.
7. That I agree to permit the PDC or the Virginia Department of Conservation and Recreation to inspect the project to ensure that it is being maintained in good order for a period of ten (10) years after its completion. Inspections may occur at the discretion of the PDC or the Virginia Department of Conservation and Recreation; however, reasonable notice shall be given prior to the inspection, and no project shall be inspected more than once in a calendar year, provided that inspection does not result in needed repairs.
8. That I agree that I will repay the full amount listed in Item 3 if the project is not maintained in good repair for a minimum of ten (10) years.

Executive Summary

Hazard mitigation describes actions taken to help reduce or eliminate long-term risks caused by hazards or disasters. Therefore, with funding from Virginia Department of Emergency Management (VDEM) and the Federal Emergency Management Agency (FEMA), the Middle Peninsula Regional All Hazards Mitigation Plan (AHMP) was updated.

The area covered by this plan includes Essex, Gloucester, King William, King & Queen, Mathews, and Middlesex Counties and the Towns of West Point, Urbanna, and Tappahannock and the three federally recognized Tribe, including the Pamunkey Tribe, Rappahannock Tribe, and the Upper Mattaponi Indian Tribe of the Middle Peninsula. As part of a mitigation planning requirement of the Disaster Mitigation Act of 2000 (DMA 2000), localities and tribes worked to identify, assess, and mitigate risks within their communities to ensure that critical services would continue to function if a disaster were to occur.

The following is an overview of what to expect in the subsequent sections of this Regional AHMP.

Section 1, Introduction, describes reason why the region updated the plan. In part the associated regulations are summarized.

Section 2, Planning Process, provides a narrative description of the process used to prepare the AHMP update. This includes the identification of the Local Planning Team (LPT), and how the public and other stakeholders were involved. It also includes a detailed summary for each of the LPT meetings and any associated outcomes.

Section 3, Community Profiles, describes the planning area of this plan and the general makeup of each locality and tribe.

The Hazard Identification and Risk Assessment (HIRA) is presented in Section 4. This section serves to identify, analyze, and assess the Middle Peninsula region's overall risk to hazards. The risk assessment also attempts to define any hazard risks. In part, Section 5, is the HAZUS. FEMA's HAZUSMH loss estimation methodology was used in evaluating known hazard risks by their relative long-term cost in expected damages. In essence, the information generated through the risk assessment serves a critical function as communities seek to determine the most appropriate mitigation actions to pursue and implement — enabling communities to prioritize and focus their efforts on those hazards of greatest concern and those structures or planning areas facing the greatest risk(s). The hazards analyzed in this plan include hurricane wind, flooding, and sea level rise.

Section 6, Capability Assessment, is a review of the capabilities and tools that each locality and tribe have or have access to in order to achieve mitigation actions.

A review of the 2016 mitigation strategies is in Section 7 of the plan. Each locality provided status updates to the mitigation strategies in the 2016 AHMP. This section also reviewed other mitigation actions taken by the localities within the past 5 years.

Section 8, New Mitigation Goals, Objectives, and Strategies, list the goals, objectives and strategies that aim to reduce or prevent injury from hazards to residents, communities, state facilities, and critical facilities. Each locality and tribe reviewed the list of mitigation strategies and selected strategies to participate in over the next 5-years. Within this section goals, objectives and strategies clearly identify the mitigation intent and then there is a list of localities that will work to achieve the strategy. This section also includes strategies that have been canceled and/or completed by a locality.

Section 9, Implementation Plan, reviews how each locality and tribe plan to implement and complete the hazard mitigation goals, objectives and strategies.

Section 10, Plan Adoption, lists the dates that the AHMP update was adopted by each locality and tribe.

Finally, Section 11, Plan Maintenance, include the measures that the MPPDC and participating jurisdictions will take to ensure the Plan's continuous long-term implementation. The procedures also include the manner in which the Plan will be regularly evaluated and updated to remain a current and meaningful planning document.

Section I: Introduction

The Disaster Mitigation Act of 2000 (DMA 2K) is a key component of the Federal government's commitment to reduce damages to private and public property through mitigation actions. The DMA 2K amends the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act) and is designed to improve planning for, response to, and recovery from disasters by requiring state and local entities to implement pre-disaster mitigation planning and develop hazard mitigation plans. This legislation specifically established the Pre-Disaster Mitigation (PDM) Program and created requirements for the Post-Disaster Hazard Mitigation Grant Program (HMGP). This key piece of federal legislation is known as Public Law 106-390.

DMA 2K requires local governments to develop and submit mitigation plans to qualify for Hazard Mitigation Assistance (HMA) funds. The Act requires the plan to demonstrate "a jurisdiction's commitment to reduce risk from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards." The final mitigation plan update is reviewed by the Virginia Department of Emergency Management (VDEM), approved by Federal Emergency Management Agency (FEMA), and then adopted by each participating jurisdiction.

To meet such requirements, Middle Peninsula Planning District Commission (MPPDC) staff guided the development and update of the Regional All Hazards Mitigation Plan (AHMP) in accordance with DMA 2K. All nine (9) Middle Peninsula localities, including Essex, Gloucester, King & Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, Urbanna, and West Point, participated in the plan. In addition to the nine regional localities, the three federally recognized Indian Tribes in the region, including the Pamunkey Tribe, Upper Mattaponi Indian Tribe, and the Rappahannock Tribe, were invited to participate in the 2021 AHMP update.

As this plan follows DMA 2K planning requirements and associated guidance documents for developing Hazards Mitigation Plans, a four-step mitigation planning process was utilized (FEMA, 2015):

The planning process helps prepare citizens and government agencies to better respond when disasters occur. Also, mitigation planning allows participating localities and tribes, to remain eligible for mitigation grant funding for projects that reduce the impact of future disaster events. Eligible projects may include property acquisition and structure demolition, structure elevation, localized flood risk reduction projects, infrastructure retrofits, soil stabilization, wildfire mitigation, post-disaster code enforcement, wind retrofits for one- and two-family residences, and planning related activities. The long-term benefits of mitigation planning include the following:

- An increased understanding of hazards faced by the Middle Peninsula region.
- Building more sustainable and disaster-resistant communities.
- Increasing education and awareness of hazards and their risks.
- Developing implementable and achievable actions for risk reduction.

- Financial savings through partnerships that support planning and mitigation efforts.
- Reduced long-term impacts and damages to human health and structures.

This AHMP also utilizes the elements outlined in FEMA's Local Mitigation Plan Review Tool and Local Mitigation Planning Handbook, published in 2020 and March 2013, respectively.

Section 2: The Planning Process – Public Involvement and Community Partners

The Middle Peninsula Planning District Commission's (MPPDC) Senior Planning Project Manager led and facilitated the 2021 update of the Regional All-Hazards Mitigation Plan (AHMP). All nine Middle Peninsula localities participated and contributed substantial staff time to the development and update of this plan. In addition to time spent, each locality financially contributed to this effort in order to meet FEMA funding match requirements. To begin this project and to realize local commitments, MPPDC staff drafted a Memorandum of Understanding (MOU) for each locality to sign. The MOU outlined the terms of agreement between the MPPDC and the locality concerning financial obligations of the local adoption of the 2021 Regional AHMP. In response, each locality reviewed and signed the MOU (Appendix A).

As per the MOU, localities appointed two local representatives to service on the Local Planning Team (LPT). The LPT helped determine the plan's outcomes and substantive content. The LPT consisted of locality staff with varying backgrounds and experience. Please see Appendix B for a list of LPT participants and positions. Also in an effort to utilize the expertise of professionals with knowledge of natural hazard mitigation efforts and/or actively involved in one or more of the 4 phases of emergency management – preparedness, response, prevention/mitigation, or recovery - MPPDC staff invited representatives from Virginia Department of Conservation and Recreation (DCR) – Floodplain Division, Virginia Department of Emergency Management (VDEM), Virginia Department of Transportation (VDOT) – Saluda Residency, the National Weather Service, U.S. Corps of Engineers, Virginia Department of Health (VDH), Virginia Department of Forestry (VOF), Virginia Coastal Policy Clinic (VCPC), Old Dominion University, and the assistant to the Governor for Coastal Adaptation and Protection. Finally, to round out the LPT, MPPDC staff invited representatives from the three federally recognized tribes within the region, including the Pamunkey Tribe, Upper Mattaponi Indian Tribe (UMIT), and the Rappahannock Tribe.

This Plan also includes brief profiles of the three federally recognized Native American tribes that share land within the Middle Peninsula. The MPPDC's effort and those of the tribal governments are separate and autonomous efforts. While the tribes are independent, sovereign nations, they did consult on the LPT in this effort. Tribes are important stakeholders in the region, and the MPPDC recognizes that tribal level plans can support or enhance hazard mitigation in the planning area and provide an opportunity to partner and share information that may help leverage resources.

The UMIT, along with many other Native communities across the region, have a complex history, undergoing many challenges and events that have threatened their traditional ways of life, culture, land, and ultimately, their survival. The centuries-long struggle of Native nations to maintain cultural identity and sovereignty has greatly contributed to the historical legacy of these communities. Nevertheless, Tribal communities, including the UMIT, have persisted, their knowledge and traditions living on through the generations.

Due to the rural nature of the Middle Peninsula area, there were no private not-for profit environmental organizations based in the region that were identified by LPT members at the onset of the planning phase of this project that could provide meaningful input. In conjunction with the LPT, Middle Peninsula Planning District Commissioners, consisting of elected officials and citizen representatives were kept abreast of the progress made throughout the plan update process through written staff reports at monthly committee meetings.

A list of the Planning Team members can be found in Appendix B. [LPT meeting minutes, agenda, and presentations](#) have been posted and are available on the MPPDC website.

SECTION 2: THE PLANNING PROCESS – PUBLIC INVOLVEMENT AND COMMUNITY PARTNERS

2.1. Project Timeline for Update

Financial support for the AHMP update was provided by FEMA and VDEM, and matching funds contributed by the nine localities of the MPPDC. Table 1 provides a timeline of the project and associated tasks of this 2-year project.

Table 1: Project timeline and associated tasks				
Task	Starting Point	Unit of Time	Duration	Work Completed By
Grant Implementation and kickoff	1-60	Days	60 days	Regional Planner (RP)
Organize Resources: <ol style="list-style-type: none"> 1. Form a Mitigation Advisory and Planning Committee 2. Award HAZUS Contract 3. Inventory available resources/collect data 4. Begin Public Outreach Efforts 	61-151	Days	90 days	RP and LPT
Revise Hazard Identification and Risk Assessment <ol style="list-style-type: none"> 1. Compile and analyze data for HIRA analysis 2. Vulnerability assessment/ loss identification 3. Provide HIRA, vulnerability & loss estimation analysis to public 4. VDEM review of HIRA, vulnerability & loss estimation analysis 	152-362	Days	210 days	RP, LPT VDEM, and FEMA
Community Assessment/Profile <ol style="list-style-type: none"> 1. Review current community profiles with each locality 	363-483	Days	120 days	RP and LPT
Coordination with Tribes	484-574	Days	90 days	RP
Revise Mitigation Plan <ol style="list-style-type: none"> 1. Update mitigation goals, strategies and actions 2. Solicit/incorporate public comments 3. Prepare implementation strategy 4. Compile/ review draft plan 5. Solicit / incorporate public comment on final draft 6. VDEM/FEMA review and final plan 	575-740	Days	165 days	RP, LPT, VDEM, and FEMA
Adoption and Implementation <ol style="list-style-type: none"> 1. Final VDEM/FEMA review and plan approval 2. Publish VDEM/FEMA approved HMP for public distribution 3. Each Locality adopts the plan 	741-831	Days	90 days	RP/VDEM/FEMA
Project Closeout with VDEM	832-922	Days	90 days	RP/VDEM

Beginning in January 2021, MPPDC staff hosted regular meetings of the AHMP LPT. The LPT guided the development of the plan, including hazard identification, capability assessment, mitigation strategy reporting, strategy development, and plan adoption. While locality and tribal representatives provided information specific to their communities, state and federal agency representatives offered their expertise and experience about hazards, mitigation, and funding opportunities. The LPT completed the following tasks within the timeframes noted below:

Task 1 - Hazard Identification/Capability Assessment

The AHMP LPT completed a series of 5 tasks using the hazard worksheets provided by VDEM staff to:

1. Identify all natural hazards.
2. Compile a history detailing the nature of each identified hazard.
3. Develop an inventory of assets that are at risk from each identified natural hazard.
4. Write a narrative describing the vulnerability of the community's assets to these natural hazards.
5. Assess their localities or Tribe's capability to use the local regulatory tools and the jurisdiction's technical staff to implement hazard mitigation activities.

To gather the appropriate information, LPT were asked to complete hazard worksheets by March 19, 2021, in order to provide the Regional Planner time to compile community assessments by the March 29th LPT meeting.

Next a Hazards Identification and Risk Assessment (HIRA) was conducted using the HAZUS version 4.2 software from FEMA. MPPDC staff contracted with Dewberry to have this assessment completed. Results anticipated damages from hurricane winds, flooding, and sea level rise.

In conjunction with HAZUS, the Natural Hazards ranking, developed by the Kaiser Permanente Model, from the 2016 AHMP was made available to the LPT for reference and to update the plan. Upon review one new hazard was added to the list and the other regional hazards were re-ranked.

Task 2 - Review of the Strategies from the 2016 AHMP

At the March 29, 2021, meeting of LPT, the Regional Planner reviewed each strategy within the 2016 AHMP. Each locality was able to review the strategies they committed to in 2016 and had an opportunity to make changes as a reflection of their local mitigation progress and local priority changes. Additionally, jurisdictions were provided with a spreadsheet to report the status - completed, deleted, not started, cancelled or in progress - of the mitigation strategies since 2016. Tribes also had the opportunity to review the mitigation strategies, commit to those that they felt were appropriate for their Tribe, or develop new mitigation strategies.

The LPT was asked to update this information on April 6, 2021, and return the updated spreadsheets by April 30, 2021, for inclusion into the plan.

Task 3 - Inform the Public – Hazard Identification/Assessment Phase

Once the natural hazards were identified and assessed, the LPT solicited comments from Middle Peninsula citizens. Through a public survey launched on a March 1st, the survey requested feedback on local hazards and thoughts on mitigation actions. Mitigation actions can be defined as any action taken to reduce or eliminate the long-term risk to human life and property from hazards. The survey closed on March 15th and data was analyze. For all survey response see Appendix C.

To advertise this survey, the link was posted on the MPPDC website and was advertised on the MPPDC Facebook page.

Task 4 - Develop Goals and Objectives

At the March 29, 2021, LPT meeting, the group reviewed mitigation goals from the 2016 AHMP and decided no changes would be needed to the regional goals and objectives for the AHMP update. The LPT reviewed the criteria used to develop their mitigation strategies and again decided to make no changes.

The evaluation criteria used to develop the mitigation strategies included the following:

Social Considerations

1. Will the proposed strategy be considered acceptable to the residents?
2. Will the proposed strategy treat all residents of the locality equally?
3. Will the proposed strategy cause any social disruption in the community?

Technical Considerations

1. Will the proposed strategy work?
2. Will the proposed strategy create more problems than it solves?
3. Will the proposed strategy solve the problem or just mask a symptom?
4. Is the proposed action in line with other locality goals?

Administrative Factors

1. Does the locality have the capacity to implement the proposed strategy?
2. Who in the locality will spearhead the strategy?
3. Is there sufficient funding, staff, and technical support to undertake this effort?

Political Considerations

1. Will members of the governing body accept and support the proposed strategy?
2. Is there support to implement and maintain the proposed strategy by members of the governing body?

Legal Issues

1. Is the locality legally authorized to undertake this proposed strategy?
2. Will the proposed strategy constitute a legal taking?
3. Is the proposed activity in compliance with the jurisdiction's comprehensive plan?
4. Will the locality face legal liability if the proposed strategy is not implemented or conversely, legally challenged if the strategy is implemented?

Economic Concerns

1. What are the costs and the benefits of implementing the proposed strategy?
2. Do the benefits outweigh the costs? Construction projects seeking FEMA financial assistance to mitigate the adverse effects of natural hazards will utilize FEMA's Benefit/Cost Formula to ensure that the proposed project benefits exceed the anticipated project costs.
3. Are the capital, maintenance and administrative costs accounted for with the proposed strategy?
4. Has the funding been secured for this project?
5. What burden will this strategy place on the locality's tax base or local economy?
6. Does the proposed strategy contribute to other jurisdictional goals?

Environmental Factors

1. What affect will the action have on the environment?
2. Will this action need environmental regulatory approvals?
3. Approvals from whom and does this create any concerns about the feasibility of the proposed action?

Task 5 - Strategy Development

At the March 29, 2021, LPT meeting, the members developed and updated mitigation strategies to address the hazards that were determined to adversely affect their communities. The Rappahannock Tribe assessed the mitigation strategies within the plan and committed to 10 strategies.

Task 6 - Inform the Public – Strategy Development Phase

The LPT updated and developed mitigation strategies. This task was completed at the September 10, 2021, LPT meeting. These mitigation strategies were included in the Plan and were available to the public comment during from October 17, 2021, to November 1, 2021. This public comment period was advertised on the MPPDC website and on the MPPDC Facebook page.

Task 7 - Draft Plan

The draft plan was completed by October 29, 2021 and posted for public comment from October 17th to November 1st. The plan was posted on the MPPDC website and on the Facebook page. According to Facebook analytics the post reach (i.e., the number of people who saw a specific post in their news feed) was 1,422, the post impressions (i.e., the total number of times a post was visible in user timelines or feeds) was 1,623, and post engagements (i.e., the total number of actions that people take involving your content on Facebook) was 37. Even with this extensive reach no comments were made.

MPPDC staff also sent invitations to neighboring communities (ie. Louisa County, Richmond County, Westmoreland County, Lancaster County, New Kent County, Hanover County, and the Northern Neck Planning District Commission), local and regional agencies involved in hazard mitigation (Virginia Department of Health, Virginia Department of Emergency Management, Virginia Department of Conservation and Recreation, Virginia Department of Forestry, and the National Weather Service) and agencies that have the authority to regulate development (ie. County and town planners). Appendix D includes the invitations to review the draft AHMP and provide feedback or insight to improve the plan. No substantive comments were made.

With no comments or feedback, the plan was packaged and submitted to VDEM/FEMA for their review and approval.

Task 8 - Adoption

Once VDEM/FEMA staff gave conditional approval of the draft plan, jurisdictional staff presented the updated plan to their Board of Supervisors, Town Council, or Tribal Council and requested the plan's adoption.

Once adopted, locality and tribal staff began with the implementation phase of the strategies based on the schedule outlined in Section 9 of the update.

Task 9 - Public Input during Plan Development

A three-part public outreach strategy was implemented to keep the public informed of AHMP updates and to request their assistance in plan develop:

1. **OUTREACH METHOD:** Public Information Website (including Social Media Integration)
AVAILABILITY: Throughout the plan update.
BRIEF DESCRIPTION: A project information website was hosted by the MPPDC and was available to the general public, neighboring local governments, schools, local, state and federal partners, participating jurisdictions and tribes, and the LPT for the duration of the project at the following web address: <https://mppdc.com/index.php/service-centers/mandates/hazards>. On the website the Regional Planner contact information was listed, therefore was an opportunity of all parties to reach out to provide input and/or ask questions. Additionally, Consociate Media posted news releases about the plan on the MPPDC Social Media pages (i.e. Facebook and Twitter) on March 1, 2021, and October 18, 2021. Copies of the press releases and the corresponding Facebook statistics are included in Appendix E.
DETAILS: Specific resources included on the site were:
 - Project information fact sheet
 - Drafts of the Regional AHMP
 - List of LPT participants
 - List of project tasks and general timeline
 - PowerPoint files from LPT meetings and minutes
 - PDF of existing local hazard mitigation plans for reference during the plan update process
 - Links to planning resources, including recently published FEMA hazard mitigation planning guidance
 - FEMA mitigation planning guidance
 - Local Mitigation Planning Handbook
 - Mitigation Ideas
 - Integrating Hazard Mitigation into Local Planning
 - Social media integration including MPPDC Facebook

2. **OUTREACH METHOD:** Project Information Fact Sheet
AVAILABILITY: Throughout the plan update and on the public information website.
BRIEF DESCRIPTION: A one-page (double-sided) project information fact sheet was available on the MPPDC website in PDF format for the duration of the project. The primary purpose of this document was to provide information on the regional planning process and to provide project contact information and links for interested parties to engage in the planning effort. Printed copies were also made available on an as-needed basis.
DETAILS: Specific information provided on this fact sheet included:
 - Project overview (who, what, where, when, how)
 - Overview of the regional hazard mitigation planning process, including:
 - Public outreach
 - Risk assessment
 - Capability assessment
 - Mitigation strategy development
 - Plan maintenance
 - Plan adoption
 - Explanation of project leadership, including the LPT and project manager.
 - Project schedule
 - Contact information and links to project information website
 - Project graphics/illustrations

3. **OUTREACH METHOD:** Public Participation Survey
AVAILABILITY: During the hazard identification and mitigation strategy review
BRIEF DESCRIPTION: An online public participation survey hosted by MPPDC using the SurveyMonkey and was opened to the public on March 1st and closed March 15th. The primary purpose of the survey was to solicit input about local hazard concerns and mitigation actions of interest, and feedback on the plan update. The survey was accessible through hyperlinks posted on the project information website, locality websites, and circulated via email and Facebook. The feedback received was to be evaluated and incorporated into the LPT's decision-making process and the final plan.
DETAILS: Types of questions asked on the survey, included, but were not limited to:
- Personal history with natural hazards
 - Natural hazard concerns
 - Perception of vulnerable community assets
 - Importance of community assets
 - Priorities concerning natural hazard preparedness
 - Steps local government can take to reduce natural hazard risk
 - Types of mitigation activities deemed important
 - Personal interest in natural hazard mitigation
 - Effective ways to communicate with residents
 - Location in the floodplain
 - Questions regarding flood insurance
 - Personal actions to mitigate property
 - Mitigation activities planned for the respondent's household
 - Location within the planning area
 - Age (optional)*
 - Gender (optional)*
 - Highest level of education (optional)*
 - Length of time living in the planning area
 - Ownership of property versus rental status
 - Type of dwelling
 - Open comments**
4. **OUTREACH METHOD:** Public Comment
AVAILABILITY: 2-week comment period
BRIEF DESCRIPTION: Upon completion of the draft plan, MPPDC staff posted the draft on the MPPDC website page and advertised on Facebook that the plan was available for public comment. The draft plan was also advertised on community websites and social media pages to encourage public input. The public comment period was open on October 18th and closed on November 1st.

Upper Mattaponi Tribe

The Upper Mattaponi Indian Tribe (UMIT) began the planning process with the Middle Peninsula Planning District in the spring of 2021 and in conjunction with the available resources from the Commonwealth of Virginia and the Virginia Department of Emergency Management.

However, due to limited capacity, the majority of the planning process began upon the hire of the Emergency Management Coordinator in December 2021. The UMIT planning team consisted of the Emergency Management Coordinator, Environmental and Cultural Protection Director, and the Tribal Administrator. Once the plan was completed, the final draft was submitted to the Tribal Council, including the Chief, to review and approve. Due to the condensed timeline, the planning

team did not include any tribal citizens; however, for future reviews and plans, tribal citizens will be asked for input.

The UMIT defines the public in regards to emergency management as any tribal citizen or anyone on tribal land that may be impacted by an emergency event. This encompasses tribal government employees, Aylett Family Wellness employees and patients, and any visitors, including tribal citizens.

The current plan has not been submitted for review by tribal citizens. Due to limited capability and time constraints, a small planning team was created to complete the project. For future iterations, a larger planning team will be assembled, comprised of additional tribal staff and tribal citizens. The UMIT holds a monthly meeting for all staff and tribal citizens, which includes tribal government updates. At a monthly meeting, the Emergency Management Coordinator will explain what the Hazard Mitigation Plan is and what the ask is for tribal citizens to review the plan. Based on the response, the Emergency Management Coordinator will partner with tribal citizens to further review the current plan and make changes based on tribal citizen concern, questions, and priorities. The Tribe will continue to use all communication methods, including a quarterly newsletter and website to engage the community in emergency management opportunities. Much of the tribal community resides in the ancestral land of Tsneacomacah, however, there are UMIT citizens in over thirty states. While the services of emergency management will differ based on location, the Department of Emergency Management intends to include all tribal citizens, regardless of location, in as many aspects as possible.

Rappahannock Tribe

The Rappahannock Indian Tribe fully participated in the develop of the Middle Peninsula AHMP. The Rappahannock Tribe planning team consisted of Chief G. Anne Richardson, Grant Writer and Strategic Planning Assistant Pat Morris, Director of Emergency Management Steven Nelson, and the Housing Department Jerry Fortune. The Rappahannock Tribal Citizens and other planning district area residents were able to access the public information on the MPPDC website and social media platforms to gain plan awareness and provide feedback direct to the planning team as well to the Rappahannock Tribe. The Rappahannock Tribal Citizens and other planning district area residents were also able to access the public survey advertised by the MPPDC to provide input and feedback on plan development. The public participation survey forwarded by the MPDDC was used to solicit input from Elder Tribal Citizens. It was also made available to key staff and long-time area residents as a tool to gain their input on the items addressed. Other than a few direct inquires of area residents for feedback on the survey, no additional public comment was solicited beyond that undertaken by the MPPDC.

During future iterations of the plan, Tribal Citizen involvement and participation in the plan development, revisions and adoption will be increased. The Tribe is planning additional communications to Tribal Citizens via email and social media, website about meeting opportunities, draft review, surveys, feedback opportunities, and the adoption process. Tribal communications tools are currently being developed to improve our ability to accomplish this goal.

The Rappahannock Indian Tribe defines a Tribal Citizen is a citizen of a sovereign tribal nation. Sovereignty is a legal word for an ordinary concept—the authority to self-govern. Hundreds of treaties, along with the Supreme Court, the President, and Congress, have repeatedly affirmed that tribal nations retain their inherent powers of self-government. Currently, 573 sovereign tribal nations (variously called tribes, nations, bands, pueblos, communities, and Native villages) have a formal nation-to-nation relationship with the US government. These tribal governments are legally defined as “federally recognized tribes.” Two-hundred-and-twenty-nine of these tribal nations are located in Alaska; the remaining tribes are located in 35 other states. In total, tribal governments

exercise jurisdiction over lands that would make Indian Country the fourth largest state in the nation. Finally, the Rappahannock Tribe defines public as the general population in the area (non-Tribal Citizens).

Summary of Local Planning Team Actions

During the update process, the LPT was instrumental in reviewing and updating the AHMP. The following table is a record of LPT participation in the AHMP updates, including meeting attendance, information requests, and section reviews.

This table provides record of meeting attendance for all Local Planning Team participants. The green squares represent participation in the meeting, the red squares represent no attendance at the meeting, light green squares represent no participation in the meeting, but the regional planner touched base with the entity after the meeting.								
Name	Locality	Meeting 1 (012521)	Meeting 2 (020821)	Meeting 3 (022221)	Meeting 4 (032921)	Meeting 5 (042621)	Meeting 6 (062621)	Meeting 7 (072621)

SECTION 2: THE PLANNING PROCESS – PUBLIC INVOLVEMENT AND COMMUNITY PARTNERS

This table lists the participating localities and tribes as well as the task and the date that information was due back to the regional planner. The regional planner would take the information provided by the locality and tribe and update the plan. The check marks show the localities and tribes that provided feedback for each task.

Locality/Tribe	Task Check List									
	1 - Community Profile Review (due: 2/5/21)	2- Hazards Survey (due: 2/17/21)	3 - Community Assessment Survey (due: 2/19/21)	4 - NFIP Survey (due: 2/19/21)	5 - Hazards Assessment (due: 3/19/21)	6 - Mitigation Strategy Status Updates (due: 4/30/21)	7 - Implementation Plan (due: 4/30/21)	8 - Review of 2016 Mitigation Strategies (due: 8/13/21)	9 - Local Plan Coordination and Integration (due 9/15/21)	10 - Recovery/ Mitigation Projects (due: 9/15/21)
Town of West Point	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
King William County	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

SECTION 2: THE PLANNING PROCESS – PUBLIC INVOLVEMENT AND COMMUNITY PARTNERS

A brief summation of LPT contributions include:

1. Meetings: Throughout the course of this project the LPT meet on 7 separate occasions to discuss the plan update. Meeting dates were:
 - January 25, 2021
 - February 8, 2021
 - February 22, 2021
 - March 29, 2021
 - April 26, 2021
 - June 28, 2021
 - July 26, 2021

For meeting minutes visit the [MPPDC website](#).

2. January 25, 2021
 - Introduced the AHMP
 - Reviewed project timeline
 - Reviewed HAZUS options for contracting with Dewberry
 - Reviewed Community Profiles and requested edits
3. February 8, 2021
 - Reviewed hazard ranking from the 2016 AHMP and the Kaiser Permanente Hazard Vulnerability Tool.
 - Finalize public outreach process for this the AHMP Update
4. February 22, 2021
 - Completed hazard assessment
 - Reviewed the public survey to be published
 - Reviewed the Hazards assessment
 - Reviewed the 2016 Mitigation Strategies
5. March 29, 2021
 - Reviewed the results from the public survey
 - Finalized the review of the 2016 Mitigation Strategies
6. April 26, 2021
 - Provided the LPT with an overview of the Middle Peninsula Fight the Flood program
7. June 28, 2021
 - Contracted with Dewberry to complete a regional HAZUS analysis (ie. flooding, hurricane winds, and sea level rise).
 - Reviewed 2010 Mitigation Strategies.
8. July 26, 2021
 - Reviewed HAZUS results provided by Dewberry

Summary of Primary Revisions of the 2021 AHMP

The below will list the sections of the plan and updates that the AHMP LPT made to keep this plan current.

SECTION 2: THE PLANNING PROCESS – PUBLIC INVOLVEMENT AND COMMUNITY PARTNERS

Executive Summary – This section was added to the beginning of the AHMP to provide an introduction and summary of findings with the AHMP update.

Section 1 – Introduction

- Included the participation of three Federally recognized tribes within the Middle Peninsula, including the Pamunkey, Upper Mattaponi, and the Rappahannock Tribes.

Section 2 – Planning Process

- Updated the planning process to reflect the activities that took place during the plan update, including meetings and locality and tribal participation.

Section 3 – Community Profiles

- Updated community profiles and included a community profile for the Rappahannock Tribe.
- Updated community profiles and included a community profile for the Upper Mattaponi Indian Tribe.
- Updated the Economic Resiliency within the Middle Peninsula and removed the Health Opportunity Index from Virginia Department of Health (VDH) since this was not directly used in the assessment of hazards within the region.

Section 4 – Hazard Assessment

- Added communicable diseases to the list of hazards impacting the Middle Peninsula region.
- Removed Tsunamis, Landslides and Volcanoes from the Hazards List as the LPT found these hazards to be of little to no risk to the region.
- Consolidated hazards, including:
 - Winter Storm (ice) and Winter Storm (snow) to WINTER WEATHER
 - Coastal, Riverine, and ditch flooding hazards to FLOODING
 - Extreme cold and extreme heat to EXTREME TEMPERATURES
- Updated the prioritization worksheet for hazards impacting to include the new hazard listed above and the LPT reassessed and re-prioritized hazards. In 2016 the critical hazards included Winter Storms (Ice), Coastal Flooding, Lightning, Hurricanes, and Summer Storms, whereas in the 2021 updated plan the most critical hazards included: Summer Storms, Winter Weather (ice & snow), Hurricanes, Communicable Disease, and Flooding.
- Updated the Repetitive Loss and Severe Repetitive Loss data.
- Updated the flood plain maps
- Updated wildfire data for 2015-2020 events
- Updated storm event data within the Region
- Updated Virginia Earthquakes map from the 2018 Commonwealth of Virginia Hazard Mitigation Plan.
- Added Point Source Emissions Inventory and air quality index to describe air quality in the region
- Utilized the Emergency Action Plans (EAP) for the high hazard dams, including Cow Creek Mill Pond Dam and Beaverdam Reservoir Dam, in Gloucester County to update the Dam Failure information.

Section 5 – Hazus Assessment

- The flood, hurricane wind, and sea level rise analysis for the HIRA was completed using the FEMA Hazus – MH Version 4.2 software. In part it included updated data including:
 - All GIS grid products are in Universal Transverse Mercator (UTM) Projection with X,Y (North American Datum of 1983), and Z units (North American Vertical

Datum of 1988) in Feet. All GIS grid products were created or converted to a 10-ft grid cell size for analysis.

- Digital Elevation Model (DEM) – National Elevation Dataset (NED) One-Arc Second (~30 meter resolution)
- Frequencies (Both Riverine & Coastal hazards) - 0.2%, 1%, 2%, 4%, and 10%. No grid is created representing an annualized depth of flooding. Annualized results are derived from the loss estimation.
- FEMA’s Riverine and Coastal analysis is completed by Hydrologic Unit Code (HUC) and data from two HUCs were available to be incorporated as a Level 2 update for flood hazard analysis. These HUCs provided updated data for portions of Essex, King & Queen, Middlesex, Gloucester, and Mathews Counties. FEMA does not have updated data for King William County.
- Level 2 assessment was conducted for Coastal flooding:
 - FEMA’s detailed engineering analysis provided an update to the one percent-annual chance return period for coastal hazards that combines both surge and wave run-up analysis for a limited spatial area.
 - “Starting Stillwater Elevations” as published in the Flood Insurance Study’s (FIS) Table 2 – Transect Data (see each FEMA FIS document for the table details) from each respective FEMA Flood Insurance Study (FIS) to develop depth grids for return periods other than the one-percent-annual chance:
 - ESSEX COUNTY – Revised May 4, 2015
 - GLOUCESTER COUNTY – Revised November 19, 2014
 - KING AND QUEEN COUNTY – Preliminary October 3, 2013
 - KING WILLIAM COUNTY – Preliminary October 3, 2013
 - MIDDLESEX COUNTY – Revised May 18, 2015
 - MATHEWS COUNTY – Revised December 9, 2014
 - Hazus default shoreline data was modified to extend up the York River so that Level 1 coastal modeling could be completed for King William County, King and Queen County, and portions of Gloucester County upstream of the George Washington Memorial Highway Bridge (US 17).
- Methodology of Hazus analysis has been added to the Appendices (Appendix G).

Section 6 – Capability Assessment

- Updated capability assessment tables that focus on the planning and regulatory, administrative, and technical, education and outreach, and financial capabilities of each Middle Peninsula locality and for the Rappahannock Tribe.
- Added National Flood Insurance Program compliance tables to the report (Appendix H)
- Added capabilities of the Upper Mattaponi Indian Tribe and the Rappahannock Tribe.

Section 7 – Review of Strategies from the 2016 Regional AHMP

- Updated the status of mitigation strategies for localities.
- Added information about the Rappahannock Tribe and their efforts in mitigation.

Section 8 - New Mitigation Goals, Objectives, and Strategies

- In sections that mentioned flood proofing, nature-based solutions were added as a mitigation action.
- Included information about the Middle Peninsula Fight the Flood Program to assist with educational endeavors and flood proofing efforts.
- Updated repetitive loss and severe repetitive loss properties in the Middle Peninsula.

SECTION 2: THE PLANNING PROCESS – PUBLIC INVOLVEMENT AND COMMUNITY PARTNERS

- Updated flood prone roads in Strategy 1.1.6
- Updated strategies with localities interested in participating:

Strategy	Localities and Tribes added to the Strategy
1.1.1	Upper Mattaponi Indian Tribe
1.1.3	Town of Urbanna and Upper Mattaponi Indian Tribe
1.1.4	Rappahannock Tribe and Upper Mattaponi Indian Tribe
1.1.5	King & Queen County
1.1.7	Town of Urbanna
1.1.8	Upper Mattaponi Indian Tribe
1.1.9	Upper Mattaponi Indian Tribe
1.1.10	Gloucester County
1.1.11	King & Queen County and Upper Mattaponi Indian Tribe
1.1.12	Upper Mattaponi Indian Tribe
1.1.13	Upper Mattaponi Indian Tribe
1.1.15	Upper Mattaponi Indian Tribe
1.1.18	King & Queen County and Upper Mattaponi Indian Tribe
1.1.19	Upper Mattaponi Indian Tribe
1.3.1	Rappahannock Tribe and Upper Mattaponi Indian Tribe
2.2.1	Rappahannock Tribe and Upper Mattaponi Indian Tribe
3.1.2	Rappahannock Tribe and Upper Mattaponi Indian Tribe
3.1.4	Rappahannock Tribe and Upper Mattaponi Indian Tribe
3.1.5	King & Queen County
3.1.6	Rappahannock Tribe and Upper Mattaponi Indian Tribe
3.1.7	King & Queen County and Upper Mattaponi Indian Tribe
3.1.8	Rappahannock Tribe
4.1.1	King & Queen County and Upper Mattaponi Indian Tribe

- Added a mitigation strategy that focuses on high hazards dams in Gloucester County.
- Added mitigation projects completed by the Rappahannock Tribe and the Upper Mattaponi Indian Tribe.

Section 9 – Implementation Plan

- Included how this plan will be integrated into locality plans, policies, codes and programs across disciplines and departments.
- Removed information on the Chesapeake Bay Nation Estuarine Research Reserve since this program was discontinued.
- Included information about how the Middle Peninsula Fight the Flood program to support educational efforts and flood proofing in the region.

Section 10 – Plan Adoption

- The dates that Board of Supervisors and Town Councils adopt the 2021 All Hazards Mitigation Plan will be updated.

Section 11 – Plan Maintenance

- Added information about how the region will handle annual updates and track progress on meeting mitigation strategies.

Section 3: Community Profile of Middle Peninsula Localities

The Middle Peninsula region encompasses six (6) counties and three (3) towns including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties as well as the Towns of Tappahannock, Urbanna, and West Point (Figure 1). Additionally, the region also includes three federally recognized tribes, including the Pamunkey, Upper Mattaponi, and Rappahannock Tribes. According to the 2020 Census, the total population of the Middle Peninsula is 90,826.

The Middle Peninsula is located on the western shore of the Chesapeake Bay, bound to the north by the Rappahannock River and to the south by the York River. As the region is located in the Virginia coastal plain, it has a relatively flat topography. The southeastern-most portions of the region are at sea level, while elevation rises to approximately 200 feet above sea level moving in a northwesterly direction.

Based on the region's low topography, 1200+ miles of coastline, and its proximity to waterways-broad rivers, meandering creeks, wide bays and tidal marshes, the Middle Peninsula is highly susceptible to floods and coastal storms. Additionally, with a high-water table in lower elevations of the Middle Peninsula, water cannot easily drain from land and thus exacerbates flooding from summer thunderstorms, hurricanes, nor'easters, as well as rising seas. Tidal surges associated with these severe storms often compound the flooding within this region.

While the Middle Peninsula region remains largely rural, it lies in close proximity to the metropolitan areas of Hampton Roads, Richmond and the Fredericksburg-Northern Virginia Metropolitan Areas. Suburban growth from these urban areas is spreading into the Middle Peninsula, affecting the region's natural resource-based industries and traditional rural lifestyle. For instance, the region's traditional land use patterns can best be described as having:

- A predominantly rural character with large, scattered farms and forested tracts;
- A number of closely-knit, small communities surrounded by working farms and forests;
- Small scale commercial fishing communities along the lower reaches of the watersheds;
- Three small towns that provide a focal point for commercial, industrial, and residential development at a modest scale; and
- Government operation centers that provide another focal point of local activity in the region.

However, the last 20 to 30 years, the region has seen a slight shift to:

- Growing sectors in tourism, retiree housing and related retiree services;
- Large, forested tracts are converting from woodlands to residential development;
- Waterfront communities transitioning from commercial fisheries with a reduced level of fisheries to an increasing number of marinas and residential developments; and
- Commercial development being located along Route 33 in Middlesex, Route 360 in King William, and Route 17 in southern Gloucester County between the Court House and the Coleman Bridge.

In summary, changes in land uses that concentrate development along the region's waterfront poses the greatest risk for hazard prevention and mitigation activities – particularly in the low-lying southeastern areas of Gloucester, Mathews, and Middlesex Counties.

Figure 1:

Essex County

Essex County is predominantly a rural county located at the northern end of the Middle Peninsula. It is bound on the north and east by the Rappahannock River, on the south by Middlesex County and on the west by Caroline and King and Queen Counties. The County comprises of approximately 286 square miles (Essex County Comprehensive Plan, 2015). Residential developments exist as small rural communities along the Rappahannock River or along the primary and many secondary roads. With a

history of slow/gradual growth and strong land use control regulations, the County has remained mostly rural.

According to the 2010 Census figures, the population in Essex consists of 11,151 people, an increase of 1,162 (11.63%) from the 2000 Census. The population has 5,274 men and 5,877 women and is comprised of 6,370 whites, 4,247 African Americans, and 534 people of other races. The population aged somewhat during the period from 2000 to 2010 with a modest reduction in school age population. These trends suggest that County programs may require redirection to meet the specific needs (i.e. health care, transportation, etc.) of an older population. A low to moderate trend in growth in the County's population is expected into the future.

Town of Tappahannock

Tappahannock is an incorporated town located along the shores of the Rappahannock River in the east-central portion of Essex County. The Town of Tappahannock is both the employment and population center of the County. Occupying less than three square miles of land, Tappahannock features an active waterfront, a historic downtown, residential subdivisions, schools, public buildings, an old airport and industrial center, a business corridor, and extensive wetland areas. Tappahannock serves as the county seat for Essex County.

According to the 2010 Census, the population in Tappahannock consists of 2,375 people, an increase of 307 (14.8%) from the 2000 Census. The population has 975 men and 1,400 women and is comprised of 1,076 whites, 1,128 African Americans, and 171 people of other races.

Gloucester County

Gloucester County's proximity to urban centers to the south, and the northwestward migration of suburban development from the greater Hampton Roads/Newport News area has transformed portions of the County into a suburban landscape. This is most pronounced at the southern reaches of the County from the Historic Court House Village and Gloucester Point. Residents from the Hampton Roads area and other areas of the urban crescent are lured to the County by the promise of lower taxes, lower housing costs, rural character, and relative freedom from the congestion evident in metropolitan areas. This has created increased traffic volumes on the limited collector roads not designed for such heavy use within the county. Commuters, travelers and trucks from the Middle Peninsula and points north use Route 17 as an alternative to interstate 64 to get to the Peninsula, Southside and the Outer Banks. Route 17 is the primary route through Gloucester and is also the heart of Gloucester's Development District where public water and sewer are available and where the county has expressed a desire to see continued economic development along this corridor. The need for alternative routes and connection to take local traffic off of Route 17 to reduce congestion is one of the goals expressed in the adopted Comprehensive Plan and the proposed update to the plan.

Despite the urban/suburban character of the County's Development District, the majority of the County remains relatively rural with low density development and active farm and timberlands. Much of the eastern portion of the County, east of Route 17 and South of Route 3/14 is characterized by low lying lands, low to moderate density housing and waterfront homes and communities. North of the Court House is very similar to other localities on the Middle Peninsula with a mixture of low and moderate density residential development and large tracts of farms and forests. Route 33, which runs along the northern portion of the County, provides convenient access from the interstate to upper Gloucester and Mathews County.

According to the 2010 Census, the population in Gloucester County consists of 36,858 people, an increase of 2,078 (5.97%) from the 2000 Census. The population has 18,239 men and 18,619 women, comprised of 32,149 whites, 3,197 African Americans, and 1,512 people of other races. A moderate trend in growth is expected into the future (Virginia Employment Commission, 2013).

King and Queen County

King and Queen County is located in the north-central portion of the Middle Peninsula and is bounded on the west by the York and Mattaponi Rivers which separate King and Queen from King William and New Kent Counties. The Dragon Swamp separates King and Queen County from Essex, Middlesex, and Gloucester Counties on the east. Often called the "shoestring county", King and Queen County is about 65 miles long and less than 10 miles wide. Farming and logging continue to be the mainstays to the local economy.

King and Queen County is the least populous county of the Middle Peninsula and one of the most rural counties in Virginia today. In 1990, the population density was only 20 people per square mile. Nearly three-fourths of the County's 318.1 square miles of land area is timberland. Over the past four decades, King and Queen County has experienced slow, but steady population growth. In 2010 the population density was 22 people per square mile.

According to 2010 Census figures, the population in King and Queen County consist of 6,945 people, an increase of 315 (4.8%) from the 2000 Census. The population has 3,454 men and 3,491 women and is comprised of 4,663 whites, 1,975 African Americans, and 307 people of other races. A moderate trend in population growth is expected into the future and the overall population distribution appears to be experiencing a gradual shift to the upper and lower ends of the County where transportation routes to jobs and retail markets are most favorable.

King William County

Located approximately 20 miles northeast of the City of Richmond, King William County is rapidly growing into a bedroom community of the metro-Richmond area. Much of the county's 286 square miles are made up of gently rolling farmland and scenic timberland located between the Pamunkey and Mattaponi Rivers. Farming and logging continue to be the mainstays of the local economy. King William is home to the only Native American Indian Reservations in the Commonwealth and to the oldest courthouse in continuous use in the United States. The Mattaponi and Pamunkey Tribes operate fish hatcheries on the rivers. Residents and visitors enjoy the numerous recreational opportunities that the rivers provide.

According to 2010 Census figures, the population in King William County consists of 15,935 people, an increase of 2,789 (21.2%) from the 2000 Census. The population has 7,759 men and 8,176 women and is comprised of 12,297 whites, 2,819 African Americans, and 819 people of other races. Projections indicate that King William County will continue to experience moderate to accelerated population growth. By the year 2020, it is estimated that the County's population will grow at a rate of 8.62%, increasing the population by 1,373 persons. Growth management will become more important as competing uses vie for space and facilities.

Town of West Point

The Town of West Point lies at the extreme southern end of King William County where the Mattaponi and Pamunkey Rivers join to form the York River. The town is relatively flat, with large sections comprised of tidal marshes, particularly along the Mattaponi River. The highest elevations occur at the northern end of town at a height of 30+ feet above sea level. Most of the Pamunkey River waterfront is

on a bluff averaging 20 feet in height. Union forces destroyed the town and the railroad, completed in 1859, during the Civil War. Only four houses survived the torching and remain intact today. West Point became an incorporated town in 1870. During the late 19th and early 20th centuries, West Point was a popular tourist destination. After the decline of tourism, a shipyard, built in 1917, and a pulp mill, built in 1918, revitalized the town.

The river areas surrounding the town are primarily used for recreation and barge access to the WestRock, a Meadwestvaco and Rock Tenn Corporation, where pulping operations convert wood chips, sawdust and recyclable paper products into pulp for use in producing various types of paperboard. The Old Dominion Grain Corporation also benefits from barge access.

According to 2010 Census figures, the population in Town of West Point consists of 3,306 people, an increase of 400 (15.4%) from the 2000 Census. The population has 1543 men and 1763 women and is comprised of 2618 whites, 509 African Americans, and 179 people of other races.

Mathews County

Mathews County is located at the eastern tip of the Middle Peninsula. The County is bordered mostly by water, with the Chesapeake Bay to the east, the Mobjack Bay to the south, the North River to the west, and the Piankatank River to the north. Except for approximately five miles that border Gloucester County, the County's perimeter is formed by its 217-mile shoreline. Mathews is predominantly a rural community that has attracted an increasing number of retirees and vacationers. More than half of the working residents earn their living outside the County. The mainstays of the local economy are agriculture, trade, seafood, and tourism.

Much of the housing in Mathews is traditional single-family dwellings, but the County also has a growing number of manufactured homes and vacant seasonal housing (built typically for summer occupancy). Seasonal housing, in the form of cottages, recreational vehicles, rental mobile homes, and a few condominium units increased in number from 448 in 1970, to 583 in 1980, to 783 in 1990. Residents of seasonal housing are often not accounted for in the census counts because the units were not occupied during the census survey. It is estimated that only about 75% of the housing units in Mathews County are occupied year-round, adding significantly to the summer population of Mathews County.

According to 2010 Census figures, the population in Mathews County consists of 8,978 people, a decrease of 229 (-2.5%) from the 2000 census. The population has 4,363 men and 4,615 women and is comprised of 7,898 whites, 823 African Americans, and 257 people of other races. Projections indicate that Mathews County will continue to experience low population growth. By the year 2020, it is estimated that the County's population will grow at a rate of 3.41%, increasing the population by 9,284 persons. Mathews County's population changed little between 1840 and 1900. The population peaked in 1910 with 8,922 residents, but gradually declined over the next five decades to a low point of 7,121 in 1960. This was in keeping with a national trend of population shifts from rural to urban areas because of the increased job opportunities in the cities. The population began to grow in the 1970's and it took until the mid-1990's before the population reached the peak reported in 1910.

Middlesex County

Middlesex County, located at the eastern end of the Middle Peninsula, is comprised of 131 square miles of land and 135 linear miles of shoreline. The County is surrounded by three significant waterways; the Rappahannock River to the northeast, the Piankatank River to the southwest, the Chesapeake Bay to the east. The County is also bordered by Gloucester County to the southeast, King and Queen County to the West, and Essex County to the north. The geographic location of Middlesex County, particularly

with the close proximity to two significant rivers, the Chesapeake Bay and the Atlantic Ocean, make Middlesex County communities much more vulnerable to tropical weather events, affecting the eastern seaboard of the United States. The county government operations are managed by a County Administrator, who is appointed by a five-person elected Board of Supervisors. The Government Seat, Board of Supervisors Meeting Room, and Courts Complex, are located in the area known as Saluda, Virginia. The Middlesex County School System is comprised of an elementary, middle and high school, with the School Board Administration Offices located in the Cooks Corner Office Building, just east of Saluda.

Middlesex has remained largely rural over the years, with farming, forestry, and fin and shell fishing providing the principal elements of the economic base. The County's relatively remote geographical location adds to the community's rural character. The 2013 Census reports the county population to be 10,762 full-time residents, a decrease of 197 (2%), from the 2010 census of 10,959. The population is made up by 5,413 females, and 5,349 males, comprised of 8,545 Whites, 1,937 African Americans, and 280 people of other races. A total of 3,056 residents, or 28.4% of the population of Middlesex, are over 65 years-of-age. With the population dropping 2% in the past three years, it is estimated that the county's population will not see any drastic fluctuations, up or down, throughout the next decade.

The county population lives in 7,184 dwellings, with only 3.5% of the occupancies being comprised of multi-family dwelling units, a figure significantly lower than the Commonwealth's average of 21.7%. County officials estimate that 30% of the housing units in the community are seasonal, increasing the population between May and October with an additional 20,000 residents. Middlesex, Virginia, is home to one of the top boating populations in the Commonwealth of Virginia, another factor which adds to the seasonal population of the county.

Public Safety Services in Middlesex County are provided by the Office of the Sheriff, four individual volunteer fire companies, Deltaville, Hartfield, Urbanna, and Waterview; two volunteer rescue squads, Deltaville and Urbanna. The collective departments work together responding to law enforcement situations, fires, medical emergencies, and all-hazards incidents throughout the community. All Emergency Management activities, including operations of the Emergency Operations Center as well as maintenance and oversight of the Emergency Operations Plan, are managed by a county appointed Emergency Services Coordinator. This individual works in conjunction with the Middlesex Emergency Management Director, who is an appointed member, from the Board of Supervisors. The Emergency Services Coordinator also works in conjunction with the leadership and members of the volunteer fire departments and volunteer rescue squads.

Town of Urbanna

The Town of Urbanna is located in Middlesex County on the Rappahannock River on a finger of land bounded by Perkins Creek and Urbanna Creek. The Town is one of America's original harbor towns and is located approximately five miles from Saluda, VA. Incorporated in 1902, the present town boundary comprises an area of about one-half square mile. The town operates an active boat harbor which is a major gateway for the fishing and recreational boating industries serving the area.

According to 2010 Census figures, the population in the Town of Urbanna consists of 476 people, a decrease of 67 (-12.3%) from the 2000 Census. The population has 204 men and 272 women and is comprised of 431 whites, 35 African Americans, and 10 people of other races. The Town of Urbanna experiences a seasonal swelling of the population to well above 2,000 people within the town and at the nearby Bethpage Campground due to seasonal use of vacation homes and campsites. This influx of tourists brings in much needed revenue and helps support the service industry and the tax base for the county. Also, the Town is the location of an annual Urbanna Oyster Festival. Since 1958, this event

features oyster specialties and other Chesapeake Bay seafood, a parade, a fine arts exhibit and visiting tall ships. Crowds for the two-day event reach approximately 75,000 people.

Rappahannock Tribe

The Rappahannock Tribe, located on the river of the same name, is one of seven Federally recognized tribes in Virginia. Their ancestors were among those greeting the first English colonists to Virginia in the early 17th century. It was not long, however, before the English settlers dispossessed and displaced the Rappahannock River groups from the rich lands along the river. Acknowledging their treaty obligations to the Rappahannock, in 1682, colonial authorities assigned approximately 3,500 acres to the Rappahannock Indians in the vicinity of Indian Neck, interior land miles from their ancestral home. Rappahannock families nonetheless persisted in this vicinity through the 18th and 19th centuries and many tribal members remain in Indian Neck today, where the Rappahannock Indian Tribal Center is located and where the Tribal Government operates.

The Rappahannock's are organized in four components of community:

- Children (birth to 10 years) are the first link in the chain of tribal growth and are taught dance, drum, history, language, political structure, and traditions; elders spend much time educating and preparing children for the next stage of life.
- Youth (ages 11 to 18) are taught more complicated concepts of indigenous construction, creative arts, tool making, gathering skills, farming techniques, and hunting skills. Producers spend time training and mentoring youth in preparation for their next stage of life.
- Producers (ages 19 to 59) are the managers of programs, committees, and projects. They usually hold positions as official or unofficial leaders and are mentored by Elders. Classroom education programs train them in project planning, design, and implementation, as well as leadership for council and committee members.
- Elders (60+) have lived through all the previous stages of life and are well endowed with spiritual wisdom and cultural knowledge. They are the Keepers of the Knowledge and hold closely to oral tradition and intimate history of previous generations. They are responsible for sharing their knowledge with children and youth and act as guides to the producers, collaborating jointly in the decision-making process.

Health and wellness in tribal culture is closely tied to spiritual, cultural, and social traditions. Through the generations, tribal traditions have incorporated all the dimensions of wellness (spiritual, social, emotional, physical, occupational, environmental, financial, and intellectual). It is this holistic view that continues to guide the work of Rappahannock leaders today.

The Rappahannock Tribe gained State Recognition in 1983 and Federal Recognition in 2018. Tribal members total more than 350 and reside primarily on rural properties located on the Middle Peninsula in Virginia. The Rappahannock Tribe's Service Area (RTSA) includes King & Queen, King William, Essex and Caroline Counties in Virginia. The Tribe is led by Chief Anne Richardson and its offices are located at 5036 Indian Neck Road, Virginia 23148.

Upper Mattaponi Tribe

The Upper Mattaponi Indian Tribe (UMIT) is a federally recognized Indian tribe centered in King William County, Virginia. The Tribe was officially recognized by the Commonwealth of Virginia on March 25, 1985, and received federal recognition on January 29, 2018.

As part of the Powhatan Chiefdom, the Tribe's ancestral lands of Tsenacomacah encompassed the Tidewater and Eastern Shore regions of Virginia. The Tribe were signatories to the Middle Plantation Treaty of 1677 as a tributary tribe, subject to the Queen of the Pamunkey.

The inland waterways of the York River watershed, surround the Tribe's current tribal center, with the Tribal Government operating in King William County. The governing body of the Tribe consists of the Chief, Assistant Chief, and five (5) Council Members. Under the Tribe's Constitution, the Upper Mattaponi Indian Tribal Council has the power and authority to represent and speak for the Upper Mattaponi Indian Tribe in all matters for the welfare of the Tribe. The Tribal Council also has the power and authority to negotiate with federal, state, and local governments, as well as the councils or governments of other tribes. The Tribe has over 650 tribal citizens that reside primarily in the York, James, and Rappahannock River watershed.

Economic Resiliency

In 2020, the MPPDC updated and approved the Middle Peninsula Comprehensive Economic Development Strategy (CEDS) that sets forth goals and objects necessary to improve the regional economy. In part, a chapter was added to this document titled, "Coastal Economic Resiliency" to focus on emerging challenges posed by climate change and rising sea levels. The MPPDC intends to expand this chapter to include specific economic challenges associated with managing coastal resiliency as well as new program and services instructions to address coastal risk, such as the MPPDC Fight the Flood Program (<https://fightthefloodva.com/>) which provides citizens access to loans, grants, and insurance to protect private investments (i.e. homes and land). As hazards pose threats to the local and regional economy, economic resiliency of the region is critical to the regions long term success. The three primary attributes of economic resiliency include: the ability to recover quickly from a shock, the ability to withstand a shock, and the ability to avoid the shock altogether.

Based on mapping efforts by the U.S. Bureau of Labor Statistics (BLS) in 2019, maps of Employment in Hurricane Storm Surge Flood Zones were developed that provide an example of impacts to employment in hurricane storm surge flood zones in Gloucester, Mathews, and Middlesex Counties (Figures 2-4). These maps show that in Mathew County 62.8% of all business establishments would be impacted by hurricane storm surge and reduced quarterly revenues in the third quarter of 2019 by 76.5%. In Middlesex County 7.6% of all business establishments would be impacted by hurricane storm surge and reduced quarterly revenues in the third quarter of 2019 by 6.5%. In Gloucester County 15.2% of all business establishments would be impacted by hurricane storm surge and reduced quarterly revenues in the third quarter of 2019 by 8.9%. Consequently, this will have economic consequences to the overall region.

Figure 2: Employment in Hurricane Storm Surge Flood Zones in Mathews County (BLS, 2019).

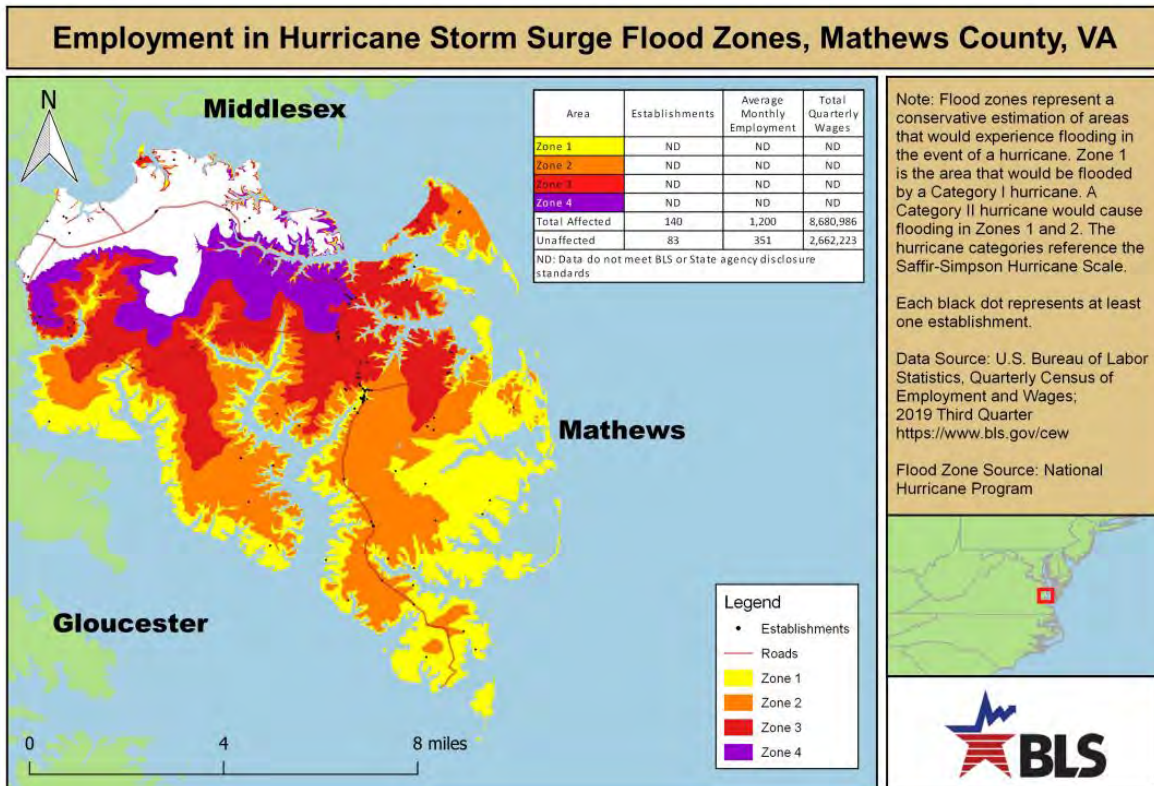

Figure 3: Employment in Hurricane Storm Surge Flood Zones in Middlesex County (BLS, 2019).

Figure 4: Employment in Hurricane Storm Surge Flood Zones in Gloucester County (BLS, 2019).

Therefore, to minimize impacts, not only from hurricane storm surge, but from all other hazards identified in this plan, local business leaders should anticipate, prepare, and plan for impacts and consider how to recover if such events occur.

Section 4 – Hazard Identification and Risk Assessment

MPPDC staff engaged community partners and the general public concerning the nature of hazards that threaten the Middle Peninsula region. A Local Planning Team (LPT) was created to provide local insight and expertise. The LPT identified hazards of the Middle Peninsula, how they should be prioritized as critical, moderately-critical and non-critical hazards, and they also decided that an in-depth analysis was needed for critical hazards. Non- Critical and moderately hazards were not re-analyzed with the exception of recent occurrences due to their minimal impact.

Based on the Federal Guidelines [Disaster Mitigation Act of 2000, §201.1(b)], the Hazards Identification and Risk Assessment (HIRA) is only focused on natural hazards and their impacts. It measures potential loss of life, personal injury, economic impairment, and property damage resulting from natural hazards that threaten the Middle Peninsula. The Middle Peninsula HIRA involved:

1. Hazard Identification,
2. Risk Assessment Analysis, and
3. Financial Loss Estimations (See Section 5).

4.1 Hazard Identification

The LPT first reviewed and evaluated the 2016 list of hazards impacting the Middle Peninsula. MPPDC staff developed a hazards survey for localities and tribes’ representatives on the LPT to assess the hazards risk the highest and lowest risk to Middle Peninsula communities. Based on survey results the LPT decided to remove tsunamis, landslides, and volcanoes from the hazards list. These were deemed to have little to no risk to the region. Next, the LPT decided to combine similar hazards under general heading including:

- Consolidated Winter Storm (ice) and Winter Storm (snow) to WINTER WEATHER
- Consolidated Coastal, Riverine, and ditch flooding hazards to FLOODING
- Consolidated Extreme cold and extreme heat to EXTREME TEMPERATURES

Additionally, instead of just focusing on natural hazards the LPT decided to be inclusive of all hazards that may threaten the Middle Peninsula region.

Table 2: List of Hazards. The LPT identified the following as hazards that may impact the region.	
<ul style="list-style-type: none"> • Hurricanes • Winter Weather (Ice & Snow) • Tornadoes • Flooding (Coastal Flooding/Nor-easters, riverine flooding, and ditch flooding) • Coastal/Shoreline Erosion • Sea Level Rise (added in 2010) • Wildfires • High Winds/Windstorms • Dam Failure 	<ul style="list-style-type: none"> • Droughts • Lightning • Earthquakes • Shrink-swell Soils • Extreme Temperatures (Cold & Heat) • Land Subsidence/Karst • Air Quality • HAZMAT • Summer Storms • Communicable Diseases (added in 2021)

Based on discussions held by the LPT, one new hazard was added to the list that caused new concern to the region.

Communicable Diseases - According to the Commonwealth of Virginia Hazards Mitigation Plan (2018), *A communicable disease is an illness caused by an infectious agent or its toxic products that develops*

when the agent or its product is transmitted from an infected person, animal, or arthropod to a susceptible host. Infectious agents include viruses, bacteria, fungi, parasites, or aberrant proteins called prions. The infectious agent might spread by one of several mechanisms, including contact with the infected individual or his or her body fluids, contact with contaminated items or a vector, or contact with droplets or aerosols. An infection, which is the actual spread of the infectious agent or its toxic product, is not synonymous with disease because an infection may not lead to the development of clinical signs or symptoms.

In conjunction with the list of hazards, the LPT reviewed the 2016 prioritization (Table 3) of hazards as a result of utilizing the Hazards Vulnerability Tool worksheet provided by VDEM staff (originally designed to estimate medical center hazard and vulnerability by Kaiser Permanente).

Table 3: Prioritization Worksheet for Hazards on the Middle Peninsula in 2016 AHMP.

Spreadsheet developed by:

Like the 2006, 2010, and 2016 updates, the LPT agreed to continue using the Kaiser Permanente Hazard Vulnerability Assessment Tool for this AHMP update. In doing so, this provided a measure of continuity and consistency between the mitigation plans. Therefore, each county, town, and Tribe LPT representative were asked to complete the vulnerability worksheet and turn it into the MPPDC Planner. The LPT representative for each community evaluated each hazard based on five criteria to rank the hazards from highest to lowest priorities. The five categories included the probability based on past events, the potential impacts to structures, primary impacts (percentage of damage to a typical structure or industry in the

community), secondary impacts (based on impacts to the community at large), and potential mitigation options. The definitions given in Table 4 were used as a standard for evaluation of all the hazards.

Table 4: Prioritization Criteria for Hazards on the Middle Peninsula.	
Probability - <i>Frequency of occurrence based on historical data of all potential hazards</i>	
<u>Level</u>	
0	Not Applicable
1	Unlikely (less than 1% occurrence: no events in the last 100 years)
2	Likely (between 1% and 10% occurrence: 1-10 events in last 100 years)
3	Highly Likely (over 10% occurrence: 11 events or more in last 100 years)
Affected Structures - <i>Number of Structures affected</i>	
<u>Level</u>	
0	Not Applicable
1	Small (limited to 1 building)
2	Medium (limited to 2-10 buildings)
3	Large (over 10 buildings)
Primary Impacts - <i>Based on percentage of damage to a typical structure or industry in the community</i>	
<u>Level</u>	
0	Not Applicable
1	Negligible (less than 3% damage)
2	Limited (between 3% and 49% damage)
3	Critical (more than 49% damage)
Secondary Impacts - <i>Based on impacts to the community at large</i>	
<u>Level</u>	
0	Not Applicable
1	Negligible (no loss of function, no displacement time, no evacuations)
2	Limited (some loss of function, displacement time, some evacuations)
3	Critical (major loss of loss of function, displacement time, major evacuations)
Mitigation Options - <i>Number of cost-effective mitigation options</i>	
<u>Level</u>	
0	Not Applicable
1	Many (over 3 cost effective mitigation options)
2	Several (2-3 cost effective mitigation options)
3	Few (1 cost effective mitigation option)

After much consideration of the criteria, and consideration of readily available data, local knowledge, and observations the LPT re-ranked the hazards for this update. Table 5 provides the new regional ranking of the hazards. This ranking was the average ranking from each of the localities and tribes. Please see Appendix F for the individual hazard rankings.

Table 5: Prioritization worksheet for Hazards in the Middle Peninsula for the 2021 update.

UNMITIGATED RISK=	PROBABILITY * IMPACT
0.04	0.08

As an outcome of the reassessment and re-ranking of hazards, there were five hazards ranked as having the highest relative risk and thus considered “**Critical Hazards**”. The Critical hazards include:

1. Summer Storms,
2. Winter Weather (ice & snow),
3. Hurricanes,
4. Communicable Disease, and
5. Flooding (riverine, coastal, stormwater, and ditch).

The hazards considered “**Moderately Critical**” have historically occurred in the Middle Peninsula yet ranked lower than the Critical Hazards in terms of risk during the hazard prioritization exercise. The Moderately-Critical hazards include:

6. Tornadoes,
7. Lightning,
8. High Wind/Windstorms
9. Coastal/shoreline Erosion,
10. Wildfires,
11. HAZMAT, and
12. Extreme Temperatures.

Hazards considered “**Non-Critical**” have occurred very infrequently or have not occurred at all – based on the available historical records. These hazards are not considered a widespread threat that would result in significant loss of property and life in the Middle Peninsula. The Non-Critical hazards include:

13. Sea Level Rise,
14. Drought,
15. Shrink- Swell Soils,
16. Earthquake,
17. Air Quality,
18. Dam Failure, and
19. Land Subsidence/Karst.

Public Survey

As part of the All-Hazards Mitigation Plan update, public outreach and input was gathered through a public survey. A survey was released on March 1, 2021, to request information on local hazards and risks and thoughts on mitigation actions. Mitigation actions were defined as any action taken to reduce or eliminate the long-term risk to human life and property from hazards. The survey was open for 2 weeks and closed on March 15, 2021. This is a summary of the public survey responses.

Over the course of a 2-week period there were 106 respondents to the survey. Forty-one (38.68%) of respondents were from Gloucester County, eighteen (16.98%) from King & Queen County, fourteen (13.21%) from Middlesex County, twelve (11.32%) from Mathews County, ten (9.43%) from the Town of West Point, eight (7.55%) from King William County, three (2.83%) from Essex County, and zero participants from Town of Urbanna and the Town of Tappahannock. Of the 106 respondents zero respondents were affiliated with a federally recognized tribe (i.e. Upper Mattaponi, Rappahannock, and Pamunkey Tribe) within the region.

When asked how concerned they were about the hazards affecting their community over the next 20 years respondents were most concerned about FLOODING, HURRICANES, TORNADOES, and COMMUNICABLE DISEASE. The hazards they were least concerned about DAM FAILURE, EARTHQUAKES, SHRINK-SWELL SOILS, and WILDFIRES. The top three hazards that threaten the region include HURRICANES, FLOODING, and WINTER STORMS.

Middle Peninsula localities and its citizens can be impacted by hazards. While living in the Middle Peninsula region of 76.42% of respondents have experienced or have been impacted by a hazard listed within the AHMP and 23.58% have not been impacted. During rain events 32.08% of respondents mentioned that their road floods. Of the respondents 21 (19.81%) have homes within a floodplain, 70 (66.04%) are not located in a floodplain, and 15 (14.15%) did not know. Additionally, when asked if they had flood insurance, 24 (22.64%) said yes, 75 (70.75%) said no, and 6 (6.60%) did not know.

The LPT considered this information when ranking their hazards within their jurisdiction. Also based off the survey the hazards of most concern were listed as critical hazards for the region.

4.2. Hazards Considered “Non-Critical” Hazards to the Middle Peninsula

The following section describes hazards that were deemed “Non-Critical” hazards to the Middle Peninsula region by the LPT.

4.2.1. Sea Level Rise

A look at the geologic record of Chesapeake Bay shows a long and dynamic history - from the bolide (asteroid or comet) impact about 35 million years ago which formed the Chesapeake Bay impact crater, to the melting of glaciers beginning about 18,000 years ago, resulting in a continued rise of sea level, and drowning of the Susquehanna River valley. Given that the rise in sea level has been occurring for thousands of years and is fundamental to the present formation of the Chesapeake Bay and the region’s local tidal waters, there has been a heightened level of concern in recent years about sea level rise. Concern is justified given that current and projected rates of sea level rise and what has been experienced during the last century. There is consensus that rise in sea level will continue for centuries to come, and that human and natural communities within the Middle Peninsula will be vulnerable.

Causes and Current Rates of Local Sea Level Rise

Processes responsible for rising sea levels are complex. To help simplify the matter, it is useful to make a distinction between the concepts of eustatic and relative sea level (RSL) change. Eustatic change, which can vary over large spatial scales, describes sea level changes at the oceanic to global scale that result from changes in the volume of seawater or the ocean basins themselves. The two major processes responsible for eustatic change are the thermal expansion of seawater due to warming and the melting and discharge of continental ice (i.e., glaciers and ice sheets) into the oceans. The global average for current (2006-2015) eustatic sea level change is 0.14 in/yr (3.6 mm/yr) (NOAA Laboratory for Satellite Altimetry, 2021) with estimates for the Chesapeake Bay region on the order of 0.07 in/yr (1.8 mm/yr; Boon et al. 2010) for the approximate same time period. According to the NOAA tide gauge at Sewell’s Point, Virginia there is relative sea level rise trend of 4.73 millimeters/year. Figure 5 shows trend data from 1927 to 2020.

Figure 5:
Relative Sea Level Trend
8638610 Sewells Point, Virginia

The relative sea level trend is 4.73 millimeters/year with a 95% confidence interval of +/- 0.22 mm/yr based on monthly mean sea level data from 1927 to 2020 which is equivalent to a change of 1.55 feet in 100 years.

The plot shows the monthly mean sea level without the regular seasonal fluctuations due to coastal ocean temperatures, salinities, winds, atmospheric pressures, and ocean currents. The long-term linear trend is also shown, including its 95% confidence interval. The plotted values are relative to the most recent [Mean Sea Level datum established by CO-OPS](#). The calculated trends for all stations are available as a [table in millimeters/year and in feet/century](#) (0.3 meters = 1 foot). If present, solid vertical lines indicate times of any major earthquakes in the vicinity of the station and dashed vertical lines bracket any periods of questionable data or datum shift.

RSL change describes the observed change in water level at a particular location and represents the sum of eustatic sea level change and local vertical land movement (subsidence or uplift) at that location. Within the Chesapeake Bay region, land subsidence represents a significant component of RSL change. Factors contributing to land subsidence include tectonic (movement of the earth’s crust) and man-induced impacts (e.g., groundwater withdrawal, hydrocarbon removal). Such land subsidence at rates of **1.1 to 4.8 millimeters per year** exacerbate sea level rise within the region (USGS, 2013).

It is important to note that the lower lying counties like Gloucester and Mathews County will most likely see the largest impact from sea level rise due to their proximity to water and their low-lying geography. Please Section 5 for the Hazus assessment on sea level rise and estimated losses.

Sea Level Rise Vulnerability

Coastal habitat and activity may be impacted by sea level rise. As the water reaches further inland it will influence humans, the environment, and the economy. Table 6 shows the potential impacts to sea level rise.

Table 6: Impacts of sea level rise on humans, the environment, and the economy.	
Sector	Effect
IMPACTS TO HUMANS	
Recreation	-Public access point throughout the region may be inundated
Transportation	-Roads may be inundated -Travel disruptions
Infrastructure	-Property loss and increased need to mitigate -Increased demands on stormwater management systems -Inundation of public and private infrastructure
Health	-Sanitation concerns will increase as rising groundwater levels and sea waters may inundate onsite wastewater disposal systems and drain fields.
Emergency Response	-The ability to provide emergency services to all inundated areas may be reduced. There may be difficulty reaching these locations due to high waters.
IMPACTS TO THE ENVIRONMENT	
Hydrology and Water resources	-Water quality could be impacted as rising groundwater levels and sea waters may inundate onsite wastewater disposal systems and drain fields. -Changes in hydrology could impact local natural resources.
Agricultural crops	-Increased inundation of crop fields. This could drown the crops. -Salt water intrusion could destroy crops.
Forests	-Salt water intrusion could destroy forests creating “ghost forests”.
IMPACT TO THE ECONOMY	
Transportation	-Inundated roads may cause travel and commerce disruptions -Increase road maintenance and cost
Business	-Reduced interest in the region to locate business -Higher insurance rates -Impacts to business infrastructure
Agriculture	-As the region’s economy is based on natural resources, saltwater intrusion could damage silviculture stands and crops that will have a negative impact on the local and regional economy.

Sea Level Rise Extent (Impact)

RSL rise rates at the local level are derived from accurate time series of water level measurements spanning several decades or more. A recent analysis of tide gauge data by the Virginia Institute of Marine Science reported relative sea level rise 0.19 in/yr (4.73 mm/yr). Although there are no additional adequate tidal

records available for the Middle Peninsula's bordering rivers (i.e. York and Rappahannock Rivers), one would expect RSL rise rates to increase as one approached areas of elevated land subsidence such as West Point, VA. Based on land subsidence and eustatic sea level information, the RSL rise rate would be expected to be on the order of 0.22 in/yr (5.6 mm/yr) at or near West Point, VA. There is growing concern that RSL rise rates will accelerate in the future with projections of sea level increases in the Bay region.

4.2.2. Drought

Empirical studies conducted over the past century have shown that drought is never the result of a single cause. It is the result of many causes, often synergistic in nature, and therefore often difficult to predict more than a month or more in advance. In fact, an area may already be in a drought before drought is even recognized. The immediate cause of drought is the predominant sinking motion of air (subsidence) that results in compressional warming or high pressure, which inhibits cloud formation and results in lower relative humidity and less precipitation. Most climatic regions experience varying degrees of dominance by high pressure, often depending on the season. Prolonged droughts occur when large-scale anomalies in atmospheric circulation patterns persist for months or seasons (or longer). The extreme drought that affected the United States and Canada during 1988 resulted from the persistence of a large-scale atmospheric circulation anomaly (National Drought Mitigation Center, 2004).

There have been four major statewide droughts since the early 1900's (USGS, 2002). The drought of 1930-32 was one of the most severe recorded in the Commonwealth while the droughts of 1938-42 and 1962-71 were less severe; however, the cumulative stream flow deficit for the 1962-71 drought was the greatest of the droughts because of its duration. The drought of 1980-82 was the least severe and had the shortest duration. Tidewater Virginia experienced "Severe Drought" conditions during the drought of 2001-2002 when stream flow into Chesapeake Bay was only half the average annual flow into the Bay (Virginia State Climatology Office, 2002).

In 2007, seventeen counties fell into severe drought status as over \$10 million in crop damages occurred in Southwest Virginia. Virginia is one of 44 states that have implemented a Drought Plan. The goals of these plans are to reduce water shortage impacts, personal hardships, and conflicts between water and other natural resource users. These plans promote self-reliance by systematically addressing issues of principal concern. The National Drought Policy Commission's report to Congress and the president, "[Preparing for Drought in the 21st Century](#)", emphasizes the need for drought planning at the state, local, federal, and tribal levels of government. While some state plans focus on mitigation strategies, Virginia's Plan emphasizes response strategies.

In a parallel effort, Middle Peninsula localities with the exception of Gloucester County, participated in the development of the Middle Peninsula Regional Water Supply Plan (MPRWSP) in 2011 and the update in 2021. Gloucester County participated in the development of the Hampton Roads Regional Water Supply Plan. Overall, the water supply plans contain proposed strategies and policies that localities can undertake to mitigate adverse effects of periodic droughts. As both the Regional Water Supply Plan and Drought Response plans focus on responding to drought, both plans should identify the role the jurisdiction's Emergency Services Coordinator/Manager will have with the locality's County Administrator/Town Manager during the implementation of both plans.

Drought Vulnerability

Drought is a phenomenon that, affects the Commonwealth on nearly an annual basis. Drought has several definitions, depending upon the impact. **Agricultural drought** is the most common form of drought and is characterized by unusually dry conditions during the growing season. **Meteorological drought** is defined as an extended period (generally 6 months or more) when precipitation is less than 75 percent of

normal during that period. If coincident with the growing season, agricultural and meteorological drought can occur simultaneously. In general, hydrologic drought is the most serious, and has the most wide-reaching consequences. **Hydrologic drought** occurs due to a protracted period of meteorological drought, which reduces stream flows to extremely low levels (“Dry years” in Figure 6) and creates major problems for public (reservoir/river) and private (well) water supplies.

Extended periods of drought can impact crop and hay yields, and significant crop losses can result. The impact of meteorological drought can vary significantly depending upon dry years. In Figure 6 the red bars indicate the length of the dry period, the time of year the dry period occurs, the antecedent moisture conditions prior to the onset of the dry period, and the relative dryness (in percent of normal precipitation) of the period in question. Drought duration is highly variable by region. The duration also depends on when the precipitation is needed for such activities as planting and irrigation.

In addition to the primary impacts of drought, there are also secondary impacts that can increase the potential for other hazards to occur. Extended periods of drought can increase the risk of wildfire occurrences.

Specific impacts of drought to Middle Peninsula localities may be experienced differently; however economic losses may occur due to crop loss and water shortages.

Figure 6: Estimated annual mean stream inflow into Chesapeake Bay 1937 – 2020. (USGS, 2021).

Drought Extent (Impact)

To assist in identifying the severity of a drought event a classification system is utilized and will dictate public water restriction (Table 7). Notice that water restrictions start as voluntary and then become required as the severity of the drought increases.

Category	Description	Possible Impacts
D0	Abnormally Dry	Going into drought: short-term dryness slowing planting, growth of crops or pastures; fire risk above average. Coming out of drought: some lingering water deficits; pastures or crops not fully recovered.
D1	Moderate Drought	Some damage to crops, pastures; fire risk high; streams, reservoirs, or wells low, some water shortages developing, or imminent, voluntary water use restrictions requested
D2	Severe Drought	Crop or pasture losses likely; fire risk very high; water shortages common; water restrictions imposed
D3	Extreme Drought	Major crop/pasture losses; extreme fire danger; widespread water shortages or restrictions
D4	Exceptional Drought	Exceptional and widespread crop/pasture losses; shortages of water in reservoirs, streams, and wells creating water emergencies

The [US Drought Monitor](#) provides a history of drought events within Middle Peninsula localities.

4.2.3. Shrink-swell Soils

Various areas of the Middle Peninsula have expandable soils that have the potential to shrink and /or swell with changes in moisture content. The sensitivity of a soil to shrink or swell is related to the amount of clay minerals in the soil. These soils are very affected by changes in moisture content. They have a high tendency to expand (swell) when receiving a lot of moisture and contract (shrink) during times of little or no precipitation. Soils that have a high shrink-swell rating may cause damage to buildings, roads, or other structures if not compensated for by engineering. Special designs are often needed for construction on such soils.

House Joint Resolution No. 243 (passed by the Virginia House of Delegates and Senate in March 1996) requires mandatory education for Virginia building code officials on the issue of expansive soils. Where expansive or other problem soils are identified, various methods for responding to them are permitted, including removal and replacement of soils, stabilization by dewatering or other means, or the construction of special footings, foundations, or slabs on how to deal with such soil conditions. This mandatory education is intended to provide guidance on the type of construction techniques to be employed where problem soils are present. While not preventing a site from being used, a high shrink-swell capability places a potential restriction on the size and weight of the building that may be built upon it.

Shrink-swell soils are not specifically addressed in the Essex County Comprehensive Plan (1998 & 2015), however soils associations are generally described. The Rappahannock-Molena-Pamunkey soil association is located on tidal marshes along the Rappahannock River and along floodplain of major creeks that feed into the river. The soil association is predominately Rappahannock soils, which are not suitable for any type of development because of flooding, high water table, and high organic content. These soils are very poorly drained with a surface layer of loam and subsurface of loam, fine sandy loam, and clay loam. About half of the land within this soil association is farmed; the rest is tidal and freshwater marshes. Some areas are used for waterfront development, but seasonal wetness, flooding, and unsuitability for septic systems limits the uses of this land. The suitability of the soil for septic systems and for agriculture is a prime consideration in making general land use policy decisions in Essex County.

Parts of the Town of Tappahannock consist of soils of the Rappahannock-Molena-Pamunkey soil association, primarily along Hoskin's Creek and Tickner's Creek (Town of Tappahannock Comprehensive Plan, 2014). These areas are not suitable for development, therefore eliminating potential problems associated with structures built on shrink-swell soils.

Shrink-swell soils are not specifically addressed in the Gloucester County Comprehensive Plan (amended 2016). However, in an analysis of soil suitability for development, clayey soils account for roughly 6,600 acres, or approximately 5% of the area of the county. Because these conditions are often coincident with shrink-swell soils, this is an approximate estimation of shrink-swell soil conditions within the county. These clayey soils are also listed as being unsuited for housing septic systems. The Gloucester County Land Use Plan generally coordinates the Bayside Conservation District and Resource Conservation District with large areas of soils unsuitable for septic tank use or otherwise unsuitable for high density or commercial development due to physical constraints.

The King & Queen County Comprehensive Plan (2019) includes a map of Shrink Soils in the County that shows high levels near the Dragon Run area of the County. The Comprehensive Plan also includes a detailed soil survey of the County.

Only one area in King William County (Bohicket) is rated high for shrink-swell soils (King William Comprehensive Plan, 2003). According to the Comprehensive Plan, the County uses the Soil Survey results in formulating future land use policies. Goals and implementation strategies within the County's Comprehensive Plan include increasing public awareness of potential problems resulting from building on soils with moderate to high shrink-swell characteristics, discouraging development in areas that are unsuited for development because of soil conditions, continue policies that require soil feasibility studies prior to approval of residential rezoning, include in the plan review process a requirement for evaluating shrink-swell soil qualities, and provide builders and developers with advice and information on shrink-swell qualities of soils and the need to evaluate these conditions before committing to construction. Shrink-Swell soils are not addressed in the Town of West Point's Comprehensive Plan (2000).

High shrink-swell soils are present in the northeastern tip of Mathews County and along the waterfront of the rivers and streams. Most of the wetlands in the County and most of the areas within the Chesapeake Bay Resource Protection Areas (protected from development by the Chesapeake Bay Preservation Act, adopted by the Virginia General Assembly in 1988) are shrink-swell soils. These soils account for just a little more than 7,000 acres of Mathews County.

According to the Middlesex County Comprehensive Plan (2009), shrink-swell soils within Middlesex County limit community development in the Ackwater, Craven, and Slagle soil series. Together, the lands comprised of these soils make up approximately 12,350 acres, or roughly 15% of the area of the county. Community development in these areas is restricted because the limitations caused by these soils cannot normally be overcome without exceptional, complex, or costly measures.

Only low to moderate shrink-swell soil potential exists in the Town of Urbanna, leaving the soils of the Town generally moderately suited for development (Town of Urbanna Comprehensive Plan, 2012). The Town's Comprehensive Plan states that individual sites should be examined in detail prior to any development.

Therefore, it's important to note that there are varying degrees of vulnerability amongst Middle Peninsula localities.

Shrink-swell Soil Vulnerability

As shrink-swell soils expand and shrink this may cause pressure and stress on house foundations. If foundations are not properly designed to handle this, then the foundation may crack, ultimately causing harm to residents.

Shrink-swell Soil Extent (Impact)

Shrink–swell is the volume change that occurs as a result of changes in the moisture content of clay-rich soils. Swelling pressures can cause heave, or lifting of structures, while shrinkage can cause settlement or subsidence. [subsidence](#). Fine-grained, clay-rich soils can absorb large quantities of water after rainfall, becoming sticky and heavy. Conversely, they can also become very hard when dry, resulting in shrinking and cracking of the ground. This hardening and softening is known as ‘shrink–swell’ behavior. Damage to buildings may occur when the volume change of the soil, due to shrinking or swelling, is unevenly distributed beneath the foundations. For example, if there is a difference in water content in the ground beneath a building, swelling pressures can cause the wall to lift; this is often called ‘heave’. This can happen at the corners or towards the center of a building. Subsidence on the other hand is a lowering or collapse of the ground.

According to the US Department of Agriculture, Natural Resources Conservation Service, shrink-swell classes are based on the change in length of an unconfined clod (lump of earth and clay) as moisture content is decreased from a moist to a dry state. If this change is expressed as a percent, the value used is Linear extensibility percent (LEP). LEP is the linear expression of the volume difference of natural soil fabric at 1/3-bar or 1/10-bar water content and oven dryness. The volume change is reported as percent change for the whole soil. If it is expressed as a fraction, the value used is COLE, coefficient of linear extensibility. The shrink-swell classes are defined as follows:

Shrink-Swell Class	LEP	COLE
Low	<3	<0.03
Moderate	3 - 6	0.03 - 0.06
High	6 - 9	0.06 - 0.09
Very High	≥9	≥0.09

If the shrink-swell potential is rated moderate to very high, shrinking and swelling can damage buildings, roads, and other structures. The high degree of shrinkage associated with high and very high shrink-swell potentials can damage plant roots.

4.2.4. Earthquakes

An earthquake is a sudden movement or trembling of the Earth, caused by the abrupt release of strain that has accumulated over a long time. For hundreds of millions of years, the forces of plate tectonics have shaped the Earth as the huge plates that form the Earth's surface slowly move over, under, and past each other. Sometimes the movement is gradual; at other times, the plates are locked together, unable to release the accumulating energy. When the accumulated energy grows strong enough, the plates break free and result in an earthquake (Shedlock and Pakister, 1997). If the earthquake occurs in a populated area, it may cause deaths, injuries, and extensive property damage.

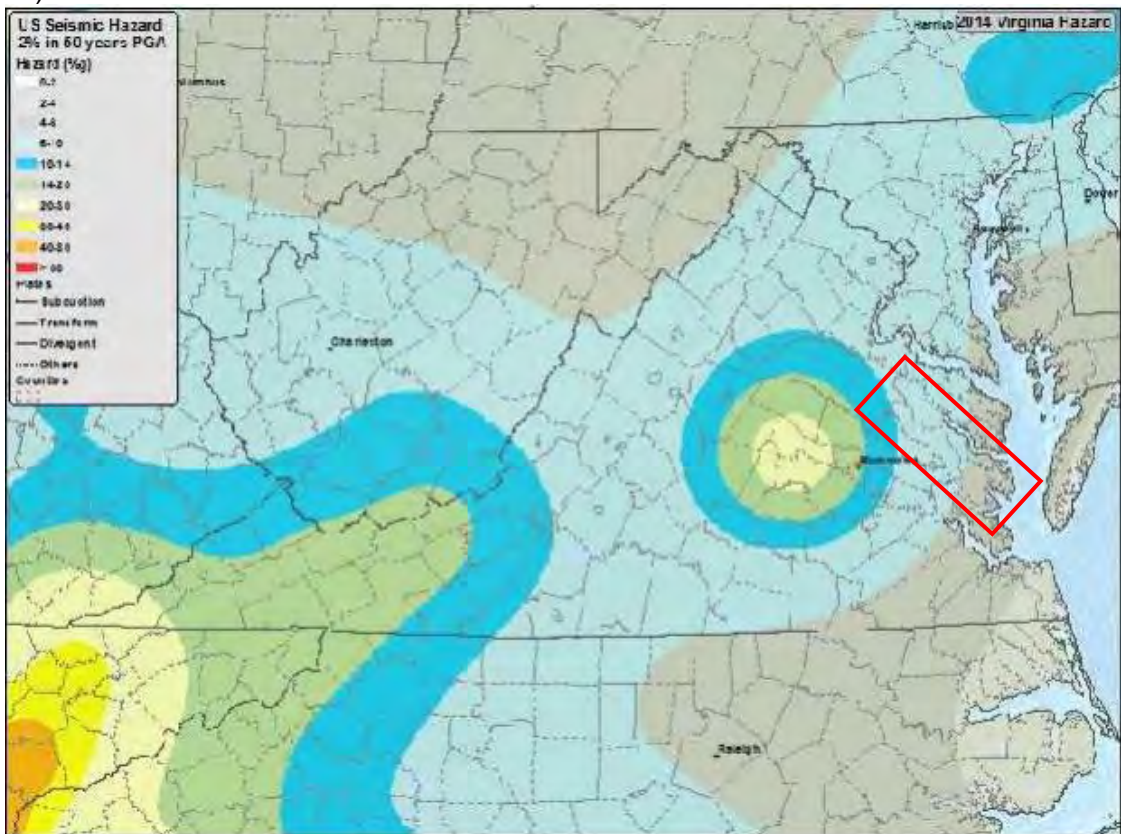

Earthquake Vulnerability

During an earthquake when the ground is shaking, it experiences acceleration. The peak acceleration (PA) is the largest acceleration recorded by a particular station during an earthquake (expressed as %g). When acceleration acts on a physical body, the body experiences the acceleration as a force. The force most experienced is the force of gravity, which causes one to have weight. Units of acceleration are measured in terms of g, the acceleration due to gravity. For example, an acceleration of 11 feet per second per second

is $11 \times 12 \times 2.54 = 335$ cm/sec/sec. The acceleration due to gravity is 980 cm/sec/sec, so an acceleration of 11 feet/sec/sec is about $335/980 = 0.34$ g. Expressed as a percent; 0.34 g is 34 %.

The United States Geological Survey (USGS) rates the susceptibility of areas of the United States to earthquakes and has published risk maps, which give the probability of various levels of ground motion being exceeded in 5 years. An approximate threshold for shaking that causes building damage (for pre-1965 dwellings or dwellings not designed to resist earthquakes) is 10 %g. According to USGS predictions, the Middle Peninsula is located within the 1-2%g, 2-3%g and 3-4%g contour lines (Figure 7).

Figure 7: Seismic- Hazard Map of Virginia. Earthquake hazard map showing peak ground accelerations having a 2 percent probability of being exceeded in 60 years. The Middle Peninsula of Virginia (hi-lighted by the red square on the map) falls within the blue, light blue, and green polygons. Image courtesy USGS (2018).

Historical data is supportive of this low risk assessment. Virginia has experienced over 498 documented earthquakes from 1774 and 2016. Figure 8 depicts the historical earthquake epicenters in and near Virginia from 1774 and 2016. The largest earthquake in Virginia was a magnitude 5.8 earthquake in Giles County in 1897. This earthquake was the third largest in the eastern US in the last 200 years was felt in twelve states. Based on the map there were no earthquake epicenters recorded within the area of the Middle Peninsula. However, in 2011 a 5.8 earthquake in Mineral, Virginia was felt in the Middle Peninsula region and caused damages according to VDEM.

Depending on the epicenter of the earthquake Middle Peninsula localities may experience varying impacts. According to the USGS (2018) the eastern most portions of Mathews and Gloucester County have a lower chance of being impacted by earthquakes.

Figure 8: Virginia Earthquakes 1774 – 2016 - Historical earthquake epicenters in and near Virginia from 1774 through 2016. The Middle Peninsula of Virginia (highlighted by the red square on the map) is void of any historic earthquake epicenters (Source: Commonwealth of Virginia Hazard Mitigation Plan 2018).

Earthquake Extent (Impact)

The severity of an earthquake can be expressed in terms of both intensity and magnitude. However, the two terms are quite different, and are often confused. Intensity is based on the observed effects of ground shaking on people, buildings, and natural features. It varies from place to place within the disturbed region depending on the location of the observer with respect to the earthquake epicenter. Magnitude is related to the amount of seismic energy released at the hypocenter of the earthquake. It is based on the amplitude of the earthquake waves recorded on instruments which have a common calibration. The magnitude of an earthquake is thus represented by a single, instrumentally determined value.

Earthquake severity is commonly measured on two different scales: the Modified Mercalli Intensity scale and the Richter Magnitude scale. The following provides ranking and classification definitions for the two scales (Table 8).

Table 8: Ranking and classification definitions for two scales that measure earthquake severity.

Richter Magnitude Scale	Modified Mercalli Intensity Scale
1.0 to 3.0	I
3.0 to 3.9	II to III
4.0 to 4.9	IV to V
5.0 to 5.9	VI to VII
6.0 to 6.9	VII to IX
7.0 and Higher	VIII or Higher
Defined Modified Mercalli Intensity Scale Rating	
I	Not felt except by a very few under especially favorable conditions.
II	Felt only by a few persons at rest, especially on upper floors of buildings.
III	Felt quite noticeably by persons indoors, especially on upper floors of buildings. Many people do not recognize it as an earthquake. Standing motor cars may rock slightly. Vibrations similar to the passing of a truck.
IV	Felt indoors by many, outdoors by few during the day. At night, some awakened. Dishes, windows, doors, disturbed; walls make cracking sound. Sensation like heavy truck striking building. Standing motor cars rocked noticeably.
V	Felt by nearly everyone; many awakened. Some dishes, windows broken. Unstable objects overturned. Pendulum clocks may stop.
VI	Felt by all, many frightened. Some heavy furniture moved; a few instances of fallen plaster. Damage slight.
VII	Damage negligible in buildings of good design and construction; slight to moderate in well-built ordinary structures; considerable damage in poorly built or badly designed structures; some chimneys broken.
VIII	Damage slight in specially designed structures; considerable damage in ordinary substantial buildings with partial collapse. Damage great in poorly built structures. Fall of chimneys, factory stacks, columns, monuments, walls. Heavy furniture overturned.
IX	Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb. Damage great in substantial buildings, with partial collapse. Buildings shifted off foundations.
X	Some well-built wooden structures destroyed; most masonry and frame structures destroyed with foundations. Rails bent.
XI	Few, if any (masonry) structures remain standing. Bridges destroyed. Rails bent greatly.
XII	Damage total. Lines of sight and level are distorted. Objects thrown into the air.

4.2.5. Air Quality

Good air quality is taken for granted by most of the citizens of the Middle Peninsula of Virginia. However, there are natural and human-caused factors that may influence the air quality within the region.

First emissions from human activity can influence overall air quality within the region. From vehicle emissions to local businesses (ie. industry), Virginia Department of Environmental Quality (DEQ) Air Division’s monitors and regulates emissions. DEQ is responsible for carrying out the mandates of the Virginia Air Pollution Control Law and the Federal obligations under the Clean Air Act on behalf of the State Air Pollution Control Board. For local industry, DEQ issues air quality permits to regulate emitted pollutants to ensure that emissions do not cause harm to the public or to the environment. Each year DEQ compiles an inventory of criteria pollutant air emissions from point, area, mobile, and biogenic sources (Table 9).

Table 9: 2019 Point Source Emissions Inventory. DEQ periodically compiles an inventory of criteria pollutant air emissions from point, area, mobile, and biogenic sources in the state. Point source emissions are inventoried annually (DEQ, 2021) for each Middle Peninsula Locality.

County	Site Name	Emissions (tons)							Facility Total

<p>**Note: Blank squares within the table indicate that there are no emissions to be measured. NH₃ – Ammonia; NO_x- Nitrogen oxides; PM 10 –particulate matter 10 micrometers or less in diameter; PM 2.5 – particulate matter 2.5 micrometers or less in diameter, generally described as fine particles; SO₂- Sulfur dioxide; VOC- Volatile organic compound</p>									

With the passing of the Clean Air Act in 1970 and then amendments in 1990, US Congress required DEQ to enhance the vehicle emissions inspection program to improve air quality and to reduce emission further. In response Virginia requires the inspection of vehicles operating in the counties of Arlington, Fairfax, Loudoun, Prince William, Stafford and the Cities of Alexandria, Fairfax, Falls Church, Manassas, and Manassas Park. Vehicle emissions contain pollutants that contribute to the formation of ozone, the main component of smog. Smog builds up at ground level on hot sunny days and may even impact water quality in the Chesapeake Bay and its tributaries through atmospheric deposition.

In conjunction with emissions caused by humans there are natural emissions, such as forest fires and controlled burns, that have the potential to cause air quality to deteriorate and become unsafe, especially for those who suffer from medical conditions that make them sensitive to poor air quality. As a rural region of Virginia, the Middle Peninsula landscape is dominated by fields and forests. To properly manage these resources, property owners may carry out prescribed burning, a deliberate use of fire under specified and controlled conditions to achieve a resource management goal. Benefits including:

- site preparation for reforestation,
- hardwood control in pine stands,
- wildfire hazard reduction,
- improved wildlife habitat, and
- threatened and endangered species management.

According to the VDOF: *Products from the combustion of forest fuels are mainly carbon-containing compounds. The most important pollutants being particulate matter and carbon monoxide (CO).*

Two products of complete combustion are carbon dioxide (CO₂) and water, these make up over 90% of the total emissions. Under ideal conditions it takes 3.5 tons of air to completely burn 1 ton of fuel. The combustion of 1 ton of fuel will produce the following:

Carbon dioxide (CO ₂)	2,000 to 3,500 lbs
Water Vapor	500 to 1,500 lbs
Particulate Matter	10 to 2000 lbs
Carbon Monoxide (CO)	20 to 500 lbs
Hydrocarbons	4 to 40 lbs
Nitrogen Oxides	1 to 9 lbs
Sulfur Oxide	Negligible amounts

To assist with the management of the smoke generated from prescribed burning, the VDOF has developed [voluntary smoke management guidelines](#) to lessen impacts to public health and welfare. In addition to prescribed burns there are also unplanned forest fires that may impact the region's air quality. For instance, on August 4, 2011, a lightning strike caused a fire in the Great Dismal Swamp that kept smoldering for 111 days. This impacted air quality in Southern Virginia, Middle Peninsula Localities, and northward across Virginia and as far as Annapolis, Maryland. Wind currents over the Chesapeake Bay provided a channel for the ash-heavy smoke to travel north and caused a CODE ORANGE (See Table 10 below) for most of coastal Virginia.

Each locality within the Middle Peninsula will have varying vulnerability to air quality impacts. Localize events (i.e. wildfires, emissions for business, etc.) and wind currents may influence air quality within a given area at a given time.

Air Quality Extent

To monitor and assess daily air quality, the Environmental Protection Agency (EPA) has established the Air Quality Index (AQI). This scale determines how clean or polluted the air is and its impacts on human health. Based on a 0-500 scale, the higher the AQI value the greater the level of air pollution and the greater the health concern. Table 10 identifies the AQI levels of health concern, the associated numerical value, and the meaning:

Table 10: AQI Scale. AQI levels and associated numerical values and meaning of the index (AirNow, 2015).

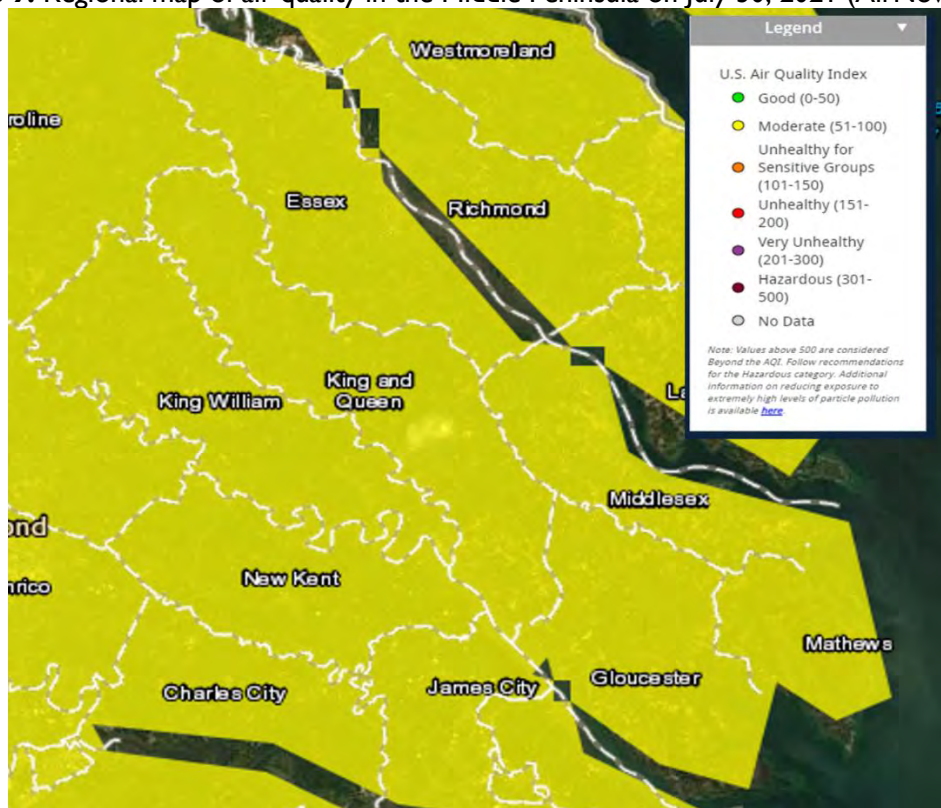

Air Quality Index Levels of Health Concern	Numerical Value	Meaning
Good	0 to 50	Air Quality is considered satisfactory, and air pollution poses little or no risk.
Moderate	51 to 100	Air quality is acceptable; however, there may be a risk for some people particularly those who are unusually sensitive to air pollution.
Unhealthy for Sensitive Groups	101 to 150	Members of sensitive groups may experience health effects. The general public is less likely to be affected.
Unhealthy	151 to 200	Some members of the general public may experience health effects; members of sensitive groups may experience more serious health effects.
Very Unhealthy	201 to 300	Health alert: The risk of health effects is increased for everyone.
Hazardous	301 to 500	Health warning of emergency conditions: everyone is more likely to be affected.

Based on this scale the EPA will calculate daily AQI number for each of the five major air pollutants regulated by the Clean Air Act, including ground ozone, particle pollution, carbon dioxide, sulfur dioxide, and nitrogen dioxide (Table 11).

Table 11: Description of regulated pollutants (AirNow, 2015).	
Pollutant	Description
Ozone (O₃)	<p>Ozone is a form of oxygen with three atoms instead of the usual two atoms. It is a photochemical oxidant and, at ground level, is the main component of smog. Unlike other gaseous pollutants, ozone is not emitted directly into the atmosphere. Instead, it is created in the atmosphere by the action of sunlight on volatile organic compounds and nitrogen oxides.</p> <p>Higher levels of ozone usually occur on sunny days with light winds, primarily from March through October. An ozone exceedance day is counted if the measured eight-hour average ozone concentration exceeds the standards.</p>
Carbon Monoxide (CO)	<p>Carbon Monoxide (CO) is a colorless, odorless, very toxic gas produced by the incomplete combustion of carbon-containing fuels, most notably by gasoline powered engines, power plants, and wood fires. CO can cause harmful health effects by reducing oxygen delivery to the body's organs (like the heart and brain) and tissues. At extremely high levels, CO can cause death.</p>
Sulfur Dioxide (SO₂)	<p>Sulfur dioxide (SO₂) is one of a group of highly reactive gasses known as "oxides of sulfur." The largest sources of SO₂ emissions are from fossil fuel combustion at power plants (73%) and other industrial facilities (20%). Smaller sources of SO₂ emissions include industrial processes such as extracting metal from ore, and the burning of high sulfur containing fuels by locomotives, large ships, and non-road equipment. SO₂ is linked with a number of adverse effects on the respiratory system.</p>
Nitrogen Dioxide (NO₂)	<p>Nitrogen dioxide (NO₂) is one of a group of highly reactive gasses known as "oxides of nitrogen", or "nitrogen oxides (NO_x)". Other nitrogen oxides include nitrous acid and nitric acid. While EPA's National Ambient Air Quality Standard covers this entire group of NO_x, NO₂ is the component of greatest interest and the indicator for the larger group of nitrogen oxides. NO₂ forms quickly from emissions from cars, trucks and buses, power plants, and off-road equipment. In addition to contributing to the formation of ground-level ozone and fine particle pollution, NO₂ is linked with a number of adverse effects on the respiratory system.</p>
Particulate Matter (PM-2.5 PM-10)	<p>Particle pollution (also called particulate matter or PM) is the term for a mixture of solid particles and liquid droplets found in the air. Some particles, such as dust, dirt, soot, or smoke, are large or dark enough to be seen with the naked eye. Others are so small, they can only be detected using an electron microscope. Particle pollution includes <i>inhalable coarse particles</i>, with diameters larger than 2.5 micrometers and smaller than 10 micrometers and <i>fine particles</i>, with diameters that are 2.5 micrometers and smaller. How small is 2.5 micrometers? Think about a single hair from your head. The average human hair is about 70 micrometers in diameter -- making it 30 times larger than the largest fine particle. These particles come in many sizes and shapes and can be made up of hundreds of different chemicals. Some particles, known as <i>primary particles</i>, are emitted directly from a source, such as construction sites, unpaved roads, fields, smokestacks, or fires. Others form in complicated reactions in the atmosphere of chemicals such as sulfur dioxides and nitrogen oxides that are emitted from power plants, industries, and automobiles. These particles, known as <i>secondary particles</i>, make up most of the fine particle pollution in the country.</p> <p>Coarse particulates (PM-10) come from sources such as windblown dust from the desert or agricultural fields (sandstorms) and dust kicked up on unpaved roads by vehicle traffic. PM-10 data is the near real-time measurement of particulate matter 10 microns or less in size from the surrounding air. This measurement is made at standard conditions, meaning it is corrected for local temperature and pressure.</p> <p>Fine particulates (PM-2.5) are generally emitted from activities such as industrial and residential combustion and from vehicle exhaust. Fine particles are also formed in the atmosphere when gases such as sulfur dioxide, nitrogen oxides, and volatile organic compounds, emitted by combustion activities, are transformed by chemical reactions in the air. Large-scale agricultural burning or sandstorms can produce huge volumes of fine particulates. PM-2.5 data is the near real-time measurement of particulate matter 2.5 microns or less in size from the surrounding air. This measurement is made at local conditions and is not corrected for temperature or pressure.</p>

AirNow.com provides a daily air quality forecast for select regions of Virginia including Hampton Roads, Northern Virginia, Richmond, Roanoke, Shenandoah National Park and Winchester. This site also provides calendars of air quality nationally and at the state level (Figure 9).

Figure 9: Regional map of air quality in the Middle Peninsula on July 30, 2021 (AirNow, 2021).

Air Quality Vulnerability

Poor air quality can impact a variety of factors including human health, the local economy, and the environment.

Human health impacts of air pollution can range from minor breathing problems to premature death. The more common effects include changes in breathing and lung function, lung inflammation, and irritation and aggravation of existing heart and lung conditions (e.g., asthma, emphysema, and heart disease). For instance, $PM_{2.5}$ and ground-level O_3 can affect human respiratory and cardiovascular systems. $PM_{2.5}$ and ground-level O_3 has also been associated with eye, nose and throat irritation, shortness of breath, exacerbation of respiratory conditions, chronic obstructive pulmonary disease and asthma, exacerbation of allergies, increased risk of cardiovascular diseases and premature death. Another example is as CO enters the lungs it forms a compound known as carboxyhemoglobin that inhibits the blood's capacity to carry oxygen to organs and tissues. Therefore, heart disease patients may be sensitive to CO pollution. Finally, infants, elderly, and individuals with respiratory diseases may be sensitive to air pollution. Such negative health effects increase as the concentrations of pollutants in the air increase.

Economic impacts of air pollution can result from the health effects air pollution. Air pollution may not only reduce work attendance and overall participation in the labor force, but it can also increase health care costs, missed days of work, and reduce work productivity. Ultimately this impacts a local and regional economy and revenue. While the impacts to human health can be detrimental to the economy, increased O_3 levels may reduce the growth of crops, plants, and trees, leading to economic losses in agriculture and

forestry. Finally, smog can lower tourism since it reduces and impair visibility and enjoyability of surroundings and scenic views.

Environmental impacts of air pollution consist of:

- Ground-level O₃ can significantly impact vegetation and reduce the productivity of some crops. It can injure flowers and shrubs and may contribute to forest decline. Ecosystem changes can also occur, as plant species that are more resistant to O₃ can become more dominant than those that are less resistant.
- Plant response to PM is largely due to the resultant changes in soil chemistry rather than direct deposition on the plant. Various PM constituents taken up by the plant from the soil can reduce plant growth and productivity. PM can also cause physical damage to plant surfaces via abrasion.
- NO_x and SO₂ can become acidic gases or particulates, and cause or accelerate the corrosion and soiling of materials. Together with NH₃, they are the main precursors of acid rain. Acid rain affects soils and water bodies, and stresses both vegetation and animals.

4.2.6. Dam Failure & Risk

Based on 2021 data from the US Army Corps of Engineers (USACE's) National Inventory of Dams (NID), there are approximately 2,760 dams in the Commonwealth (Figure 10) and 107 in the Middle Peninsula (Table 12).

Figure 10: Dam locations and associated hazard potential in the Commonwealth (Source: DCR, 2022).

Dam Failure Extent (Impacts)

As failure of dams may result in a localized major impact, including loss of human life, economic loss, lifeline disruption, and environmental impact such as destruction of habitat, there are also secondary impacts including flooding to the surrounding areas. Thus, a scale has been developed to classify the hazard potentials of dams due to their overall impact to a given area:

- **High** – dams that upon failure would cause probable loss of life or serious economic damage.
- **Significant** – dams that upon failure might cause loss of life or appreciable economic damage.
- **Low** – dams that upon failure would lead to no expected loss of life or significant economic damage. This classification includes dams that upon failure would cause damage only to property of the dam owner. **Special criteria** – includes dams that upon failure would cause damage only to property of the dam owner.

According to Virginia Department of Conservation and Recreation, the Middle Peninsula region has 130 dams. Table 12 shows the number of dams in each risk classification in each County in the region. Please see Appendix I for a list of all dams within the Middle Peninsula Region.

Table 12: Inventory of dams within the Middle Peninsula and their risk classification (DCR, 2022).

County	High	Significant	Low	Low, Special	Undetermined	Total # of Dams
Essex	0	0	0	0	23	23
Gloucester	2	0	1	0	10	13
King and Queen	0	3	0	0	25	28
King William	0	0	1	0	48	49
Mathews	0	0	0	0	0	0
Middlesex	0	0	1	0	16	17
TOTAL	2	3	3	0	122	130

Dam Failure Vulnerability

Dams are classified with a hazard potential depending on the downstream losses estimated in event of failure. The recent regulatory revisions bring Virginia’s classification system into alignment with the system already used in the National Inventory of Dams maintained by the U.S. Army Corps of Engineers. Hazard potential is not related to the structural integrity of a dam but strictly to the potential for adverse downstream effects if the dam were to fail. Regulatory requirements, such as the frequency of dam inspection, the standards for spillway design, and the extent of emergency operations plans, are dependent upon the dam classification. The owner of each regulated Class I, II, and III dam is required to apply to the Soil and Water Conservation Board for an operation and maintenance certificate.

The Virginia DCR Division of Dam Safety’s mission is to conserve, protect, enhance, and advocate the wise use of the Commonwealth’s unique natural, historical, recreational, scenic, and cultural resources. The program’s purpose is to provide for safe design, construction, operation, and maintenance of dams to protect public safety. Disaster recovery programs include assistance to dam owners and local officials in assessing the condition of dams following a flood disaster and assuring the repairs and reconstruction of damaged structures are compliant with the National Flood Insurance Program (NFIP) regulations.

For those dam failures that pose a risk when there are large potential areas with large populations surrounding dams. On-going dam inspections and Virginia’s participation in the National Dam Safety Program maintained by FEMA and the U.S. Army Corps of Engineers serve as preventative measures against dam failures.

Most dam failures occur due to lack of maintenance of dam facilities in combination with excess precipitation events, such as hurricanes and thunderstorms. During Hurricane Floyd in 1999, floods broke open at least 12 unregulated dams in eastern Virginia. One of those failures, at the Cow Creek Dam near Gloucester Courthouse, temporarily closed state Route 14; No one was hurt. Rebuilding the dam cost about \$160,000 (U.S. Water News Online, 2002). During Tropical Storm Gaston in late summer of 2004, a dam was overtopped in King William County and caused a washout of Route 610 between Rt. 608 and Rt. 609. The road was closed to traffic for several weeks (VDOT, 2004).

Each Middle Peninsula locality has a dam and therefore vulnerable to dam failure. However, the degree of vulnerability and impact will vary between the localities if a dam failure occurs. For instance, Gloucester County may experience the most impact from a failure at Beaver Dam as it is the largest in the region and has a high-risk classification. The 39-foot dam structure covers approximately 635 acres of land and is in close proximity to the Gloucester County Courthouse area which is a main residential and business corridor for the County. This increases the potential of economic loss.

Dam Impoundments

In 2001, Virginia's legislature broadened the definitions of "impounding structure" to bring more dams under regulatory oversight. On February 1, 2008, the Virginia Soil and Water Conservation Board approved major revisions to the Impounding Structure Regulations in the Virginia Administrative Code, changing the dam hazard potential classification system, modifying spillway requirements, requiring dam break inundation zone modeling, expanding emergency action plan requirements, and making a variety of other regulatory changes.

All dams in Virginia are subject to the Virginia Dam Safety Act and Dam Safety Regulations (updated in 2016) if:

1. the impounding structure is 25 feet or greater in height and creates a maximum impounding capacity of 15 acre-feet or greater.
2. the impounding structure is six feet or greater in height and creates a maximum impounding capacity of 50 acre-feet or greater

A dam is excluded from these regulations if it meets one or more of the following criteria:

1. Licensed by the State Corporation Commission that are subject to a safety inspection program.
2. Owned or licensed by the United States government.
3. Operated primarily for agricultural purposes that are less than 25 feet in height or that create a maximum impoundment capacity smaller than 100 acre-feet.
4. Water or silt-retaining dams approved pursuant to 45.1-222 or 45.1-225.1 of the Code of Virginia.
5. Obstructions in a canal used to raise or lower water levels.

The height of the dam is defined as *the hydraulic height of an impounding structure. If the impounding structure spans a stream or watercourse, height means the vertical distance from the natural bed of the stream or watercourse measured at the downstream toe of the impounding structure to the top of the impounding structure. If the impounding structure does not span a stream or watercourse, height means the vertical distance from the lowest elevation of the downstream limit of the barrier to the top of the impounding structure.* The maximum impounding capacity means *the volume of water or other materials in acre-feet that is capable of being impounded at the top of the impounding structure.*

The DCR – Division of Dam Safety is the state agency responsible for enforcing the Virginia Dam Safety Act and overseeing the issuance of Operation and Maintenance Certificates for regulated dams.

High Risk Dams

Beaverdam Reservoir Dam– Gloucester, County

The Beaverdam Reservoir is classified as high risk, located to the north of the Gloucester Courthouse area, is contained by a 39-foot dam structure, and covers approximately 635 acres of land. According to the Emergency Action Plan, *The Watershed area draining to Beaverdam Reservoir is 17.2 square miles consisting of woods, open space, roadways and residences. This area has experience very little development since the construction of the dam. The impounding structure for Beaverdam Reservoir, Beaverdam Reservoir Dam, is classified as a “High” hazard dam with a spillway design flood (SDF) equal to the probable maximum flood event (PMF). The dam is an earthfill, grass lined embankment with a regulatory height of about 40 feet and a length of about 2,030 feet. The embankment cross section generally consists of 3:1 (horizontal: vertical) upstream and downstream slopes, with a 14 foot wide rest at elevation 55, and a downstream toe at elevation 15. The spillway consists of a 30 foot by 30-foot square concrete tower structure, with all four sides receiving flow from a 26-foot weir.*

Failure mechanisms evaluated in the EAP include a sunny day dam failure and a spillway design flood dam failure. The property is owned by Gloucester County, and it is an actively used local recreational site known as Beaverdam Park as well as a drinking water source for Gloucester County residents.

Figure 11 shows areas shaded in yellow and blue that would be inundated if the reservoir dam were to fail. According to Gloucester County officials, the shaded areas represent 405 homes just north of the Gloucester Courthouse Complex and the downtown business district that would be inundated if the dam failed. An emergency action plan was prepared and last revised on 12/22/2014. Beyond the information within the EAP there is no detailed risk assessment for this dam, including detailed maps of inundated areas, impacted structures, and loss estimates. A risk assessment for this high hazard dam has been added as a mitigation action, if funding becomes available.

Figure 11: Beaverdam Reservoir Dam and Cow Creek Mill Pond. Flood Inundation Map (Source: Gloucester County Comprehensive Plan, 2016).

Data Source: Gloucester County GIS Department, Virginia Department of Emergency Management

Cow Creek Mill Pond Dam– Gloucester, County

The Cow Creek Mill Pond is classified as high risk, located east of the Gloucester Courthouse area. It is contained by a 16-foot earth dam structure and has a maximum storage capacity of 937 acres-feet. The dam is owned privately by the Cow Creek Mill Pond Association and is used for recreation. According to the EAP, *If the dam were to fail, Routes 14 and 3 are in danger due to the flood wave overtopping the roadway. There are further threats of danger along the roadway to nearby businesses and buildings. Under normal conditions, flow passes under Routhes 14 and 3, the dam’s concrete emergency spillway is capable of safely passing up to 5.7*

feet depth of water in the spillway before the dam overtops. An emergency action plan was prepared and last revised on 4/15/2021.

Figure 11 shows areas shaded in yellow and blue that would be inundated due to dam failures. According to DCR's Quick Reference Summary of Cow Creek Dam, if this dam failed Route 14 and Route 3 would be impacted by inundation and 1 business has the potential of being impacted. Beyond the information there is no detailed risk assessment for this dam, including detailed maps of inundated areas, impacted structures, and loss estimates. A risk assessment for this high hazard dam has been added as a mitigation action if funding becomes available.

Lake Anna Dam

The Lake Anna Dam, located near Mineral in Louisa County, Virginia, creates an impoundment with a surface area of approximately 13,000 acres. Periodic major water releases from Lake Anna flow into the Pamunkey River can have adverse effects on river levels.

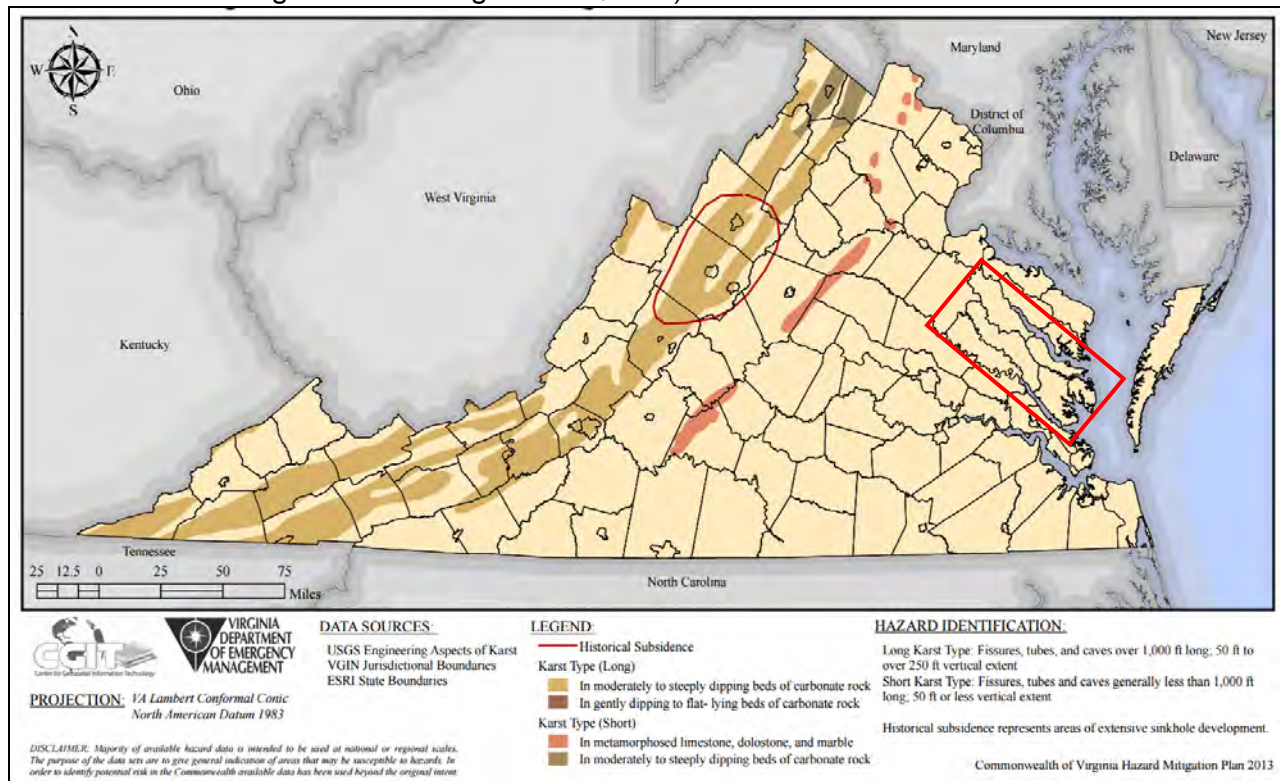

Depending on the amount of water released by the dam owner, Dominion Energy, a potential flooding hazard exists for King William County residents, which would include flooding of low-lying agricultural land, some roads, three (3) bridges, a scattering of residences and some agricultural structures.

4.2.7. Land Subsidence due to Karst

According to the United State Geological Survey, land subsidence is the gradual settling or sudden sinking of the Earth's surfaces. Principal causes of land subsidence may include aquifer system compaction, drainage of organic soils, underground mining, hydro-compaction, natural compaction, sinkholes, and thawing permafrost. In particular, human activity such as withdrawing water, oil, or gas from underground reservoirs may cause land subsidence.

Land subsidence often occurs in regions with mildly acidic groundwater and where the geology is dominated by limestone, dolostone, marble or gypsum. In western parts of the Commonwealth the geology consists of karst which is limestone and similar soluble rocks. Therefore, as karst is easily dissolved by acidic groundwater sinkholes are created. Sinkholes are classified as natural depressions of the land surface. Areas with large amounts of karst are characterized by the presence of sinkholes, sinking streams, springs, caves, and solution valleys. As karst is not part of the Middle Peninsula geology, land subsidence due to karst does not occur within the region (Figure 12).

Figure 12: Karst regions and Historical Subsidence are primarily limited to the mountainous regions of the state. The area encompassing the Middle Peninsula is highlighted on the map with a red square. (Source: Commonwealth of Virginia Hazard Mitigation Plan, 2013)

While the Middle Peninsula may not be impacted by land subsidence due to karst it's important to note that the region is impacted by land subsidence due to water withdraws and rebounding land from the last glacial period. Land subsidence rates on the order of 0.05-0.06 in/yr (1.2-1.4 mm/yr) are attributed to the postglacial forebulge collapse within the Bay region (Douglas 1991). It can take many thousands of years for impacted regions to reach isostatic equilibrium.

Land Subsidence due to Karst Extent

The USGS recognizes four major impacts caused by land subsidence: (1) Changes in elevation and slope of streams, canals, and drains; (2) Damage to bridges, roads, railroads, storm drains, sanitary sewers, canals, and levees; (3) Damage to private and public buildings; and (4) Failure of well casings from forces generated by compaction of fine-grained materials in aquifer systems.

Land Subsidence due to Karst Extent

Since the Middle Peninsula region does not have karst, the region is not susceptible to land subsidence due to karst.

4.3. Hazards considered “Moderately-Critical” Hazards to the Middle Peninsula

The following sections describe hazards that have historically occurred in the Middle Peninsula yet ranked lower than the Critical Hazards in terms of risk during hazard prioritization. These hazards were deemed “Moderately-Critical Hazards” to the Middle Peninsula region by the LPT.

4.3.1 Tornadoes

The National Weather Service (NWS) defines a tornado as a violently rotating column of air in contact with the ground and extending from the base of a thunderstorm. A condensation funnel does not need to reach to the ground for a tornado to be present; however, a debris cloud beneath a thunderstorm is all that is needed to confirm the presence of a tornado, even without a condensation funnel. Tornadoes are distinguishable from waterspouts, which are small, relatively weak rotating columns of air over water beneath a cumulonimbus or towering cumulus cloud. Waterspouts are most common over tropical or subtropical waters. The exact definition of waterspout is debatable. In most cases the term is reserved for small vortices over water that are not associated with storm-scale rotation (i.e., they are the water-based equivalent of landspouts). Yet there is sufficient justification for calling virtually any rotating column of air a waterspout if it is in contact with a water surface.

Tornadoes often appear as a funnel shaped cloud or a spiraling column of debris extending from storm clouds to the ground. They are created during severe weather events like thunderstorms and hurricanes when cold air overrides a layer of warm air, causing the warm air to rise rapidly. Tornadoes may be only several yards across, or in rare cases, over a mile wide. Winds within a tornado can reach speeds over 250 mph, but most tornado winds are 100 mph or less. Weak tornadoes (categorized as F0 and F1 on the Fujita scale, Table 13 & 14) are most common in the Middle Peninsula and often last only a minute before dissipating. From 1951 through the year 2016, 848 tornadoes were documented in Virginia (Commonwealth of Virginia Hazard Mitigation Plan, 2018). Within Middle Peninsula localities 51 tornadoes that touched down between 1950 to 2021 (See Appendix J). While most tornadoes touched down in the Middle Peninsula during April, July is considered the most active month for tornadoes in Virginia. The hot, humid days common to July are often accompanied by a late afternoon or evening thunderstorm.

Table 13: Fujita Scale to measure tornados.

F #	Est. Wind (mph)	Typical Damage
F0	< 73	Light: chimneys damaged, shallow-rooted trees pushed over
F1	73-112	Moderate: mobile homes pushed off foundations, cars blown
F2	113-157	Considerable: mobile homes demolished, trees uprooted, roofs torn off frame houses
F3	158-206	Severe: roof and walls torn down, trains overturned, cars thrown
F4	207-260	Devastating: well-constructed walls leveled, large objects thrown
F5	261-318	Incredible: homes lifted and carried, cars thrown 300 ft, trees debarked

Table 14: Fujita Scale, Derived Enhanced Fujita (EF) Scale and Operated EF Scale.

Fujita Scale			Derived EF Scale		Operational EF Scale	
F #	Fastest ¼ mile (mph)	3 Second Gust (mph)	EF #	3 Second Gust (mph)	EF #	3 Second Gust (mph)
0	40-72	45-78	0	65-85	0	65-85
1	73-112	79-117	1	86-109	1	86-110
2	113-157	118-161	2	110-137	2	111-135
3	158-207	162-209	3	138-167	3	136-165
4	208-260	210-261	4	168-199	4	166-200
5	261-318	262-317	5	200-234	5	Over 200

Figure 13: Historic Tornado Touchdowns and Tracks 1950-2011. HAZARD IDENTIFICATION: Historic tornado touchdowns and tracks are symbolized for visual effect and are not drawn to scale. Actual tornado swath widths vary considerably, although more intense tornadoes are generally wider.

The hot temperatures and humidity of the late afternoon fuel the thunderstorm's growth. If certain conditions are right, a tornado may develop. Hurricane-induced tornadic activity can also occur close to the coastline as a hurricane makes landfall (Watson, 2002). Virginia's tidewater counties see a fair number of tornadoes for two reasons, both of which are related to the region's proximity to Chesapeake Bay and the coast. For instance, as waterspouts are common, they will occasionally come onshore and have minimal damage. Once the waterspout comes onshore, it is considered a tornado and is generally classified as a F0. The second instance this area sees an increase in tornadoes is that often during the warm months there is a bay breeze or sea breeze front (bay or sea cooled air on one side of the front and land heated air on the other). When a large rotating thunderstorm moves over a boundary/front such as this, there is an increased chance that conditions will be right for the development of a tornado (Watson, 2002). Between 1950 and 2021, sixteen tornadoes were reported in Gloucester County, ten in Middlesex, seven in Mathews, seven in King and Queen County, three in Essex County, and eight in King William County (NCDC Storm Event Database, 2021). The Commonwealth of Virginia Hazard Mitigation Plan's illustration above shows historic tornado touchdowns within the Middle Peninsula (Figure 13). While the historic data appears to show that the Middle Peninsula has a low annual probability of being struck by a tornado, it is important to note that because tornadoes can result from severe thunderstorms and hurricanes, the susceptibility of this region to these storms carries the threat of tornadoes along with it. However, it's important to mention that the vulnerability will vary from locality to locality. This is clear when looking at Figure 15. Those localities within the closest proximity to the water seem to be more vulnerable whereas the upper localities (i.e. King William, King & Queen and Essex) are less vulnerable.

On April 16, 2011, three separate tornadoes touched down in the Middle Peninsula. The first tornado came from the southwest. The tornado took a 46-mile path that hit Surry, James City, York, Gloucester, and Mathews Counties. This tornado registered as a F3 tornado on the Fujita Scale which means that winds were 158-206 miles per hour (mph). Such winds severely damaged roofs and walls and threw cars. In Gloucester County alone this tornado tore the roof off Page Middle School and crumpled fences and buses on the property (Figure 14). Overall, this tornado caused approximately \$8,020,000 in damages, caused 2

fatalities and 60 injuries. The second and third tornadoes touched down in Middlesex County. The second tornado registered as a F1 tornado on the Fujita Scale. This path was 1.06 miles and caused approximately \$100,000 in damages. The third tornado registered as a F2 tornado on the Fujita Scale. This path was 2.8 miles and caused approximately \$6,000,000 in damages.

Figure 14: Photo of the damage at Page Middle School in Gloucester County (Gloucester-Mathews Gazette Journal, 2011).

Tornado Vulnerability

Weak tornadoes may break branches or damage signs. Damage to buildings (ie. mobile homes or weak structures) primarily affects roofs and windows and may include loss of the entire roof or just part of the roof covering and sheathing. Windows are usually broken from windborne debris.

In a strong tornado, some buildings may be destroyed but most suffer damage like loss of exterior walls or roof or both; interior walls usually survive.

Violent tornadoes cause severe to incredible damage, including heavy cars lifted off the ground and thrown and strong frame houses leveled off foundations and swept away; trees are uprooted, debarked, and splintered.

Weak tornadoes make up 74% of all tornadoes, and 67% of all tornado deaths come from violent tornadoes.

Tornado Extent (Impact)

In Virginia, tornadoes primarily occur from April through September, although tornadoes have been observed in every month. Low-intensity tornadoes occur most frequently; tornadoes rated F2 or higher

are very rare in Virginia, although F2, F3, and a few F4 storms have been observed. In comparison to other states, Virginia ranks 28th in terms of the number of tornado touchdowns reported between 1950 and 2006; Midwestern and Southern states ranked significantly higher.

4.3.2. Lightning

Virginia averages 35 to 45 thunderstorm days per year statewide (Watson, 2001). Thunderstorms are generally beneficial because they provide needed rain for crops, plants, and reservoirs. Thunderstorms can occur any day of the year and at any time of the day but are most common in the late afternoon and evening during the summer months. About five percent of thunderstorms become severe and can produce tornadoes, large hail, damaging downburst winds, and heavy rains causing flash floods. Thunderstorm can develop in less than 30 minutes, allowing little time for warning. All thunderstorms produce lightning, which can be deadly. The NWS does not issue warnings for ordinary thunderstorms nor for lightning. The NWS does highlight the potential for thunderstorms in the daily forecasts and statements. The VDEM suggests that the public be alert to the signs of changing weather, such as darkening skies, a sudden wind shift, and drop in temperature, and having a warning device such as NOAA Weather Radio.

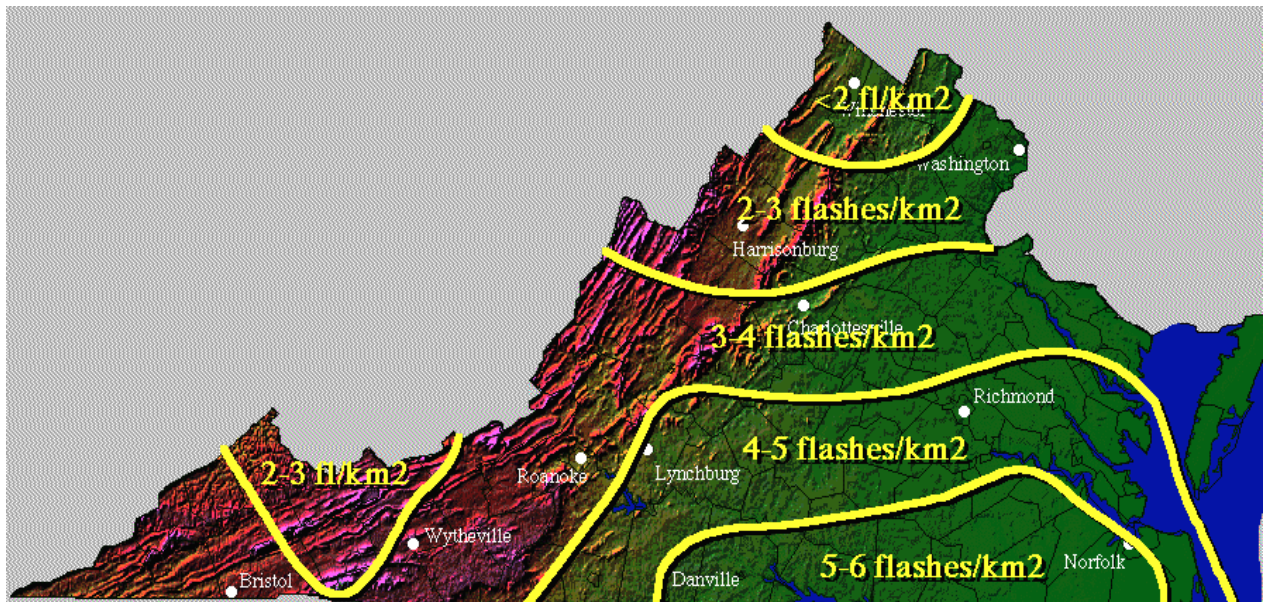

Figure 15: Lightning Flash Density Map computed for 1989 (Electric Power Institute) (University of Virginia Climatology Office, 1989).

Lightning can strike up to 10 to 15 miles from the rain portion of the storm. The lightning bolt originates from the upper part of the thunderstorm cloud known as the anvil. A thunderstorm can grow up to 8 miles into the atmosphere where the strong winds aloft spread the top of the thunderstorm cloud out into an anvil. The anvil can spread many miles from the rain portion of the storm, but it is still a part of that storm. Lightning, from the anvil, may strike several miles in advance of the rain. Lightning bolts may also come from the side or back of the storm, striking after the rain and storm have seemed to pass, or hitting areas that were totally missed by the rain.

Lightning Vulnerability

Between 1959 and 2017, lightning killed 67 people in Virginia. Many additional injuries from lightning go unreported or are not captured by NWS data collection techniques. Nationally, from 1959 through 2017, there have been 4136 deaths due to lightning. Most deaths were males between the ages of 20 and 40

years old who were caught outdoors on fishing, camping, boating, or farming /ranching. A national network of 114 lightning ground stroke detectors was put in place by the Electric Power Research Institute (EPRI), a private organization, that serves the needs of power companies and other subscribers interested in lightning across the country (Virginia Climate Advisory, 1992). These detectors sense the characteristic electromagnetic impulses of cloud-to-ground lightning strikes that occur up to several hundred kilometers away. Then, by using triangulation techniques, the network is able to describe the location of every ground strike that it detects in the continental U.S. (Figure 15). It's important to realize that the contours on the map are very general and because accurate, long-term records of lightning strikes do not exist, the illustration may not be representative of long-term patterns. Historic data shows that the Middle Peninsula region is at a low risk of suffering damages from lightning and thunderstorms, yet it is important to note that thunderstorms and lightning can be very dangerous and can accompany hurricanes and other severe weather events.

The entire planning area is equally at risk to lightning and can be dangerous and/or life threatening. It is hard to generate specific mitigation strategies for this potential natural hazard other than a general public awareness/education campaign associated with thunderstorm/lightning activity.

4.3.3. High Wind / Windstorms (excluding tornados and hurricanes)

High winds and windstorms, when not a result of hurricanes or tornadoes, are often associated with thunderstorms. The NWS defines a severe thunderstorm as having winds 50 kts (58 mph) or hail greater than 3/4" in diameter (about dime-sized). A thunderstorm is considered severe if it produces hail larger than 3/4 of an inch (2 cm), winds greater than 58 mph (93 kph), or tornadoes. This strong frontal system could produce violent damaging effects to the community, such as hail, lightning, high winds (sometimes including tornadoes), and flash floods. Numerous thunderstorms occur in Middle Peninsula every year and vary amongst localities.

High Wind/Windstorms Vulnerability

The threat that any particular thunderstorm presents varies depending on its intensity, structure, and the ground below it. Many thunderstorms simply require people and their belongings to seek shelter inside a sturdy building. However, severe thunderstorms can be very dangerous and require seeking shelter underground because of the damage, they can cause to buildings. Historically the most severe occur during the spring and summer. In the U.S., only about 10% of all thunderstorms are classified as severe. Seeking shelter before a thunderstorm has arrived is best because high wind and lightning can form well in advance of any precipitation. Hail-resistant roofs can reduce property damage, as can properly attached roofs. As always, learning about what safety measures to take during a thunderstorm is the first and most important step in coping with thunderstorms.

In the U.S., the NWS issues severe thunderstorm watches and warnings. A watch is issued when atmospheric conditions are favorable for the development of a severe thunderstorm. A warning is issued when severe thunderstorms have developed. Similar to tornado watches and warnings, severe thunderstorm warnings are broadcast via media (ie. radio and television), Internet, and NOAA weather radios. Particularly of note for coastal communities, such as the Middle Peninsula, are wind advisories associated with water bodies. A Small Craft Advisory is issued for sustained winds 25-33 knots and/or Seas > 7 feet within 12 hours; There is no legal definition of "small craft" but the Coast Guard generally recommends boats smaller than 33 feet should avoid being on the water, but it depends on the experience of the crew. A Gale Warning is issued for 1-minute sustained surface winds in the range 34 kt (39 mph or 63 kph) to 47 kt (54 mph or 87 kph) inclusive, either predicted or occurring not directly associated with tropical cyclones. Reliable forecasting is essential to providing communities with adequate warnings about incoming thunderstorms and the specific threats that each storm possesses.

Damage from strong winds associated with thunderstorms can result in scattered, but severe damage to buildings and vegetation. Although these severe weather events usually occur during the spring and summer months, the emergency management staff should be prepared for them to occur at any time throughout the year.

Utilizing VDEM-generated information available on the state website and/or other information sources, community preparedness mitigation strategies should be developed by the localities for quick dissemination to their residents. Dissemination outlets should include jurisdictional websites, local radio, and TV stations as well as social media sites such as Facebook and twitter.

Derecho

According to the NWS, a derecho is a complex of thunderstorms or a mesoscale convective system (MCS) that produce large swaths of severe, straight-line wind damage at Earth's surface. To be classified as a derecho, the following conditions must be met:

- There must be a concentrated area of convectively induced wind damage or gust greater than or equal to 58 mph occurring over a path length of at least 250 miles.
- Wind reports must show a pattern of chronological progression in either a singular swath (progressive; this event was a classic example) or a series of swaths (serial).
- There must be at least three reports separated by 64 kilometers (km) or more of Enhanced Fujita (EF1) damage/or measured convective wind gusts of 74 mph or greater.
- No more than 3 hours can elapse between successive wind damage/gust events.

Derechos can occur year-round but are most common from May to August (Coniglio et al., 2004)

On June 29, 2012, a derecho struck the Ohio Valley and Mid-Atlantic states. The derecho traveled 700 miles, impacting 10 states and Washington, D.C. (Figure 16). The hardest hit states were Ohio, West Virginia, Virginia, and Maryland, and Washington, D.C. The winds generated by this system were intense, with several measured gusts exceeding 80 mph and causing the death of thirteen people due to falling trees. An estimated 4 million customers lost power for up to a week. The region impacted by the derecho was also in the midst of a heat wave. The heat, coupled with the loss of power, led to a life-threatening situation. Heat claimed 34 lives in areas without power. The Middle Peninsula experienced wind gusts ≥ 65 kts (74 mph).

Figure 16: Area affected (black contours) and storm reports (colored symbols) associated with the June, 29, 2012 derecho. Reports are for the 24-hour period from 7:00 a.m. (Central Daylight Time (CDT)) Friday, June 29 to 7:00 a.m. CDT Saturday, June 30. Areal outline based in Iowa and Illinois to reflect the derecho's origin from convection in the region that did not immediately produce continuous derecho-like conditions. In addition, some of the report in those states occurred not with the system here discussed, but rather with a subsequent storm complex that formed on the evening of June 29. The areal outline also is dashed in North Carolina to reflect that many of the damaging wind gusts in the state occurred south of the thunderstorms that produced them. Storm reports depicted as follows. Wind damage or wind gust \geq 50 kts (59 mph), small blue squares, estimated or measured with gusts \geq 65 kts (74 mph), large black squares with yellow centers, hail \geq 0.75 inches, small green squares, hail \geq 2.0 inches, large green triangles, tornadoes, small red squares (NWS, 2012).

High Wind / Windstorms Extent (Impact)

Wind risk can be determined by measuring the speed of the winds. The categories used to determine risk and ranking hazards include the following:

Hurricane Risk	Wind Speed (mph)	Category
Low	≤ 59.9	High Wind
Medium – Low	60.0-73.9	Tropical Storm
Medium – High	74.0-94.9	Category 1 Hurricane
High	≥ 95.0	Category 2 +

4.3.4. Coastal/Shoreline Erosion

As flooding is the most frequent and costly natural hazard in the United States - besides fire, nearly 90% of Presidential Disaster Declarations result from natural events where flooding is a major component. Excess water from snowmelt, rainfall, or storm surge accumulates and overflows onto adjacent floodplains and other low-lying land adjacent to rivers, lakes, ponds, and the Chesapeake Bay.

Coastal flooding is typically a result of storm surge, wind-driven waves, and heavy rainfall. These conditions are produced by hurricanes during the summer and fall, and nor'easters and other large coastal storms during the winter and spring. Storm surges may overrun barrier islands and push sea water up coastal rivers and inlets, blocking the downstream flow of inland runoff.

Soil Erosion

Hurricanes and nor'easters produce severe winds and storm surges that create significant soil erosion along rivers and streams in the Middle Peninsula. In addition to the loss of soil along these water bodies, there is damage to man-made shoreline hardening structures such as bulkheads and rap-rap as well as to piers, docks, boat houses and boats due to significant storm surges.

These damages are more severe along the broad open bodies of water on major rivers located closer to the Chesapeake Bay. In general terms, the damage is less intense as you move up the watershed from the southeastern area of the region towards the northwestern end of the Middle Peninsula. Therefore, the soil erosion is most severe in Mathews, Gloucester, and Middlesex Counties and to a lesser degree in the 3 remaining Middle Peninsula Counties of King and Queen, King William, and Essex Counties.

The location and the angle at which these hurricanes/nor'easters come ashore region can significantly affect the amount of soil erosion during a particular storm. It can generally be said that hurricane generated soil erosion is uneven in occurrence and that the storm surge affords 2 opportunities for erosion – once as water inundates low-lying amount coast lands and again as floodwaters ebb.

For example, with Hurricane Isabel in 2003, its enormous wind field tracked in a north-northwest direction to the west of the Chesapeake Bay with the right front quadrant blowing from the south-southeast. This pushed the storm surge up the Bay and piling it into the western shore – causing serious soil erosion to the eastern land masses in Mathews, Gloucester, and Middlesex Counties.

Destructive as it was, Hurricane Isabel might have been worse. If it had been stronger at landfill, the storm surge generated in the Chesapeake Bay may have been higher. Had it stalled along its path and lingered through several tide cycles, prolonged surge conditions, exacerbated by high winds, might have cause more severe erosion. If rainfall has been higher, bank erosion due to slope failure might have been more common, particularly given the wetter than normal months that preceded Hurricane Isabel.

Coastal/Shoreline Erosion Vulnerability

Thousands of acres of crops and forest lands may be inundated by both saltwater and freshwater. Escape routes, particularly from barrier islands, may be cut off quickly, stranding residents in flooded areas and hampering rescue efforts. Coastal flooding is very dangerous and causes the most severe damage where large waves are driven inland by the wind. Wind driven waves destroy houses, wash away protective dunes, and erode the soil so that the ground level can be lowered by several feet. Because of the coastal nature of the Middle Peninsula, the region is very susceptible to this type of flooding and resulting damage.

Coastal/Shoreline Erosion Extent (Impacts)

According to the US Geological Survey there are six physical variables that influence the coastal and its vulnerability to sea-level rise and inundation. Shoreline erosion is one of the variables considered in the following table. Shoreline erosion and accretion rates for the U.S. have been compiled by May and others (1983) and Dolan and others (1985) into the Coastal Erosion Information System (CEIS) (May and others, 1982). CEIS includes shoreline change data for the Atlantic, Gulf of Mexico, Pacific and Great Lakes coasts, as well as major bays and estuaries. The data in CEIS are drawn from a wide variety of sources, including published reports, historical shoreline change maps, field surveys and aerial photo analyses. However, the

lack of a standard method among coastal scientists for analyzing shoreline changes has resulted in the inclusion of data utilizing a variety of reference features, measurement techniques, and rate-of-change calculations. Thus, while CEIS represents the best available data for the U.S. as a whole, much work is needed to accurately document regional and local erosion rates.

VARIABLE	Ranking of coastal vulnerability index				
	Very low	Low	Moderate	High	Very high
	1	2	3	4	5
Geomorphology	Rocky, cliffed coasts Fjords Fiards	Medium cliffs Indented coasts	Low cliffs Glacial drift Alluvial plains	Cobble beaches Estuary Lagoon	Barrier beaches Sand Beaches Salt marsh Mud flats Deltas Mangrove Coral reefs
Coastal Slope (%)	> .2	.2 – .07	.07 – .04	.04 – .025	< .025
Relative sea-level change (mm/yr)	< 1.8	1.8 – 2.5	2.5 – 2.95	2.95 – 3.16	> 3.16
Shoreline erosion/ accretion (m/yr)	>2.0 Accretion	1.0 – 2.0	-1.0 – +1.0 Stable	-1.1 – -2.0	< - 2.0 Erosion
Mean tide range (m)	> 6.0	4.1 – 6.0	2.0 – 4.0	1.0 – 1.9	< 1.0
Mean wave height (m)	<.55	.55 – .85	.85 – 1.05	1.05 – 1.25	>1.25

4.3.5. Wildfire

A wildfire is an uncontrolled burning of grasslands, brush, or woodlands. The potential for wildfire depends upon surface fuel characteristics, recent climate conditions, current meteorological conditions, and fire behavior. Hot, dry summers, and dry vegetation increase susceptibility to fire in the fall, a particularly dangerous time of year for wildfire.

The three leading causes of wildfires in Virginia are escaped debris fires, arson, and machine use. Wildfires can also result from natural occurrences, such as lightning strikes. Wildfire danger can vary greatly season to season and is often exacerbated by dry weather conditions.

The VDOF indicates that there are three principal factors that can lead to the formation of wildfire hazards: topography, fuel, and weather. The environmental conditions that exist during spring (March and April) and fall (October and November) exacerbate the hazard. When relative humidity is low and high winds are coupled with a dry forest floor (brush, grasses, leaf litter), wildfires may easily ignite. Years of drought can lead to environmental conditions that promote wildfires. In Virginia, accidental or intentional setting of fires by humans is the largest contributor to wildfires. Residential areas that expand into wild land areas also increase the risk of wildfire threats.

Wildfire Vulnerability

As development has spread into areas which were previously rural, new residents have been relatively unaware of the hazards posed by wildfires and have used highly flammable material for constructing buildings. This has not only increased the threat of loss of life and property but has also resulted in a greater population of people less prepared to cope with wildfire hazards.

The impacts of wildfires can be widespread leading to many secondary hazards. During a wildfire, the removal of groundcover that serves to stabilize soil can lead to hazards such as landslides, mudslides, and flooding. In addition, the leftover scorched, and barren land may take years to recover, and the resulting erosion can be problematic.

Because of wildfire risk, the Virginia Department of Forestry (VDOF) has provided new information on identifying high-risk fire areas. Their Fire Risk Assessment Mapping Database was designed to help communities determine areas with the greatest vulnerability to wildfire. Since wildfire occurrence is based on multiple factors, the VDOF developed a fire ranking map to assist to wildfire prevention efforts, as shown in Figure 22. In 2002 and 2003, VDOF examined which factors influence the occurrence and advancement of wildfires and how these factors could be represented in a Geographic Information System (GIS) model. VDOF determined that historical fire incidents, land cover (fuels surrogate), topographic characteristics, population density, and distance to roads were critical variables in a wildfire risk analysis. The resulting high, medium, and low risk category reflect the results of these analyses. Figure 17 and Table 15 show the varying degree of risk amongst Middle Peninsula localities.

Figure 17: Middle Peninsula Wildfire Risk. Throughout the region risk to wildlife varies due to historic fire incidents, land cover, topographic characteristics, population density and distance to roads.

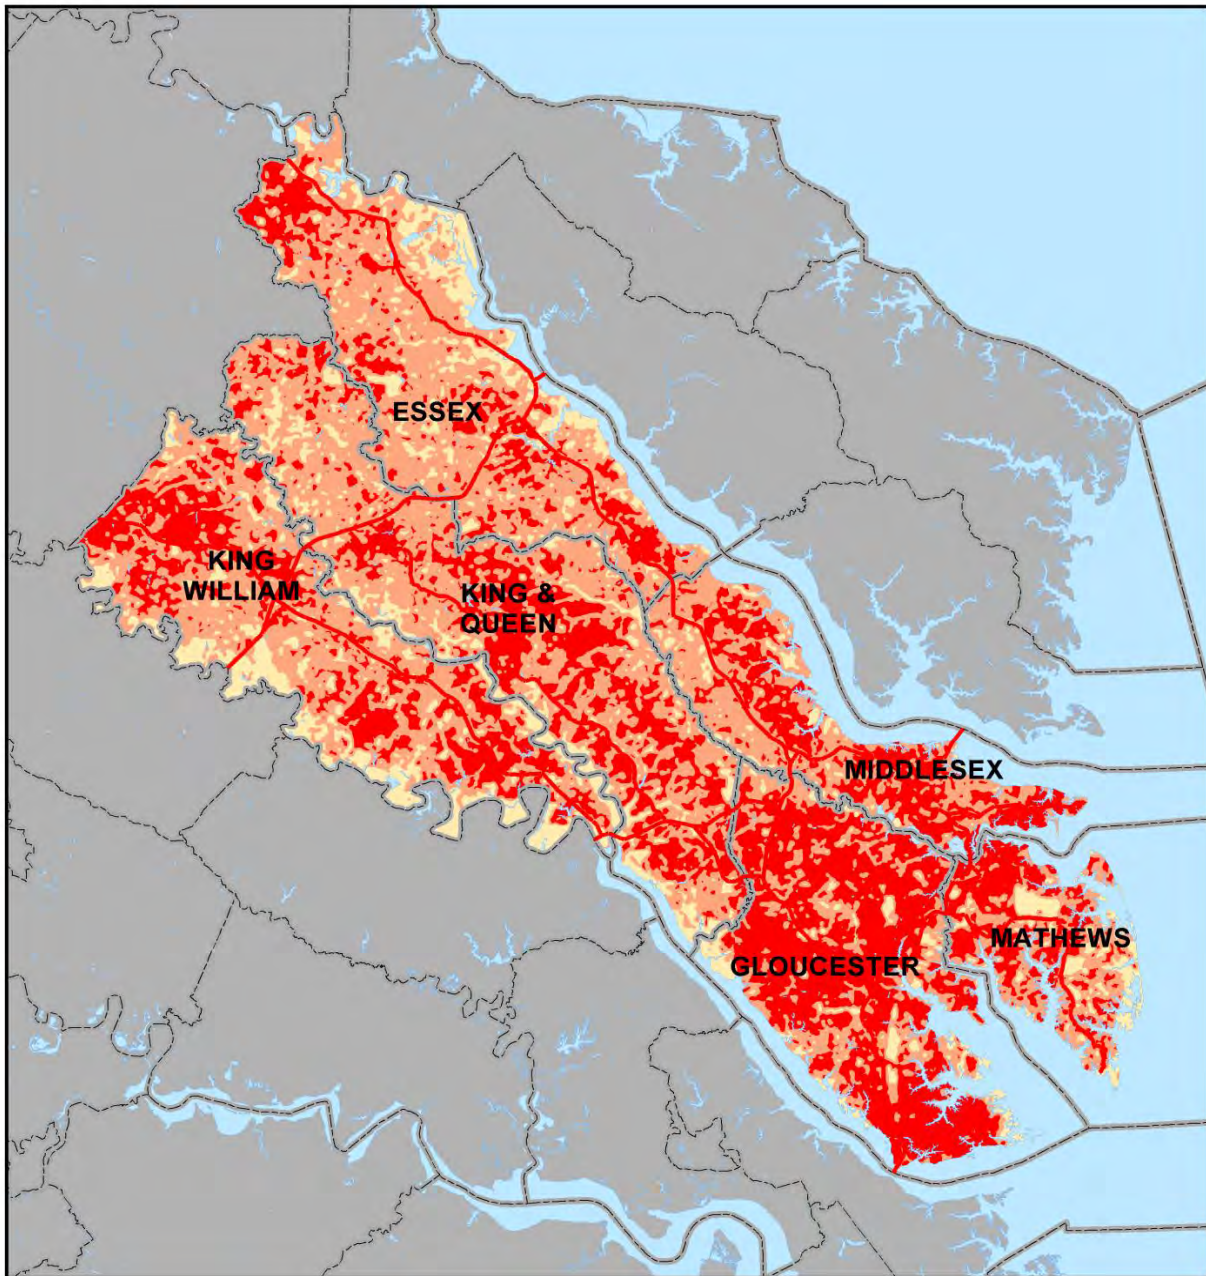

Table 15: Acres of each Middle Peninsula County within each VDOF Fire Risk Category.

County	LOW	MEDIUM	HIGH	Total Acreage
Essex	33,894	105,885	31,999	171,778
Gloucester	16,267	46,195	90,182	152,644
King and Queen	28,569	117,897	59,440	205,906
King William	42,127	89,417	51,039	182,583
Mathews	14,903	28,819	21,966	65,688
Middlesex	8,619	50,251	33,320	92,190
Middle Peninsula Total	144,389	438,464	287,946	870,789

Table 16: Percent of each Middle Peninsula County's area within each VDOF Fire Risk Zone.

County	LOW	MEDIUM	HIGH
Essex	19.7	61.6	18.6
Gloucester	10.7	30.3	59.1
King and Queen	13.9	57.3	28.9
King William	23.1	49.0	28.0
Mathews	22.7	43.9	33.4
Middlesex	9.3	54.5	36.1
Middle Peninsula	16.6	50.4	33.1

As a region, most of the area making up the Middle Peninsula falls within the “Medium” Fire Risk category (Table 15 and 16). It is noteworthy that nearly 60 percent of the area of Gloucester County falls within the “High” Fire Risk category (Table 16).

Debris burning continues to be the leading cause of forest fires in Virginia. The Commonwealth of Virginia has several laws that help to reduce the risk of wildfires. Most notably is the ‘Virginia's 4:00 PM Burning Law’, which goes into effect each spring. The 4:00 PM Burning Law is different from the burning bans, which are invoked only during periods of extreme fire danger. Briefly, the 4:00 PM Burning Law states: from February 15 through April 30 of each year, no burning before 4:00 PM is permitted if the fire is in, or within 300 feet of, woodland, brushland or fields containing dry grass or other flammable material.

Since forest fuels cure during the winter months, the danger of fire is higher in early spring than in summer when the forest and grasses are green with new growth. The 4:00 PM Burning Law is an effective tool in the prevention of forest fires.

Areas where homes meet the Wildland are called the Wildland/Urban interface. Flammable forest fuels often surround homes located in the woods. The VDOF suggests the following safety tips to minimize the threat to homes:

- Have a least 30 feet of defensible space surrounding a home. This will reduce the wildfire threat to a home by changing the characteristics of the surround vegetation. Defensible space also allows firefighters room to put out fires.
- Build with fire-resistant exterior construction materials, such as cement, brick, plaster, and stucco and concrete masonry. Double pane glass windows can make a home more resistant to wildfire heat and flames. Roofs should be Class A.
- Use landscaping materials and design to also create defensible space. Remove flammable plants that contain resins, oils and waxes that burn readily. Large, leafy hardwood trees should be pruned so that the lowest branches are at least 6 to 10 feet high to prevent a fire on the ground from spreading up to the treetops.

- Identify a home and neighborhood with legible and clearly marked street names and numbers so emergency vehicles can rapidly find the location of the emergency. Include a driveway that is at least 12 feet wide with a vertical clearance of 15 feet – provide access to emergency apparatus.

Between 2015 and 2020 there have been of 87 wildfires within the region (Appendix K). Based on VDOF records, each locality has been impacted by wildfire (Table 17 and 18):

Table 17: The number wildfires in a given year (VDOF, 2021).

County	Number of Wildfires in a Given Year						Total
	2015	2016	2017	2018	2019	2020	
Essex	2	3	4	6	5	1	21
Gloucester	6	5	3	3	4	3	24
King & Queen	1	3	5	4	1	4	18
King William	4	1	2	2	1	1	11
Mathews	0	3	1	1	1	1	7
Middlesex	1	2	0	2	0	1	6
Total	14	17	15	18	12	11	87

Table 18: The total acres burned at as result of wildfires in a given year (VDOF, 2021).

County	Number of Acres Burned in a Giver Year						Total
	2015	2016	2017	2018	2019	2020	
Essex	3.10	35.10	3.7	22.6	14.3	30	108.8
Gloucester	145	227.3	7.6	.4	42	108.7	531
King & Queen	16	6.3	9.8	34.2	1.5	74.4	142.2
King William	1.5	2.5	13.8	4	5	5.5	32.3
Mathews	0	2.8	3.3	3	1.8	.7	11.6
Middlesex	1	0.2	0	3.1	0	.2	4.5
Total	166.6	274.2	38.2	67.3	34.6	219.5	830.4

Previous wildfire events identified in the 2011 Mitigation Plan include:

- During 2009, Middlesex County experienced a major wildfire north of Urbanna between route 602 and US Route 17 near Hilliard Pond.
- During 2008, Gloucester County experienced a significant fire in the Guinea area that burned several acres. While this fire did not require any evacuations it did require mutual aid from other jurisdictions. This fire was coordinated through Abington Volunteer Fire and Rescue.

In 2008, drought conditions combined with strong winds resulted in sporadic wildfires in numerous locations throughout the Middle Peninsula region. Mutual aid assistance between area fire departments, as well as from the VDOF, was widely used during these wildfire events.

Mitigation strategies formalizing MOUs between area fire departments to quickly respond to the adverse effects of the wildfire hazard should be included as part of the AHMP update.

Mitigation strategies to improve communication systems between the local jurisdictions and with their state fire-fighting partners should also be proposed with this update.

In addition, the VDOF safety tips - as noted above - lend themselves to a public education mitigation strategy dealing with wildfires and should be included with this update.

Wildfire Extent (Impact)

The VDOF thoroughly tracks the number of acres burned and estimated damages for each incident in the Commonwealth. Timing and coordination resulted in limitations in using this data as part of the ranking methodology.

4.3.6. HAZMAT

HAZMAT can be defined as a material (Chemical, Radiological, Biological or Reactive) that would be a danger to life or to the environment if released without precautions. Furthermore, a hazardous material is any substance or material in a quantity or form that may pose a reasonable risk to health, the environment, or property. The hazards and associated risks of hazardous materials will vary amongst Middle Peninsula as it includes incidents involving substances such as toxic chemicals, fuels, nuclear wastes and/or products, and other radiological and biological or chemical agents. In addition to accidental or incidental releases of hazardous materials due to fixed facility incidents and transportation accidents, regions must be ready to respond to hazmat releases as potential terrorism. It is important to note that the risk of a Hazmat incident is unpredictable and will vary amongst Middle Peninsula localities.

According to VDEM, all jurisdictions in Virginia have a Local Emergency Planning Committee (LEPC) that identifies local industrial hazardous materials and keeps the community informed of the potential risks. With a fixed facility, the hazards are pre-identified, and the facility is required to prepare a risk management plan and provide a copy of this plan to local governments.

Hazardous materials carried through Middle Peninsula localities by commercial vehicle may also cause a risk, particularly if the vehicle is involved in an accident. While the vehicle should have placards on the vehicle to identify the hazard on board, however they are less predictable. In accordance with 9VAC20-110 the Virginia Waste Management Board is responsible for promulgating regulations governing the transport of hazardous materials within the Commonwealth. Additionally, the VAC also provides requirements for “every person who transports or offers for transportation of hazardous materials within or through the Commonwealth of Virginia” (9VAC20-110-110) Therefore there are measures in place to help reduce the risk of hazards materials being transported through the Middle Peninsula Region.

HAZMAT Vulnerability

The effects of hazardous material is ultimately dependent on the type and amount of hazardous material, however injuries and/or deaths could occur as a result of a hazmat incident. They can pose risk to health, safety, and property at fixed facilities and during transportation. According to VDEM, “A business might have to evacuate depending on the quantity and type of chemical released or local officials might close a facility or area for hours, possibility days until a substance is properly cleaned up. Businesses that store, produce or transport hazardous materials may be fined for accidental or intentional spills. The business involve in the release would typically be responsible for the cost of the cleanup. A business that is located near the site of the hazardous waste site of a hazardous materials spill or release is likely to be unaffected unless the substance is airborne and poses a threat to areas outside the accident site. In that case local emergency official would order an immediate evaluation of areas that could potentially be affected. Depending on the type of hazardous substance, it could take hours or days for emergency official to deem the area safe for return.” Ultimately this would impact business productivity and could impact the local/regional economy.

HAZMAT Extent (Impact)

Hazardous materials are categorized into nine major hazard classes that communicated the risk associated with it. Table 19 shows categories and provides examples of the hazardous material.

CLASS	Division	NAME OF CLASS OR DIVISION	EXAMPLE
1	1.1	Explosives (mass detonation)	Dinitrophenol
	1.2	Projections Hazards	Ammunition Smoke, White Phosphorous
	1.3	Mass Fire Hazards	Article, Explosive No. 5
	1.4	Minor Hazards	Fireworks
	1.5	Very Insensitive	Blasting Agents Explosive, Blasting, Type E Article, Explosive Extremely Insensitive
	1.6	Extremely Insensitive	
2	2.1	Flammable Gases	Propane
	2.2	Non-Flammable Gases	Helium, Compressed
	2.3	Poisonous/Toxic Gases	Fluorine, Compressed
3		Flammable Liquids	Gasoline, Alcohol, Diesel Fuel, Fuel Oils
4	4.1	Flammable Solids	Ammonium Picrate, Wetted
	4.2	Spontaneously Combustible	Phosphorus, White Dry
	4.3	Dangerous when wet	Sodium
5	5.1	Oxidizers	Ammonium Nitrate, Liquid
	5.2	Organic Peroxides	Organic Peroxide Type B, Liquid
6	6.1	Poisons (Toxic Material)	Potassium Cyanide
	6.2	Infectious Substance	Diagnostic Specimen
7		Radioactive	Uranium, Plutonium
8		Corrosives	Hydrochloric Acid, Battery Acid, Formaldehyde, Sulfuric Acid
9		Miscellaneous Hazardous Materials	Asbestos, Airbag Inflaters
None		ORM-D (Other Regulated Material – Domestic)	Consumer Commodity (Hair Spray or Charcoal)
Combustible Liquid		Combustible Liquid	Heating Oil, Diesel Fuel

In addition to the categories of hazardous material, when shipping hazardous material driver must keep shipping papers and use the following to identify that they have hazardous material on board:

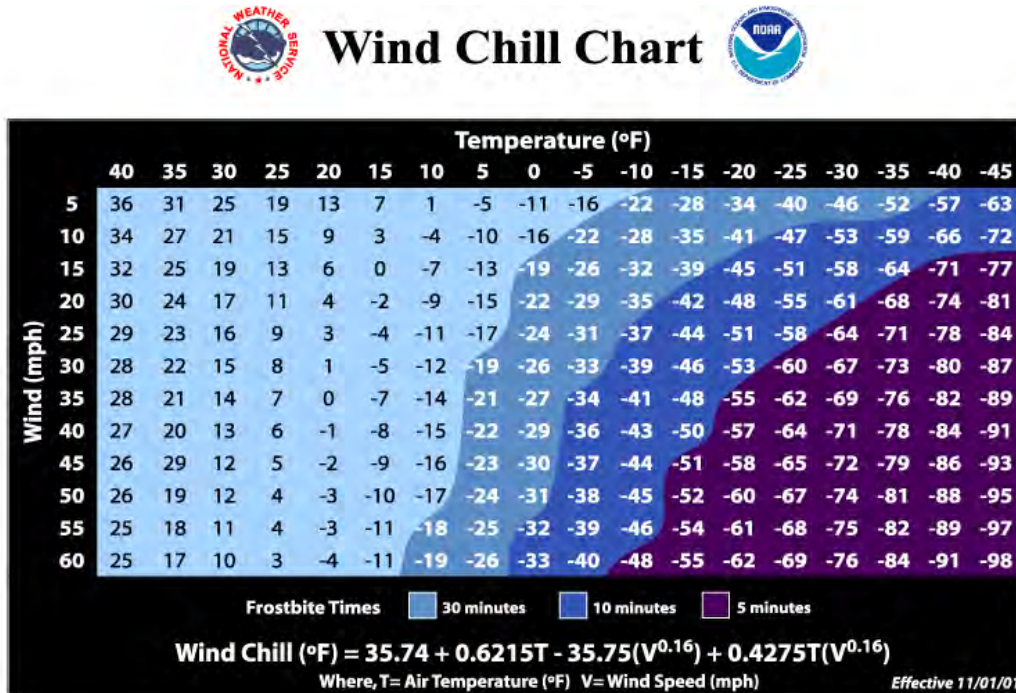

Package labels are diamond-shaped hazard warning labels found on most hazardous materials packages. These labels inform others of the hazard. If the diamond label does not fit on the package, shippers may put the label on a tag attached to the package. For example, compressed gas cylinders often have tags or decals. Global harmonization has standardized “Pictograms” which are also very prevalent on shipping labels and shipping papers to warn of potential hazards associated with the package contents.

Placards warn others of hazardous materials. They are placed on the outside of the vehicle and identify the hazard class of the cargo. A placarded vehicle must have at least four identical placards. Placards must be readable from all four directions. Therefore, they are put on the front, rear and both sides of the vehicle. Placards measure 10 ¾ inches square and are turned in a diamond shape. Cargo tanks and other bulk packaging display the identification number of their contents on placards. Or they may use orange panels or white diamond-shape displays the same size as placards.

4.3.7. Extreme Temperatures (Heat and Cold)

Extreme cold temperatures are not annual events in Virginia. Although wind chill advisories are issued nearly every year, especially in the western and northern portions of the state, life-threatening extreme cold, requiring wind chill warnings, is a rare occurrence in the Middle Peninsula. According to NOAA, Wind Chill is a term used to describe what the air temperature feels like to the human skill due to the combination of cold temperatures and winds blowing on exposed skin. Figure 18 shows the wind chill calculator.

Figure 18: Wind Chill Chart (NOAA, 2022).

The NWS Wind Chill Temperature index uses advances in science, technology, and computer modeling to provide an accurate, understandable, and useful formula for calculating the dangers from winter winds and freezing temperatures. In early summer of 2001, Human trials were conducted at the Defense and Civil Institute of Environmental Medicine in Toronto, Canada. The trial results were used to improve the accuracy of the new formula and determine frostbite threshold values. During the human trials, twelve volunteers (six men and six women) were placed in a chilled wind tunnel and thermal transducers were stuck to their faces to measure heat flow from the cheeks, forehead, nose and chin while walking 3 mph on a treadmill. Each Volunteer participated in four trials of 90 minutes each and was exposed to varying wind speeds and temperatures. The new wind chill index is now being used in Canada and the United States.

The frequency of occurrence is dependent entirely upon the extreme cold criteria used - wind chill vs. air temperature. The primary impact of extreme cold is increased potential for frostbite, hypothermia, and potentially death because of over-exposure to extreme cold. Some secondary impacts of extreme/excessive cold may present a danger to livestock and pets, and frozen water pipes in homes and businesses.

Extreme heat, generally associated with drought conditions, is a phenomenon that is generally confined to the months of July and August, although brief periods of excessive heat have occurred in June and September. Extreme heat can be defined either by actual air temperature, or by the heat index, which relates the combined effects of humidity and air temperature on the body (Figure 19).

Figure 19: Heat Index Chart (NOAA, 2022).

Extreme heat is not an annual event in the Middle Peninsula. Although heat advisories are issued near every year, especially in the urban areas of Northern Virginia and Richmond. Life-threatening extreme heat is a rare occurrence in the Middle Peninsula region. The frequency of occurrence is dependent entirely upon the extreme heat criteria used (i.e. heat index vs. air temperature). The primary impact of extreme heat is increased potential for heat exhaustion or heat stroke, which can be fatal to the elderly and infirmed. In addition, there is an increased risk of dehydration, if proper steps are not taken to ingest adequate amounts of non-alcoholic fluids. The impact of extreme heat is most prevalent in urban areas, which are not found in the Middle Peninsula. Secondary impacts of excessive heat are severe strain on the electrical power system, and potential brownouts or blackouts.

The entire planning area is equally at risk to extreme temperature events.

4.4. Hazards Considered “Critical” Hazards to the Middle Peninsula

The following sections describe hazards that are common throughout the Middle Peninsula region and deemed “Critical Hazards” to the Middle Peninsula by the LPT.

4.4.1. Summer Storms

Summer Storms are weather systems accompanied by strong winds, lightning, heavy rain, and possibly hail and tornadoes. They can occur at any time in the Middle Peninsula of Virginia, although they are most frequent during the warm spring and summer months from April through September. The most common summer storm is the thunderstorm, with the severe thunderstorm with the most potential to cause damage. The potential thunderstorm threat is often measured by the number of “thunderstorm days” – defined as days in which thunderstorms are observed.

Thunderstorms form when a shallow layer of warm, moist air is overrun by a deeper layer of cool, dry air. Cumulonimbus clouds, frequently called “thunderheads,” are formed in these conditions. These clouds are often enormous (up to six miles or more across and 40,000 to 50,000 feet high) and may contain tremendous amounts of water and energy. That energy is often released in the form of high winds, excessive rains, lightning, and possibly hail and tornadoes.

Thunderstorms are typically short-lived (often lasting no more than 30-40 minutes) and fast moving (30-50 miles per hour). Strong frontal systems, however, may spawn one squall line after another, composed of many individual thunderstorm cells. Severe thunderstorms may also cause severe flood problems because of the torrential rains that they may bring to an area. Thunderstorms sometimes move very slowly and can thus dump a tremendous amount of precipitation onto a location. Flooding can result, including flash floods, “urban flooding,” and river flooding.

The entire planning area is equally at risk to summer storms.

4.4.2. Winter Storms (Ice & Snow)

4.4.2-1 Ice Storms

Virginia's biggest winter storms are the great "Nor'easters". At times, Nor'easters have become so strong that they have been labeled the "White Hurricane". In order for these storms to form, several things need to occur. High pressure builds over New England. Arctic air flows south from the high center into Virginia. The colder and drier the air is, the denser and heavier it becomes. This cold, dry air is unable to move west over the Appalachian Mountains and it remains trapped to the east side, funneling down the valleys and along the coastal plain toward North Carolina. To the east of the arctic air is the warm water of the Gulf Stream. The contrast of cold air sinking into the Carolinas and the warm air sitting over the Gulf Stream creates a breeding ground for storms. Combine this with the right meteorological conditions such as the position of the jet stream, and storm development may become "explosive" (sudden, rapid intensification; dramatic drop in the central pressure of the storm) (Watson and Sammler, 2004) (Figure 20).

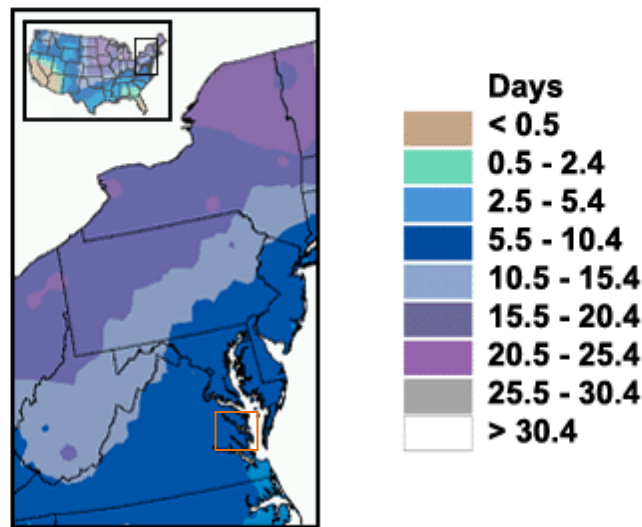

Winter Ice Storms occur generally as freezing rain, when precipitation, starts falling as snow, melts as it passes through a warm layer of air several thousand feet above the ground. Beneath the warm layer of air is a shallow layer of freezing air just above the ground. As the liquid precipitation falls through this layer of freezing air, it becomes super-cooled, meaning that its temperature falls below freezing, but it remains a liquid. Before it has a chance to freeze solid (into sleet or ice pellets), the super-cooled liquid droplets hit the ground (or some object such as a tree limb or power line), whose temperature is also below freezing; the water then freezes on contact.

For a good Nor'easter to develop, the jet stream entering the West Coast of the United States splits. The northern branch crosses the northern Rockies and Canada while the southern branch dips to cross the Gulf Coast states, where it picks up a disturbance that it carries northeast across Virginia to rejoin the northern branch over Newfoundland. The northern branch of the jet supports the southward sinking cold air. When this disturbance interacts with the temperature boundary formed by the warm Gulf Stream waters and the arctic air mass inland, a low-pressure system forms. The strong wind from the northeast gives the low-pressure storm its name, *Nor'easter*. Wind blowing counterclockwise around the storm center carries warm, moist air from the Gulf Stream up and over the cold inland air. The warm air rises and cools, and snow begins. The storm's speed and exact track to the north become critical in properly forecasting and warning for heavy snow across Virginia. On the Middle Peninsula, it is quite common for the rain-snow line to fall right over the northern sections of King William, King and Queen, and Essex Counties. Heavy snow often falls in a narrow 50-mile-wide path about 150 miles northwest of the low-pressure center. Closer to the low's center, the warmer ocean air changes the precipitation to sleet, freezing rain and eventually rain. If the forecasted storm track is off by just a little bit, it may mean - 64 - the

difference between forecasting heavy rain, freezing rain or sleet, and a foot of snow (Watson and Sammler, 2004). Therefore, Middle Peninsula localities will not experience winter ice storms the same.

Intense winds around the storm's center build waves that rack the coastline and sometimes drive water inland, causing extensive coastal flooding and severe beach erosion. Unlike a hurricane, which usually comes and goes within one tidal cycle, the Nor'easter can linger through several tides, each one piling more water on shore and into the bays. The March 5-9, 1962, Nor'easter, known as the "Ash Wednesday Storm", lingered off the Virginia Capes for days. It caused over \$200 million (in 1962 dollars) in property damage and major coastal erosion from North Carolina to Long Island, N.Y.

Annual Mean Number of Days with Freezing Precipitation for the Chesapeake Bay Watershed Region

Source: National Climatic Data Center, NOAA

Figure 20: Annual mean number of days with freezing precipitation (rain or drizzle) for the Chesapeake Bay Watershed region. The area encompassing the Middle Peninsula is highlighted on the map with a red square.

As with snow, the frequency with which freezing rain occurs varies throughout the Chesapeake Bay watershed. In the northern part of the watershed, around Binghamton, NY, the incidence of freezing rain is one of the highest in the country. Although less common, freezing rain is still a threat even to the southern parts of the watershed. Figure 25 shows how the number of days with freezing precipitation (both rain and drizzle) in an average year varies throughout the Chesapeake Bay region. The Middle Peninsula generally experiences between 5.5 and 10.4 days of freezing rain annually. During the winter of 1993-1994, a series of ice storms struck Virginia. The conditions for the formation of an *ice storm* are not completely unlike those for the formation of a Nor'easter. High pressure over New England funnels cold, dry arctic air south over the state. The air tries to push west but cannot rise over the - 65 - Appalachian Mountains and becomes trapped on the east side. A storm moves northeast from the southern plains or Gulf Coast region. Instead of passing south and east of Virginia, it often moves up the western slopes of the mountains. As this warm, moist air rises over the mountains and the trapped cold air on the east side, precipitation begins (Watson and Sammler, 2004) (Figure 21). The type of precipitation depends on the depth of the

cold air. At first the thickness of the cold air mass is often enough to produce snow, but as the warm air passes over the cold air and erodes it, the cold air mass gets more and more shallow. Soon the cold air mass is too thin to produce snow. Rain droplets freeze into small ice pellets, or *sleet*, as it falls through the cold air. When sleet hits the ground, it bounces and does not stick to objects (Watson and Sammler, 2004).

Figure 21: Ice Storm-Formation (Watson and Sammler 2004).

Eventually, the cold air mass is so shallow that the rain does not freeze. If the temperature of the earth's surface is below freezing, then rain will freeze as it hits the ground, producing *freezing rain*, a very dangerous on roadways or walkways. As the ice accumulates on trees and wires, the weight eventually causes them to break, knocking out power and phone service. Sometimes, so much ice can accumulate that structural damage and collapse can occur to buildings and communication towers. This is precisely what occurred during the "Christmas Ice Storm" of December 1998, which hit southeast Virginia, including the Middle Peninsula. Icy conditions caused injuries from slips, falls, and numerous vehicle accidents. Ice accumulations of up to an inch brought down trees and power lines. Outages were so widespread (400,000 customers on Christmas Eve) that some people were without power for up to ten days (Watson and Sammler, 2004). Other types of weather systems generally do not cause major problems for Virginia. Storms such as the "Alberta Clipper," a fast-moving storm from the Alberta, Canada region, or a cold front sweeping through from the west generally do not bring more than one to four inches of snow in a narrow 50- to 60-mile-wide band. Sometimes, the high pressure and cold arctic air that follow in the wake of a clipper become the initial set up for a Nor'easter. In very rare cases, elements combine to produce very localized heavy snow without any fronts or storm centers nearby. These events are nearly impossible to forecast with any accuracy (Watson and Sammler, 2004).

However, in November 2009, Tropic Storm Ida made landfall in Alabama, but weakened, losing its tropical storm characteristics, as it crossed to North Carolina. The storm redeveloped off the coast of Carolina in the Atlantic Ocean. The resulting coastal low combined with an unusually strong Canadian high over New England resulted in a strong pressure gradient over Coastal Virginia and the Carolinas. This caused storming northeasterly winds, high waves and record high water levels. Stations of the coastline of the Virginia recorded wind speeds, gusts, and barometric pressures of this Nor'easter (Table 20).

Table 20: Maximum observed wind speeds, gusts and barometric pressure by stations located near Middle Peninsula Localities during the November 2009 Nor'easter.

Station Name	Maximum Wind Speed			Maximum Wind Gust			Minimum Barometric Pressure

Winter Ice Storms Vulnerability

Winter ice storms can impact individuals, property as well as the overall community. At the individual level ice has the potential to cause automobile accidents and reduce the walkability of community due to ice-covered walkways. Personal property may be impacted as pipes freeze or structural failures occur due to the weight of the ice. The overall community may also be impacted as transportation will be interrupted or halted, and the weight of ice to snap tree limbs could damage power lines or infrastructure.

Winter Ice Storm Extent (Impact)

While a winter ice storm may be measured based the damages caused by the ice storm, wind speed and the barometric pressure, winter ice storms may also be measure on the Sperry-Piltz Ice Accumulation Index (2009). This scale can predict the projected footprint, total ice accumulation and the resulting potential damages from approaching ices storms (Table 21).

Table 21: The Sperry-Piltz Ice Accumulation Index, or “SPIA Index”. The below categories of damages are based upon combinations of precipitation totals, temperatures and wind/speeds/directions (SPIA, 2009).

ICE DAMAGE INDEX	DAMAGE AND IMPACT DISCRPTIONS
0	Minimal risk of dame to exposed utility systems; no alerts or advisories needed for crews, few outages.
1	Some isolated or localized utility interruptions are possible, typically lasting only a few hours. Roads and bridges may become slick and hazardous.
2	Scattered utility interruptions expected, typically lasting 12 to 24 hours. Roads and travel conditions may be extremely hazardous due to ice accumulation.
3	Numerous utility interruptions with some damage to main feeder lines and equipment expected. Tree limb damage is excessive. Outages lasting 1-5 days
4	Prolonged and widespread utility interruptions with extensive damage to main distribution feeder lines and some high voltage transmission lines/structures. Outages lasting 5-10 days.
5	Catastrophic damage to entire exposed utility systems, including both distribution and transmission networks. Outages could last several weeks in some areas. Shelters needed.

4.3.2-2 Snowstorms

The winter months can bring a wide variety of hazards to the Middle Peninsula, including blizzards, snowstorms, ice, sleet, freezing rain, and extremely cold temperatures. All of these weather events can be experienced throughout the state, depending on the depth of cold air that is in place over the region when the storm event comes. The Middle Peninsula’s biggest winter weather threats come from Northeasters or Nor’easters. These large storms form along the southern Atlantic coast and move northeast into Virginia along the Mid-Atlantic coast. These events are explained in detail in the following section describing Critical Hazards to the Middle Peninsula, under the sub-heading “Winter Ice Storms”. Winter storm events can bring strong winds and anything from rain to ice to snow to even blizzard conditions over a very large area. This combination of heavy frozen precipitation and winds can be quite destructive and lead to widespread utility failures and high cleanup costs. Nor'easters may occur from November through April, but are usually at their worst in January, February, and March.

Snowstorm Vulnerability

The impacts of winter storms are minimal in terms of property damage and long-term effects. The most notable impact from winter storms is the damage to power distribution networks and utilities. Severe winter storms with significant snow accumulation have the potential to inhibit normal functions of the Middle Peninsula. Governmental costs for this type of event are a result of the needed personnel and equipment for clearing streets. Private sector losses are attributed to lost work when employees are unable to travel. Homes and businesses suffer damage when electric service is interrupted for long periods. Health threats can become severe when frozen precipitation makes roadways and walkways very slippery

and due to prolonged power outages and if fuel supplies are jeopardized. Occasionally, buildings may be damaged when snow loads exceed the design capacity of their roofs or when trees fall due to excessive ice accumulation on branches. The primary impact of excessive cold is increased potential for frostbite, and potentially death as a result of over-exposure to extreme cold. Some secondary hazards extreme/excessive cold present is a danger to livestock and pets, and frozen water pipes in homes and businesses.

Snowstorms do not occur every year in the Middle Peninsula. The West Virginia University Extension Service developed estimates the likelihood for snowfall frequency and accumulation for 152 monitoring stations across the Commonwealth based on historic snowfall accumulation and frequency data (Rayburn and Lozier 2001, these data are available on-line at: <http://www.wvu.edu/~agexten/forglvst/VAsnow/index.htm>). Three of these stations are located on the Middle Peninsula: Urbanna in Middlesex County, Walkerton in King and Queen County, and West Point in King William County. While the other counties of the Middle Peninsula were not included in the West Virginia University Extension Office data, these stations may be considered representative to predict annual snow cover likelihood for the rest of the Middle Peninsula.

At the Urbanna Station in Middlesex County, snow cover data was collected for 24 years between 1949 and 1973. Based on snowfall frequency and accumulation during this period, a general risk of snow cover and snow depth in a given year was calculated. Rayburn and Lozier determined that there is a 50% risk of having between 1 and 8 inches of snow on the ground for 8 days or more. This means that, in one (1) year out of two (2), Urbanna will probably have snow of up to 8 inches on the ground for 8 days. In one (1) year out of four (4), Urbanna may have snow cover up to 8 inches deep for 12 days (in other words, there is a 25% chance of having snow for 12 days). In one year out of ten, Urbanna may have up to 8 inches of snow for 17 days (there is a 10% chance of having snow for 17 days). For deeper accumulations (greater than 8 inches), there is a 10% risk of having snow cover for 2 days or more. This means that, in 1 year out of 10, this location probably will have snow cover of at least 8 inches for 2 days.

At the Walkerton Station in King and Queen County, snow cover data was collected for 66 years between 1931 and 1997. Based on snowfall frequency and accumulation during this period, a general risk of snow cover and snow depth in a given year was calculated. Rayburn and Lozier determined that there is a 50% risk of having between 1 and 8 inches of snow on the ground for 6 days or more. This means that, in one year out of two, Walkerton will probably have snow of up to 8 inches on the ground for 6 days. In one year out of 4, Walkerton may have snow cover up to 8 inches deep for 13 days (in other words, there is a 25% chance of having snow for 13 days). In one year out of ten, Walkerton may have up to 8 inches of snow for 22 days (there is a 10% chance of having snow for 22 days). For deeper accumulations (greater than 8 inches), the risk is the same as reported for Urbanna and there is a 10% risk of having snow cover for 2 days or more. This means that, in 1 year out of 10, this location probably will have snow cover of at least 8 inches for 2 days. The average annual snowfall for 2014 at the Walkerton Station was 10.0 inches.

At the West Point station in King William County, snow cover data was collected for 44 years between 1953 and 1997. Based on snowfall frequency and accumulation during this period, a general risk of snow cover and snow depth in a given year was calculated. Rayburn and Lozier determined that there is a 50% risk of having between 1 and 8 inches of snow on the ground for 8 days or more. This means that, in one year out of two, West Point will probably have snow of up to 8 inches on the ground for 8 days. In one year out of 4, West Point may have snow cover up to 8 inches deep for 15 days (in other words, there is a 25% chance of having snow for 15 days). In one year out of ten, West Point may have up to 8 inches of snow for 19 days (there is a 10% chance of having snow for 19 days). For deeper accumulations (greater than 8 inches), the risk is the same as reported for both Urbanna and Walkerton. There is a 10% risk of having snow cover for 2 days or more. This means that, in 1 year out of 10, this location probably will

have snow cover of at least 8 inches for 2 days. The average annual snowfall for 2014 at the West Point Station was 10.1 inches.

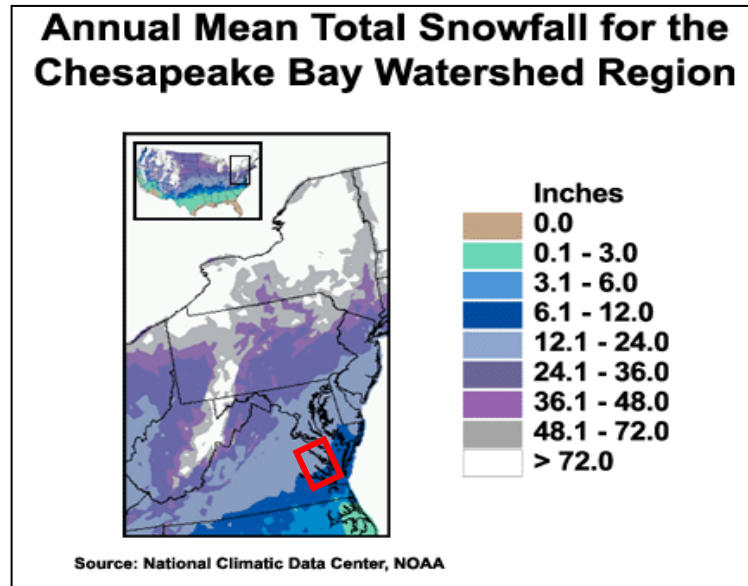

Figure 22: Map of annual mean total snowfall for the Chesapeake Bay Watershed region (StormCenter Communications, 2003). The area encompassing the Middle Peninsula is highlighted on the map with a red square.

Compared to western, northern, and mountainous regions of the state, the risk of high snow accumulations in the Middle Peninsula is low and will vary amongst localities (Figure 22). According to the National Climatic Data Center, mean annual snowfall in the Middle Peninsula ranges from between 6 and 12 inches at the lower reaches of the region (primarily in Gloucester and Mathews Counties) to as much as 12 to 24 inches in the upper reaches of the region (primarily in Essex, King and Queen, King William, and Middlesex Counties). The proximity of adjacent water bodies bordering the region (Chesapeake Bay and its tributaries) to the Atlantic Ocean allows the Bay to retain heat and buffer to the region from intense snow. The amount of snow that falls across the watershed varies both from year to year and from location to location. Generally, areas to the north, such as in Pennsylvania and New York, see more snow in an average year than locations in the southern part of the watershed. For areas to the south, such as Norfolk, winters typically pass without a measurable amount of snowfall.

Snow without ice has adverse impacts for the road transportation network, which therefore limits the ability of residents to have access to essential and for some, life-critical emergency medical care.

The ability of the local jurisdictions to provide critical public safety services (ie. fire, emergency medical and law enforcement) could be a focus of any mitigation strategies proposed in the update during the emergency response phase when severe snow events hit the Middle Peninsula.

In December of 2009, a major snowstorm slammed the East Coast and snarled the busy holiday travel season as airports shut down runways, rail service slowed, and bus routes were suspended on the last weekend before Christmas. Record snowfall totals were reported at Washington Dulles and Reagan National airports. Accumulation at Dulles reached 16 inches, breaking the old record of 10.6 inches set December 12, 1964; 13.3 inches was reported at Reagan. The old record there was 11.5 inches set December 17, 1932.

Snowfall Extent (Impact)

The Northeast Snowfall Impact Scale (NESIS) developed by Paul Kocin and Louis Uccellini of the NWS (Kocin and Uccellini, 2004) characterizes and ranks high-impact Northeast snowstorms. These storms have large areas of 10-inch snowfall accumulations and greater. NESIS has five categories: Extreme, Crippling, Major, Significant, and Notable. The index differs from other meteorological indices in that it uses population information in addition to meteorological measurements. Thus, NESIS gives an indication of a storm's societal impacts.

NESIS categories, their corresponding NESIS values, and a descriptive adjective:

Category	NESIS Value	Description
1	1—2.499	Notable
2	2.5—3.99	Significant
3	4—5.99	Major
4	6—9.99	Crippling
5	10.0+	Extreme

Winter Weather Section

Since the original plan was developed there has only been one significant snowfall event in the Middle Peninsula. According to the National Climatic Data Center (NCDC), on February 10, 2010, between 1 and 5 inches fell across the region. All land area within the region is subject to snowfall. Due to only two operating weather stations in King and Queen and King William Counties, there is little data available for additional analysis. Therefore, the information described in the West Virginia Extension Service in the original plan will suffice.

Additional impacts include downed power lines, roof collapses during heavy snow loads, as well as frozen utility lines during extreme cold events.

4.4.3. Hurricanes

Hurricanes are cyclonic storms that originate in tropical ocean waters. Most hurricanes develop in an area 300 miles on either side of the equator. Hurricanes are heat engines, fueled by the release of latent heat from the condensation of warm water. Their formation requires a low-pressure disturbance, sufficiently warm sea surface temperature, a rotational force resulting from the spinning of the earth and the absence of wind shear in the lowest 50,000 feet of the earth's atmosphere.

Hurricanes that impact Virginia form in the so-called Atlantic Basin - from the west coast of Africa towards the Caribbean Sea and Gulf of Mexico. Hurricanes in this basin generally form between June 1 and November 30 – with a peak around mid-September. In an average season, there are about 10 named

tropical storms in the Atlantic Basin with 6 of these likely to develop into hurricanes. The busiest hurricane season in the 20th century was in 1933, which saw 21 hurricanes/tropical storms. Two of these storms hit the Tidewater Region and caused significant devastation in the Middle Peninsula - known as the “Chesapeake-Potomac Hurricanes of 1933”. By contrast, the 1914 season saw no hurricanes and only one tropical storm.

As a hurricane develops, barometric pressure at its center falls and winds increase. A weather system with winds at or exceeding 39 mph is designated as a tropical storm, which is given a name and closely monitored by the NOAA National Hurricane Center in Miami, Florida. When winds are at or exceed 74 mph, the tropical storm is deemed to be a hurricane. Hurricane intensity is measured using the Saffir-Simpson Scale, ranging from a Category 1 (minimal) to a Category 5 (catastrophic) hurricane. The scale categorizes the intensity of hurricanes using a linear method based upon maximum sustained winds, minimum barometric pressure, and storm surge potential, which are combined to estimate the potential flooding and damage to property given a hurricane's estimated intensity. See the table below for greater details on the characteristics of Category 1 thru Category 5 hurricanes.

Hurricane Vulnerability

Hurricanes have the greatest potential to inflict damage as they cross the coastline from the ocean, which is called landfall. Because hurricanes derive their strength from warm ocean waters, they are generally subject to deterioration once they make landfall. The forward momentum of a hurricane can vary from just a few miles per hour to 40 mph. This forward motion, combined with a counterclockwise surface air flow, makes the right front quadrant of the hurricane the location of the most potentially damaging winds.

Hurricanes have the potential to spawn dangerous tornadoes. The excessive rainfall and strong winds can also cause flash floods, flooding and abnormal rises in sea levels known as storm surges. Although a hurricane may cause a tremendous amount of wind and water damage, the accompanying storm surge is much more dangerous to life and property in coastal regions. The storm surge is a great dome of water typically 50 miles wide that comes sweeping across the coastline near the area where the eye of the hurricane makes landfall. This storm surge, aided by the hammering effect of breaking waves, acts like a giant bulldozer as it sweeps everything in its path. The stronger the hurricane, the higher and more dangerous the storm surge will be. Nine out of ten hurricane fatalities are caused by the storm surge.

The vulnerability will vary amongst localities within the Middle Peninsula. As Gloucester and Mathews County are located within the Chesapeake Bay Carter, and therefore these lower lying areas of the region will be the most vulnerability. Also, generally, as hurricane hit land the storm is slowed therefore those coastal areas of the region will be at most risk. However secondary impacts may be experienced inland and in upland counties (i.e. King William, King & Queen, and Essex Counties).

Hurricane Extent (Impact)

The Saffir-Simpson Hurricane Wind Scale is a 1 to 5 categorization based on the hurricane's intensity at the indicated time. The scale – originally developed by wind engineer Herb Saffir and meteorologist Bob Simpson – has been an excellent tool for alerting the public about the possible impacts of various intensity hurricanes. The scale provides examples of the type of damage and impacts in the United States associated with winds of the indicated intensity. In general, damage rises by about a factor of four for every category increase.

Category One Hurricane

Very dangerous winds will produce some damage

(Sustained winds 74-95 mph, 64-82 kt, or 119-153 km/hr)

People, livestock, and pets struck by flying or falling debris could be injured or killed. Older (mainly pre-1994 construction) mobile homes could be destroyed, especially if they are not anchored properly as they tend to shift or roll off their foundations. Newer mobile homes that are anchored properly can sustain damage involving the removal of shingle or metal roof coverings, and loss of vinyl siding, as well as damage to carports, sunrooms, or lanais. Some poorly constructed frame homes can experience major damage, involving loss of the roof covering and damage to gable ends as well as the removal of porch coverings and awnings. Unprotected windows may break if struck by flying debris. Masonry chimneys can be toppled. Well-constructed frame homes could have damage to roof shingles, vinyl siding, soffit panels, and gutters. Failure of aluminum, screened-in, swimming pool enclosures can occur. Some apartment building and shopping center roof coverings could be partially removed. Industrial buildings can lose roofing and siding especially from windward corners, rakes, and eaves. Failures to overhead doors and unprotected windows will be common. Windows in high-rise buildings can be broken by flying debris. Falling and broken glass will pose a significant danger even after the storm. There will be occasional damage to commercial signage, fences, and canopies. Large branches of trees will snap, and shallow rooted trees can be toppled. Extensive damage to power lines and poles will likely result in power outages that could last a few to several days. Hurricane Dolly (2008) is an example of a hurricane that brought Category 1 winds and impacts to South Padre Island, Texas.

Category Two Hurricane

Extremely dangerous winds will cause extensive damage

(Sustained winds 96-110 mph, 83-95 kt, or 154-177 km/hr)

There is a substantial risk of injury or death to people, livestock, and pets due to flying and falling debris. Older (mainly pre-1994 construction) mobile homes have a very high chance of being destroyed and the flying debris generated can shred nearby mobile homes. Newer mobile homes can also be destroyed. Poorly constructed frame homes have a high chance of having their roof structures removed especially if they are not anchored properly. Unprotected windows will have a high probability of being broken by flying debris. Well-constructed frame homes could sustain major roof and siding damage. Failure of aluminum, screened-in, swimming pool enclosures will be common. There will be a substantial percentage of roof and siding damage to apartment buildings and industrial buildings. Unreinforced masonry walls can collapse. Windows in high-rise buildings can be broken by flying debris. Falling and broken glass will pose a significant danger even after the storm. Commercial signage, fences, and canopies will be damaged and often destroyed. Many shallowly rooted trees will be snapped or uprooted and block numerous roads. Near-total power loss is expected with outages that could last from several days to weeks. Potable water could become scarce as filtration systems begin to fail. Hurricane Frances (2004) is an example of a hurricane that brought Category 2 winds and impacts to coastal portions of Port St. Lucie, Florida with Category 1 conditions experienced elsewhere in the city.

Category Three Hurricane

Devastating damage will occur

(Sustained winds 111-130 mph, 96-113 kt, or 178-209 km/hr)

There is a high risk of injury or death to people, livestock, and pets due to flying and falling debris. Nearly all older (pre-1994) mobile homes will be destroyed. Newer mobile homes will sustain severe damage with potential for complete roof failure and wall collapse. Poorly constructed frame homes can be destroyed by the removal of the roof and exterior walls. Unprotected windows will be broken by flying debris. Well-built frame homes can experience major damage involving the

removal of roof decking and gable ends. There will be a high percentage of roof covering and siding damage to apartment buildings and industrial buildings. Isolated structural damage to wood or steel framing can occur. Complete failure of older metal buildings is possible, and older unreinforced masonry buildings can collapse. Numerous windows will be blown out of high-rise buildings resulting in falling glass, which will pose a threat for days to weeks after the storm. Most commercial signage, fences, and canopies will be destroyed. Many trees will be snapped or uprooted, blocking numerous roads. Electricity and water will be unavailable for several days to a few weeks after the storm passes. Hurricane Sandy (2012) is an example of a hurricane that brought Category 3 winds and impacts to coastal portions of Cuba, but it downgraded to a Category 2 storm off the coast of the Northeast.

Category Four Hurricane

Catastrophic damage will occur

(Sustained winds 131-155 mph, 114-135 kt, or 210-249 km/hr)

There is a very high risk of injury or death to people, livestock, and pets due to flying and falling debris. Nearly all older (pre-1994) mobile homes will be destroyed. A high percentage of newer mobile homes also will be destroyed. Poorly constructed homes can sustain complete collapse of all walls as well as the loss of the roof structure. Well-built homes also can sustain severe damage with loss of most of the roof structure and/or some exterior walls. Extensive damage to roof coverings, windows, and doors will occur. Large amounts of windborne debris will be lofted into the air. Windborne debris damage will break most unprotected windows and penetrate some protected windows. There will be a high percentage of structural damage to the top floors of apartment buildings. Steel frames in older industrial buildings can collapse. There will be a high percentage of collapse to older unreinforced masonry buildings. Most windows will be blown out of high-rise buildings resulting in falling glass, which will pose a threat for days to weeks after the storm. Nearly all commercial signage, fences, and canopies will be destroyed. Most trees will be snapped or uprooted, and power poles downed. Fallen trees and power poles will isolate residential areas. Power outages will last for weeks to possibly months. Long-term water shortages will increase human suffering. Most of the area will be uninhabitable for weeks or months. Hurricane Charley (2004) is an example of a hurricane that brought Category 4 winds and impacts to coastal portions of Punta Gorda, Florida with Category 3 conditions experienced elsewhere in the city.

Category Five Hurricane

Catastrophic damage will occur

(Sustained winds greater than 155 mph, greater than 135 kt, or greater than 249 km/hr)

People, livestock, and pets are at very high risk of injury or death from flying or falling debris, even if indoors in mobile homes or framed homes. Almost complete destruction of all mobile homes will occur, regardless of age or construction. A high percentage of frame homes will be destroyed, with total roof failure and wall collapse. Extensive damage to roof covers, windows, and doors will occur. Large amounts of windborne debris will be lofted into the air. Windborne debris damage will occur to nearly all unprotected windows and many protected windows. Significant damage to wood roof commercial buildings will occur due to loss of roof sheathing. Complete collapse of many older metal buildings can occur. Most unreinforced masonry walls will fail which can lead to the collapse of the buildings. A high percentage of industrial buildings and low-rise apartment buildings will be destroyed. Nearly all windows will be blown out of high-rise buildings resulting in falling glass, which will pose a threat for days to weeks after the storm. Nearly all commercial signage, fences, and canopies will be destroyed. Nearly all trees will be snapped or uprooted, and power poles downed. Fallen trees and power poles will isolate residential areas. Power outages will last for weeks to possibly months. Long-term water shortages will increase human suffering. Most

of the area will be uninhabitable for weeks or months. Hurricane Andrew (1992) is an example of a hurricane that brought Category 5 winds and impacts to coastal portions of Cutler Ridge, Florida with Category 4 conditions experienced elsewhere in south Miami-Dade County

Hurricane Isabel in 2003 was one of Virginia's costliest disasters, causing widespread devastation and disrupting the lives of thousands of citizens – including those living in the Middle Peninsula. This deadly storm was a Category 2 hurricane when it made landfall between Cape Lookout and Cape Hatteras on North Carolina's Outer Banks on Thursday, September 18, 2003. By the time it reached Virginia, it was downgraded to a Category 1 hurricane. Even though the storm followed a path west of the City of Richmond, Isabel's destructive effects were felt throughout Tidewater Virginia and the entire Mid-Atlantic Region.

Hampton Roads remained in the right front quadrant through most of the storm's landfall, which helped to push the storm surge into many inland areas along the rivers. Property damage resulting from the 4 to 12-foot storm surge was extensive in many parts of the region. Homes, bulkheads and piers were damaged, and the winds resulted in significant damage to properties and power lines. Rainfall totaled between 2 and 11 inches along the storm's track. Trees, especially those with shallow root systems, were blown over. Damages due to wind, rain, and storm surge resulted in flooding, electrical outages, piles of debris, transportation interruptions and damaged homes/businesses. Many citizens were without power for several days - with others in remote locations of the Middle Peninsula without power for up to three weeks.

Statewide losses to residential property were estimated to exceed \$590 million and businesses reported over \$84 million in losses. Thirty-two deaths were directly or indirectly attributed to this storm in Virginia. One of these deaths was in Gloucester County when an individual died of a heart attack after their vehicle was swept up in high water. Hurricane Isabel is considered one of the most significant tropical cyclones to affect portions of northeastern North Carolina and east-central Virginia since Hurricane Hazel in 1954 and the Chesapeake-Potomac Hurricane of 1933 (Beven and Cobb, 2004).

Although Virginia was spared a direct hit, the hurricane season of 2004 may be the costliest on record in the United States. Fifteen tropical or subtropical storms formed in the North Atlantic. Nine of these storms become hurricanes with six becoming major hurricanes of Category 3 or higher on the Saffir-Simpson Hurricane Scale. Six of the hurricanes, Alex, Charley, Frances, Gaston, Ivan and Jeanne, and three tropical storms struck the United States in 2004. The strongest hurricane was Ivan, which reached Category 5 status. Ivan was directly blamed for 26 deaths and damage estimates were \$13 billion in the United States.

With 4 hurricanes and tropical storms hitting the United States in a 5-week period, 2004 has been labeled as the year of the hurricane according to leading experts who participated in a Center for Health and the Global Environment briefing at Harvard Medical School (Compass Publications, Inc. 2004). They report that the intense period of destructive weather may be a harbinger of what is to come. Hurricanes have been on the increase over the past decade as part of a natural multi-decadal cycle (Ananthaswamy, 2003). These storms are more likely to form when the Atlantic is warm, as it was from the 1930s to the 1960s.

Although the decades since the 1960s have seen fewer hurricanes, numbers have risen since 1995 and may not have reached the predicted peak yet. There is growing evidence and concern that tropical storms will be more intense and pronounced as future climate changes are expected to persist.

By virtue of its position along the Atlantic Ocean and near the Gulf Stream, southeastern Virginia is frequently impacted by hurricanes. Continuous weather records for the Hampton Roads Area of Virginia

began on January 1, 1871, when the National Weather Service was established in downtown Norfolk. However, the recorded history of significant tropical storms that affected the area goes back much further.

Prior to 1871, very early storms have been described in ship logs, newspaper accounts, history books, and countless other writings. The residents of coastal Virginia during Colonial times were very much aware of the weather. They were a people that lived near the water and largely derived their livelihood from the sea. To them, a tropical storm was indeed a noteworthy event. The excellent records left by some of Virginia's early settlers and from official records of the National Weather Service are summarized in the "*Chronology of Middle Peninsula Hazard Events.*"

Since 1953, Atlantic tropical storms have been named from lists originated by the National Hurricane Center. The lists featured only women's names until 1979, after which male and female names were included in the lists for both the Atlantic and Gulf of Mexico storms. Whenever a hurricane has had a major impact, any country affected by the storm can request that the name of the hurricane be "retired" by agreement of the World Meteorological Organization (WMO). Retiring a name means that it cannot be reused for at least 10 years, to facilitate historic references, legal actions, insurance claim activities, etc. and to avoid public confusion with another storm of the same name. Retired names for storms that hit the Tidewater Region include Agnes (1972), Cleo (1964), David (1979), Donna (1960), Floyd (1999), Fran (1996), Gloria (1985), Gracie (1959), Hazel (1954), and Isabel (2003) (NOAA Atlantic Oceanographic and Meteorological Laboratory, Hurricane Research Division).

Middle Peninsula Storm Surge Hazard Maps

In order to estimate the geographic extent of potential damage from these hurricanes, a review of the 2008 Middle Peninsula Storm Surge Hazard Maps show the worst-case scenario of hurricane storm surge inundation at mean tide. Figures 29- 32 are maps developed by the U.S. Corp of Engineers in conjunction with the VDEM as part of their 2008 Virginia Hurricane Evacuation Study.

Due to the nature of the study, only Mathews, Gloucester and Middlesex Counties in the Middle Peninsula were included since they are considered coastal counties that suffer greatly from tidal surge impacts and therefore have impacts for evacuating residents from low-lying areas. Although the limits of the study only included the lower half of our region, it should be noted that all Middle Peninsula localities experienced storm surges during the latest severe storm - Hurricane Isabel in September 2003.

The data reflects only still saltwater flooding. Freshwater flooding may also occur with hurricane events from heavy rainfall runoff, and waves may accompany the surge and cause further inundation. The maps represent the surge from Category 1 through 4 hurricanes. State and federal officials do not include storm surges from a Category 5 hurricane since they do not believe that the ocean water temperature off of the Virginia Coast is warm enough for such an intense storm.

Figures 23 through 26 summarize surge height estimates using the SLOSH (Sea, Lake, and Overland Surges from Hurricanes) model is a numerical model used by the National Weather Service (NWS) to compute storm surge. Storm surge is defined as the abnormal rise of water generated by a storm, over and above the predicted astronomical tides. Flooding from storm surge depends on many factors, such as the track, intensity, size, and forward speed of the hurricane and the characteristics of the coastline where it comes ashore or passes nearby. For planning purposes, the National Hurricane Center (NHC) uses a representative sample of hypothetical storms to estimate the near worst-case scenario of flooding for each hurricane category.

Figure 25: Storm Surge Inundation Map of Essex County (NOAA, 2022).

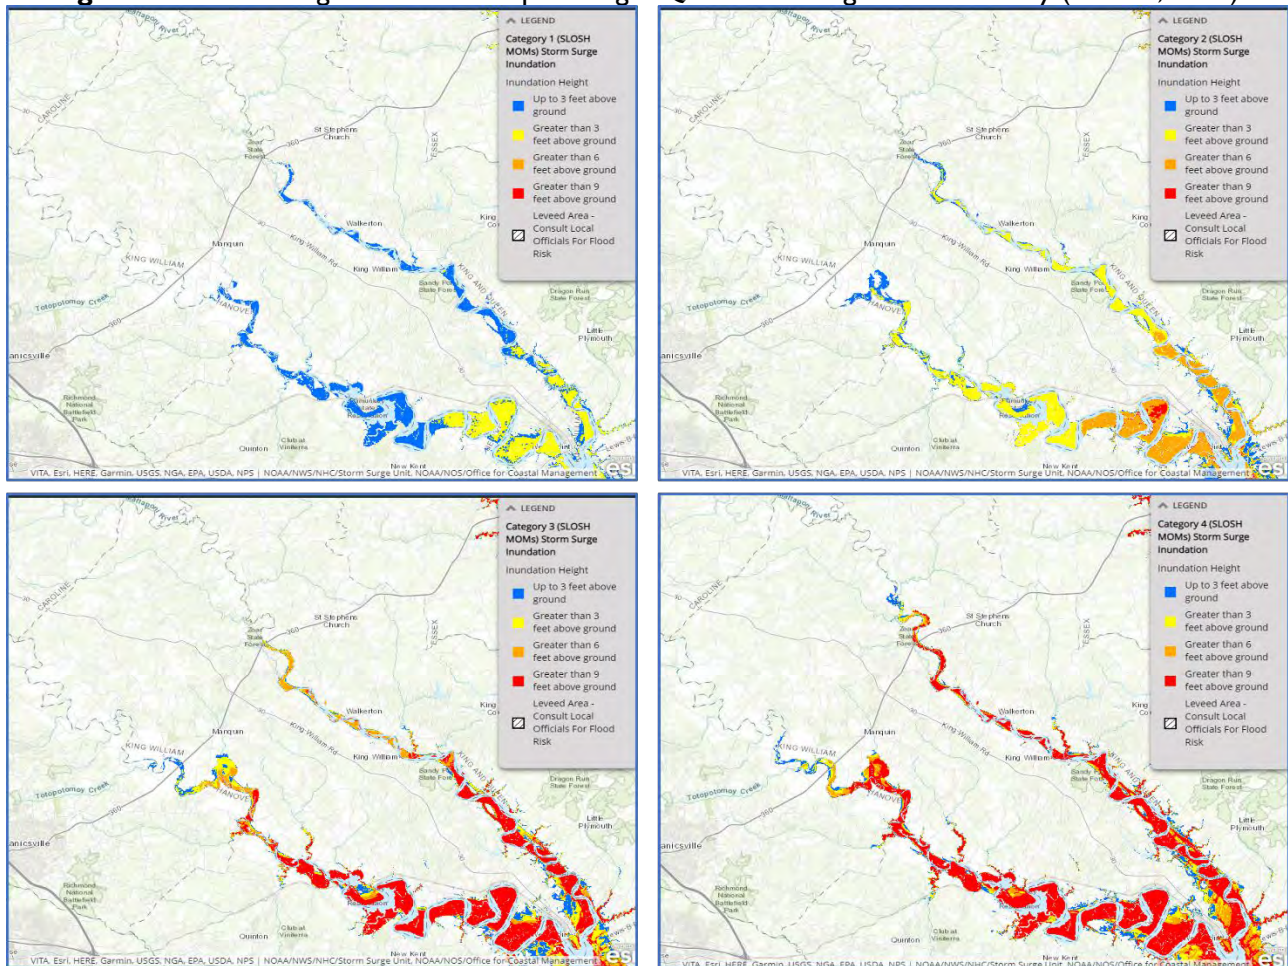

Figure 26: Storm Surge Inundation Map of King & Queen and King William County (NOAA, 2022).

Historical Occurrences

In evaluating localized threats of hurricanes and tropical storms to the Middle Peninsula Region, NOAA hurricane tracking data from 1851 to 2020 was analyzed to identify storms that may have posed a threat to the region.

Based on this data, 90 storms - including hurricanes, tropical storms and tropical depressions - passed within 25 nautical miles of the Middle Peninsula Region. Of these storms 5 were hurricanes, 31 were tropical storms, 9 were tropical depressions, and 18 were extra-tropical storms (Table 22). Over the same period of time, 63 storms passed within 50 nautical miles of the region, including 13 hurricanes, 31 tropical storms, 9 tropical and subtropical depressions, and 18 extra-tropical storms (Table 22).

Table 22: Historic Storm Tracks within 50 and 25 nautical mile radii of the Middle Peninsula between 1851 and 2020.		
Type of Storm	Quantity passing within 50 nm	Quantity passing within 25 nm
Hurricane – Category 5 (winds >157 mph)	0	0
Hurricane – Category 4 (winds 130-156 mph)	0	0
Hurricane – Category 3 (winds 111-129 mph)	1	0
Hurricane – Category 2 (winds 96-110 mph)	1	1
Hurricane – Category 1 (winds 74-95 mph)	11	4
Tropical Storm (winds 39-73 mph)	46	31
Tropical Depression (winds <38 mph)	9	9
Extra Tropical Storm	22	18
Total:	90	63

General Chronology of Middle Peninsula Coastal Storm Hazard Events

Because of its proximity to the Atlantic Coast and Chesapeake Bay, the Middle Peninsula has been impacted by coastal storms throughout recorded history.

Hurricanes come close enough to produce hurricane force winds approximately three times every 20 years. Two or three times a century, winds and tides produce considerable damage and significantly threaten life. Historical records are invaluable to researchers trying to understand long-term patterns in the frequency and intensity of coastal storms and such data on storms and weather go back a long time in Virginia, thanks to record keeping by early weather observers such as George Washington, James Madison and Thomas Jefferson as well as journals/articles written by early settlers. The following is a brief synopsis of the major coastal storm events that have impacted the Middle Peninsula Region.

From 1564 to 1799

Hurricanes played an important role during the European exploration and colonization of the Americas. Great storms that besieged Virginia influenced the establishment of new settlements and changed the coastal geography, particularly on the Middle Peninsula. While official weather records did not begin until 1871 in Norfolk, tremendous coastal storms were often recorded through the shipwrecks they induced and in the writings of the early Virginia colonists.

The records of hurricane and tropical storm occurrences during this era are sparse compared to modern-day accounts, since the colonies were not settled until the early 1600's. The original settlers at Jamestown experienced the wrath of such storms firsthand and it is suggested that the lost colony of Roanoke Island may have been doomed by a coastal storm. The first such storm to be recorded occurred in 1564. Others followed in June 1566, June 1586, August 1587, and August 1591. A September 1667 storm, deemed the "Dreadful Hurry Cane of 1667", destroyed thousands of homes in Virginia (Brinkley, 1999). Twelve days of rain was said to have followed this storm, causing the Chesapeake Bay to rise 12 feet. This storm and a July 1788 hurricane may have followed a similar track as the 1933 hurricane, which caused massive devastation to the Middle Peninsula.

The October Hurricane of 1749 was a great disaster for Virginians. It formed Willoughby Spit in Norfolk and put the city streets of Hampton 4 feet below water. The Bay was said to have risen 15 feet above normal, destroying waterfront buildings (Ludlum, 1963). At least 50 vessels were driven ashore along the Virginia coast, with a loss of 22 lives. Damage in and around the city of Norfolk was estimated to be at least 30,000 Virginia Pounds (approximately \$3 million in today's currency – Brinkley, 1999).

The September 8, 1769, hurricane, considered one of the worst storms of the eighteenth century, passed over Williamsburg. Damage was "inconceivable" and crops were destroyed. Many old homes and trees were leveled. Heavy rain ruined tobacco crops and flooded roads. Tobacco in storage warehouses was also damaged. Heavy damage was seen in Chesapeake Bay. High winds tore off the top of a wharf at Yorktown and a schooner rammed a nearby storehouse. Four ships in the York River were driven ashore. Two ships on the James River were also wrecked. A vessel from Norfolk, filled with coal from Williamsburg, was forced up to Jamestown before it went to pieces (Roth and Cobb, 2001).

"The Independence Hurricane" of September 1775 ravaged the coast between Currituck, N.C., and Chincoteague on the Eastern Shore. Wharves and storehouses on the waterfront of Norfolk were devastated. Raging waters carried bridges away. At Williamsburg, mill-dams broke and corn stalks were blown flat. Many ships were damaged as they were thrown ashore at Norfolk, Hampton, and York. A full blockade of Hampton Roads thereafter brought shipping to a halt for three months. At least 25 died due to a shipwreck. On September 9, 1775, a Williamsburg correspondent of the Virginia Gazette wrote, "The shocking accounts of damage done by the rains last week are numerous; most of the mill-dams are broke, the corn laid almost level with the ground, and fodder destroyed; many ships and other vessels drove ashore and damaged at Norfolk, Hampton, and York. The death toll in Virginia and North Carolina was 163 lives (Roth and Cobb, 2001).

A strong gale played a role in a battle between the Royal Governor of Virginia, Dunmore, and General Lewis of the rebel forces on July 10, 1776. The royal fleet had been injured prior to the storm by General Lewis' forces and was sailing from Gwynn's Island (Mathews County) toward St. George's Island, in the Potomac. The British crew was without water and enduring smallpox when the gale struck. A flour-laden supply ship ran aground. One ship foundered at the Mouth of the Rappahannock, while another was stranded on the Eastern shore (Roth and Cobb, 2001).

On October 16, 1781, a storm of "unknown character" struck Virginia. The French Fleet and the Patriot Army, under the command of George Washington, trapped the Earl of Cornwallis at Yorktown. The Earl decided to flee to the north to Gloucester Point under the cover of darkness. A "furious storm" doomed the plan to failure, as seas ran high, and every boat was "swamped." He sent forward his flag of truce and surrendered, thus ending the battle (Roth and Cobb, 2001).

The "most tremendous gale of wind known in this country" passed over the Lower Chesapeake Bay September 22-24, 1785 and went along a track very similar to the Chesapeake-Potomac Hurricane of 1933 and likely severely impacted the Middle Peninsula. At Norfolk, lower stories of dwellings were flooded. Warehouses were totally carried away by the storm surge, causing large amounts of salt, sugar, corn, and lumber to disappear. A large number of cattle drowned, and people hung onto trees for dear life during the tempest. Vessels floated inland into cornfields and wooded areas (Roth and Cobb, 2001).

"George Washington's Hurricane" of July 23-24, 1788, made landfall in Virginia and passed directly over the Lower Chesapeake Bay and Mount Vernon, the home of George Washington. This track is very similar to the track of the Chesapeake-Potomac Hurricane of 1933. At Norfolk, winds increased at 5 p.m. on the 23rd with the wind originating from the northeast. At 12:30 a.m., the wind suddenly shifted to the south and "blew a perfect hurricane, tearing down chimneys, fences, and leveling corn." In addition, large trees were uprooted, and houses were moved from their foundations. Port Royal (Caroline County) and Hobb's Hole (Essex County) experienced a violent northeast gale, which drove several vessels ashore. In Fredericksburg, great quantities of corn, tobacco, and fruit were destroyed. Houses and trees fell in great numbers across Northumberland, Lancaster, Richmond and Westmoreland Counties on the Northern Neck. Crops were destroyed and many livestock perished in lower Mathews County. Many plantations saw their houses leveled. Homes were flooded with water six feet deep and several inhabitants drowned.

Gloucester County was inundated, and an estimated \$400,000 (in 1788 dollars) in damage was incurred (Roth and Cobb, 2001).

1800-1899

Great Coastal Hurricane of 1806 (August 23) caught British and French ships off guard, while engaged in the Napoleonic Wars in the U.S. shipping lanes. The British man-of-war *L'Impeteax* drifted under jury masts for 23 days before finally beaching near Cape Henry. Ships of the two warring nations put in for repair and refitting at the port of Norfolk after the storm. This hurricane, due to its slow movement and consequent erosion of the coastline, completed the creation of Willoughby Spit at Hampton Roads. A seawall built to prevent further erosion at Smith Point lighthouse at the mouth of the Potomac River was damaged (Roth and Cobb, 2001).

A severe coastal storm dropped heavy rains on the Fredericksburg area in January 1863. It rained for 30 hours, dropping more than twelve inches, making mud so deep that mules and horses died attempting to move equipment. The rivers became too high and swift to cross, disrupting the Union Army offensive operation in the ill-famed "Mud March" (Watson and Sammler, 2004).

The Gale of '78 was one of the most severe hurricanes to affect eastern Virginia in the latter half of the 19th century and struck on October 23, 1878. This hurricane moved rapidly northward from the Bahamas on October 22nd and struck the North Carolina coast later that same day moving at a forward speed of 40 to 50 mph. The storm continued northward passing through east central Virginia, Maryland, and eastern Pennsylvania. Cobb and Smith Islands on the Eastern Shore were completely submerged during this storm (Roth and Cobb, 2001).

A September 1882 tropical storm, the "protracted and destructive rainstorm", swept away four mills near Ware's Wharf along the lower Rappahannock. The brunt of the cyclone only extended fifty miles inland. Heavy rains were also seen at Washington, D.C. (Roth and Cobb, 2001).

During an April 1889 Nor'easter, the Tidewater Region had sustained winds from the north of 75 mph measured at Hampton Roads and 105 mph at Cape Henry. Tides at Norfolk reached 8.37 feet above Mean Low Water, which is over 4 feet above flood stage level (Watson and Sammler, 2004).

Noteworthy hurricanes or tropical storms also occurred in September 1821 (one of the most violent on record for the 19th century), June 1825, August 1837, September 1846 (which formed Hatteras and Oregon Inlets in North Carolina), August 1850, September 1856, September 1876, August 1879, October 1887, August 1893, September 1894, October 1897 (tides in Norfolk rose 8.1 feet above Mean Lower Low Water), and October 1899 (tide in Norfolk rose 8.9 feet above Mean Lower Low Water).

From 1900 to 1999

A number of coastal storms hit the Tidewater Region in the early part of the 20th century. Hurricanes and tropical storms in October 1903, August 1924, September 1924, August 1926, and September 1928 each brought high winds (in excess of 70 mph measured in Norfolk and in Cape Henry). The 1903 and 1928 storms also raised tides as much as 9 feet and 7 feet, respectively, higher than normal in the region (Roth and Cobb, 2001).

The summer of 1933 was the most active storm season for eastern Virginia in the 20th century. Two hurricanes, one on August 23 and one on September 16, struck the North Carolina and Virginia coasts and caused much devastation on the Middle Peninsula. In Chesapeake lore, the "Storm of '33" is recalled by older residents and enshrined in legend as the worst storm in memory (Mountford, 2003). The August

storm brought winds in excess of 80 mph and a storm surge that forced the tide nearly 10 feet above normal.

The September storm struck the area 24 days later and had sustained winds as high as 88 mph (measured at the Naval Air Station in Norfolk) and the tide reached 8.3 feet above Mean Lower Low Water (Roth and Cobb, 2001). Much of the land around the New Point Comfort lighthouse, the third oldest light on the Bay located at the entrance to Mobjack Bay and the mouth of the York River in Mathews County, was washed away and caused the lighthouse to be stranded on a very small island a few 100 yards from the tip of the mainland.

Hurricane Hazel hit eastern Virginia on October 15, 1954. This storm brought with it gusts of 100 mph which is the highest wind speed record at the Norfolk Airport location. A reliable instrument in Hampton recorded 130 mph winds (Roth and Cobb, 2001).

A severe nor'easter gave gale force winds (40+ mph) and unusually high tides to the Tidewater Virginia area on April 11, 1956. At Norfolk, the strongest wind gust was 70 mph. The strong northeast winds blew for almost 30 hours and pushed up the tide, which reached 4.6 feet above normal in Hampton Roads. Thousands of homes were flooded by the wind-driven high water and damages were huge. Two ships were driven aground. Waterfront fires were fanned by the high winds. The flooded streets made access by firefighters very difficult, which added to the losses (Watson and Sammler, 2004).

The "Ash Wednesday Storm" hit Virginia during "Spring Tide" (sun and moon phase to produce a higher-than-normal tide) on March 5-9, 1962. The storm moved north off the coast past Virginia Beach and then reversed its course moving again to the south and bringing with it higher tides and higher waves which battered the coast for several days. The storm's center was 500 miles off the Virginia Capes when water reached 9 feet at Norfolk and 7 feet on the coast. Huge waves toppled houses into the ocean and broke through Virginia Beach's concrete boardwalk and sea wall. Houses on the Middle Peninsula also saw extensive tidal flooding and wave damage. The beaches and shorefront had severe erosion (Watson and Sammler, 2004).

Hurricane Cleo in September 1964 produced the heaviest coastal rainfall in the area (11.40 inches in 24 hours) since records began in 1871 (Roth and Cobb, 2001).

Hurricane Agnes was downgraded to a tropical depression by the time it moved into Virginia in June 1972, but the rainfall produced by Agnes made this storm more than twice as destructive as any previous hurricane in the history of the United States (Roth and Cobb, 2001).

In July 1996, Hurricane Bertha passed over portions of Suffolk and Newport News. Bertha spawned 4 tornadoes across east-central Virginia. The strongest, an F1 tornado, moved over Northumberland County injuring 9 persons and causing damages of several million dollars. Other tornadoes moved over Smithfield, Gloucester and Hampton (Roth and Cobb, 2001).

In September 1999, Hurricane Floyd produced 10 to 20 inches of rain on saturated ground and resulted in a recorded 500-year flood for Franklin, VA. While North Carolina and southeastern Virginia were hit with the brunt of this storm, significant damage from downed trees and localized flooding occurred and all of the counties of the Middle Peninsula were included in the Federal Disaster Declaration (FEMA FEMA-1293-DR, Virginia).

From 2000 to 2009

Hurricane Isabel hit the coasts of North Carolina and Virginia on September 18, 2003. It was a Category 1 hurricane when it made landfall. The highest sustained wind was 72 mph at Chesapeake Light. Storm surge varied significantly across the region. At Sewell's Point in Norfolk, the maximum water level was 7.9 feet above MLW. This represented a 5-foot storm surge - the biggest in the region since Hurricane Hazel in 1954. Thirty-six deaths were attributed to Hurricane Isabel in Virginia, including one in Gloucester County. Total damages for the Hampton Roads area amounted to \$506 million.

In 2004, Tropical Storm Gaston caused serious damage to a handful of VDOT Secondary Roads in the Central Garage/Manquin sections of King William County.

In 2006, Tropical Storm Ernesto caused residential and roadway flooding damage as well as beach erosion damage in Mathews County.

There were an additional 5 named tropical events during this period to hit the Middle Peninsula region resulting in minor severe weather damage.

In 2009 Middle Peninsula coastal localities experienced a significant Nor-Easter with high winds and coastal flooding.

From 2010-2015

Hurricane Irene was hit the coast of North Carolina and had impacts on the Virginia coastal on August 26-27, 2011. Heavy rain, including some totals more than 10 inches, fell on eastern sections of Virginia. Irene lashed the eastern third of Virginia with tropical storm and isolated hurricane force gusts.

In early September 2011, the remnant of Tropical storm Lee produced flash flooding in some sections of eastern Virginia, with the Washington, DC, suburbs particularly hard hit.

Hurricane Sandy was a season hurricane that passed off the Mid Atlantic coast, before turning west, and striking the New Jersey & New York coast on October 29, 2012. Sandy was a very large storm that was transitioning from a tropical to a non-tropical storm as it moved north paralleling the U.S. East coast during the October 27-29 time frame. Sandy's impact was relatively small in Virginia, with very heavy rainfall and some flooding the biggest impacts. The most significant impact was felt on the DELMARVA, especially on the east side of the Chesapeake Bay from Salisbury, MD southward to Onancock, VA, where severe coastal flooding and storm surge inundated many areas, as Sandy passed by to the north. Crisfield, MD and Saxis, VA were hardest hit, with millions of dollars in damage to homes and businesses. Damage and flooding were worse than that which occurred in the same area during Hurricane Floyd (1999).

On record for the 2014 season, eight name tropical or subtropical storms formed in the North Atlantic. Six of these became hurricanes and two of these reached major hurricanes of Category 3 or higher on the Saffir-Simpson Hurricane Scale. Six of the hurricanes, Arthur, Bertha, Cristobal, Edouard, Fay, Gonzalo and Hanna, and one tropical storm struck the United States. According to the NWS, activity in the basin in 2014 was only about 63% of the 1981-2010 average.

From 2016-2020

Tropical Storm Hermine moved northeast along the Southeast Coast then off the Mid-Atlantic Coast producing tropical storm force winds, minor to moderate coastal flooding, and heavy rainfall. Gloucester Courthouse reported 0.43 inches of rain.

Hurricane Dorian tracking northeast along the North Carolina coast and just off the Virginia coast produced tropical storm winds and associated wind damage across parts of southeast Virginia in May 2019. Within the Middle Peninsula, Gloucester, and Mathews Counties were impacted. Storm winds downed trees and power lines that caused power outages.

In August 2020, the center of Tropical Storm Isaias tracked north just inland of the Middle Atlantic Coast. The tropical storm produced tropical storm force winds and associated wind damage across Gloucester, Mathews, and Middlesex Counties.

Soil Erosion

Hurricanes and nor'easters produce severe winds and storm surges that create significant soil erosion along rivers and streams in the Middle Peninsula. In addition to the loss of soil along these water bodies, there is damage to man-made shoreline hardening structures such as bulkheads and rap-rap as well as to piers, docks, boat houses and boats due to significant storm surges.

These damages are more severe along the broad open bodies of water on major rivers located closer to the Chesapeake Bay. In general terms, the damage is less intense as you move up the watershed from the southeastern area of the region towards the northwestern end of the Middle Peninsula. Therefore, the soil erosion would be most severe in Mathews, Gloucester and Middlesex Counties and to a lesser degree in the 3 remaining Middle Peninsula Counties of King and Queen, King William, and Essex Counties.

The location and the angle at which these hurricanes/nor'easters come ashore region can significantly affect the amount of soil erosion during a particular storm. It can generally be said that hurricane generated soil erosion is uneven in occurrence and that the storm surge affords 2 opportunities for erosion – once as water inundates low-lying amount coast lands and again as floodwaters ebb.

For example, with Hurricane Isabel in 2003, its enormous wind field tracked in a north-northwest direction to the west of the Chesapeake Bay with the right front quadrant blowing from the south-southeast. This pushed the storm surge up the Bay and piling it into the western shore – causing serious soil erosion to the eastern land masses in Mathews, Gloucester and Middlesex Counties.

Destructive as it was, Hurricane Isabel might have been worse. If it had been stronger at landfill, the storm surge generated in the Chesapeake Bay may have been higher. Had it stalled along its path and lingered through several tide cycles, prolonged surge conditions, exacerbated by high winds, might have cause more severe erosion. If rainfall has been higher, bank erosion due to slope failure might have been more common, particularly given the wetter than normal months that preceded Hurricane Isabel.

4.4.4. Communicable Disease

According to the Commonwealth of Virginia Hazard Mitigation Plan (2018), *A communicable disease is an illness caused by an infectious agent or its toxic products that develops when the agent or its product is transmitted from an infected person, animal, or arthropod to a susceptible host. Infectious agents include viruses, bacteria, fungi, parasites, or aberrant proteins called prions. The infectious agent might spread by one of several mechanisms, including contact with the infected individual or his or her body fluids, contact with contaminated items or a vector, or contact with droplets or aerosols. An infection, which is the actual spread of the infectious agent or its toxic product, is not synonymous with disease because an infection may not lead to the development of clinical signs or symptoms. Examples of communicable diseases include Zika virus, pandemic influenza, Ebola, Middle East Respiratory Syndrome (MERS), tuberculosis, COVID-19, hepatitis A, and pertussis (also known as whooping cough).*

Vulnerability

Weather and climate have significant effects on both human and animal health. With changes in climate, the frequency, severity, duration, and location of weather and climate phenomena, changes should be expected, such as rising temperatures, heavy rains, and droughts. Changes in weather and climate can affect health by changing the severity and/or frequency of health problems that are already in play, and by creating unanticipated or unforeseen health problems or threats that have not previously existed.

Many communicable diseases are transmitted by vectors, such as mosquitoes, ticks, and fleas. Vectors can transmit an array of pathogens, such as viruses, bacteria, and protozoa, that can cause illness in humans (or humans and animals). The seasonality and prevalence, as well as distribution patterns, of vector-borne illnesses are influenced by climate factors, such as temperature and humidity. It is anticipated that changes in climate may have both short-term and long-term effects on both vector-borne disease transmissions and infection patterns. This will affect seasonal risk and possibly lead to broad geographic changes in disease patterns over time. Because of the number of factors involved in predicting how changes in climate may impact communicable disease transmission, it is difficult to predict how, exactly, climate change will impact vector-borne illness transmission.

In addition, it is possible that changes in climate may allow or encourage the emergence of new or significantly altered illnesses, heretofore unknown to the medical community.

The hazard ranking for communicable disease is based primarily on the population count and population density for each jurisdiction. No geographic extent data was available for probability estimation; each jurisdiction was assigned a value of low (1) for ranking purposes. Property and crop damages were ranked as low for this hazard, as the hazard is unlikely to impact property and crops. Injuries and fatalities and events were estimated as medium (3) for all jurisdictions, to account for each jurisdiction's susceptibility to communicable disease. The parameters in the communicable disease risk assessment are described in the following table, along with the total ranking.

Locality	Population Vulnerability	Population Density	Injuries & Fatalities	Property Damage	Crop Damage	Events	Geographic Extent	Total Risk Ranking
Essex	Low	Low	Medium	Low	Low	Medium	Low	Medium-Low
Gloucester	Medium	Medium	Medium	Low	Low	Medium	Low	Medium-Low
King William	Low	Low	Medium	Low	Low	Medium	Low	Medium-Low
King & Queen	Low	Low	Medium	Low	Low	Medium	Low	Medium-Low
Mathews	Low	Medium	Medium	Low	Low	Medium	Low	Medium-Low
Middlesex	Low	Medium	Medium	Low	Low	Medium	Low	Medium-Low

Impact

The Virginia Department of Health (VDH) tracks reportable diseases throughout the Commonwealth and provides data on the top communicable illnesses by county for 2018 (the most recent year for which data are available). Figure 27 to 32 provides the incidence rate for the top ten communicable diseases across Middle Peninsula localities.

Figure 27: Within Essex County, Salmonellosis was the most frequently reported disease with 2 cases. This equates to a rate of 18.1 cases per 100,000 population (VDH, 2021).

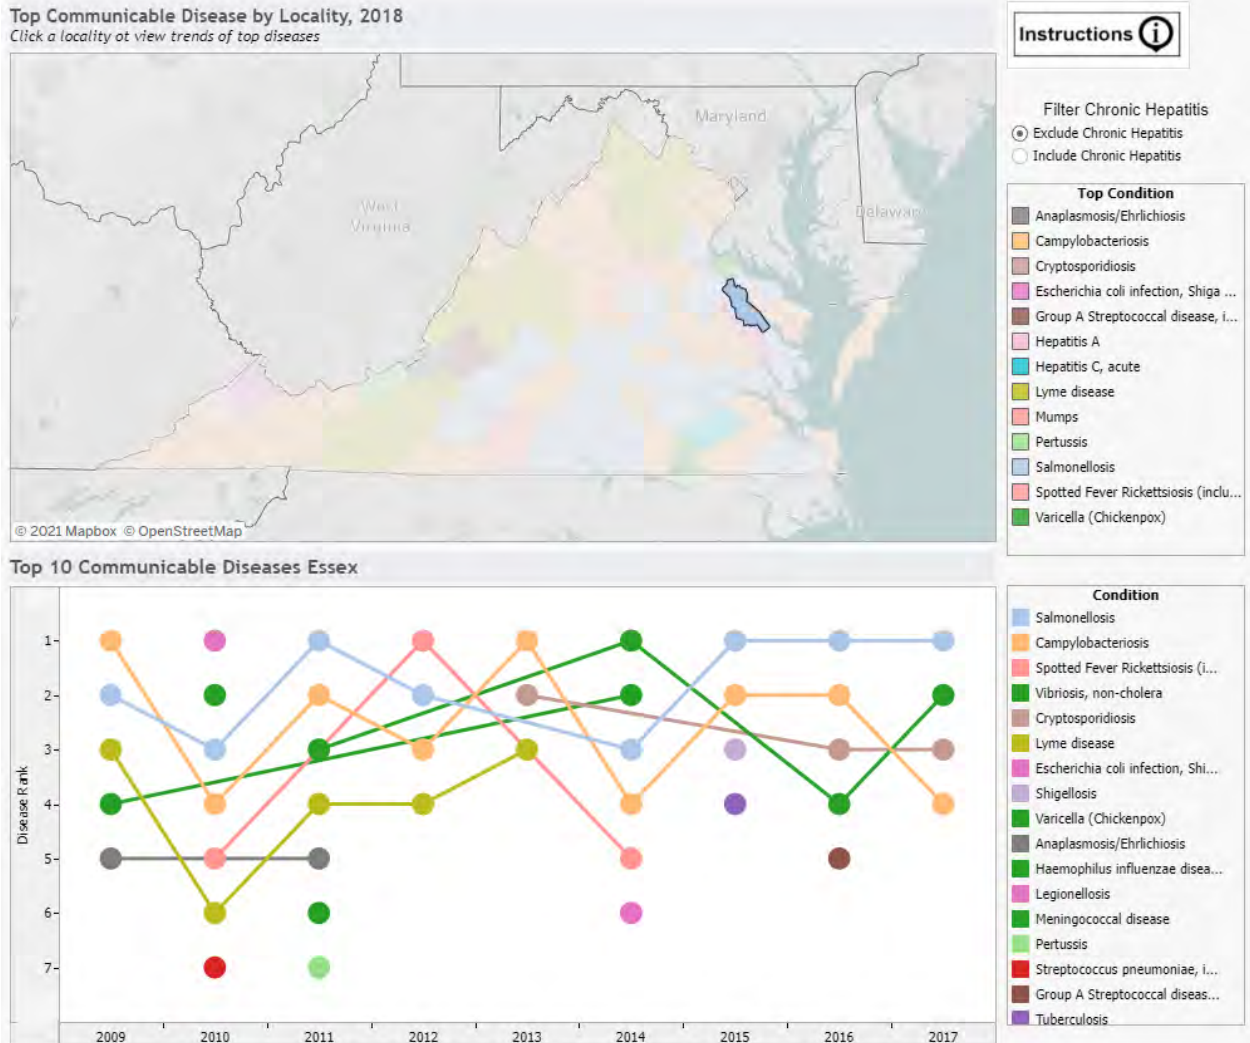

Figure 28: Within King & Queen County, Escherichia coli infection, Shiga Toxin-Producing was the most frequently reported disease with 2 cases. This equates to a rate of 28.6 cases per 100,000 population (VDH, 2021).

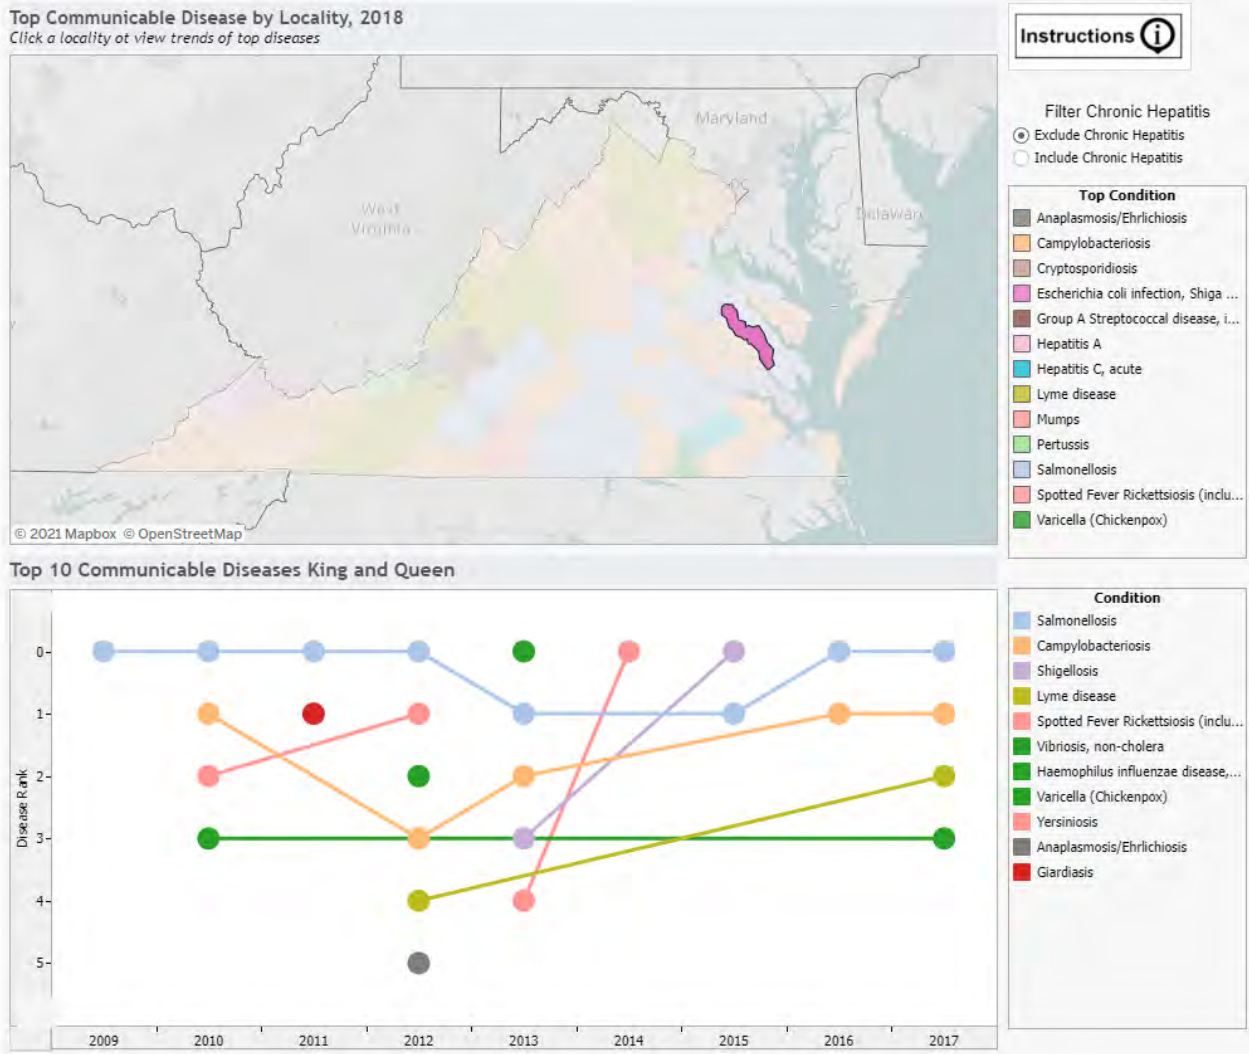

Figure 29: Within King William County, Campylobacteriosis was the most frequently reported disease with 7 cases. This equates to a rate of 41.9 cases per 100,000 population (VDH, 2021).

Top 10 Communicable Diseases King William

Figure 30: Within Gloucester County, Salmonellosis was the most frequently reported disease with 12 cases. This equates to a rate of 32.2 cases per 100,000 population (VDH, 2021).

Figure 31: Within Mathews County, Salmonellosis was the most frequently reported disease with 4 cases. This equates to a rate of 45.6 cases per 100,000 population (VDH, 2021).

Top Communicable Disease by Locality, 2018
Click a locality to view trends of top diseases

Figure 32: Within Middlesex County, Salmonellosis was the most frequently reported disease with 5 cases. This equates to a rate of 46.8 cases per 100,000 population (VDH, 2021).

In early 2020, Coronavirus disease (COVID-19) surfaced and grew to pandemic proportions for the entire world. According to the World Health Organization (2021), *COVID-19 is an infectious disease caused by the SARS-CoV-2 virus. Most people infected with the virus will experience mild to moderate respiratory illness and recover without requiring special treatment. However, some will become seriously ill and require medical attention. Older people and those with underlying medical conditions like cardiovascular disease, diabetes, chronic respiratory disease, or cancer are more likely to develop serious illness. Anyone can get sick with COVID-19 and become seriously ill or die at any age.*

The Three Rivers Health District in Virginia includes Middle Peninsula Localities and Northern Neck Localities. Based on VDH data of the pandemic, Three Rivers Health District recorded the following cases during pandemic:

Percent of the Population Fully Vaccinated:	53.20%	52.20%	49.60%	49.80%	55.80%	57.80%	
Percent of the Adult Population with At Least One Dose:	67.10%	67.60%	63.00%	66.30%	69.50%	71.80%	
Percent of the Adult Population Fully Vaccinated:	62.00%	62.00%	57.60%	60.70%	64.00%	66.00%	

4.4.5. Flooding

There are variety of flooding sources impacting Middle Peninsula localities, including stormwater, riverine flooding, coastal flooding, and ditch flooding. Flooding is partial or complete inundation of normally dry land areas.

Riverine flooding is defined as the overflow of rivers, streams, drains, and lakes due to excessive rainfall, rapid snowmelt, or ice. This type of flooding is different from *coastal flooding*, which is caused by storm surge and wave action and affects coastal areas, especially those along the beachfront. There are several types of riverine floods, including headwater, backwater, interior drainage, and flash flooding. Flash flooding is characterized by rapid accumulation or runoff of surface waters from any source. This type of flooding impacts smaller rivers, creeks, and streams and can occur because of dams being breached or overtopped. Because flash floods can develop in a matter of hours, most flood-related deaths result from this type of event.

Periodic flooding of lands adjacent to non-tidal rivers and streams is a natural and inevitable occurrence. When stream flow exceeds the capacity of the normal water course, some of the above-normal stream flow spills over onto adjacent lands within the floodplain. Riverine flooding is a function of precipitation levels and water runoff volumes within the watershed of the stream or river. The recurrence interval of a flood is defined as the average time interval, in years, expected to take place between the occurrence of a flood of a particular magnitude and an equal or larger flood. Flood magnitude increases with increasing recurrence interval.

The major rivers of the Middle Peninsula are tidal in nature, serving as estuarine tributaries of the Chesapeake Bay. Flood hazard varies by locality and type of flooding. Riverine flooding is more of a threat to mountainous regions, where population areas typically lie in narrow valleys, which lack the ability to store and dissipate large amounts of water. Consequently, stream flow tends to increase rapidly.

Riverine flooding was addressed during the flood mitigation planning process and mitigation strategies in this update will include:

1. Continuing to maintain and enforce a strong NFIP,
2. Investigating the feasibility of undertaking a FEMA-promoted Community Rating System (CRS) for enhanced floodplain protection policies, and
3. Actively promoting public education programs about development in and adjacent to areas with a history of flooding from rivers and creeks.

4.4.5-1 Riverine Flooding

As riverine flooding is defined as the overflow of rivers, streams, drains, and lakes due to excessive rainfall, rapid snow melt, rapid ice melt or a combination of all three and this type of flooding involves the partial or complete inundation of normally dry land areas. It differs from coastal flooding, which is caused by a combination of rain, storm surge and wave action and affects coastal areas, especially those along the beachfront.

Approximately 60% of Virginia's river flooding begins with flash flooding from tropical systems passing over or near the state. Riverine flooding also occurs because of successive rainstorms. Rainfall from any one storm may not be enough to cause a problem, but with each successive storm's passage over the basin, rivers rise until eventually they overflow their banks. If this occurs in late winter or spring, melting snow in the mountains can produce additional runoff that can compound flooding problems.

There are several types of riverine flooding including headwater, backwater, interior drainage, and flash flooding:

Headwater flooding results from significant rain events that occur at the upper reaches of a watershed that then flow downstream within a short period of time.

Backwater flooding results when the lower portion of a river or stream is blocked by debris or backed up due to a storm surge along the coast.

Interior drainage flooding results when a dam gives way and the water being held in the impoundment is released all at once to the downstream receiving channel.

Flash flooding is characterized by rapid accumulation and runoff of surface waters from any source. This type of flooding impacts smaller rivers, creeks, and streams and can occur because of dams being breached or overtopped. Because flash floods can develop in a matter of hours, most flood-related deaths result from this type of event.

Although flash flooding is more of a threat in the steeper mountainous regions of the state where population areas typically lie in narrow valleys that lack the ability to store and dissipate large amounts of water, some of the hilly areas in the upper reaches of the Middle Peninsula watersheds can experience rapid increase in stream flow resulting in some riverine flooding and subsequent threats to life and property.

Periodic flooding of lands adjacent to non-tidal rivers and streams is a natural and inevitable occurrence. When stream flow exceeds the capacity of the normal water course, some of the above-normal stream flow spills over onto adjacent lands within the floodplain. Riverine flooding is a function of precipitation levels and water runoff volumes within the watershed of the stream or river.

The recurrence interval of a flood is defined as the average time interval, in years, expected to take place between the occurrence of a flood of a particular magnitude and a second one of equal or greater magnitude. Flood magnitude increases with increasing recurrence interval. The interval most referred to and also the basis for many local government regulations is known as the 100-year flood or storm event.

The major rivers in the lower Middle Peninsula are tidal in nature and they serve as estuarine tributaries of the Chesapeake Bay. Flood hazards vary due to the river's location and the type of storm event taking place.

Riverine Flooding Vulnerability

Populations and property are extremely vulnerable to flooding. Homes, business, public buildings and critical infrastructure may suffer damage and be susceptible to collapse due to heavy flooding. Floodwaters can carry chemicals, sewage, and toxins from roads, factories, and farms; therefore any property affected by the flood may be contaminated with hazardous materials. Debris from vegetation and man-made structures may also be hazardous following the occurrence of a flood. In addition, floods may threaten water supplies and water quality, as well as initiate power outages, and create health issues such as mold.

Riverine Flooding Extent (Impact)

The FEMA Special Flood Hazard Area designations area associated with the probability of flooding (Table 25).

Zone V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined
Zone VE	Coastal flood zone with velocity hazard (wave action); wave heights above 3 feet; Base Flood Elevations determined.
Zone A	100 Year flood area (1% annual change of flood). Base Flood Elevations determined.
Zone AE	100-year flood area (1% annual chance of flood). Base Flood Elevations determined.
Zone AO	Subject to 100-year shallow flooding with flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); Base Flood Elevations undetermined
Zone X	Areas with 0.2% annual chance of flood or less; areas in 100-year flood zone with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.
Zone X500	The same description as Zone X, however, this area falls between the 100 and 500-year flood zone.
UNDES	Area in which flood hazards are undetermined.

4.4.5- 2 Ditch Flooding

As per the Commonwealth of DEQ Guidance Memorandum No. 08-2004 Regulation of Ditches under the Virginia Water Protection (VWP) Program, ditch is defined as a linear feature excavated for the purpose of draining or directing surface or groundwater. Ditches may also be constructed to collect groundwater or surface water for the purposes of irrigation.

Ditch Flooding Vulnerability

Throughout the Middle Peninsula of Virginia, the network of aging roadside ditches and outfalls, serving 670 miles of roads, creates the region’s primary stormwater conveyance system. Currently each locality in the region experiences inadequate drainage and as a result, roads and private properties are frequently flooded after a storm event. The lowest lying localities (ie. Mathews and Gloucester County) are more vulnerable to ditch flooding as most of their land is either at or slightly above sea level. This low topography and lack of grade does not assist the flow of water out of areas. Therefore, roadway flooding frequently cuts residents and business off from the county and emergency services for extended periods of time. Flooding has also caused the county school system to be closed due safety concerns. Flooding, risks to public health and safety, property damage, and long-term loss of property use and values are consequences of the inadequate drainage systems, all of which ultimately negatively impact the economy of the Middle Peninsula.

Conditions contributing to the failure of the drainage system, include, but are not limited to, the following:

1. A lack of maintenance, including removal of sediment and overgrown vegetation, causing slopes to be inadequate or reverse slope and/or tides not allowed to recede;
2. Insufficient elevation change (topographic constraints);
3. Cross-culverts are filled with sediment, not adequately maintained, damaged, and/or installed with an inadequate / reverse slope;
4. Unclear ownership and ditch maintenance responsibility (VDOT or private);
5. Sea level rise; and
6. Land subsidence.

When high exposure to hurricanes, nor’easters, tropical storms, sea level rise, and land subsidence is coupled with clogged roadside ditches and outfalls, illicit filling of the ditches on private property, and/or failing ditches,

there are significant social, economic, and environmental impacts.

Ditch Flooding Extent (Impact)

Ditch flooding is currently measured through observations. Currently in Mathews County a citizen group records observations and takes photos of the ditch flooding. Additionally in 2015 the Draper Aden Associated partnered with Mathews County to develop a Stormwater Ditch Steering Committee that consisted of private citizens, VDOT, and MPPDC representatives. Areas within Mathews were selected to focus on that were prone to ditch flooding and were called priority areas. These priority areas were visited, and existing conditions were noted. Based on findings in the field, DAA provided site recommendations to improve the given ditch as well as associated costs of the improvements. This information will be the basis of a roadside ditch database underdevelopment in 2016.

4.4.5-3 Coastal Flooding

According to the Commonwealth of Virginia Hazards Mitigation Plan coastal flooding occurs when strong onshore winds push water from an ocean, bay or inlet onto the land. In addition, coastal areas experience flooding from overland flow, ponding and inadequate storm water drainage. Coastal flooding may arise from tropical cyclones (hurricanes and tropical storms) or Nor'easters (extra tropical storms).

Flooding is the most frequent and costly natural hazard in the United States - besides fire. Nearly 90% of Presidential Disaster Declarations result from natural events where flooding is a major component. Excess water from snowmelt, rainfall, or storm surge accumulates and overflows onto adjacent floodplains and other low-lying land adjacent to rivers, lakes, ponds and the Chesapeake Bay. Based on data

Coastal flooding is typically a result of storm surge, wind-driven waves, and heavy rainfall. These conditions are produced by hurricanes during the summer and fall, and nor'easters and other large coastal storms during the winter and spring. Storm surges may overrun barrier islands and push sea water up coastal rivers and inlets, blocking the downstream flow of inland runoff.

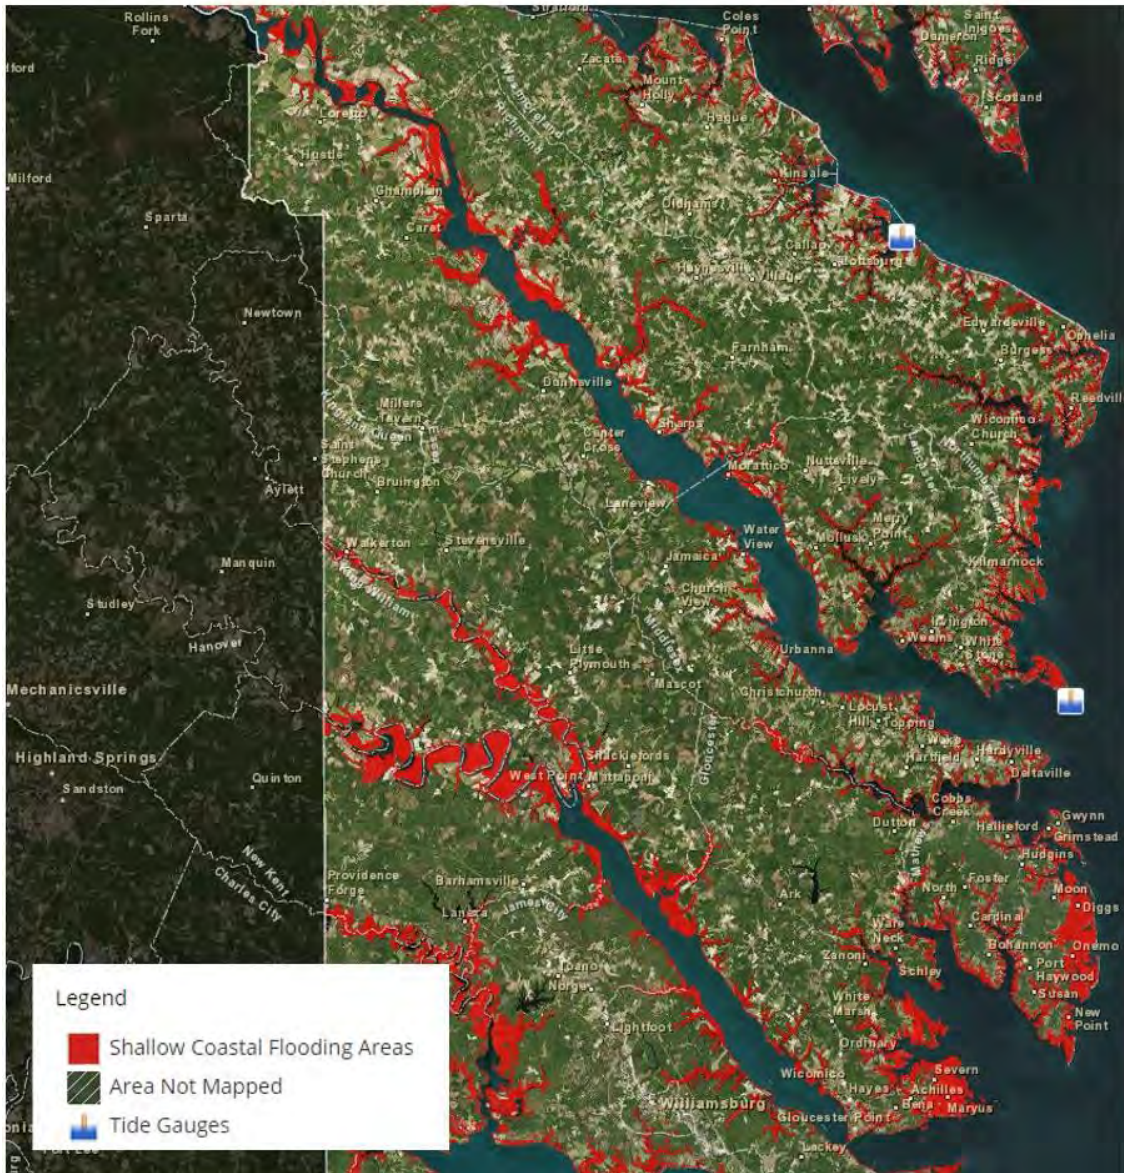

Coastal Flooding Vulnerability

Thousands of acres of crops and forest lands may be inundated by both saltwater and freshwater. Escape routes, particularly from barrier islands, may be cut off quickly, stranding residents in flooded areas and hampering rescue efforts. Coastal flooding is very dangerous and causes the most severe damage where large waves are driven inland by the wind. Wind driven waves destroy houses, wash away protective dunes, and erode the soil so that the ground level can be lowered by several feet. Because of the coastal nature of the Middle Peninsula, the region is very susceptible to this type of flooding and resulting damage.

Based on NOAA's Coastal Management Digital Coast Database frequent shallow flooding occurs in the Middle Peninsula region. As many coastal areas experience periodic mini-to-moderate shallow coastal flooding events – typically as result of meteorological factors that include high tides, winds, and rain. Figure 33 is a map of the Middle Peninsula showing the areas impacting the coastal areas. One can see that there is varying degree of impact amongst Middle Peninsula localities.

Figure 33:

Frequent Shallow Coastal Flooding in Middle Peninsula Virginia
(NOAA, 2015)

Coastal Flooding Extent (Impacts)

To help identify coastal flooding, FEMA will conduct engineering studies referred to as Flood Insurance Studies (FISs). Using the information gathered in these studies, FEMA engineers and cartographers delineate Special Flood Hazard Areas (SFHAs) on flood maps. SFHA are subject to inundation by a flood that has a 1-percent or greater chance of being equaled or exceeded in any given year. This type of flood is commonly referred to as the 100-year flood or base flood. A 100-year flood is not a flood that occurs every 100 years. In fact, the 100-year flood has a 26 percent chance of occurring during a 30-year period, the length of many mortgages. The 100-year flood is a regulatory standard used by Federal agencies and most states,

to administer floodplain management programs. The 100-year flood is also used by the NFIP as the basis for insurance requirements nationwide.

4.4.5-4 Stormwater Flooding

Storm water can be a cause of or a contributing factor to flash or urban flooding. Flooding increases as solid surfaces replace permeable surfaces or natural green spaces, as storm water is unable to filter into the landscape. Storm water deposits sediment that decreases the depth and flow capacity of waterways (natural and manmade), further increasing flooding. Storm water runoff flooding is most evident in areas where urbanization has occurred. Changes in land use have a major impact on both the quantity and quality of storm water runoff. Impervious cover decreases the amount of rainwater that can naturally infiltrate into the soil, thereby increasing the volume and rate of storm water runoff.

Stormwater may enter surface waters directly or through natural and constructed channel systems. Pollution, such as automobile oil, grease, metals, sediment, bacteria from animal waste, fertilizers, and pesticides, even deposits from airborne pollutants can contaminate the runoff.

Unmanaged stormwater can cause erosion and flooding. It can also carry excess nutrients, sediment and other contaminants into rivers and streams. Properly managed stormwater can recharge groundwater and protect land and streams from erosion, flooding, and pollutants.

Within the Middle Peninsula, roadside ditches are the region's stormwater conveyance system. Therefore, high water tables, clogged roadside ditches or unmaintained ditches may not be adequate to move water away from roads or infrastructure.

Stormwater Vulnerability

As climate change is expected to create more severe storms this means more water to manage. Therefore, as mentioned previously, when high exposure to hurricanes, nor'easters, tropical storms, sea level rise, and land subsidence is coupled with clogged roadside ditches and outfalls, illicit filling of the ditches on private property, and/or failing ditches and high water tables, there are significant social, economic, and environmental impacts.

Stormwater Extent (Impact)

The entire region is impacted by stormwater; however, those localities and communities that are lower in elevation and/or have a higher water table will experience more impacts to flooding due to stormwater since the water has nowhere to go.

Buildings are in danger from hydrostatic loads, which occur when flood waters come into contact with a building, its foundation, or a building element. Inadequately elevated buildings on shallow foundations are most in danger from vertical hydrostatic forces (buoyancy or flotation). Such buildings are vulnerable to uplift from flood and wind forces because the weight of a foundation or building element is much less when submerged than when not submerged (FEMA Coastal Construction Manual, 2011). Hydrodynamic loads are a function of flow velocity and structural geometry and can destroy walls, push structures off foundations, and carry sediment and debris (FEMA Coastal Construction Manual, 2011).

In addition to stormwater impacts on infrastructure, stormwater may also impact agriculture. If water sits on agricultural fields for too long periods, this could decrease crop yields.

Middle Peninsula Resources at Potential Risk of Loss Floodplain Properties and Structures

While floodplain boundaries are officially mapped by FEMA's National Flood Insurance Program (NFIP), flood waters sometimes go beyond the mapped floodplains and/or change courses due to natural processes (e.g., accretion, erosion, sedimentation, etc.) or human development (e.g., filling in floodplain or floodway areas, increased imperviousness areas within the watershed from new development, or debris blockages from vegetation, cars, travel trailers, mobile homes, and propane tanks).

Since the floodplains in the United States are home to over 9 million households and there continues to be a high demand for residential and commercial development along water features, most property damage results from inundation by sediment and debris-filled water. Flooding is one of the most significant hazards faced by the Middle Peninsula. A majority of the flooding that has damaging effects on the region is tidal flooding, which primarily occurs in conjunction with severe coastal storms such as hurricanes or nor'easters.

In addition to tidal flooding, some regions of the Middle Peninsula are subject to flooding events induced by rain associated with a hurricane or a tropical storm, which can produce extreme amounts of rainfall in short periods of time. In August 2004, Tropical Storm Gaston dumped 14 inches of rain in a matter of hours on King William County, washing out numerous roads and bridges. This storm qualified the county for disaster aid through a Presidential Disaster Declaration.

Flooding of vacant land or land that does not have a direct effect on people or the economy is generally not considered a problem. Flood problems arise when floodwaters cover developed areas, locations of economic importance, infrastructure, or any other critical facility. Low-lying land areas of Essex, Gloucester, Mathews, and Middlesex Counties and the lower reaches of King and Queen and King William Counties are highly susceptible to flooding, primarily from coastal storm when combined with tidal surges.

These flood-prone regions include marsh areas adjacent to waterways, and the wide, flat outlets where its streams and rivers meet the Chesapeake Bay and its tributaries. Fluctuations in the surrounding water levels produce a mean tidal range of approximately 3 feet. The timing or coincidence of maximum surge-producing forces with the normal high tide is an important factor in consideration of flooding from tidal sources. Strong winds from the east or southeast can push Chesapeake Bay water into the mouth of the York and Rappahannock Rivers and Mobjack Bay – thereby flooding lower portions of the Middle Peninsula. This surge combined with the normal high tide can increase the mean water level by 15 feet or more.

The Flood Insurance Rate Maps (FIRMs) show flooding during a 100-year storm event or, in other words, the storm that has a 1% chance of being equaled or exceeded in any given year. The FIRMs account for both coastal surge driven flooding, as well as flooding generated from rain events. The 1% annual-chance-flood (or the 100-year flood as it is commonly referred to) represents a magnitude and frequency that has a statistical probability of being equaled or exceeded in any given year. Another way of looking at it is that the 100-year flood has a 26% (or a 1 in 4) chance of occurring over the life of a 30-year mortgage on a home (FEMA, 2002).

Along with nearly 20,000 communities across the country, all of the localities in the Middle Peninsula voluntarily participate in the National Flood Insurance Program by adopting and enforcing floodplain management ordinances in order to reduce future flood damage. In exchange, the NFIP makes federally backed flood insurance available to homeowners, renters, and business owners in these communities (FEMA, 2002).

The U.S. Congress established the National Flood Insurance Program (NFIP) with the passage of the National Flood Insurance Act of 1968. Flood insurance is designed to provide an alternative to disaster assistance to reduce the escalating costs of repairing damage to buildings and their contents caused by floods. Flood damage is reduced by nearly \$1 billion a year by communities implementing sound floodplain management requirements and property owners purchasing flood insurance.

Additionally, buildings constructed in compliance with NFIP building standards suffer approximately 80% less damage annually than those not built-in compliance with these standards. It is estimated that for every \$3 paid in flood insurance claims, there is \$1 spent in disaster assistance payments (FEMA, 2002).

Mapping flood hazards creates broad-based awareness of the flood hazards and provides the data needed for local floodplain management programs and to provide flood insurance actuarial rates for new construction (FEMA, 2002).

Floodplain maps covering the Middle Peninsula Region have recently been updated. FEMA produced these new digital maps in the following years:

2015

Essex County
Middlesex County

2014

Gloucester County
Mathews County

2013

King & Queen County
King William County

The recently completed digital floodplain maps/data can be integrated into the GIS of those Middle Peninsula localities that utilize GIS technology.

In recent years, FEMA has comprehensively analyzed Region III's coastal flood hazard and integrated the latest topographic data sets with state-of-the-art storm modeling techniques (FEMA, 2015). This new information replaces maps and studies that are based on data and modeling technology from as far back as the 1970's (FEMA, 2015). With this new data and technology, new FIRMs have been generated. The FIRMs reflect floodplain zones are standardized to the 100-year flood and assigned an area called the Special Flood Hazard Area (SFHA). A SFHA is a high-risk area defined as any land that would be inundated by a flood having a 1-percent chance of occurring in any given year (FEMA, 2002). In the Middle Peninsula, the SFHA includes zones designated as VE, A, Coastal A, AE, AO, X, and X500. Table 25 provides definitions for the zones.

Table 25: FEMA Flood Zone Designations found in the Middle Peninsula Region.	
Zone VE & V	SFHA along coasts subject to inundation by the 100-year flood with additional hazards due to velocity (wave action). Base flood elevations derived from detailed hydraulic analyses are shown within these zones. This delineated flood hazard includes wave heights equal to or greater than three feet. <i>Mandatory flood insurance purchase requirements apply.</i>
Zone A	SFHA subject to inundation by the 100-year flood. Because detailed hydraulic analyses have not been performed, no base flood elevation or depths are shown. <i>Mandatory flood insurance purchase requirements apply.</i>
Zone AE	SFHA subject to inundation by the 100-year flood determined in a Flood Insurance Study by detailed methods. Base flood elevations are shown within these zones. This delineates flood hazards including wave heights less than three feet. <i>Mandatory flood insurance purchase requirements apply.</i>
Zone AO	SFHA inundated by the 100-year flood where flooding is anticipated to average depth of 1 to 3 feet, where a clearly defined channel does not exist, where the path of flooding is unpredictable, and where velocity flow may be evident.
Zone X	These areas have been identified in the Flood Insurance Study as areas of moderate or minimal hazard from the principal source of flood in the area. However, buildings in these zones could be flooded by severe, concentrated rainfall coupled with inadequate local drainage systems. Local storm water drainage systems are not normally considered in the community's FIS. The failure of a local drainage system creates areas of high flood risk within these rate zones. <i>Flood insurance is available in participating communities but is not required by regulation in these zones.</i>
Zone X500	The same description as Zone X, however, this area falls between the 100 and 500-year flood zone.
UNDES	Undescribed. No information available.

To further assist community official and property owners in recognizing an increased potential for damage due to wave action in the AE zone, FEMA issued guidance in December 2008 on identifying and mapping the 1.5-foot wave high line, referred to as the Limit and Moderate Wave Action (LiMWA) (Figure 34). As LiMWA addresses the fact that wave action does cease at the AE Zone delineate, a new SFHA has been developed between the VE and AE Zone called Zone Coastal A. Zone Coastal A is landward of a V Zone, or land ward of an open coastal without mapped V Zones. While the Coastal A Zone in not a NFIP mandate, it offers design and construction practice for communities that wish to adopt high floodplain management standards. Within the Middle Peninsula, Gloucester County, Mathews County and the Town of West Point are the only locality that has included Coastal A Zone within their FIRMs and floodplain management policy.

Figure 34: Diagram of coastal flood zones (FEMA, 2015).

Under the NFIP regulations, participating NFIP communities are required to regulate all development in the SFHAs. Development is defined as:

“any man-made change to improved or unimproved real estate, including but not limited to buildings or other structures, mining, dredging, filling, grading, paving, excavation or drilling operations or storage of equipment or materials.”

Before a property owner can undertake any development in the SFHA, a permit must be obtained from the locality. The locality is responsible for reviewing the proposed development to ensure that it complies with the locality’s floodplain management ordinance. Localities are also required to review proposed developments in the SFHAs to ensure that all necessary permits have been received from those governmental agencies from which approval is required by Federal or State law, such as 404 Wetland Permits from the Army Corps of Engineers or permits under the Endangered Species Act.

Under the NFIP, localities must review all new development proposals to ensure that they are reasonably safe from flooding and that the utilities and facilities serving these developments are constructed to minimize or eliminate flood damage.

In general, the NFIP minimum floodplain management regulations require that new construction or substantial improvements to existing buildings in the Zone A must have their lowest floor, including basements, elevated to or above the Base Flood Elevation (BFE). Non-residential structures in Zone A can be either elevated or dry flood proofed. In Zone V, the building must be elevated on piles/columns and the bottom of the lowest horizontal structural member of the lowest floor of all new construction or substantially improved existing buildings must be elevated to or above the BFE.

When the NFIP was created, the U.S. Congress recognized that insurance for “existing buildings” constructed before a community joined the Program would be prohibitively expensive if the premiums were not subsidized by the Federal Government. Congress also recognized that most of these flood-prone buildings were built by individuals who did not necessarily have sufficient knowledge of the flood hazard to make informed decisions.

Under the NFIP, “existing buildings” are generally referred to as pre-FIRM buildings. These buildings were built before the flood risk was known and identified on the locality’s FIRM. Currently, about 26% of the 4.3 million NFIP policies in force are pre-FIRM subsidized policies as compared to 70% of the policies that were being subsidized in 1978 (FEMA, 2002).

Middle Peninsula Flood Insurance Data

According to data from DCR dated October 28, 2021, there are a total of 3,399 flood insurance policies covering Middle Peninsula properties (Table 26).

Locality	Total Policies	# of Claims Since 1978	Total Value of Claims
Essex	180	223	\$5,706,414.53
Tappahannock	59	17	\$196,025.24
Gloucester	1416	1336	\$29,978,952
King & Queen	50	22	\$644,684.83
King William	12	10	\$77,367.15
West Point	81	78	\$2,288,641.12
Mathews	1225	1145	\$20,350,449.48
Middlesex	338	220	\$2,939,203.54
Urbanna	38	78	\$277,744.64
Totals	3399	3063	\$62,459,482.53

County	# of Properties	# of Claims	Total Building Claims	Average Claim
Essex	32	82	\$1,855,068.89	\$22,622.79
Mathews	169	417	\$8,252,285.42	\$19,789.65
Gloucester	146	384	\$3,310,607.84	\$21,642.21
Middlesex	35	78	\$1,084,995.57	\$13,910.20
Town of Urbanna	2	4	\$120,595.91	\$30,148.98
Town of Tappahannock	2	4	\$66,220.74	\$16555.19
Town of West Point	9	21	\$644,314.91	\$30,681.66

Repetitive loss (RL) properties can define two ways:

1. The NFIP defines Repetitive Loss as 2 or more claims of at least \$1000 over a 10-year rolling period. This is the data that appears in this plan (Table 27).
2. The Hazard Mitigation Assistance program defines Repetitive Loss as having incurred flood-related damage on 2 occasions, in which the cost of the repair, on the average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event; and, at the time of the second incidence of flood-related damage, the contract for flood insurance contains increased cost of compliance coverage.

Table 28 shows the number of SRL properties within the Middle Peninsula region.

Table 28: Severe Repetitive Loss Properties in the Middle Peninsula (DCR, 2021).

County	# of Properties	# of Claims	Total Building Payments	Average Pay
Essex	2	9	\$142,973.31	\$22,884.81
Mathews	11	49	\$1,288,909.58	\$34,179.62
Gloucester	13	63	\$1,857,182.84	\$33,028.95
Middlesex	2	6	\$157,821.97	\$37,271.90

4.5. Locality Specific Critical Facilities and Public Utilities

4.5.1. King and Queen County Critical Facilities and Public Utilities

The County’s Courthouse Complex is located in the central portion of the county along the Route 14 ridgeline, which runs in a southeasterly/northwesterly direction. The Complex is the center of county government and contains all county offices. The law enforcement and public safety functions are located in the new courts/administration building, which has a generator that serves these areas of the building during a power outage. The complex is located outside of the 500-year floodplain.

Additional properties that the County owns include 4 solid waste facilities located at 4 different locations throughout the county and the property that the regional library is located on. All 5 of these properties lie outside of the 500-year floodplain.

There are 4 volunteer fire departments (VFD) and 2 volunteer rescue squads (VRS) located at scattered positions throughout the county. All these emergency response facilities are located outside the 500-year floodplain.

The County’s 3 school sites are all located along the high and dry Route 14/721 corridor. Central High School, located in the King and Queen Courthouse area in the middle portion of the county, is the County’s designated shelter due to flooding or any other type of natural disaster.

The Middle Peninsula Regional Airport is located in the southern portion of the county and is owned and operated by a regional authority. The Airport Authority is made up of 4 local governments including King and Queen, King William and Gloucester Counties as well as the Town of West Point. Life-Evac, a medical transport helicopter service, is located at the airport. The airport terminal and runway are located outside the 500-year floodplain.

There are no public water or sewer facilities anywhere in the County - all properties in the County are served by individual wells and septic systems.

Repetitive and Severe Repetitive Loss Residential Structures in King and Queen County

According to FEMA’s records, King and Queen County has no Repetitive Loss residential properties or Severe Repetitive Losses as of 2020.

According to VDOT and County officials, flood prone roads in King and Queen County include the following in Table 29.

Table 29: King and Queen County Flood Prone Roads		
Route	Road Name	Location of Flooding
749	Kays Lane	At Root Swamp
721	Newtown Road	near Bradley Farm Road
721	Newtown Road	near Level Green Road
721	Newtown Road	near Glebe Road
623	Indian Neck Road	near Rappahannock Cultural Center
625	Poplar Hill Road	near Spring Cottage Road
628	Spring Cottage Road	near Eastern View Road
628	Todds Bridge Road	near Gunsmoke Lane
628	Pattie Swamp Road	at swamp
631	Fleets Mill Road	at Fleets Millpond
631	Norwood Road	at Dickeys Swamp
636	Minter Lane	at Walkerton Creek
620	Powcan Road	at Poor House Lane
620	Duck Pond Road	at Garnetts Creek
634	Mt. Elba Road	at flat areas
633	Mantua Road	at Garnetts Creek
617	Exol Road	at Exol Swamp
614	Devils Three Jump Road	Devils Three Jump Road
14	The Trail	at Truhart
613	Dabney Road	At Little Tastine Swamp
611	Tastine Road	At Little Tastine Swamp
603	Lombardy Road	At Little Tastine Swamp
608	Clancie Road	At Bugan Villa Drive
601	Stratton Major Road	Near Union Prospect Baptist Church
601	Stratton Major Road	Near Union Road
644	Jonestown Road	At Meadow Swamp
605	Plain View Lane	At Guthrie Creek
601	Cheery Row Lane	At Guthrie Creek and swamp
666	Tuckers Road	Entire road including Tuckers R.P.
667	Wrights Dock Road	Entire road
640	Lyneville Road	At 36" cross-pipes
625	Bryds Mill	At cross-pipes
615	Union Hope Road	At Exol Swamp
604	Bryds Bridge Road	At Bryds Bridge
612	Lilly Pond Rod	At Dragons Swamp Bridge
610	Dragonville Rod	At Timber Brook Swamp
614	Rock Springs Road	At bridge
14	Buena Vista Road	at K&Q/ Gloucester County line

Public Boat Ramps

There are 2 public boats ramps in the county along the Mattaponi River that are operated/maintained by the Virginia Department of Game and Inland Fisheries (VDGIF):

Water Body	Access Area	Barrier Free	Type	Ramps	Latitude	Longitude
Mattaponi River	Melrose	Yes	Concrete Ramp	I	37° 38' 14" N 37.6372145	76° 51' 18"W -76.8549627
Directions: From King & Queen Courthouse, Rt. 14 South (2.8 miles); Right onto Rt 602 (1.2 miles) to Ramp						
Mattaponi River	Waterfence	Yes	Concrete Ramp	I	37° 35' 31" N 37.5920552	76° 47' 55"W -76.7987125
Directions: From West Point, Rt 33 East, turn Left onto SR 14 (5 miles), turn Left onto SC 611 to end						
<i>Virginia Department of Game and Inland Fisheries, 2015</i>						

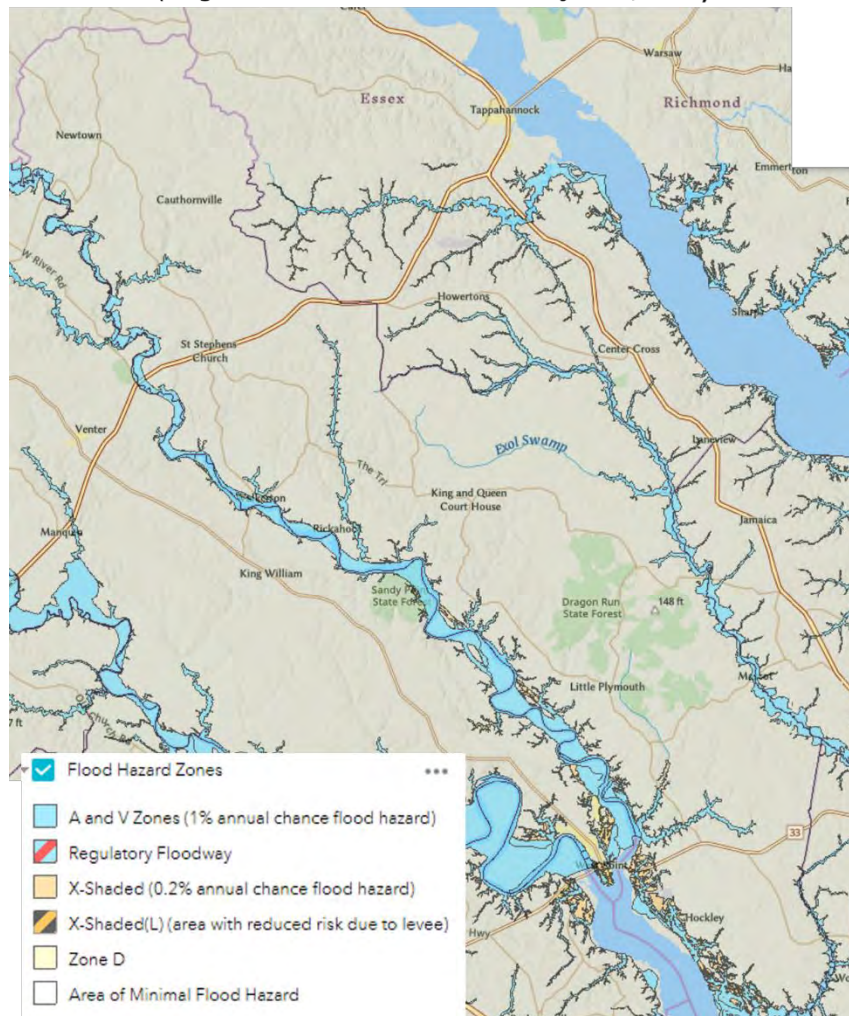

In addition to the VDGIF sites, there is a water access site to the Mattaponi River in Walkerton and in Shacklefords.

Due to the low velocity of the flood waters along this section of the Mattaponi River, none of these boat landings sustain damage from flood waters.

Floodplain

Below is a map of the floodplain within King and Queen County.

Flood Hazard Zones in King & Queen County
(Virginia Flood Risk Information System, 2021)

Alternative On-site Sewage Disposal Systems (OSDS)

The Virginia Department of Health (VDH) regulations have changed dramatically in recent years to keep pace with improvements in technology. Now, there are a number of “alternative on-site sewage disposal systems” that are allowed to be constructed where poor soils and/or a high-water table prevented the construction of a conventional septic system on the property. As of 2009, there were 1,208 OSDSs permitted and installed in the Middle Peninsula. There are an additional 2,006 OSDSs permitted by VDH but not yet installed (Figure 35).

Many of these are located in the 100-year floodplain, some of which could suffer damage during flooding events since most of the systems have essential mechanical and other components at-grade or slightly above grade.

Figure 35:

4.5.2. Essex County Critical Facilities and Public Utilities

The County's Offices are located within the Town of Tappahannock, which is centrally located mid-county along the Route 17 corridor. The County Offices are in a handful of buildings in downtown Tappahannock in an area that is outside of the 500-year floodplain. There are emergency generators at the County Administration Building and at the Sheriff's Office/Dispatch Center.

Additional properties that the County owns include 2 solid waste facilities located at Center Cross and Bray's Fork, the county library, the elementary school/school board offices, and the middle school/high school complex. All properties are located outside of the 500-year floodplain. The new middle school has an emergency generator.

The county/town is served by one volunteer fire department that has 3 fire stations. One station is located in Tappahannock along Airport Road, another is located at the northern end of the county along Route 17 at Loretto and the third station is located at the southern end of the County near Center Cross. The Tappahannock Volunteer Rescue Squad is in downtown Tappahannock, and it serves town residents as well as all county residents. All emergency response facilities are located outside of the 500-year floodplain. The fire department on Airport Road and the EMS facility downtown have emergency generators.

The Tappahannock-Essex County Community Airport is located off Route 360 at Paul's Crossroads. The airport is located on a high ridgeline, which is outside of the 500-year floodplain.

The new animal shelter that serves the town and county is located at the town's former maintenance facility along Airport Road, which does not flood.

Repetitive and Severe Repetitive Loss Residential Structures in Essex County

According to FEMA's records, Essex County has 32 Single-Family Repetitive Loss properties and 2 Single-Family Severe Repetitive Losses as of September 2021.

According to VDOT officials, flood prone roads in the Essex County/Tappahannock area include the following:

Route	Road Name	Location
17	Church Lane	Tickners Creek at June Parker Marina
617	Island Farm Road	Piscataway Creek
646	Fort Lowery Lane	Rappahannock River
680	River Place	Rappahannock River

Route 17 is the main south/north road serving the county. This primary road has been designated as a hurricane evacuation route by the Commonwealth of Virginia for some Tidewater residents evacuating northward during a Category 2 or stronger hurricane. The road was elevated to reduce the risk and frequency of flooding on this stretch of road.

Also, according to town officials, all roads that dead end at the Rappahannock River flood but sustain little damage since flood velocities are low along this section of the river through Tappahannock.

Floodplain

Below is a map of the floodplain within Essex County.

Flood Hazard Zones in Essex County (Virginia Flood Risk Information System, 2021)

Alternative On-site Sewage Disposal Systems (OSDS). The following map (Figure 53) show the location of the OSDS systems constructed in the 100-year and 500-year floodplain in Essex County:

**Essex County
OSDS within the Flood Plain**

Legend

- 100-Year Flood Plain
- 500-Year Flood Plain
- Alternative Onsite Sewage Disposal Systems (OSDS) selection

0 2 4 Miles

Although this data has been used by the Middle Peninsula Planning District Commission (MPPDC), no warranty, expressed, or implied is made by the MPPDC as to the accuracy or application of the database and related materials, nor shall the fact of distribution constitute any such warranty; and no responsibility is assumed by the MPPDC in connection herewith.

Tappahannock Critical Facilities and Public Utilities

The Town of Tappahannock provides public water and sewer services to its citizens. The water system does not sustain damage during floods.

The wastewater treatment plant is located along Hoskins Creek on the west side of Route 17. The wastewater treatment plant does not suffer damage during severe flooding events. In the last plan there was mention that there was one sewerage pump station located along Newbill Drive that received flood damage during hurricane strength storms. During Hurricane Isabel in 2003, the electrical controls needed to be repaired since there was flood damage. However, since the last plan the Newbill Drive electrical controls have been raised to above the flood line of Hurricane Isabel in hopes to avoid future issues.

Public Boat Landings

There is one public boat ramp in the Town of Tappahannock along Hoskin’s Creek that is operated/maintained by the VDGF:

Water Body	Access Area	Barrier Free	Type	Ramps	Latitude	Longitude
Hoskin’s Creek	Hoskin’s Creek	No	Concrete Ramp	1	35° 55’ 12” N 37.9200873	76° 51’ 26”W -76.8571004
Directions: Town of Tappahannock, Rt. T-1002 (Dock Street)						
<i>Virginia Department of Game and Inland Fisheries, 2015</i>						

In addition to Hoskin’s Creek, there is public access at the Prince Street Road ending which is owned by the Middle Peninsula Chesapeake Bay Public Access Authority. While Prince Street may suffer minor damage during severe storm events, Dock Street does not sustain damage from flood waters according to town officials.

Repetitive and Severe Repetitive Loss Residential Structures in the Town of Tappahannock

According to FEMA’s records, the Town of Tappahannock has 2 Single Family Repetitive Loss properties and no Severe Repetitive Losses as of September 2021. The following map shows the floodplains in the Town of Tappahannock.

Flood Hazard Zones in the Town of Tappahannock (Virginia Flood Risk Information System, 2021)

4.5.3. King William County Critical Facilities and Public Utilities

Public water and sewerage systems serve portions of the Route 360 growth corridor in Central Garage. A package wastewater treatment plant discharges sewer effluent into an unnamed tributary that leads into Moncuin Creek, which then flows into the Pamunkey River. Floodwaters do not adversely impact the wastewater treatment plant.

The public water system serves the relatively high and dry Central Garage area. Therefore, this Route 360/30 area water system does not sustain damage from flooding events.

According to VDOT officials, flood prone roads in the King William County and Town of West Point include the following:

Route	Road Name	Location
30	King William Road	Cypress Swamp at Olson's Pond
636	VFW Road	Cypress Swamp
632	Mt. Olive- Cohoke Road	Intersection of Route 633
609	Smokey Road	Herring Creek
628	Dorrel Road	Herring Creek
1006	Thompson Ave	West Point Creek
1003	Chelsea Road	West Point Creek to dead end
1130	Glass Island Road	Mattaponi River
1107	Kirby Street	1 st to 7 th Streets
n/a	1 st to 7 th Streets	Between Kirby St. and Pamunkey River
n/a	2 nd to 5 th Streets	Between Lee St. and Mattaponi River

Public Boat Landings

There are 2 public boat ramps in King William County that is owned and maintained by VDGIF:

Water Body	Access Area	Barrier Free	Type	Ramps	Latitude	Longitude
Mattaponi River	Aylett	Yes	Concrete Ramp	1	37° 47' 8" N 37.7855806	77° 6' 11" W -77.1030150
Directions: Aylett, Rt 360 East, Right onto Rt 600						
Pamunkey River	Lestor Manor	Yes	Concrete Ramp	1	37° 35' 10" N 37.5861120	76° 59' 4" W -76.9845725
Directions: From King William Courthouse, Rt 30 South (.7 miles); Right on Rt 633 (7.4 miles); Left on Rt 672 (.4 miles)						
<i>Virginia Department of Game and Inland Fisheries, 2015</i>						

Additionally, there is a very small canoe/kayak launch at Zoar State Forest located a few miles north of Route 360.

Due to the low velocity of the flood waters along these upper reaches of the Mattaponi River, neither of these boat landings sustain damage from flood waters.

Repetitive and Severe Repetitive Loss Residential Structures in King William County

According to FEMA's records, King William County has no Repetitive Loss residential properties or Severe Repetitive Loss as of October 2021.

Floodplain

The following map shows the floodplains in King William County.

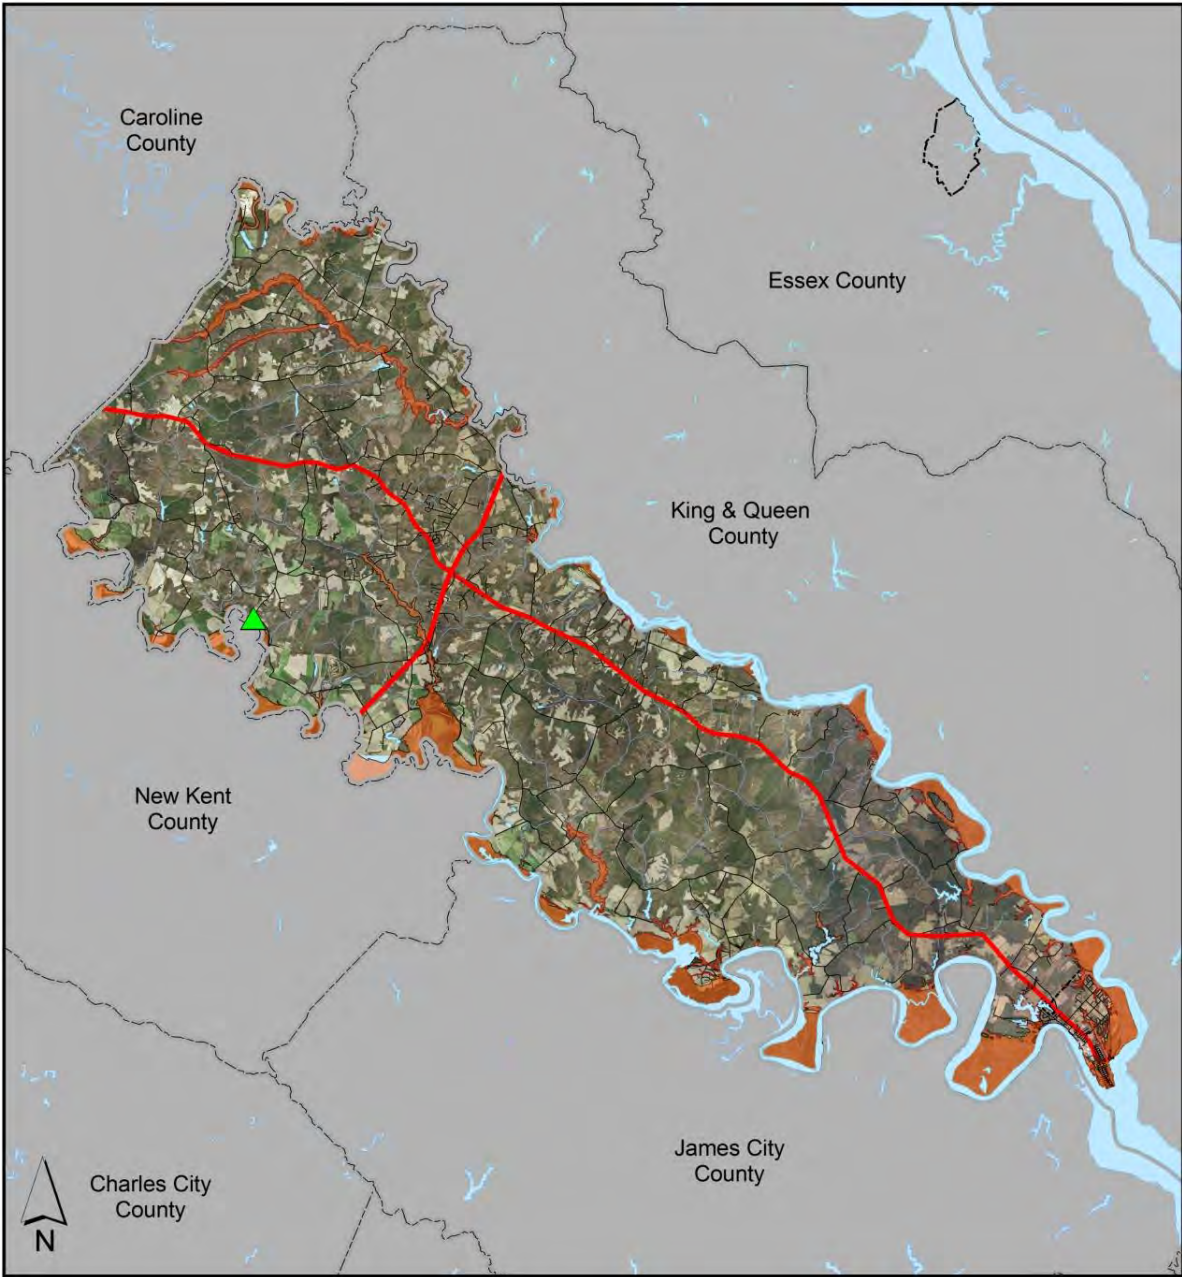

Flood Hazard Zones in King William County (Virginia Flood Risk Information System, 2021)

Alternative On-site Sewage Disposal Systems (OSDS)

The map (Figure 64) below shows the locations of the installed OSDS facilities constructed in the 100-year floodplain in King William County.

IRGINIA DEPARTMENT OF
EMERGENCY MANAGEMENT

U.S. DEPARTMENT OF
HOMELAND SECURITY

MIDDLE PENINSULA
PLANNING DISTRICT COMMISSION

Town of West Point Critical Facilities and Public Utilities

Located at the confluence of the Mattaponi and Pamunkey Rivers where they become the headwaters of the York River, there is public infrastructure, private residences and downtown businesses that are at risk of flooding during severe storms.

The town provides both public water and sewer service to its residents. The water system is owned and operated by the town and sustains little damage during flooding events.

The ownership and operation of the town's sewerage system has been turned over to the Hampton Roads Sanitation District (HRSD). The wastewater treatment plant is located at the east end of 23rd Street. The facility did not flood during Hurricane Isabel in 2003 and the vital electrical and mechanical controls are on a slightly elevated portion of the site and therefore, the facility's location does not pose a risk of flooding.

A sewer pump station located on 2nd Street near the point does have a flooding problem. During Hurricane Isabel, the pump motors in the well house flooded and needed to be dried out. However, the electrical controls are mounted high enough in the pump house so that they did not sustain flood damage. There is a sewer pump station located on 13th street that did not flood during Hurricane Isabel, but the floodwaters did reach within 1-foot of the facility.

Public Boat Landings

There is one public boat landing located along the Mattaponi River on the north side of the Lord Delaware Bridge on Glass Island Road. This facility does receive minor damage to the roadway and parking areas during severe storms.

Water Body	Access Area	Barrier Free	Type	Ramps	Latitude	Longitude
Mattaponi River	West Point	Yes	Concrete Ramp	2	37° 47' 8" N 37.5406099	76° 47' 23" W -76.7896487
Directions: Town of West Point on Rt 33						
						VDGIF, 2015

Public Park Facility

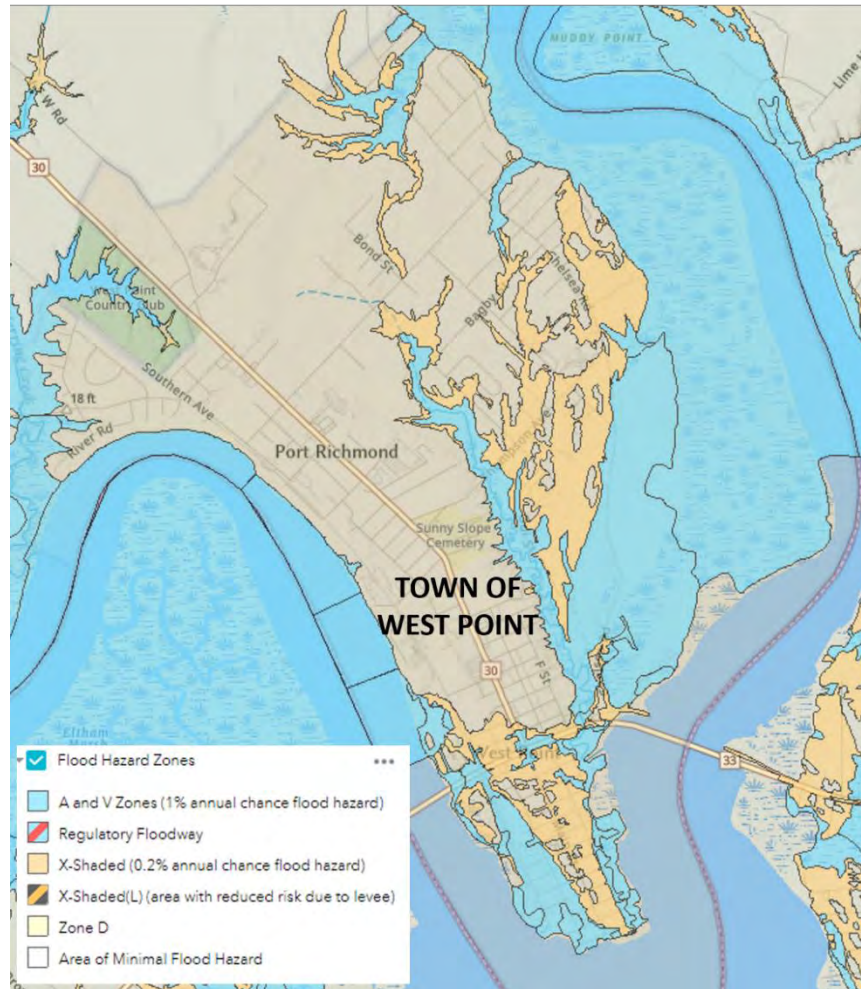

On the south side of the Lord Delaware Bridge, there is a small-town park with walking trails and benches adjacent to the water's edge. This is a new facility that was built in conjunction with the new bridge construction that was completed in 2006. Due to the minimal amount of infrastructure at this shoreline facility, it is anticipated that there will be no more than minor damages from rising waters in this wetlands area adjacent to the Mattaponi River.

Repetitive and Severe Repetitive Loss Residential Structures in West Point

According to FEMA's records, the Town of West Point has 8 Single Family and 1 Non-Residential Repetitive Loss properties and zero Severe Repetitive Losses as of October 2021.

The floodplains are displayed in the following map.

Flood Hazard Zones in the Town of West Point (Virginia Flood Risk Information System, 2021)

Numerous homes and downtown businesses at the southern end of West Point flood during severe storms particularly as flood waters reached 8 feet 6 inches above mean low water which is 6 inches above the 8 ft 100-year flood plain elevation. The West Point School Complex, which serves as the town's shelter, is located on the northern side of the town and the buildings are not subjected to floodwaters. However, Chelsea Road is located along the Mattaponi River, and it is 1 of 2 routes that are used to access the school complex. This roadway does flood during severe storms.

4.5.4. Gloucester Critical Facilities and Public Utilities

The county has a relatively extensive network of public water and sewer facilities in and around the Gloucester Courthouse area. The Beaverdam Reservoir, located just north of the courthouse area, serves as the drinking water source for the county's public water supply system. As discussed earlier in the Dam Impoundment Section of the plan, the dam is structurally well-built and remains fully certified by the DCR (Figure 3). Below the dam there are approximately 200 homes that would flood if the Reservoir structure failed. However, in 1999 the impoundment overflowed during Hurricane Floyd yet no flood damage to the home since the excess water flowed downstream using the emergency spillway.

Table 32 provides a list of dams within the locality that may be impacted by natural hazards as well.

Table 32: The following is a list of dams in Gloucester County that are on the Virginia Department of Conservation and Recreation's Certification List.				
Dam Name	Class	Height	Capacity in Acre Feet	Water Body
Woodberry Farm	3	8	158	Jones Creek
Weaver Dam	3	6	81	Jones Creek
Haynes	3	15	366	Carter Creek
Robins Creek	3	16	219	Wilson
Cow Creek	2	16	931	Cow
Burke Stream	3	20	481	Burke Mill
Cypress Shores River	3	15	143	Piankatank
Haines Pond	3	9	50	Carter Creek
Beaverdam Reservoir	1	39	20,523	Beaverdam Creek
Wood Duck Pond	4	Unknown	Unknown	Unknown
Leigh Lake	4	12	unknown	Jones Creek

The water distribution system does not suffer damage during severe storm events since it is a closed underground system. The sewerage collection lines and pumps stations are owned and operated by Gloucester County. There are 2 pump stations in the Gloucester Courthouse area (Pump # 11 and Pump #13) that sustained damage during Hurricane Floyd in 1999. The damage was caused by floodwaters resulting from the overtopping of the Beaverdam Reservoir as previously mentioned. After the wastewater is collected, it is transported in a large force main that runs down Route 17, crosses under the York River and then flows into the York River Wastewater Treatment Plant in York County. The large force main and treatment plant are owned and operated by the Hampton Roads Sanitation District. The force main is a closed underground system that does not sustain damage during severe flooding events.

The Achilles Elementary School site, located in the southeastern section of the county, is adversely affected by flood waters from storms surges associated with a Category 1 hurricane.

According to VDOT officials, flood prone roads in Gloucester County include the following:

Table 33: Gloucester County Flood Prone Roads.		
Route	Road Name	Location of Floodwaters
684	Starvation Road	From Big Oak Lane to ESM
662	Allmondsville Road	From Rte. 606 to Rte. 618
618	Chappahosic Road	From Rte. 662 to Rte. 639
636	Brays Point Road	From Eagle Lane to ESM
1303	Carmines Islands Road	From Gardner Lane to ESM
646	Jenkins Neck Road	Various spots from Owens Road to ESM
648	Maundys Creek Road	From Rte. 649 to ESM
649	Maryus Road	From Haywood Seafood Lane to ESM
652	Rowes Point Road	From 653 to ESM
649	Severn Wharf Road	Various spots from 653 to ESM

Public Boat Ramps

There are 4 public boat landings in Gloucester County that are owned and operated by the VDGIF:

Water Body	Access Area	Barrier Free	Type	Ramps	Latitude	Longitude
Piank tank River	Deep Point	Yes	Concrete Ramp	1	37° 32' 10" N 37.5361228	76° 29' 43" W -76.4953889
Directions: From Glens, Rt 198 East (7.5 miles); Left on Rt 606 (1.5 miles)						
Porpop tank River	Tanyard	No	Concrete Ramp	1	37° 27' 17" N 37.4548078	76° 40' 5" W -76.6679753
Directions: From Gloucester, Rt 14 North (4.3 miles); Left on Rt 613 (3.3 miles); Right on Rt 610 (.6 miles); left on Rt 617 (.5 miles)						
Ware River	Warehouse	Yes	Concrete Ramp	1	37° 24' 11" N 37.4031611	76° 29' 23" W -76.4896286
Directions: East of Gloucester on Rt 621						
York River	Gloucester Point	Yes	Concrete Ramp	2	37° 14' 45" N 37.2457058	76° 30' 17" W -76.5048003
Directions: Town of Gloucester Point, Rt 1208 – TEMPORARILY CLOSED						
VDGIF, 2015						

In addition to VDGIF there is a list of other public boat ramps throughout the County, including:

- **Cappahosic Landing Location:** End of Cappahosic Road. York River Access. Bank fishing, beach, Picnicking, limited parking, and restrooms - May thru October. Park area maintained by Gloucester County while the Landing is maintained by VDOT.
- **Cedar Bush, Oliver's Landing Location:** End of Cedar Bush Road. York River Access. Gravel ramp and finger pier. Maintained by Gloucester County and VDOT.
- **Field's Landing:** End of Field's Landing Road. York River Access. Car top boats only, no trailer access. Maintained by VDOT.
- **Glass Point Landing:** End of Glass Road. Severn River Access. Car top boats only, no trailer access Maintained by Gloucester County and VDOT.
- **Gloucester Point Beach Park Location:** End of Greate Road, next to Coleman Bridge. York River Access. Sandy beach, swimming, picnicking, outdoor showers – seasonal, restrooms, playground, fishing pier, parking and two landings. One landing is maintained by Gloucester County and one by DGIF (see above for details).
- **John's Point Landing** - End of John's Point Road. Small boats only, gravel ramp and sand ramp for car top boats: Fishing Parking Maintained by Gloucester County and VDOT
- **Miller's Landing** - car top boats only, no trailer access Location: End of Miller's Landing Road Poropotank River Access Fishing Parking Maintained by VDOT
- **Payne's Landing:** End of Paynes Landing Road. Ware River Access. Car top boats only, no trailer access. Maintained by Gloucester County.

Repetitive and Severe Repetitive Loss Residential Structures in Gloucester County

According to FEMA's records, Gloucester County has 146 (ie.141 Single Family, 1 Non-Residential, 3 Condos, and one 2-4 Family properties) Repetitive Loss properties and 13 (i.e. 11 Single Family and 2 non-residential properties) Severe Repetitive Losses as of October 2021.

Floodplain

The following map shows the floodplains in Gloucester County.

Flood Hazard Zones in Gloucester County (Virginia Flood Risk Information System, 2021)

Alternative On-site Sewage Disposal Systems (OSDS)

The following maps (Figure 36) show the locations of the installed OSDS facilities constructed in the 100-year and 500-year floodplain in Gloucester County.

Figure 36:

4.5.5. Mathews Critical Facilities and Public Utilities

New Point Comfort Lighthouse, located at the southern tip of Mathews County, has undergone significant flood damage resulting from the lighthouse being separated from the mainland due to severe erosion. Mathews County owns the lighthouse facility. In 2016 the Waterfront Development Corporation installed a new pier at the lighthouse that allowed contractors to access the site for restoring the stone tower. Restoration of the tower started in 2020 and concluded on October 12, 2021, when a ceremony was held to relight the lighthouse.

According to VDOT officials, flood prone roads in Mathews County include the following:

Table 34: Mathews County Flood Prone Roads

Route	Road Name	Location
610	Marsh Hawk Road	From Rte. 614 to Rte. 611
600	Circle Drive	From Rte.14 to Rte. 14
600	Light House or Point Road	From Rte. 14 to ESM
611	Tabernacle Road	From Rte. 613 to Rte. 609
611	Tabernacle Road	From Rte. 610 to Rte. 609
609	Bethel Beach Road	From Rte. 610 to ESM
609	Bethel Beach Road	From Rte. 614 to Rte. 611
643	Haven Beach Road	From Rte. 704 to ESM
633	Old Ferry Road	From Rte. 704 to 636
608	Potato Neck Road	From Rte. 649 to ESM
644	Bandy Ridge Road	From Rte. 611 to Rte. 614

Public Boat Ramps

There is one public boat landing in Mathews County that is owned and operated by the VDGIF:

Water Body	Access Area	Barrier Free	Type	Ramps	Latitude	Longitude
East River	Town Point	Yes	Concrete Ramp	1	37° 24' 55" N 37.4143723	76° 20' 15" W -76.3375842
Directions: From Mathews, Rt 14 South (3.8 miles); Right onto Rt 615 (.6 miles)						
VDGIF, 2015						

Repetitive and Severe Repetitive Loss Residential Structures in Mathews County

According to FEMA's records, Mathews County has 169 (i.e. 164 Single family, 3 Non-resident, 1 Other resident, and 1 Condo) Repetitive Loss residential properties and 11 Single Family Severe Repetitive Losses as of October 2021.

Public School Properties

During a Category 2 hurricane, the Thomas Hunter Middle School and the Lee Jackson Elementary School properties become flooded.

Floodplain

The following map shows the floodplains in Mathews County.

Flood Hazard Zones in Mathews County (Virginia Flood Risk Information System, 2021)

Alternative On-site Sewage Disposal Systems (OSDS)

The following map (Figure 37) show the location of the OSDS facilities constructed in the 100-year and 500-year floodplains in Mathews County.

Figure 37:

4.5.6. Middlesex County Critical Facilities and Public Utilities

The county does not currently operate any public water systems. However, there are community water systems operated by private companies serving the Village of Saluda and some of the larger residential subdivisions in the lower portion of the county in the Hartfield and Deltaville areas. These water systems do not sustain flood damages from severe hurricanes and nor'easters.

The County does have a public sewerage system in the planning stages that will serve the Village of Saluda and properties east along the Route 33 corridor towards the Cook's Corner area. The wastewater treatment plant and outfall for this proposed system will be built along a tributary of Urbanna Creek, located between Saluda and Cook's Corner.

Since this project is in the permitting/design stage, it is assumed that the facility will be designed and constructed in a manner to avoid any future adverse impacts from floodwaters.

According to VDOT officials, flood prone roads in Middlesex County/Urbanna include the following:

Route	Road Name	Location
648	Montague Island Road	From Rte.604 to ESM
651	Smokey Point	From Rte. 640 to Rte. 685
1103	Irma's Lane	From Rte. 33 to Rte. 1102
628	Mill Creek Road	From Rte. 702 to ESM
636	Timber Neck Road	From Rte. 643 to Rte. 659

Public Boat Ramps

There are 3 public boat landings in Middlesex County that are owned and operated by the VDGIF:

Water Body	Access Area	Barrier Free	Type	Ramps	Latitude	Longitude
Parrotts Creek	Mill Stone	Yes	Concrete Ramp	1	37° 43' 36" N 37.7266569	76° 37' 19"W -76.6219992
Directions: Church View, Rt 17 North (1.1 miles); Right on Rt 640 (4.4miles); Left on Rt 608 (0.8 miles)						
Rappahannock River	Mill Creek	Yes	Concrete Ramp	1	37° 35' 3" N 37.5842494	76° 25' 28"W -76.4244480
Directions: From Hartfield, Rt 3 North (0.5 miles); Right on Rt 626 (3.1 miles)						
Rappahannock River	Saluda	Yes	Concrete Ramp	1	37° 37' 21" N 37.6225893	76° 34' 54"W -76.5816117
Directions: Rt 618 North (1.4 miles) of Saluda						
VDGIF, 2015						

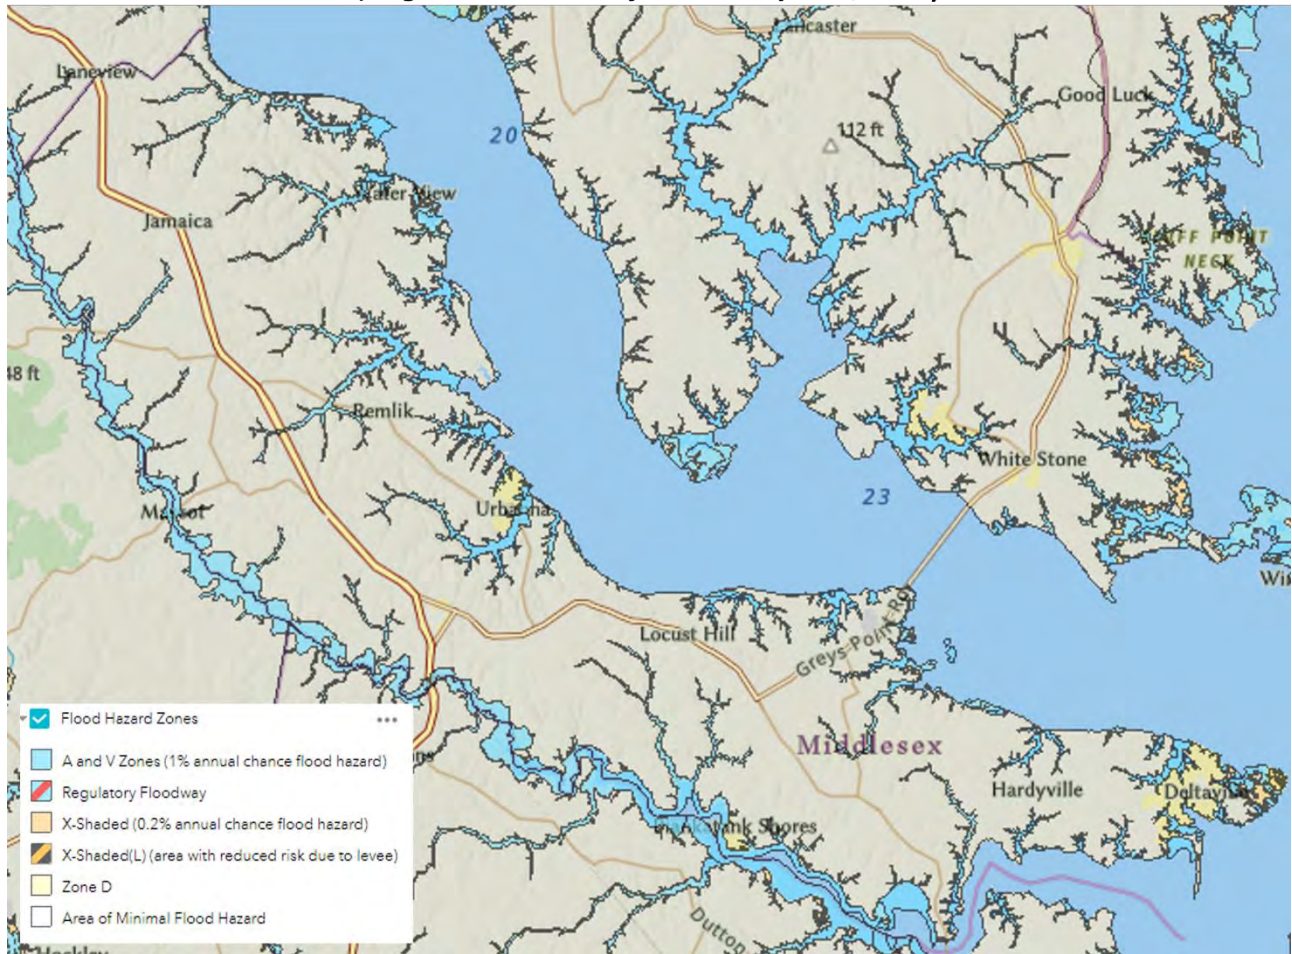

Repetitive and Severe Repetitive Loss Residential Structures in Middlesex County

According to FEMA's records, Middlesex County has 35 Single Family Repetitive Loss properties and 2 Single Family Severe Repetitive Loss properties as of October 2021.

Floodplain

The following map shows the floodplains in Middlesex County.

Flood Hazard Zones in Middlesex County (Virginia Flood Risk Information System, 2021)

Alternate On-site Sewage Disposal Systems (OSDS)

The map (Figure 38) below shows the location of the OSDS facilities constructed in the 100-year and 500-year floodplain in Middlesex County.

Figure 38:

Urbanna Critical Facilities and Public Utilities

The Town of Urbanna provides public water and sewer service to its residents. The town operates the public water system which serves town residents as well as some nearby customers in surrounding Middlesex County.

The sewerage collection and treatment system is operated by the HRSD. When flood waters are anticipated, the staff at HRSD turn off the pumps at the sewerage pump stations to prevent pumping floodwaters into the wastewater treatment plant.

The wastewater treatment plant is located on high land next to the town's water tower, which is an area that does not flood.

The town operates the Urbanna Town Marina that includes a boat/fishing dock, a small beach area, a small park and a small operations building - all located at Upton's Point along the Rappahannock River. This facility suffered significant damage in 2003 from Hurricane Isabel and has been completely rebuilt since then at an approximate cost of \$850,000.

Repetitive and Severe Repetitive Loss Residential Structures in the Town of Urbanna

According to FEMA's records, the Town of Urbanna has 2 (ie. 1 Single Family and 1 Other resident property) Repetitive Loss residential properties and zero Severe Repetitive Loss properties as of October 2021.

In 2003, Hurricane Isabel damaged/destroyed 5 houses along low-lying Island Drive. When these houses were re-built by the property owners, they were elevated in order to prevent future damage from flood waters along this section of the Rappahannock River. The following map shows the floodplains in the Town of Urbanna.

**Flood Hazard Zones in the Town of Urbanna
(Virginia Flood Risk Information System, 2021)**

4.5.7. Upper Mattaponi Critical Facilities

The Upper Mattaponi Indian Tribe established a medical facility in Aylett, Virginia in 2021. Aylett Family Wellness is the Commonwealth’s first Indian Health Service Clinic, which operates under the PL 93-638 contract, and offers a trio of medical services to tribal citizens and residents of the rural community. The clinic is a primary care provider; however, the facility also offers on-site laboratory services and a fully functioning pharmacy. Aylett Family Wellness is located at 7864 Richmond Tappahannock Highway, Aylett, Virginia 23009.

The government offices of the Upper Mattaponi Indian Tribe are located at 13467 King William Road, King William, Virginia 23086.

Section 5: Risk Assessment Analysis

Flooding, Hurricane, and Sea Level Rise

Hazus is a nationally recognized multi-hazard loss estimation model that was developed by the Federal Emergency Management Agency (FEMA) and the National Institute of Building Sciences (NIBS). The primary purpose of Hazus is to provide methodology and software application to develop multi-hazard losses at a regional scale. The published online Hazus Technical Manuals provide detailed information about how the models work and how the models generate estimated loss estimates. The loss estimates are used primarily by local, state and regional officials to plan and stimulate efforts to reduce risk from multi-hazards and prepare for emergency response and recovery¹.

Potential loss estimates analyzed in Hazus includes:

- Physical damage to residential and commercial buildings, schools, essential facilities, and infrastructure
- Economic loss including lost jobs, business interruptions, repair, and reconstruction costs.

This analysis for flood, hurricane, and sea level rise impact implements two Hazus analysis modules, flood and wind. The Hazus flood module uses depth of flooding data along with industry standard depth damage curves to estimate the economic impact of various flood scenarios. Riverine flooding, coastal flooding, and sea level rise scenario depth of flooding estimates from the National Oceanic and Atmospheric Agency (NOAA) are analyzed in the Hazus flood module. Hurricane damages are calculated with wind speed, direction, and duration analysis from the Hazus hurricane module. Model information is from either historical hurricane tract and impacts or are estimated in a probabilistic scenario. Hurricane wind driven storm surge is not calculated in the Hurricane model, but instead is a component of the coastal analysis that takes both estimated storm surge and wave-run-up into account in the depth of flooding damages.

Results of the Hazus modules are captured at the Census block level for all Hazards. Census blocks align well with County and incorporated jurisdiction boundaries. The results for the three federally recognized Tribes within the Middle Peninsula, they are represented as a portion of the overall County results and Tribal Designated Statistical Areas (TDSA) have been included in maps. According to the US Census Bureau, TSDAs are *intended to encompass a compact and contiguous area that contains a concentration of individuals who identify with the delineating federally recognized American Indian tribe. TSDAs are also intended to be comparable to American Indian reservations within the same state or region and provide a means for reporting statistical data for the area.* Please note this TSDAs may not be the Tribe's planning area of the AHMP, land owned by the Tribe, land in trust to the Tribe, Tribal ancestral land, or land of importance to the Tribe. Additionally, upon correspondence with the Tribes the TSDAs did not sufficiently represent their Tribe. Finally, it was found that this the TDSA data did not include the Upper Mattaponi Tribe. Future Hazus runs will need to improve and capture the Tribes planning area and assess the losses within these areas.

For each scenario, Flood Hazards (Riverine and Coastal), Hurricane Wind Hazard, and Sea Level Rise Hazard, a description of the methodology and parameters for estimation of the hazard, a description of the built and potential loss environment, and the results of the scenario are presented in narrative, tabular, and mapping formats. All supporting digital input and results are included as an annex to this analysis.

¹ Hazus User & Technical Manuals, <https://www.fema.gov/flood-maps/tools-resources/flood-map-products/hazus/user-technical-manuals>

Flood Hazard Analysis

The Hazus flood hazard analysis module was used to identify and characterize the flood hazards and the subsequent loss-potential or risk for both riverine and coastal flooding impacts. The standard methodology of defining loss potential for any given hazard, includes annualizing the potential over a series of statistical return periods. Annualization is the mathematical method of converting individual losses to a weighted-average that may be experienced in any given year. This Plan's scope of analysis examines risk by annualizing the impact of flooding from the 0.2%, 1%, 2%, 4%, and 10% annual chance return periods. In layman's-terms these same annual-chance return periods are often described as the 500-year, 100-year, 50-year, 25-year and 10-year events as shown in Table 35. Coastal flood risk is usually represented by a single event, the one-percent-annual chance return period that incorporates both storm surge and wave-run-up values. This study has developed storm surge return periods to match the riverine flood hazard events so an annualized flood loss can be established.

Table 35: Annual probability for flood hazard recurrence intervals.

Flood Recurrence Interval	Annual Chance of Occurrence
10-year	10.0%
25-year	4.0%
50-year	2.0%
100-year	1.0%
500-year	0.2%

Each of these flood hazard return periods represent a statistical event of the chance of being equaled or exceeded in any given year; i.e., the likelihood that a particular event with a given intensity occurs on average per year. Once each of these statistical return periods are calculated, an annualized value is computed offering a perspective for any given year.

The flood modeling performed as part of the current Plan update, and the respective risk results, represents estimated flood losses for each statistical return period and then the annualized flood losses. However, it is important to note that the idiom of 'comparing apples with oranges' very-much applies to the various elements of flood modeling as well as modeling risk from potential flooding. Therefore, where appropriate differing modeling methodologies and their respective results have been separated for comparative purposes as described and highlighted in the bulleted list below. The same list also presents the order in which Hazus modeling information is presented in this report:

The flood hazard modeling performed includes the following:

- FEMA Floodplains and Depth Grid Information
- Hazus Building Stock (Inventory of Buildings and Facilities):
 - All modeling utilized default Hazus building inventory values (Version 4.2 – US Census Bureau 2010 Building Stock Data)
 - All modeling utilized default Hazus Dasymetric Census Geographies

- All modeling utilized default Hazus essential facilities
- **Hazus Levels 1 and 2 Multi-frequency Flood Modeling** –Hazus derived flood hazards were combined with FEMA’s detailed engineering modeling of flood hazards as published on FEMA’s Map Service Center. The following core inputs and parameters were included in this study:
 - All GIS grid products are in Universal Transverse Mercator (UTM) Projection with X,Y (North American Datum of 1983), and Z units (North American Vertical Datum of 1988) in Feet. All GIS grid products were created or converted to a 10-ft grid cell size for analysis.
 - Digital Elevation Model (DEM) – National Elevation Dataset (NED) One-Arc Second (~30 meter resolution)
 - Frequencies (Both Riverine & Coastal hazards) - 0.2%, 1%, 2%, 4%, and 10%. No grid is created representing an annualized depth of flooding. Annualized results are derived from the loss estimation.
 - FEMA’s Riverine and Coastal analysis is completed by Hydrologic Unit Code (HUC) and data from two HUCs were available to be incorporated as a Level 2 update for flood hazard analysis. These HUCs provided updated data for portions of Essex, King & Queen, Middlesex, Gloucester and Mathews Counties. FEMA does not have updated data for King William County. Data were imported from:
 - FRD_02080104_GeoDatabase_20201006
 - FRD_02080102_GeoDatabase_20201006
 - Riverine:
 - Level 1 - One-Square Mile (sq mi) Drainage Threshold for places where there were no updated data from FEMA, such as King William County,
 - Level 2 – FEMA’s engineering detailed studies produced depth grids for all return periods.
 - Coastal:
 - Level 2
 - FEMA’s detailed engineering analysis provided an update to the one-percent-annual chance return period for coastal hazards that combines both surge and wave run-up analysis for a limited spatial area.
 - “Starting Stillwater Elevations” as published in the Flood Insurance Study’s (FIS) Table 2 – Transect Data (see each FEMA FIS document for the table details) from each respective FEMA Flood Insurance Study (FIS) to develop depth grids for return periods other than the one-percent-annual chance:
 - ESSEX COUNTY – Revised May 4, 2015
 - GLOUCESTER COUNTY – Revised November 19, 2014
 - KING AND QUEEN COUNTY – Preliminary October 3, 2013
 - KING WILLIAM COUNTY – Preliminary October 3, 2013
 - MIDDLESEX COUNTY – Revised May 18, 2015
 - MATHEWS COUNTY – Revised December 9, 2014
 - Hazus default shoreline data was modified to extend up the York River so that Level 1 coastal modeling could be completed for King William County, King and Queen County, and portions of Gloucester County upstream of the George Washington Memorial Highway Bridge (US 17).

- **Hazus Level I Analysis and Summary of Losses**– Analysis for annualized losses and losses for each return period:
 - Level I
 - Multiple frequencies (each return period available for riverine and coastal)
 - Hazus default general building stock is analyzed for each return period and then summarized as loss totals by dollars of building and contents loss, and dollars of business interruption.
 - Hazus default essential facilities losses have totals summarized by dollars of building and content’s loss, along with an estimate of time to full restoration of the function of that facility
 - Annualized (riverine and coastal)
 - General building stock is processed for annualized loss analysis summarized as loss totals by dollars of building and contents loss, and by capita. Summaries are also built for general occupancy class type, and construction material.
 - Hazus does not provide this analysis methodology for Essential Facilities
 - Results will be presented in the narrative, tables, and maps as losses due to riverine hazards, losses due to coastal hazards, and then the combined impact of both hazard types.

FEMA Floodplains and Depth Grid Information

FEMA initiates Flood Insurance Studies (FIS) on a national prioritization schedule. The most recent FIS’s have been incorporated into this Plan as outlined by date in the list above; dates ranging from 2013 to 2020. These various new studies have produced updated riverine and coastal flood hazards for most of the jurisdictions in the Middle Peninsula planning area. The new riverine coastal flood hazards associated with the most recent FEMA studies have been produced under the Risk MAP Program. In short, the Risk MAP Program seeks to include risk assessments as part of an FIS to better communicate the risk of flooding. Consequently, a Risk MAP study includes all of the regulatory FIS products; namely engineering, floodplain mapping, digital FIRM data and report text. However, in addition to the traditional regulatory products, Risk MAP also includes new non-regulatory products aimed at communicating risk. One of the core non-regulatory datasets that FEMA develops includes the creation of depth grids from the digital FIRM data. Depth grids are the key to performing risk assessments in the Hazus software as they are able to be directly imported from authoritative sources of engineering modeling. Figures 42 and 43 illustrates the extent of flood hazards as defined by the most recent FEMA flood insurance studies that were incorporated into this study making this a Level 2 hazard data analysis.

The flood hazard within Hazus is ultimately defined by a depth grid which is a representation of the difference between the estimated water surface and ground elevations for each respective flood frequency or annual chance.

The following image is a simplified representation as shown in FEMA’s Guidance for Flood Risk Analysis and Mapping, Flood Depth and Analysis Grids (May 2014):

The new Risk MAP projects for each of the counties in the Middle Peninsula Regional include new riverine coastal one-percent-annual-chance depth grids. Figure 39 shows these new coastal one-percent-annual chance depth grids and the new FEMA digital FIRM floodplains.

Figure 39: FEMA Level 2 Depth Grids.

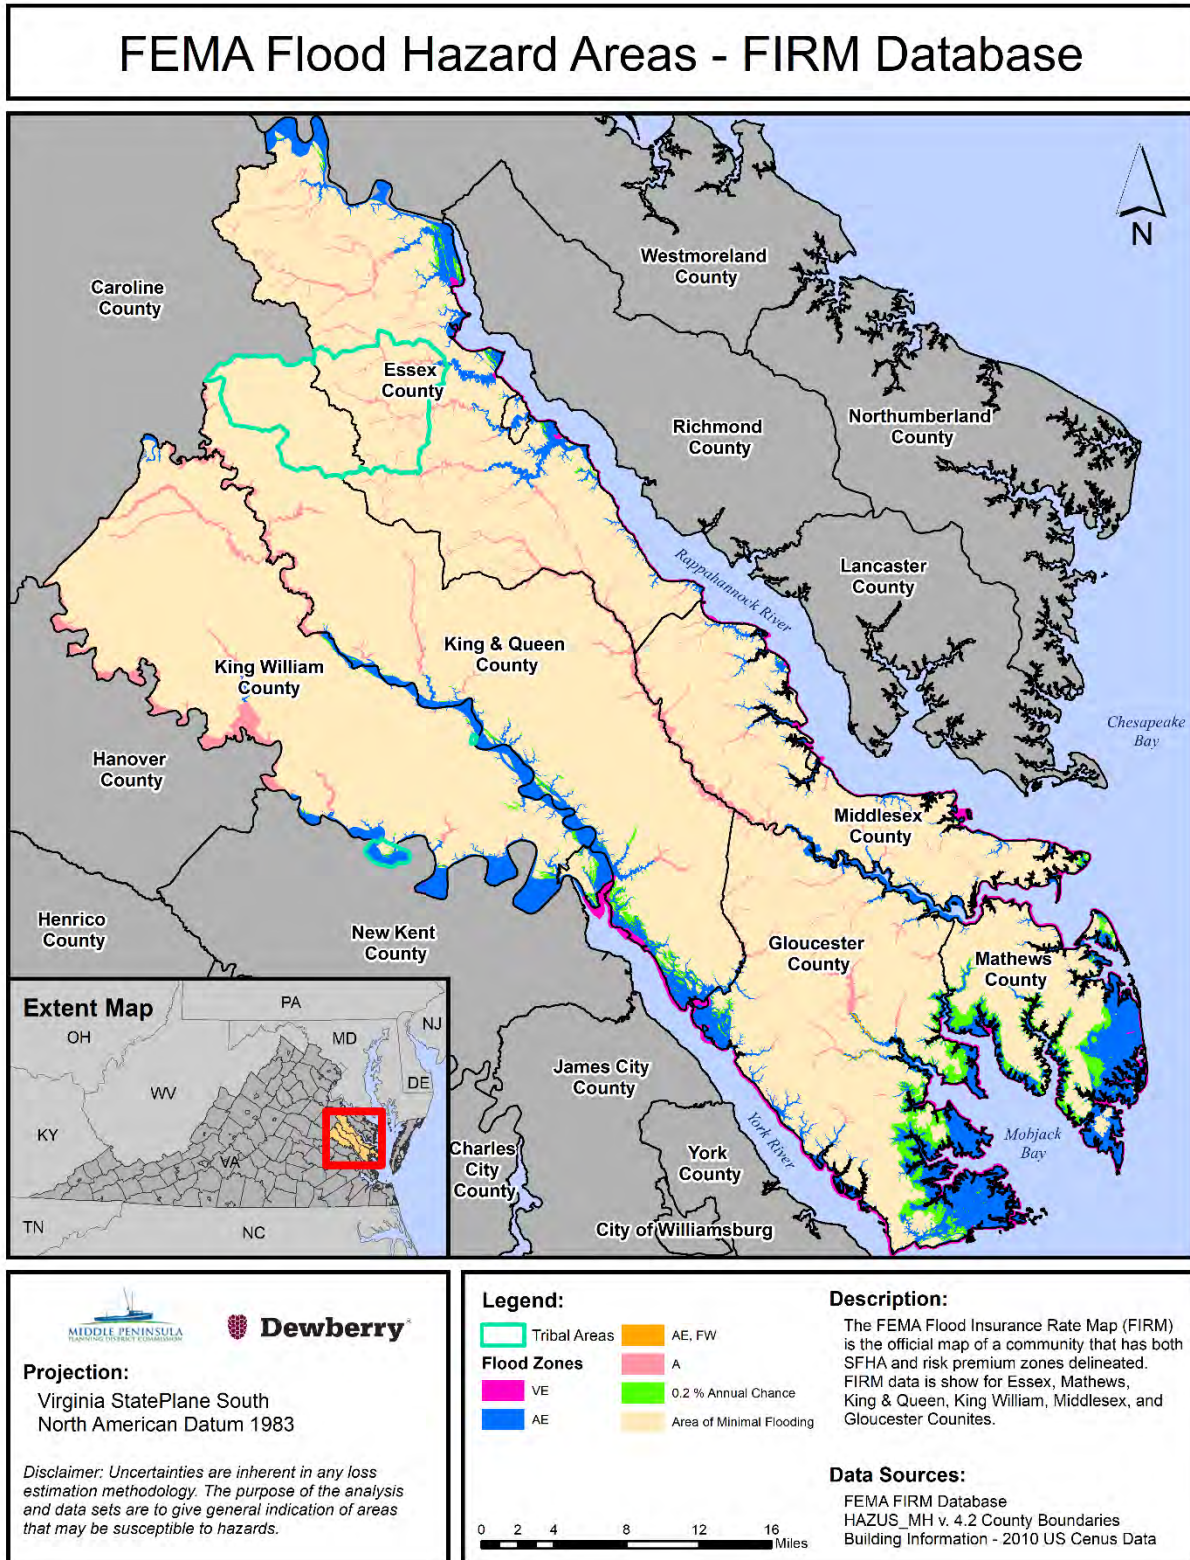

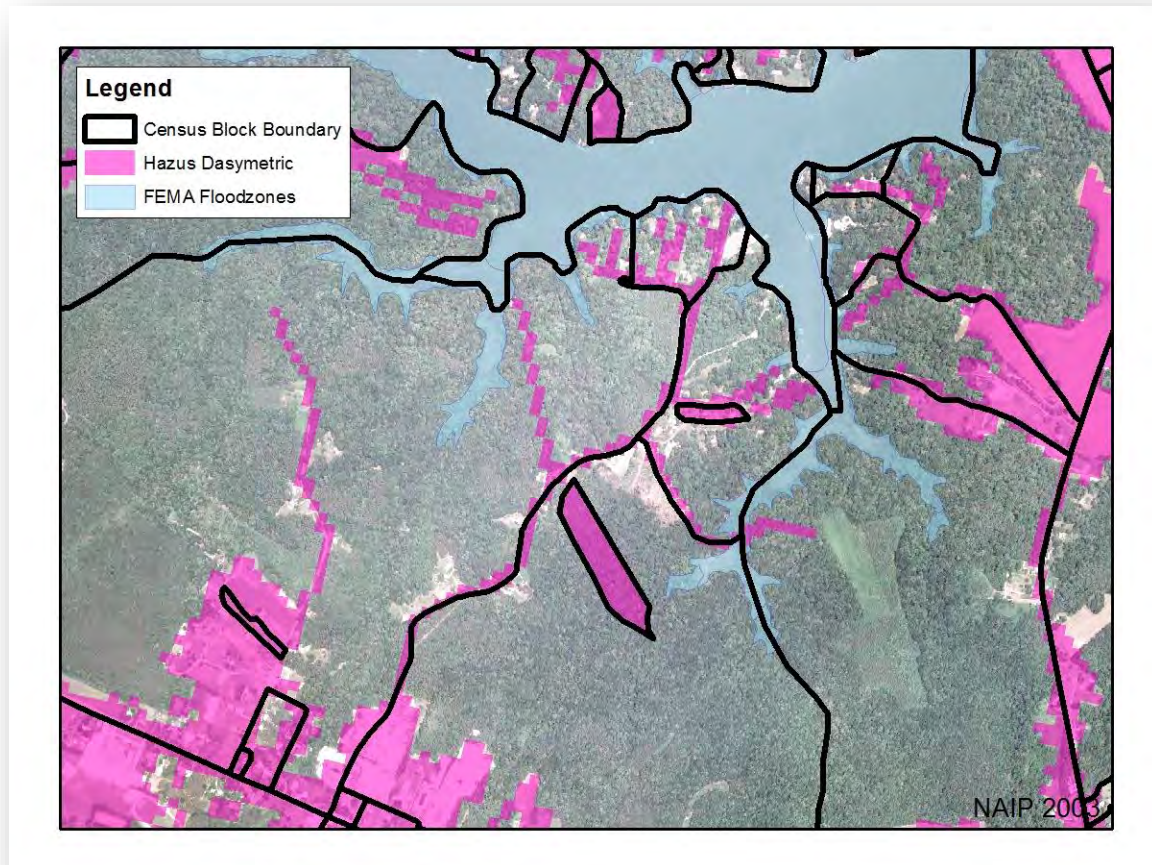

Figure 40: Level I Hazards.

Hazus Building Stock (Inventory of Buildings and Facilities)

Hazus general building stock is an inventory of the built environment that is at risk of damage by a hazard. Each respective type or sub-type of buildings in the following categories; residential, commercial, industrial, agricultural, religious, government, and education has risk based on the replacement value for buildings in that use category, the size and construction of these buildings, and the replacement cost to rebuild if the building is destroyed. For the damage calculations, Hazus assumes that all buildings are evenly distributed throughout a given census block and therefore damage is estimated as a percent and is weighted by the area of inundation at a given depth for a given census block. The methodology therefore, is known as an area-weighted methodology.

FEMA has initiated recent improvements to the area-weighted methodology by further refining the distribution of building square-footage to land areas characterized by development and removing land areas typical of non-developed land classes (e.g., forests, wetlands, etc...). This refinement is called dasymetric mapping and the current Plan modeling utilizes the FEMA dasymetric building stock. The following image shows a small example area in which the developed areas are pink:

Use of the new dasymetric data will typically reduce the total area subject to area-weighted loss estimations - particularly for those census blocks that have flood risk but no actual development within the floodplains. An area analysis of the dasymetric versus full stock census blocks is compared in the following table:

Digital FIRM Acreage Type	Census Block Type	
	Dasymetric	Entire Census Block
Acres of 0.2% Annual Chance Floodplains (500-year)	29,199 Acre (3.5% of Total Acres)	127,531 Acre (15.2% of Total Acres)
Acres of 1% Annual Chance Floodplains (100-year)	23,288 Acre (2.8% of Total Acres)	111,222 Acre (13.3% of Total Acres)
Total Acres of Census Blocks Middle Peninsula Region		836,632 Acres

A comparison of FEMA’s digital FIRM data intersecting the two types of Hazus census blocks reveals that an estimated 3.5% of the dasymetric data is within the extents of the 0.2-percent-annual chance flood hazard area versus 15.2% when using full census blocks. And, considering the 1-percent-annual chance flood hazard area, there is approximately 2.8% intersecting the dasymetric data versus 13.3% when using full census blocks. Consequently, this refinement can be considered a benefit to the risk analyses in that the expectation of over-estimations are mitigated by limiting potential losses to developed areas.

Loss estimations are first based on inundation area for specified sub-types of building’s cost per square-footage. The second type of data includes information on the local economy that is used in estimating losses. Table 35 displays the economic loss categories used to calculate annualized losses by Hazus. Data for this analysis has been provided at the census block level.

Table 35: Hazus direct economic loss categories and descriptions.

Category Name	Description of Data Input into Model	Hazus Output
Building	Cost per sq ft to repair damage by structural type and occupancy for each level of damage	Cost of building repair or replacement of damaged and destroyed buildings
Contents	Replacement value by occupancy	Cost of damage to building contents
Inventory	Annual gross sales in \$ per sq ft	Loss of building inventory as contents related to business activities
Relocation	Multiple factors; primarily a function of Rental Costs (\$/ft2/month) for non-entertainment buildings where damage ≥10%	Relocation expenses (for businesses and institutions); disruption costs to building owners for temporary space.
Income	Income in \$ per sq ft per month by occupancy	Capital-related incomes losses as a measure of the loss of productivity, services, or sales
Rental	Rental costs per month per sq ft by occupancy	Loss of rental income to building owners
Wage	Wages in \$ per sq ft per month by occupancy	Employee wage loss as described in income loss

The Middle Peninsula Planning District Commission currently has approximately 46,146 structures with an estimated potential exposure of the built environment of approximately \$19.7 billion. Average estimated replacement value of buildings in the study area range from approximately \$318,000 to \$490,000, with the mean approximation value of \$412,000. Eighty-Two percent of the planning district's general occupancy is categorized as residential, and 11% is commercial. Table 36 provides inventory information for each of the six counties that were included in the analysis. Gloucester County occupies a largest percentage (40%) of the building stock exposure for the region.

Table 36: Building stock exposure for general occupancies by county.

County	Residential	Commercial	Industrial	Agriculture	Religion	Govt.	Education	Total \$ and % of Total
Essex	\$1,690,695	\$404,683	\$149,121	\$21,320	\$38,252	\$20,307	\$36,124	\$2,360,502 (12%)
Gloucester	\$6,468,784	\$879,665	\$164,938	\$28,290	\$116,120	\$36,529	\$196,149	\$7,890,475 (40%)
King & Queen	\$992,231	\$57,304	\$30,890	\$5,828	\$27,490	\$3,346	\$8,736	\$1,125,825 (6%)
King William	\$2,799,158	\$294,544	\$118,245	\$28,276	\$57,502	\$27,319	\$29,734	\$3,354,778 (17%)
Mathews	\$1,739,804	\$159,583	\$50,753	\$8,584	\$27,408	\$7,692	\$14,446	\$2,008,270 (10%)
Middlesex	\$2,431,988	\$379,226	\$69,110	\$12,200	\$36,784	\$13,212	\$48,482	\$2,991,002 (15%)
Total	\$16,122,660	\$2,175,005	\$583,057	\$104,498	\$303,556	\$108,405	\$333,671	\$19,730,852
% of Total	82%	11%	3%	< 1%	2%	< 1%	2%	100%

All values are in thousands of dollars.

Note: Total exposure differs between exporting by building occupancy versus building construction type due to rounding issues in the Hazus data estimation equations.

Building stock exposure is also classified by building type. General Building Types (GBTs) have been developed as a means to classify the different building types. This provides an ability to differentiate between buildings with substantially different damage and loss characteristics. Building types represent the characteristics of a typical building in its class. The damage and loss prediction models are developed for each building type. The estimated performance of a building type is based upon the "average characteristics" of the total population of buildings within each class. Five general classifications have been established, including wood, masonry, concrete, steel and manufactured homes. A brief description of the building types is available in Table 37. The Hazus inventory serves as the default when a user does not have better data available.

Table 37: Hazus general building type classes.

General Building Type	Description
Wood	Wood frame construction
Masonry	Reinforced or unreinforced masonry construction
Steel	Steel frame construction
Concrete	Cast-in-place or pre-cast reinforced concrete construction
Manufactured Home	Factory-built residential construction

Wood construction represents the majority (62%) of building types in the planning district. Masonry construction accounts for nearly a quarter (25%) of the building types. Table 38 provides building stock exposure for these five main building types.

Table 38: Building stock exposure for general building construction type by county.

County	Wood	Masonry	Concrete	Steel	Manufactured Home	Total
Essex	\$739,917	\$277,995	\$12,384	\$54,013	\$41,811	\$1,126,120
Gloucester	\$4,926,253	\$2,004,985	\$184,550	\$629,434	\$145,376	\$7,890,598
King & Queen	\$1,296,670	\$500,835	\$34,312	\$122,743	\$53,977	\$2,008,537
King William	\$2,152,946	\$851,390	\$65,898	\$244,516	\$40,194	\$3,354,944
Mathews	\$1,289,067	\$592,340	\$101,638	\$323,107	\$54,516	\$2,360,668
Middlesex	\$1,845,893	\$762,017	\$70,862	\$242,371	\$70,147	\$2,991,290
Total	\$12,250,746	\$4,989,562	\$469,644	\$1,616,184	\$406,021	\$19,732,157
% of Total	62%	25%	3%	8%	2%	100%
All values are in thousands of dollars						
Note: Total exposure differs between exporting by building occupancy versus building construction type of \$1,305 due to rounding issues in the Hazus data estimation equations.						

Multi-Frequency Riverine and Coastal Flood Modeling – Results

Tables 39 to 45 show the multi-frequency results for riverine hazards, coastal hazards, and the combined impact of both hazards for the Middle Peninsula Region and each County. Flood hazard damage dollars are calculated based on a depth-damage curve in Hazus applied to the replacement cost per square footage of the building to get a damage cost. These costs are calculated for a Census Block which are summarized for each County.

Table 39: Middle Peninsula Regional summary of multi-frequency flood damage building stock losses.

Area	Scenario	Total Losses	Building Losses	Content Losses	Business Disruption
Riverine Results					
All Counties	10-percent-annual-chance event	\$6,104	\$2,984	\$1,906	\$1,214
All Counties	4-percent-annual-chance event	\$10,148	\$5,103	\$3,193	\$1,852
All Counties	2-percent-annual-chance event	\$11,685	\$5,916	\$3,681	\$2,088
All Counties	1-percent-annual-chance event	\$12,496	\$6,370	\$3,910	\$2,216

General Building Stock Annualized Flood Losses

Annualization is the mathematical method of converting individual losses to a weighted-average that may be experienced in any given year. Annualized loss is the preferred measure with which to express potential risk for hazard mitigation planning as it is useful for creating a common denominator by which different types of hazards may be compared. Annualized losses compared across a region, may indicate targeted areas for prioritization of hazard mitigation actions. Areas with significant annualized losses may be subject to not only local flooding (nuisance flooding) but also frequent storm event flooding as well.

Hazus riverine flood model annualized losses for the Middle Peninsula are \$889,000. Property or “capital stock” losses are \$761,000 and make up about 85.6% of the damages which includes the values for building, content, and inventory. Business interruption accounts for \$128,000 (14.4%) of the annualized losses and includes relocation, income, rental, and wage costs.

Hazus coastal flood model annualized losses for the Middle Peninsula are \$40,020,000. Property or “capital stock” losses are \$29,881,000 and make up about 74.7% of the damages. Business interruption accounts for \$10,139,000 (25.3%) of the annualized losses.

Hazus combined flood model annualized losses for the Middle Peninsula are \$40,909,000. Property or “capital stock” losses are \$30,642,000 and make up about 74.9% of the damages. Business interruption accounts for \$10,267,000 (25.1%) of the annualized losses. Of the combined annualized losses, riverine losses account for only 2.2% of the combined loss, whereas coastal losses account for 97.8% of the combined loss.

The flood model incorporates National Flood Insurance Program (NFIP) entry dates to distinguish Pre-FIRM and Post-FIRM data from the census blocks. Pre-FIRM buildings constructed prior to the initial FIRM are considered “pre-FIRM” and those constructed on or after the initial FIRM are considered “post-FIRM”. This distinction is important because post-FIRM buildings were built above the base flood elevation (BFE), which makes those buildings less susceptible to flooding. This results in different damage curves between pre- and post-FIRM buildings. If the different curves were not used for these two categories of structures, the results would be skewed and the loss estimates inaccurate. The results provided in this report show the combined total losses for both pre- and post-FIRM values combined.

Losses are calculated for riverine hazards, coastal hazards, and then a combination of both hazards. This separation by hazard class may also help focus or target specific mitigation actions that may differ riverine to coastal areas.

Table 47 illustrates the expected annualized losses broken down by county and Table 48 includes the annualized losses along with Population and Per-Capita losses.

Table 46: Annualized losses for pre and post-FIRM buildings.

Middle Peninsula Region	90,826	\$40,909,000	\$450.41
1 2010 Census-based population counts - as exists within Hazus stock data.			

King William County has the highest riverine annualized losses, \$523,000, accounting for 58.8% of the total riverine losses for Middle Peninsula and ranks first in terms of per-capita losses at \$32.82. Gloucester County has the highest coastal annualized losses, \$21,803,000, accounting for 53.3% of the total coastal losses for Middle Peninsula and ranks second in terms of per-capita coastal losses at \$591.54. Gloucester County also has the highest combined annualized losses, \$22,131,000, accounting for 54.1% of the total coastal losses for Middle Peninsula. It continues to rank second in terms of per-capita losses, with a combined value of \$600.44. The majority of the expected damages can be attributed to building and content value.

Gloucester County also has the second highest riverine losses, \$328,000, accounting for 36.9% of the total riverine annualized losses for the Middle Peninsula and ranks second in terms of annualized per-capita riverine loss at \$8.90. Mathews County has the second highest coastal losses, \$8,239,000, accounting for 20.6% of the total coastal annualized losses for the Middle Peninsula and ranks first in terms of annualized per-capita coastal loss at \$917.69. Mathews County has the second highest combined losses as well, but as it has no annual riverine losses greater than \$1,000 and therefore had no recorded riverine annual loss, all values are identical to Mathews County coastal losses.

Riverine building value losses account for approximately 52% of the expected riverine annualized damages and 32.1% is attributed to content value losses. Coastal building value losses account for approximately 42.85% of the expected coastal annualized damages and 31.49% is attributed to content value losses. Combined building value losses account for approximately 43.1% of the expected annualized damages and 31.5% is attributed to content value losses.

Residential building damage represents the majority of the damages, followed closely by the residential content damages for the riverine, coastal, and combined hazards. Wood buildings account for \$608,000, or 68.4% of the riverine annualized damages of which the majority are in King William County. Wood still accounts for the majority of damage in the coastal (\$24,109,000; 60.2%) and combined (\$24,717,000; 60.4%) hazards as well. However, for both the coastal and the combined hazards, the county with the majority of damages is Gloucester County, with \$21,803,000 annually for coastal and \$22,131,000 annually combined. Occupancy results indicate that agricultural, non-profit and industrial have the largest percent of exposure at risk; i.e. these are the predominant occupancy types that intersect the flood hazard. Manufactured homes only account for 3.3% of the combined annualized damages but have the highest percentage of building stock at risk to yearly damages. Tables 49 and 50 summarize the property losses and business interruption losses shown by occupancy and building type. The slight differences in the annualized losses for building type and occupancy can be attributed to the Hazus classification methodology as seen in Tables 50 and 51.

Description:
 Annualized loss is defined as the expected value of loss in any one year, and if developed by weighting the frequency losses (10%, 4%, 2%, 1%, and 2.0% annual chance events). Annualized Full Replacement General Building Stock (GBS) economic loss was calculated using Hazus dasymetric census block's GBS but are displayed using full census blocks.

Figure 42:

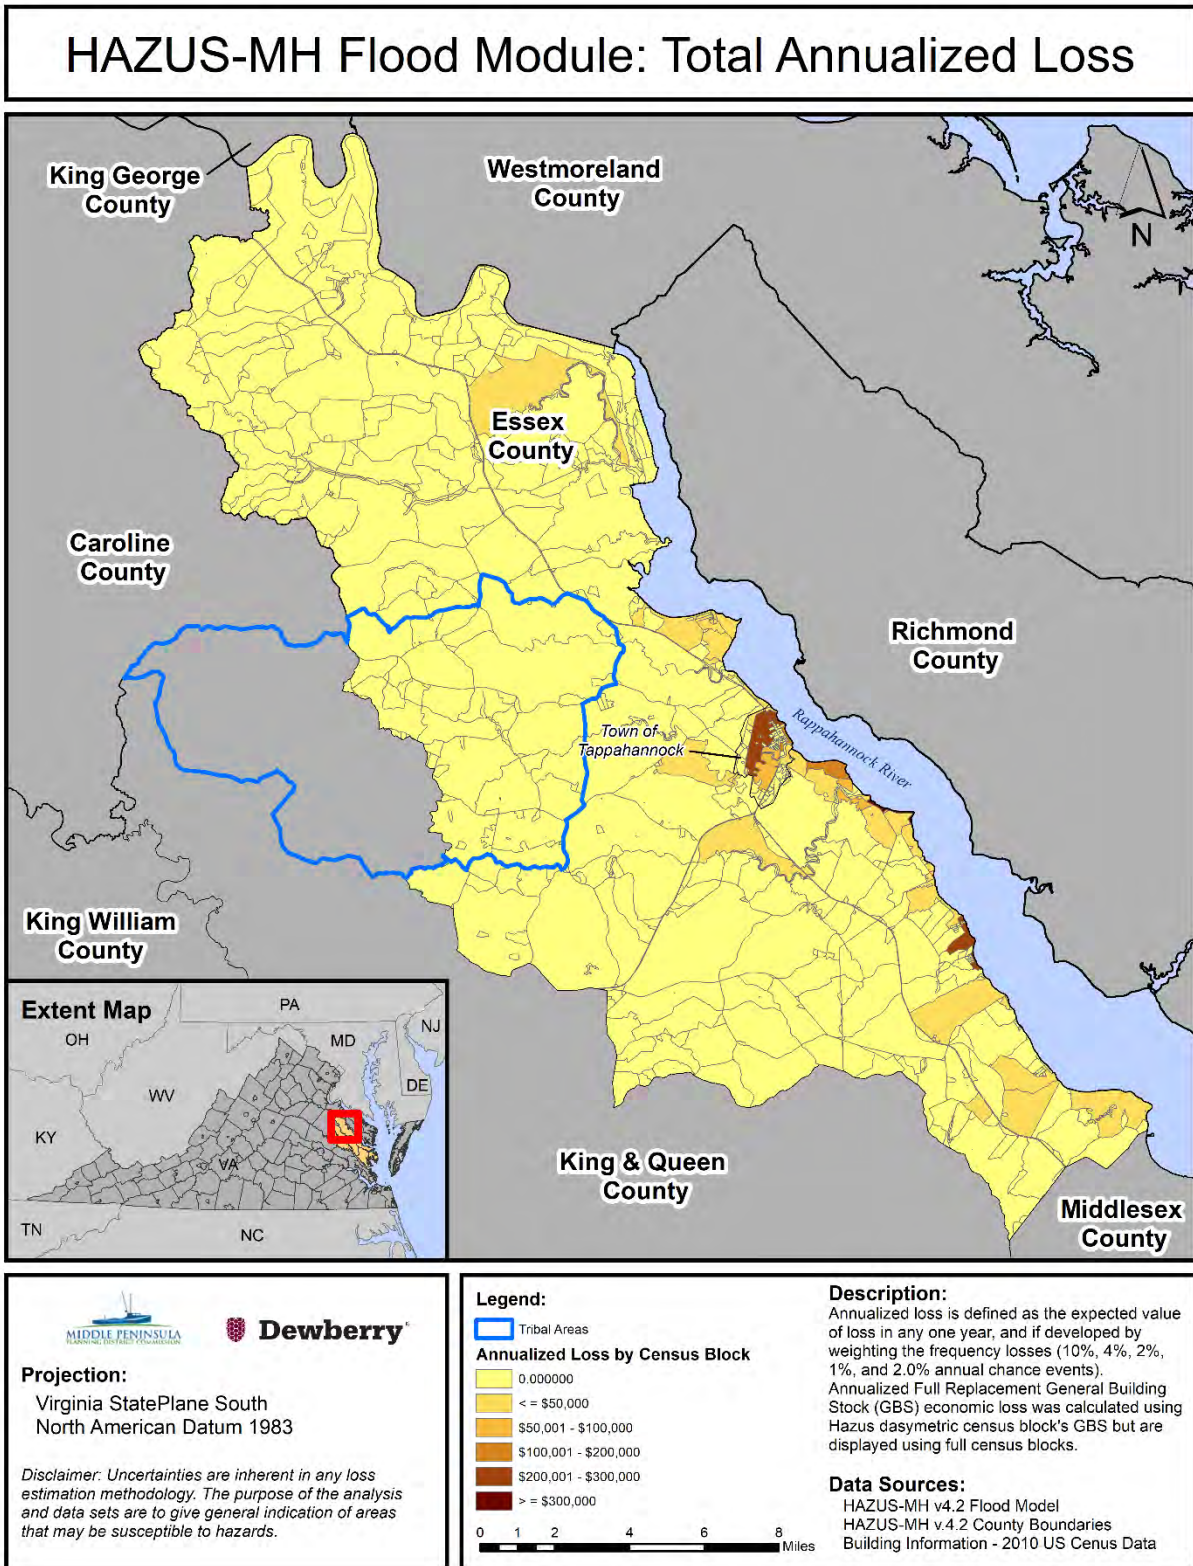

Figure 43:

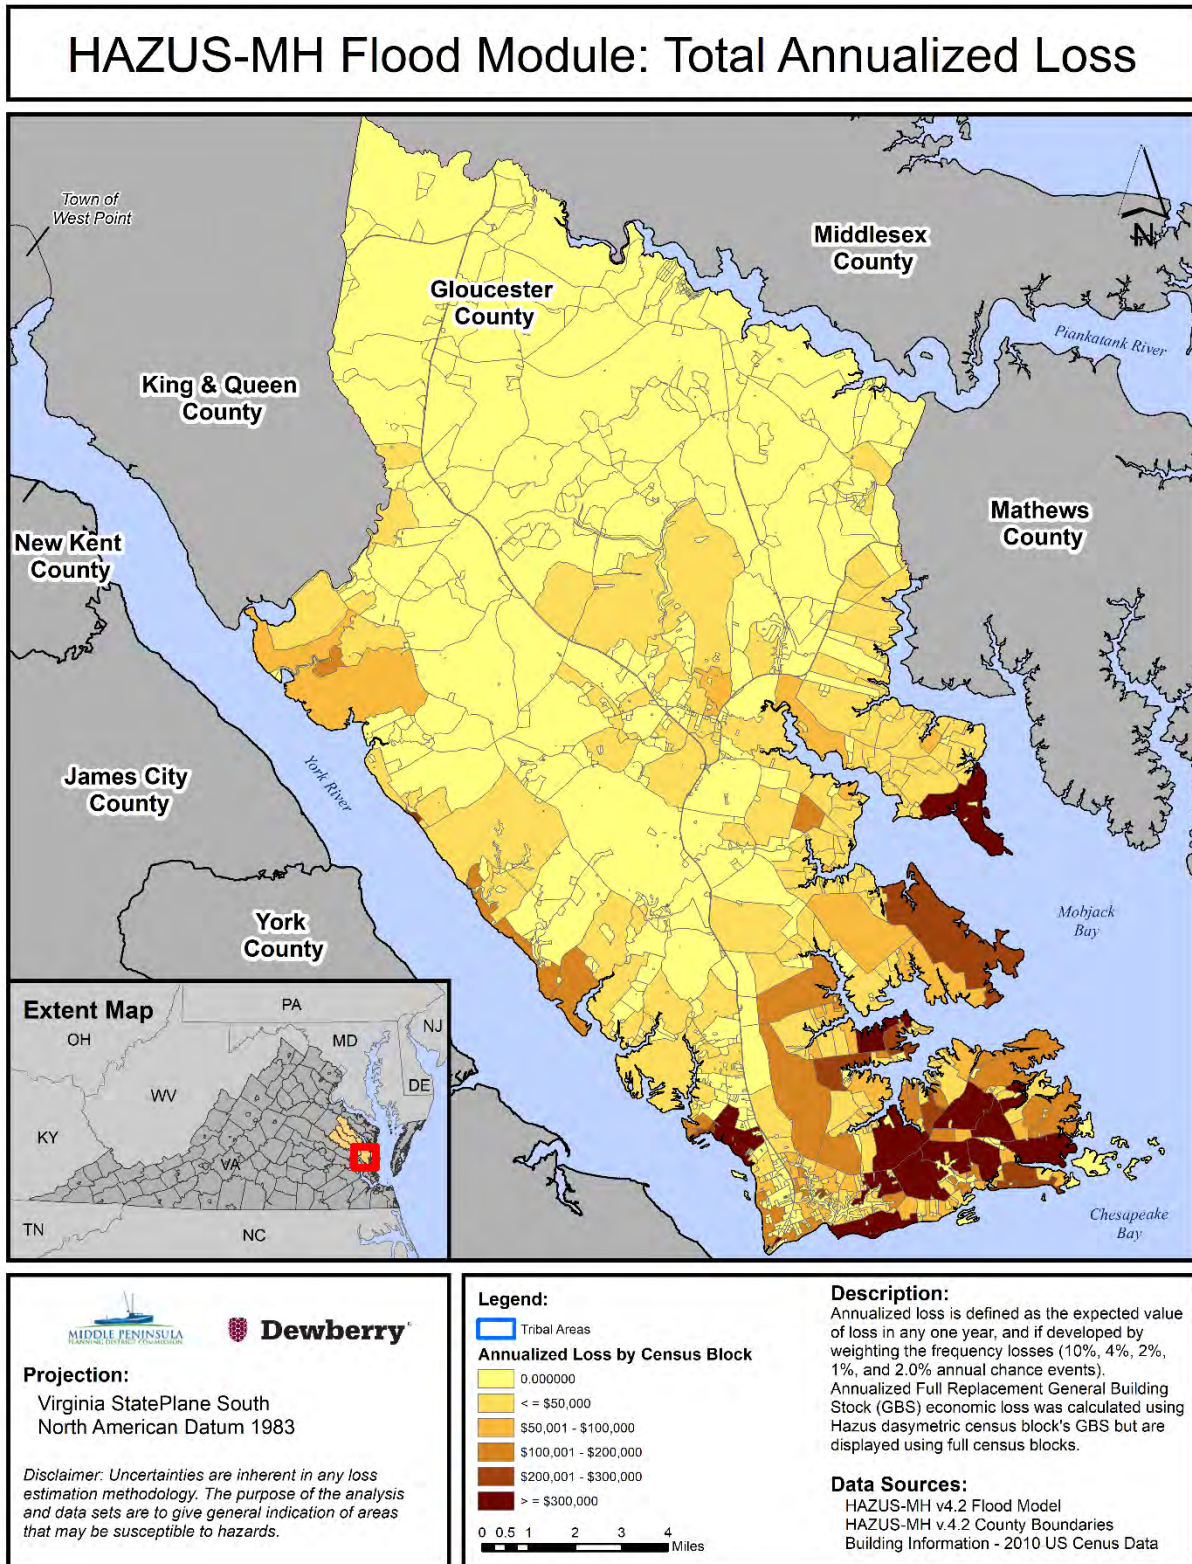

Figure 44:

Figure 45:

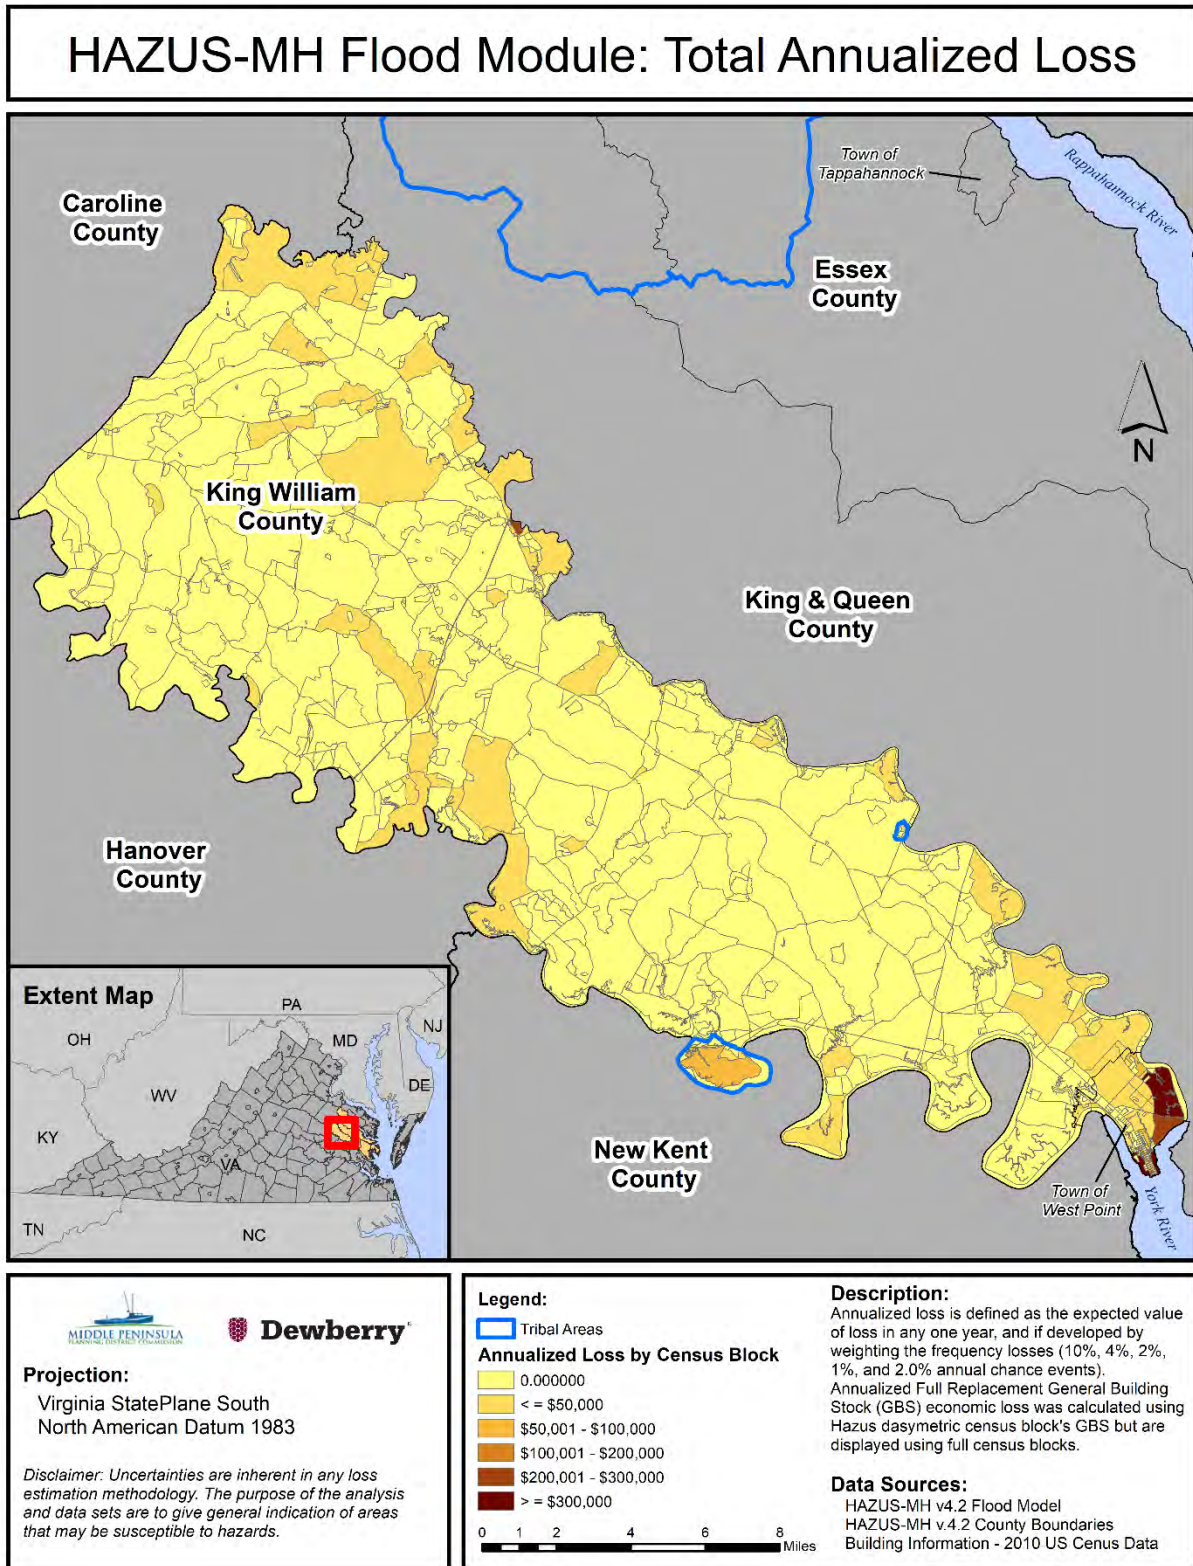

Figure 46:

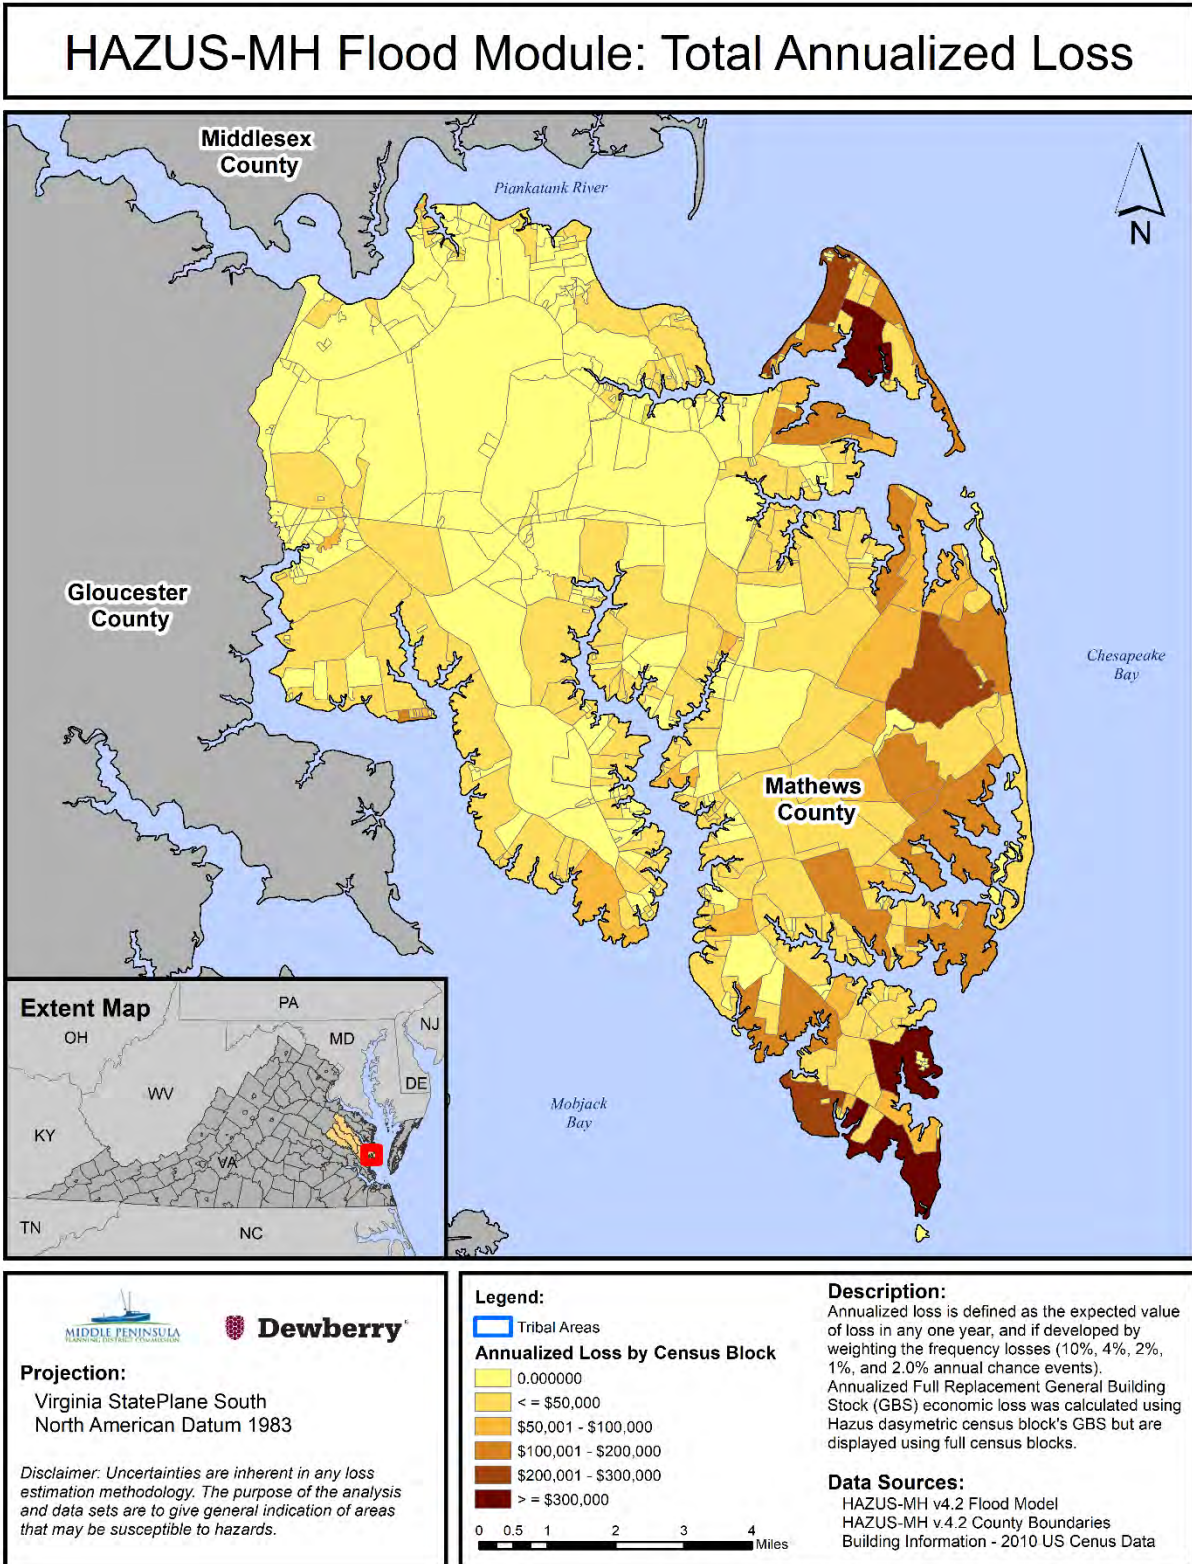

Figure 47:

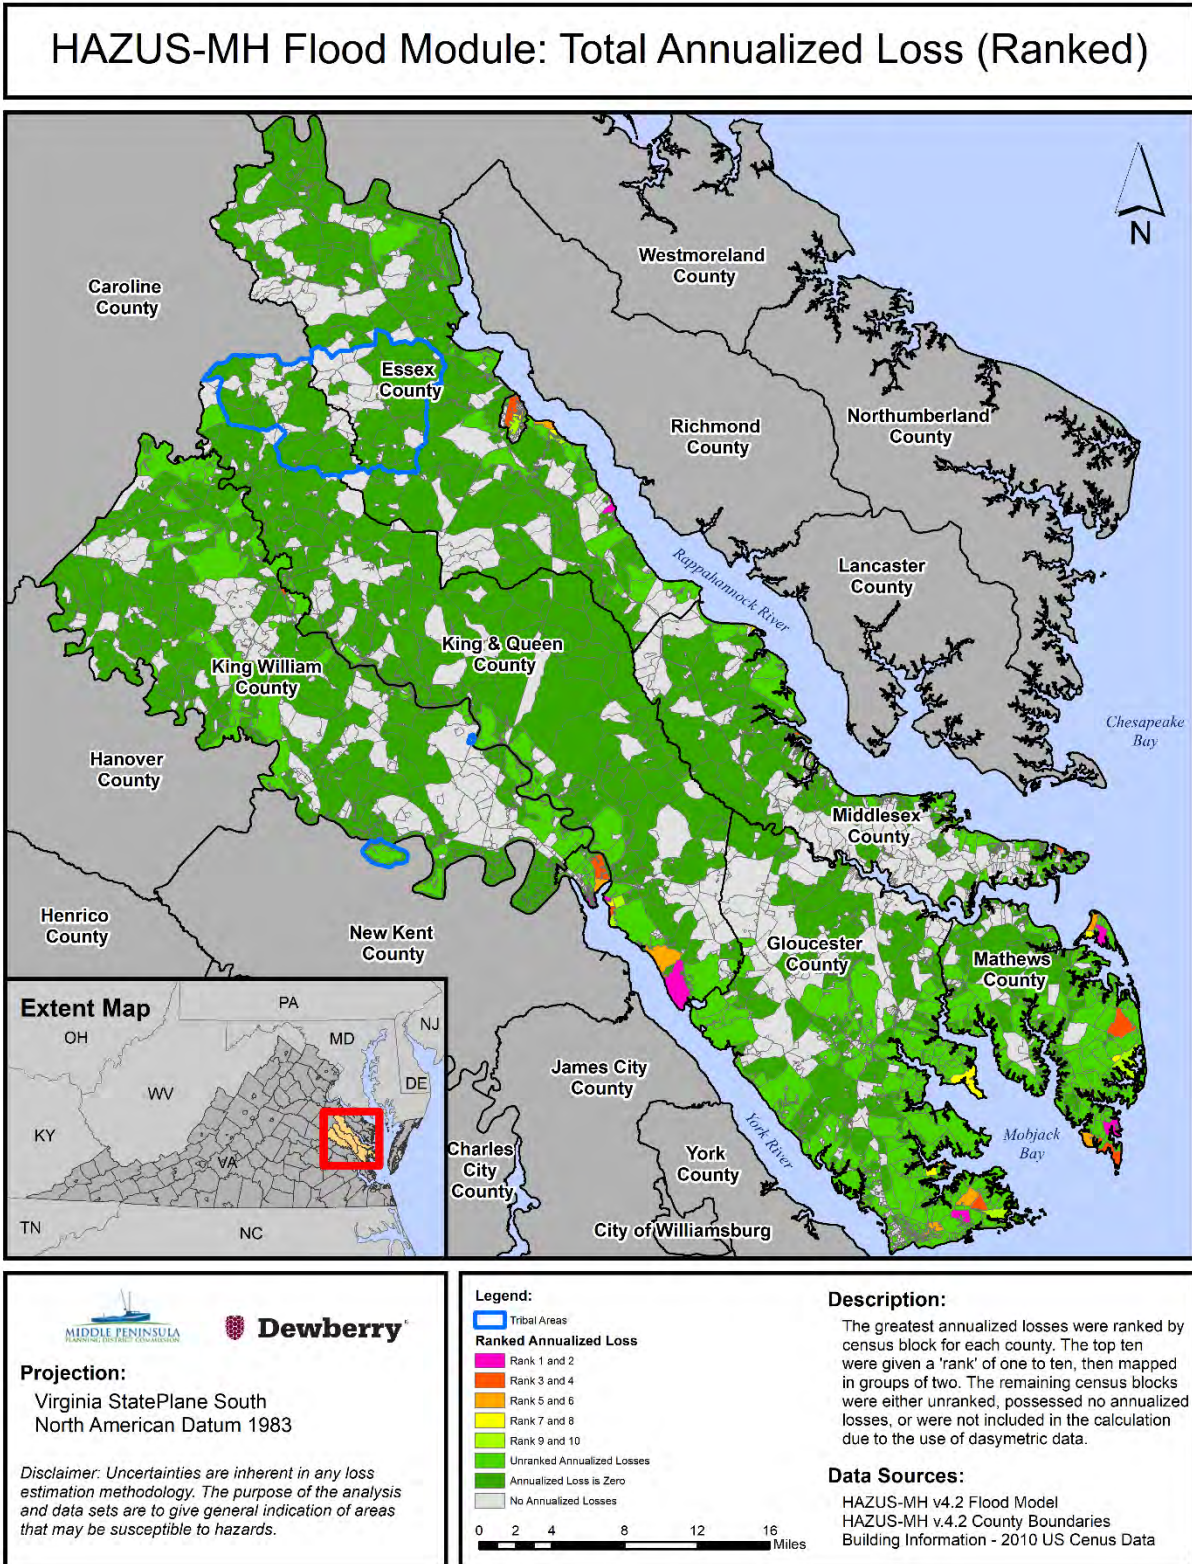

Figure 48:

Gloucester County accounts for about 54% of the planning district's combined riverine and coastal annualized losses. The census blocks bordering the York River and Mobjack Bay have higher loss values as compared to the larger census blocks in the northwest portions of the county. Combined damages along the York River are approximately half of the damages along Mobjack Bay. The southeast portion of the County contains the greatest concentration of loss. The vicinity of Guinea Road and Kings Creek Road; beginning in the locale of Hayes and heading east to Kings Creek being bordered on the north by the Severn River and on the south by the York River exhibits the greatest concentration of loss. Additionally, the land area of Saddlers Neck to Stump Point being bounded on the north by the Northwest Branch Severn River and Willetts Creek to the south exhibits a second concentration of risk. Finally, the peninsula and vicinity of Ware Neck Point -where the Ware River and North River converge – is another location exhibiting a concentration of losses.

Losses in Mathews County are spread throughout the county with a high frequency of census block having damages greater than \$50,000 along the Chesapeake Bay to include the various harbor/haven inlets and also at the confluences of the Piankatank River in the north as well as Mobjack Bay in the south. Another location that exhibits relatively higher loss estimates includes Roys Point in the area around Daniel Avenue. Ultimately, Mathews County ranks second of the six counties and accounts for 20.1% of the total annualized losses in the Middle Peninsula planning district.

The census blocks bordering the Pamunkey and Mattaponi rivers contain almost all of the annualized damages for King William County with the greatest concentration of losses in the Town of West Point. Wood framed structures across the county account for more than 50% of the losses. The total annualized damages for the Town of West Point are approximately \$3.5 million. Total annualized losses of the Pamunkey Indian Reservation are approximately \$80,000 and the Mattaponi Indian Reservation is \$12,000. One location in the northwestern portion of the County exhibits relatively higher annualized loss values; the area is in the vicinity of Aylett, with Aylett experiencing the losses near \$352,000.

Middlesex County's annualized losses account for 6.8% of the total risk with wood framed structures accounting for about 67% of the losses. The census blocks along the Rappahannock River collectively account for the greatest amount of losses within the County. Losses in the vicinity of Mud Creek, Balls Point, the Town of Urbana, and the confluence with the Chesapeake Bay constitute the areas having the highest loss values. The Town of Urbana has an estimated \$745,000 in annualized damages and includes the census block having the highest estimated loss (\$607,000) within the County. The second highest census block loss (\$160,000) is located at the confluence between the Rappahannock River and the Chesapeake Bay in the southeastern portion of the County.

The majority of damage within Essex County is along the Rappahannock River with the greatest concentration of annualized losses from the Town of Tappahannock in the north, extending downstream to the vicinity of Bowlers Wharf. Total annualized damages along the length of the Rappahannock are approximately \$2.28 million. The concentrated damages from Tappahannock to Wares Point is approximately \$2.05 million or nearly 90% of the expected damages along the Rappahannock River. The Town of Tappahannock accounts for approximately \$0.76 million or nearly one-third of the expected damages in the area of concentrated damages along the Rappahannock. The County and Town combined, account for approximately 5.6% of annualized damages for the Middle Peninsula region.

King and Queen County has the lowest annualized loss values for the region, accounting for 2.8% of the total damages. Residential occupancy makes up the majority of the losses in the county. A relatively small group of census blocks along the York River account for most of the damages near \$1.03 million. In comparison, along the Mattaponi River damages are in the range of near \$101,000 or roughly one-tenth of the expected damages along the York River. Notwithstanding, a small pocket of development at

the end of Limehouse Road along the Mattaponi River downstream of Muddy Point and opposite the Town of West Point is an area with annualized losses near \$61,000. The Rappahannock Tribe’s tribal designated statistical area (TDSA) has no calculated annual flood loss.

Table 52 lists the annualized flood losses for the Middle Peninsula Tribal Nations. Please note that the Upper Mattaponi is not represented in the below data but is included in the county data. GIS boundaries were sourced from the "American Indian/Alaska Native/Native Hawaiian Areas" as identified in the 2020 TIGER/Line GIS data, which is publicly available from the U.S. Census Bureau’s website. (<https://www.census.gov/geographies/mapping-files/time-series/geo/tiger-line-file.html>). This website defines Reservation and TDSA areas as:

- *American Indian Reservations: The U.S. Census bureau’s boundary files for American Indian reservations are areas with boundaries established by treaty, statute, and/or executive or court order. The reservations and their boundaries are identified for the Census Bureau by the Bureau of Indian Affairs (BIA), an agency in the U.S. Department of the Interior, or by State governments.*
- *Tribal Designated Statistical Areas²: the U.S. Census Bureau includes Tribal designated statistical areas that are geographic entities delineated by Federally and State-recognized tribes without a land base, that is, with no reservation or trust lands.*
(<https://www2.census.gov/geo/pdfs/reference/GARM/Ch5GARM.pdf>):

It’s important to note that upon correspondences with the Tribes this data does not accurately reflect Tribal lands. For instance, the Upper Mattaponi Indian Tribe is concerned with tribal land, land that citizens own, ancestral land, and land areas of Tribal interest, including but not limited to, traditional hunting and fishing areas, areas maintaining cultural significance, and all other ceded and non-ceded lands since the inception of the Tribe. The ancestral lands of Tsenacomacah encompassed the Tidewater and Eastern Shore regions, particularly the coastal and inland waterways in the York, James, and Rappahannock River watersheds. The Upper Mattaponi Indian Tribe is centered in King William County, with much of the tribal community base residing in ancestral lands. While the majority of tribal citizens live in Virginia, there are UMIT citizens in over thirty states.

For Tribal Nations shown in Table 52, all flood damage is from riverine sources.

Table 52: Tribal Nation based Hazus annualized losses.

Tribal Nation	Total Annualized Loss
Mattaponi Indian Reservation	\$12,000 (13%)
Pamunkey Indian Reservation	\$80,000 (87%)
Rappahannock Tribe's TDSA	No Losses
Total Tribal Losses	\$92,000
To Note: <i>The Upper Mattaponi Indian Tribe was not included in the national HAZUS annualized losses database.</i>	

² Please note this TDSAs may not be the Tribe’s planning area for the AHMP, land owned by the Tribe, land in trust to the Tribe, Tribal ancestral land, or land of importance to the Tribe. Future Hazus runs will need to improve and capture the Tribes planning area and assess the losses within these areas.

Essential Facilities and Loss Estimation

Hazus defines essential facilities as:

- Primary medical care facilities. Alternative care sites like nursing homes, outpatient, or urgent care sites are not included
- emergency operation centers
- public schools used for sheltering
- fire stations
- police stations

Schools are specifically those vital to emergency response and recovery following a disaster as they often play a key role in sheltering people displaced from damaged homes. Generally, the default Hazus data shows that there are very few locations of each type of essential facility in a census tract, making it easier to obtain site-specific information for each facility. Thus, damage and loss-of-function are evaluated on a building-by-building basis for this class of structure; even through the uncertainty in each such estimate is large³. To upgrade to a Level 2 analysis for essential facilities, each category of facility would be updated from local information. For a Level 2 analysis the key items to update are:

- Create a latitude/longitude for every building on a site (e.g. each school or hospital building). Normally smaller sheds such as yard maintenance or open sided structures such as pavilions are excluded.
- Capture the square footage, year built, unique name/id, and point of contact for all building locations being updated.
- Assign a building assessed replacement valuation to each essential facility. Often the assessor parcel information will only show a total for the improvements on a parcel so each building will need its own valuation
- Assign a first finished floor elevation to every building on the campus
- Gather contents information. Essential facilities like hospitals, fire stations and other emergency services may have very expensive equipment located on the first floor and are subject to content losses.
- For hospitals define the number of beds available.
- For schools and fire stations identify kitchens and available space for sheltering needs
- Define each of the building construction types. Schools often leverage portable buildings, manufactured facilities, or small metal outbuildings.
- Identify any flood wet or dry proofing that may have occurred at the building such as flood gates, elevation, or dry-lock for masonry construction types. Also note if generators are available and if they are elevated.

The Hazus essential facilities database includes default data for Medical Care Facilities, Emergency Response Facilities (fire stations, polices stations, emergency operation centers), and schools. Figure 49 displays the spatial location of the default essential facilities as provided with the Hazus software for the Plan.

Many Plans also identify critical facilities that are key to the functionality of a community. These often include water/wastewater services, key community functions, power facilities, road crossings/bridges, and other lifelines critical for restoration after a natural disaster. These individual facilities may be analyzed as a user defined feature (UDF) for flood damages. Unfortunately, the essential facilities module

³ Multi-hazard Loss Estimation Methodology Hurricane Model User Manual, HAZUS-MH V4.2, Chapter 1: Introduction, I-6

in Hazus does not incorporate an evaluation of restoration time, sheltering and lifeline outage and return to service functionality for other than its own essential facility categories.

The majority of the region's essential facilities are able to remain functional for the 10-percent-, 4-percent-, 2-percent-, 1-percent-, and 0.2-percent-annual-chance recurrence intervals. No facilities were damaged due to only riverine flood hazard. Only 6 essential facilities were calculated as damaged for the coastal flood hazard. Figure 50 highlights the locations of those facilities that are damaged by the Hazus Level I multi-frequency flood hazard(s) – thus experiencing estimated damage and loss. The previous Plan's results showed damages to West Point elementary, middle and high schools from coastal influenced flooding. This version of the Plan incorporated updated coastal modeling from FEMA, and these essential facilities showed no expected damages.

Table 53 lists the damaged essential facilities, the percent-annual-chance event that damaged the facility, it's building and contents losses, and the maximum time to full functionality.

Figure 49:

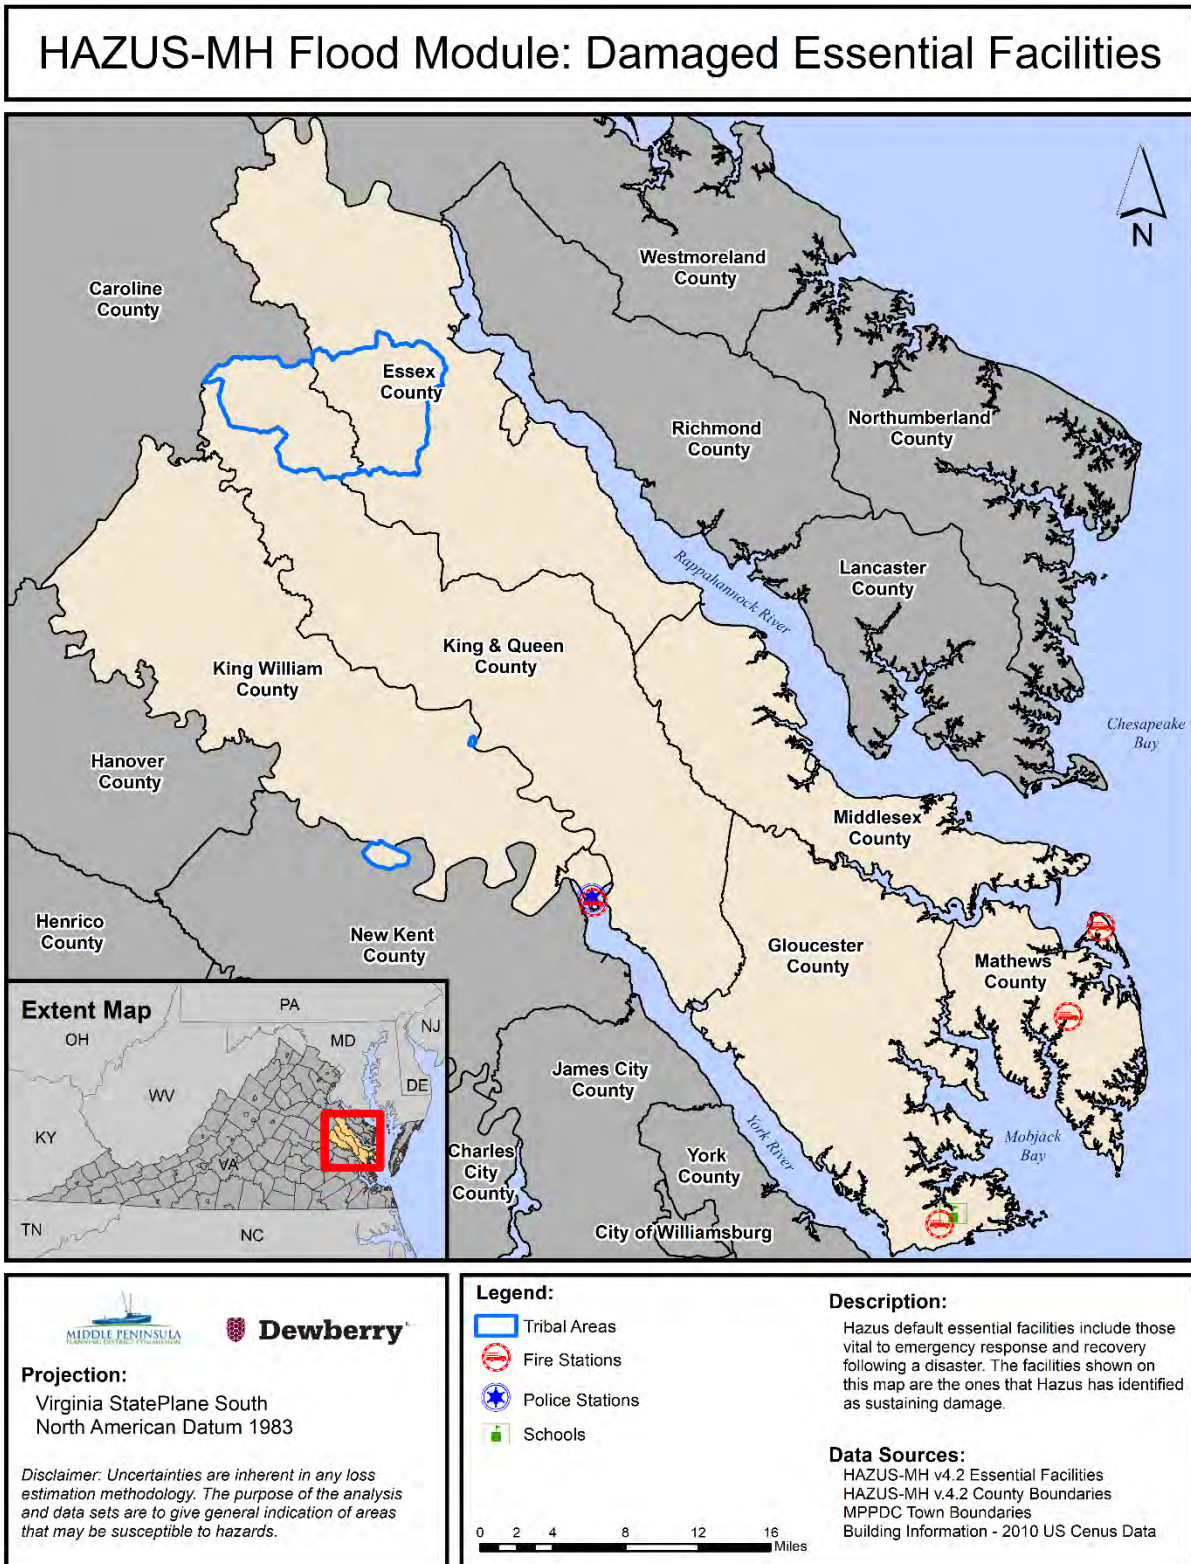

Table 53: Damages to essential facilities.

Name	City	Return Period	Flood Hazard	Building DmgPct	Building Losses	Contents DmgPct	Content Losses	Days to Full Restoration
Abingdon Volunteer Fire and Rescue Incorporated Station 2	Hayes	0.2-percent-annual-chance	Coastal	21.18%	\$3,494	92.55%	\$3,494	630
Achilles Elementary	Hayes	0.2-percent-annual-chance	Coastal	18.80%	\$1,152	81.40%	\$4,990	720
Mathews Volunteer Fire Department Incorporated Station 1	Mathews	10-percent-annual-chance	Coastal	7.88%	\$198	11.53%	\$435	480
Mathews Volunteer Fire Department Incorporated Station 1	Mathews	4-percent-annual-chance	Coastal	9.23%	\$232	16.93%	\$639	480
Mathews Volunteer Fire Department Incorporated Station 1	Mathews	2-percent-annual-chance	Coastal	10.49%	\$264	28.90%	\$1,091	480
Mathews Volunteer Fire Department Incorporated Station 1	Mathews	1-percent-annual-chance	Coastal	13.14%	\$331	60.70%	\$2,292	630
Mathews Volunteer Fire Department Incorporated Station 1	Mathews	0.2-percent-annual-chance	Coastal	11.55%	\$291	47.38%	\$1,789	480
Mathews Volunteer Fire Department Incorporated Station 3	Gwynn	0.2-percent-annual-chance	Coastal	9.48%	\$239	17.91%	\$676	480
West Point Police Department	West Point	0.2-percent-annual-chance	Coastal	11.26%	\$283	42.40%	\$1,601	480
West Point Volunteer Fire Department / West Point Volunteer Rescue Squad	West Point	0.2-percent-annual-chance	Coastal	12.18%	\$307	55.92%	\$2,111	630

Note: No essential facilities had any calculated damage for the riverine flood hazard.

Figure 50:

Comparative Flood Modeling and Comparative Hot Spot Maps

The previous version of this plan included a section to compare the potential results of a Hazus generated depth of flooding product (Level 1) to the results of a Level 2 analysis that included engineering study of flood hazards converted to depth grids to that closely aligned with FEMA's special flood hazard area. This previous comparison made the case for the use of a Level 1 analysis as the best available data. This comparative analysis was not created for this version as the Plan as the flood hazard data was updated with all available FEMA flood study data from engineering riverine and coastal modeling sources, where it was available. The incorporation of engineering supported depth grids creates a Level 2 Hazus scenario representing the best available data used to estimate riverine and coastal flood damages.

Additional analysis was also completed in the previous Plan to compare the essential facilities that were damaged to an overlay of the essential facilities with FEMA's flood hazard mapping to identify hot spots. As the flooding depth grids in this version of the plan are directly created from FEMA's flood hazard mapping product, the comparison of the Level 1 Hazus damages to Level 2 FEMA flood hazard areas is not needed. The damages to the essential facilities should now be consistent with FEMA's flood hazard areas.

Potential Mitigation Actions

The potential mitigation actions noted are those that are Hazus-specific and would benefit refinement of Hazus analyses. The previous Plan update included the following items (below). Those items that have been accomplished in the current Plan update are symbolized with a check-mark (☑) and those that still remain for future efforts (☐). New potential Hazus Mitigation actions are denoted with the following (➤).

- Update flood risk to have improved multi-frequency riverine depth grids over the remaining areas of Middle Peninsula.
- Update flood risk to have accurate multi-frequency coastal depth grids over all areas of Middle Peninsula.
- Once multi-frequency depth grids have been created for both riverine and coastal flooding across all areas of Middle Peninsula, re-run Hazus for to update this plan with the 2020 census data.
- Level 2 general building stock and essential facilities improvements.
 - Improvements in the future should aim to further refine the building stock. Notably, one improvement should include adding new development that may not have been in the land use/land cover data; e.g., new housing developments, new construction, etc.
 - Perform localized building-level assessments in known areas of loss and or areas subject to likely losses.
- Improve Data associated with the federally recognized tribes.

Hurricane Wind Analysis

The hurricane wind model uses state of the art wind field models, and calibrated and validated hurricane data. Wind speed has been calculated as a function of central pressure, translation speed, and surface roughness as described in the Hazus Wind Model Technical Manual as:

- Central pressure is modeled as a function of sea surface temperature, and the storm heading, speed, etc., are updated at each six-hour point in the storm history. Linear interpolation is used between the six-hour points;
- Translation speed is modeled as the forward speed of the storm with winds in the right front quadrant as the strongest due to additive nature of the wind (forward speed + hurricane induced wind speed). Typically, as well, this has the least amount of surface friction to reduce the wind speed, since it is generally more of water
- Surface roughness is modeled as the friction of the earth's surface that would reduce wind speed. For example, land, buildings and trees create drag on the wind versus just open water which has the lowest friction.

This assessment has been completed for Probabilistic Level I analysis for the Hurricane wind hazard. The standard methodology of defining loss potential for any given hazard, includes annualizing the potential over a series of statistical return periods. Annualization is the mathematical method of converting individual losses to a weighted-average that may be experienced in any given year. The standard probabilistic scope pertaining to Hazus Level I hurricane wind risk corresponds to annualizing the 0.1%, 0.2%, 0.5%, 1%, 2%, 5%, and 10% wind return periods. These same annual-chance return periods are often described as the 1,000-year, 500-year, 200-year, 100-year, 50-year, 20-year and 10-year events as shown in Table 54 below. As this is a probabilistic analysis, the hurricane that is simulated does not represent an actual, historic hurricane tract or path. This is a simulation for the study area of a hurricane with common parameters derived from multiple historic events along with industry standardized modeling for scenarios.

Table 54: Annual probability based on wind recurrence intervals.

Wind Recurrence Interval	Annual Chance of Occurrence
10-year	10.0%
20-year	5.0%
50-year	2.0%
100-year	1.0%
200-year	0.5%
500-year	0.2%
1000-year	0.1%

Practically, these statistical events represent the chance of being equaled or exceeded in any given year; i.e., the likelihood that a particular event with a given intensity occurs on average at least once every x-

years. Once each of these statistical return periods are calculated, an annualized value is computed thus offering a perspective for any given year. For this analysis, it is the annual chance of occurrence that is used to describe a given recurrence event.

In addition to the Level 1 probabilistic methodology for development of the wind event, a Level 1 analysis is performed on the default economic building stock data and the default essential facilities data provided with the Hazus software; i.e., no local data inputs. For a Level 1 analysis, dollar values shown in this report should only be used to represent cost of damage for large aggregations of building types. Highly detailed, building specific, loss estimations have not been completed for this analysis as they require additional local data inputs. To perform a Level 2 analysis of the economic building stock would involve replacing the default information with property replacement values provided from each county's tax assessor data and supplemented with property valuations from property not in the assessor's system (such as government facilities that are not included in local tax assessment data). In addition, the essential facilities such as emergency operation centers, police stations, fire stations, school campus buildings, and hospital campus sites would be updated to include not only replacement value but also content valuations. Updating the economic inventory involves cooperation with all partners to the plan and often needs redaction of any data with privacy concerns. For the Level 2 environment revised assumptions also need to be developed for the building structure design, approximate finished floor elevation heights, and any wet or dry flood-proofing or wind mitigation that may have been added to the improvement on a property. Updating the building inventory for a Level 2 environment provides the benefit of better and more relevant data to the local region, but the creation of these data also requires pre-coordination with all potential data contributors to the project. Ideally a Level 2 building inventory update would be conducted prior to the kickoff of a plan's update cycle to allow for more time to collect and process data from all jurisdictions participating in the plan.

Note that combined wind, storm surge and wave-type scenarios have not been implemented in this Plan update however, the Flood modeling includes various scenarios that include the effects of storm surge and wave-action. Storm surge risk and coastal flooding is discussed in Section 4.

Loss estimation for this Hazus module is based on specific input data. The inputs include square footage of buildings for specified structural or occupancy types and information on the local economy that is used in estimating losses. Table 55 displays the economic loss categories used to calculate annualized losses by Hazus.

Table 55: Hazus direct economic loss categories and descriptions.

Category Name	Description of Data Input into Model	Hazus Output
Building	Cost per square foot to repair damage by structural type and occupancy for each level of damage	Cost of building repair or replacement of damaged and destroyed buildings
Contents	Replacement value by occupancy	Cost of damage to building contents
Inventory	Annual gross sales in dollars per square foot	Loss of building inventory as contents related to business activities
Relocation	Multiple factors; primarily a function of Rental Costs (\$/ft ² /month) for non-entertainment buildings where damage ≥10%	Relocation expenses (for businesses and institutions); disruption costs to building owners for temporary space.
Income	Income in dollars per square foot per month by occupancy	Capital-related incomes losses as a measure of the loss of productivity, services, or sales
Rental	Rental costs per month per square foot by occupancy	Loss of rental income to building owners
Wage	Wages in \$ per sq ft per month by occupancy	Employee wage loss as described in income loss

A probabilistic scenario Hazus analysis was completed using the planning district as the study area. The individual county results have been derived from this data set.

The Middle Peninsula region currently has approximately 45,683 structures with an estimated exposure value of approximately \$12.5 Billion. Average estimated replacement value of buildings in the study area range from \$205,000 to \$312,000, with the mean approximation value of \$273,000 ⁴. Ninety-four percent of the planning district's general occupancy is categorized as residential, followed by commercial (4%). The remaining two percent is a combination of industrial, agriculture, religion, government, and education buildings. Table 56 provides inventory information for each of the six counties that were included in the analysis. Gloucester County occupies a large percentage (40%) of the building stock exposure for the region.

⁴ Previous Plan values adjusted per BLS CPI Inflation Calculator (2000 to 2010) to match Hazus/Census years.

Table 56: Building stock exposure for general occupancies by county.

County	Residential	Commercial	Industrial	Agriculture	Religion	Govt.	Education	Total \$ and % of Total
Essex	\$1,690,695	\$404,683	\$149,121	\$21,320	\$38,252	\$20,307	\$36,124	\$2,360,502 (12%)
Gloucester	\$6,468,784	\$879,665	\$164,938	\$28,290	\$116,120	\$36,529	\$196,149	\$7,890,475 (40%)
King & Queen	\$992,231	\$57,304	\$30,890	\$5,828	\$27,490	\$3,346	\$8,736	\$1,125,825 (6%)
King William	\$2,799,158	\$294,544	\$118,245	\$28,276	\$57,502	\$27,319	\$29,734	\$3,354,778 (17%)
Mathews	\$1,739,804	\$159,583	\$50,753	\$8,584	\$27,408	\$7,692	\$14,446	\$2,008,270 (10%)
Middlesex	\$2,431,988	\$379,226	\$69,110	\$12,200	\$36,784	\$13,212	\$48,482	\$2,991,002 (15%)
Total	\$16,122,660	\$2,175,005	\$583,057	\$104,498	\$303,556	\$108,405	\$333,671	\$19,730,852
% of Total	82%	11%	3%	< 1%	2%	< 1%	2%	100%

All values are in thousands of dollars

Building stock exposure is also classified by building type. General Building Types (GBTs) have been developed as a means to classify the different building types. This provides an ability to differentiate between buildings with substantially different damage and loss characteristics. Model building types represent the average characteristics of buildings in a class. The damage and loss prediction models are developed for model building types and the estimated performance is based upon the "average characteristics" of the total population of buildings within each class. Five general classifications have been established, including wood, masonry, concrete, steel and manufactured homes (MH). A brief description of the building types is available in Table 57.

Table 57: Hazus general building type classes.

General Building Type	Description
Wood	Wood frame construction
Masonry	Reinforced or unreinforced masonry construction
Steel	Steel frame construction
Concrete	Cast-in-place or pre-cast reinforced concrete construction
MH	Factory-built residential construction

Buildings with wood construction represents the majority (74%) of building types in the planning district and align predominantly with residential building practices. Masonry construction accounts for almost a quarter of the building type exposure and is primarily for non-residential buildings. Table 58 provides building stock exposure for the five main building types.

Table 58: Building stock exposure for general building type by county.

County	Wood	Masonry	Concrete	Steel	Manufactured Home	Total
Essex	\$739,917	\$277,995	\$12,384	\$54,013	\$41,811	\$1,126,120
Gloucester	\$4,926,253	\$2,004,985	\$184,550	\$629,434	\$145,376	\$7,890,598
King & Queen	\$1,296,670	\$500,835	\$34,312	\$122,743	\$53,977	\$2,008,537
King William	\$2,152,946	\$851,390	\$65,898	\$244,516	\$40,194	\$3,354,944
Mathews	\$1,289,067	\$592,340	\$101,638	\$323,107	\$54,516	\$2,360,668
Middlesex	\$1,845,893	\$762,017	\$70,862	\$242,371	\$70,147	\$2,991,290
Total	\$12,250,746	\$4,989,562	\$469,644	\$1,616,184	\$406,021	\$19,732,157
% of Total	62%	25%	3%	8%	2%	100%
All values are in thousands of dollars						

Multi-frequency Hurricane Modeling – Probabilistic Level 1 methodology

Annualized loss is defined as the expected value of loss in any one year and is developed by aggregating the losses and exceedance probabilities for the 10-percent-, 5-percent-, 1-percent-, 0.5-percent-, 0.2-percent-, and 0.1-percent-annual-chance return periods. The following figures illustrate the 3-second peak gust wind speeds for the 1-percent-, 0.2-percent-, and 0.1-percent-annual-chance return periods. Wind speeds are based on estimated 3-second gusts in open terrain at 10 meters above the ground at the centroid of each census tract. Buildings that must be designed for a 1-percent-annual-chance mean recurrence interval wind event include⁵:

- Buildings where more than 300 people congregate in one area
- Buildings that will be used for hurricane or other emergency shelter
- Buildings housing a day care center with capacity greater than 150 occupants
- Buildings designed for emergency preparedness, communication, or emergency operation center or response
- Buildings housing critical national defense functions
- Buildings containing sufficient quantities of hazardous materials

Description:
HAZUS_MH hurricane wind model makes use of an existing state-of-the-art windfield model, which has been calibrated to and validated using full-scale hurricane data. The model calculates wind speeds as a function of central pressure, translation speed, and surface roughness.

Building Information - 2010 US Census Data

Hazus Building Stock (Inventory of Buildings and Facilities)

Hazus general building stock is an inventory of the built environment that is at risk of damage by a hazard. Each respective type or sub-type of building in the following categories; residential, commercial, industrial, agricultural, religious, government, and education has risk based on the replacement value for buildings in that use category, the size and construction of these buildings, and the replacement cost to rebuild if the building is destroyed. For the damage calculations, Hazus assumes that all buildings are evenly distributed throughout a given census block and therefore damage is estimated as a percent and is weighted by the area of inundation at a given depth for a given census block. The methodology therefore, is known as an area-weighted methodology.

FEMA has initiated recent improvements to the area-weighted methodology by further refining the distribution of building square-footage to land areas characterized by development and removing land areas typical of non-developed land classes (e.g., forests, wetlands, etc...). This refinement is called dasymetric mapping and the current Plan modeling utilizes the FEMA dasymetric building stock. The following image shows a small example area in which the developed areas are pink:

Use of the new dasymetric data will typically reduce the total area subject to area-weighted loss estimations - particularly for those census blocks that have flood risk but no actual development within the floodplains. A more detailed explanation is included in the Flood Hazard Analysis section.

General Building Stock Loss Estimation

The probabilistic Hazus hurricane analysis predicts that the Middle Peninsula can annually expect close to \$2,766,673 in damages due to hurricane wind events. Property or “capital stock” losses of \$2,618,514 make up about 95% of the damages. This includes the values for buildings, contents, and inventory. Business interruption accounts for approximately \$148,159 of the annualized losses, or 5%, and includes relocation, income, rental, and wage costs.

Table 59 illustrates the expected annualized losses broken down by county. Gloucester County has the highest annualized losses of \$1,396,164, accounting for 50% of the total losses for Middle Peninsula. The majority of the expected damages can be attributed to building and content value.

Mathews County has the second highest annualized losses of \$505,371, accounting for 18% of the total annualized losses for Middle Peninsula.

Building structure damage accounts for approximately 66% of the expected annualized damages; residential occupancy makes up the vast majority of these losses. More than 70% of the buildings are categorized as wood frame and 20% masonry construction. Tables 60 and 61 summarize the property losses and business interruption losses shown by occupancy and building type. The slight differences in the annualized losses for building type and occupancy can be attributed to the Hazus classification methodology.

Table 59: County based Hazus annualized losses by all building and occupancy types.

County	Building	Content	Inventory	Relocation	Income	Rental	Wage	Total

Figures 54 through 61 on the following pages show the total annualized losses mapped for the planning district and individual counties. The majority of damages occur to residential structures. Tables 62 and 63 summarize the annualized loss values by county. These values are broken down by building type and

general occupancy for comparison. Total exposure has been included as a reference point for damages. Wood structures account for seventy-four percent of the total annualized damages. As wood structures make up the majority of construction type in general stock building inventory this is in line with the source data. The next highest category of damage by construction type is seen in masonry structures representing approximately twenty-one-percent of the total annualized damages. This also aligns with masonry (brick or block) construction being the second most common building material type in the Middle Peninsula region.

Description:
The greatest annualized losses were ranked by census block for each county. The top ten were given a 'rank' of one to ten, then mapped in groups of two. The remaining census blocks were either unranked or possessed no annualized losses.

Data Sources:
HAZUS-MH v4.2 Wind Model
HAZUS-MH v4.2 County Boundaries
Building Information - 2010 US Census Data

Fifty-percent of the Middle Peninsula region's annualized losses occur in Gloucester County. While losses are distributed throughout Gloucester County a few patterns of concentrated losses may be identified. Many of the census blocks exhibiting annualized losses of \$10,000 or greater follow along the State Route 17 corridor or are clustered around the Gloucester Courthouse. More specifically the majority of annualized losses align from Gloucester Courthouse to the York River bounded on the North by County 606 or Ark Road and the south by Nursery Lane, Haynes Pond, and Carter Creek – this area accounts for approximately \$230,000 (or approximately 16%) of expected annualized damages. On the northern side of Gloucester Courthouse, the area generally bounded in the west by Beech Swamp and Cow Creek in the east, and being traversed by Indian Road through the middle and extending north-east to the Piankatank River in the vicinity of Ferry Creek at Hell Neck – this area accounts for approximately \$200,000 (or approximately 14%) of expected annualized damages. Finally, those census blocks having the greatest expected annualized losses are in the vicinity of Hayes and Gloucester Point along the York River where as much as \$385,000 (or approximately 27% - and greater) of annualized damages are estimated.

Losses in Mathews County are also spread throughout the county with pockets of higher loss in the northern one-third of the county. Approximately \$231,000 (or 46%) of estimated annualized damages can be attributed to the northern one-third of the County; versus approximately \$157,000 (or 31%) in the center and \$115,000 (or 23%) in the southern one-third. Compared to Gloucester County, Mathews only has two (2) census blocks having expected annualized losses of \$10,000 or greater, versus eighteen (18) such blocks in Gloucester. Mathews County accounts for approximately \$507,000 (or 18%) of the total annualized losses in the planning district.

Middlesex County accounts for 13% of the total annualized losses. The greatest concentration of estimated annualized losses is in the lower-eastern portion of the County; Gray's Point Road and south-eastward. This south-eastern portion of the County includes approximately \$260,000 (or 70%) of the estimated damages for the County. Other concentrations of estimated damages are distributed between Saluda, Urbanna and Water View. Urbanna accounts for approximately 7% of the annualized losses at approximately \$25,700. Urbanna also includes two (2) census blocks within the top ten ranked blocks within the County accounting for \$12,400 or 48% of the losses in Urbanna.

Seven percent of the total annualized damages (\$196,000) for the region are attributed to King William County. King William exhibits four (4) primary areas where losses are concentrated. The first being the Town of West Point which can be attributed with twenty-nine percent (29%) of the damages within the County having annualized losses of \$56,000. Next, there are two (2) areas near both Aylett and Manquin on the northern side of US 360 (Richmond-Tappahannock Highway). These two areas combined account for annualized losses of \$30,000 or fifteen percent (15%). Last, the central portion of the County includes an area on either side of King William Road from West River Road in the north to Horse Landing Road in the south and accounting for roughly \$11,200 or six percent (6%) of annualized losses. The remainder of losses are distributed throughout the County with the greatest concentration of loss in the northwest quarter of the County. The Pamunkey Indian Reservation is estimated to have annualized losses of \$1,284 and the Mattaponi Reservation close to \$905; combined these two Indian Reservation losses account for approximately 1.1% of the annualized losses throughout the County.

Essex County accounts for 7% of the total annualized losses. The greatest concentration of potential annualized wind damage exists in the central portion of the County – including the Town of Tappahannock. This central area is traversed by three (3) of the primary roads being, US 360 (Richmond Highway), US 17 (Tidewater Trail) and Tappahannock Boulevard – running through the Town of Tappahannock. The combined annualized losses for this general area are approximately \$94,000 or fifty percent (50%) of the losses within the County. The Town of Tappahannock accounts for twenty-percent

(20%) of the damages in the County and an estimated \$37,200 in annualized damages. Two pockets of development along the Rappahannock River (one south of Tappahannock and the other on the north side) represent clusters of potential damages. The area to the south of Tappahannock exists in the vicinity of River Landing Road in the north and Mill Swamp Road in the south having potential damages of \$11,300 annually. The area north of Tappahannock is the vicinity near Woodside Country Club having potential damages of \$9,700 annually.

King and Queen County has the lowest annualized losses in the region, accounting for 4% of the total damages. Residential occupancy makes up the majority of the losses in the county. The southern one-third of the county, from roughly Dragon Run State Forest southward, has the greatest concentration of losses across the entire County accounting for nearly \$66,000 or 60% of the losses. The remaining 40% of potential losses are distributed through the remainder of the county to the north and west with approximately \$16,400 or 14% existing north of the Richmond-Tappahannock Highway and twenty-six percent (26%) distributed between the Richmond-Tappahannock Highway in the north to roughly Dragon Run State Forest in the south; note that this area includes locales such as Bruington, King and Queen Courthouse as well as Walkerton. The Rappahannock Tribe’s TDSA is estimated to have annualized losses of \$16,123, which is 0.58% of the Middle Peninsula total. Table 65 lists the Tribal Nations annual hurricane losses.

Table 64 lists the annualized losses for the Middle Peninsula Tribal Nations. Please note that the Upper Mattaponi is not represented in this data but is included in the county data. GIS boundaries were sourced from the "American Indian/Alaska Native/Native Hawaiian Areas" as identified in the 2020 TIGER/Line GIS data, which is publicly available from the U.S. Census Bureau’s website. (<https://www.census.gov/geographies/mapping-files/time-series/geo/tiger-line-file.html>). This website defines Reservation and TDSA areas as:

- *American Indian Reservations: The U.S. Census bureau’s boundary files for American Indian reservations are areas with boundaries established by treaty, statute, and/or executive or court order. The reservations and their boundaries are identified for the Census Bureau by the Bureau of Indian Affairs (BIA), an agency in the U.S. Department of the Interior, or by State governments.*
- *Tribal Designated Statistical Areas: the U.S. Census Bureau includes Tribal designated statistical areas that are geographic entities delineated by Federally and State-recognized tribes without a land base, that is, with no reservation or trust lands.*
(<https://www2.census.gov/geo/pdfs/reference/GARM/Ch5GARM.pdf>):

It’s important to note that upon correspondences with the Tribes this data does not accurately reflect Tribal lands and will need to be updated for the next update.

Table 64: Tribal Nation based Hazus annualized losses.

Tribal Nation	Total Annualized Loss
Mattaponi Indian Reservation	\$905 (5%)
Pamunkey Indian Reservation	\$1,284 (7%)
Rappahannock Tribe's TDSA	\$16,123 (88%)
Total Tribal Losses	\$18,312

Building Damage

Hazus calculates expected damage percentages for each probabilistic return period for wind damages. This represents the percentage of building square footage in each damage state. Five damage states have been specified in Hazus and are outlined in Table 65.

Table 65: Hazus damage state thresholds.

Damage State	Qualitative Damage Description
None (Livable)	Little or no visible damage from the outside. No broken windows, or failed roof deck. Minimal loss of roof over, with no or very limited water penetration.
Minor (Livable)	Maximum of one broken window, door or garage door. Moderate roof cover loss that can be covered to prevent additional water entering the building. Marks or dents on wall requiring painting or patching for repair.
Moderate (Typically still livable)	Major roof cover damage, moderate window breakage. Minor roof sheathing failure. Some resulting damage to interior of building from water.
Severe (Typically non-livable but repairable)	Major window damage or roof sheathing loss. Major roof cover loss. Extensive damage to interior from water.
Destruction (Non-livable)	Complete roof failure and/or, failure of wall frame. Loss of more than 50% of roof sheathing.
Hazus V4.2 Technical Manual	

Building Damage by Annual Chance Frequency (i.e., Multi-frequency Building Damages)

- **10-percent-annual-chance** - Hazus estimates that about 1 building will have minor damage. No buildings (0) are expected to be at least moderately damaged, and no buildings (0) are expected to be completely destroyed during the 10-percent-annual-chance.
- **4-percent-annual-chance** - Hazus estimates that about 88 buildings will have minor damage. No buildings (0) are expected to be at least moderately damaged, and no buildings (0) are expected to be completely destroyed during the 5-percent-annual-chance.
- **2-percent-annual-chance** - Hazus estimates that about 4 buildings will be at least moderately damaged, and no buildings (0) are expected to be completely destroyed during the 2-percent-annual-chance.
- **1-percent-annual-chance** - Hazus estimates that about 36 buildings will be at least moderately damaged and five (5) buildings are expected to have severe damage – potentially another single (1) building may be expected to be completely destroyed during the 1-percent-annual-chance.
- **0.5-percent-annual-chance** - Hazus estimates that about 171 buildings will be at least moderately damaged, approximately 25 buildings are expected to be severely damaged, and two (2) buildings are expected to be completely destroyed during the 0.5-percent-annual-chance.
- **0.2-percent-annual-chance** - Hazus estimates that about 791 buildings will be at least moderately damaged, approximately 113 buildings are expected to be severely damaged, and twelve (12) buildings are expected to be completely destroyed during the 0.2-percent-annual-chance.
- **0.1-percent-annual-chance** - Hazus estimates that about 1,935 buildings will be at least moderately damaged, approximately 398 buildings are expected to be severely damaged, and 46 buildings are expected to be completely destroyed during the 0.1-percent-annual-chance.

Table 67 and Appendix G provide detailed information on the damage state percentages and number of buildings damaged for each of the probabilistic return periods.

The default data and parameters for each building stock category, have damages that are calculated based on the probabilities of the four different damage states of wind damage by building type. Damage is calculated as a function of peak gust wind speed. It should be noted that the results in Table 66 are based solely on the modeled direct economic loss for the study region with the simulated hurricane activity for each of the independent return periods. It is possible, that the results will not increase as logically expected by each return period. For example, with this methodology, it is possible to have the results of the 1-percent-annual-chance event show more dollar damage than the 0.2-percent-annual-chance event's result.

Table 66: Building damage by county.

Essex County	Average Damage State (%)				
	Return Period	None	Minor	Moderate	Severe
10-percent-annual-chance Event	100.00%	-	-	-	-
5-percent-annual-chance Event	99.82%	0.18%	-	-	-
2-percent-annual-chance Event	99.72%	0.28%	-	-	-

Debris Generation

Hazus estimates the amount of debris that will be generated by a hurricane. The model breaks the debris into three general categories: Brick/Wood, Reinforced Concrete/Steel, and Trees. Tree debris makes up the majority of tonnage generated in the hurricane analysis. Brick and wood debris make up the remainder, and a very small percentage (0.01%) associated with Concrete and Steel; i.e., not shown in Table. Table 67 summarizes, by return period, the total generated debris by Type.

Table 67: Hurricane debris generation.

Return Period	Total Debris (tons)	Tree Debris (tons)	% Tree Debris	Brick & Wood (tons)	% Brick and Wood
10-percent-annual-chance Event	1,620	1,620	100%	0	0.00%
5-percent-annual-chance Event	23,563	23,543	99.92%	20	0.08%
2-percent-annual-chance Event	71,500	70,986	99.28%	514	0.72%

0.1-percent-annual-chance Event	699,604	676,766	96.74%	22,165	3.17%

Essential Facilities

Essential facilities, including medical care facilities, emergency response facilities and schools, are those vital to emergency response and recovery following a disaster. School buildings are included in this category because of the key role they often play in sheltering people displaced from damaged homes. Generally, there are very few of each type of essential facilities in a census tract, making it easier to obtain site-specific information for each facility. Thus, damage and loss-of-function are evaluated on a building-by-building basis for this class of structures; even through the uncertainty in each such estimate is large⁶.

The Hazus essential facilities database includes default data for Medical Care Facilities, Emergency Response Facilities (fire stations, police stations, EOCs) and schools. Table 68 shows the functionality, by return period for each essential facility type. The region's essential facilities are able to remain functional for the 10-percent-, 5-percent-, and 1-percent-annual-chance recurrence interval. Functionality begins to decline at the 1-percent-annual-chance event. All of the facilities have zero functionality during the 0.1-percent-annual-chance event.

⁶ Multi-hazard Loss Estimation Methodology Hurricane Model User Manual, HAZUS-MH V4.2, Chapter 1: Introduction, 1-6

Potential Mitigation Actions:

The potential mitigation actions noted are those that are Hazus-specific and would benefit refinement of Hazus analyses.

- In high damage Census blocks provide more information about acquiring for hurricane wind damage mitigation such as hurricane straps, hurricane storm window covers, and reduction of vegetation that becomes damaging storm debris during hurricane wind events.
- Perform Hurricane analysis for a known and historic storm that affected the Middle Peninsula region for comparative purposes.
- Refine and update data sets for GBS and essential facilities.
 - o Improvements in the future should aim to further refine the building stock. Notably, one improvement should include adding any new development that may not have been in the land use/land cover data; e.g., new housing developments, new construction, etc...
 - o Perform localized building-level assessments in known areas of loss and or areas subject to likely losses.
- Improve Data associated with the federally recognized tribes.

Sea Level Rise Risk Analysis

The Hazus Flood Model analyzes both riverine and coastal flood hazards. Flood hazard within Hazus is defined by depth of flooding. Other contributing factors of damage include the duration and velocity of water in the floodplain. Other hazards associated with flooding that may contribute to flood losses include channel erosion and migration, sediment deposition, bridge scour, and the impact of flood-born debris. The Hazus Flood Model allows users to estimate flood losses primarily due to flood depth to the general building stock (GBS). While velocity is also considered, it is not a separate input parameter and is accounted within depth-damage functions (i.e., expected percent damage given an expected depth) for census blocks that are defined as either coastal or riverine influenced.

Flood-specific modeling was performed in this Plan revision to determine annualized flood loss. However, it is important to note that the Sea Level Rise analyses while similar is not 100% the same as the multi-frequency analyses performed and presented in the Flood Section; see Flood Analysis. This section will offer a basic amount of information to differentiate between the two report sections.

Coastal flood modeling typically includes identifying baseline tidal water levels and then computing additions or increases to water surface levels from various natural forces such as storm surge effects (i.e., water level increases as the result of a storm pushing landward) as well as other wave-related effects such as increased wave heights and the run-up of waves over the land as waves crash. Other factors of coastal storms play a part in estimating increased water surface levels such as shoreline and/or dune erosion. Consequently, each of the scenarios presented in the Flood Analysis section includes depth grids which are produced from modeling that considers increases to water surface levels from the various forces typical of coastal storm events – a.k.a. Storm Surge.

In contrast, the Hazus analysis performed for the Sea Level Rise (SLR) scenarios (this section) DO NOT include the use of depth grids that consist of storm surge. Rather, this Sea Level Rise section uses depth grids that 1.) Are depths from the current baseline tidal water levels (Mean Higher High Water or MHHW) and 2.) Includes the addition of the Intermediate-High (IMH) Scenario's 2060 sea level estimate, which is a 3.02-foot increase in water depth. The two depth grids were run through Hazus represent these two aforementioned scenarios developed by NOAA's Office for Coastal Management in August 2016. The IMH selected is also consistent with Governor Northam's November 2021 Executive Order 45 that approves to except NOAA's IMH scenario as the planning standard for Virginia state owned buildings.

Another factor to consider while viewing Maps and Tables is that the Base Scenario is essentially the average of the highest tide that is experienced on a daily basis over a long period of time. Typical there are two high tides in a given day, the MHHW represents the mean (or average) of the higher of the two tides as recorded over a period of record. The definition as provided by [NOAA – Tides & Currents](#) states, "The average of the higher high water height of each tidal day observed over the National Tidal Datum Epoch. For stations with shorter series, comparison of simultaneous observations with a control tide station is made in order to derive the equivalent datum of the National Tidal Datum Epoch."⁷ The tidal station within and used as reference for the water surface elevations in Middle Peninsula is the Gloucester Point Station.

NOAA Sea Level Rise Scenarios and Depth Grid Information

SLR depth grids were pulled from NOAA's Sea Level Rise Viewer to perform the risk assessments across the Middle Peninsula planning district. These depth grids were able to be directly imported into the Hazus Flood model, which eliminated the need to pre-process any modeling or Geographic

⁷ NOAA – Tides & Currents (http://tidesandcurrents.noaa.gov/datum_options.html), accessed April 22, 2015.

Information Systems (GIS) data. Generally-speaking, the creation of depth grids requires GIS data that represents an estimated water surface along with an associated ground surface. Thereafter, the difference between the two surfaces represents the estimated depth of flooding for a given location; i.e., water elevation less ground elevation equals depth; see Depth Grid Graphic in the Flood Analysis Section.

The data is available from Digital Coast, the NOAA-sponsored website developed to provide not only coastal data, but the tools, training, and information needed to use the provided data (see <http://coast.noaa.gov/slr/>). The following list offers an itemization and brief description(s) of the two scenarios:

- **Mean Higher High Water (MHHW)**
 - This is the average of the higher high water height of the highest tide recorded each tidal day at a given tide station observed over the National Tidal Datum Epoch. The closest tide station to Middle Peninsula is the Gloucester Point Station.
 - The National Tidal Datum Epoch is the specific 19-year period adopted by the National Ocean Service as the official time segment over which tide observations are taken and reduced to obtain mean values for a standard elevation defined by a certain phase of the tide, called tidal datums.
 - The MHHW at the Gloucester Point Station is 1.4 feet above mean sea level.
- **Intermediate-High (IMH) Scenario**
 - The IMH is based on an average of high-end, semi-empirical, global sea level rise projections (Grinsted et al., 2009; Horton et al., 2008; Jevrejeva et al., 2010; Vermeer and Rahmstorf, 2009).
 - From the NOAA-calculated IMH Scenario, the 2060 modeled sea level was chosen. This estimate is the MHHW scenario plus 3.02 feet.

Building Stock Economic Inventory

Hazus general building stock is an inventory of the built environment that is at risk of damage by a hazard. Each respective type or sub-type of building in the following categories; residential, commercial, industrial, agricultural, religious, government, and education has risk based on the replacement value for buildings in that use category, the size and construction of these buildings, and the replacement cost to rebuild if the building is destroyed. For the damage calculations, Hazus assumes that all buildings are evenly distributed throughout a given census block and therefore damage is estimated as a percent and is weighted by the area of inundation at a given depth for a given census block. The methodology therefore, is known as an area-weighted methodology.

FEMA has initiated recent improvements to the area-weighted methodology by further refining the distribution of building square-footage to land areas characterized by development and removing land areas typical of non-developed land classes (e.g., forests, wetlands, etc...). This refinement is called dasymetric mapping and the current Plan modeling utilizes the FEMA dasymetric building stock. The following image shows a small example area in which the developed areas are pink:

Use of the new dasymetric data will typically reduce the total area subject to area-weighted loss estimations - particularly for those census blocks that have flood risk but no actual development within the floodplains. A more detailed explanation is included in the Flood Hazard Analysis section.

The same dasymetric building stock (i.e., square-footage inventory of buildings) that was utilized for the Flood Analysis was also used for Sea Level Rise. All building inventory statistics (i.e., building stock exposure by county or general building type) that were used for the Sea Level Rise Hazus scenarios are the same as defined in the Flood Analysis section. Please refer to the Flood Hazard Analysis section for building stock exposure by county.

Dynamics of exposure (and also loss) are dependent on a number of variables. A key variable, for example, includes the spatial accuracy (30-meter) of the land-use/land-cover data used to create the developed areas of the dasymetric building stock inventory. Another key variable includes the spatial accuracy (i.e., horizontal accuracy) and also the vertical accuracy of the topographic data used to delineate flood inundation areas. Therefore, detailed site analyses may be appropriate and necessary to further understand local dynamics. However, noting the regional nature of the risk assessments performed, a few tables for reference are provided of the Sea Level Rise scenarios to help better understand the dasymetric building stock that is 1.) Potentially exposed and 2.) May experience potential loss. Acreage of developed land intersecting the SLR scenarios is captured in Table 69. Figure 62 shows the dasymetric developed areas intersecting both the MHHW and the IMH Scenarios.

SECTION 5: RISK ASSESSMENT ANALYSIS

Table 69: Acreage of dasymetric areas (30m developed areas) intersecting SLR scenarios.

MHHW Sea Level Rise Scenario			IMH Sea Level Rise Scenario

Users are encouraged to consider that while one County may have a greater area of developed land intersecting the SLR flood inundation, the square-footage and/or value of structures within the developed areas may have very different value estimates. Consequently, it can be seen that Middlesex County has a great deal of development in close proximity to the MHHW flood hazard – particularly in the Residential category (\$67.4 Million). However, as was mentioned earlier, the resolution or spatial accuracy of the 30-meter land-use/land-cover data used to create the dasymetric developed areas does not consider elevation. There are areas within the District that have development on high ground near flooding sources. Middlesex County has a number of these areas. This combination in conjunction with higher residential exposure (\$25.3 Million) shows Middlesex as more susceptible to the MHHW Sea Level Rise Scenario.

In contrast, development patterns in the eastern-most portion of Middlesex exhibits development that is set-back away from areas of open and tidal waters – thus exhibiting less exposure to the MHHW SLR Scenario. However, as water levels rise, as would be the case of the IMH Scenario, the development along the low-lying fringes of the coastal plain become more susceptible to the flood hazard and therefore includes a greater proportion of building inventory exposed to the potential rising water levels. The two most eastern counties of Gloucester and Mathews, while they do have development along tidal-influenced waters, they are not within the extent of the MHHW to the same degree as Middlesex, and therefore have less exposure to the MHHW scenario.

General Building Stock Loss Estimation

Losses are presented similar to the Flood Analysis however, only the combined Total losses of all building categories are presented in an effort to keep the results as simple as possible for relative comparison to the more detailed multi-frequency flood analysis. To reiterate, the multi-frequency analysis (Flood Analysis) DOES include water surface levels that consider storm surge.

Hazus Level I flood model losses for the Middle Peninsula planning district from the MHHW SLR scenario are approximately \$8.9 Million US Dollars and the IMH 2060 scenario are approximately \$90.2 Million US Dollars which is a 90% increase in the expected total damages. Property or “capital stock” losses, which includes the values for building, content, and inventory, for the MHHW scenario accounts for 53.8% of the expected loss (\$4.8 Million) whereas the IMH 2060 scenario is estimated to be approximately \$37.8 Million or 41.9% of the expected loss. Business interruption, which includes relocation, income, rental and wage costs, for the MHHW scenario accounts for \$4.1 Million (46.2%) of the expected losses and the IMH 2060 scenario accounts for \$52.4 Million US Dollars (57.1%) of the losses.

Table 72 and Table 73 illustrate the expected losses broken down by county from the Sea Level Rise scenarios, while Table 74 breaks out the expected losses for the three Tribal Nations. Middlesex County, having the highest level of estimated exposure (\$26.092 Million US Dollars) within the MHHW scenario inundation area, does has the highest loss from the MHHW scenario at \$3.0 Million, which accounts for 33.6% of the MHHW losses for the Middle Peninsula⁸. Gloucester County is attributed with 29.8% of total losses at approximately \$2.7 Million, and Mathews County has losses of approximately \$2.3 Million or 25.4% of the total – followed by Essex (7.3%), King William (3%) and last King and Queen (0.1%). The relatively higher loss percentages attributed to Middlesex, Gloucester, and Mathews counties suggests that the distribution of development at-risk includes the low-lying coastal plains along the Chesapeake and Mobjack Bay as well as the York River.

⁸ Readers are reminded due to the regional nature of the analysis; detailed site analyses may be entirely appropriate and necessary to fully understand local dynamics. Especially in areas where development is in close proximity to flooding sources and also marked topographic elevation changes.

The IMH scenario also shows the greater combined losses in the down-east area however, Gloucester and Mathews account for the greatest combined losses (71.3%). Gloucester County has the highest loss from the IMH scenario at approximately \$39.0 Million US Dollars, accounting for 43.2% of the total losses for the Middle Peninsula. The IMH scenario shows Mathews County at approximately \$25.4 Million and ranked second (28.1%), followed by Middlesex County at approximately \$11.3 Million (12.5%), and then Essex (7.6%), King William (7.1%) and last King and Queen (1.5%). Again, the relatively higher loss percentages attributed to Gloucester and Mathews counties suggests that the distribution of development at-risk includes the low-lying coastal plains along the Chesapeake and Mobjack Bay as well as the York River. Figure 65 exemplifies the differences between the inundation extents of the MHHW and IMH scenarios; the mapping of the depth grids represented by red/orange areas are the increased inundation areas of the IMH scenario. Development in these areas would be susceptible to greater potential losses.

The flood model incorporates National Flood Insurance Program (NFIP) entry dates to distinguish Pre-FIRM and Post-FIRM data from the census blocks. Pre-FIRM buildings constructed prior to the initial FIRM are considered “pre-FIRM” and those constructed on or after the initial FIRM are considered “post-FIRM”. This distinction is important because post-FIRM buildings were built above the base flood elevation (BFE), which makes those buildings less susceptible to flooding. This results in different damage curves between pre- and post-FIRM buildings. If the different curves were not used for these two categories of structures, the results would be skewed and the loss estimates inaccurate. The results provided in this report show the combined total losses for both pre- and post-FIRM values combined.

Table 72: County based Hazus loss for both pre- and post-FIRM – sea level rise MHHW.

Table 74 lists the annualized losses for the Middle Peninsula Tribal Nations. Please note that this data does not include the Upper Mattaponi Tribe; however, the Upper Mattaponi data is included in the County estimations. GIS boundaries were sourced from the "American Indian/Alaska Native/Native Hawaiian Areas" as identified in the 2020 TIGER/Line GIS data, which is publicly available from the U.S. Census Bureau's website. (<https://www.census.gov/geographies/mapping-files/time-series/geo/tiger-line-file.html>). This website defines Reservation and TDSA areas as:

- *American Indian Reservations: The U.S. Census bureau's boundary files for American Indian reservations are areas with boundaries established by treaty, statute, and/or executive or court order. The reservations and their boundaries are identified for the Census Bureau by the Bureau of Indian Affairs (BIA), an agency in the U.S. Department of the Interior, or by State governments.*
- *Tribal Designated Statistical Areas: the U.S. Census Bureau includes Tribal designated statistical areas that are geographic entities delineated by Federally and State-recognized tribes without a land base, that is, with no reservation or trust lands.*
(<https://www2.census.gov/geo/pdfs/reference/GARM/Ch5GARM.pdf>):

It's important to note that upon correspondences with the Tribes this data does not accurately reflect Tribal lands and will need to be updated for the next update.

Table 74: Tribal Nation based Hazus annualized losses.

Tribal Nation	MHHW Losses	IMH Losses
Mattaponi Indian Reservation	\$57,000 (100%)	\$90,000 (68%)
Pamunkey Indian Reservation	No Losses	\$42,000 (32%)
Rappahannock Tribe's TDSA	No Losses	No Losses
Total Tribal Losses	\$57,000	\$132,000

Figure 63:

Figures 64 through 73 on the following pages show the total losses for the planning district for both SLR scenarios and the Ranking of the top ten loss of census blocks (Ranked within each respective County). County-specific maps are shown with the IMH scenario.

Again, users of these maps are reminded that the scenarios shown in the following maps DO NOT include increases to water surface levels from the various natural forces typical of coastal storm events (e.g., Storm Surge). The following results are intended to offer perspective on potential damage/loss in the event that the MHHW surface was to increase by 3.02 feet.

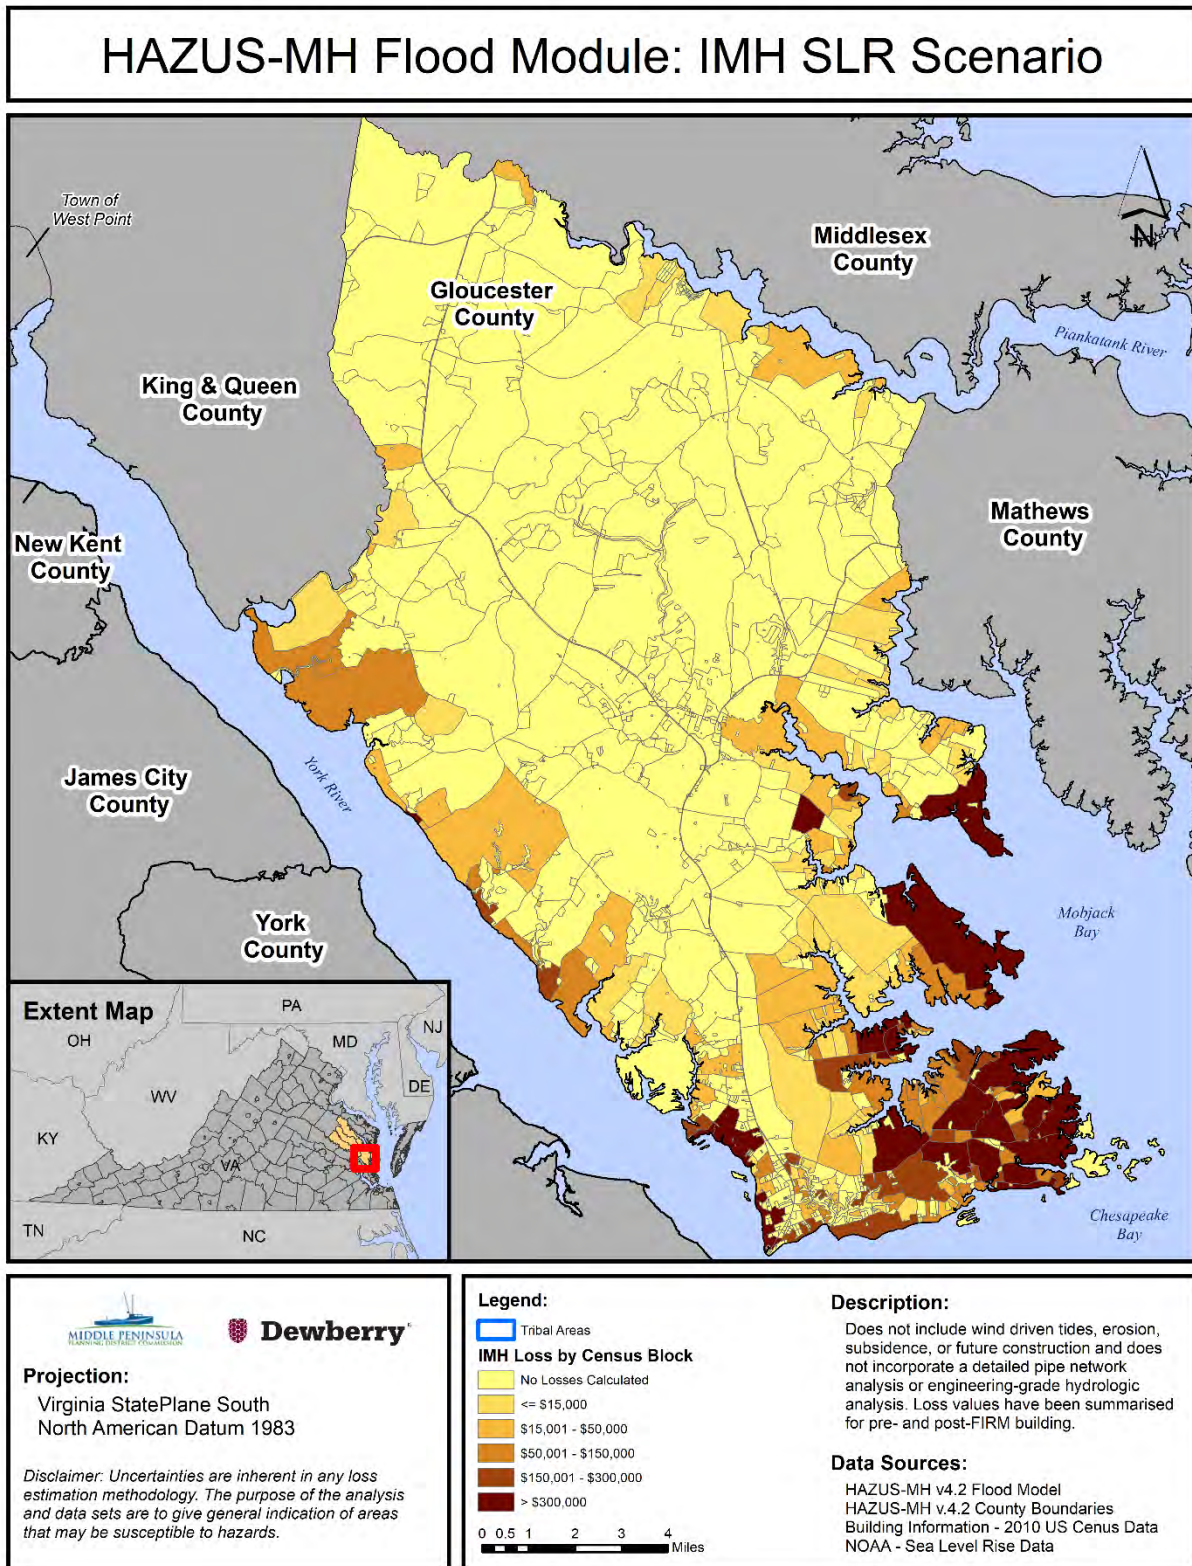

Figure 69:

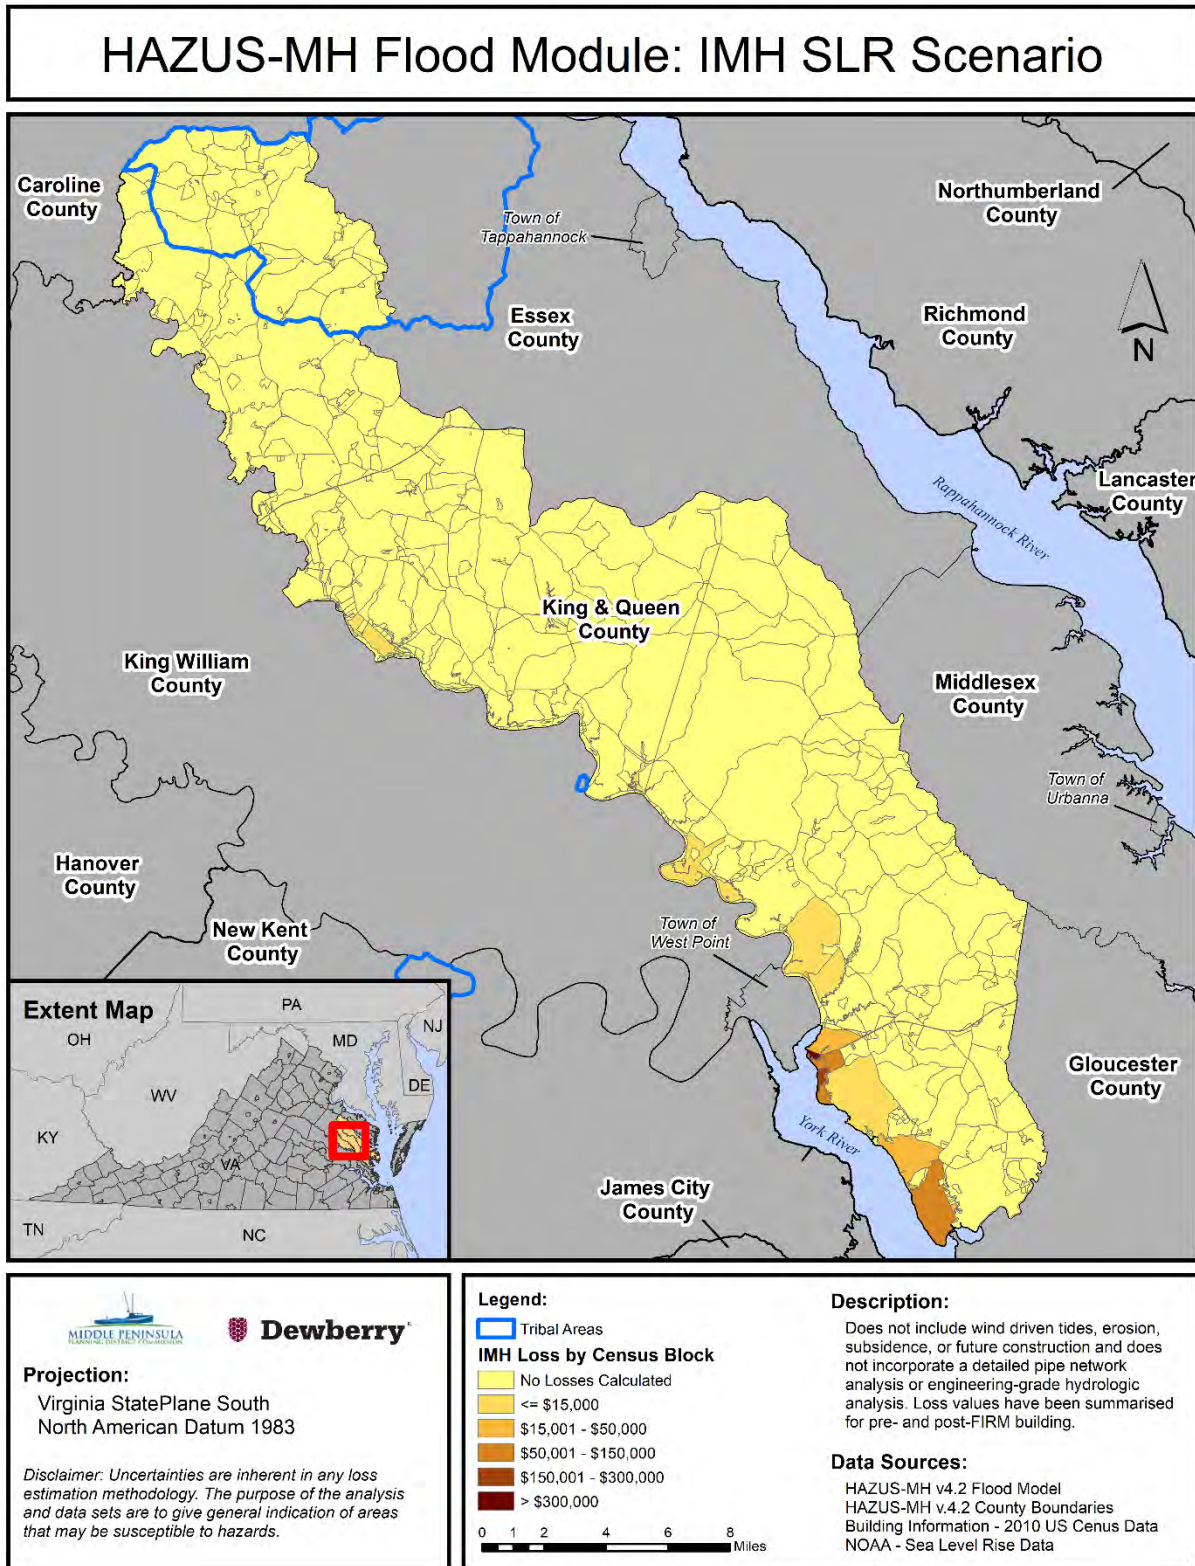

Figure 70:

Figure 71:

Figure 72:

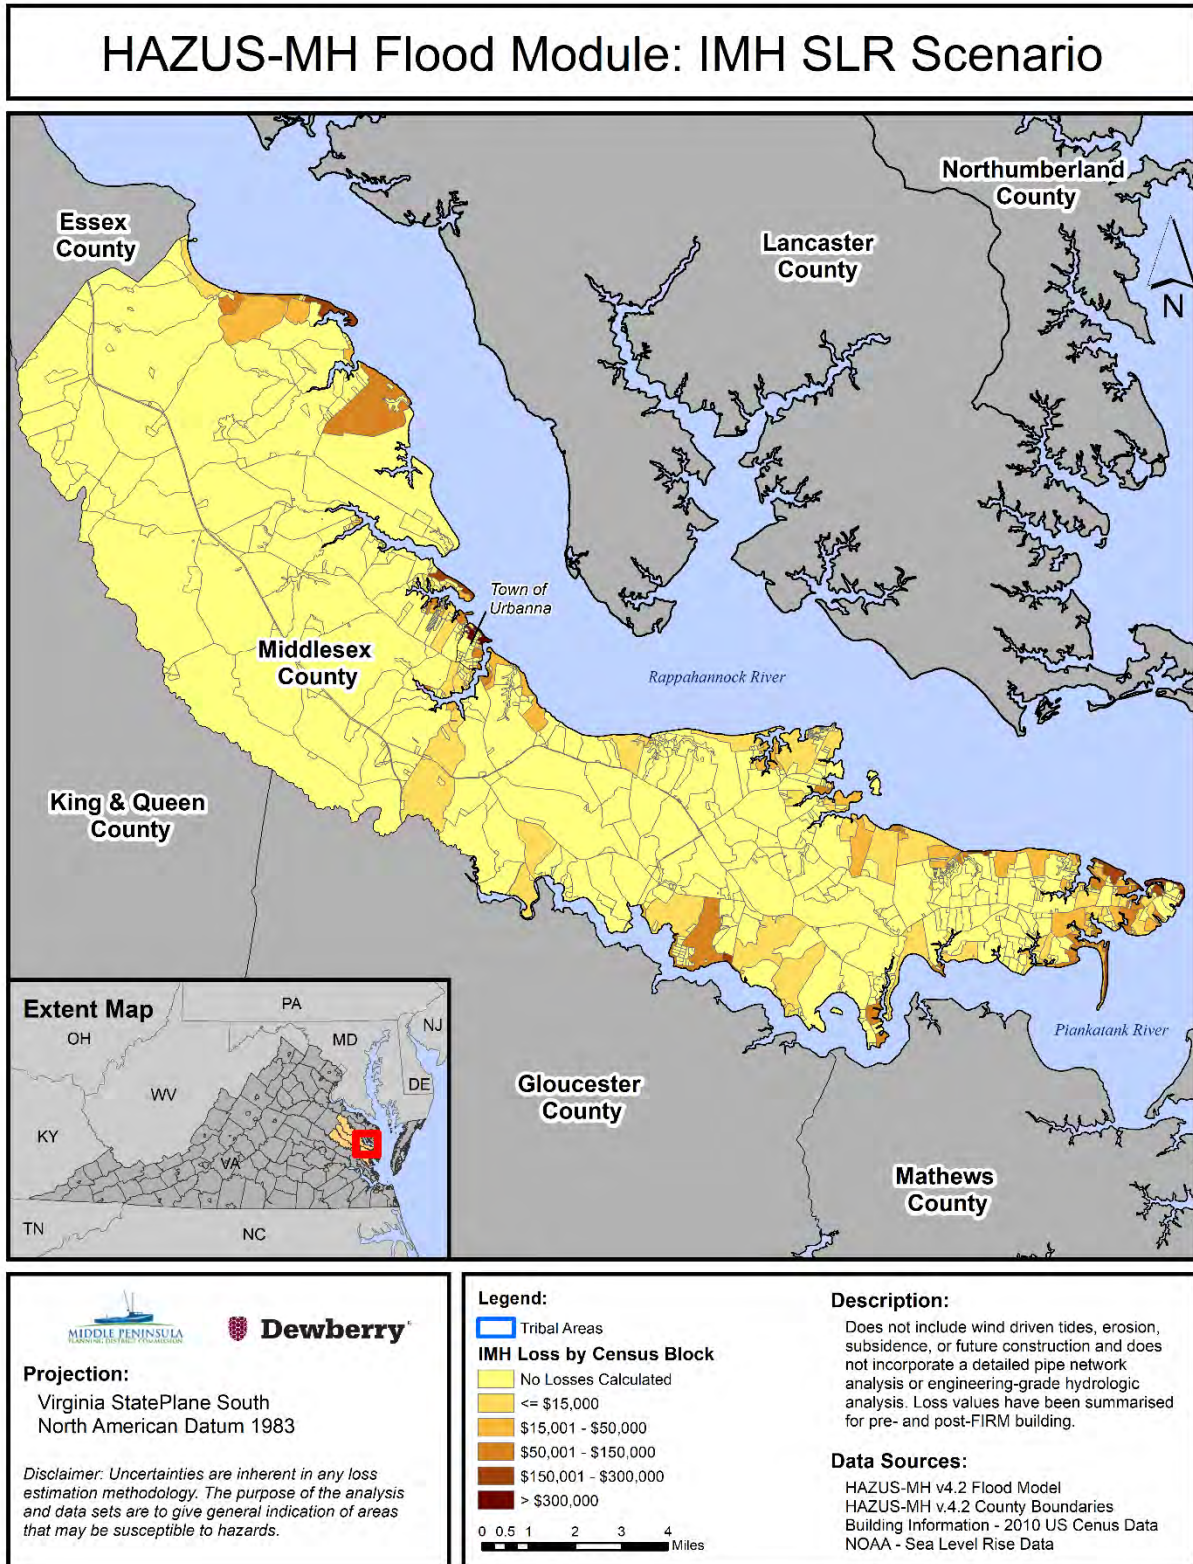

Figure 73:

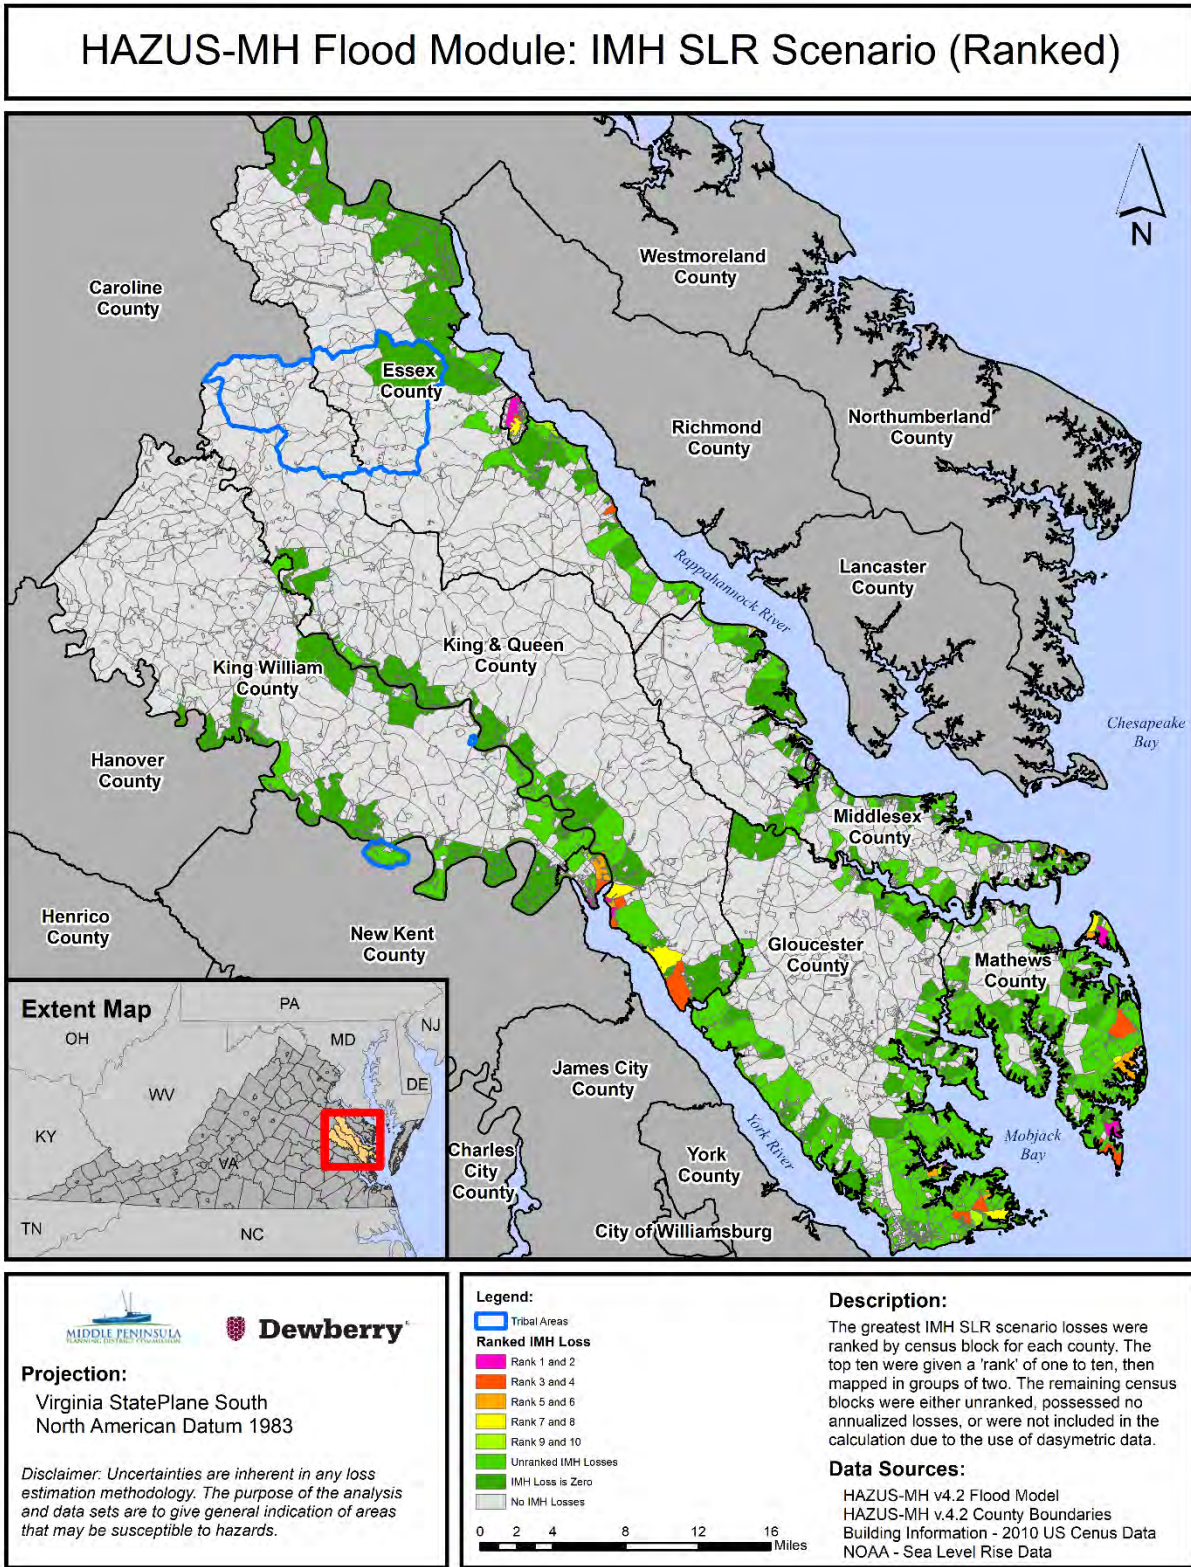

Table 75: Hazus loss for both pre- and post- FIRM – MHHW and IMH scenarios.

Area	Scenario ^A	Total Loss	% Total	Building Loss	% Loss	Contents Loss	% Loss	Business ^B Interruption
Middle Peninsula Region	MHHW	\$8,931	100%	\$2,841	100%	\$1,963	100%	\$4,126
Middle Peninsula Region	IMH	\$90,218	100%	\$22,535	100%	\$15,176	100%	\$52,430
Essex County	MHHW	\$649	7%	\$131	5%	\$121	6%	\$397
Essex County	IMH	\$6,858	8%	\$1,208	5%	\$910	6%	\$4,729
Gloucester County	MHHW	\$2,663	30%	\$999	35%	\$688	35%	\$976
Gloucester County	IMH	\$38,966	43%	\$8,932	40%	\$6,345	42%	\$23,663
King and Queen County	MHHW	\$85	1%	\$37	1%	\$21	1%	\$26
King and Queen County	IMH	\$1,361	2%	\$504	2%	\$340	2%	\$503
King William County	MHHW	\$268	3%	\$59	2%	\$43	2%	\$166
King William County	IMH	\$6,399	7%	\$1,125	5%	\$1,162	7%	\$4,104
Mathews County	MHHW	\$2,267	25%	\$711	25%	\$472	25%	\$1,084
Mathews County	IMH	\$25,383	28%	\$7,303	32%	\$4,338	29%	\$13,725
Middlesex County	MHHW	\$2,999	34%	\$904	32%	\$618	31%	\$1,477
Middlesex County	IMH	\$11,251	12%	\$3,463	16%	\$2,081	14%	\$5,706

Data in Thousands of Dollars

Notes:

^A Scenario does not include wind driven tides nor consider natural processes such as erosion, subsidence, or future construction and does not incorporate a detailed pipe network analysis or engineering-grade hydrologic analysis. Details of the SLR analysis performed by NOAA can be accessed at http://coast.noaa.gov/digitalcoast/_pdf/SLRViewerFAQ.pdf

^B Business Interruption = Relocation Cost + Income Loss + Rental Income Loss + Wage Loss

Essential Facilities and Loss Estimation

The majority of the region's essential facilities are able to remain functional for both the MHHW and the IMH. Only one essential facility was affected, and only for the IMH. Figure 74 highlights the location of the facility that is damaged by the IMH 2060 scenario – thus experiencing estimated damage and loss. Table 76 lists the damaged essential facilities, the percent-annual-chance event that damaged the facility, it's building and contents losses, and the maximum time to full functionality.

Figure 74:

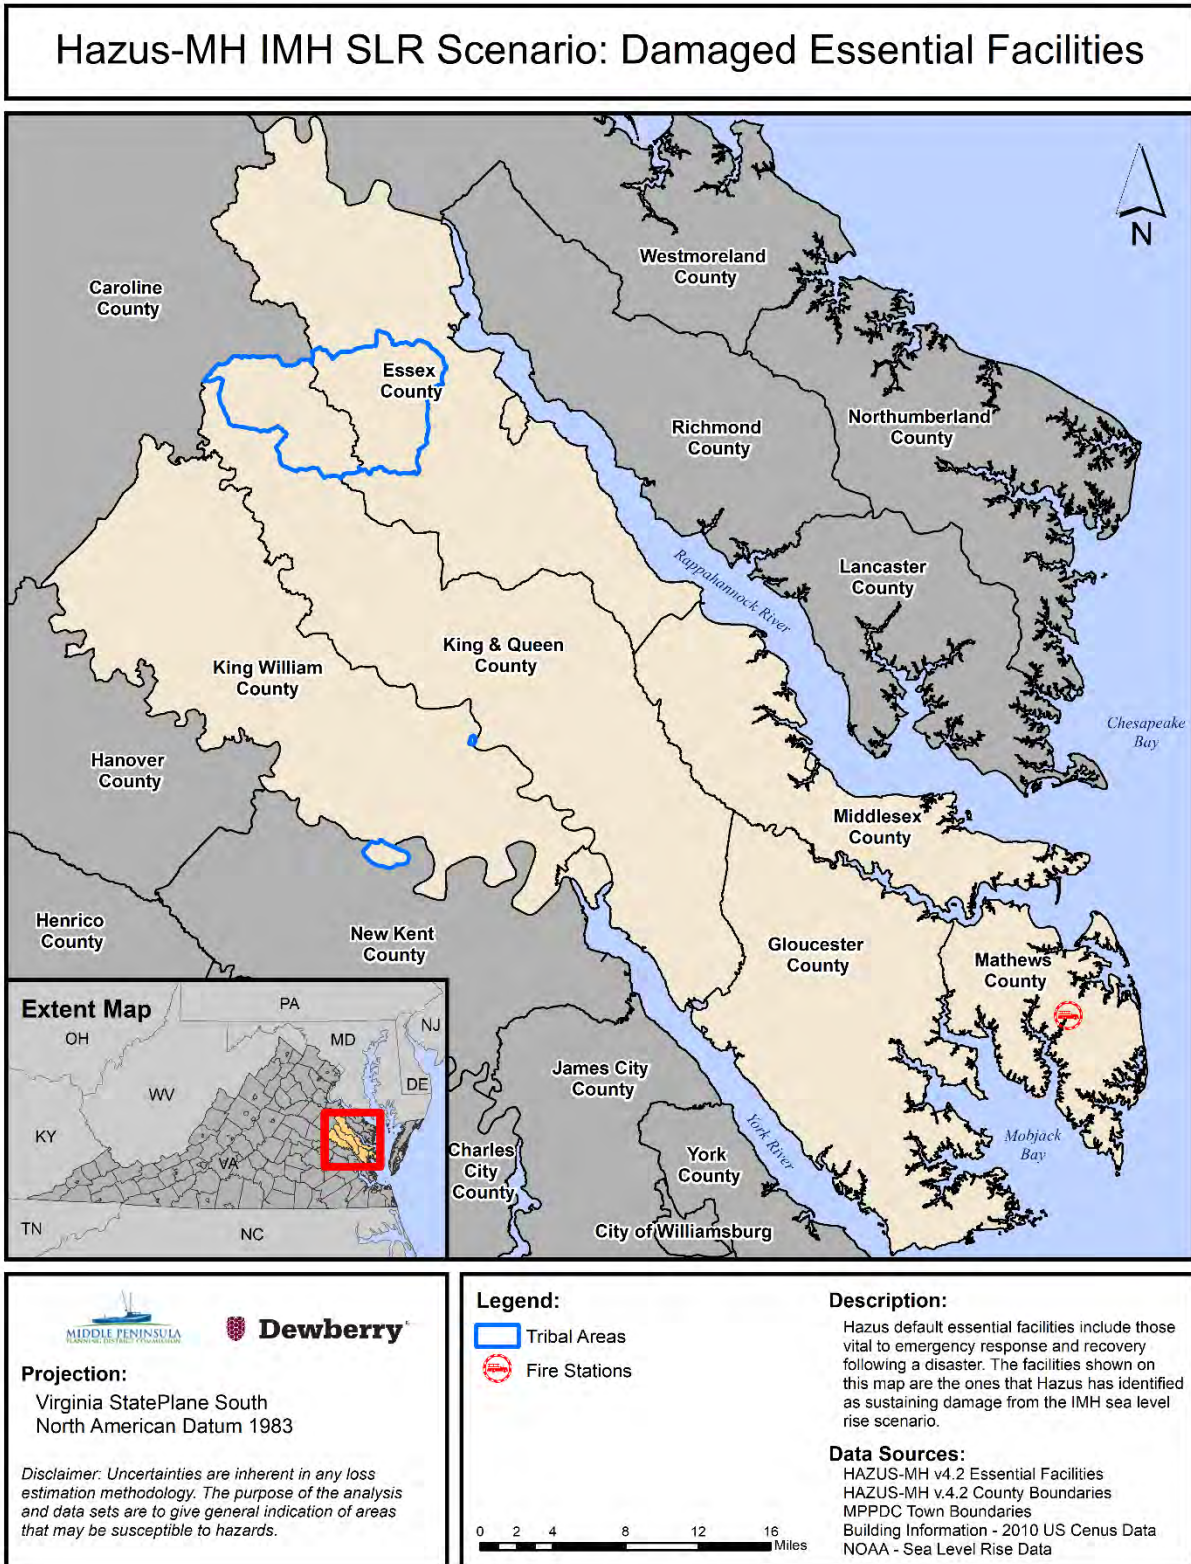

Table 76: Damages to essential facilities.

Name	City	Scenario	Flood Hazard	Building DmgPct	Building Losses	Contents DmgPct	Content Losses	MaxTime to Full Restoration
Mathews Volunteer Fire Department Incorporated Station I	Mathews	IMH	SLR	1.43%	\$36.02	1.64%	\$61.75	480

Note: No essential facilities had any calculated damage for the MHHW scenario.

Potential Mitigation Actions

The potential mitigation actions noted are those that are Hazus-specific and would benefit refinement of Hazus analyses.

- Perform Hazus analyses based on the same data resources used to develop the inundation areas mapped in the report submitted to the Virginia General Assembly in January 2013 titled – RECURRENT FLOODING STUDY FOR TIDEWATER VIRGINIA by the Virginia Institute of Marine Science, Center for Coastal Resources Management at the College of William & Mary. This study appears to include the most widely accepted Sea Level Rise plus Storm Surge Scenario facing coastal Virginia. It would therefore be appropriate to consider 1.) The creation of depth grids from the study data and then 2.) Hazus Risk Assessment. It would also be beneficial to incorporate elements of the design storm into a combined Hazus Flood and Hurricane Scenario - in this manner benefits of the combined methodology can be realized – which includes methods to guard against over-counting or double-counting losses by simply adding damages from each respective Hazus model.
- Refine and update data sets for GBS and essential facilities.
 - Improvements in the future should aim to further refine the building stock. Notably, one improvement should include adding any new development that may not have been in the land use/land cover data; e.g., new housing developments, new construction, etc...
 - Perform localized building-level assessments in known areas of loss and or areas subject to likely losses.
- Improve Data associated with the federally recognized tribes.

Section 6 - Capability Assessment

According to the FEMA Local Mitigation Planning Handbook, *Each community has a unique set of capabilities, including authorities, policies, programs, staff, funding another resources available to accomplish mitigation and reduce long-term vulnerability.* In an effort to assess these capabilities within each Middle Peninsula locality and tribe the regional planner worked with the LPT to gather the necessary information. To provide consistency amongst the localities, the regional planner provided each locality with a Capability Assessment Worksheet to fill out. This work sheet requested feedback on the primary types of capabilities for reducing long-term vulnerability including planning and regulatory, administrative, and technical, financial, and education and outreach.

While each locality and tribe have a variety of tools (i.e. authorities, polices, programs, staff, and funding sources) to implement mitigation goals, objectives, and strategies, each locality and tribe functions differently and therefore has a different capacity to implement tools. Below is a breakdown of the capabilities within in each jurisdiction as it relates to planning and regulatory, administrative, and technical, financial, and education and outreach.

Planning and regulatory capabilities are the plans, policies, codes, and ordinances that prevent and reduce the impacts of hazards. Table 77 shows the types of plans within each Middle Peninsula locality and tribe. This table also identifies, in green, those plans that address hazards to some degree.

Table 77: This a summary table of the plans that are implemented within their locality. The green squares indicate that plans within the localities that address hazards.

Plans	Essex	Gloucester	King & Queen	King William	Mathews	Middlesex	Town of Tappahannock	Town of Urbanna	Town of West Point	Rappahannock Tribe	Upper Mattaponi Tribe
Comprehensive Plan	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No	No
Capital Improvements Plan	Yes	Yes	Yes	Yes	Yes	Yes	No	Yes	No	No	No
Economic Development Plan	Yes	Yes	Yes	No	No	Yes	No	Yes	No	In-Progress	No
Local Emergency Operations Plan	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	In-Progress	No**
Continuity of Operations Plan		In Progress		No	In-Progress	Yes	No	No	Yes	In-Progress	No**
Transportation Plan	Yes	No	Yes	Yes	Yes	No	No	No	No	No	No
Stormwater Management Plan	Yes	Yes	Yes	Yes	Yes	No	Yes	Yes	No	No	No
Community Wildfire Protection Plan		No	No	No	No	No	No	No	No	No	No
Other special plans (e.g. Brownfield's redevelopment, disaster recovery, coastal zone management, climate change adaptation)		Yes	Yes	No	No	No	No		No	No	No**

*Note: Each locality and tribe had the opportunity to provide responses to available capabilities. Therefore, empty squares represent no response from the locality.

**The Upper Mattaponi Tribe has recently hired an Emergency Management Coordinator and plans are started to meet this requirement. Also the UMT is in the process of developing a Climate Vulnerability Assessment.

Table 78: ESSEX COUNTY		
Land Use Planning and Ordinances	Yes/No	1. Is the ordinance an effective measure for reducing hazard impacts? 2. Is the ordinances adequately administered and enforced?
Zoning ordinance	Yes	1. Yes 2. Yes
Subdivision ordinance	Yes	1. Yes 2. Yes
Floodplain ordinance	Yes	1. Yes 2. Yes
Natural hazard specific ordinance (stormwater, steep slope, wildfire)		1. Yes 2. Yes
Flood insurance rate maps	Yes	1. Yes 2. Yes
Acquisition of land for open space and public recreation uses	Yes	Landuse, parks and recreation

Natural hazard specific ordinance (stormwater, steep slope, wildfire)	Yes	Stormwater Ordinance Drought Ordinance
Flood insurance rate maps	Yes	
Acquisition of land for open space and public recreation uses	No	

Table 82: MATHEWS COUNTY		
Land Use Planning and Ordinances	Yes/No	1. Is the ordinance an effective measure for reducing hazard impacts? 2. Is the ordinance adequately administered and enforced?
Zoning ordinance	Yes	1. Yes 2. Yes
Subdivision ordinance	Yes	1. Yes 2. Yes
Floodplain ordinance	Yes	1. Yes 2. Yes
Natural hazard specific ordinance (stormwater, steep slope, wildfire)	No	
Flood insurance rate maps	Yes	1. Yes, effective date 12/09/14 2. Yes
Acquisition of land for open space and public recreation uses	Yes	Only through FEMA HMGP Grant funding
How can these capabilities be expanded and improved to reduce risk?		
<ul style="list-style-type: none"> • The Comprehensive Plan will be reviewed this year and into 2016 for potential amendments to identify future land uses for flood prone areas of the county and to adopt ordinances /policies that will reduce risks from recurrent flooding. • We will consider land use tools such as increased setbacks and increased minimum lot sizes in the zoning ordinance and reducing the number of lots that can be created through subdivision of land to reduce development areas of land in the county subject to flooding. • We will consider tools such as Purchase of Development Rights and Transfer of Development Rights to be included in our County Code of Ordinances to provide incentives to property owners/developers to develop outside of flood prone areas. • We will review the Capital Improvements Plan to identify County-owned buildings/facilities that could be flood proofed or developed outside of Special Flood Hazard Areas. • The Floodplain Management Ordinance could be expanded to identify a freeboard requirement for elevation of structures above the base flood elevation (BFE). 		

Table 83: MIDDLESEX COUNTY		
Land Use Planning and Ordinances	Yes/No	1. Is the ordinance an effective measure for reducing hazard impacts? 2. Is the ordinance adequately administered and enforced?

Table 87: RAPPAHANNOCK TRIBE		
Land Use Planning and Ordinances	Yes/No	Is the ordinance an effective measure for reducing hazard impacts? Is the ordinances adequately administered and enforced?
Zoning ordinance	No	1. NA 2. NA
Subdivision ordinance	No	1. NA 2. NA
Floodplain ordinance	No	1. NA 2. NA
Natural hazard specific ordinance (stormwater, steep slope, wildfire)	No	1. NA 2. NA
Flood insurance rate maps	No	1. NA 2. NA
Acquisition of land for open space and public recreation uses	No	1. NA 2. NA
How can these capabilities be expanded and improved to reduce risk?		
<p>The Rappahannock Tribal Center is in King & Queen County. The Tribe operates within the program parameters and guidelines established by the four counties that make up our Rappahannock Tribe Service Area (RTSA) of King & Queen, King William, Essex, and Caroline Counties.</p> <p>Although the Tribe currently and largely relies on the emergency services provided by our four-county emergency service agencies, the Rappahannock Tribe has recently launched its own Emergency Management department and is currently in the process of developing our preparedness plans and resources.</p>		

Table 88: UPPER MATTAPONI TRIBE		
Land Use Planning and Ordinances	Yes/No	Is the ordinance an effective measure for reducing hazard impacts? Is the ordinances adequately administered and enforced?
Zoning ordinance	No	1. NA 2. NA
Subdivision ordinance	No	1. NA 2. NA
Floodplain ordinance	No	1. NA 2. NA
Natural hazard specific ordinance (stormwater, steep slope, wildfire)	No	1. NA 2. NA
Flood insurance rate maps	No	1. NA 2. NA
Acquisition of land for open space and public recreation uses	No	1. NA 2. NA
How can these capabilities be expanded and improved to reduce risk?		
<p>Currently in capacity building stage, need additional support to create planning and ordinances.</p>		

Administrative and technical capabilities include tools, staff and their skills that can be used for mitigation planning and to implement specific mitigation actions. For smaller jurisdictions without staff resources, enforcing policies, or conducting public outreach may be difficult. Table 89 below indicates whether Middle Peninsula localities and tribes have specific administrative and technical capabilities.

Table 89: This table indicates whether Middle Peninsula localities and tribes have specific administrative, staff, and technical capabilities.

Administration	Essex	Gloucester	King & Queen	King William	Mathews	Middlesex	Town of Tappahannock	Town of Urbanna	Town of West Point	Rappahannock Tribe	Upper Mattaponi Tribe
Planning Commission	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No	No

Hazus analysis	No	No	No	No	No	No	No	Yes	Yes	No	No

*Note: Each locality and Tribe had the opportunity to provide responses to available capabilities. Therefore, empty squares represent no response from the jurisdiction.

Essex County has tree trimming maintenance program with the local electric company helps to reduce risk of power outages. As for the Town of Tappahannock they have access to and benefit from the Chief Building Official, Floodplain Administrator, and Emergency Manger that is employed with Essex County.

Gloucester County identified that staffing within the County is not adequate to proactively enforce regulations, however all staff are trained on hazards and mitigation and that there is coordination between agencies, staff and committees. Gloucester County has a County Hazard Mitigation Committee that meets monthly and aggressively addresses homes in the flood risk zones with FEMA's Hazard Mitigation Grant Program (HMGP) to perform property elevations. The County also works with Dominion Energy for tree trimming maintenance program to reduce risk of power outages.

As the Town of Urbanna is a small coastal community, resources are limited and, in many cases, shared with the Middlesex County. While the Town of Urbanna has access to a Chief Building Official, Floodplain Administrator, Emergency Manger, and a GIS coordinator, Middlesex County employees these people. In addition, the Town of Urbanna benefits from Middlesex County's fire and emergency medical service mutual aid agreements as well as the County's Blackboard connect and Reverse 911 system. Urbanna's Economic Development Plan and Emergency Operations Plans are incorporated into the Middlesex County Plan.

King William County has adequate staffing throughout the county, but identified that the Chief Building Official, Floodplain Administrator, Community Planner, and GIS coordinator are not trained in hazards and mitigation. As for the Town of West Point, it operates separately from the County and only benefits from the King William County warning system in place. Therefore, the Town has full-time staffers, with the exception of the civil engineer, that help to adequately to enforce regulations, however the majority of them are not trained on hazards and mitigation (i.e., Chief Building Official, Floodplain administrator, Community planning and the GIS coordinator).

Mathews County identified that while County positions are filled full time positions Chief Building Official, and the Floodplain Administrator are not staffed adequately. There is more work than staff hours can handle. However, each staffer noted in the above table are trained on hazards and mitigation.

The Rappahannock Tribe operates within the program parameters and guidelines established by the four counties that make up our Rappahannock Tribe Service Area (RTSA) of King & Queen, King William, Essex, and Caroline Counties; however, since the Tribe became federally recognized the Tribe is working on developing programs, mutual aid agreements, and technical resources. The Tribe is currently researching Code Red, Everbridge, and other alert systems and seeking grant funding for such services.

The Upper Mattaponi Indian Tribe is currently in the capacity building stage, and actively working on hiring staff in various roles. The Tribe is investigating advanced hazard warning systems, and until a system can be implemented, tribal citizens can utilize the system utilized by their specific locality. The Tribe is also working on developing programs, ordinances, agreements, and technical resources.

In addition to locality specific capabilities, all Middle Peninsula localities are active members of the Middle Peninsula Planning District Commission (MPPDC). The MPPDC is a regional planning body that can assist localities in grant writing, technical assistance, and executing a project. Depending on the need of the locality or the region, MPPDC staff may assist. For instance, through this AHMP update MPPDC hired a planner to coordinate localities and Tribes to update the AHMP. In part, the Hazus analysis was conducted for all localities and the Tribal Designated Statistical Areas (TDSA), as defined by the US Census, associated with the three federally recognized tribes in the Middle Peninsula region to estimate

potential losses from hurricane winds, flooding and sea level rise. Please see Section 5 for the full Hazus analysis.

Financial capabilities address a jurisdiction's access to or eligibility to use the following funding resources for hazard mitigation. Table 90 below indicates the specific financial capabilities of the localities and tribes in the region.

Table 90: This table indicates whether Middle Peninsula localities and Tribes have specific financial capabilities.

Plans	Essex	Gloucester	King & Queen	King William	Mathews	Middlesex	Town of Tappahannock	Town of Urbanna	Town of West Point	Rappahannock Tribe	Upper Mattaponi Tribe
Capital Improvement Project funding	Yes	Yes	Yes	Yes	Yes	No	Yes	Yes/ Eligible	No	Yes	Yes
Authority to levy taxes for specific purposes	No	Yes	Yes	Yes	No	No	No	No	No	No	
Fees for water, sewer, gas, or electric services	No	Yes	No	No	No	No	No	Yes- Water Only	No	No	No
Impact fees for new development	No	No	No	No	No	No	No	No	No	No	No
Storm water utility fee	No	Yes	No	No	No	No	No	No	No	No	No
Incur debt through general obligation bonds and /or special tax bonds	No	Yes	No	Yes	Yes	No	No	No	No	No	Yes
Incur debt through private activities	Yes	Yes	No	Yes	No	No	No	No	No	No	Yes
Community Development Block Grant	No	No		Yes	Yes	No	No	No	No	No	Yes
Other federal funding programs	No	Yes		Yes	Yes	Yes	Yes	Yes	Yes	Yes, Researching options	Yes
State funding programs	No	Yes	Yes	Yes	No	Yes	Yes	Yes	No	Yes, Researching options	Yes

*Note: Each locality and Tribe had the opportunity to provide responses to available capabilities. Therefore, empty squares represent no response from the locality.

While some financial options are available to localities and tribes, there are some cases in which these resources may not be used to address mitigation. For instance, Essex County could use the CIP to fund mitigation however there is currently no dedicated funds for this effort. If there were CIP could be used for a variety of planning efforts and providing local grant incentives and hazard mitigation work on private properties. According to Gloucester County it has access to stormwater utility fees, incurred debt through general obligation bonds and /or special tax bonds, and debt through private activities and yet Gloucester County cannot utilize these resources specifically for mitigation purposes. For King William County those funding resources identified as “not being used in the past and therefore are not likely to be used in the future” include Authority to levy taxes for specific purposes and incurring debt through private activities. However, King William County also noted funding resources identified as “not being used in the past but could be in the future” to include capital improvement project funding, community development block grant, other funding programs, and state funded programs as well as incurring debt through general obligation bonds and/or special tax bonds.

The Town of Urbanna noted that while it has access to the community development block grants, other federal funding programs and state funding program these programs have not been used locally in the past and they have limited potential to be used in the future due to income eligibility.

Mathews County has utilized the Community Development Block Grant and received for a business District Revitalization project. While this project was not associated with hazard mitigation, Mathews County could use this funding for future hazard mitigation activities. In addition Mathews County has also received funding from the FEMA’s HMGP Program to elevate houses and acquire properties in Special Flood Hazard Areas. The County plans to apply for additional funding from FEMA to elevate houses and acquire properties when the opportunity is available.

The Upper Mattaponi Tribe identified that there is limited availability of funding for tribes. UMT hopes to be able improve financial capabilities to better mitigate against disasters. Also, federally recognized tribes have limited ability to utilize bond obligations.

Education and Outreach capabilities are education and outreach programs, campaigns, and methods already in place to implement mitigation activities and communicate hazard –related information. Table 91 below indicates whether Middle Peninsula localities and Tribes have specific education and outreach efforts.

Table 91: This table indicates whether Middle Peninsula localities have specific education and outreach efforts.

Plans	Essex	Gloucester	King & Queen	King William	Mathews	Middlesex	Town of Tappahannock	Town of Urbanna	Town of West Point	Rappahannock Tribe	Upper Mattaponi Tribe
Local citizen groups or non-profit organizations focused on environmental protection, emergency preparedness, access, and functional needs populations, etc.	Yes	Yes	No	No	No	Yes	No	Yes	No	Yes	No
Ongoing public education or information program (e.g., responsible water use, fire safety, household preparedness, environmental education)	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	No	Yes	No
Natural disaster or safety related school programs	Yes	Yes	Yes		Yes	Yes	No	Yes	No	No	No
StormReady certification	No	Yes (2014-recertification)	No	No	No	No	No	No	No	No	No
Firewise Communities certification	No	No	No	No	No	No	No	No	No	No	No
Public-private partnership initiatives addressing disaster-related issues	Yes	Yes	No	No	No	Yes	Yes	No	No	No	No

*Note: Each locality and Tribe had the opportunity to provide responses to available capabilities. Therefore, empty squares represent no response from the locality.

Essex County has local employees that provide ongoing public education. The County also works with local schools to educate students about water issues, fire safety, and household hazard preparedness. In addition, the County hosts a Disaster Survivor Day each year to teach citizens how to prepare for disasters. The Town of Tappahannock is focused on-going public education regarding water quality and water conservation.

Gloucester County offers a variety of public outreach opportunities for their citizens. As participants in the FEMA CRS program, the County has developed a Program for Public Information (PPI) that includes on-going education about water issues, fire safety, household preparedness, environmental education, and hazards. The Emergency Manager provides this outreach and awareness. The County has developed a public-private partnership within the Gloucester Chamber of Commerce in order to host an annual preparedness symposium. The County's Community Emergency Response Team (CERT) performs outreach and education programs for Spring Storms, Hurricane Preparedness, Flood Program Awareness, and Winter Weather Preparedness. Additionally, the County has incorporated lightning safety in natural disaster and safety-related school programs.

Within Mathews County, the capability to provide education and outreach is limited, yet the school curriculum includes natural disaster and safety-related programs. The Building Official's web page has online information and community presentations regarding building codes and floodplain management.

In Middlesex County, public education is offered through the Office of Emergency Services. The Town of Urbanna has limited staff and funds, and therefore looks to Middlesex County for the majority of its public engagement efforts. However, the Town has a local citizens group, Friends of the Parks (501-3-C organization) that is very interested in resource protection and preservation. The organization is in its formative stages of development but has considerable potential to assist in public outreach.

King William County does not currently have an active public education program, but there is a program currently under development. As for the Town of West Point, they do not have education opportunities for citizens. Staff in West Point would need to be trained on hazard mitigation topics before providing outreach programs.

Over the course of 2022, the Upper Mattaponi Tribe is planning to improve public education and outreach to local citizen groups or non-profit organizations focused on environmental protection, emergency preparedness, access, and functional needs populations.

On a regional level, the MPPDC launched the Fight the Flood Program in 2020. As this program works to connect private landowners facing rising flood waters with tools and funding to contract with specialized businesses who can help evaluate, design, and build mitigation solutions. As part of this program, the website Fight the Flood Program website offers educational material on flooding, flood insurance, and mitigation options.

Existing Mitigation Activities - Structural Projects

Gloucester County's Hurricane Recovery/Mitigation Projects

Gloucester County offers a variety of public outreach opportunities for their citizens. As participants in the CRS program, the County has developed a Program for Public Information (PPI) that includes ongoing education about flooding. The PPI and its outreach efforts are managed by Gloucester's Floodplain Administrator in coordination with the Department of Community Engagement and Public Information (DCEPI). This includes participation in Flood Awareness week each March. The Department of Emergency Management also coordinates with DCEPI for outreach efforts related to fire safety, household preparedness, environmental education, and hazards. The County has developed a public-

private partnership within the Gloucester Chamber of Commerce to host an annual preparedness symposium. The County's Community Emergency Response Team (CERT) performs outreach and education programs for Spring Storms, Hurricane Preparedness, Flood Program Awareness, and Winter Weather Preparedness. Additionally, the County has incorporated lightning safety in natural disaster and safety related school programs.

Gloucester County also has an active and on-going hurricane residential recovery program in the Jenkins Creek and Guinea communities in the southern portion of the county. This is where the York River and Mobjack Bay meet the Chesapeake Bay. The county has successfully applied for and received grant funding from HUD/VDHCD as well as FEMA/VDEM to implement their multi-phased residential mitigation program.

Since 2004, Gloucester County has participated in eleven (11) Hazard Mitigation (HMGP) grants, one (1) Repetitive Flood Claim (RFC) grant, and one (1) Community Development Block Urgent Needs (CDBG) grant. Five HMGP grants are still active. Gloucester County has been very active in the mitigation scene receiving more than 25% of the Virginia's HMA allocations since 2005. All the grants were designed to both assist in the recovery from storm events and to help reduce the damages that could come from future events.

The 2006 CDBG Urgent Needs grant built or rehabilitated, on elevated foundations, 7 homes. The homes were all severe loss homes that were substantially damaged by Isabel. The work under this grant was completed in 2009. Under the FEMA Hazard Mitigation Assistance (HMA) program, the County has acquired 30 parcels and has funding to 2 more parcels under 4 FEMA acquisition grants. Each parcel was cleared of its structures and turned into permanent open space. The land was incorporated into an Open Space Plan. Most of the lots are now acting as natural buffers for the Guinea area. One is to be developed as a walking trail. The County continues to look at additional recreation options for the spaces as well. In all the County owns 82 acres acquired under the FEMA HMA grant.

The FEMA HMA grants have 85 funded elevations since 2004 with 60 on new foundations. Gloucester had 7 FEMA elevation grants and 1 FEMA RFC grant. Gloucester also had 4 owners have withdrawn and we are working on completing 21 elevations. All the current grant work should be complete by next summer (2017). The elevation work places the home on a new foundation that is at least two feet above the FEMA required base flood elevation level (Figures 75-80). Although most of the homes in the grants have been in Guinea area residents in Ware Neck, Harcum (Painkatank River), Glass, and Robins Neck have also participated in the program.

The work by the County has helped reduce its total number of repetitive and severe repetitive loss lists. Of the properties in the FEMA HMA grants, 3 acquired properties were identified as repetitive loss however none of them are severe repetitive loss properties. Sixteen on the elevated homes were repetitive loss properties, 4 of which are severe. All 7 CDBG homes were considered severe repetitive loss homes. In total we have mitigated nineteen repetitive loss properties and 11 severe repetitive loss homes. County's Building Office tracks and has completed all the AW-501 worksheets in order to report to FEMA the completed mitigation activities for these homes.

The total funds allocated by all the grants is just under \$12 million dollars. This includes just over \$8.5 million plus in federal funds and over \$2.5 million in state funds for the FEMA grants and \$750,000 in funds for the CDBG program.

Most recently, in July of 2015, Gloucester County received \$331,594 of HMGP funding, which is 34% of total state funding. This funding will be used to elevate 2 homes and will allow 2 properties to be

acquired. In both cases this will minimize the risk of future flooding to citizens. Gloucester County has joined into a partnership with the United States Geological Service (USGS) by installing a Tide Gage on the Severn River that is used to monitor flood conditions in the southeastern section of the County.

Figure 79: House in Hayes, Gloucester County - BEFORE elevation.

Figure 80: House in Hayes, Gloucester County - AFTER elevation.

Mathews County Mitigation Projects

The following are a list of FEMA HMGP grants Mathews County has received for elevation of houses and acquisitions of properties over the past five (5) years.

Project Number SLR-2009-115-002

This was a grant to elevate one house under a Severe Repetitive Loss Program funding the County received from FEMA. The total project budget for this elevation was \$207,942.00. This house elevation was advertised for bid, a contract was awarded, and the house was elevated above the Base Flood Elevation (BFE) for the Special Flood Hazard Area (SFHA) where the property is located. The property owner provided a ten (10) percent match of the contractor's bid amount using his funds. Ninety (90) percent of the cost for elevating the house was paid for out of the grant.

This house is on FEMA's Severe Repetitive Loss list.

Project Number SLR- 1987-008

The county applied for funding after the remnants of Tropical Storm Ida damaged properties in Mathews in November 2009. The county was awarded funding in the amount of \$889,825 to acquire one property and elevate eight (8) houses. The County awarded contracts to elevate four (4) houses and the work has been completed. One property was acquired and there is one house remaining to be elevated. Three houses were not elevated because the eligible property owners chose not to participate in the grant program.

Three of the four houses that were elevated are on FEMA's Repetitive Loss list. The property that was acquired is on the list, and the one house remaining to be elevated is on the list.

Project Number HGMP-4042-002

The County applied for funding subsequent to the Louisa Earthquake. The County was awarded funding in the amount of \$1,923,973 to elevate nine (9) homes and acquire three (3). All twelve (12) homes were located throughout the County, but primarily in the southern and western portions of the County that were most susceptible to flooding.

To date eight (8) homes have been elevated. One house was acquired. Three (3) property owners were removed from the grant program or decided not to participate.

Project Number HMGP – 4045 – 002

The County applied for funding subsequent to the Tropical Storm Lee event. The County was awarded funding in the amount of \$1,122,865 to elevate nine (9) homes. All nine (9) homes are located throughout the County, but primarily in the eastern and southern portions of the County that are most susceptible to flooding. To date, three homes have been elevated. Five property owners are not participating in the grant program. Two houses that were elevated are on the Repetitive Loss List.

Project Number HMGP – 4092-002

The County applied for funding subsequent to the Hurricane Sandy event. The County was awarded funding in the amount of \$1,774,360 to elevate eleven (11) homes and acquire one property. All twelve (12) homes were located throughout the County, but primarily in the eastern and southern portions of the County that were most susceptible to flooding. To date, three (3) homes have been elevated (Figures 81 and 82). Two homes have been awarded a

contract to be elevated and four homes are ready to be advertised for bid. One house is ready to be acquired. Two property owners are not participating in the grant program.

One house that was elevated is one the Repetitive Loss list and one house that is ready to be advertised for bid is on the list.

Figure 81: Photos of an elevated home in Moon, Va during (left) and after (right) (Mathews County, 2015).

Figure 82: Photos of an elevated home in Port Haywood during (left) and after (right) being elevated (Mathews County, 2015).

Town of West Point Hurricane Recovery/Mitigation Projects

In March of 2010 the Town of West Point applied for funding through the Virginia Department of Emergency Management Hazard Mitigation Grant Program. The Town proposed a project to elevate a home on Kirby Street to base flood elevation plus 1 foot to relocate the home outside the 100-year flood plain. This would reduce flood risk from major storms (i.e. Hurricane Isabel) as well as minor nor'easters.

Upon receiving notice of funding in 2013, the Town requested bids to complete the elevation project. In 2015 the project was finally complete. Below are pictures of the house before and after elevation (Figure 83 and 84).

Figure 83: Photos of a home in the Town of West Point before being elevated.

Figure 84: Photos of a home in the Town of West Point after being elevated.

In conjunction with this elevated home, the Town of West Point received funding through the HMA to relocate the Public Works Building on 7th Street to King William Avenue due to repetitive flooding. This move created a more stable working environmental for employees.

Both the Kirby Street property and the Publics Works Building were on the repetitive loss list prior to mitigation action.

The Town of West Point also received funding through FEMA and VDEM to acquire multiple properties – including two properties on 1st Street, one property on 2nd Street, one property on Glass Island Road as well as one property on 5th street. The 5th Street property was on the repetitive loss list.

Observations from Existing Structural Mitigation Projects

Due to the engineering and other technical aspects of structural mitigation projects as well as the limited number of county personnel available to undertake these new initiatives, Gloucester County has hired a consulting firm, Community Planning Partners, to assist them with their grant funding applications, project engineering/design as well as construction management of their multi-phased mitigation projects. Mathews County has hired the same consulting firm as Gloucester and have a total of 47 properties either they have mitigation using HMA funds or are in the process of mitigating.

To date no other Middle Peninsula locality has undertaken structural mitigation projects. However, 5 private property owners in the town of Urbanna, with their own financial resources, have rebuilt their homes that were damaged by flooding from Hurricane Isabel. These structures were rebuilt in accordance with the locality's floodplain regulations, and they were elevated by either being built on stilts or with block crawl spaces having the required vented openings in the foundation. When Middle Peninsula localities undertake future structural mitigation projects, it can be expected that they will continue to utilize the services of either consulting engineering firms or local agencies that have the technical capacity to undertake housing elevation projects.

The localities have the capacity to offer operational support services such as office space and some administrative support services in their role as the official FEMA grantee. Once again, project management will in all likelihood be a contracted service due to the dependency on grant funding and the technical complexity of elevating houses.

Rappahannock Tribe Mitigation Efforts

Ongoing emergency management/recovery /mitigation project efforts by the Rappahannock Tribe include:

- The delivery emergency medical supplies, food, and medicine to home bound Tribal members
- PPE supplies are now available, and some have been distributed to Tribal members. The remaining supply on site and available to members. Staff members handle the requests for medical supplies, food, and medicine
- A newly hired Director of Emergency Management is reviewing the service area's hazards, key stakeholders, and available resources. The Director is meeting with regional, state, and federal emergency managers and hazard mitigation planners to support the development of the Rappahannock Tribe's Emergency Operation Plan (EOP). A complete interim key contact document was developed to facilitate communication, planning, and response coordination during disaster events. A more complete EOP is currently under development and is anticipated to be completed by October 1, 2021

The Rappahannock Tribe has constructed a new operations building to house the Emergency Management Department. The building is roughly 90% complete, but the Tribe is still waiting for contractors to finalize the build before being able to occupy the new facility. The Tribe has obtained Broadband Internet services and have upgraded phones to be used throughout the emergency management operations building. They have increased their phone call capacity from 2 simultaneous calls to the ability to handle up to 29 simultaneous calls.

The Director of Emergency Management has also identified and communicated to Tribal members the need to develop volunteer teams for emergency response staffing. Currently recruiting class instructors and interested volunteers participate in the following programs:

- CERT – Community Emergency Response Teams
- Welfare Check/Member Assistance – General assistance for Tribal Members
- Emergency Operations Center (EOC) – Coordination of disaster response
- Emergency Evacuation Center - Provide for the basic needs for 100 displaced persons
- Training in emergency care and emergency response - First Aid, CERT, EMTs

Finally, a Ford Explorer has been purchased and is in use by the Emergency Management Department. The vehicle is temporarily equipped by the Emergency Management Director's personal emergency response equipment. Plans include obtaining Tribal owned emergency equipment to outfit the vehicle.

Upper Mattaponi Tribe Existing Mitigation Efforts

The Upper Mattaponi Indian Tribe has focused heavily on ensuring tribal citizens are prepared throughout the coronavirus pandemic. COVID-19 care packages have been distributed regularly over the last two years equipped with test kits and personal protective equipment.

The newly hired Emergency Management Coordinator is meeting with key stakeholders, including county, state, and federal emergency managers, and partners. Through these partnerships, the Emergency Management Coordinator is working on developing an official Tribal Emergency Operations Plan. Time-sensitive Emergency Response Plans have been created to respond to emergencies as they occur.

National Flood Insurance Program (NFIP)

The AHMP Steering Committee was given an opportunity to share progress made on implementing the National Flood Insurance Program (NFIP) locally. Information was received through a spread sheet developed by FEMA. The questions inquire about actions taken within the communality with regards to floodplain identification and mapping, floodplain management, and flood insurance.

As all 9 Middle Peninsula jurisdictions participate in the NFIP as administered by FEMA, each jurisdiction has implemented local floodplain ordinances that include requirement that comply with the minimum FEMA – or in some case exceed the minimum requirements prescribed by FEMA. As seen in Section 7 of this plan update, 8 of the 9 Middle Peninsula jurisdictions have implemented Base Floor Elevation (BFE) regulations that require structures to be an additional 1' or over BFE. The 8 Middle Peninsula jurisdictions that require this more restrictive regulation are Essex, Gloucester, King William, King & Queen, and Middlesex Counties and the Towns of Urbanna, West Point, and Tappahannock.

Enforcement of the floodplain regulations are undertaken by the locality's Zoning Administrator and Building Official.

All 9 Middle Peninsula localities remain in full compliance with their floodplain and building code regulations as evidenced by their periodic reviews of their NFIP related activities by FEMA and VDCR evaluators.

For additional details about locality NFIP, please visit Appendix H.

Stormwater Management Ordinances

During the 2012 General Assembly session, the Virginia General Assembly passed legislation (HB 1065) that requires localities throughout the state to develop, adopt, and implement local a Virginia Stormwater Management Program (VSMP) by July 1, 2014. This bill integrated elements of the Erosion and Sediment Control Act, the Stormwater Management Act, and the Chesapeake Bay Preservation Act so that these regulatory programs could be implemented in a consolidated and consistent manner, resulting in greater efficiencies (one-stop shopping) for those being regulated. However, in 2014, additional action by the General Assembly, with the passing of House Bill 1173/Senate Bill 423, localities were provided an “Opt-Out” option that would leave the administration of the VSMP to the Virginia Department of Environmental Quality (DEQ) instead of local administration. As a result, only Gloucester County has chosen to develop and administer a local VSMP. All other localities within the Middle Peninsula as decided to “opt-out” and have DEQ administer the program. While this is the status of the VSMP, the program is still influx as DEQ wants to relinquish administrative power and give it back to the localities.

Please see Appendix L for Gloucester County’s Stormwater Management Ordinance.

Future Mitigation Capabilities and Opportunities

Local governing bodies are charged with protecting the health, safety, and welfare of its residents. The 6 Boards of Supervisors and the 3 Town Council are legally empowered to develop ordinances and policies to implement this charge based on sound and comprehensive review and analysis of flood mitigation proposals and strategies.

In general, the localities will continue to facilitate federal and state grant funded flood mitigation projects for private property owners with the understanding that the property owners will pay for all costs – construction and administration – that are not covered by grant funds.

Public infrastructure flood mitigation projects will be undertaken by the local governing bodies when they determine that the benefits outweigh the costs. Typically, these projects will be incorporated into the locality’s Capital Improvement Program and considered for funding by the governing body during their annual budget development and approval process.

Section 7 - Review of Strategies from the 2016 Middle Peninsula All Hazards Mitigation Plan

As Middle Peninsula localities transition from the 2016 AHMP strategies into the 2021 AHMP strategies, it is critical to look at the progress made over the last 5 years to provide a clearer direction moving forward. Therefore, to capture the progress made by localities, the Regional Planner reviewed the 2016 Mitigation Strategies with the AHMP LPT and requested status updates on each 2016 mitigation strategy. Tables 91 to 99 record locality responses and strategy statuses. Please note that the shaded red boxes identify the completed strategies.

2016 Strategy	2016 Priority	Status	Comment
1.1.1	Moderate	On-going	The County Building Official administers the Floodplain Management Ordinance for current and new structures.
1.1.2	Moderate	On-going	Ch. 18 of the Floodplain Management Ordinance is being used to manage this.
1.1.5	Low	In-progress	Regional Hampton Road Evacuation Plan
1.1.6	Low	In-progress – will be completed 2017	Regional Hampton Road Evacuation Plan
1.1.8	High	On-going	Board of Supervisors reviewed this at their August 2021 meeting
1.1.9	Low	In-progress	Have not started.
1.1.10	Moderate	On-going	Elevation & Construction Standards are in Ch. 18 of county ordinances. The Floodplain Management Ordinance states Free Board as 1ft elevation BFE (Base Flood Elevation) and regulates this.
1.1.11	Moderate	On-going	Ch. 18 of the Floodplain Management Ordinance enforces this as well as the USBC.
1.1.13	Low	In-progress	There are no plans to promote at this time.
1.1.15	Moderate	On-going	Wetlands Board approvals for shoreline erosion control measures. Encourage citizens to participate in the Middle Peninsula Fight the Flood Program.
2.2.1	Low	On-going	Mutual aid contract is renewed once a year
2.2.2	Low	On-going	Mutual aid contract is renewed once a year
3.1.2	Low	Delayed	There are no plans to promote at this time.
3.1.3	Low	In-progress	Power company maintains their own rights-of-way
3.1.5	Moderate	On-going	Being discussed for the future.
3.1.6	Moderate	On-going	Being discussed for the future.
3.1.8	Moderate	On-going	Being discussed for the future.
3.2.1	Moderate	On-going	GIS coordinator incorporates this into county GIS maps
3.2.2	Low	On-going	Refine and update data sets when changes are made. Also, during the 2021 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2), but 2020 Census was not included.
4.1.1	Low	On-going	Will be utilized when plan is adopted

Table 92: Town of Tappahannock – 2016 Mitigation Strategy status			
2016 Strategy	2016 Priority	Status	Comments
1.1.3	Low	Canceled	All pump stations are enclosed in small buildings and the pumps are above ground. The pump stations have power and flood alarms. There are no plans to relocate the stations at this time
1.1.5	Low	In-progress	Regional Hampton Road Evacuation plan
1.1.7	High	Delayed	Delayed because of VDOT
1.1.9	Low	Delayed	Delayed because of Essex County
1.1.10	Moderate	On-going	Elevation & Construction Standards are in Ch. 18 and the Floodplain Management Ordinance states Free Board, 1ft elevation BFE (Base Flood Elevation) and regulates this.
1.1.11	Moderate	On-going	Ch. 18 the Floodplain Management Ordinance enforces this as well as the USBC.
1.1.15	Moderate	In-Progress	Encourage citizens to participate in the Middle Peninsula Fight the Flood Program.
2.2.1	Low	On-going	Mutual aid contract is renewed once a year
2.2.2	Low	On-going	Mutual aid contract is renewed once a year
3.1.2	Low		There are no plans to promote at this time.
3.1.3	Low		Power company maintains their own rights-of-way
3.1.5	Moderate	On-going	Being discussed for the future.
3.1.6	Moderate	Not started	Being discussed for the future.
3.2.2	Low	In-progress	1. During the 2021 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2). 2..2020 Census was not included in HAZUS.
4.1.1	High	On-going	Adopted a Floodplain overlay district as a component of the County's zoning ordinance

Table 93: Gloucester County – 2016 Mitigation Strategy Status			
2016 Strategy	2016 Priority	Status	Comments
1.1.1	High	On-going	Gloucester has Hazard Mitigation Management Team consisting of various staff members to oversee FEMA grant projects. The Projects are managed by the Engineering Services Department. The majority of projects are residential elevations.
1.1.2	Low	On-going	Outreach efforts are conducted in general but no targeted efforts towards commercial water dependent buildings. These are a very small portion of the greater total of flood risk properties.
1.1.3	High	On-going	Grant applications have been submitted and declined in recent years for pump station relocation. BRIC, as a new program, may provide a path for funding.
1.1.4	Low	Canceled	At this time, the County does not participate in FEMA acquisitions.
1.1.5	Moderate	Not Started	VDOT's Responsibility
1.1.6	Moderate	Not Started	VDOT's Responsibility; The County regularly encourages VDOT to conduct flood resilient efforts on secondary roadways with significant flooding during nuisance tides.
1.1.7	Moderate	On-going	VDOT's Responsibility;
1.1.8	Moderate	On-going	DCR and FEMA regularly review Gloucester's ordinances in accordance with the CRS program. An upcoming review will occur this summer (2021) as part of an ordinance modification.
1.1.11	High	On-going	Gloucester's Building Inspection department regulates development in the floodplain in coordination with the Floodplain Administrator.
1.1.13	Moderate	On-going	Outreach has not been done due to lack of time/manpower.
1.1.15	Low	In-progress	Promotes public education and awareness through current floodplain management committee and through the Middle Peninsula Fight the Flood Program.
1.1.18	High	Completed	Created a GIS layer of data showing pond locations, size, inspection data, and dry hydrant information.
1.1.19	High	On-going	Mitigation strategies are regularly considered when updating plans/programs.
2.2.1	Moderate	Completed & On-going	In 2018 a formal MOA between Gloucester and other MPNN localities was established that provides for EOC & response support if local emergency exceeds local capacity. Formal mutual aid agreements are in place with some neighbor jurisdictions. Potentially additional agreements could be established. Would need to determine need.
2.2.2	Moderate	Completed & On-going	In 2018 a formal MOA between Gloucester and other MPNN localities was established that provides for EOC & response support if local emergency exceeds local capacity. Formal mutual aid agreements are in place with some neighbor jurisdictions. Potentially additional agreements could be established, but the need would have to be determined.
3.1.2	Moderate	On-going	
3.1.3	Moderate	On-going	Grid hardening projects have been underway over the last year through Gloucester, providing redundancy in power supply, also clearing rights of way in many areas.
3.1.4	Moderate	On-going	Gloucester community engagement and Emergency Management departments have been working with Hampton Roads PDC in efforts to promote the new Get Flood Fluent website. Also know your zone info is regularly

SECTION 7 - REVIEW OF STRATEGIES FROM THE 2016 MIDDLE PENINSULA ALL HAZARDS MITIGATION PLAN (AHMP)

			sent to public. Additionally, encourage citizens to participate in the Middle Peninsula Fight the Flood Program.
3.1.5	High	On-going	<p>Gloucester County participates in the State's Flood Awareness Week through various media platforms.</p> <p>Gloucester County also send 'RLA' Letters to property owners within the CRS identified Repetitive Loss Areas (Well over 500 structures).</p> <p>Gloucester is working towards sending letters to all homeowners within the regulatory floodplain and SLOSH model Hurricane Zones to notify individuals of their flood zone and hurricane risks. This includes homes outside of the regulatory floodplain that could be flooded by a Cat. I hurricane.</p>
3.1.6	Moderate	On-going	Gloucester Volunteer Fire and Rescue also trained response personnel in ice rescue.
3.1.7	Moderate	On-going	New programs have been developed and implemented in partnership among Community Engagement, Public Information, and Flood Plain Manager.
3.1.8	Moderate	On-going	Work with Virginia Department of Forestry on public awareness on fire prevention every October.
3.2.2	Low	In-progress	<ol style="list-style-type: none"> 1. During the 2021 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2). 2..2020 Census was not included in HAZUS.
4.1.1	High	In-progress	Adopted a floodplain overlay district as a component of the County's zoning ordinance.

Table 94: King and Queen County -2016 Mitigation Strategy Status			
2016 Strategy	2016 Priority	Status	Comments
1.1.6	Moderate	On-going	Route 17 at Parkers Marina completed and now open. Road was raised.
1.1.8	Moderate	Every 2-years	
1.1.9	Low	Canceled	Lack of manpower and funding at the present time
1.1.10	Low	Completed	Adopted new FIRM maps May of 2016 and new code to include 2' of freeboard. Still require flood elevation certificates.
1.1.13	Moderate	On-going	Will continue to work with local TRSWD to obtain farm pond dams when needed.
1.1.15	Low	Completed May 2016	Adopted new FIRM maps May of 2016 and new code. VE flood zone has a higher construction requirement.
1.1.19	Low	Completed	Zoning & Planning has mitigation strategies for development in floodplains and/or RPA buffers with approved WQIA.
2.2.1	High	On-going	Mutual aid agreements exist between various VFDs, Intergovernmental agreements exist for sharing emergency management resources
2.2.2	High	On-going	Mutual aid agreements exist between various VFDs, Intergovernmental agreements exist for sharing emergency management resources
3.1.2	Moderate	Not Started	Roadways in VDOT system needs ditch cleanouts to prevent roadway flooding
3.1.3	Moderate	In-Progress	REC does a great job of this
3.1.4	Low	Completed 2015-2016	Held open house opportunities for the public when new FIRM maps are proposed for adoption. Notified the public via US Mail and/or public notice in the paper.
3.1.6	Moderate	Not started	
3.1.8	Moderate	On-going	
3.2.1	Moderate	Completed	New FIRM maps adopted May of 2016, provided GIS mapping online for public view/use, which includes flood mapping
3.2.2	Low	In-progress	1. During the 2021 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2). 2..2020 Census was not included in HAZUS.
4.1.1	High	In-Progress	Adopted a floodplain overlay district as a component of the County's zoning ordinance.

Table 95: King William – 2016 Mitigation Strategy Status			
2016 Strategy	2016 Priority	Status	Comments
1.1.1	Low	On-going	Structures would need to be constructed above the base flood elevation and no structures are permitted in the 100 ft. RPA.
1.1.4	Low	On-going	
1.1.5	High	On-going	Board of supervisors and VDOT
1.1.6	Moderate	On-going	Board of supervisors and VDOT
1.1.8	Moderate	In-Progress	Updating the ordinance; to be adopted in September 2021
1.1.9	High	In-Progress	Expected to be completed in 2022.
1.1.10	Low	Completed- Spring 2015	Adopted 1.5' freeboard
1.1.11	High	On-going	Any construction in the flood zone is required to meet all flood requirements of the building code, i.e. flood vents and elevation. A certificate of elevation is also required.
1.1.12	Low	On-going	
1.1.13	High	On-going	
1.1.15	Low	On-going	Building code and prohibit construction in wetlands
1.1.18	High	In-progress	GIS layer developed; Added stormwater BMP layer
1.1.19	High	In-progress	Changes are currently being made to the ordinance and the comprehensive plan.
2.2.1	High	Completed	Verbal mutual aid agreement with adjoining counties, dare
2.2.2	High	Completed	Verbal mutual aid agreement with adjoining counties, dare
3.1.2	High	Not started	
3.1.3	High	w/in 1 years	
3.1.4	High	Not started	Very little development around flood plains
3.1.5	High	Completed	Have information available in the planning dept.
3.1.6	High	In-Progress	Information to be provided on the county web-page. This is expected to be completed in November 2021.
3.1.7	Moderate	In-Progress	Provide a handout along with flood insurance information and ratings. Also, the Middle Peninsula Fight the Flood Program offers educational material to property owners. This is expected to be completed in 2022.
3.1.8	Moderate	In-Progress	On the county website and facebook during fire season, department of forestry
3.2.2	High	In-progress	1. During the 2021 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2). 2..2020 Census was not included in HAZUS.
4.1.1	High	In-progress	Revised Comprehensive. Plan; proposed to be completed and adopted in January 2022.

Table 96: Town of West Point -2016 Mitigation Strategy Status			
2016 Strategy	2016 Priority	Status	Comments
1.1.1	Moderate	On-going	The HMA application (made in 2010) to elevate a home in the Town of West Point was not funded by FEMA. Since the Towne has applied for funding over the last several years and since it takes a substantial amount of staff time to complete these applications this outcome is discouraging and applications for similar project may not be pursued in the future.
1.1.2	High	Annually	Building department reviews all plans to make sure they meet building code.
1.1.3	Moderate	Completed	Relocated public works building (ie. Second street Pump Station, Bagby Street and Mattaponi Ave Pump Station, and Thompson Avenue Pump Station at West Point Creek) to higher ground.
1.1.5	Low	Not Started	
1.1.7	Moderate	On-going	Town and HRSD continues to study these areas.
1.1.8	Moderate	Completed	Done by Charles Kline with Virginia Department of Conservation and Recreation in 2015.
1.1.9	Moderate	Completed	Completed with Mary Carson Stiff at Wetlands Watch in 2019.
1.1.11	Moderate	Ongoing	Review of zone and building applications
1.1.15	Low	Not Started	
2.2.1	High	Partially - Completed	In 2009, the Rappahannock Volunteer Firefighters Association signed a mutual agreement, but this only consists of a few volunteer departments within the locality (Appendix M). This is not a mutual aid agreement at the County/Town level.
2.2.2	High	Partially - Completed	In 2009, the Rappahannock Volunteer Firefighters Association signed a mutual agreement, but this only consists of a few volunteer departments within the locality (Appendix M). This is not a mutual aid agreement at the County/Town level.
3.1.2	Moderate	On-going	Directing the public to the Middle Peninsula Fight the Flood Program to improve chronic flooding problems.
3.1.3	Moderate	Not started	
3.1.4	Moderate	Completed	Directing citizens to the Middle Peninsula Fight the Flood Program
3.1.5	Moderate	Completed	Directing citizens to the Middle Peninsula Fight the Flood Program
3.1.6	Moderate	Not started	
3.1.7	Moderate	Not started	
3.2.1	Moderate	On-going	Received new GIS information from FEMA, updated as received from FEMA
3.2.2	Low	In-progress	1. During the 2021 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2). 2..2020 Census was not included in HAZUS.
4.1.1	High	On-going	Adopted a Floodplain overlay district as a component of the County's zoning ordinance

SECTION 7 - REVIEW OF STRATEGIES FROM THE 2016 MIDDLE PENINSULA ALL HAZARDS MITIGATION PLAN (AHMP)

Table 97: Mathews County- 2016 Mitigation Strategy Status			
2016 Strategy	2016 Priority	Status	Comments
1.1.1	High	In-progress/ ongoing	Four FEMA HMGP grants were awarded to the County for the elevation of houses for thirty-four repetitive loss properties and acquisition of three properties. The elevations and acquisitions in these four grants are in progress and are expected to be completed in 2017. Another FEMA HMGP grant for one severe repetitive loss property was used to elevate the house in 2014.
1.1.2	Moderate	Not started	Delayed because of lack of funding
1.1.3	Moderate	In progress	Provided additional shoreline stabilization material at the base of the New Point Comfort Lighthouse in Mathews County. Also, the County worked to retrofit the fire station in Mathews County to mitigate the impacts of flooding hazards. The fire station in Bohannon was relocated, the station in Gywnn's Island was retrofitted and currently the County is actively seeking real estate to relocate the Mathews Court House fire station.
1.1.4	Moderate	In-progress/ ongoing	FEMA HMGP funds have been used to acquire one repetitive loss property. Two others are in the process of being acquired
1.1.5	Low	On-going	VDOT's responsibility
1.1.6	Moderate	Not started	Delayed because of lack of VDOT funding
1.1.7	Low	On-going	VDOT's responsibility
1.1.8	Low	On-going	
1.1.9	Low	Not started	Delayed because of lack of staff to apply for inclusion and ongoing participation in the CRS Program.
1.1.10	Low	Delayed	Increased elevation requirements proposed for updated floodplain management ordinance, but not adopted. Potential to be addressed in the future.
1.1.11	High	In-progress/ ongoing	County's Building Official is enforcing adopted Floodplain Management Ordinance. Zoning amendments will be considered by the Planning Commission to address recurrent flooding after the five-year review of the Comprehensive Plan.
1.1.13	Moderate	Not started	No request has been made to the NRCS or Tidewater Soil and Water Conservation District for an inventory of farm pond dams.
1.1.15	Low	In-progress/ ongoing	The County's Wetlands Projects Coordinator and the Wetlands Board are promoting "Living Shorelines" as a shoreline erosion control method to property owners by utilizing information provided by VIMS and VMRC.
2.2.1	High	On-going	Currently participating in mutual aid no formal MOU's
2.2.2	High	On-going	Currently participating in mutual aid no formal MOU's
3.1.2	Moderate	In-progress/ ongoing	The County has contracted a third-party to clean outfall ditches experiencing drainage issue. Maintenance is periodically performed by VDOT on ditches within their right-of-way.
3.1.3	Low	Not started	No request has been made to Dominion Power for information or guidance about removing vegetation near power lines. Dominion does maintain certain vegetation clearances near major powerlines throughout the County without any request needed from the County
3.1.4	High	In-progress/ ongoing	Information is made regularly available through the County Website and various social media platforms
3.1.5	High	In-progress/ ongoing	The Department of Planning & Zoning continues to accept applications for the next possible round of FEMA HMGP funding.
3.1.6	Low	Not started	Delayed due to Lack of Staff and Funding

SECTION 7 - REVIEW OF STRATEGIES FROM THE 2016 MIDDLE PENINSULA ALL HAZARDS MITIGATION PLAN (AHMP)

3.1.7	High	In-progress/ ongoing	Department of Planning & Zoning staff provided this information to residents when the Comprehensive Plan was updated in 2010. On-going information has been provided to the Planning Commission regarding this topic in advance of the five-year review of the Comprehensive Plan.
3.1.8	Moderate	Not started	Delayed because of lack of staff
3.2.2	Low	In-progress	1. During the 2021 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2). 2..2020 Census was not included in HAZUS.
4.1.1	High	On-going	

Table 98: Middlesex County -2016 Mitigation Strategy Status			
2016 Strategy	2016 Priority	Status	Comments
1.1.1	Moderate	On-going	Managed by Staff on an on-going basis
1.1.2	Low	Not Started	Delayed because lack of staff; any concerns are forwarded to VDOT
1.1.4	Low	Not Started	
1.1.5	High	On-going	Continue to coordinate with VDOT and utilize plan as required.
1.1.6	Low	On-going	Continue to coordinate with VDOT
1.1.8	High	On-going	Active program; ordinance adopted.
1.1.9	Low	Not Started	Delayed because lack of staff
1.1.10	High	Completed	Floodplain Ordinance Adopted
1.1.11	High	On-going	Managed by staff on an on-going basis
1.1.13	Moderate	On-going	Managed by staff when required
1.1.15	High	On-going	Managed by staff and Wetland Board
1.1.18	High	Not Started	Delayed because of lack of staff
1.1.19	Moderate	On-going	Managed by staff as required
2.2.1	High	On-going	Middle Peninsula Emergency Management MOU
2.2.2	High	On-going	Middle Peninsula Emergency Management MOU
3.1.2	Moderate	On-going	This occurs as needed
3.1.3	Moderate	On-going	Managed by Staff on an as needed basis
3.1.4	High	On-going	Managed by staff during public education deliveries
3.1.5	High	On-going	This occurs as requested
3.1.6	Moderate	On-going	Managed by staff during public education deliveries
3.1.7	Moderate	Not Started	Reactionary only
3.1.8	Moderate	On-going	Managed by Staff during public education deliveries
3.2.1	Moderate	Completed	
3.2.2	Low	In-progress	During the 2021 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2) and 2010 Census was included in HAZUS. 2020 Census data will be used for the next AHMP update.
4.1.1	High	In-progress	Adopted a floodplain overlay district as a component of the County's zoning ordinance.

2016 Strategy	2016 Priority	Status	Comments
1.1.1	Low	On-going	Greatly increased freeboard requirements in new floodplain ordinance beyond minimum requirement.
1.1.2	Moderate	On-going	
1.1.9	Low	Not Started	
1.1.11	High	On-going	Enforcement of all floodplain/zoning/building regulations in flood zones is actively pursued on an on-going basis.
1.1.15	Low	On-going	Conducted jointly with Middlesex County
1.1.19	Moderate	On-going/In-progress	
2.2.1	High	Partially - Completed	In 2009, the Rappahannock Volunteer Firefighters Association signed a mutual agreement, but this only consists of a few volunteer departments within the locality (Appendix M). This is not a mutual aid agreement at the County/Town level
2.2.2	High	Partially - Completed	In 2009, the Rappahannock Volunteer Firefighters Association signed a mutual agreement, but this only consists of a few volunteer departments within the locality (Appendix M). This is not a mutual aid agreement at the County/Town level
3.1.2	Moderate	On-going	Educational materials periodically placed on web site to encourage maintenance.
3.1.3	Moderate	In-progress	Dominion Energy is currently replacing electrical lines/transformers to increase power for town and reduce power outages. New poles are also being installed.
3.1.6	Low	In-progress	Work with First Responder agencies to provide educational information.
3.1.7	Low	In-progress	Provide information on webpage and provide hand-outs. Also, direct citizens to the Middle Peninsula Fight the Flood Program.
3.2.2	Low	In-progress	1. During the 2015 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2). 2. 2020 Census data will be in the next HAZUS.
4.1.1	High	In-progress	Adopted a Floodplain overlay district as a component of the County's zoning ordinance

The following is a more descriptive version of the mitigation strategies that have been implemented by Middle Peninsula jurisdictions:

Strategies that have been completed since 2016 by the local governments under **Goal I: Prevent Future Hazard Related Losses** include the following:

1. Gloucester County created a GIS layer of data showing pond locations, size, inspection data, and dry hydrant information.
2. The Town of West Point relocated public works buildings (i.e. Second Street Pump Station, Bagby Street and Mattaponi Ave Pump Station, and Thompson Avenue Pump Station at West Point Creek) to higher ground. Additionally, Mathews County provided additional shoreline stabilization material at the base of the New Point Comfort Lighthouse and retrofitted the fire stations to mitigate the impacts of flooding hazards.
3. King & Queen County, Middlesex County, and Town of Urbanna adopted new code to include 2 feet of freeboard; King William County adopted 1.5 feet freeboard in Spring of 2015.
4. King & Queen County adopted the new FIRM maps in May of 2016.
5. Town of West Point worked with Virginia Department of Conservation and Recreation to have their floodplain ordinance reviewed.

SECTION 7 - REVIEW OF STRATEGIES FROM THE 2016 MIDDLE PENINSULA ALL HAZARDS MITIGATION PLAN (AHMP)

6. Town of West Point utilized the research completed by Wetlands Watch to investigate the FEMA Community Rating System Program. Based on findings the Town of West Point did not find participation in the CRS Program to be beneficial.
7. Mathews County and Town of West Point applied to receive funding through the FEMA HMGP. The Town of West Point application was not funded; however, 4 applications from Mathews were funded to elevate houses for 34 repetitive loss properties and the acquisition of three properties.
8. The development and launching of the Middle Peninsula Fight the Flood Program has become a regional resource for all Middle Peninsula localities and tribes to address flooding on private property and to provide financial resources to implement flood management solutions (i.e. nature-based solutions and living shorelines).

Strategies that have been completed by the local governments under **Goal 2: Improve Community Emergency Management Capability** include the following:

1. Each year the mutual aid agreements amongst all Middle Peninsula localities are renewed to coordinate the region's fire and emergency medical units to ensure a quick and efficient response to severe weather events.
2. Formalized mutual aid agreements amongst all Middle Peninsula localities to coordinate the region's fire units to ensure a quick and efficient response to wildfires has been continued.
3. Gloucester County formalized a MOA in 2018 with Middle Peninsula and Northern Neck localities that provides for EOC (Emergency Operations Center) and response support if local emergency exceeds local capacity.

A strategy that has been completed under **Goal 3: Increase Public Awareness of Vulnerability to Hazards** includes the following:

1. To improve the hazard assessment within the region, a HAZUS analysis was run with the 4.2 version software and 2010 Census data was used.
2. King & Queen County incorporated the digitized local floodplain maps into their GIS database after adoption by the board of supervisors.
3. Middlesex County informed community property owners about changes to the DFIRM/FIRM that would impact their insurance rates.
4. The development and launching of the Middle Peninsula Fight the Flood Program has become a regional information resource for all matters associated with flooding, insurance and flood management solutions (i.e. nature-based solutions and living shorelines).

Canceled Strategies

To provide a quick snapshot of the canceled strategies, below are a list of the strategies and the localities that have canceled them.

- **Strategy I.1.3: Protect public buildings and public infrastructure from flood waters resulting from 100-year flood storm events.**

Town of Tappahannock canceled this strategy as the Town does not have current plans to protect public buildings and public infrastructure from flood waters. Currently all pump stations are enclosed in small buildings and the pumps are above foundation levels. The pump stations have power and flood alarms.

- **Strategy I.1.4: When elevating or flood proofing is not feasible for existing buildings threatened by flooding, land purchase and conversion to non-residential recreation/conservation land uses should be pursued by the locality or Tribe using FEMA Grant Funds.**

Gloucester County canceled this strategy since the County does not participate in FEMA acquisition program. The management of acquired land may cause additional costs to the County.

- **Strategy I.1.9: Investigate the FEMA Community Rating System (CRS) Program in the Middle Peninsula localities that are not currently participating in it, which can ensure a less flood hazard prone community and thereby lower flood insurance rates for its residents.**

King & Queen County canceled this strategy due to lack of manpower and funding. This strategy may be revisited in future AHMP updates.

Completed Strategies

To provide a quick snapshot of the completed strategies, below are a list of the strategies and the localities that have completed them.

- **Strategy I.1.8: Review locality's compliance with the National Flood Insurance Program with a bi-annual review of their Floodplain Ordinance and any newly permitted activities in the 100-year floodplain.**

Based on the results of their compliance review with Virginia Department of Conservation and Recreation (DCR), locality officials responsible for managing the locality's floodplain program recommended amendments to the local Floodplain Ordinance and/or departmental policies/procedures as requested by compliance officials in a timely manner after the review.

Strategy I.1.8 was completed by the following Middle Peninsula locality:

1. Town of West Point.

- **Strategy I.1.9: Investigate the FEMA Community Rating System (CRS) Program in the Middle Peninsula localities that are not currently participating in it, which can ensure a less flood hazard prone community and thereby lower flood insurance rates for its residents.**

Localities determined the steps and resources needed to become a certified CRS Program Community.

Strategy 1.1.9 was completed by following Middle Peninsula localities:

1. Town of West Point.

- **Strategy 1.1.10: Investigate and implement increasing building elevation requirements for structures proposed in flood zones.**

Middle Peninsula localities are adversely affected by flood water surges from coastal storms to some extent - with decreasing severity as you move from the southeastern-most areas to the northwestern-most portions of the region.

Localities should consider adopting an ordinance to increase freeboard regulatory floodplain.

Strategy 1.1.10 was completed by the following Middle Peninsula localities:

- 1. King & Queen County,**
- 2. King William County, and**
- 3. Middlesex County.**

- **Strategy 1.1.15: Promote coastal construction techniques that will minimize soil erosion and shoreline damage caused by coastal storm surges**

Locality staff will work with engineers from the Virginia Marine Resources Commission (VMRC) and Virginia Institute of Marine Science Shoreline Studies Program to determine what coastal construction techniques can be used by waterfront property owners to lessen coastal erosion/flooding along the water's edge during severe storm events. Also, localities can encourage citizens to participate in the Middle Peninsula's Fight the Flood Program.

Additionally, as FEMA developed new Flood Insurance Rate Maps a new information layer was added called the Limit of Moderate Wave Action (LiMWA) that identifies the 1.5-foot wave height. With this new information communities and property owners can make more informed decision about reducing their coastal flood risk.

Strategy 1.1.15 was completed by the following Middle Peninsula localities:

1. King & Queen County.

- **Strategy 1.1.18: Create a GIS layer of data showing pond locations, their size, inspection data, and dry hydrant information to improve fire response.**

Strategy 1.1.18 was completed by the following Middle Peninsula localities:

1. Gloucester County.

- **Strategy 1.1.19: Integrate mitigation strategies into locality plans, policies, codes and programs across disciplines and departments.**

The localities worked to integrating mitigation strategies into regional, county, and/or town plans (i.e. Comprehensive Plan, Stormwater Management Plan, Water Supply Plan, etc), policies, codes (i.e. ordinances) and programs to help support hazard risk reduction.

Strategy 1.1.19 was completed by the following Middle Peninsula localities:

1. **King & Queen County.**

- **Strategy 3.1.4: Promote public education programs to ensure that property owners are fully informed about the flood hazards on the property that they own**

Each local and Tribal government will develop and post flood mitigation materials on the Emergency Services Section of their website. Posted information will include a list of the locality or Tribe's mitigation strategies and technical information that the local property owners can use to help alleviate flood damage to their properties.

Strategy 3.1.4 was completed by the following Middle Peninsula localities:

1. **King & Queen County, and**
2. **Town of West Point.**

- **Strategy 3.1.5: Develop a public education campaign for residents living in the 100-year floodplain, especially those living on FEMA's list of SRL and RL properties, listing methods for them to decrease flood damage including the availability of any FEMA grant funds for elevation or relocation projects.**

Technical information should specify design considerations for how to handle all household utility components in flood prone areas as well as breakaway walls and venting options that allow automatic entry and exit of flood waters.

Strategy 3.1.5 was completed by the following Middle Peninsula localities:

1. **Town of West Point.**

- **Strategy 3.2.1: Incorporate the newly digitized local floodplain maps into each County's GIS database after adoption by the local governing body, to the extent possible.**

Each county's GIS technician/consultant will incorporate the digitized floodplain map data into their system when a GIS system becomes available to the locality.

County planning/zoning officials will ensure that this floodplain data is readily available to property owners so that they are aware of the 100-year flood boundaries on their land.

Strategy 3.2.1 was completed by the following Middle Peninsula localities:

- 1. King & Queen County, and**
- 2. Middlesex County.**

- **Strategy 3.2.2: When the Natural Hazards Mitigation Plan is updated in the future, complete:**
 - 1. HAZUS flood runs for the 1 sq. mi. threshold. In most cases, this will need to be done on priority stream reaches as the program does not run efficiently at this level.**
 - 2. Re-run HAZUS for plan update to reflect 2010 census data.**

As part of the 2021 update, 2010 census data was reflected in the HAZUS and HAZUS was run using the latest software (Version 4.2).

Strategy 3.2.2 was completed by the following Middle Peninsula localities:

- 1. Essex County,**
- 2. Gloucester County,**
- 3. King and Queen County,**
- 4. King William County,**
- 5. Mathews County,**
- 6. Middlesex County,**
- 7. Town of Tappahannock,**
- 8. Town of Urbanna,**
- 9. Town of West Point, and**
- 10. Rappahannock Tribe.**

- **Strategy 4.1.1: All Natural Hazards: Adopt an Implementation Plan that includes one or more of the following:**

Adopted Floodplain Overlay District as a component of the County's Zoning Ordinance.

- 1. Essex County,**
- 2. Gloucester County,**
- 3. King William County,**
- 4. Mathews County,**
- 5. Middlesex County,**
- 6. Town of Tappahannock,**
- 7. Town of Urbanna, and**
- 8. Town of West Point.**

While Middle Peninsula Localities have worked to complete 2021 mitigation strategies within their jurisdiction to benefit the public and create a more hazard resilient community, each locality continues to work toward comprehensive hazard mitigation. The review of 2016 mitigation strategies highlights

[SECTION 7 - REVIEW OF STRATEGIES FROM THE 2016 MIDDLE PENINSULA ALL HAZARDS MITIGATION PLAN \(AHMP\)](#)

actions taken by localities, and it offers insight into what objectives, goals, and strategies that still need to be accomplished or worked on.

Section 8 - New Mitigation Goals, Objectives, and Strategies

Taking into account the update of the hazard vulnerability assessment using the Kaiser Permanente methodology and the results of the recently completed HAZUS damage assessments, the LPT proposes new and/or updated mitigation strategies to reduce the region's risk to hazards affecting the Middle Peninsula. Please note that the strategies may not be numerical order since some strategies have been completed. The completed strategies can be found in Section 7 of this Plan.

Goal 1: Prevent future losses resulting from natural hazard events.

Objective 1.1: Provide protection for future development to the greatest extent possible.

Strategy 1.1.1: Reduce or eliminate flood damage to residential/business structures that are highly vulnerable for continual flood damage.

Strategy 1.1.1 will be undertaken by the following Middle Peninsula localities and Tribe:

1. **Essex County,**
2. **Middlesex County,**
3. **Gloucester County,**
4. **Mathews County,**
5. **King William County,**
6. **Town of West Point,**
7. **Town of Urbanna,**
8. **Town of Tappahannock, and**
9. **Upper Mattaponi Tribe.**

If requested by citizen living in FEMA Repetitive Loss or Severe Repetitive Loss structure, the Middle Peninsula localities listed above will apply on behalf of the citizen for FEMA grant funds that lessen/eliminate flood damages. Project costs, including staff time, equipment, materials, construction activities, and administrative costs, are reimbursable by FEMA grant funds, but property owners who are benefitting directly from the flood mitigation project may need to provide matching funds.

Some of the localities listed above may want to undertake mitigation projects in one "neighborhood" at a time for consistency/uniformity in the community as well as for some economies-of-scale savings in some of our more rural low-lying areas. The Upper Mattaponi Tribe will work with homeowners that have identified problems and reconstruction projects will be investigated to determine eligibility for grant funding.

According to FEMA data as of 2020, the following is a summary of the number of Repetitive Loss and Severe Repetitive Loss Properties in each locality (Table 100). If the locality is not listed there are no Repetitive Loss or Severe Repetitive Loss Properties.

Locality	Repetitive Loss Properties	Severe Repetitive Loss Properties
Essex County	33	2
Gloucester County	155	18
King William	9	0
Mathews County	162	15
Middlesex County	37	2

Tappahannock	3	0
Urbanna	2	0
West Point	9	0

Please note that in 2020 the MPPDC launched a community Fight the Flood Program that connects property owners facing rising flood waters with tools and funding to contract with specialized businesses who can help evaluate, design, and build solutions. This program is intended to identify and advance flood mitigation activities in the region.

Properties to be mitigated will receive a higher priority ranking by the locality using the following criteria:

1. Severe Repetitive Loss Properties over Repetitive Loss Properties.
2. Willingness and ability of the property owner to pay for the non-FEMA grant funded portion of match of the project costs.
3. Higher benefit/cost ratio properties over lower benefit/cost ratio properties.
4. Projects that reduce flood risks to other nearby properties over those that don't.

Cost/Benefit Implications of Implementing Strategy I.1.1

This strategy will have direct:

1. Benefits for private property owners by reducing/eliminating the severity of structural flood damage to their homes and businesses.
2. Benefits for private property owners with possible reductions in their future flood insurance premiums.
3. Benefits for FEMA by reducing the number of properties on the Repetitive Loss and Severe Repetitive Loss Lists and subsequent flood insurance claims.
4. Costs for private property owners who will directly benefit from the mitigation work on their property as well as by the federal government through expenditure of FEMA Hazard Mitigation Funds.

Mitigation Strategy addresses the following hazards: hurricanes, winter weather, flooding, sea level rise, and summer storms.

Strategy I.1.2: Flood proof, to the greatest extent possible, existing water dependent commercial buildings against flooding, including surge velocities (ie. “wave runup”), to ensure continuity and viability of the seafood industry and other water dependent businesses.

Strategy I.1.2 will be undertaken by the following Middle Peninsula localities:

1. **Essex County,**
2. **Middlesex County,**
3. **Gloucester County,**
4. **Mathews County,**
5. **Town of Urbanna, and**
6. **Town of West Point.**

Each locality listed above will work with the owners of water dependent commercial properties to communicate the full range of flood proofing techniques available to them to decrease their vulnerability to flood losses. For water dependent commercial properties in the Town of Urbanna, Middlesex County will help accomplish this task.

Each locality will advertise and conduct an annual workshop for contractors and property owners to provide instructions on how they can undertake specific flood proofing techniques on their buildings. Please note that in 2020 the Middle Peninsula Planning District Commission launched a community Fight the Flood Program that connects property owners facing rising flood waters with tools and funding to contract with specialized businesses who can help evaluate, design, and build solutions. Therefore, localities will utilize this program as an educational tool and resource to encourage flood proofing.

Cost/Benefit Implications of Implementing Strategy I.1.2

This strategy will have direct:

1. Benefits for private business owners by reducing/eliminating the severity of structural flood damage that will allow them to maintain the viability of the coastal seafood industry.
2. Benefits for private property owners with possible reductions in their future flood insurance premiums.
3. Benefits for FEMA by reducing the number of properties on the Repetitive Loss and Severe Repetitive Loss lists eligible for subsequent flood insurance claims.

Mitigation Strategy addresses the following hazards: hurricanes, winter weather, sea level rise, flooding, and summer storms.

Strategy I.1.3: Protect public buildings and public infrastructure from flood waters resulting from 100-year flood storm events.

Strategy I.1.3 will be undertaken by the following Middle Peninsula localities and Tribe:

1. Gloucester County,
2. Mathews County,
3. Town of West Point,
4. Town of Urbanna, and
5. Upper Mattaponi Tribe.

The Middle Peninsula localities, as well as other political subdivisions of the state providing public infrastructure in our region, including the Hampton Roads Sanitation District (HRSD), shall incorporate flood protection measures into their critical public buildings and public infrastructure if deemed feasible by local officials. The Upper Mattaponi Tribe will work to determine project eligibility for grant funding.

These flood protection measures should be incorporated into their local Capital Improvements Program (CIP) for funding consideration by the governing body during their annual budget development and approval process, if possible.

A list of the critical public buildings and public infrastructure within localities include the following:

- Flood proof and/or elevate the following public sewerage pump stations:

Locality	Pump Station Name
Gloucester County	Pump Station #11 and Pump Station #13, #15 and #17
Town of Urbanna	Town Marina
Town of West Point	Second Street Pump Station
Town of West Point	Bagby Street and Mattaponi Ave Pump Station
Town of West Point	Thompson Avenue Pump Station at West Point Creek

- Consider mitigation retrofit projects at fire stations in Mathews County at-
 - New Point
 - Mathews Court House

Cost/Benefit Implications of Implementing Strategy I.1.3

This strategy will have direct:

1. Benefits for local governments and the HRSD by reducing/eliminating flood damage to public sewage systems.
2. Benefits to the public by maintaining public health standards by reducing/eliminating sewage system overflows into public water bodies during severe weather events.
3. Costs to local governments/HRSD to design and construct waterproofing and stabilization improvements to local buildings/infrastructure.

Mitigation Strategy addresses the following hazards: hurricanes, sea level rise, flooding, and summer storms.

Strategy I.1.4: When elevating or flood proofing is not feasible for existing buildings threatened by flooding, land purchase and conversion to non-residential recreation/conservation land uses should be pursued by the locality or Tribes using FEMA Grant Funds.

Strategy I.1.4 will be undertaken in the following Middle Peninsula localities and Tribes:

1. Essex County,
2. King William County,
3. Mathews County,
4. Middlesex County,
5. Rappahannock Tribe, and
6. Upper Mattaponi Tribe.

Cost/Benefit Implications of Implementing Strategy I.1.4

This strategy will have direct:

1. Benefits for residential neighborhoods by reducing/eliminating storm construction debris that results from structures that are habitually damaged or destroyed by flood waters.
2. Benefits to the locality, Tribe, and general public by increasing vegetative buffering materials in storm surge zones when land is converted from residential use to conservation/preservation use.
3. Benefits for FEMA by reducing the number of properties on the Repetitive Loss and Severe Repetitive Loss lists and subsequent flood insurance claims.
4. Costs for localities and Tribes, including the maintenance of the property or properties acquired through this grant program.
5. Costs for FEMA through expenditure of Hazard Mitigation Funds for land use conversion program.

Mitigation Strategy addresses the following hazards: hurricanes, flooding, and summer storms.

Strategy I.1.5: Improve/maintain main evacuation routes (Table I01) used by Middle Peninsula residents and Tidewater residents evacuating severe coastal weather events and add evacuation route insignia to public streets that are part of the hurricane evacuation route.

Strategy I.1.5 will be undertaken in the following Middle Peninsula localities using available grant funds:

1. Essex County,
2. Gloucester County,
3. King William County,
4. King & Queen County,
5. Mathews County,
6. Middlesex County,
7. Town of Tappahannock, and
8. Town of West Point.

Locality	Road Name/Location
Essex/Tappahannock	Route 17 at June Parker Marina
King William County	King William Drive (Route 30) at Cypress Swamp at Olson’s Pond
Gloucester County	Route 17 N
Mathews County	Route 14 to Rt. 198 N to 17 N
Town of West Point	When Bridges are Closed due to Winds above 45 miles per hour: Route 30, however Rt 30 can close due to flooding at Cypress Swamp. When bridges are open: Rt 33 Wet to Route 64

Cost/Benefit Implications of Implementing Strategy I.1.5

This strategy will have direct:

1. Benefits for both public motorists and the VDOT Primary Road System by decreasing flooding and flood damage to the Middle Peninsula’s primary hurricane evacuation routes.
2. Benefits to local resident and seasonal visitors to better visualize routes who may not be aware that the route exists.
3. Substantial costs in federal and state transportation construction funds to elevate Route 17 and Route 30.
4. Costs of producing and erecting the signs.

Mitigation Strategy addresses the following hazards: hurricanes, sea level rise, and flooding.

Strategy I.1.6: Improve/maintain/reconstruct public roads that hinder the evacuation of Middle Peninsula and Tidewater residents fleeing flood waters from coastal storms.

Strategy I.1.6 will be undertaken in the following Middle Peninsula localities using available grant funds (i.e. VDOT and VDEM):

1. Essex County,
2. Gloucester County,
3. King and Queen County,
4. King William County,
5. Middlesex County, and

6. Mathews County.

Route	Road Name	Location of Flooding
749	Kays Lane	at Root Swamp
721	Newtown Road	Near Bradley Farm Road
721	Newtown Road	Near Level Green Road
721	Newtown Road	Near Cedar Plane Road
721	Newtown Road	Near Glebe Road
623	Indian Neck Road	Near Rappahannock Culture Center
625	Poplar Hill Road	Nar Spring Cottage Road
628	Spring Cottage Road	Near Eastern View Road
628	Todds Bridge Road	Near Gunsmoke Lane

Cost/Benefit Implications of Implementing Strategy I.1.6

This strategy will have direct:

1. Benefits to residents who will be better able to safely leave their neighborhoods during evacuations when requested by emergency response officials.
2. Benefits to the longevity of the VDOT Secondary Road System as the state struggles to maintain their existing public road network from future flood damages.
3. Substantial costs in federal and state transportation construction funds to make roadway and drainage structure improvements to the many low-lying roads in the Middle Peninsula Region.

Mitigation Strategy addresses the following hazards: hurricanes, sea level rise, flooding, and summer storms.

Strategy I.1.7: Improve public roads that adversely affect critical public infrastructure in the floodplain.

Strategy I.1.7 will be undertaken in the following Middle Peninsula localities:

1. **Gloucester County,**
2. **Mathews County,**
3. **Town of Tappahannock,**
4. **Town of Urbanna, and**
5. **Town of West Point.**

Locality	Road Name/ Location
Tappahannock	Newbill Drive
Town of West Point	Second Street
Town of West Point	Bagby Street and Mattaponi Ave
Town of West Point	Thompson Avenue at West Point Creek

Significant storm water runoff from the downtown Tappahannock Business District combined with storm surge activity from the adjacent Rappahannock River causes inundation and the undermining of Newbill Drive. The Town of West Point is focused on improving public roads where sewer pump stations are located in order to reduce flooding inundation that could impact how the pump functions. Within Gloucester County two segments of Route 17 – George Washington Memorial Highway are located in a special flood hazard area and are potentially affected by storm surge. The first is near the Court House area of the County and would be potentially inundated by a storm surge from a Category 1 hurricane. The second area is located at the southern end of the County and has potential to be inundated by a storm surge from a Category 3 or 4 hurricane. Improving these road segments could protect the public infrastructure located in the Court House Area, including government buildings as well as pump stations (#11 and #13). In addition to these two segments, all roads in Gloucester County used to access critical infrastructure are important and may be improved when needed.

Cost/Benefit Implications of Implementing Strategy I.1.7

This strategy will have direct:

1. Benefits to the residents of the Town of West Point that utilize the sewer pump stations. The pump station will remain fully functional during and after severe flooding events.
2. Capital costs to improve storm water drainage in order to avoid future damage to roadway and pump stations.

Mitigation Strategy addresses the following hazards: hurricanes, sea level rise, flooding, winter storms, dam failure, and summer storms.

Strategy I.1.8: Review locality/Tribe’s compliance with the National Flood Insurance Program with a bi-annual review of their Floodplain Ordinance and any newly permitted activities in the 100-year floodplain.

Strategy I.1.8 will be undertaken in the following Middle Peninsula localities and Tribe:

1. **Essex County,**
2. **Gloucester County,**
3. **King William County,**
4. **King & Queen County,**
5. **Middlesex County,**
6. **Town of Tappahannock, and**
7. **Upper Mattaponi Tribe.**

Based on the results of their compliance review with Virginia Department of Conservation and Recreation (DCR), locality officials responsible for managing the locality’s floodplain program will recommend amendments to the local Floodplain Ordinance and/or departmental policies/procedures as requested by compliance officials in a timely manner after the review. Additionally, as Gloucester

County is a part of FEMA's Community Rating System (CRS), the program conducts a 5-year cycle visit (audit) that includes a review of the ordinances.

Cost/Benefit Implications of Implementing Strategy I.1.8

This strategy will have direct:

1. Benefits to localities by regularly and systematically tracking development activity in the flood zones to enable timely and effective changes to the locality's Floodplain Ordinance and other associated local land development ordinances and regulations.
2. Minimal costs to locality since the review is done by staff at DCR and recommended changes are completed by the local government body after consultation with local government zoning and floodplain management employees.

Mitigation Strategy addresses the following hazards: hurricanes, sea level rise, flooding, and summer storms.

Strategy I.1.9: Investigate the FEMA Community Rating System (CRS) Program in the Middle Peninsula localities that are not currently participating in it, which can ensure a less flood hazard prone community and thereby lower flood insurance rates for its residents.

Strategy I.1.9 will be undertaken in the following Middle Peninsula localities and Tribe:

1. Essex County,
2. King William County,
3. Mathews County,
4. Middlesex County,
5. Town of Tappahannock,
6. Town of Urbanna,
7. Town of West Point, and
8. Upper Mattaponi Tribe.

With the exception of Gloucester County, which is already involved in the CRS Program, locality staff from the localities listed above and the Upper Mattaponi Tribe will determine the steps and resources needed to become a certified CRS Program Community.

Locality staff will take their findings to the County Administrator/Town Manager with a recommendation to either enter into the CRS Program, or not, based on the costs and benefits to its residents. The Upper Mattaponi Staff will take their findings to their Tribal Council.

Cost/Benefit Implications of Implementing Strategy I.1.9

This strategy will have direct:

1. Benefits to residents living in flood prone areas if the locality/Tribe adopts a CRS Program with lower property insurance rates.
2. Costs of dedicating additional staff time to develop, implement, and manage the CRS Program.

Mitigation Strategy addresses the following hazards: hurricanes, sea level rise, flooding, dam failure, and summer storms.

Strategy I.1.10: Investigate and implement increasing building elevation requirements for structures proposed in flood zones.

Strategy I.1.10 will be undertaken in the following Middle Peninsula localities:

1. Gloucester County,
2. Essex County,
3. Mathews County,
4. Town of Tappahannock, and
5. Town of West Point.

Middle Peninsula localities are adversely affected by flood water surges from coastal storms to some extent - with decreasing severity as you move from the southeastern-most areas to the northwestern-most portions of the region.

The Building/Zoning Officials in each of the localities should conduct a feasibility study focused on increasing the elevation requirements for proposed structures to be built in flood zones would lessen flood damage and lower flood insurance premiums for residents. The lower insurance premiums were analyzed in a 2006 FEMA-commissioned study entitled *Evaluation of the National Flood Insurance Program's Building Standards* (www.fema.gov/library/viewRecord.do?id=2592). The feasibility study should be undertaken using local data sources including the latest FIRM data, FEMA Severe Repetitive Loss and Repetitive Loss Lists and known flood water depths from building permit files in the Building Department's records. Based on favorable findings localities should consider implementing increased freeboard.

In September 2010, Gloucester County updated their ordinances to require new structures to be constructed 2 feet above the Base Flood Elevation. Now in 2021, the locality is currently developing an ordinance revision that proposes 3 feet of freeboard in the regulatory floodplain.

Cost/Benefit Implications of Implementing Strategy I.1.10

This strategy will have direct:

1. Benefits of reduced flood insurance premiums for Middle Peninsula residents if the locality adopts more stringent regulations.
2. Benefit of lowering future flood insurance claims during severe flooding events if the locality implements greater freeboard requirements.
3. Costs of dedicating locality staff time in the Building/Zoning Departments to develop, implement, and manage the building elevation program.

Mitigation Strategy addresses the following hazards: hurricanes, sea level rise, flooding, dam failure, and summer storms.

Strategy I.1.11 Continue to ensure that floodplain/zoning/building regulations in flood prone areas are strictly enforced to prevent non-compliant development and the need to invest in additional public infrastructure in these areas in the future.

Strategy I.1.11 will be undertaken in the following Middle Peninsula localities and Tribe:

1. Essex County,
2. Gloucester County,
3. King William County,
4. King & Queen County
5. Mathews County

6. Middlesex County,
7. Town of Tappahannock,
8. Town of Urbanna,
9. Town of West Point, and
10. Upper Mattaponi Tribe.

Utilize location information gleaned from the FEMA-generated Severe Repetitive Loss List and the Repetitive Loss List as an additional source of data when locality officials guide local property owners about proposed construction/development projects in flood-prone areas. The Upper Mattaponi will review plans for new builds to ensure they are compliant with relevant regulations.

Cost/Benefit Implications of Implementing Strategy I.1.11

This strategy will have direct:

1. Benefits to local officials with being able to provide historical flood occurrence data to prospective homeowners/builders in flood prone areas.
2. Costs of dedicating locality staff time in the Planning/GIS Department to map these properties into the locality’s data base.

Mitigation Strategy addresses the following hazards: hurricanes, sea level rise, flooding, dam failure, and summer storms.

Strategy I.1.12: Limit future development in inundation areas located below large water impoundments.

Strategy I.1.12 will be undertaken in the following Middle Peninsula locality and Tribe:

1. King William County and
2. Upper Mattaponi Tribe

The impoundment with the greatest likelihood for adverse flooding impacts downstream from the dam includes the following:

Locality	Facility
King William County	Lake Anne- Located in Louisa County

King William County officials should request Dominion/Virginia Power to assist them with mapping those land areas in the county that are adversely impacted by flood waters from their periodic release of water from Lake Anna. Those maps could then be used by county officials for incorporation into future Comprehensive Plan updates as well as for creating perhaps a possible zoning ordinance overlay district showing periodic inundation areas where future development should be avoided.

The Upper Mattaponi Tribe will monitor plans for development in applicable areas.

Cost/Benefit Implications of Implementing Strategy I.1.12

This strategy will have direct:

1. Benefits to local officials with being able to guide future land use planning and development in these periodically affected properties.
2. Costs of dedicating locality staff time in the Planning/GIS Department to map these properties into the locality’s data base.

Mitigation Strategy addresses the following hazards: coastal/shoreline erosion, sea level rise flooding, and dam failure.

Strategy I.1.13 Strongly encourage the USDA - Natural Resources Conservation Services staff, Virginia Department of Conservation and Recreation's Regional Dam Safety Engineer, and the Virginia Soil and Water Conservation District Office staff to ensure that farm pond dams remain structurally sound.

Strategy I.1.13 will be undertaken in the following Middle Peninsula localities and Tribe:

- 1. Essex County,**
- 2. Gloucester County,**
- 3. King and Queen County,**
- 4. King William County,**
- 5. Mathews County,**
- 6. Middlesex County, and**
- 7. Upper Mattaponi Tribe.**

There is no organized database of farm pond dams in the Middle Peninsula. Since catastrophic failure of farm pond dams could have a hazardous flooding outcome for those living below them, it is critical that a database be developed by each locality to ensure emergency response actions and mitigation activities are undertaken.

The agencies listed above have a working knowledge within Middle Peninsula communities of where some of the larger dam structures may be located since they have a history of working with farmers on various farmland enhancement and subsidy projects.

For the USDA and the Virginia Soil and Water Conservation Districts King and Queen, King William and Essex Counties are served by an office in Tappahannock while Middlesex, Gloucester and Mathews Counties are served by these agencies located in Gloucester County. As for Virginia Department of Conservation and Recreation's there is one Regional Dam Safety Engineer that serves all Middle Peninsula.

A written request from the County Administrator/Emergency Services Coordinator in each of the six Middle Peninsula counties should be made to these two agencies requesting an inventory of all dams that they are aware of as well as any structural design/physical condition information that they may have about the dam.

This information will be used by County Planning Officials when they evaluate land development requests during the early planning stages of a proposed project.

Cost/Benefit Implications of Implementing Strategy I.1.13

This strategy will have direct:

1. Benefits to local officials with being able to locate and provide a vulnerability assessment of these structures for future emergency planning strategies.
2. Costs to the USDA and VSWCD agencies with the dedication of staff time and resources to gather and synthesize this data for local government use.

Mitigation Strategy addresses the following hazards: dam failure.

Strategy I.1.15: Promote coastal construction techniques that will minimize soil erosion and shoreline damage caused by coastal storm surges.

Strategy I.1.15 will be undertaken in the following Middle Peninsula localities and Tribe:

1. Essex County,
2. Gloucester County,
3. King William County,
4. Mathews County,
5. Middlesex County,
6. Town of Tappahannock,
7. Town of Urbanna,
8. Town of West Point, and
9. Upper Mattaponi Tribe.

Locality staff will work with engineers from the Virginia Marine Resources Commission (VMRC) and Virginia Institute of Marine Science Shoreline Studies Program to determine what coastal construction techniques can be used by waterfront property owners to lessen coastal erosion/flooding along the water's edge during severe storm events. Also, localities can encourage citizens to participate in the Middle Peninsula's Fight the Flood Program. This program connects property owners facing rising flood waters with tools and funding to contract with specialized businesses who can help evaluate, design, and build solutions. Additionally, this program focuses on the implementation of nature-based shoreline management solution (i.e. living shorelines, sills, sand nourishment, etc.). As part of the Fight the Flood Program the MPPDC offers a Living Shoreline Incentives program that provides grant and loan funds for the installation of living shorelines. Ultimately these programs provide on-going support to minimize soil erosion and shoreline damage.

Additionally, as FEMA developed new Flood Insurance Rate Maps a new information layer was added called the Limit of Moderate Wave Action (LiMWA) that identifies the 1.5-foot wave height. With this new information communities and property owners can make more informed decision about reducing their coastal flood risk.

Cost/Benefit Implications of Implementing Strategy I.1.15

This strategy will have direct:

1. Benefits to residents with waterfront property by providing design options that will lessen adverse impacts from flood waters resulting from storm surges.
2. Costs of dedicating locality staff time to work with VMRC, VIMS and MPPDC staff to develop best management design solutions that will mitigate soil erosion and other environmental damages.

Mitigation Strategy addresses the following hazards: coastall/shoreline erosion, sea level rise and flooding

Strategy I.1.18: Create a GIS layer of data showing pond locations, their size, inspection data, and dry hydrant information to improve fire response.

Strategy I.1.18 will be undertaken in the following Middle Peninsula localities and Tribe:

1. **King & Queen County,**
2. **Middlesex County,**
3. **King William County, and**
4. **Upper Mattaponi Tribe.**

Cost/Benefit Implications of Implementing Strategy I.1.18

This strategy will have direct:

1. Benefits to local fire departments by having a data base of water bodies and dry fire hydrant information when responding to fires.
2. Costs of GIS/Community Development staff time with data gathering, data input and data maintenance of the County's GIS system.

Mitigation Strategy addresses the following hazards: wildfires, droughts, lightning, and HAZMAT

Strategy I.1.19: Integrate mitigation strategies into locality plans, policies, codes and programs across disciplines and departments.

Strategy I.1.19 will be undertaken in the following Middle Peninsula localities and Tribe:

1. **Essex County,**
2. **Gloucester County,**
3. **King William County,**
4. **Mathews County,**
5. **Middlesex County,**
6. **Town of Tappahannock,**
7. **Town of Urbanna,**
8. **Town of West Point, and**
9. **Upper Mattaponi Tribe.**

The localities listed above will work to continue integrating mitigation strategies into regional, county, and/or town plans (i.e. Comprehensive Plan, Stormwater Management Plan, Water Supply Plan, etc), policies, codes (i.e. ordinances) and programs to help support hazard risk reduction. According to FEMA there are two primary ways to effectively accomplish Plan Integration:

1. Integrate natural hazard information and mitigation policies and principles into local planning mechanism and vice versa.
 - Include information on natural hazards (past events, potential impacts, and vulnerabilities).
 - Identify hazard-prone areas throughout the community.
 - Develop appropriate goals, objectives, policies, and projects.
2. Encourage collaborative planning and implementation and inter-agency coordination:
 - Involve key community officials who have the authority to execute policies and programs to reduce risk.
 - Collaborate across departments and agencies with key staff to help share knowledge and build relationships that are important to the successful implementation of mitigation activities.

The Upper Mattaponi Tribe will include mitigation strategies in plans and programs as they are created.

Cost/Benefit Implications of Implementing 1.1.19

This Strategy will have direct:

1. Benefits to localities and the Upper Mattaponi Tribe will include enhanced risk reduction through improved coordination.
2. Benefits to localities will include better defined roles of locality staff (ie. planners, emergency managers, engineers, etc.) in improving disaster resiliency.
3. Cost is the staff time required to develop and integrate mitigation strategies into locality/tribal plans and policies.

Mitigation Strategy addresses the following hazards: hurricanes, winter weather, tornadoes, coastal/shoreline erosion, sea level rise, flooding, wildfires, high winds/windstorms, dam failure, droughts, lightning, earthquakes, shrink/swell soils, extreme temperatures land subsidence/karsts, air quality, HAZMAT, and summer storms.

Objective 1.2: Provide protection for critical public facilities and essential services.

Objective 1.3: Middle Peninsula localities and Tribes will support implementation of structural and nonstructural mitigation activities to reduce exposure to natural and man-made hazards.

Strategy 1.3.1: Mitigation projects that will result in protection of public or private property from hazards. Eligible projects include, but are not limited to:

- Acquisition of hazard prone properties,
- Mitigation reconstruction,
- Elevation of structures in flood prone areas,
- Implementation of nature-based solutions (i.e. living shorelines) to protect flood prone properties, reduce coastal erosion, and improve coastal resiliency,
- Minor structural flood control projects,
- Relocation of structures from hazard prone areas,
- Retrofitting of existing buildings and facilities,
- Retrofitting of existing buildings and facilities for shelters,
- Infrastructure protection measures,
- Storm water management improvements,
- Advanced warning systems and hazard gauging systems (weather radios, reverse-911, stream gauges, I-flows),
- Targeted hazard education, and
- Installation of generator connections for shelters.

Strategy 1.3.1 will be undertaken in the following Middle Peninsula locality and Tribes:

1. Gloucester County,
2. Rappahannock Tribe, and
3. Upper Mattaponi Tribe

As numerous buildings have experienced repetitive damage due to flooding and storm events these structures will be mitigated to reduce or eliminate the potential for damage associated with natural hazards. Gloucester County will also work to reduce vulnerabilities from 2 high hazard dams (ie. Beaverdam Reservoir and Cow Creek Mill Pond). Gloucester County will follow procedures within the Dam Emergency Action Plans to safeguard the lives and reduce damage to the property of citizens in

Gloucester County living and/or working along or near Cow Creek Mill Pond and Beaverdam Reservoir high risk dams.

The Upper Mattaponi Tribe will investigate project eligibility for grant funding. Also, the Upper Mattaponi Tribe will investigate communication systems for advanced and to purchase additional generators for tribal buildings are being developed.

Cost/Benefit Implications of Implementing Strategy 1.3.1

This strategy will have direct:

1. Benefits to the private and public infrastructure by mitigating impacts and vulnerabilities from natural hazards.
2. Benefits to the general public through hazard education programs to prepare for impacts.
3. Benefits for FEMA by reducing the number of properties on the Repetitive Loss and Severe Repetitive Loss Lists and subsequent flood insurance claims.
4. Cost for localities and Tribes include retrofitting existing buildings and facilities, implementing advanced warning systems, maintenance of acquired hazard prone properties, installation of stormwater management practices, as well as deploying hazard education.
5. Costs for FEMA through expenditure of Hazard Mitigation Funds for home elevations and land acquisitions in flood prone areas.

Mitigation Strategy addresses the following hazards: hurricanes, winter storms, tornadoes, coastal/shoreline erosion, sea level rise, flooding, wildfires, high winds/windstorms, dam failure, droughts, lightning, earthquakes, shrink/swell soils, extreme temperatures, land subsidence/karsts, air quality, HAZMAT, and summer storms.

Goal 2: Improve community emergency management capabilities.

Objective 2.1: Improve the ability of the jurisdictional emergency managers to communicate with residents and businesses during and following natural hazard emergencies.

Objective 2.2: Improve communications between the emergency managers working in the Middle Peninsula jurisdictions and other nearby localities.

Strategy 2.2.1: Formalize mutual aid agreements to coordinate the region's fire and emergency medical units to ensure a quick and efficient response to severe weather events.

Strategy 2.2.1 will be undertaken in the following Middle Peninsula localities and Tribes:

1. Essex County,
2. Gloucester County,
3. King and Queen County,
4. Mathews County,
5. Town of Tappahannock,
6. Town of Urbanna,
7. Town of West Point,
8. Rappahannock Tribe, and
9. Upper Mattaponi Tribe.

With these little-notice storm events, time is of the essence with the ability to provide life-saving aid to as many residents as possible quickly after the severe storms strike. Currently there is a mutual aid agreement amongst participants of the Rappahannock Volunteer Fire Association, which includes the following Middle Peninsula volunteer fire and rescue departments: Gloucester Volunteer Fire and Rescue, King William Volunteer Fire Department, Lower Middlesex Volunteer Fire, Mathews Volunteer Fire Department, Tappahannock Volunteer Fire Department, Upper Middlesex Volunteer Fire Department, West Point Volunteer Fire and Rescue, Middlesex Volunteer Fire Department, Lower King and Queen Volunteer Fire Department, and Central King and Queen Volunteer Fire Department. While this is inclusive of some fire and rescue departments within the Middle Peninsula, this is not inclusive of all and therefore cannot be labeled as complete.

Cost/Benefit Implications of Implementing Strategy 2.2.1

This strategy will have direct:

1. Benefits for local fire and rescue units since having formalized agreements in place will help to coordinate the dispatching of first response units as needed when there may be limited supply and high demand for assistance.
2. Benefits for residents with coordinated emergency response services during these damaging and potentially life-threatening natural hazards.
3. Costs to implement the mutual aid agreements should be minimal for the jurisdiction with the dedication of a small amount of emergency management and legal staff time.

Mitigation Strategy addresses the following hazards: hurricanes, winter storms, tornadoes, coastal/shoreline erosion, sea level rise, flooding, wildfires, high winds/windstorms, dam failure, droughts, lightning, earthquakes, shrink/swell soils, extreme temperatures, land subsidence/karsts, air quality, HAZMAT, , and summer storms.

Strategy 2.2.2: Formalize mutual aid agreements to coordinate the region's fire units to ensure a quick and efficient response to wildfires.

Strategy 2.2.2 will be undertaken in the following Middle Peninsula localities:

1. **Essex County,**
2. **Gloucester County,**
3. **King and Queen County,**
4. **King William County,**
5. **Mathews County,**
6. **Town of Tappahannock,**
7. **Town of Urbanna, and**
8. **Town of West Point.**

Since numerous wildfire sites can erupt in multiple locations when dry and windy conditions are present throughout the Middle Peninsula, a coordinated regional response by all fire departments serving the area is required to combat this natural hazard. Clearly written and uniform mutual aid agreements can insure a greater degree of a well-coordinated regional response to this natural hazard.

Currently there is a mutual aid agreement amongst participants of the Rappahannock Volunteer Fire Association, which includes the following Middle Peninsula volunteer fire and rescue departments: Gloucester Volunteer Fire and Rescue, King William Volunteer Fire Department, Lower Middlesex Volunteer Fire, Mathews Volunteer Fire Department, Tappahannock Volunteer Fire Department, Upper

Middlesex Volunteer Fire Department, West Point Volunteer Fire and Rescue, Middlesex Volunteer Fire Department, Lower King and Queen Volunteer Fire Department, and Central King and Queen Volunteer Fire Department. While this is inclusive of some fire and rescue department within Middle Peninsula localities, this is not inclusive of all and therefore cannot be labeled as complete. Please note that this strategy focuses on creating mutual aid agreements at the County level.

Cost/Benefit Implications of Implementing Strategy 2.2.2

This strategy will have direct:

1. Benefits for local and nearby fire units since having formalized agreements in place will help to coordinate the dispatching of first response units as needed when there may be a limited supply and a high demand for assistance during times of multiple wildfires.
2. Benefits the residents with coordinated emergency response services during this damaging and potentially life-threatening natural hazard.
3. Costs to implement the mutual aid agreements should be minimal for the jurisdiction's emergency management and legal staff.

Mitigation Strategy addresses the following hazards: wildfires.

Objective 2.3: Improve the ability of localities to communicate with the Virginia Emergency Operations Center during state and federally declared disasters.

Goal 3: Increase the public's awareness and educational level of their vulnerabilities to natural hazards.

Objective 3.1: Provide information to residents and businesses about the types of natural hazards that they may be exposed to, where they are likely to occur and what they can do to better prepare for them or to avoid their adverse effects.

Strategy 3.1.2: Encourage private property owners to perform regular and routine maintenance of ditches and culverts in order to keep them free of debris, with a special emphasis on road sections where there are chronic flooding problems, including those listed earlier in the plan.

Strategy 3.1.2 will be undertaken in the following Middle Peninsula localities and Tribes:

1. Essex County,
2. Gloucester County,
3. King and Queen County,
4. King William County,
5. Mathews County,
6. Middlesex County,
7. Town of Tappahannock,
8. Town of Urbanna,
9. Town of West Point,
10. Rappahannock Tribe, and
11. Upper Mattaponi Tribe.

As previously noted, there are many VDOT Secondary Roads that are inundated by flood waters during significant storm events. Oftentimes, the flooding occurs at low-lying sections of these roads where the drainage pipes and ditches have been partially or completely blocked by vegetative debris.

Property owners with road frontage should be actively encouraged by local Emergency Management staff, by developing a proactive public information program, to keep ditch lines free of vegetative debris which would lessen the flooding at these stressed road crossings and better allow for vehicles to evacuate during severe storm events.

Cost/Benefit Implications of Implementing Strategy 3.1.2

This strategy will have direct:

1. Benefits for residents living in flood prone areas that will allow them safer evacuation and return routes during severe flooding events.
2. Costs for public information notifications via printed media, reverse 911 systems, County websites or e-mail messages.

Mitigation Strategy addresses the following hazards: flooding, summer storms, hurricanes, and sea level rise.

Strategy 3.1.3: Encourage the two power companies operating in the Middle Peninsula Region to maintain system components, including power line rights-of-way, to minimize interruptions of the electrical power grid for severe weather.

Strategy 3.1.3 will be undertaken in the following Middle Peninsula localities:

1. **Essex County**
2. **Gloucester County**
3. **King and Queen County,**
4. **King William County,**
5. **Mathews County,**
6. **Middlesex County,**
7. **Town of Tappahannock,**
8. **Town of Urbanna, and**
9. **Town of West Point.**

Local Emergency Service Coordinators will work closely with Community Relations/Education employees at Dominion/Virginia Power and Rappahannock Electric Cooperative to inform and guide to their customers about the importance of keeping trees and brush away from electric power lines on their property in order to decrease the possibility of storm damage to the power grid during severe rain/windstorm events.

Educational mailings, such as landscape design techniques as well as a list of plants to grow under power lines to promote attractive landscaping while protecting the power lines from damaging vegetative growth, could be developed by Dominion/Virginia Power and Rappahannock Electric Cooperative staff and mailed as insert with property owners' monthly electric bills.

Cost/Benefit Implications of Implementing Strategy 3.1.3

This strategy will have direct:

1. Benefits local residents with more reliable electric services during severe weather events.

2. Benefits power companies with lower maintenance and repair costs for their rights-of-way and power system equipment.
3. Costs to the 2 power companies to produce and disseminate educational materials to their customers.

Mitigation Strategy addresses the following hazards: hurricanes, winter storms, tornadoes, flooding coastal/shoreline erosion, high winds/windstorms, earthquakes, and summer storms.

Strategy 3.1.4: Promote public education programs to ensure that property owners are fully informed about the flood hazards on the property that they own.

Strategy 3.1.4 will be undertaken in the following Middle Peninsula localities and Tribes:

1. Gloucester County,
2. King William County,
3. Mathews County,
4. Middlesex County,
5. Town of Urbanna,
6. Rappahannock Tribe, and
7. Upper Mattaponi Tribe.

Each local and Tribal government will develop and post flood mitigation materials on the Emergency Services Section of their website. Posted information will include a list of the locality or Tribe's mitigation strategies and technical information that the local property owners can use to help alleviate flood damage to their properties. In 2020 the MPPDC launched a community Fight the Flood Program that connects property owners facing rising flood waters with tools and funding to contract with specialized businesses who can help evaluate, design, and build solutions. This program aims to educate the public on flood mitigation options to mitigate for flooding on their property.

Cost/Benefit Implications of Implementing Strategy 3.1.4

This strategy will have direct:

1. Benefits local residents with property in the flood plain about measures they can take to lessen flood damages to their property.
2. Costs of dedicating emergency management and public information officer's staff time to developing and distributing mitigation information.

Mitigation Strategy addresses the following hazards: hurricanes, winter storms, sea level rise, flooding, dam failure, and summer storms.

Strategy 3.1.5: Develop a public education campaign for residents living in the 100-year floodplain, especially those living on FEMA's list of SRL and RL properties, listing methods for them to decrease flood damage including the availability of any FEMA grant funds for elevation or relocation projects.

Strategy 3.1.5 will be undertaken in the following Middle Peninsula localities:

1. Essex County,
2. Gloucester County,

3. King & Queen County,
4. Mathews County,
5. Middlesex County, and
6. Town of Tappahannock.

Technical information should specify design considerations for how to handle all household utility components in flood prone areas as well as breakaway walls and venting options that allow automatic entry and exit of flood waters. As part of the MPPDC Fight the Flood Program property owners facing rising flood waters are connected to resources, tools, and funding to identify and advance flood mitigation activities in the region.

Cost/Benefit Implications of Implementing Strategy 3.1.5

This strategy will have direct:

1. Benefits local residents with property in the flood plain about measures they can take to lessen flood damages to their property.
2. Costs of dedicating emergency management and public information officer's staff time to developing and distributing mitigation information.

Mitigation Strategy addresses the following hazards: hurricanes, winter storms, sea level rise, flooding, and summer storms.

Strategy 3.1.6: Increase resident and emergency responder safety during severe winter ice storm events by developing a public education campaign to inform residents about the importance of keeping tree limbs away from their homes and electric lines.

Strategy 3.1.6 will be undertaken in the following Middle Peninsula localities and Tribes:

1. Essex County,
2. Gloucester County,
3. King and Queen County,
4. King William County,
5. Mathews County,
6. Middlesex County,
7. Town of Tappahannock,
8. Town of Urbanna,
9. Town of West Point,
10. Rappahannock Tribe, and
11. Upper Mattaponi Tribe.

By decreasing the potential for structures to incur damage during ice storms, this will allow the structures to remain occupied thereby lessening the number of emergency responder calls to remove occupants from damaged homes during times when roads are dangerous and/or impassable. Localities and Tribes will work with utility companies within the region to educate the public.

Cost/Benefit Implications of Implementing Strategy 3.1.6

This strategy will have direct:

1. Benefits for residents since they will be able to stay in their undamaged homes with electric lines intact which will allow for quicker restoration of electric service after severe winter storms.

2. Benefits for first responders with fewer risky fire and rescue calls on ice covered roads during and after severe weather events.
3. Costs of dedicating emergency management and public information officer staff time to develop and distribute ice storm related mitigation information on the locality or Tribe's website and other social media sites.

Mitigation Strategy addresses the following hazards: extreme temperatures, winter storms.

Strategy 3.1.7: Develop public information and inform property owners about the long range affects that sea level rise will have on low-lying property that they own.

Strategy 3.1.7 will be undertaken in the following Middle Peninsula localities and Tribe:

1. Essex County,
2. Gloucester County,
3. King William County,
4. King & Queen County,
5. Mathews County,
6. Middlesex County,
7. Town of Urbanna,
8. Town of West Point, and
9. Upper Mattaponi Tribe.

The local governments noted above will provide information about the potential physical impacts of sea level rise on the Emergency Management Homepage of their jurisdictional website. Posted information will include areas in the locality that are expected to be affected, the time frame within which the impacts will be anticipated, the public infrastructure that may be impacted and what measures can be taken to mitigate future adverse impacts.

Cost/Benefit Implications of Implementing Strategy 3.1.7

This strategy will have direct:

1. Benefits for residents with property located in low lying areas about measures they can take to lessen future damages from this natural hazard.
2. Benefits to local governments with reduced damages to both public infrastructure and private property.
3. Cost in staff time to assemble, post and update website information on the locality's Emergency Management Homepage about sea level rise.

Mitigation Strategy addresses the following hazards: sea level rise.

Strategy 3.1.8 Promote a public education program to ensure that property owners protect their property by decreasing flammable forest fuels surrounding homes located in wooded settings.

Strategy 3.1.8 will be undertaken in the following Middle Peninsula localities and Tribes:

1. Essex County,
2. Gloucester County,

3. **King and Queen County,**
4. **King William County,**
5. **Mathews County,**
6. **Middlesex County, and**
7. **Rappahannock Tribe.**

Each of these local governments and Tribes will develop and post information about wildfire risks on the Emergency Management Homepage of their website. Posted information will include safety tips to minimize threats to homes/property that the Virginia Department of Forestry has developed and other existing wildfire reduction strategies that are available on related websites.

Mitigation Strategy addresses the following hazards: wildfires and drought.

Cost/Benefit Implications of Implementing Strategy 3.1.8

This strategy will have direct:

1. Benefits for local residents with property located in wooded areas to lessen the potential for fire damage to their homes and property.
2. Benefits to local and state fire responders with fewer calls to save structures and rescue residents in perilous situations.
3. Cost in staff time to assemble, post and update website information on the locality or Tribal Emergency Management Homepage.

Objective 3.2: Improve jurisdictional mapping capabilities to show the physical areas in their locality that may be affected by natural hazard events including storm surge areas from coastal storms.

Strategy 3.2.1: Incorporate the newly digitized local floodplain maps into each locality's GIS database after adoption by the local governing body, to the extent possible.

Strategy 3.2.1 will be undertaken in the following Middle Peninsula localities:

1. **Essex County,**
2. **Mathews County,**
3. **Town of Tappahannock,**
4. **Town of Urbanna, and**
5. **Town of West Point.**

Each county's GIS technician/consultant will incorporate the digitized floodplain map data into their system when a GIS system becomes available to the locality.

County planning/zoning officials will ensure that this floodplain data is readily available to property owners so that they are aware of the 100-year flood boundaries on their land.

Cost/Benefit Implications of Implementing Strategy 3.2.1

This strategy will have direct:

1. Benefits of more accurate flood plain data that will enable local officials to better guide development in flood prone areas.
2. Benefits for better data to incorporate into locality Comprehensive Plan Updates.

Costs of dedicating locality staff time in the GIS Department to incorporate the mapping products into the locality's IT system.

Strategy 3.2.2: When the All-Hazards Mitigation Plan is updated in the future, localities will refine and update data sets for general building stock and essential facilities; that will feed into a Level 2 HAZUS Assessment.

Strategy 3.2.2 will be undertaken in the following Middle Peninsula localities:

1. Essex County,
2. Gloucester County,
3. King and Queen County,
4. King William County,
5. Mathews County,
6. Middlesex County,
7. Town of Tappahannock,
8. Town of Urbanna, and
9. Town of West Point.

Cost/Benefit Implications of Implementing Strategy 3.2.2

This strategy will have direct:

1. Benefits to locality Zoning Administrators/Floodplain Managers/Building Officials with more precise costs when reviewing locality-wide mitigation projects and policies.
2. Costs to local government officials to contract with engineering firms to run HAZUS models since it is a more technically specific application than more localities in the Middle Peninsula can perform with their own staff capabilities.

Mitigation Strategy addresses the following hazards: hurricanes, winter weather, tornadoes, coastal/shoreline erosion, sea level rise, wildfires, high winds/windstorms, dam failure, droughts, lightning, earthquakes, shrink/swell soils, extreme temperatures, land subsidence/karsts, landslides, air quality, HAZMAT, and summer storms.

Goal 4: Ensure that the strategies developed in this plan are incorporated into other local planning documents, ordinances, policies, and procedures.

Objective 4.1: Develop an Implementation Plan within the AHMP Update that identifies the locality employees/officials who will be responsible for implementing each strategy that they will undertake, the local regulatory tools that the jurisdiction will use to implement the strategies, the resources that will be needed and the time frame within which the strategy will be completed.

Strategy 4.1.1: All Hazards: Adopt an Implementation Plan that includes one or more of the following:

1. Assigns locality officials/employees with the ability and authority to implement or cause to be implemented the mitigation strategies that they have agreed to in the update;
2. Determines a low, moderate, and high priority for each strategy in the locality;
3. Establishes realistic timeframes for completing each strategy.

4. Appoints a natural hazard mitigation advisory committee to work with the Board of Supervisors, Planning Commission and Planning Staff to monitor progress on adopted strategies and to suggest additional mitigation strategies within the five-year review period of the AHMP Update by 2022 and the update of the jurisdiction's next Comprehensive Plan.
5. Consider including the mitigation strategies in an Implementation Matrix as part of the jurisdiction's next Comprehensive Plan update.
6. Amend the locality's Zoning Ordinance and Subdivision Ordinance to include natural hazard mitigation strategies as they relate to land development requirements, policies, and procedures.
7. Submit capital projects to the Planning Commission/Board of Supervisors for their consideration when they review the locality's Capital Improvement Program (CIP).
8. Seeks funding from various state and federal agencies for mitigation strategies that require an infusion of funds beyond what the jurisdiction can provide.

Strategy 4.1.1 will be undertaken in the following Middle Peninsula localities and Tribe:

1. Essex County,
2. Gloucester County,
3. King William County,
4. King & Queen County,
5. Mathews County,
6. Middlesex County,
7. Town of Tappahannock,
8. Town of Urbanna,
9. Town of West Point, and
10. Upper Mattaponi Tribe.

Cost/Benefit Implications of Implementing Strategy 4.1.1

This strategy will have direct:

1. Benefits for the elected officials and locality staff since it gives them specific expectations with implementing the numerous strategies in the plan.
2. Costs to local governments have been kept within reason considering the limited financial resources and the many funding responsibilities that the rural Middle Peninsula jurisdictions face.

Mitigation Strategy addresses the following hazards: hurricanes, winter weather, tornadoes, coastal/shoreline erosion, sea level rise, flooding, wildfires, high winds/windstorms, dam failure, droughts, lightning, earthquakes, shrink/swell soils, extreme temperatures, land subsidence/karsts, air quality, HAZMAT, and summer storms.

Section 9 – Implementation Plan

Overview

The LPT assigned a **low, moderate, or high priority** to each of the strategies that have been proposed to lessen the adverse impacts from natural hazards in their respective communities. These priority ratings were assigned after reviewing the evaluation criteria listed at the beginning of Section 8 as well as their historical insight and knowledge of how their jurisdiction operates.

Strategies that were assigned a **higher priority** are ones that the LPT determined that their localities could implement:

1. in a timely manner,
2. with limited financial and staff resources, and
3. would reduce or eliminate losses to public infrastructure or private structures that have a history of damage from natural causes.

Strategies that were assigned a **moderate priority** are ones that the LPT determined that their localities could implement:

1. with a greater commitment of staff time,
2. a higher level of financial support from the locality, and
3. would increase public safety for a significant number of residents.

Strategies that were assigned a **low priority** are ones that LPT determined would:

1. require assistance from agencies/organizations outside of the direct control of the local government, and
2. have a lower potential to reduce or eliminate direct losses from natural hazards.

Please note that the Middle Peninsula localities and the federally recognized tribes used the above prioritization scale.

Public Survey (continued)

The final section of the public survey that was open to Middle Peninsula citizens from March 1st to March 15th, focused on understanding prioritizing projects and mitigating hazards. Respondents believed that mitigation actions protecting critical facilities, protecting, and reducing damages to utilities, and protecting private property were very important. The least important mitigation actions identified by respondents were preventing development in hazard areas and promoting cooperation among public agencies, citizens, non-profit organizations, and businesses. Next, when asked what actions have been on their property to reduce the risk of hazards 98 respondents purchased homeowners/renters insurance policies, 74 respondents have removed dead/dying trees or vegetation, 66 respondents have an alternate power supply, 56 respondents purchased and placed easily accessible fire extinguishers, 24 respondents purchased flood insurance, 20 respondents flood proofed their home, 20 respondents gained an alternative water supply, 17 respondents installed retrofits (i.e.. high impact windows or doors to withstand high winds; fire resistant siding, roofing or window screens, storm doors), 4 respondents installed fire breaks around their home, and 11 respondents have taken other actions.

Respondents also provided input regarding incentives that might encourage mitigation actions on their property and the majority of respondents favored property tax breaks, State tax incentives, insurance premium discounts, and grant funding. Finally, when asked what types of mitigation projects local government agencies should focus on to reduce disruption of services and to strengthen the community, they ranked the following from be most favorable to least favorable:

- Retrofit infrastructure
- Work on improving the damage resistance of utilities
- Retrofit and strengthen essential facilities
- Inform property owners of ways can mitigate damage to their properties
- Replace inadequate or vulnerable bridges and causeways
- Assist vulnerable property owners with securing funding to mitigate impacts on their property(s)
- Provide better information about hazard risk and high-hazard areas
- Buyout flood prone properties and maintain as open space.

Responsible Party

The local Emergency Services Coordinator/Emergency Manager (ESC/EM) will be the primary person responsible for implementing the strategies in this plan as adopted by their jurisdiction. The ESC/EM will need to work closely with the locality's Chief Administrative Officer (CAO) since many of the strategies will require Board of Supervisor or Town Council action.

Local governing body action will include implementation of new policies or ordinances as well as the possibility of amending existing ones. In addition, the governing body will need to approve grant applications for FEMA Hazard Mitigation Grant Funding and/or other funding sources.

The ESC/EM and CAO will need to work closely with the locality's Building, Planning and Zoning Department staff members as well as with FEMA and VDEM Disaster Mitigation staff in order to implement a successful and comprehensive hazards mitigation program.

Changes to the locality's zoning ordinance, comprehensive plan, building regulations and/or capital improvements programs can be anticipated. The CAO and ESC/EM in each locality will spearhead the effort to amend existing ordinances/policies or develop new ones to help implement mitigation strategies adopted for their locality in the MPAHMP update.

Communications

The ESC/EM will develop and implement their county-wide hazards mitigation outreach and public awareness campaigns using local media and other proven informational outlets in their locality – including their county websites that includes additional information about their Emergency Services Department.

Each locality's website will list and briefly describe the mitigation strategies that they have adopted in this plan and the timeframes by which they plan to implement them. Additionally, the website will include technical information and diagrams that residents can use to implement low-cost/low-tech construction measures to lessen potential future losses from natural hazards. Table 108 to 117 list the strategies that each jurisdiction has committed to for the next 5 years.

Table 108: Essex County - Locality Specific Plan of Action

Strategy	Priority	Responsible Party	Funding Source	Status	Comment
1.1.1	Moderate	Zoning	FEMA/landowners	By request	
1.1.2	Low	Building	Local	Yearly	
1.1.4	Low	Planning/ESC	Federal	By request	
1.1.5	High	BOS/VDOT	VDOT	In-progress	Currently participate in the Regional Hampton Road Evacuation Plan
1.1.6	High	BOS/VDOT	VDOT	In-progress	Currently participate in the Regional Hampton Road Evacuation Plan
1.1.8	High	Planning	Local	On-going	
1.1.9	High	Building/Zoning	Local	In-progress	
1.1.10	Low	Building	Local	Did not adopt	
1.1.11	High	Zoning	Local	On-going	
1.1.13	High	ESC/Planning	Local	In-progress	
1.1.15	High	Building/Wetlands	Local	In-progress	
1.1.19	Moderate	ESC/Planning	Local	On-going	
2.2.1	High	ESC	Local	In-progress	Mutual aid contract is renewed once a year
2.2.2	High	ESC	Local	In-progress	Mutual aid contract is renewed once a year
3.1.2	Low	Planning/VDOT	Local	Not started	Delayed due to limited funding and manpower
3.1.3	High	ESC/power co	Local	In-progress	
3.1.5	Moderate	ESC/MPPDC	Local/Regional	In-progress	The County will encourage citizens to participate in the Middle Peninsula Fight the Flood Program.
3.1.6	High	ESC	Local	Ongoing & In-progress	
3.1.8	Low	ESC	Local	Ongoing	
3.2.1	High	Planning	Local	In-progress	
3.2.2	Low	ESC/Regional	State/Federal	In-progress	1. During the 2020 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2) 2. 2010 Census data was included in HAZUS. 2020 Census data will be used in the next AHMP update.
4.1.1	High	ESC	Local	In-progress	Adopted a floodplain overlay district as a component of the County's zoning ordinance.

Table 109: Town of Tappahannock Locality Specific Plan of Action

Strategy	Priority	Responsible Party	Funding Source	Status	Comments
1.1.1	Moderate	Zoning	FEMA/landowners	By request	
1.1.5	High	Town/County	VDOT	Delayed	Delayed because of VDOT; currently participate in the Regional Hampton Road Evacuation plan
1.1.7	High	Town	VDOT	Delayed	Delayed because of VDOT; currently participate in the Regional Hampton Road Evacuation plan
1.1.8	High	Planning	Local	On-going	
1.1.9	Low	Building/Zoning	Local	W/in 2 years	Delayed because of Essex County
1.1.10	Low	Building	Essex County	w/in 2 years	
1.1.11	Low	Zoning	Local	Not started	
1.1.15	Low	Building/Wetlands	Local	w/in 2 years	
1.1.19	Moderate	ESC/Planning	Local	On-going	
2.2.1	High	ESC	Local	In-progress	Mutual aid contract is renewed once a year
2.2.2	High	ESC	Local	In-progress	Mutual aid contract is renewed once a year
3.1.2	Moderate	ESC	n/a	On-going	
3.1.3	Moderate	ESC/power co	n/a	w/in 1 years	
3.1.5	Low	ESC/MPPDC	Local/Regional	In-progress	The Town will encourage citizens to participate in the Middle Peninsula Fight the Flood Program.
3.1.6	Low	ESC	Local	Not started	
3.2.1	High	Planning	Local	w/in 2 years	
3.2.2	Low	ESC	State/Federal	In-progress	1. During the 2020 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2) 2. 2010 Census data was included in HAZUS. 2020 Census data will be used in the next AHMP update.
4.1.1	High	ESC	Local	On-going	Adopted a floodplain overlay district as a component of the County's zoning ordinance.

Table 110: Gloucester County Locality Specific Plan of Action.

Strategy	Priority	Status	Plan to complete this strategy	Responsible Party	Funding Source	Schedule
I.1.1	Moderate	On-going	Continued progress on the strategy as part of the Hazard Mitigation Management Team combined with our Floodplain Management Committee and Program Public Information.	Hazard Mitigation Management Team and Floodplain Management Committee and Program Public Information	FEMA /Landowners	Strategy will be continual on an annual scheduled basis
I.1.2	Moderate	On-going	Same as above	Same as above	FEMA	Strategy will be continual on an annual scheduled basis
I.1.3	Moderate	On-going	Same as above	Engineering and Building & Grounds Departments	Federal grant	Strategy will be continual on an annual scheduled basis
I.1.4	High	On-going	Same as above	Engineering and Building & Grounds Departments	FEMA	Strategy will be continual on an annual scheduled basis as grants are available.
I.1.5	High	In-progress	Same as above	BOS/VDOT	VDOT	Strategy will be continual on an annual scheduled basis
I.1.6	High	On-going	Same as above	BOS/VDOT	VDOT	Strategy will be continual on an annual scheduled basis
I.1.7	Moderate	In-progress	Same as above	BOS/VDOT	VDOT	Strategy will be continual on an annual scheduled basis
I.1.8	Moderate	On-going	Same as above	Building Inspections and Planning & Zoning Departments	Local	Strategy will be continual on a bi-annual scheduled basis
I.1.10	Moderate	On-going	Same as above	Building Inspections and Planning & Zoning Departments	Local	Strategy will be continual on an annual scheduled basis
I.1.11	High	On-going	Same as above	Building Inspections and Planning & Zoning Departments	Local	Strategy will be continual on an annual scheduled basis
I.1.13	Moderate	On-going	Same as above	BOS/ Environmental Programs /Extension Service	Local	Strategy will be continual on an annual scheduled basis and updated on a regular basis.
I.1.15	Moderate	On-going	Continued progress on the strategy as part of the Hazard Mitigation Management Team combined with our Floodplain Management Committee and Program Public Information.	Wetlands Board Environmental Programs	Local	Strategy will be continual on an annual scheduled basis
I.1.18	Moderate	In-progress	Same as above	DIT / GIS	Local	Strategy will be continual on an annual scheduled basis
I.1.19	Moderate	In-progress	Same as above	BOS, Building Inspections, Planning & Zoning Departments, VDOT	Local	Strategy will be continual on an annual scheduled basis and revised when plans are reviewed
I.1.20	Moderate	In-progress	Same as above	Emergency Management, Hazard Mitigation Management Team & Floodplain Management Committee and Dam Owners	Local/Dam Owners	EAP for the Cow Creek Dam has recently been approved in 2021. Gloucester is currently working with a consultant to

						hold listening session and engagement exercises to better understand the impacts of Beaver Creek Dam.
1.3.1	High	In-progress	Same as above	Emergency Management, Hazard Mitigation Management Team and Floodplain Management Committee, Building Inspections and Planning & Zoning Departments	Local	
2.2.1	High	In-progress	Same as above	Emergency Management	Local	Strategy will be continual on an annual scheduled basis
2.2.2	High	In-progress	Same as above	Emergency Management	Local	Strategy will be continual on an annual scheduled basis
3.1.2	Moderate	On-going	Same as above	VDOT, Floodplain Management Committee and Program Public Information	VDOT & Local grants	Strategy will be continual on an annual scheduled basis and upgraded when VDOT make road improvements as approved by BOS.
3.1.3	Low	On-going	Same as above	Emergency Management, Hazard Mitigation Management Team and Floodplain Management Committee and Program Public Information	Dominion Power	Strategy will be continual on an annual scheduled basis as contract requires by Dominion Power.
3.1.4	Moderate	On-going	Same as above	Same as above	Program Public Information	Strategy will be continual on an annual scheduled basis
3.1.5	High	On-going	Same as above	Emergency Management, Hazard Mitigation Management Team and Floodplain Management Committee and Program Public Information	Program Public Information	Strategy will be continual on an annual scheduled basis and will apply for grants to fund PPI. Additionally, the County will encourage citizens to participate in the Middle Peninsula Fight the Flood Program.
3.1.6	Moderate	On-going	Same as above	Emergency Management, Dominion Power	Dominion Power	Strategy will be continual on an annual scheduled basis
3.1.7	Low	On-going	Same as above	Middle Peninsula Planning District Commission	MPPDC	Strategy will be continual on an annual scheduled basis as part of PDC funding
3.1.8	Moderate	On-going	Same as above	Emergency Management, US Forestry Service, and Volunteer Fire Departments	USFS	Strategy will be continual on an annual scheduled basis and will seek grant opportunities.
3.2.2	Low	In-progress	Same as above	Middle Peninsula Planning District Commission	MPPDC	Strategy will be continual as the AHMP is scheduled for review 2021
4.1.1	High	In-progress	Same as above	Emergency Management and BOS	local	Strategy will be continual as the AHMP is scheduled for review 2021

SECTION 9: IMPLEMENTATION PLAN

Table III: King and Queen County - Locality Specific Plan of Action

Strategy	Priority	Responsible Party	Funding Source	Status	Comments
1.1.5	Low	VDOT	VDOT	On-going	VDOT managed plan for bridge and traffic flow.
1.1.6	Moderate	BOS/VDOT	VDOT	On-going	Route 17 at Parkers Marina completed and now open. Road was raised. Also, items referred to VDOT as identified
1.1.8	Moderate	Zoning	Local	Every 2-years	Program reviewed by FEMA
1.1.11	Moderate	Building/Zoning	Local	On-going	
1.1.13	Moderate	ESC/Planning	VDOT	w/in 2-years	
1.1.15	Low	Building/Zoning	Local	On-going	Adopted new FIRM maps May of 2016 and new code. VE flood zone has a higher construction requirement. Also, promote public education and awareness through current floodplain management committee and through the Middle Peninsula Fight the Flood Program.
1.1.18	Moderate	Zoning	Local	On-going	Data updated on an as needed bases as dry hydrants are removed or added and new GIS data is provided, including new aerial imagery.
1.2.1	Low	ESC/CAO	Local	On-going	
2.2.1	High	ESC	Local	On-going	Currently participate in mutual aid, no formal MOU's
2.2.2	High	ESC	Local	On-going	Currently participate in mutual aid, no formal MOU's
3.1.2	Moderate	ESC	VDOT	Not Started	Roadways in VDOT system needs ditch cleanouts to prevent roadway flooding
3.1.3	Moderate	ESC/power co	Power Co.	In-Progress	REC does a great job of this
3.1.5	Low	ESC/MPPDC	Grant	On-going	The County will rely on the MPPDC for education campaigns for residents living in the 100-year floodplain. The MPPDC launched the Fight the Flood Program to engage residents impacted by flooding.
3.1.6	Moderate	ESC	n/a	Not started	
3.1.7	Low	MPPDC	Regional	Not Started	Rely on MPPDC for educational programs; FTF Program
3.1.8	Moderate	ESC	n/a	On-going	
3.2.2	Low	ESC	Local	In-Progress	On-going through GIS
4.1.1	High	ESC	Local	In-Progress	Adopted a floodplain overlay district as a component of the County's zoning ordinance.

Table 112: King William County - Locality Specific Plan of Action

Strategy	Priority	Responsible Party	Funding Source	Status	Comments
1.1.5	High	BOS/VDOT	VDOT	On-going	
1.1.6	Moderate	BOS/VDOT	VDOT	On-going	
1.1.12	Low	Zoning	Local	On-going	
1.1.13	Moderate	ESC/Planning	Local	Delayed	Delayed due to lack of funding and interest in this topic.
1.1.15	Low	Building/Wetlands	Local	On-going	
1.1.16	Moderate	Community Development	Local	Not Started	Delayed due to lack of funding
1.1.18	Low	GIS/Community Development	Local	On-going	GIS layer developed; Added stormwater BMP layer
1.1.19	Moderate	Community Development	Local	On-going	
2.2.1	High	ESC	Local	On-going	Currently participate in mutual aid, no formal MOU's
2.2.2	High	ESC	Local	On-going	Currently participate in mutual aid, no formal MOU's
3.1.2	Moderate	ESC	n/a	Not started	
3.1.3	Moderate	ESC/power co	n/a	w/in 1 years	
3.1.4	Moderate	ESC	n/a	Not started	Very little development around flood plains
3.1.5	Low	MPPDC	Regional	Not started	Very little development around flood plains; However, the County will rely on the MPPDC for education campaigns for residents living in the 100-year floodplain. The MPPDC launched the Fight the Flood Program to engage residents impacted by flooding.
3.1.6	Low	ESC	n/a	w/in 2 years	
3.1.7	Low	ESC/Community Development	Local	Not Started	Threat level of sea rise limited in this community.
3.1.8	Moderate	ESC	n/a	Not started	
3.2.2	Low	ESC	n/a	In-progress	1. During the 2020 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2) 2. 2010 Census data was included in HAZUS. 2020 Census data will be used in the next AHMP update.
4.1.1	High	ESC	Local	In-progress	Adopted a floodplain overlay district as a component of the County's zoning ordinance.

Table 113: Town of West Point - Locality Specific Plan of Action

Strategy	Priority	Responsible Party	Funding Source	Status	Comments
1.1.1	Moderate	Planning	FEMA/land owners	Canceled	Have applied for funding over the last years and denied.
1.1.2	High	Building	Local	On-going	
1.1.3	Moderate	Planning	HRSD/Local	Completed	Relocated public works building to higher ground
1.1.5	Low	Planning	Regional	Not Started	
1.1.7	Moderate	VDOT/HRSD/Local	VDOT/HRSD/Local	On-going	Continue to evaluate status of roads
1.1.9	Moderate	Building/Zoning	Local	Not started	
1.1.10	Low	Building/Zoning	Local	On-going/ Completed	
1.1.11	Moderate	Zoning	Local	Ongoing	Review of zone and building applications
1.1.15	Low	Building/Wetlands	Local	In-progress	Encourage citizens to participate in the Middle Peninsula Fight the Flood Program.
1.1.19	Low	Planning	Local	Not Started	Plan to work on techniques
2.2.1	High	Regional	Regional	On-going	Currently participate in mutual aid, no formal MOU's
2.2.2	High	Regional	Regional	On-going	Currently participate in mutual aid, no formal MOU's
3.1.2	Moderate	ESC	King William	On-going	King William Dispatch has the capability of doing this for the Town, if needed
3.1.3	Low	ESC/power co	n/a	Not started	
3.1.6	Moderate	ESC	Local	Not started	Work on public education through social media
3.1.7	Low	ESC	n/a	Not started	Work on public education through social media
3.2.1	High	Planning	n/a	On-going	Updated GIS information as received from FEMA
3.2.2	Low	ESC	Local	In-progress	1. During the 2020 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2) 2. 2010 Census data was included in HAZUS. 2020 Census data will be used in the next AHMP update.
4.1.1	High	ESC	Local	In-progress	Adopted a Floodplain overlay district as a component of the Town's zoning ordinance

Table 114: Mathews County - Locality Specific Plan of Action

Strategy	Priority	Responsible Party	Funding Source	Status	Comments
1.1.1	High	Zoning	FEMA/landowners	In-progress/ ongoing	Four FEMA HMGP grants were awarded to the County for the elevation of houses for thirty-four repetitive loss properties and acquisition of three properties. The elevations and acquisitions in these four grants are in progress and are expected to be completed in 2017. Another FEMA HMGP grant for one severe repetitive loss property was used to elevate the house in 2014.
1.1.2	Low	Public Works	Local	Not Started	Delayed because of lack of funding
1.1.3	Moderate	Public Works	Local	Not Started	Delayed because of lack of funding
1.1.4	High	Town/County	VDOT	In-progress/ ongoing	FEMA HMGP funds were used to acquire five properties.
1.1.5	High	County	VDOT	Not Started	Recently added to this mitigation strategy
1.1.6	Low	County	VDOT	Not Started	Delayed because of lack of VDOT funding
1.1.8	High	Local/VDCR	Building/Zoning	Not Started	Delayed because of lack of VDOT funding
1.1.9	Low	Building/Zoning	Local	Not started	CRS was investigated by the previous Building Official. Board of Supervisors was not interested in joining at that time.
1.1.10	High	Building	Essex County	Delayed	Increased elevation requirements proposed for updated floodplain management ordinance, but not adopted. Potential to be addressed in the future.
1.1.11	High	Zoning	Local	In-progress/ ongoing	County's Building Official is enforcing adopted Floodplain Management Ordinance. Zoning amendments will be considered by the Planning Commission to address recurrent flooding after the five-year review of the Comprehensive Plan.
1.1.13	Low	Building/Wetlands	Local	Not started	No request has been made to the NRCS or Tidewater Soil and Water Conservation District for an inventory of farm pond dams.
1.1.15	Moderate	Building/Wetlands	Local	In-progress/ ongoing	The County's Wetlands Projects Coordinator and the Wetlands Board are promoting "Living Shorelines" as a shoreline erosion control method to property owners by utilizing information provided by VIMS and VMRC.
1.1.19	Moderate	Building/Zoning	Local	In-progress/ ongoing	Mitigation strategies will be included in the 5-year review of the Mathews County Comprehensive Plan by integrating natural hazard information and identifying hazard prone areas within the community.
2.2.1	High	ESC	Local	On-going	Formal MOA with regional partners.
2.2.2	High	ESC	Local	On-going	Formal MOA with regional partners.
3.1.2	Moderate	ESC	n/a	In-progress/ ongoing	The County encourages property owners to participate in its Outfall Ditch Maintenance Program. Local VDOT maintenance crews periodically clean ditches in their right-of-way. A Ditching Committee comprised of County residents was also formed to address this problem.
3.1.3	Low	ESC/power co	n/a	Not started	No request has been made to Dominion Power for information and guidance about the importance of keeping trees and brush away from power lines.

3.1.4	High	ESC	n/a	In-progress/ ongoing	The County's Building Official regularly posts information on the County's website regarding flood hazards.
3.1.5	High	ESC	n/a	In-progress/ ongoing	The County's Building Official and the Department of Planning & Zoning inform residents about FEMA HMGP grants to elevate their houses or acquire properties. Additionally, the County will encourage citizens to participate in the Middle Peninsula Fight the Flood Program.
3.1.6	Low	ESC	n/a	Not started	Delayed because of lack of staff
3.1.7	High	ESC	local	In-progress/ ongoing	Department of Planning & Zoning staff provided this information to residents when the Comprehensive Plan was updated in 2010. On-going information has been provided to the Planning Commission regarding this topic in advance of the five-year review of the Comprehensive Plan.
3.1.8	Low	Public Works	Local	Not started	Delayed because of lack of staff
3.2.1	High	Zoning	Local	In-progress/ ongoing	Current FEMA flood zone maps are incorporated to our County's Online GIS.
3.2.2	Low	ESC	n/a	In-progress	1. During the 2020 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2) 2. 2010 Census data was included in HAZUS. 2020 Census data will be used in the next AHMP update.
4.1.1	High	Building/Zoning/ESC	Local	Ongoing	Implement plans that address one or more of the eight

Table 115: Middlesex County - Locality Specific Plan of Action

Strategy	Priority	Responsible Party	Funding Source	Status	Comments
1.1.1	High	Zoning	FEMA/land owners	On-going	Managed by Staff on an on-going basis
1.1.2	Low	Building	Local	Not Started	Delayed because lack of staff; any concerns are forwarded to VDOT
1.1.4	Low	Building	FEMA	Not Started	Lack of staff to implement strategy
1.1.5	High	ESC/VDOT	Local	On-going	Utilize MP Evacuation Plan and Coordinate with VDOT
1.1.6	Low	BOS/VDOT	VDOT	On-going	Managed by VDOT
1.1.8	High	Zoning	VDOT	On-going	Active program; Ordinance recently readopted
1.1.9	Low	Building/Zoning	Local	Not Started	Delayed because lack of staff
1.1.11	High	Zoning	Local	On-going	Managed by staff on an on-going basis
1.1.13	Moderate	ESC/Planning		On-going	Coordinate with USDA Staff when required
1.1.15	High	Building/Wetlands	Local	On-going	Managed by Staff on an on-going basis
1.1.18	High	ES/GIS	Local	Not Started	Delayed because lack of staff
1.1.19	Moderate	BOS/Zoning/ES	Local	On-going	Coordinated by staff as required
1.2.1	Low	ESC/CAO	Local	Not Started	
2.2.1	High	ESC	Local	On-going	MP Emergency Management MOU
2.2.2	High	ESC	Local	On-going	MP Emergency Management MOU
3.1.2	Low	ESC	n/a	On-going	This occurs as needed; Public information via social media and handout material
3.1.3	Moderate	ESC/power co	n/a	On-going	Managed by Staff on an as needed basis; Continue to coordinate with power company
3.1.4	High	ESC	n/a	On-going	Managed by staff during public education deliveries; Public information via presentation, social media, and handout material
3.1.5	Low	ESC	n/a	On-going	This occurs as requested, <i>Public information via presentation, social media and handout material.</i> Additionally, the County will encourage citizens to participate in the Middle Peninsula Fight the Flood Program.
3.1.6	High	ESC	n/a	On-going	Managed by staff during public education deliveries; Public information via presentation, social media, and handout material
3.1.7	Low	ESC	Local	Not Started	Reactionary only; Public information social media and handout material
3.1.8	High	ESC	n/a	On-going	Managed by Staff during public education deliveries; Public information via presentation, social media, and handout material
3.2.2	Low	ESC	n/a	In-progress	Continue to update and file TIER II Reports.
4.1.1	High	ESC	Local	In-progress	Adopted a floodplain overlay district as a component of the County's zoning ordinance.

Table 116: Town of Urbanna - Locality Specific Plan of Action

Strategy	Priority	Responsible Party	Funding Source	Status	Comments
1.1.1	High	Zoning	FEMA/landowners	On-going	Greatly increased freeboard requirements in new floodplain ordinance beyond minimum requirement.
1.1.2	High	Building	Local	On-going	
1.1.3 (newly added strategy)	Moderate	Zoning/HRSD	Local	On-going	Replacing & relocating old sewage pumping stations with modern, more efficient systems and at better locations. Planting appropriate vegetation to shore up shoreline.
1.1.7 (newly added strategy)	Moderate	VDOT	VDOT/Local	On-going	Continue working with VDOT insisting they provide proper service for their roads. Work with property owners to have them take proper care of their drainage areas adjacent to the road.
1.1.9	Moderate	Building/Zoning	VDOT	Not Started	
1.1.11	High	Zoning	Local	On-going	Enforcement of all floodplain/zoning/building regulations in flood zones is actively pursued on an on-going basis.
1.1.15	High	Building/Wetlands	Local	On-going	Conducted jointly with Middlesex County
1.1.19	Moderate	Town/MPPDC	Local	On-going/In-progress	The Town and MPPDC integrates plans and policies when the opportunity arises.
2.2.1	High	ESC	Local	On-going	Currently participate in mutual aid, no formal MOU's
2.2.2	High	ESC	Local	On-going	Currently participate in mutual aid, no formal MOU's
3.1.2	Low	ESC	n/a	On-going	Educational materials periodically placed on web site to encourage maintenance.
3.1.3	Low	ESC/power co	n/a	On-going	Town encourages Dominion line maintenance at every opportunity.
3.1.4	Low	Town/MPPDC	Local/Regional	In-Progress	Direct citizens to the Middle Peninsula Fight the Flood Program
3.1.6	Low	ESC	n/a	Delayed	Manpower constraints
3.1.7	Moderate	ESC	Local	In-progress	Materials are being developed for distribution
3.2.1	Moderate	Zoning/GIS	n/a	n/a	See Middlesex County
3.2.2	Low	ESC	n/a	In-progress	1. During the 2020 HAZUS completed by Dewberry the newest version of HAZUS software (version 4.2) 2. 2010 Census data was included in HAZUS. 2020 Census data will be used in the next AHMP update.
4.1.1	High	ESC	Local	In-progress	Adopted a Floodplain overlay district as a component of the County's zoning ordinance

Table 117: Rappahannock Tribe - Specific Plan of Action

Strategy	Priority	Responsible Party	Funding Source	Status	Comments
1.1.4	Low		FEMA Grants	Not Started	Will consider as needs are identified
1.3.1	Low	Director of Emergency Management	Grants	In-progress	<ul style="list-style-type: none"> • After funding secured, purchase Weather radios for Tribal Members. Subscribe to Alerting system for delivering information to members and area residents. Obtain generator for operations building. • Advanced warning systems (weather radios, reverse-911, Code Red type alerts) are being researched • Generator will be added to Operations building
2.2.1	Moderate	Director of Emergency Management	Grants	In-Progress	<ul style="list-style-type: none"> • Identify who has what resources in area as well as what capabilities we have. Obtain Mutual Aid Agreements covering the Rappahannock Tribal Service Area • The Rappahannock Tribe has plans on providing a 100-bed shelter
3.1.2	Low	Director of Emergency Management	Property Owner	Not Started	As problems areas are identified, property owners will be contacted and encouraged to perform required maintenance
3.1.4	Low	Director of Emergency Management	Grants	Not Started	As problems areas are identified, property owners will be contacted informed
3.1.6	Low	Director of Emergency Management	Grants	Not Started	Once we can locate and hire an Emergency Communications Coordinator, we will begin this and other public education programs
3.1.8	Low	Emergency Communications Coordinator	Grants	Not Started	Once we can locate and hire an Emergency Communications Coordinator, we will begin this and other public education programs

Strategy	Priority	Responsible Party	Funding Source	Status	Comment
1.1.1	Low	Emergency Management	Grants	Not Started	As problems are identified by homeowners, reconstruction of properties will be investigated to determine eligibility for grant funding.
1.1.3	Low	Emergency Management	Grants	Not Started	As problems are identified, reconstruction of properties will be investigated to determine edibility for grant funding.
1.1.4	Low	Environmental Protection	Grants	Not Started	As problems are identified, conversion of properties will be investigated to determine eligibility for grant funding.
1.1.8	Low	Environmental Protection	Grants	Not Started	Conduct a bi-annual review of NFIP compliance
1.1.9	Low	Environmental Protection	Grants	Not Started	Investigate the FEMA CRS Program and how it can be implemented at UMIT
1.1.11	Low	Environmental Protection	Grants	Not Started	Review plans for new builds to ensure they are compliant in relevant regulations
1.1.12	Low	Environmental Protection	Grants	Not Started	Monitor plans for development in applicable areas
1.1.13	Low	Environmental Protection	Grants	Not Started	Begin partnerships with applicable agencies
1.1.15	Low	Environmental Protection	Grants	Not Started	Promote techniques when construction is occurring
1.1.18	Low	Environmental Protection	Grants	Not Started	Add data when GIS maps are created
1.1.19	Low	All Staff	Grants	Not Started	<ul style="list-style-type: none"> • Include mitigation strategies as plans and programs are being created • The Tribe is currently in the capacity building stage, and many plans and procedures are currently being developed.
1.3.1	Low	Emergency Management/Tribal Administrator	Grants	Not Started	<ul style="list-style-type: none"> • As problems are identified by homeowners, retrofitting of properties will be investigated to determine eligibility for grant funding. • Communication systems for advanced warning are being investigated • Plans to purchase additional generators for tribal buildings are being developed
2.2.1	Low	Emergency Management/Tribal Administrator Legal	Grants	Not Started	Partner with local counties to develop MOUs for tribal service areas
3.1.2	Low	Emergency Management	Grants	On-going	<ul style="list-style-type: none"> • Create and distribute homeowner and renter flyer on proper home maintenance • Post reminders on home maintenance during storms • Encourage homeowners to maintain standard of care of their properties
3.1.4	Low	Emergency Management	Grants	Not Started	<ul style="list-style-type: none"> • Create and distribute homeowner and renter flyer on proper home maintenance • Post reminders on home maintenance during storms • Encourage homeowners to maintain standard of care on their properties
3.1.6	Low	Emergency Management	Grants	Not Started	<ul style="list-style-type: none"> • Create and distribute homeowner and renter flyer on proper home maintenance • Post reminders on home maintenance during storms

SECTION 9: IMPLEMENTATION PLAN

					<ul style="list-style-type: none"> • Encourage homeowners to maintain standard of care on their properties
3.1.7	Low	Emergency Management/ Environmental Protection	Grants	Not Started	Create and distribute homeowner and renter flyer on long-term effects of sea level rise
4.1.1	Low	Emergency Management	Grants	Not Started	<ul style="list-style-type: none"> • Establish Hazard Mitigation Planning Committee to assign strategies and develop timeline for action steps • Research and apply for grants as able to assist in emergency management and hazard mitigation

Local Plan Coordination and Integration

During this update the AHMP Steering added strategy 1.1.19 that focuses on integrating mitigation strategies into locality plans, policies, codes and programs across disciplines and departments. Here are examples of how Middle Peninsula localities are working toward this goal:

Essex County has developed zoning, subdivision, and floodplain ordinances that effectively reduce hazard impacts. Additionally, they have adopted flood insurance rate maps and have acquired land for open space and public recreation uses that assist in reducing hazard impacts.

Gloucester County is currently developing a Continuity of Operations Plan and has developed zoning, subdivision, floodplain, and natural hazard specific ordinances that effectively reduce hazard impacts. Additionally, they have adopted flood insurance rate maps and they have acquired land for open space and public recreation. The County has referenced the AHMP in the Comprehensive Plan, Floodplain Management Plan as well as the Open Space Management Plan. In conjunction with County plans, they have also adopted ordinances (zoning, subdivision, floodplain, and natural hazard) as well as flood insurance rate maps and have acquired land for open space and public recreates uses that assist in reducing hazard impacts.

King and Queen County has developed zoning, subdivision, floodplain, and natural hazard specific (ie. stormwater) ordinances that effectively reduce hazard impacts. Additionally, they have adopted flood insurance rate maps and they have acquired land for open space and public recreation (ie. conservation easements and Department of Forestry public forests) uses that assist in reducing hazard impacts.

King William County has included references to hazard mitigation in a variety of plans including the County Comprehensive Plan and the Local emergency Operations Plan. Additionally, King William County adopted ordinances (zoning, subdivision, floodplain, and natural hazard) as well as flood insurance rate maps that assist in reducing hazard impacts.

Mathews County adopted their Comprehensive Plan 2030 in January 2011 it has since been updated in 2017 and is currently being updated now that includes a chapter on hazard mitigation. Other plans that address hazards include the Capital Improvements Plan (Adopted in 2020), Local Emergency Operations Plan (Adopted December 2019), and the Transportation Plan. Additionally, Mathews County adopted ordinances (zoning, subdivision, floodplain, and natural hazard) as well as flood insurance rate maps and acquired land for open space through FEMA HMGP grant funding that assist in reducing hazard impacts.

Middlesex County has developed zoning, subdivision, and floodplain ordinances that effectively reduce hazard impacts. Additionally, they have adopted flood insurance rate maps to assist in reducing hazard impacts.

The **Upper Mattaponi Tribe** is currently in a capacity building stage, and existing plans, studies, reports, and technical information is limited. The plan takes into considerations all existing plans; however, as more plans are officially developed, they will be able to be used for future iterations.

In conjunction with integrating hazards and mitigation into local policies and plans, Middle Peninsula localities are interested in public involvement and several localities have specifically identified additional public participation steps to explore over the next five years:

- King William County- The County has established an All-Hazards Emergency Planning Committee to ensure that the public is involved.
- Gloucester County- The public will be involved with natural hazard planning through the Local Emergency Planning Committee (LEPC) and the Floodplain Management Committee (FMC). Both groups are open to the public and speak to hazard identification and mitigation strategies. Copies of The Plan will be made available at both County Public Libraries. Additionally, Gloucester County offers a variety of public outreach opportunities for their citizens. As participants in the CRS program the County has developed a Program for Public Information (PPI) that includes ongoing education about flooding.
- Town of Tappahannock – The Town will utilize monthly Town Council meetings to engage the public on hazard and mitigation topics.
- Mathews County- County will, from time to time, include pertinent information and opportunities for input on our website www.mathewscountyva.gov.
- King and Queen County- Copies of the AHMP will be made available at the Public Library. Comments from the public will be encouraged with a submission procedure outlined. The plan will be discussed at open public Board of Supervisors meetings when up for review. References to the Plan will be on the County’s future Emergency Services Web Page.

Section 10 - Plan Adoption

The participating Middle Peninsula Localities held a public informational session during one of their regularly scheduled local governing board/council meetings seeking adoption of the plan. The federally recognized Tribes also presented this plan to their Tribal Governments for adoption.

After these informational sessions, the 12 governing bodies adopted the AHMP update by resolution on the dates noted below:

Locality	Date of Adoption
Essex County	April 12, 2022
Town of Tappahannock	May 9, 2022
Gloucester County	April 19, 2022
King and Queen County	May 9, 2022
King William County	May 23, 2022
Town of West Point	April 25, 2022
Mathews	April 26, 2022
Middlesex County	May 3, 2022
Town of Urbanna	May 14, 2022
Tribe	Date of Adoption
Pamunkey Tribe	September 1, 2022
Rappahannock Tribe	July 11, 2022
Upper Mattaponi Tribe	June 29, 2022

Resolutions from localities and tribes adopting the AHMP update are included in Appendix N.

Section II - Plan Maintenance

The annual monitoring, evaluating, and updating of the AHMP shall be a collaborative effort between the MPPDC and participating localities and tribes.

The first annual evaluation of the AHMP will be completed on the 1-year anniversary date, or close to the anniversary date, of FEMA's approval of the plan. MPPDC staff will reach out to LPT members (Locality and Tribal representatives) who actively participated in the development of the AHMP with an explanation of needed information and mitigation strategy status updates for the annual maintenance of the plan. For consistency purposes, a list of questions will be posed to the localities and tribes to focus the annual update. Questions presented to the LPT will include, but will not be limited to:

- Report any major disasters or hazard events.
- Document any new risk information or hazard data gathered.
- Review mitigation strategies and update progress on mitigation actions and noting new actions or project that were recently identified, funded, or underway. A table of mitigation strategies will be provided.
- Address needs required to implement mitigation strategy such as training, data, or funding.
- Review opportunities for integrating data and actions from the AHMP into other plans and programs.
- Identify any challenges where technical assistance from the State or FEMA Region 3 would be helpful.

Copies of the plan sections will be sent to points of contacts and changes will be directly made to the document in "red or blue text", when requested. If substantial changes are needed or if the jurisdiction wants the MPPDC to gather and update the requested information, the MPPDC will partner with jurisdiction at a burden rate of pay.

Upon completion of plan maintenance requests, MPPDC staff will inform regional partners of the AHMP updates. Additionally, MPPDC staff will post updates to the AHMP on the MPPDC website (www.mppdc.com).

The 2026 AHMP Update

Due to the limited jurisdictional staff and funds, it can be anticipated that the 9 Middle Peninsula localities and Tribes will undertake the 2026 update as a regional planning project; however, it is important to mention that if funding becomes available, the Upper Mattaponi Tribe has expressed interest in developing a standalone hazard mitigation plan. It can also be anticipated that MPPDC participating localities will ask MPPDC staff to seek funding from FEMA for this joint project. With or without partial FEMA grant funding, the update will be undertaken and completed within the 5-year mandated federal requirement.

Middle Peninsula PDC Hazards Mitigation Plan Update

Service Agreement between

The Middle Peninsula Planning District Commission (MPPDC) and

Essex County, Virginia (the County or Town) for the

Virginia Department of Emergency Management (VDEM)

“Middle Peninsula PDC Hazards Mitigation Plan Update”

Grant Number FEMA-DR-4401-VA-003

THIS SERVICE AGREEMENT (the “Agreement”) dated this 28 day of December, 2020.

BETWEEN:

Essex County, Virginia of 202 S. Church Lane, Tappahannock, VA 22560
(The “Client”)

AND

Middle Peninsula Planning District Commission of 125 Bowden Street, Saluda, Virginia 23149
(The “Contractor”)

BACKGROUND:

- A. The Client is of the opinion that the Contractor has the necessary qualifications, experience, and abilities to provide services to the Client.
- B. The Contractor is agreeable to providing such services to the Client on the terms and conditions set out in this Agreement.
- C. The Client recognizes the utility of a standard agreement to be used by member localities to ensure that mandates such as the Middle Peninsula multi-jurisdictional hazard mitigation plan are developed in accordance with Title 44 of the Federal Code of Regulations (CFR) Part 201.6; that the planning process is conducted in an open manner involving community stakeholders; that it is consistent with each participating jurisdiction’s policies, programs and authorities; and that it is an accurate reflection of the community’s values.

IN CONSIDERATION OF the matters described above and of the mutual benefits and obligations set forth in this Agreement, the receipt of sufficiency of which consideration is hereby acknowledged, the Client and the Contractor (individually the “Party” and collectively the “Parties” to this Agreement) agree as follows:

Services Provided

1. The Client hereby agrees to engage the Contractor to provide the Client with services (the “Services”) necessary to update the regional Middle Peninsula PDC Hazard Mitigation Plan as described in Appendix A Project Scope of Work in accordance with:
 - 44 CFR Ch. 1 Section 201.6, Part a, which indicates that a local government MUST have a mitigation plan approved in order to receive HMGP project grants

Middle Peninsula PDC Hazards Mitigation Plan Update

- and in order to apply for and receive mitigation project grants under all other mitigation grant programs.
- Disaster Mitigation Act of 2000 (“DMA 2K”), which is a key component of the Federal government’s commitment to reduce damages to private and public property through mitigation activities. This legislation established the Pre-Disaster Mitigation (“PDM”) Program and created requirements for the Post-Disaster Hazard Mitigation Grant Program (“HMGP”). This key piece of federal legislation is known as Public Law 106-390.
 - DMA 2K, which requires local governments to develop and submit mitigation plans to qualify for PDM and HMGP funds. The Act requires that the plan demonstrate “the jurisdiction’s commitment to reduce risk from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards.”.
2. The Contractor recommends that the Client consult with legal counsel concerning questions related to the requirements of Disaster Mitigation Act of 2000 and 44 CFR Ch. 1 Section 201.6 and other related sections.

Term of Agreement

3. The term of this Agreement (the “Term”) will begin on the date this Agreement is signed by both Parties and will remain in full force and effect until either FEMA approves the update to the Middle Peninsula PDC Hazard Mitigation Plan or by VDEM contract end date of October 12, 2022. The term of this Agreement may be extended with the written consent of the Parties. The Agreement may be terminated by either Party with 30 days written notice given to the other Party.
4. In the event that the Client breaches this Agreement, the Client shall remain liable to the Contractor for the costs of all services both rendered and agreed upon as set forth in paragraph 5 and 6 below. In the event that the Contractor breaches this Agreement, the Contractor will return to the Client any and all unspent monies received from the Client as set forth in Paragraph 5 and 6 below. The Parties acknowledge that no other damages, fees, or penalties shall be due one from the other as the result of any act or omission of either Party.

Performance

5. The Parties agree to fully cooperate and to do everything necessary to ensure that the terms of this Agreement take effect including the execution of additional documents should the need arise.

Compensation

Middle Peninsula PDC Hazards Mitigation Plan Update

6. For the services rendered by the Contractor as required by this Agreement, the Client will provide the following compensation as described below (as specifically applicable to Client locality, rounded up for ease).

Locality Share to be Split between all: \$6,803

Essex	\$972
Gloucester	\$972
King and Queen	\$972
King William	\$972
Mathews	\$972
Middlesex	\$972
Urbanna	\$324
Tappahannock	\$324
West Point	\$324
Total	\$6, 804 (rounded up for ease)

2 Year Federal Grant	Fema Funding	State Match Provided Non Fed Share	Local Share split between localities	Per County Match/Share	Per Town Match Share
\$ 142,863	\$ 108,848	\$ 27,212	\$ 6,803	\$ 972	\$ 324
				\$ 486	\$ 162
				\$ 486	\$ 162

All Such compensation shall be subject to appropriation by the Client.

7. The Contractor will invoice the Client for two annual payments of: **County \$486 or Town \$162 (as applicable)**.
8. Project updates will be provided in the Middle Peninsula Planning District Commission monthly meeting packets.
9. In the event that a change order is requested, beyond the scope of services outlined in this Agreement, the Client will be charged on an hourly basis according to the approved Commission budget subject to the applicable provisions referenced in Dispute Resolution below (see section 20c). Appearances at local meetings, answering of telephonic questions and private meetings will be deemed change orders in the discretion of the Contractor provided such has been disclosed in writing, in advance to the Client.

Upon completion of the Services, a presentation will be made by the Contractor, at the request of the Client, at one local meeting of the Client's choice without additional compensation.

Reimbursement of Expenses

10. The Contractor will not be reimbursed for any expenses incurred in connection with this Agreement.

Employment Discrimination by Contractor Prohibited

11. a. The Contractor will not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, age, disability, or other basis prohibited by state law relating to discrimination in employment, except where there is a bona fide occupational qualification reasonably necessary to the normal operation of the Contractor. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this nondiscrimination clause.
 - b. The Contractor, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, will state that such Contractor is an equal opportunity employer.
 - c. Notices, advertisements and solicitations placed in accordance with federal law, rule or regulation shall be deemed sufficient for the purpose of meeting the requirements of this section.
12. The Contractor will include the provisions of the foregoing paragraphs a, b and c in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Drug-Free Workplace

13. The Contractor agrees to (i) provide a drug-free workplace for the Contractor's employees; (ii) post in conspicuous places, available to employees and applicants for employment, a statement notifying employees that the unlawful manufacture, sale, distribution, dispensation, possession, or use of a controlled substance or marijuana is prohibited in the Contractor's workplace and specifying the actions that will be taken against employees for violations of such prohibition; (iii) state in all solicitations or advertisements for employees placed by or on behalf of the Contractor that the Contractor maintains a drug-free workplace; and (iv) include the provisions of the foregoing clauses in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Middle Peninsula PDC Hazards Mitigation Plan Update

14. For the purposes of this section, “*drug-free workplace*” means a site for the performance of work done in connection with a specific contract awarded to a contractor in accordance with this chapter, the employees of whom are prohibited from engaging in the unlawful manufacture, sale, distribution, dispensation, possession or use of any controlled substance or marijuana during the performance of the contract.

Employment of Illegal Aliens

15. The Contractor agrees that it does not and shall not during the performance of this Agreement knowingly employ an unauthorized alien as defined in the federal Immigration Reform and Control Act of 1986.

Ownership of Intellectual Property

16. All information gathered during this project will remain public, unless prohibited from disclosure or exempted from required disclosure in accordance with state and federal law.

Capacity

17. In providing the Services under this Agreement, it is expressly agreed that the Contractor is acting as an independent contractor and not as an employee. The Contractor and the Client acknowledge that this Agreement does not create a partnership or joint venture between them.

Notice

18. All notices, requests, demands or other communications required or permitted by the terms of this Agreement will be given in writing and delivered to the Parties of this Agreement as follows:

- a. Michael Lombardo, County Administrator
Essex County, Virginia
202 S. Church Lane, P.O Box 1079
Tappahannock, VA 22560
- b. Middle Peninsula Planning District Commission
125 Bowden Street
Saluda, VA 23149

Or to such other address as any Party may from time to time notify the other.

Additional Clauses

19. This Agreement has been reviewed and approved via recorded vote of the Essex County Board of Supervisors.

Dispute Resolution

20. In the event a dispute arises out of or in connection with this Agreement, the Parties will attempt to resolve the dispute through friendly consultation.

- a. Once a final deliverable has been submitted by Contractor and approved by FEMA, the Contractor shall be deemed to have completed all services required under this Agreement.
- b. Once the scope of work has been completed and/or the product has received any necessary approvals, any changes made by the Client to the final product is “at its own risk”. The Client assumes all responsibility for any modification, deviation, or change initiated outside of the agreed to scope of work.
- c. The Contractor has no contractual responsibility to advocate for, coordinate, or administer any local modifications beyond the services agreed to by the Contractor in accordance with the terms of this Agreement.
 - The Client may request an addendum to the contract for specific changes. The Contractor may consider the request from the Client and, if willing to perform the requested work, shall provide a response including a new cost estimate for consideration. Any addendum shall be authorized by the [Name of County/Town] [Board of Supervisors/Town Council] by Resolution outlining such changes to the Services.

Modification of Agreement

21. Any amendment or modification of this Agreement or additional obligation assumed by either Party in connection with this Agreement will only be binding if evidenced in writing signed by each Party or an authorized representative of each Party.

Time of the Essence

22. Time is the essence in this Agreement. No extension or variation of this Agreement will operate as a waiver of this provision.

Assignment

23. The Contractor shall not voluntarily or by operation of law assign or otherwise transfer its obligations under this Agreement without the prior written consent of the Client.

Entire Agreement

24. It is agreed that there is no representation, warranty, collateral agreement, or condition affecting this Agreement except as expressly provided in this Agreement.

Governing Law

25. It is the intention of the Parties to this Agreement that this Agreement and the performance under this Agreement, and all suits and special proceedings under this Agreement, be construed in accordance with and governed, to the exclusion of the law of any other forum, by the laws of the Commonwealth of Virginia, without regard to the jurisdiction in which any action or special proceeding may be instituted.

Severability

26. In the event that any of the provisions of this Agreement are held to be invalid or unenforceable in whole or in part, all other provisions will nevertheless continue to be valid and enforceable with the invalid or unenforceable parts severed from the remainder of the Agreement.

Waiver

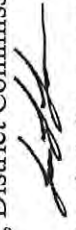

27. The waiver by either Party of a breach, default, delay, or omission of any of the provisions of this Agreement by the other Party will not be construed as a waiver of any subsequent breach of the same or the provisions.

IN WITNESS WHEREOF the Parties have duly affixed their signatures under land and seal on this 28th day of December, 2020.

Essex County, Virginia (Client)

County Administrator

Middle Peninsula Planning District Commission (Contractor)

Per:  (SEAL)
Executive Director

Appendix A:

Proposed Project Scope of Work

The Middle Peninsula Planning District Commission (MPPDC) will update the 2016 Middle Peninsula All Hazards Mitigation Plan (AHMP) with the help of a Local Planning Team. Membership will be nominated by counties, towns, and other stakeholders (i.e.. Tribes, chamber of commerce, state agencies, the public, etc) in the Middle Peninsula. The plan will address several natural hazards, including but limited to hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, earthquakes, shrink-swell soils, extreme cold, extreme heat, landslides, land subsidence/karst, and tsunami.

The project includes the following components:

1. Planning Process
2. Risk Assessment
3. Hazard Mitigation Strategy
4. Hazard Mitigation Plan Maintenance Process
5. Hazard Mitigation Plan Adoption and Approval

Planning Team Responsibilities

Representatives on the Planning Team from participating jurisdictions must engage in the following planning process, including, but not limited to:

- Develop the Work Program and Schedule with the Planning Team
- Organize and attend regular meetings (virtual and/or in person) of the Planning Team. Attendance will be documented in the PDC monthly meeting packet.
- Assist the Planning Team with developing and conducting an outreach strategy to involve other planning team members, stakeholders, and the public, as appropriate to represent their Jurisdiction.
- Identify community resources available to support the planning effort, including meeting spaces, facilitators, and media outlets.
- Provide data and feedback to develop the risk assessment and mitigation strategy, including a specific mitigation action plan for their Jurisdiction.
- Submit the draft plan to their Jurisdiction for review.
- Work with the Planning Team to incorporate all their Jurisdiction’s comments into the draft plan.
- Submit the draft plan to their respective governing body for consideration and adoption.
- After adoption, coordinate a process to monitor, evaluate, and work toward plan implementation.

Local Adoption

Middle Peninsula PDC Hazards Mitigation Plan Update

To be eligible for HMGP project grants (grants for a locality after a disaster), a local government must have a mitigation plan. Approval includes adoption by the participating jurisdictions.

Timeframe of Grant

This agreement and grant will be in effect from the date of signature by all parties, and will remain in effect through the duration of this project. Once a final deliverable has been submitted to and approved by the Client and the mandating entity, the Contractor shall be deemed to have completed all services required under this Agreement. The agreement may be terminated prior to that time by any Participating Jurisdiction by giving 30 days written notice.

RE: Middle Peninsula PDC Hazard Mitigation Plan Update
FEMA-4401-DR-VA-003

Dear Mr. Lawrence:

I am pleased to notify you that the Federal Emergency Management Agency (FEMA) has approved the project titled "Middle Peninsula PDC Hazard Mitigation Plan Update." The funds have been obligated through the Hazard Mitigation Grant Program. Attached you will find the grant award package. Please read all documents carefully prior to initiating your project. As funded, the federal share is 75 percent of the total project costs.

Your project cannot begin until the authorized agent has signed the grant award package. No reimbursements will be made until the award package is signed and received by the Virginia Department of Emergency Management. Please sign the attached grant agreement and scan and email it to Debbie Messmer, state hazard mitigation officer. Congratulations on the approval of this project. If you have questions regarding this award or the implementation of your project, please contact Debbie Messmer at (804) 267-7732 or by e-mail at debbie.messmer@vdfem.virginia.gov.

Sincerely,

Curtis C. Brown
Alternate Governor's Authorized Representative

**Re: Project Approval
Hazard Mitigation Grant Program (HEMGP)
FEMA-4401-DR-VA-003**

Dear Dr. Stern:

I am pleased to inform you that the project application, Middle Peninsula Planning District Commission Mitigation Plan Update 7% Project, submitted under FEMA-DR-4401-VA-003, has been approved.

The total amount for this project is \$142,863 with a federal share of \$108,848 (\$102,945 for project costs and \$6,903 for subrecipient management costs), and a non-federal share of \$34,015; the federal share should be available in the SMARTLINK system. A copy of the Obligation Report is enclosed for your files.

The Period of Performance for this project ends on October 15, 2022. All grant award activities must be incurred during the performance period. The final product of this grant must be a FEMA approved plan. When submitting the updated plan, allow sufficient time for review, revision, and adoption.

Please provide this office with a Quarterly Progress Report thirty days after the end of each Federal fiscal year quarter.

Middle Peninsula PDC Hazards Mitigation Plan Update

**Service Agreement between
The Middle Peninsula Planning District Commission (MPPDC) and
Gloucester County for the
Virginia Department of Emergency Management (VDEM)
“Middle Peninsula PDC Hazards Mitigation Plan Update”
Grant Number FEMA-DR-4401-VA-003**

THIS SERVICE AGREEMENT (the “Agreement”) dated this 6TH day of November 2020.

BETWEEN:

Gloucester County, 6489 Main Street, Gloucester, VA 23061
(The “Client”)

AND

Middle Peninsula Planning District Commission of 125 Bowden Street, Saluda, Virginia 23149
(The “Contractor”)

BACKGROUND:

- A. The Client is of the opinion that the Contractor has the necessary qualifications, experience, and abilities to provide services to the Client.
- B. The Contractor is agreeable to providing such services to the Client on the terms and conditions set out in this Agreement.
- C. The Client recognizes the utility of a standard agreement to be used by member localities to ensure that mandates such as the Middle Peninsula multi-jurisdictional hazard mitigation plan are developed in accordance with Title 44 of the Federal Code of Regulations (CFR) Part 201.6; that the planning process is conducted in an open manner involving community stakeholders; that it is consistent with each participating jurisdiction’s policies, programs and authorities; and that it is an accurate reflection of the community’s values.

IN CONSIDERATION OF the matters described above and of the mutual benefits and obligations set forth in this Agreement, the receipt of sufficiency of which consideration is hereby acknowledged, the Client and the Contractor (individually the “Party” and collectively the “Parties” to this Agreement) agree as follows:

Services Provided

- 1. The Client hereby agrees to engage the Contractor to provide the Client with services (the “Services”) necessary to update the regional Middle Peninsula PDC Hazard Mitigation Plan as described in Appendix A Project Scope of Work in accordance with:

Middle Peninsula PDC Hazards Mitigation Plan Update

- 44 CFR Ch. 1 Section 201.6, Part a, which indicates that a local government MUST have a mitigation plan approved in order to receive HMGP project grants and in order to apply for and receive mitigation project grants under all other mitigation grant programs.
 - Disaster Mitigation Act of 2000 (“DMA 2K”), which is a key component of the Federal government’s commitment to reduce damages to private and public property through mitigation activities. This legislation established the Pre-Disaster Mitigation (“PDM”) Program and created requirements for the Post-Disaster Hazard Mitigation Grant Program (“HMGP”). This key piece of federal legislation is known as Public Law 106-390.
 - DMA 2K, which requires local governments to develop and submit mitigation plans to qualify for PDM and HMGP funds. The Act requires that the plan demonstrate “the jurisdiction’s commitment to reduce risk from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards.”.
2. The Contractor recommends that the Client consult with legal counsel concerning questions related to the requirements of Disaster Mitigation Act of 2000 and 44 CFR Ch. 1 Section 201.6 and other related sections.

Term of Agreement

3. The term of this Agreement (the “Term”) will begin on the date this Agreement is signed by both Parties and will remain in full force and effect until either FEMA approves the update to the Middle Peninsula PDC Hazard Mitigation Plan or by VDEM contract end date of October 12, 2022. The term of this Agreement may be extended with the written consent of the Parties. The Agreement may be terminated by either Party with 30 days written notice given to the other Party.
4. In the event that the Client breaches this Agreement, the Client shall remain liable to the Contractor for the costs of all services both rendered and agreed upon as set forth in paragraph 5 and 6 below. In the event that the Contractor breaches this Agreement, the Contractor will return to the Client any and all unspent monies received from the Client as set forth in Paragraph 5 and 6 below. The Parties acknowledge that no other damages, fees, or penalties shall be due one from the other as the result of any act or omission of either Party.

Performance

Middle Peninsula PDC Hazards Mitigation Plan Update

5. The Parties agree to fully cooperate and to do everything necessary to ensure that the terms of this Agreement take effect including the execution of additional documents should the need arise.

Compensation

6. For the services rendered by the Contractor as required by this Agreement, the Client will provide the following compensation as described below (as specifically applicable to Client locality, rounded up for ease).

Locality Share to be Split between all: \$6,803

Essex	\$972
Gloucester	\$972
King and Queen	\$972
King William	\$972
Mathews	\$972
Middlesex	\$972
Urbanna	\$324
Tappahannock	\$324
<u>West Point</u>	<u>\$324</u>
Total	\$6, 804 (rounded up for ease)

2 Year Federal Grant	Fema Funding	State Match Provided Non Fed Share	Local Share split between localities	Per County Match/Share	Per Town Match Share
\$ 142,863	\$ 108,848	\$ 27,212	\$ 6,803	\$ 972	\$ 324
			Year 1	\$ 486	\$ 162
			Year 2	\$ 486	\$ 162

All Such compensation shall be subject to appropriation by the Client.

7. The Contractor will invoice the Client for two annual payments of: **County \$486 or Town \$162 (as applicable).**
8. Project updates will be provided in the Middle Peninsula Planning District Commission monthly meeting packets.
9. In the event that a change order is requested, beyond the scope of services outlined in this Agreement, the Client will be charged on an hourly basis according to the approved Commission budget subject to the applicable provisions referenced in Dispute Resolution below (see section 20c). Appearances at local meetings, answering of telephonic questions and private meetings will be deemed change orders

Middle Peninsula PDC Hazards Mitigation Plan Update

in the discretion of the Contractor provided such has been disclosed in writing, in advance to the Client.

Upon completion of the Services, a presentation will be made by the Contractor, at the request of the Client, at one local meeting of the Client's choice without additional compensation.

Reimbursement of Expenses

10. The Contractor will not be reimbursed for any expenses incurred in connection with this Agreement.

Employment Discrimination by Contractor Prohibited

11. a. The Contractor will not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, age, disability, or other basis prohibited by state law relating to discrimination in employment, except where there is a bona fide occupational qualification reasonably necessary to the normal operation of the Contractor. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this nondiscrimination clause.
 - b. The Contractor, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, will state that such Contractor is an equal opportunity employer.
 - c. Notices, advertisements and solicitations placed in accordance with federal law, rule or regulation shall be deemed sufficient for the purpose of meeting the requirements of this section.
12. The Contractor will include the provisions of the foregoing paragraphs a, b and c in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Drug-Free Workplace

13. The Contractor agrees to (i) provide a drug-free workplace for the Contractor's employees; (ii) post in conspicuous places, available to employees and applicants for employment, a statement notifying employees that the unlawful manufacture, sale, distribution, dispensation, possession, or use of a controlled substance or marijuana is prohibited in the Contractor's workplace and specifying the actions that will be taken against employees for violations of such prohibition; (iii) state in all solicitations or advertisements for employees placed by or on behalf of the Contractor that the Contractor maintains a drug-free workplace; and (iv) include the provisions of the foregoing clauses in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Middle Peninsula PDC Hazards Mitigation Plan Update

14. For the purposes of this section, "*drug-free workplace*" means a site for the performance of work done in connection with a specific contract awarded to a contractor in accordance with this chapter, the employees of whom are prohibited from engaging in the unlawful manufacture, sale, distribution, dispensation, possession or use of any controlled substance or marijuana during the performance of the contract.

Employment of Illegal Aliens

15. The Contractor agrees that it does not and shall not during the performance of this Agreement knowingly employ an unauthorized alien as defined in the federal Immigration Reform and Control Act of 1986.

Ownership of Intellectual Property

16. All information gathered during this project will remain public, unless prohibited from disclosure or exempted from required disclosure in accordance with state and federal law.

Capacity

17. In providing the Services under this Agreement, it is expressly agreed that the Contractor is acting as an independent contractor and not as an employee. The Contractor and the Client acknowledge that this Agreement does not create a partnership or joint venture between them.

Notice

18. All notices, requests, demands or other communications required or permitted by the terms of this Agreement will be given in writing and delivered to the Parties of this Agreement as follows:

- a. County Administrator
Gloucester County
6489 Main Street
Gloucester, VA 23061

- b. Middle Peninsula Planning District Commission
125 Bowden Street
Saluda, VA 23149

Or to such other address as any Party may from time to time notify the other.

Additional Clauses

19. This Agreement has been reviewed and approved via recorded vote of the Gloucester County Board of Supervisors.

Dispute Resolution

20. In the event a dispute arises out of or in connection with this Agreement, the Parties will attempt to resolve the dispute through friendly consultation.

- a. Once a final deliverable has been submitted by Contractor and approved by FEMA, the Contractor shall be deemed to have completed all services required under this Agreement.
- b. Once the scope of work has been completed and/or the product has received any necessary approvals, any changes made by the Client to the final product is “at its own risk”. The Client assumes all responsibility for any modification, deviation, or change initiated outside of the agreed to scope of work.
- c. The Contractor has no contractual responsibility to advocate for, coordinate, or administer any local modifications beyond the services agreed to by the Contractor in accordance with the terms of this Agreement.
 - The Client may request an addendum to the contract for specific changes. The Contractor may consider the request from the Client and, if willing to perform the requested work, shall provide a response including a new cost estimate for consideration. Any addendum shall be authorized by the [Name of County/Town] [Board of Supervisors/Town Council] by Resolution outlining such changes to the Services.

Modification of Agreement

21. Any amendment or modification of this Agreement or additional obligation assumed by either Party in connection with this Agreement will only be binding if evidenced in writing signed by each Party or an authorized representative of each Party.

Time of the Essence

22. Time is the essence in this Agreement. No extension or variation of this Agreement will operate as a waiver of this provision.

Middle Peninsula PDC Hazards Mitigation Plan Update

Assignment

23. The Contractor shall not voluntarily or by operation of law assign or otherwise transfer its obligations under this Agreement without the prior written consent of the Client.

Entire Agreement

24. It is agreed that there is no representation, warranty, collateral agreement, or condition affecting this Agreement except as expressly provided in this Agreement.

Governing Law

25. It is the intention of the Parties to this Agreement that this Agreement and the performance under this Agreement, and all suits and special proceedings under this Agreement, be construed in accordance with and governed, to the exclusion of the law of any other forum, by the laws of the Commonwealth of Virginia, without regard to the jurisdiction in which any action or special proceeding may be instituted.

Severability

26. In the event that any of the provisions of this Agreement are held to be invalid or unenforceable in whole or in part, all other provisions will nevertheless continue to be valid and enforceable with the invalid or unenforceable parts severed from the remainder of the Agreement.

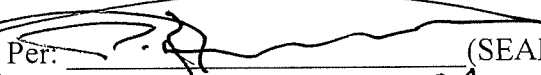

Waiver

27. The waiver by either Party of a breach, default, delay, or omission of any of the provisions of this Agreement by the other Party will not be construed as a waiver of any subsequent breach of the same or the provisions.

IN WITNESS WHEREOF the Parties have duly affixed their signatures under land and seal on this ~~17th~~ SIXTH day of NOVEMBER, 2020.

Approved as to form:

Executive Director

Appendix A:

Proposed Project Scope of Work

The Middle Peninsula Planning District Commission (MPPDC) will update the 2016 Middle Peninsula All Hazards Mitigation Plan (AHMP) with the help of a Local Planning Team. Membership will be nominated by counties, towns, and other stakeholders (i.e., Tribes, chamber of commerce, state agencies, the public, etc) in the Middle Peninsula. The plan will address several natural hazards, including but limited to hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, earthquakes, shrink-swell soils, extreme cold, extreme heat, landslides, land subsidence/karst, and tsunami.

The project includes the following components:

1. Planning Process
2. Risk Assessment
3. Hazard Mitigation Strategy
4. Hazard Mitigation Plan Maintenance Process
5. Hazard Mitigation Plan Adoption and Approval

Planning Team Responsibilities

Representatives on the Planning Team from participating jurisdictions must engage in the following planning process, including, but not limited to:

- Develop the Work Program and Schedule with the Planning Team
- Organize and attend regular meetings (virtual and/or in person) of the Planning Team. Attendance will be documented in the PDC monthly meeting packet.
- Assist the Planning Team with developing and conducting an outreach strategy to involve other planning team members, stakeholders, and the public, as appropriate to represent their Jurisdiction.
- Identify community resources available to support the planning effort, including meeting spaces, facilitators, and media outlets.
- Provide data and feedback to develop the risk assessment and mitigation strategy, including a specific mitigation action plan for their Jurisdiction.
- Submit the draft plan to their Jurisdiction for review.
- Work with the Planning Team to incorporate all their Jurisdiction's comments into the draft plan.
- Submit the draft plan to their respective governing body for consideration and adoption.
- After adoption, coordinate a process to monitor, evaluate, and work toward plan implementation.

Local Adoption

Middle Peninsula PDC Hazards Mitigation Plan Update

To be eligible for HMGP project grants (grants for a locality after a disaster), a local government must have a mitigation plan. Approval includes adoption by the participating jurisdictions.

Timeframe of Grant

This agreement and grant will be in effect from the date of signature by all parties, and will remain in effect through the duration of this project. Once a final deliverable has been submitted to and approved by the Client and the mandating entity, the Contractor shall be deemed to have completed all services required under this Agreement. The agreement may be terminated prior to that time by any Participating Jurisdiction by giving 30 days written notice.

RE: Middle Peninsula PDC Hazard Mitigation Plan Update
FEMA-4401-DR-VA-003

Dear Mr. Lawrence:

I am pleased to notify you that the Federal Emergency Management Agency (FEMA) has approved the project titled "Middle Peninsula PDC Hazard Mitigation Plan Update." The funds have been obligated through the Hazard Mitigation Grant Program. Attached you will find the grant award package. Please read all documents carefully prior to initiating your project. As funded, the federal share is 75 percent of the total project costs.

Your project cannot begin until the authorized agent has signed the grant award package. No reimbursements will be made until the award package is signed and received by the Virginia Department of Emergency Management. Please sign the attached grant agreement and scan and email it to Debbie Messmer, state hazard mitigation officer. Congratulations on the approval of this project. If you have questions regarding this award or the implementation of your project, please contact Debbie Messmer at (804) 267-7732 or by e-mail at debbie.messmer@vdem.virginia.gov.

Sincerely,

A handwritten signature in black ink, appearing to read "Curtis C. Brown".

**Re: Project Approval
Hazard Mitigation Grant Program (HMGP)
FEMA-4401-DR-VA-003**

Dear Dr. Stern:

I am pleased to inform you that the project application, Middle Peninsula Planning District Commission Mitigation Plan Update 7% Project, submitted under FEMA-DR-4401-VA-003, has been approved.

The total amount for this project is \$142,863 with a federal share of \$108,848 (\$102,045 for project costs and \$6,803 for subrecipient management costs), and a non-federal share of \$34,015; the federal share should be available in the SMARTLINK system. A copy of the Obligation Report is enclosed for your files.

The Period of Performance for this project ends on October 15, 2022. All grant award activities must be incurred during the performance period. The final product of this grant must be a FEMA approved plan. When submitting the updated plan, allow sufficient time for review, revision, and adoption.

Please provide this office with a Quarterly Progress Report thirty days after the end of each Federal fiscal year quarter.

Middle Peninsula PDC Hazards Mitigation Plan Update

**Service Agreement between
The Middle Peninsula Planning District Commission (MPPDC) and
King and Queen County for the
Virginia Department of Emergency Management (VDEM)
“Middle Peninsula PDC Hazards Mitigation Plan Update”
Grant Number FEMA-DR-4401-VA-003**

THIS SERVICE AGREEMENT (the “Agreement”) dated this 30th of November, 2020.

BETWEEN:

King and Queen County, PO Box 177 King and Queen CH,
(The “Client”)
AND

Middle Peninsula Planning District Commission of 125 Bowden Street, Saluda, Virginia 23149
(The “Contractor”)

BACKGROUND:

- A. The Client is of the opinion that the Contractor has the necessary qualifications, experience, and abilities to provide services to the Client.
- B. The Contractor is agreeable to providing such services to the Client on the terms and conditions set out in this Agreement.
- C. The Client recognizes the utility of a standard agreement to be used by member localities to ensure that mandates such as the Middle Peninsula multi-jurisdictional hazard mitigation plan are developed in accordance with Title 44 of the Federal Code of Regulations (CFR) Part 201.6; that the planning process is conducted in an open manner involving community stakeholders; that it is consistent with each participating jurisdiction’s policies, programs and authorities; and that it is an accurate reflection of the community’s values.

IN CONSIDERATION OF the matters described above and of the mutual benefits and obligations set forth in this Agreement, the receipt of sufficiency of which consideration is hereby acknowledged, the Client and the Contractor (individually the “Party” and collectively the “Parties” to this Agreement) agree as follows:

Services Provided

1. The Client hereby agrees to engage the Contractor to provide the Client with services (the “Services”) necessary to update the regional Middle Peninsula PDC Hazard Mitigation Plan as described in Appendix A Project Scope of Work in accordance with:
 - 44 CFR Ch. 1 Section 201.6, Part a, which indicates that a local government **MUST** have a mitigation plan approved in order to receive HMGP project grants

Middle Peninsula PDC Hazards Mitigation Plan Update

and in order to apply for and receive mitigation project grants under all other mitigation grant programs.

- Disaster Mitigation Act of 2000 (“DMA 2K”), which is a key component of the Federal government’s commitment to reduce damages to private and public property through mitigation activities. This legislation established the Pre-Disaster Mitigation (“PDM”) Program and created requirements for the Post-Disaster Hazard Mitigation Grant Program (“HMGP”). This key piece of federal legislation is known as Public Law 106-390.
 - DMA 2K, which requires local governments to develop and submit mitigation plans to qualify for PDM and HMGP funds. The Act requires that the plan demonstrate “the jurisdiction’s commitment to reduce risk from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards.”.
2. The Contractor recommends that the Client consult with legal counsel concerning questions related to the requirements of Disaster Mitigation Act of 2000 and 44 CFR Ch. 1 Section 201.6 and other related sections.

Term of Agreement

3. The term of this Agreement (the “Term”) will begin on the date this Agreement is signed by both Parties and will remain in full force and effect until either FEMA approves the update to the Middle Peninsula PDC Hazard Mitigation Plan or by VDEM contract end date of October 12, 2022. The term of this Agreement may be extended with the written consent of the Parties. The Agreement may be terminated by either Party with 30 days written notice given to the other Party.
4. In the event that the Client breaches this Agreement, the Client shall remain liable to the Contractor for the costs of all services both rendered and agreed upon as set forth in paragraph 5 and 6 below. In the event that the Contractor breaches this Agreement, the Contractor will return to the Client any and all unspent monies received from the Client as set forth in Paragraph 5 and 6 below. The Parties acknowledge that no other damages, fees, or penalties shall be due one from the other as the result of any act or omission of either Party.

Performance

5. The Parties agree to fully cooperate and to do everything necessary to ensure that the terms of this Agreement take effect including the execution of additional documents should the need arise.

Compensation

Middle Peninsula PDC Hazards Mitigation Plan Update

6. For the services rendered by the Contractor as required by this Agreement, the Client will provide the following compensation as described below (as specifically applicable to Client locality, rounded up for ease).

Locality Share to be Split between all: \$6,803

Essex	\$972
Gloucester	\$972
King and Queen	\$972
King William	\$972
Mathews	\$972
Middlesex	\$972
Urbanna	\$324
Tappahannock	\$324
West Point	\$324
Total	\$6,804 (rounded up for ease)

2 Year Federal Grant	Fema Funding	State Match Provided Non Fed Share	Local Share split between localities	Per County Match/Share	Per Town Match Share
\$ 142,863	\$ 108,848	\$ 27,212	\$ 6,803	\$ 972	\$ 324
			Year 1	\$ 486	\$ 162
			Year 2	\$ 486	\$ 162

All Such compensation shall be subject to appropriation by the Client.

7. The Contractor will invoice the Client for two annual payments of: **County \$486 or Town \$162 (as applicable).**
8. Project updates will be provided in the Middle Peninsula Planning District Commission monthly meeting packets.
9. In the event that a change order is requested, beyond the scope of services outlined in this Agreement, the Client will be charged on an hourly basis according to the approved Commission budget subject to the applicable provisions referenced in Dispute Resolution below (see section 20c). Appearances at local meetings, answering of telephonic questions and private meetings will be deemed change orders in the discretion of the Contractor provided such has been disclosed in writing, in advance to the Client.

Middle Peninsula PDC Hazards Mitigation Plan Update

Upon completion of the Services, a presentation will be made by the Contractor, at the request of the Client, at one local meeting of the Client's choice without additional compensation.

Reimbursement of Expenses

10. The Contractor will not be reimbursed for any expenses incurred in connection with this Agreement.

Employment Discrimination by Contractor Prohibited

11. a. The Contractor will not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, age, disability, or other basis prohibited by state law relating to discrimination in employment, except where there is a bona fide occupational qualification reasonably necessary to the normal operation of the Contractor. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this nondiscrimination clause.
 - b. The Contractor, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, will state that such Contractor is an equal opportunity employer.
 - c. Notices, advertisements and solicitations placed in accordance with federal law, rule or regulation shall be deemed sufficient for the purpose of meeting the requirements of this section.
12. The Contractor will include the provisions of the foregoing paragraphs a, b and c in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Drug-Free Workplace

13. The Contractor agrees to (i) provide a drug-free workplace for the Contractor's employees; (ii) post in conspicuous places, available to employees and applicants for employment, a statement notifying employees that the unlawful manufacture, sale, distribution, dispensation, possession, or use of a controlled substance or marijuana is prohibited in the Contractor's workplace and specifying the actions that will be taken against employees for violations of such prohibition; (iii) state in all solicitations or advertisements for employees placed by or on behalf of the Contractor that the Contractor maintains a drug-free workplace; and (iv) include the provisions of the foregoing clauses in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Middle Peninsula PDC Hazards Mitigation Plan Update

14. For the purposes of this section, “*drug-free workplace*” means a site for the performance of work done in connection with a specific contract awarded to a contractor in accordance with this chapter, the employees of whom are prohibited from engaging in the unlawful manufacture, sale, distribution, dispensation, possession or use of any controlled substance or marijuana during the performance of the contract.

Employment of Illegal Aliens

15. The Contractor agrees that it does not and shall not during the performance of this Agreement knowingly employ an unauthorized alien as defined in the federal Immigration Reform and Control Act of 1986.

Ownership of Intellectual Property

16. All information gathered during this project will remain public, unless prohibited from disclosure or exempted from required disclosure in accordance with state and federal law.

Capacity

17. In providing the Services under this Agreement, it is expressly agreed that the Contractor is acting as an independent contractor and not as an employee. The Contractor and the Client acknowledge that this Agreement does not create a partnership or joint venture between them.

Notice

18. All notices, requests, demands or other communications required or permitted by the terms of this Agreement will be given in writing and delivered to the Parties of this Agreement as follows:
- a. County Administrator
King and Queen County
PO Box 177
King and Queen CH, 23085
 - b. Middle Peninsula Planning District Commission
125 Bowden Street
Saluda, VA 23149

Or to such other address as any Party may from time to time notify the other.

Additional Clauses

Middle Peninsula PDC Hazards Mitigation Plan Update

19. This Agreement has been reviewed and approved via recorded vote of the King and Queen County Board of Supervisors.

Dispute Resolution

20. In the event a dispute arises out of or in connection with this Agreement, the Parties will attempt to resolve the dispute through friendly consultation.

- a. Once a final deliverable has been submitted by Contractor and approved by FEMA, the Contractor shall be deemed to have completed all services required under this Agreement.
- b. Once the scope of work has been completed and/or the product has received any necessary approvals, any changes made by the Client to the final product is “at its own risk”. The Client assumes all responsibility for any modification, deviation, or change initiated outside of the agreed to scope of work.
- c. The Contractor has no contractual responsibility to advocate for, coordinate, or administer any local modifications beyond the services agreed to by the Contractor in accordance with the terms of this Agreement.
 - The Client may request an addendum to the contract for specific changes. The Contractor may consider the request from the Client and, if willing to perform the requested work, shall provide a response including a new cost estimate for consideration. Any addendum shall be authorized by the [Name of County/Town] [Board of Supervisors/Town Council] by Resolution outlining such changes to the Services.

Modification of Agreement

21. Any amendment or modification of this Agreement or additional obligation assumed by either Party in connection with this Agreement will only be binding if evidenced in writing signed by each Party or an authorized representative of each Party.

Time of the Essence

22. Time is the essence in this Agreement. No extension or variation of this Agreement will operate as a waiver of this provision.

Assignment

Middle Peninsula PDC Hazards Mitigation Plan Update

23. The Contractor shall not voluntarily or by operation of law assign or otherwise transfer its obligations under this Agreement without the prior written consent of the Client.

Entire Agreement

24. It is agreed that there is no representation, warranty, collateral agreement, or condition affecting this Agreement except as expressly provided in this Agreement.

Governing Law

25. It is the intention of the Parties to this Agreement that this Agreement and the performance under this Agreement, and all suits and special proceedings under this Agreement, be construed in accordance with and governed, to the exclusion of the law of any other forum, by the laws of the Commonwealth of Virginia, without regard to the jurisdiction in which any action or special proceeding may be instituted.

Severability

26. In the event that any of the provisions of this Agreement are held to be invalid or unenforceable in whole or in part, all other provisions will nevertheless continue to be valid and enforceable with the invalid or unenforceable parts severed from the remainder of the Agreement.

Waiver

27. The waiver by either Party of a breach, default, delay, or omission of any of the provisions of this Agreement by the other Party will not be construed as a waiver of any subsequent breach of the same or the provisions.

IN WITNESS WHEREOF the Parties have duly affixed their signatures under land and seal on this 30th day of November, 2020.

Middle Peninsula PDC Hazards Mitigation Plan Update

Appendix A:

Proposed Project Scope of Work

The Middle Peninsula Planning District Commission (MPPDC) will update the 2016 Middle Peninsula All Hazards Mitigation Plan (AHMP) with the help of a Local Planning Team. Membership will be nominated by counties, towns, and other stakeholders (i.e., Tribes, chamber of commerce, state agencies, the public, etc) in the Middle Peninsula. The plan will address several natural hazards, including but limited to hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, earthquakes, shrink-swell soils, extreme cold, extreme heat, landslides, land subsidence/karst, and tsunamis.

The project includes the following components:

1. Planning Process
2. Risk Assessment
3. Hazard Mitigation Strategy
4. Hazard Mitigation Plan Maintenance Process
5. Hazard Mitigation Plan Adoption and Approval

Planning Team Responsibilities

Representatives on the Planning Team from participating jurisdictions must engage in the following planning process, including, but not limited to:

- Develop the Work Program and Schedule with the Planning Team
- Organize and attend regular meetings (virtual and/or in person) of the Planning Team. Attendance will be documented in the PDC monthly meeting packet.
- Assist the Planning Team with developing and conducting an outreach strategy to involve other planning team members, stakeholders, and the public, as appropriate to represent their Jurisdiction.
- Identify community resources available to support the planning effort, including meeting spaces, facilitators, and media outlets.
- Provide data and feedback to develop the risk assessment and mitigation strategy, including a specific mitigation action plan for their Jurisdiction.
- Submit the draft plan to their Jurisdiction for review.
- Work with the Planning Team to incorporate all their Jurisdiction's comments into the draft plan.
- Submit the draft plan to their respective governing body for consideration and adoption.
- After adoption, coordinate a process to monitor, evaluate, and work toward plan implementation.

Local Adoption

Middle Peninsula PDC Hazards Mitigation Plan Update

To be eligible for HMGP project grants (grants for a locality after a disaster), a local government must have a mitigation plan. Approval includes adoption by the participating jurisdictions.

Timeframe of Grant

This agreement and grant will be in effect from the date of signature by all parties, and will remain in effect through the duration of this project. Once a final deliverable has been submitted to and approved by the Client and the mandating entity, the Contractor shall be deemed to have completed all services required under this Agreement. The agreement may be terminated prior to that time by any Participating Jurisdiction by giving 30 days written notice.

RE: Middle Peninsula PDC Hazard Mitigation Plan Update
FEMA-4401-DR-VA-003

Dear Mr. Lawrence:

I am pleased to notify you that the Federal Emergency Management Agency (FEMA) has approved the project titled "Middle Peninsula PDC Hazard Mitigation Plan Update." The funds have been obligated through the Hazard Mitigation Grant Program. Attached you will find the grant award package. Please read all documents carefully prior to initiating your project. As funded, the federal share is 75 percent of the total project costs.

Your project cannot begin until the authorized agent has signed the grant award package. No reimbursements will be made until the award package is signed and received by the Virginia Department of Emergency Management. Please sign the attached grant agreement and scan and email it to Debbie Messmer, state hazard mitigation officer. Congratulations on the approval of this project. If you have questions regarding this award or the implementation of your project, please contact Debbie Messmer at (804) 267-7732 or by e-mail at debbie.messmer@vdem.virginia.gov.

Sincerely,

Handwritten signature of Curtis C. Brown in black ink.

**Re: Project Approval
Hazard Mitigation Grant Program (HMGP)
FEMA-4401-DR-VA-003**

Dear Dr. Stern:

I am pleased to inform you that the project application, Middle Peninsula Planning District Commission Mitigation Plan Update 7% Project, submitted under FEMA-DR-4401-VA-003, has been approved.

The total amount for this project is \$142,863 with a federal share of \$108,848 (\$102,045 for project costs and \$6,803 for subrecipient management costs), and a non-federal share of \$34,015; the federal share should be available in the SMARTLINK system. A copy of the Obligation Report is enclosed for your files.

The Period of Performance for this project ends on October 15, 2022. All grant award activities must be incurred during the performance period. The final product of this grant must be a FEMA approved plan. When submitting the updated plan, allow sufficient time for review, revision, and adoption.

Please provide this office with a Quarterly Progress Report thirty days after the end of each Federal fiscal year quarter

Middle Peninsula PDC Hazards Mitigation Plan Update

**Service Agreement between
The Middle Peninsula Planning District Commission (MPPDC) and
King William County for the
Virginia Department of Emergency Management (VDEM)
“Middle Peninsula PDC Hazards Mitigation Plan Update”
Grant Number FEMA-DR-4401-VA-003**

THIS SERVICE AGREEMENT (the “Agreement”) dated this 16 day of November, 2020.

BETWEEN:

King William County, 180 Horse Landing Road #4, King William, Virginia 23086
(The “Client”)

AND

Middle Peninsula Planning District Commission of 125 Bowden Street, Saluda, Virginia 23149
(The “Contractor”)

BACKGROUND:

- A. The Client is of the opinion that the Contractor has the necessary qualifications, experience, and abilities to provide services to the Client.
- B. The Contractor is agreeable to providing such services to the Client on the terms and conditions set out in this Agreement.
- C. The Client recognizes the utility of a standard agreement to be used by member localities to ensure that mandates such as the Middle Peninsula multi-jurisdictional hazard mitigation plan are developed in accordance with Title 44 of the Federal Code of Regulations (CFR) Part 201.6; that the planning process is conducted in an open manner involving community stakeholders; that it is consistent with each participating jurisdiction’s policies, programs and authorities; and that it is an accurate reflection of the community’s values.

IN CONSIDERATION OF the matters described above and of the mutual benefits and obligations set forth in this Agreement, the receipt of sufficiency of which consideration is hereby acknowledged, the Client and the Contractor (individually the “Party” and collectively the “Parties” to this Agreement) agree as follows:

Services Provided

- 1. The Client hereby agrees to engage the Contractor to provide the Client with services (the “Services”) necessary to update the regional Middle Peninsula PDC Hazard Mitigation Plan as described in Appendix A Project Scope of Work in accordance with:
 - 44 CFR Ch. 1 Section 201.6, Part a, which indicates that a local government MUST have a mitigation plan approved in order to receive HMGP project grants

Middle Peninsula PDC Hazards Mitigation Plan Update

and in order to apply for and receive mitigation project grants under all other mitigation grant programs.

- Disaster Mitigation Act of 2000 (“DMA 2K”), which is a key component of the Federal government’s commitment to reduce damages to private and public property through mitigation activities. This legislation established the Pre-Disaster Mitigation (“PDM”) Program and created requirements for the Post-Disaster Hazard Mitigation Grant Program (“HMGP”). This key piece of federal legislation is known as Public Law 106-390.
 - DMA 2K, which requires local governments to develop and submit mitigation plans to qualify for PDM and HMGP funds. The Act requires that the plan demonstrate “the jurisdiction’s commitment to reduce risk from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards.”.
2. The Contractor recommends that the Client consult with legal counsel concerning questions related to the requirements of Disaster Mitigation Act of 2000 and 44 CFR Ch. 1 Section 201.6 and other related sections.

Term of Agreement

3. The term of this Agreement (the “Term”) will begin on the date this Agreement is signed by both Parties and will remain in full force and effect until either FEMA approves the update to the Middle Peninsula PDC Hazard Mitigation Plan or by VDEM contract end date of October 12, 2022. The term of this Agreement may be extended with the written consent of the Parties. The Agreement may be terminated by either Party with 30 days written notice given to the other Party.
4. In the event that the Client breaches this Agreement, the Client shall remain liable to the Contractor for the costs of all services both rendered and agreed upon as set forth in paragraph 5 and 6 below. In the event that the Contractor breaches this Agreement, the Contractor will return to the Client any and all unspent monies received from the Client as set forth in Paragraph 5 and 6 below. The Parties acknowledge that no other damages, fees, or penalties shall be due one from the other as the result of any act or omission of either Party.

Performance

5. The Parties agree to fully cooperate and to do everything necessary to ensure that the terms of this Agreement take effect including the execution of additional documents should the need arise.

Middle Peninsula PDC Hazards Mitigation Plan Update

Compensation

6. For the services rendered by the Contractor as required by this Agreement, the Client will provide the following compensation as described below (as specifically applicable to Client locality, rounded up for ease).

Locality Share to be Split between all: \$6,803

Essex	\$972
Gloucester	\$972
King and Queen	\$972
King William	\$972
Mathews	\$972
Middlesex	\$972
Urbanna	\$324
Tappahannock	\$324
West Point	\$324
Total	\$6, 804 (rounded up for ease)

2 Year Federal Grant	Fema Funding	State Match Provided Non Fed Share	Local Share split between localities	Per County Match/Share	Per Town Match Share
\$ 142,863	\$ 108,848	\$ 27,212	\$ 6,803	\$ 972	\$ 324
			Year 1	\$ 486	\$ 162
			Year 2	\$ 486	\$ 162

All Such compensation shall be subject to appropriation by the Client.

7. The Contractor will invoice the Client for two annual payments of: **County \$486 or Town \$162 (as applicable).**
8. Project updates will be provided in the Middle Peninsula Planning District Commission monthly meeting packets.
9. In the event that a change order is requested, beyond the scope of services outlined in this Agreement, the Client will be charged on an hourly basis according to the approved Commission budget subject to the applicable provisions referenced in Dispute Resolution below (see section 20c). Appearances at local meetings, answering of telephonic questions and private meetings will be deemed change orders in the discretion of the Contractor provided such has been disclosed in writing, in advance to the Client.

Middle Peninsula PDC Hazards Mitigation Plan Update

Upon completion of the Services, a presentation will be made by the Contractor, at the request of the Client, at one local meeting of the Client's choice without additional compensation.

Reimbursement of Expenses

10. The Contractor will not be reimbursed for any expenses incurred in connection with this Agreement.

Employment Discrimination by Contractor Prohibited

11. a. The Contractor will not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, age, disability, or other basis prohibited by state law relating to discrimination in employment, except where there is a bona fide occupational qualification reasonably necessary to the normal operation of the Contractor. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this nondiscrimination clause.
 - b. The Contractor, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, will state that such Contractor is an equal opportunity employer.
 - c. Notices, advertisements and solicitations placed in accordance with federal law, rule or regulation shall be deemed sufficient for the purpose of meeting the requirements of this section.
12. The Contractor will include the provisions of the foregoing paragraphs a, b and c in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Drug-Free Workplace

13. The Contractor agrees to (i) provide a drug-free workplace for the Contractor's employees; (ii) post in conspicuous places, available to employees and applicants for employment, a statement notifying employees that the unlawful manufacture, sale, distribution, dispensation, possession, or use of a controlled substance or marijuana is prohibited in the Contractor's workplace and specifying the actions that will be taken against employees for violations of such prohibition; (iii) state in all solicitations or advertisements for employees placed by or on behalf of the Contractor that the Contractor maintains a drug-free workplace; and (iv) include the provisions of the foregoing clauses in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Middle Peninsula PDC Hazards Mitigation Plan Update

14. For the purposes of this section, “*drug-free workplace*” means a site for the performance of work done in connection with a specific contract awarded to a contractor in accordance with this chapter, the employees of whom are prohibited from engaging in the unlawful manufacture, sale, distribution, dispensation, possession or use of any controlled substance or marijuana during the performance of the contract.

Employment of Illegal Aliens

15. The Contractor agrees that it does not and shall not during the performance of this Agreement knowingly employ an unauthorized alien as defined in the federal Immigration Reform and Control Act of 1986.

Ownership of Intellectual Property

16. All information gathered during this project will remain public, unless prohibited from disclosure or exempted from required disclosure in accordance with state and federal law.

Capacity

17. In providing the Services under this Agreement, it is expressly agreed that the Contractor is acting as an independent contractor and not as an employee. The Contractor and the Client acknowledge that this Agreement does not create a partnership or joint venture between them.

Notice

18. All notices, requests, demands or other communications required or permitted by the terms of this Agreement will be given in writing and delivered to the Parties of this Agreement as follows:

- a. County Administrator
King William County
180 Horse Landing Road #4
King William, VA 23086
- b. Middle Peninsula Planning District Commission
125 Bowden Street
Saluda, VA 23149

Or to such other address as any Party may from time to time notify the other.

Middle Peninsula PDC Hazards Mitigation Plan Update

Additional Clauses

19. This Agreement has been reviewed and approved via recorded vote of the King William County Board of Supervisors.

Dispute Resolution

20. In the event a dispute arises out of or in connection with this Agreement, the Parties will attempt to resolve the dispute through friendly consultation.

- a. Once a final deliverable has been submitted by Contractor and approved by FEMA, the Contractor shall be deemed to have completed all services required under this Agreement.
- b. Once the scope of work has been completed and/or the product has received any necessary approvals, any changes made by the Client to the final product is "at its own risk". The Client assumes all responsibility for any modification, deviation, or change initiated outside of the agreed to scope of work.
- c. The Contractor has no contractual responsibility to advocate for, coordinate, or administer any local modifications beyond the services agreed to by the Contractor in accordance with the terms of this Agreement.
 - The Client may request an addendum to the contract for specific changes. The Contractor may consider the request from the Client and, if willing to perform the requested work, shall provide a response including a new cost estimate for consideration. Any addendum shall be authorized by the King William County Board of Supervisors by Resolution outlining such changes to the Services.

Modification of Agreement

21. Any amendment or modification of this Agreement or additional obligation assumed by either Party in connection with this Agreement will only be binding if evidenced in writing signed by each Party or an authorized representative of each Party.

Time of the Essence

22. Time is the essence in this Agreement. No extension or variation of this Agreement will operate as a waiver of this provision.

Middle Peninsula PDC Hazards Mitigation Plan Update

Assignment

23. The Contractor shall not voluntarily or by operation of law assign or otherwise transfer its obligations under this Agreement without the prior written consent of the Client.

Entire Agreement

24. It is agreed that there is no representation, warranty, collateral agreement, or condition affecting this Agreement except as expressly provided in this Agreement.

Governing Law

25. It is the intention of the Parties to this Agreement that this Agreement and the performance under this Agreement, and all suits and special proceedings under this Agreement, be construed in accordance with and governed, to the exclusion of the law of any other forum, by the laws of the Commonwealth of Virginia, without regard to the jurisdiction in which any action or special proceeding may be instituted.

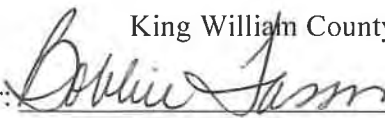

Severability

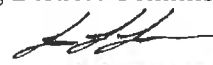

26. In the event that any of the provisions of this Agreement are held to be invalid or unenforceable in whole or in part, all other provisions will nevertheless continue to be valid and enforceable with the invalid or unenforceable parts severed from the remainder of the Agreement.

Waiver

27. The waiver by either Party of a breach, default, delay, or omission of any of the provisions of this Agreement by the other Party will not be construed as a waiver of any subsequent breach of the same or the provisions.

IN WITNESS WHEREOF the Parties have duly affixed their signatures under land and seal on this 16 day of November, 2020.

Appendix A:

Proposed Project Scope of Work

The Middle Peninsula Planning District Commission (MPPDC) will update the 2016 Middle Peninsula All Hazards Mitigation Plan (AHMP) with the help of a Local Planning Team. Membership will be nominated by counties, towns, and other stakeholders (i.e., Tribes, chamber of commerce, state agencies, the public, etc) in the Middle Peninsula. The plan will address several natural hazards, including but limited to hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, earthquakes, shrink-swell soils, extreme cold, extreme heat, landslides, land subsidence/karst, and tsunamis.

The project includes the following components:

1. Planning Process
2. Risk Assessment
3. Hazard Mitigation Strategy
4. Hazard Mitigation Plan Maintenance Process
5. Hazard Mitigation Plan Adoption and Approval

Planning Team Responsibilities

Representatives on the Planning Team from participating jurisdictions must engage in the following planning process, including, but not limited to:

- Develop the Work Program and Schedule with the Planning Team
- Organize and attend regular meetings (virtual and/or in person) of the Planning Team. Attendance will be documented in the PDC monthly meeting packet.
- Assist the Planning Team with developing and conducting an outreach strategy to involve other planning team members, stakeholders, and the public, as appropriate to represent their Jurisdiction.
- Identify community resources available to support the planning effort, including meeting spaces, facilitators, and media outlets.
- Provide data and feedback to develop the risk assessment and mitigation strategy, including a specific mitigation action plan for their Jurisdiction.
- Submit the draft plan to their Jurisdiction for review.
- Work with the Planning Team to incorporate all their Jurisdiction's comments into the draft plan.
- Submit the draft plan to their respective governing body for consideration and adoption.
- After adoption, coordinate a process to monitor, evaluate, and work toward plan implementation.

Middle Peninsula PDC Hazards Mitigation Plan Update

Local Adoption

To be eligible for HMGP project grants (grants for a locality after a disaster), a local government must have a mitigation plan. Approval includes adoption by the participating jurisdictions.

Timeframe of Grant

This agreement and grant will be in effect from the date of signature by all parties, and will remain in effect through the duration of this project. Once a final deliverable has been submitted to and approved by the Client and the mandating entity, the Contractor shall be deemed to have completed all services required under this Agreement. The agreement may be terminated prior to that time by any Participating Jurisdiction by giving 30 days written notice.

RE: Middle Peninsula PDC Hazard Mitigation Plan Update
FEMA-4401-DR-VA-003

Dear Mr. Lawrence:

I am pleased to notify you that the Federal Emergency Management Agency (FEMA) has approved the project titled "Middle Peninsula PDC Hazard Mitigation Plan Update." The funds have been obligated through the Hazard Mitigation Grant Program. Attached you will find the grant award package. Please read all documents carefully prior to initiating your project. As funded, the federal share is 75 percent of the total project costs.

Your project cannot begin until the authorized agent has signed the grant award package. No reimbursements will be made until the award package is signed and received by the Virginia Department of Emergency Management. Please sign the attached grant agreement and scan and email it to Debbie Messmer, state hazard mitigation officer. Congratulations on the approval of this project. If you have questions regarding this award or the implementation of your project, please contact Debbie Messmer at (804) 267-7732 or by e-mail at debbie.messmer@vdem.virginia.gov.

Sincerely,

A handwritten signature in black ink, appearing to read "Curtis C. Brown".

**Re: Project Approval
Hazard Mitigation Grant Program (HMGP)
FEMA-4401-DR-VA-003**

Dear Dr. Stern:

I am pleased to inform you that the project application, Middle Peninsula Planning District Commission Mitigation Plan Update 7% Project, submitted under FEMA-DR-4401-VA-003, has been approved.

The total amount for this project is \$142,863 with a federal share of \$108,848 (\$102,045 for project costs and \$6,803 for subrecipient management costs), and a non-federal share of \$34,015; the federal share should be available in the SMARTLINK system. A copy of the Obligation Report is enclosed for your files.

The Period of Performance for this project ends on October 15, 2022. All grant award activities must be incurred during the performance period. The final product of this grant must be a FEMA approved plan. When submitting the updated plan, allow sufficient time for review, revision, and adoption.

Please provide this office with a Quarterly Progress Report thirty days after the end of each Federal fiscal year quarter

Middle Peninsula PDC Hazards Mitigation Plan Update

**Service Agreement between
The Middle Peninsula Planning District Commission (MPPDC) and
Mathews County (the County) for the
Virginia Department of Emergency Management (VDEM)
“Middle Peninsula PDC Hazards Mitigation Plan Update”
Grant Number FEMA-DR-4401-VA-003**

THIS SERVICE AGREEMENT (the “Agreement”) dated this 17th day of November, 2020.

BETWEEN:

Mathews County of 50 Brickbat Road, Mathews, Virginia 23109
(The “Client”)

AND

Middle Peninsula Planning District Commission of 125 Bowden Street, Saluda, Virginia 23149
(The “Contractor”)

BACKGROUND:

- A. The Client is of the opinion that the Contractor has the necessary qualifications, experience, and abilities to provide services to the Client.
- B. The Contractor is agreeable to providing such services to the Client on the terms and conditions set out in this Agreement.
- C. The Client recognizes the utility of a standard agreement to be used by member localities to ensure that mandates such as the Middle Peninsula multi-jurisdictional hazard mitigation plan are developed in accordance with Title 44 of the Federal Code of Regulations (CFR) Part 201.6; that the planning process is conducted in an open manner involving community stakeholders; that it is consistent with each participating jurisdiction’s policies, programs and authorities; and that it is an accurate reflection of the community’s values.

IN CONSIDERATION OF the matters described above and of the mutual benefits and obligations set forth in this Agreement, the receipt of sufficiency of which consideration is hereby acknowledged, the Client and the Contractor (individually the “Party” and collectively the “Parties” to this Agreement) agree as follows:

Services Provided

- 1. The Client hereby agrees to engage the Contractor to provide the Client with services (the “Services”) necessary to update the regional Middle Peninsula PDC Hazard Mitigation Plan as described in Appendix A Project Scope of Work in accordance with:
 - 44 CFR Ch. 1 Section 201.6, Part a, which indicates that a local government MUST have a mitigation plan approved in order to receive HMGP project grants

Middle Peninsula PDC Hazards Mitigation Plan Update

and in order to apply for and receive mitigation project grants under all other mitigation grant programs.

- Disaster Mitigation Act of 2000 (“DMA 2K”), which is a key component of the Federal government’s commitment to reduce damages to private and public property through mitigation activities. This legislation established the Pre-Disaster Mitigation (“PDM”) Program and created requirements for the Post-Disaster Hazard Mitigation Grant Program (“HMGP”). This key piece of federal legislation is known as Public Law 106-390.
 - DMA 2K, which requires local governments to develop and submit mitigation plans to qualify for PDM and HMGP funds. The Act requires that the plan demonstrate “the jurisdiction’s commitment to reduce risk from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards.”.
2. The Contractor recommends that the Client consult with legal counsel concerning questions related to the requirements of Disaster Mitigation Act of 2000 and 44 CFR Ch. 1 Section 201.6 and other related sections.

Term of Agreement

3. The term of this Agreement (the “Term”) will begin on the date this Agreement is signed by both Parties and will remain in full force and effect until either FEMA approves the update to the Middle Peninsula PDC Hazard Mitigation Plan or by VDEM contract end date of October 12, 2022. The term of this Agreement may be extended with the written consent of the Parties. The Agreement may be terminated by either Party with 30 days written notice given to the other Party.
4. In the event that the Client breaches this Agreement, the Client shall remain liable to the Contractor for the costs of all services both rendered and agreed upon as set forth in paragraph 5 and 6 below. In the event that the Contractor breaches this Agreement, the Contractor will return to the Client any and all unspent monies received from the Client as set forth in Paragraph 5 and 6 below. The Parties acknowledge that no other damages, fees, or penalties shall be due one from the other as the result of any act or omission of either Party.

Performance

5. The Parties agree to fully cooperate and to do everything necessary to ensure that the terms of this Agreement take effect including the execution of additional documents should the need arise.

Middle Peninsula PDC Hazards Mitigation Plan Update

Compensation

- For the services rendered by the Contractor as required by this Agreement, the Client will provide the following compensation as described below (as specifically applicable to Client locality, rounded up for ease).

Locality Share to be Split between all: \$6,803

Essex	\$972
Gloucester	\$972
King and Queen	\$972
King William	\$972
Mathews	\$972
Middlesex	\$972
Urbanna	\$324
Tappahannock	\$324
West Point	\$324
Total	\$6,804 (rounded up for ease)

2 Year Federal Grant	Fema Funding	State Match Provided Non Fed Share	Local Share split between localities	Per County Match/Share	Per Town Match Share
\$ 142,863	\$ 108,848	\$ 27,212	\$ 6,803	\$ 972	\$ 324
			Year 1	\$ 486	\$ 162
			Year 2	\$ 486	\$ 162

All Such compensation shall be subject to appropriation by the Client.

- The Contractor will invoice the Client for two annual payments of: **County \$486 or Town \$162 (as applicable)**.
- Project updates will be provided in the Middle Peninsula Planning District Commission monthly meeting packets.
- In the event that a change order is requested, beyond the scope of services outlined in this Agreement, the Client will be charged on an hourly basis according to the approved Commission budget subject to the applicable provisions referenced in Dispute Resolution below (see section 20c). Appearances at local meetings, answering of telephonic questions and private meetings will be deemed change orders in the discretion of the Contractor provided such has been disclosed in writing, in advance to the Client.

Middle Peninsula PDC Hazards Mitigation Plan Update

Upon completion of the Services, a presentation will be made by the Contractor, at the request of the Client, at one local meeting of the Client's choice without additional compensation.

Reimbursement of Expenses

10. The Contractor will not be reimbursed for any expenses incurred in connection with this Agreement.

Employment Discrimination by Contractor Prohibited

11. a. The Contractor will not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, age, disability, or other basis prohibited by state law relating to discrimination in employment, except where there is a bona fide occupational qualification reasonably necessary to the normal operation of the Contractor. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this nondiscrimination clause.

- b. The Contractor, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, will state that such Contractor is an equal opportunity employer.

- c. Notices, advertisements and solicitations placed in accordance with federal law, rule or regulation shall be deemed sufficient for the purpose of meeting the requirements of this section.

12. The Contractor will include the provisions of the foregoing paragraphs a, b and c in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Drug-Free Workplace

13. The Contractor agrees to (i) provide a drug-free workplace for the Contractor's employees; (ii) post in conspicuous places, available to employees and applicants for employment, a statement notifying employees that the unlawful manufacture, sale, distribution, dispensation, possession, or use of a controlled substance or marijuana is prohibited in the Contractor's workplace and specifying the actions that will be taken against employees for violations of such prohibition; (iii) state in all solicitations or advertisements for employees placed by or on behalf of the Contractor that the Contractor maintains a drug-free workplace; and (iv) include the provisions of the foregoing clauses in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Middle Peninsula PDC Hazards Mitigation Plan Update

14. For the purposes of this section, “*drug-free workplace*” means a site for the performance of work done in connection with a specific contract awarded to a contractor in accordance with this chapter, the employees of whom are prohibited from engaging in the unlawful manufacture, sale, distribution, dispensation, possession or use of any controlled substance or marijuana during the performance of the contract.

Employment of Illegal Aliens

15. The Contractor agrees that it does not and shall not during the performance of this Agreement knowingly employ an unauthorized alien as defined in the federal Immigration Reform and Control Act of 1986.

Ownership of Intellectual Property

16. All information gathered during this project will remain public, unless prohibited from disclosure or exempted from required disclosure in accordance with state and federal law.

Capacity

17. In providing the Services under this Agreement, it is expressly agreed that the Contractor is acting as an independent contractor and not as an employee. The Contractor and the Client acknowledge that this Agreement does not create a partnership or joint venture between them.

Notice

18. All notices, requests, demands or other communications required or permitted by the terms of this Agreement will be given in writing and delivered to the Parties of this Agreement as follows:

- a. County Administrator
Mathews County
P.O. Box 839
Mathews, VA 23109

- b. Middle Peninsula Planning District Commission
125 Bowden Street
Saluda, VA 23149

Or to such other address as any Party may from time to time notify the other.

Middle Peninsula PDC Hazards Mitigation Plan Update

Additional Clauses

19. This Agreement has been reviewed and approved via recorded vote of the Mathews County Board of Supervisors.

Dispute Resolution

20. In the event a dispute arises out of or in connection with this Agreement, the Parties will attempt to resolve the dispute through friendly consultation.

- a. Once a final deliverable has been submitted by Contractor and approved by FEMA, the Contractor shall be deemed to have completed all services required under this Agreement.
- b. Once the scope of work has been completed and/or the product has received any necessary approvals, any changes made by the Client to the final product is “at its own risk”. The Client assumes all responsibility for any modification, deviation, or change initiated outside of the agreed to scope of work.
- c. The Contractor has no contractual responsibility to advocate for, coordinate, or administer any local modifications beyond the services agreed to by the Contractor in accordance with the terms of this Agreement.
 - The Client may request an addendum to the contract for specific changes. The Contractor may consider the request from the Client and, if willing to perform the requested work, shall provide a response including a new cost estimate for consideration. Any addendum shall be authorized by the [Name of County/Town] [Board of Supervisors/Town Council] by Resolution outlining such changes to the Services.

Modification of Agreement

21. Any amendment or modification of this Agreement or additional obligation assumed by either Party in connection with this Agreement will only be binding if evidenced in writing signed by each Party or an authorized representative of each Party.

Time of the Essence

22. Time is the essence in this Agreement. No extension or variation of this Agreement will operate as a waiver of this provision.

Middle Peninsula PDC Hazards Mitigation Plan Update

Assignment

23. The Contractor shall not voluntarily or by operation of law assign or otherwise transfer its obligations under this Agreement without the prior written consent of the Client.

Entire Agreement

24. It is agreed that there is no representation, warranty, collateral agreement, or condition affecting this Agreement except as expressly provided in this Agreement.

Governing Law

25. It is the intention of the Parties to this Agreement that this Agreement and the performance under this Agreement, and all suits and special proceedings under this Agreement, be construed in accordance with and governed, to the exclusion of the law of any other forum, by the laws of the Commonwealth of Virginia, without regard to the jurisdiction in which any action or special proceeding may be instituted.

Severability

26. In the event that any of the provisions of this Agreement are held to be invalid or unenforceable in whole or in part, all other provisions will nevertheless continue to be valid and enforceable with the invalid or unenforceable parts severed from the remainder of the Agreement.

Waiver

27. The waiver by either Party of a breach, default, delay, or omission of any of the provisions of this Agreement by the other Party will not be construed as a waiver of any subsequent breach of the same or the provisions.

IN WITNESS WHEREOF the Parties have duly affixed their signatures under land and seal on this 17th day of November, 2020.

Executive Director

Middle Peninsula PDC Hazards Mitigation Plan Update

Appendix A:

Proposed Project Scope of Work

The Middle Peninsula Planning District Commission (MPPDC) will update the 2016 Middle Peninsula All Hazards Mitigation Plan (AHMP) with the help of a Local Planning Team. Membership will be nominated by counties, towns, and other stakeholders (i.e., Tribes, chamber of commerce, state agencies, the public, etc) in the Middle Peninsula. The plan will address several natural hazards, including but limited to hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, earthquakes, shrink-swell soils, extreme cold, extreme heat, landslides, land subsidence/karst, and tsunamis.

The project includes the following components:

1. Planning Process
2. Risk Assessment
3. Hazard Mitigation Strategy
4. Hazard Mitigation Plan Maintenance Process
5. Hazard Mitigation Plan Adoption and Approval

Planning Team Responsibilities

Representatives on the Planning Team from participating jurisdictions must engage in the following planning process, including, but not limited to:

- Develop the Work Program and Schedule with the Planning Team
- Organize and attend regular meetings (virtual and/or in person) of the Planning Team. Attendance will be documented in the PDC monthly meeting packet.
- Assist the Planning Team with developing and conducting an outreach strategy to involve other planning team members, stakeholders, and the public, as appropriate to represent their Jurisdiction.
- Identify community resources available to support the planning effort, including meeting spaces, facilitators, and media outlets.
- Provide data and feedback to develop the risk assessment and mitigation strategy, including a specific mitigation action plan for their Jurisdiction.
- Submit the draft plan to their Jurisdiction for review.
- Work with the Planning Team to incorporate all their Jurisdiction's comments into the draft plan.
- Submit the draft plan to their respective governing body for consideration and adoption.
- After adoption, coordinate a process to monitor, evaluate, and work toward plan implementation.

Middle Peninsula PDC Hazards Mitigation Plan Update

Local Adoption

To be eligible for HMGP project grants (grants for a locality after a disaster), a local government must have a mitigation plan. Approval includes adoption by the participating jurisdictions.

Timeframe of Grant

This agreement and grant will be in effect from the date of signature by all parties and will remain in effect through the duration of this project. Once a final deliverable has been submitted to and approved by the Client and the mandating entity, the Contractor shall be deemed to have completed all services required under this Agreement. The agreement may be terminated prior to that time by any Participating Jurisdiction by giving 30 days written notice.

RE: Middle Peninsula PDC Hazard Mitigation Plan Update
FEMA-4401-DR-VA-003

Dear Mr. Lawrence:

I am pleased to notify you that the Federal Emergency Management Agency (FEMA) has approved the project titled "Middle Peninsula PDC Hazard Mitigation Plan Update." The funds have been obligated through the Hazard Mitigation Grant Program. Attached you will find the grant award package. Please read all documents carefully prior to initiating your project. As funded, the federal share is 75 percent of the total project costs.

Your project cannot begin until the authorized agent has signed the grant award package. No reimbursements will be made until the award package is signed and received by the Virginia Department of Emergency Management. Please sign the attached grant agreement and scan and email it to Debbie Messmer, state hazard mitigation officer. Congratulations on the approval of this project. If you have questions regarding this award or the implementation of your project, please contact Debbie Messmer at (804) 267-7732 or by e-mail at debbie.messmer@vdem.virginia.gov.

Sincerely,

Curtis C. Brown

Middle Peninsula PDC Hazards Mitigation Plan Update

**Service Agreement between
The Middle Peninsula Planning District Commission (MPPDC)
and Middlesex County (the County or Town) for the
Virginia Department of Emergency Management (VDEM)
“Middle Peninsula PDC Hazards Mitigation Plan Update”
Grant Number FEMA-DR-4401-VA-003**

THIS SERVICE AGREEMENT (the “Agreement”) dated this 1st day of December 2020.

BETWEEN:

Middlesex County of 877 General Puller Highway, Saluda, Virginia 23149
(The “Client”)

AND

Middle Peninsula Planning District Commission of 125 Bowden Street, Saluda, Virginia 23149
(The “Contractor”)

BACKGROUND:

- A. The Client is of the opinion that the Contractor has the necessary qualifications, experience, and abilities to provide services to the Client.
- B. The Contractor is agreeable to providing such services to the Client on the terms and conditions set out in this Agreement.
- C. The Client recognizes the utility of a standard agreement to be used by member localities to ensure that mandates such as the Middle Peninsula multi-jurisdictional hazard mitigation plan are developed in accordance with Title 44 of the Federal Code of Regulations (CFR) Part 201.6; that the planning process is conducted in an open manner involving community stakeholders; that it is consistent with each participating jurisdiction’s policies, programs and authorities; and that it is an accurate reflection of the community’s values.

IN CONSIDERATION OF the matters described above and of the mutual benefits and obligations set forth in this Agreement, the receipt of sufficiency of which consideration is hereby acknowledged, the Client and the Contractor (individually the “Party” and collectively the “Parties” to this Agreement) agree as follows:

Services Provided

1. The Client hereby agrees to engage the Contractor to provide the Client with services (the “Services”) necessary to update the regional Middle Peninsula PDC Hazard Mitigation Plan as described in Appendix A Project Scope of Work in accordance with:
 - 44 CFR Ch. 1 Section 201.6, Part a, which indicates that a local government MUST have a mitigation plan approved in order to receive HMGP project grants

Middle Peninsula PDC Hazards Mitigation Plan Update

and in order to apply for and receive mitigation project grants under all other mitigation grant programs.

- Disaster Mitigation Act of 2000 (“DMA 2K”), which is a key component of the Federal government’s commitment to reduce damages to private and public property through mitigation activities. This legislation established the Pre-Disaster Mitigation (“PDM”) Program and created requirements for the Post-Disaster Hazard Mitigation Grant Program (“HMGP”). This key piece of federal legislation is known as Public Law 106-390.
 - DMA 2K, which requires local governments to develop and submit mitigation plans to qualify for PDM and HMGP funds. The Act requires that the plan demonstrate “the jurisdiction’s commitment to reduce risk from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards.”
2. The Contractor recommends that the Client consult with legal counsel concerning questions related to the requirements of Disaster Mitigation Act of 2000 and 44 CFR Ch. 1 Section 201.6 and other related sections.

Term of Agreement

3. The term of this Agreement (the “Term”) will begin on the date this Agreement is signed by both Parties and will remain in full force and effect until either FEMA approves the update to the Middle Peninsula PDC Hazard Mitigation Plan or by VDEM contract end date of October 12, 2022. The term of this Agreement may be extended with the written consent of the Parties. The Agreement may be terminated by either Party with 30 days written notice given to the other Party.
4. In the event that the Client breaches this Agreement, the Client shall remain liable to the Contractor for the costs of all services both rendered and agreed upon as set forth in paragraph 5 and 6 below. In the event that the Contractor breaches this Agreement, the Contractor will return to the Client any and all unspent monies received from the Client as set forth in Paragraph 5 and 6 below. The Parties acknowledge that no other damages, fees, or penalties shall be due one from the other as the result of any act or omission of either Party.

Performance

5. The Parties agree to fully cooperate and to do everything necessary to ensure that the terms of this Agreement take effect including the execution of additional documents should the need arise.

Compensation

Middle Peninsula PDC Hazards Mitigation Plan Update

6. For the services rendered by the Contractor as required by this Agreement, the Client will provide the following compensation as described below (as specifically applicable to Client locality, rounded up for ease).

Locality Share to be Split between all: \$6,803

Essex	\$972
Gloucester	\$972
King and Queen	\$972
King William	\$972
Mathews	\$972
Middlesex	\$972
Urbanna	\$324
Tappahannock	\$324
<u>West Point</u>	<u>\$324</u>
Total	\$6,804 (rounded up for ease)

2 Year Federal Grant	Fema Funding	State Match Provided Non Fed Share	Local Share split between localities	Per County Match/Share	Per Town Match Share
\$ 142,863	\$ 108,848	\$ 27,212	\$ 6,803	\$ 972	\$ 324
			Year 1	\$ 486	\$ 162
			Year 2	\$ 486	\$ 162

All Such compensation shall be subject to appropriation by the Client.

7. The Contractor will invoice the Client for two annual payments of: **County \$486 or Town \$162 (as applicable).**
8. Project updates will be provided in the Middle Peninsula Planning District Commission monthly meeting packets.
9. In the event that a change order is requested, beyond the scope of services outlined in this Agreement, the Client will be charged on an hourly basis according to the approved Commission budget subject to the applicable provisions referenced in Dispute Resolution below (see section 20c). Appearances at local meetings, answering of telephonic questions and private meetings will be deemed change orders in the discretion of the Contractor provided such has been disclosed in writing, in advance to the Client.

Middle Peninsula PDC Hazards Mitigation Plan Update

Upon completion of the Services, a presentation will be made by the Contractor, at the request of the Client, at one local meeting of the Client's choice without additional compensation.

Reimbursement of Expenses

10. The Contractor will not be reimbursed for any expenses incurred in connection with this Agreement.

Employment Discrimination by Contractor Prohibited

11. a. The Contractor will not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, age, disability, or other basis prohibited by state law relating to discrimination in employment, except where there is a bona fide occupational qualification reasonably necessary to the normal operation of the Contractor. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this nondiscrimination clause.
 - b. The Contractor, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, will state that such Contractor is an equal opportunity employer.
 - c. Notices, advertisements and solicitations placed in accordance with federal law, rule or regulation shall be deemed sufficient for the purpose of meeting the requirements of this section.
12. The Contractor will include the provisions of the foregoing paragraphs a, b and c in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Drug-Free Workplace

13. The Contractor agrees to (i) provide a drug-free workplace for the Contractor's employees; (ii) post in conspicuous places, available to employees and applicants for employment, a statement notifying employees that the unlawful manufacture, sale, distribution, dispensation, possession, or use of a controlled substance or marijuana is prohibited in the Contractor's workplace and specifying the actions that will be taken against employees for violations of such prohibition; (iii) state in all solicitations or advertisements for employees placed by or on behalf of the Contractor that the Contractor maintains a drug-free workplace; and (iv) include the provisions of the foregoing clauses in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Middle Peninsula PDC Hazards Mitigation Plan Update

14. For the purposes of this section, “*drug-free workplace*” means a site for the performance of work done in connection with a specific contract awarded to a contractor in accordance with this chapter, the employees of whom are prohibited from engaging in the unlawful manufacture, sale, distribution, dispensation, possession or use of any controlled substance or marijuana during the performance of the contract.

Employment of Illegal Aliens

15. The Contractor agrees that it does not and shall not during the performance of this Agreement knowingly employ an unauthorized alien as defined in the federal Immigration Reform and Control Act of 1986.

Ownership of Intellectual Property

16. All information gathered during this project will remain public, unless prohibited from disclosure or exempted from required disclosure in accordance with state and federal law.

Capacity

17. In providing the Services under this Agreement, it is expressly agreed that the Contractor is acting as an independent contractor and not as an employee. The Contractor and the Client acknowledge that this Agreement does not create a partnership or joint venture between them.

Notice

18. All notices, requests, demands or other communications required or permitted by the terms of this Agreement will be given in writing and delivered to the Parties of this Agreement as follows:

- a. County Administrator
Middlesex County
877 General Puller Highway
Saluda, Virginia 23149

- b. Middle Peninsula Planning District Commission
125 Bowden Street
Saluda, VA 23149

Or to such other address as any Party may from time to time notify the other.

Additional Clauses

Middle Peninsula PDC Hazards Mitigation Plan Update

19. This Agreement has been reviewed and approved via recorded vote of the Middlesex County Board of Supervisors.

Dispute Resolution

20. In the event a dispute arises out of or in connection with this Agreement, the Parties will attempt to resolve the dispute through friendly consultation.
- a. Once a final deliverable has been submitted by Contractor and approved by FEMA, the Contractor shall be deemed to have completed all services required under this Agreement.
 - b. Once the scope of work has been completed and/or the product has received any necessary approvals, any changes made by the Client to the final product is “at its own risk”. The Client assumes all responsibility for any modification, deviation, or change initiated outside of the agreed to scope of work.
 - c. The Contractor has no contractual responsibility to advocate for, coordinate, or administer any local modifications beyond the services agreed to by the Contractor in accordance with the terms of this Agreement.
 - The Client may request an addendum to the contract for specific changes. The Contractor may consider the request from the Client and, if willing to perform the requested work, shall provide a response including a new cost estimate for consideration. Any addendum shall be authorized by the [Name of County/Town] [Board of Supervisors/Town Council] by Resolution outlining such changes to the Services.

Modification of Agreement

21. Any amendment or modification of this Agreement or additional obligation assumed by either Party in connection with this Agreement will only be binding if evidenced in writing signed by each Party or an authorized representative of each Party.

Time of the Essence

22. Time is the essence in this Agreement. No extension or variation of this Agreement will operate as a waiver of this provision.

Assignment

Middle Peninsula PDC Hazards Mitigation Plan Update

23. The Contractor shall not voluntarily or by operation of law assign or otherwise transfer its obligations under this Agreement without the prior written consent of the Client.

Entire Agreement

24. It is agreed that there is no representation, warranty, collateral agreement, or condition affecting this Agreement except as expressly provided in this Agreement.

Governing Law

25. It is the intention of the Parties to this Agreement that this Agreement and the performance under this Agreement, and all suits and special proceedings under this Agreement, be construed in accordance with and governed, to the exclusion of the law of any other forum, by the laws of the Commonwealth of Virginia, without regard to the jurisdiction in which any action or special proceeding may be instituted.

Severability

26. In the event that any of the provisions of this Agreement are held to be invalid or unenforceable in whole or in part, all other provisions will nevertheless continue to be valid and enforceable with the invalid or unenforceable parts severed from the remainder of the Agreement.

Waiver

27. The waiver by either Party of a breach, default, delay, or omission of any of the provisions of this Agreement by the other Party will not be construed as a waiver of any subsequent breach of the same or the provisions.

IN WITNESS WHEREOF the Parties have duly affixed their signatures under land and seal on this 1st day of December 2020.

Middle Peninsula PDC Hazards Mitigation Plan Update

Appendix A:

Proposed Project Scope of Work

The Middle Peninsula Planning District Commission (MPPDC) will update the 2016 Middle Peninsula All Hazards Mitigation Plan (AHMP) with the help of a Local Planning Team. Membership will be nominated by counties, towns, and other stakeholders (i.e., Tribes, chamber of commerce, state agencies, the public, etc) in the Middle Peninsula. The plan will address several natural hazards, including but limited to hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, earthquakes, shrink-swell soils, extreme cold, extreme heat, landslides, land subsidence/karst, and tsunami.

The project includes the following components:

1. Planning Process
2. Risk Assessment
3. Hazard Mitigation Strategy
4. Hazard Mitigation Plan Maintenance Process
5. Hazard Mitigation Plan Adoption and Approval

Planning Team Responsibilities

Representatives on the Planning Team from participating jurisdictions must engage in the following planning process, including, but not limited to:

- Develop the Work Program and Schedule with the Planning Team
- Organize and attend regular meetings (virtual and/or in person) of the Planning Team. Attendance will be documented in the PDC monthly meeting packet.
- Assist the Planning Team with developing and conducting an outreach strategy to involve other planning team members, stakeholders, and the public, as appropriate to represent their Jurisdiction.
- Identify community resources available to support the planning effort, including meeting spaces, facilitators, and media outlets.
- Provide data and feedback to develop the risk assessment and mitigation strategy, including a specific mitigation action plan for their Jurisdiction.
- Submit the draft plan to their Jurisdiction for review.
- Work with the Planning Team to incorporate all their Jurisdiction's comments into the draft plan.
- Submit the draft plan to their respective governing body for consideration and adoption.
- After adoption, coordinate a process to monitor, evaluate, and work toward plan implementation.

Local Adoption

Middle Peninsula PDC Hazards Mitigation Plan Update

To be eligible for HMGP project grants (grants for a locality after a disaster), a local government must have a mitigation plan. Approval includes adoption by the participating jurisdictions.

Timeframe of Grant

This agreement and grant will be in effect from the date of signature by all parties, and will remain in effect through the duration of this project. Once a final deliverable has been submitted to and approved by the Client and the mandating entity, the Contractor shall be deemed to have completed all services required under this Agreement. The agreement may be terminated prior to that time by any Participating Jurisdiction by giving 30 days written notice.

**Service Agreement between
The Middle Peninsula Planning District Commission (MPPDC) and
Town of Tappahannock (the County or Town) for the
Virginia Department of Emergency Management (VDEM)
“Middle Peninsula PDC Hazards Mitigation Plan Update”
Grant Number FEMA-DR-4401-VA-003**

THIS SERVICE AGREEMENT (the “Agreement”) dated this 17th day of Dec. , 2020.

BETWEEN:

Town of Tappahannock of 915 Church Lane, Tappahannock, Virginia 22560
(The “Client”)

AND

Middle Peninsula Planning District Commission of 125 Bowden Street, Saluda, Virginia 23149
(The “Contractor”)

BACKGROUND:

- A. The Client is of the opinion that the Contractor has the necessary qualifications, experience, and abilities to provide services to the Client.
- B. The Contractor is agreeable to providing such services to the Client on the terms and conditions set out in this Agreement.
- C. The Client recognizes the utility of a standard agreement to be used by member localities to ensure that mandates such as the Middle Peninsula multi-jurisdictional hazard mitigation plan are developed in accordance with Title 44 of the Federal Code of Regulations (CFR) Part 201.6; that the planning process is conducted in an open manner involving community stakeholders; that it is consistent with each participating jurisdiction’s policies, programs and authorities; and that it is an accurate reflection of the community’s values.

IN CONSIDERATION OF the matters described above and of the mutual benefits and obligations set forth in this Agreement, the receipt of sufficiency of which consideration is hereby acknowledged, the Client and the Contractor (individually the “Party” and collectively the “Parties” to this Agreement) agree as follows:

Services Provided

1. The Client hereby agrees to engage the Contractor to provide the Client with services (the “Services”) necessary to update the regional Middle Peninsula PDC Hazard Mitigation Plan as described in Appendix A Project Scope of Work in accordance with:
 - 44 CFR Ch. 1 Section 201.6, Part a, which indicates that a local government **MUST** have a mitigation plan approved in order to receive HMGP project grants

and in order to apply for and receive mitigation project grants under all other mitigation grant programs.

- Disaster Mitigation Act of 2000 (“DMA 2K”), which is a key component of the Federal government’s commitment to reduce damages to private and public property through mitigation activities. This legislation established the Pre-Disaster Mitigation (“PDM”) Program and created requirements for the Post-Disaster Hazard Mitigation Grant Program (“HMGP”). This key piece of federal legislation is known as Public Law 106-390.
 - DMA 2K, which requires local governments to develop and submit mitigation plans to qualify for PDM and HMGP funds. The Act requires that the plan demonstrate “the jurisdiction’s commitment to reduce risk from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards.”.
2. The Contractor recommends that the Client consult with legal counsel concerning questions related to the requirements of Disaster Mitigation Act of 2000 and 44 CFR Ch. 1 Section 201.6 and other related sections.

Term of Agreement

3. The term of this Agreement (the “Term”) will begin on the date this Agreement is signed by both Parties and will remain in full force and effect until either FEMA approves the update to the Middle Peninsula PDC Hazard Mitigation Plan or by VDEM contract end date of October 12, 2022. The term of this Agreement may be extended with the written consent of the Parties. The Agreement may be terminated by either Party with 30 days written notice given to the other Party.
4. In the event that the Client breaches this Agreement, the Client shall remain liable to the Contractor for the costs of all services both rendered and agreed upon as set forth in paragraph 5 and 6 below. In the event that the Contractor breaches this Agreement, the Contractor will return to the Client any and all unspent monies received from the Client as set forth in Paragraph 5 and 6 below. The Parties acknowledge that no other damages, fees, or penalties shall be due one from the other as the result of any act or omission of either Party.

Performance

5. The Parties agree to fully cooperate and to do everything necessary to ensure that the terms of this Agreement take effect including the execution of additional documents should the need arise.

Compensation

- For the services rendered by the Contractor as required by this Agreement, the Client will provide the following compensation as described below (as specifically applicable to Client locality, rounded up for ease).

Locality Share to be Split between all: \$6,803

Essex	\$972
Gloucester	\$972
King and Queen	\$972
King William	\$972
Mathews	\$972
Middlesex	\$972
Urbanna	\$324
Tappahannock	\$324
West Point	\$324
Total	\$6,804 (rounded up for ease)

2 Year Federal Grant	Fema Funding	State Match Provided Non Fed Share	Local Share split between localities	Per County Match/Share	Per Town Match Share
\$ 142,863	\$ 108,848	\$ 27,212	\$ 6,803	\$ 972	\$ 324
			Year 1	\$ 486	\$ 162
			Year 2	\$ 486	\$ 162

All Such compensation shall be subject to appropriation by the Client.

- The Contractor will invoice the Client for two annual payments of: **County \$486 or Town \$162 (as applicable)**.
- Project updates will be provided in the Middle Peninsula Planning District Commission monthly meeting packets.
- In the event that a change order is requested, beyond the scope of services outlined in this Agreement, the Client will be charged on an hourly basis according to the approved Commission budget subject to the applicable provisions referenced in Dispute Resolution below (see section 20c). Appearances at local meetings, answering of telephonic questions and private meetings will be deemed change orders in the discretion of the Contractor provided such has been disclosed in writing, in advance to the Client.

Upon completion of the Services, a presentation will be made by the Contractor, at the request of the Client, at one local meeting of the Client's choice without additional compensation.

Reimbursement of Expenses

10. The Contractor will not be reimbursed for any expenses incurred in connection with this Agreement.

Employment Discrimination by Contractor Prohibited

11. a. The Contractor will not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, age, disability, or other basis prohibited by state law relating to discrimination in employment, except where there is a bona fide occupational qualification reasonably necessary to the normal operation of the Contractor. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this nondiscrimination clause.
 - b. The Contractor, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, will state that such Contractor is an equal opportunity employer.
 - c. Notices, advertisements and solicitations placed in accordance with federal law, rule or regulation shall be deemed sufficient for the purpose of meeting the requirements of this section.
12. The Contractor will include the provisions of the foregoing paragraphs a, b and c in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Drug-Free Workplace

13. The Contractor agrees to (i) provide a drug-free workplace for the Contractor's employees; (ii) post in conspicuous places, available to employees and applicants for employment, a statement notifying employees that the unlawful manufacture, sale, distribution, dispensation, possession, or use of a controlled substance or marijuana is prohibited in the Contractor's workplace and specifying the actions that will be taken against employees for violations of such prohibition; (iii) state in all solicitations or advertisements for employees placed by or on behalf of the Contractor that the Contractor maintains a drug-free workplace; and (iv) include the provisions of the foregoing clauses in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

14. For the purposes of this section, “*drug-free workplace*” means a site for the performance of work done in connection with a specific contract awarded to a contractor in accordance with this chapter, the employees of whom are prohibited from engaging in the unlawful manufacture, sale, distribution, dispensation, possession or use of any controlled substance or marijuana during the performance of the contract.

Employment of Illegal Aliens

15. The Contractor agrees that it does not and shall not during the performance of this Agreement knowingly employ an unauthorized alien as defined in the federal Immigration Reform and Control Act of 1986.

Ownership of Intellectual Property

16. All information gathered during this project will remain public, unless prohibited from disclosure or exempted from required disclosure in accordance with state and federal law.

Capacity

17. In providing the Services under this Agreement, it is expressly agreed that the Contractor is acting as an independent contractor and not as an employee. The Contractor and the Client acknowledge that this Agreement does not create a partnership or joint venture between them.

Notice

18. All notices, requests, demands or other communications required or permitted by the terms of this Agreement will be given in writing and delivered to the Parties of this Agreement as follows:

- a. Eric S. Pollitt – Town Manager
Town of Tappahannock
915 Church Lane
Tappahannock, Virginia 22560
- b. Middle Peninsula Planning District Commission
125 Bowden Street
Saluda, VA 23149

Or to such other address as any Party may from time to time notify the other.

Additional Clauses

19. This Agreement has been reviewed and approved via recorded vote of the Town of Tappahannock Town Council.

Dispute Resolution

20. In the event a dispute arises out of or in connection with this Agreement, the Parties will attempt to resolve the dispute through friendly consultation.

- a. Once a final deliverable has been submitted by Contractor and approved by FEMA, the Contractor shall be deemed to have completed all services required under this Agreement.
- b. Once the scope of work has been completed and/or the product has received any necessary approvals, any changes made by the Client to the final product is “at its own risk”. The Client assumes all responsibility for any modification, deviation, or change initiated outside of the agreed to scope of work.
- c. The Contractor has no contractual responsibility to advocate for, coordinate, or administer any local modifications beyond the services agreed to by the Contractor in accordance with the terms of this Agreement.
 - The Client may request an addendum to the contract for specific changes. The Contractor may consider the request from the Client and, if willing to perform the requested work, shall provide a response including a new cost estimate for consideration. Any addendum shall be authorized by the [Name of County/Town] [Board of Supervisors/Town Council] by Resolution outlining such changes to the Services.

Modification of Agreement

21. Any amendment or modification of this Agreement or additional obligation assumed by either Party in connection with this Agreement will only be binding if evidenced in writing signed by each Party or an authorized representative of each Party.

Time of the Essence

22. Time is the essence in this Agreement. No extension or variation of this Agreement will operate as a waiver of this provision.

Assignment

Middle Peninsula PDC Hazards Mitigation Plan Update

23. The Contractor shall not voluntarily or by operation of law assign or otherwise transfer its obligations under this Agreement without the prior written consent of the Client.

Entire Agreement

24. It is agreed that there is no representation, warranty, collateral agreement, or condition affecting this Agreement except as expressly provided in this Agreement.

Governing Law

25. It is the intention of the Parties to this Agreement that this Agreement and the performance under this Agreement, and all suits and special proceedings under this Agreement, be construed in accordance with and governed, to the exclusion of the law of any other forum, by the laws of the Commonwealth of Virginia, without regard to the jurisdiction in which any action or special proceeding may be instituted.

Severability

26. In the event that any of the provisions of this Agreement are held to be invalid or unenforceable in whole or in part, all other provisions will nevertheless continue to be valid and enforceable with the invalid or unenforceable parts severed from the remainder of the Agreement.

Waiver

27. The waiver by either Party of a breach, default, delay, or omission of any of the provisions of this Agreement by the other Party will not be construed as a waiver of any subsequent breach of the same or the provisions.

IN WITNESS WHEREOF the Parties have duly affixed their signatures under land and seal on this 17th day of December, 2020.

RE: Middle Peninsula PDC Hazard Mitigation Plan Update
FEMA-4401-DR-VA-003

Dear Mr. Lawrence:

I am pleased to notify you that the Federal Emergency Management Agency (FEMA) has approved the project titled "Middle Peninsula PDC Hazard Mitigation Plan Update." The funds have been obligated through the Hazard Mitigation Grant Program. Attached you will find the grant award package. Please read all documents carefully prior to initiating your project. As funded, the federal share is 75 percent of the total project costs.

Your project cannot begin until the authorized agent has signed the grant award package. No reimbursements will be made until the award package is signed and received by the Virginia Department of Emergency Management. Please sign the attached grant agreement and scan and email it to Debbie Messmer, state hazard mitigation officer. Congratulations on the approval of this project. If you have questions regarding this award or the implementation of your project, please contact Debbie Messmer at (804) 267-7732 or by e-mail at debbie.messmer@vdem.virginia.gov.

Sincerely,

A handwritten signature in black ink, appearing to read "Curtis C. Brown".

**Re: Project Approval
Hazard Mitigation Grant Program (HMGP)
FEMA-4401-DR-VA-003**

Dear Dr. Stern:

I am pleased to inform you that the project application, Middle Peninsula Planning District Commission Mitigation Plan Update 7% Project, submitted under FEMA-DR-4401-VA-003, has been approved.

The total amount for this project is \$142,863 with a federal share of \$108,848 (\$102,045 for project costs and \$6,803 for subrecipient management costs), and a non-federal share of \$34,015; the federal share should be available in the SMARTLINK system. A copy of the Obligation Report is enclosed for your files.

The Period of Performance for this project ends on October 15, 2022. All grant award activities must be incurred during the performance period. The final product of this grant must be a FEMA approved plan. When submitting the updated plan, allow sufficient time for review, revision, and adoption.

Please provide this office with a Quarterly Progress Report thirty days after the end of each Federal fiscal year quarter.

Middle Peninsula PDC Hazards Mitigation Plan Update

**Service Agreement between
The Middle Peninsula Planning District Commission (MPPDC) and
The Town of West Point (the County or Town) for the
Virginia Department of Emergency Management (VDEM)
“Middle Peninsula PDC Hazards Mitigation Plan Update”
Grant Number FEMA-DR-4401-VA-003**

THIS SERVICE AGREEMENT (the “Agreement”) dated this 20th day of November, 2020.

BETWEEN:

Town of West Point of P.O. Box 152, West Point, VA 23181
(The “Client”)

AND

Middle Peninsula Planning District Commission of 125 Bowden Street, Saluda, Virginia 23149
(The “Contractor”)

BACKGROUND:

- A. The Client is of the opinion that the Contractor has the necessary qualifications, experience, and abilities to provide services to the Client.
- B. The Contractor is agreeable to providing such services to the Client on the terms and conditions set out in this Agreement.
- C. The Client recognizes the utility of a standard agreement to be used by member localities to ensure that mandates such as the Middle Peninsula multi-jurisdictional hazard mitigation plan are developed in accordance with Title 44 of the Federal Code of Regulations (CFR) Part 201.6; that the planning process is conducted in an open manner involving community stakeholders; that it is consistent with each participating jurisdiction’s policies, programs and authorities; and that it is an accurate reflection of the community’s values.

IN CONSIDERATION OF the matters described above and of the mutual benefits and obligations set forth in this Agreement, the receipt of sufficiency of which consideration is hereby acknowledged, the Client and the Contractor (individually the “Party” and collectively the “Parties” to this Agreement) agree as follows:

Services Provided

1. The Client hereby agrees to engage the Contractor to provide the Client with services (the “Services”) necessary to update the regional Middle Peninsula PDC Hazard Mitigation Plan as described in Appendix A Project Scope of Work in accordance with:
 - 44 CFR Ch. 1 Section 201.6, Part a, which indicates that a local government MUST have a mitigation plan approved in order to receive HMGP project grants

Middle Peninsula PDC Hazards Mitigation Plan Update

and in order to apply for and receive mitigation project grants under all other mitigation grant programs.

- Disaster Mitigation Act of 2000 (“DMA 2K”), which is a key component of the Federal government’s commitment to reduce damages to private and public property through mitigation activities. This legislation established the Pre-Disaster Mitigation (“PDM”) Program and created requirements for the Post-Disaster Hazard Mitigation Grant Program (“HMGP”). This key piece of federal legislation is known as Public Law 106-390.
 - DMA 2K, which requires local governments to develop and submit mitigation plans to qualify for PDM and HMGP funds. The Act requires that the plan demonstrate “the jurisdiction’s commitment to reduce risk from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards.”.
2. The Contractor recommends that the Client consult with legal counsel concerning questions related to the requirements of Disaster Mitigation Act of 2000 and 44 CFR Ch. 1 Section 201.6 and other related sections.

Term of Agreement

3. The term of this Agreement (the “Term”) will begin on the date this Agreement is signed by both Parties and will remain in full force and effect until either FEMA approves the update to the Middle Peninsula PDC Hazard Mitigation Plan or by VDEM contract end date of October 12, 2022. The term of this Agreement may be extended with the written consent of the Parties. The Agreement may be terminated by either Party with 30 days written notice given to the other Party.
4. In the event that the Client breaches this Agreement, the Client shall remain liable to the Contractor for the costs of all services both rendered and agreed upon as set forth in paragraph 5 and 6 below. In the event that the Contractor breaches this Agreement, the Contractor will return to the Client any and all unspent monies received from the Client as set forth in Paragraph 5 and 6 below. The Parties acknowledge that no other damages, fees, or penalties shall be due one from the other as the result of any act or omission of either Party.

Performance

5. The Parties agree to fully cooperate and to do everything necessary to ensure that the terms of this Agreement take effect including the execution of additional documents should the need arise.

Middle Peninsula PDC Hazards Mitigation Plan Update

Compensation

6. For the services rendered by the Contractor as required by this Agreement, the Client will provide the following compensation as described below (as specifically applicable to Client locality, rounded up for ease).

Locality Share to be Split between all: \$6,803

Essex	\$972
Gloucester	\$972
King and Queen	\$972
King William	\$972
Mathews	\$972
Middlesex	\$972
Urbanna	\$324
Tappahannock	\$324
West Point	\$324
Total	\$6,804 (rounded up for ease)

2 Year Federal Grant	Fema Funding	State Match Provided Non Fed Share	Local Share split between localities	Per County Match/Share	Per Town Match Share
\$ 142,863	\$ 108,848	\$ 27,212	\$ 6,803	\$ 972	\$ 324
			Year 1	\$ 486	\$ 162
			Year 2	\$ 486	\$ 162

All Such compensation shall be subject to appropriation by the Client.

7. The Contractor will invoice the Client for two annual payments of: **County \$486 or Town \$162 (as applicable).**
8. Project updates will be provided in the Middle Peninsula Planning District Commission monthly meeting packets.
9. In the event that a change order is requested, beyond the scope of services outlined in this Agreement, the Client will be charged on an hourly basis according to the approved Commission budget subject to the applicable provisions referenced in Dispute Resolution below (see section 20c). Appearances at local meetings, answering of telephonic questions and private meetings will be deemed change orders in the discretion of the Contractor provided such has been disclosed in writing, in advance to the Client.

Middle Peninsula PDC Hazards Mitigation Plan Update

Upon completion of the Services, a presentation will be made by the Contractor, at the request of the Client, at one local meeting of the Client's choice without additional compensation.

Reimbursement of Expenses

10. The Contractor will not be reimbursed for any expenses incurred in connection with this Agreement.

Employment Discrimination by Contractor Prohibited

11. a. The Contractor will not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, age, disability, or other basis prohibited by state law relating to discrimination in employment, except where there is a bona fide occupational qualification reasonably necessary to the normal operation of the Contractor. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this nondiscrimination clause.
 - b. The Contractor, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, will state that such Contractor is an equal opportunity employer.
 - c. Notices, advertisements and solicitations placed in accordance with federal law, rule or regulation shall be deemed sufficient for the purpose of meeting the requirements of this section.
12. The Contractor will include the provisions of the foregoing paragraphs a, b and c in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Drug-Free Workplace

13. The Contractor agrees to (i) provide a drug-free workplace for the Contractor's employees; (ii) post in conspicuous places, available to employees and applicants for employment, a statement notifying employees that the unlawful manufacture, sale, distribution, dispensation, possession, or use of a controlled substance or marijuana is prohibited in the Contractor's workplace and specifying the actions that will be taken against employees for violations of such prohibition; (iii) state in all solicitations or advertisements for employees placed by or on behalf of the Contractor that the Contractor maintains a drug-free workplace; and (iv) include the provisions of the foregoing clauses in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Middle Peninsula PDC Hazards Mitigation Plan Update

14. For the purposes of this section, “*drug-free workplace*” means a site for the performance of work done in connection with a specific contract awarded to a contractor in accordance with this chapter, the employees of whom are prohibited from engaging in the unlawful manufacture, sale, distribution, dispensation, possession or use of any controlled substance or marijuana during the performance of the contract.

Employment of Illegal Aliens

15. The Contractor agrees that it does not and shall not during the performance of this Agreement knowingly employ an unauthorized alien as defined in the federal Immigration Reform and Control Act of 1986.

Ownership of Intellectual Property

16. All information gathered during this project will remain public, unless prohibited from disclosure or exempted from required disclosure in accordance with state and federal law.

Capacity

17. In providing the Services under this Agreement, it is expressly agreed that the Contractor is acting as an independent contractor and not as an employee. The Contractor and the Client acknowledge that this Agreement does not create a partnership or joint venture between them.

Notice

18. All notices, requests, demands or other communications required or permitted by the terms of this Agreement will be given in writing and delivered to the Parties of this Agreement as follows:

- a. Town Manager
Town of West Point
P.O. Box 152
West Point, VA 23181
- b. Middle Peninsula Planning District Commission
125 Bowden Street
Saluda, VA 23149

Or to such other address as any Party may from time to time notify the other.

Middle Peninsula PDC Hazards Mitigation Plan Update

Additional Clauses

19. This Agreement has been reviewed and approved via recorded vote of the West Point Town Council on November 19, 2020.

Dispute Resolution

20. In the event a dispute arises out of or in connection with this Agreement, the Parties will attempt to resolve the dispute through friendly consultation.

- a. Once a final deliverable has been submitted by Contractor and approved by FEMA, the Contractor shall be deemed to have completed all services required under this Agreement.
- b. Once the scope of work has been completed and/or the product has received any necessary approvals, any changes made by the Client to the final product is “at its own risk”. The Client assumes all responsibility for any modification, deviation, or change initiated outside of the agreed to scope of work.
- c. The Contractor has no contractual responsibility to advocate for, coordinate, or administer any local modifications beyond the services agreed to by the Contractor in accordance with the terms of this Agreement.
 - The Client may request an addendum to the contract for specific changes. The Contractor may consider the request from the Client and, if willing to perform the requested work, shall provide a response including a new cost estimate for consideration. Any addendum shall be authorized by the West Point Town Council by Resolution outlining such changes to the Services.

Modification of Agreement

21. Any amendment or modification of this Agreement or additional obligation assumed by either Party in connection with this Agreement will only be binding if evidenced in writing signed by each Party or an authorized representative of each Party.

Time of the Essence

22. Time is the essence in this Agreement. No extension or variation of this Agreement will operate as a waiver of this provision.

Middle Peninsula PDC Hazards Mitigation Plan Update

Assignment

23. The Contractor shall not voluntarily or by operation of law assign or otherwise transfer its obligations under this Agreement without the prior written consent of the Client.

Entire Agreement

24. It is agreed that there is no representation, warranty, collateral agreement, or condition affecting this Agreement except as expressly provided in this Agreement.

Governing Law

25. It is the intention of the Parties to this Agreement that this Agreement and the performance under this Agreement, and all suits and special proceedings under this Agreement, be construed in accordance with and governed, to the exclusion of the law of any other forum, by the laws of the Commonwealth of Virginia, without regard to the jurisdiction in which any action or special proceeding may be instituted.

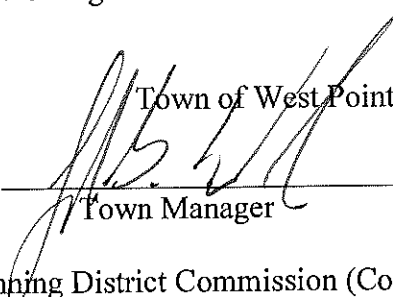

Severability

26. In the event that any of the provisions of this Agreement are held to be invalid or unenforceable in whole or in part, all other provisions will nevertheless continue to be valid and enforceable with the invalid or unenforceable parts severed from the remainder of the Agreement.

Waiver

27. The waiver by either Party of a breach, default, delay, or omission of any of the provisions of this Agreement by the other Party will not be construed as a waiver of any subsequent breach of the same or the provisions.

IN WITNESS WHEREOF the Parties have duly affixed their signatures under land and seal on this 20th day of November, 2020.

Town Manager (SEAL)

Middle Peninsula Planning District Commission (Contractor)

Per:  Lewis L. Lawrence (SEAL)
Executive Director

Middle Peninsula PDC Hazards Mitigation Plan Update

Appendix A:

Proposed Project Scope of Work

The Middle Peninsula Planning District Commission (MPPDC) will update the 2016 Middle Peninsula All Hazards Mitigation Plan (AHMP) with the help of a Local Planning Team. Membership will be nominated by counties, towns, and other stakeholders (i.e., Tribes, chamber of commerce, state agencies, the public, etc) in the Middle Peninsula. The plan will address several natural hazards, including but limited to hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, earthquakes, shrink-swell soils, extreme cold, extreme heat, landslides, land subsidence/karst, and tsunami.

The project includes the following components:

1. Planning Process
2. Risk Assessment
3. Hazard Mitigation Strategy
4. Hazard Mitigation Plan Maintenance Process
5. Hazard Mitigation Plan Adoption and Approval

Planning Team Responsibilities

Representatives on the Planning Team from participating jurisdictions must engage in the following planning process, including, but not limited to:

- Develop the Work Program and Schedule with the Planning Team
- Organize and attend regular meetings (virtual and/or in person) of the Planning Team. Attendance will be documented in the PDC monthly meeting packet.
- Assist the Planning Team with developing and conducting an outreach strategy to involve other planning team members, stakeholders, and the public, as appropriate to represent their Jurisdiction.
- Identify community resources available to support the planning effort, including meeting spaces, facilitators, and media outlets.
- Provide data and feedback to develop the risk assessment and mitigation strategy, including a specific mitigation action plan for their Jurisdiction.
- Submit the draft plan to their Jurisdiction for review.
- Work with the Planning Team to incorporate all their Jurisdiction's comments into the draft plan.
- Submit the draft plan to their respective governing body for consideration and adoption.
- After adoption, coordinate a process to monitor, evaluate, and work toward plan implementation.

Local Adoption

Middle Peninsula PDC Hazards Mitigation Plan Update

To be eligible for HMGP project grants (grants for a locality after a disaster), a local government must have a mitigation plan. Approval includes adoption by the participating jurisdictions.

Timeframe of Grant

This agreement and grant will be in effect from the date of signature by all parties, and will remain in effect through the duration of this project. Once a final deliverable has been submitted to and approved by the Client and the mandating entity, the Contractor shall be deemed to have completed all services required under this Agreement. The agreement may be terminated prior to that time by any Participating Jurisdiction by giving 30 days written notice.

RE: Middle Peninsula PDC Hazard Mitigation Plan Update
FEMA-4401-DR-VA-003

Dear Mr. Lawrence:

I am pleased to notify you that the Federal Emergency Management Agency (FEMA) has approved the project titled "Middle Peninsula PDC Hazard Mitigation Plan Update." The funds have been obligated through the Hazard Mitigation Grant Program. Attached you will find the grant award package. Please read all documents carefully prior to initiating your project. As funded, the federal share is 75 percent of the total project costs.

Your project cannot begin until the authorized agent has signed the grant award package. No reimbursements will be made until the award package is signed and received by the Virginia Department of Emergency Management. Please sign the attached grant agreement and scan and email it to Debbie Messmer, state hazard mitigation officer. Congratulations on the approval of this project. If you have questions regarding this award or the implementation of your project, please contact Debbie Messmer at (804) 267-7732 or by e-mail at debbie.messmer@vdem.virginia.gov.

Sincerely,

Handwritten signature of Curtis C. Brown.

Re: **Project Approval**
Hazard Mitigation Grant Program (HMG)
FEMA-4401-DR-VA-003

Dear Dr. Stern:

I am pleased to inform you that the project application, Middle Peninsula Planning District Commission Mitigation Plan Update 7% Project, submitted under FEMA-DR-4401-VA-003, has been approved.

The total amount for this project is \$142,863 with a federal share of \$108,848 (\$102,045 for project costs and \$6,803 for subrecipient management costs), and a non-federal share of \$34,015; the federal share should be available in the SMARTLINK system. A copy of the Obligation Report is enclosed for your files.

The Period of Performance for this project ends on October 15, 2022. All grant award activities must be incurred during the performance period. The final product of this grant must be a FEMA approved plan. When submitting the updated plan, allow sufficient time for review, revision, and adoption.

Please provide this office with a Quarterly Progress Report thirty days after the end of each Federal fiscal year quarter.

Middle Peninsula PDC Hazards Mitigation Plan Update

**Service Agreement between
The Middle Peninsula Planning District Commission (MPPDC) and
Town of Urbanna for the
Virginia Department of Emergency Management (VDEM)
“Middle Peninsula PDC Hazards Mitigation Plan Update”
Grant Number FEMA-DR-4401-VA-003**

THIS SERVICE AGREEMENT (the “Agreement”) dated this 17th day of December, 2020.

BETWEEN:

Town of Urbanna of 45 Cross Street Urbanna, Virginia 23175
(The “Client”)

AND

Middle Peninsula Planning District Commission of 125 Bowden Street, Saluda, Virginia 23149
(The “Contractor”)

BACKGROUND:

- A. The Client is of the opinion that the Contractor has the necessary qualifications, experience, and abilities to provide services to the Client.
- B. The Contractor is agreeable to providing such services to the Client on the terms and conditions set out in this Agreement.
- C. The Client recognizes the utility of a standard agreement to be used by member localities to ensure that mandates such as the Middle Peninsula multi-jurisdictional hazard mitigation plan are developed in accordance with Title 44 of the Federal Code of Regulations (CFR) Part 201.6; that the planning process is conducted in an open manner involving community stakeholders; that it is consistent with each participating jurisdiction’s policies, programs and authorities; and that it is an accurate reflection of the community’s values.

IN CONSIDERATION OF the matters described above and of the mutual benefits and obligations set forth in this Agreement, the receipt of sufficiency of which consideration is hereby acknowledged, the Client and the Contractor (individually the “Party” and collectively the “Parties” to this Agreement) agree as follows:

Services Provided

1. The Client hereby agrees to engage the Contractor to provide the Client with services (the “Services”) necessary to update the regional Middle Peninsula PDC Hazard Mitigation Plan as described in Appendix A Project Scope of Work in accordance with:
 - 44 CFR Ch. 1 Section 201.6, Part a, which indicates that a local government MUST have a mitigation plan approved in order to receive HMGP project grants

Middle Peninsula PDC Hazards Mitigation Plan Update

and in order to apply for and receive mitigation project grants under all other mitigation grant programs.

- Disaster Mitigation Act of 2000 (“DMA 2K”), which is a key component of the Federal government’s commitment to reduce damages to private and public property through mitigation activities. This legislation established the Pre-Disaster Mitigation (“PDM”) Program and created requirements for the Post-Disaster Hazard Mitigation Grant Program (“HMGP”). This key piece of federal legislation is known as Public Law 106-390.
 - DMA 2K, which requires local governments to develop and submit mitigation plans to qualify for PDM and HMGP funds. The Act requires that the plan demonstrate “the jurisdiction’s commitment to reduce risk from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards.”.
2. The Contractor recommends that the Client consult with legal counsel concerning questions related to the requirements of Disaster Mitigation Act of 2000 and 44 CFR Ch. 1 Section 201.6 and other related sections.

Term of Agreement

3. The term of this Agreement (the “Term”) will begin on the date this Agreement is signed by both Parties and will remain in full force and effect until either FEMA approves the update to the Middle Peninsula PDC Hazard Mitigation Plan or by VDEM contract end date of October 12, 2022. The term of this Agreement may be extended with the written consent of the Parties. The Agreement may be terminated by either Party with 30 days written notice given to the other Party.
4. In the event that the Client breaches this Agreement, the Client shall remain liable to the Contractor for the costs of all services both rendered and agreed upon as set forth in paragraph 5 and 6 below. In the event that the Contractor breaches this Agreement, the Contractor will return to the Client any and all unspent monies received from the Client as set forth in Paragraph 5 and 6 below. The Parties acknowledge that no other damages, fees, or penalties shall be due one from the other as the result of any act or omission of either Party.

Performance

5. The Parties agree to fully cooperate and to do everything necessary to ensure that the terms of this Agreement take effect including the execution of additional documents should the need arise.

Compensation

Middle Peninsula PDC Hazards Mitigation Plan Update

6. For the services rendered by the Contractor as required by this Agreement, the Client will provide the following compensation as described below (as specifically applicable to Client locality, rounded up for ease).

Locality Share to be Split between all: \$6,803

Essex	\$972
Gloucester	\$972
King and Queen	\$972
King William	\$972
Mathews	\$972
Middlesex	\$972
Urbanna	\$324
Tappahannock	\$324
West Point	\$324
Total	\$6,804 (rounded up for ease)

2 Year Federal Grant	Fema Funding	State Match Provided Non Fed Share	Local Share split between localities	Per County Match/Share	Per Town Match Share
\$ 142,863	\$ 108,848	\$ 27,212	\$ 6,803	\$ 972	\$ 324
			Year 1	\$ 486	\$ 162
			Year 2	\$ 486	\$ 162

All Such compensation shall be subject to appropriation by the Client.

7. The Contractor will invoice the Client for two annual payments of: **County \$486 or Town \$162 (as applicable).**
8. Project updates will be provided in the Middle Peninsula Planning District Commission monthly meeting packets.
9. In the event that a change order is requested, beyond the scope of services outlined in this Agreement, the Client will be charged on an hourly basis according to the approved Commission budget subject to the applicable provisions referenced in Dispute Resolution below (see section 20c). Appearances at local meetings, answering of telephonic questions and private meetings will be deemed change orders in the discretion of the Contractor provided such has been disclosed in writing, in advance to the Client.

Middle Peninsula PDC Hazards Mitigation Plan Update

Upon completion of the Services, a presentation will be made by the Contractor, at the request of the Client, at one local meeting of the Client's choice without additional compensation.

Reimbursement of Expenses

10. The Contractor will not be reimbursed for any expenses incurred in connection with this Agreement.

Employment Discrimination by Contractor Prohibited

11. a. The Contractor will not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, age, disability, or other basis prohibited by state law relating to discrimination in employment, except where there is a bona fide occupational qualification reasonably necessary to the normal operation of the Contractor. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this nondiscrimination clause.
 - b. The Contractor, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, will state that such Contractor is an equal opportunity employer.
 - c. Notices, advertisements and solicitations placed in accordance with federal law, rule or regulation shall be deemed sufficient for the purpose of meeting the requirements of this section.
12. The Contractor will include the provisions of the foregoing paragraphs a, b and c in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Drug-Free Workplace

13. The Contractor agrees to (i) provide a drug-free workplace for the Contractor's employees; (ii) post in conspicuous places, available to employees and applicants for employment, a statement notifying employees that the unlawful manufacture, sale, distribution, dispensation, possession, or use of a controlled substance or marijuana is prohibited in the Contractor's workplace and specifying the actions that will be taken against employees for violations of such prohibition; (iii) state in all solicitations or advertisements for employees placed by or on behalf of the Contractor that the Contractor maintains a drug-free workplace; and (iv) include the provisions of the foregoing clauses in every subcontract or purchase order of over \$10,000, so that the provisions will be binding upon each subcontractor or vendor.

Middle Peninsula PDC Hazards Mitigation Plan Update

14. For the purposes of this section, "*drug-free workplace*" means a site for the performance of work done in connection with a specific contract awarded to a contractor in accordance with this chapter, the employees of whom are prohibited from engaging in the unlawful manufacture, sale, distribution, dispensation, possession or use of any controlled substance or marijuana during the performance of the contract.

Employment of Illegal Aliens

15. The Contractor agrees that it does not and shall not during the performance of this Agreement knowingly employ an unauthorized alien as defined in the federal Immigration Reform and Control Act of 1986.

Ownership of Intellectual Property

16. All information gathered during this project will remain public, unless prohibited from disclosure or exempted from required disclosure in accordance with state and federal law.

Capacity

17. In providing the Services under this Agreement, it is expressly agreed that the Contractor is acting as an independent contractor and not as an employee. The Contractor and the Client acknowledge that this Agreement does not create a partnership or joint venture between them.

Notice

18. All notices, requests, demands or other communications required or permitted by the terms of this Agreement will be given in writing and delivered to the Parties of this Agreement as follows:

- a. Town Administrator
Town of Urbanna
P.O. Box 179
Urbanna, Virginia 23175

- b. Middle Peninsula Planning District Commission
125 Bowden Street
Saluda, VA 23149

Or to such other address as any Party may from time to time notify the other.

Additional Clauses

Middle Peninsula PDC Hazards Mitigation Plan Update

19. This Agreement has been reviewed and approved via recorded vote of the Town of Urbanna Town Council.

Dispute Resolution

20. In the event a dispute arises out of or in connection with this Agreement, the Parties will attempt to resolve the dispute through friendly consultation.
- a. Once a final deliverable has been submitted by Contractor and approved by FEMA, the Contractor shall be deemed to have completed all services required under this Agreement.
 - b. Once the scope of work has been completed and/or the product has received any necessary approvals, any changes made by the Client to the final product is "at its own risk". The Client assumes all responsibility for any modification, deviation, or change initiated outside of the agreed to scope of work.
 - c. The Contractor has no contractual responsibility to advocate for, coordinate, or administer any local modifications beyond the services agreed to by the Contractor in accordance with the terms of this Agreement.
 - The Client may request an addendum to the contract for specific changes. The Contractor may consider the request from the Client and, if willing to perform the requested work, shall provide a response including a new cost estimate for consideration. Any addendum shall be authorized by the [Name of County/Town] [Board of Supervisors/Town Council] by Resolution outlining such changes to the Services.

Modification of Agreement

21. Any amendment or modification of this Agreement or additional obligation assumed by either Party in connection with this Agreement will only be binding if evidenced in writing signed by each Party or an authorized representative of each Party.

Time of the Essence

22. Time is the essence in this Agreement. No extension or variation of this Agreement will operate as a waiver of this provision.

Assignment

Middle Peninsula PDC Hazards Mitigation Plan Update

23. The Contractor shall not voluntarily or by operation of law assign or otherwise transfer its obligations under this Agreement without the prior written consent of the Client.

Entire Agreement

24. It is agreed that there is no representation, warranty, collateral agreement, or condition affecting this Agreement except as expressly provided in this Agreement.

Governing Law

25. It is the intention of the Parties to this Agreement that this Agreement and the performance under this Agreement, and all suits and special proceedings under this Agreement, be construed in accordance with and governed, to the exclusion of the law of any other forum, by the laws of the Commonwealth of Virginia, without regard to the jurisdiction in which any action or special proceeding may be instituted.

Severability

26. In the event that any of the provisions of this Agreement are held to be invalid or unenforceable in whole or in part, all other provisions will nevertheless continue to be valid and enforceable with the invalid or unenforceable parts severed from the remainder of the Agreement.

Waiver

27. The waiver by either Party of a breach, default, delay, or omission of any of the provisions of this Agreement by the other Party will not be construed as a waiver of any subsequent breach of the same or the provisions.

IN WITNESS WHEREOF the Parties have duly affixed their signatures under land and seal on this 10th day of December, 2020.

Chairperson / Agent

Middle Peninsula Planning District Commission (Contractor)

Per: Lewis L Lawrence (SEAL)
Executive Director

Appendix A:

Proposed Project Scope of Work

The Middle Peninsula Planning District Commission (MPPDC) will update the 2016 Middle Peninsula All Hazards Mitigation Plan (AHMP) with the help of a Local Planning Team. Membership will be nominated by counties, towns, and other stakeholders (i.e., Tribes, chamber of commerce, state agencies, the public, etc) in the Middle Peninsula. The plan will address several natural hazards, including but limited to hurricanes, winter storms, tornadoes, coastal flooding, coastal/shoreline erosion, sea level rise, winter storms, wildfire, riverine flooding, wind, dam failures, drought, lightning, earthquakes, shrink-swell soils, extreme cold, extreme heat, landslides, land subsidence/karst, and tsunamis.

The project includes the following components:

1. Planning Process
2. Risk Assessment
3. Hazard Mitigation Strategy
4. Hazard Mitigation Plan Maintenance Process
5. Hazard Mitigation Plan Adoption and Approval

Planning Team Responsibilities

Representatives on the Planning Team from participating jurisdictions must engage in the following planning process, including, but not limited to:

- Develop the Work Program and Schedule with the Planning Team
- Organize and attend regular meetings (virtual and/or in person) of the Planning Team. Attendance will be documented in the PDC monthly meeting packet.
- Assist the Planning Team with developing and conducting an outreach strategy to involve other planning team members, stakeholders, and the public, as appropriate to represent their Jurisdiction.
- Identify community resources available to support the planning effort, including meeting spaces, facilitators, and media outlets.
- Provide data and feedback to develop the risk assessment and mitigation strategy, including a specific mitigation action plan for their Jurisdiction.
- Submit the draft plan to their Jurisdiction for review.
- Work with the Planning Team to incorporate all their Jurisdiction's comments into the draft plan.
- Submit the draft plan to their respective governing body for consideration and adoption.
- After adoption, coordinate a process to monitor, evaluate, and work toward plan implementation.

Local Adoption

Middle Peninsula PDC Hazards Mitigation Plan Update

To be eligible for HMGP project grants (grants for a locality after a disaster), a local government must have a mitigation plan. Approval includes adoption by the participating jurisdictions.

Timeframe of Grant

This agreement and grant will be in effect from the date of signature by all parties, and will remain in effect through the duration of this project. Once a final deliverable has been submitted to and approved by the Client and the mandating entity, the Contractor shall be deemed to have completed all services required under this Agreement. The agreement may be terminated prior to that time by any Participating Jurisdiction by giving 30 days written notice.

RE: Middle Peninsula PDC Hazard Mitigation Plan Update
FEMA-4401-DR-VA-003

Dear Mr. Lawrence:

I am pleased to notify you that the Federal Emergency Management Agency (FEMA) has approved the project titled "Middle Peninsula PDC Hazard Mitigation Plan Update." The funds have been obligated through the Hazard Mitigation Grant Program. Attached you will find the grant award package. Please read all documents carefully prior to initiating your project. As funded, the federal share is 75 percent of the total project costs.

Your project cannot begin until the authorized agent has signed the grant award package. No reimbursements will be made until the award package is signed and received by the Virginia Department of Emergency Management. Please sign the attached grant agreement and scan and email it to Debbie Messmer, state hazard mitigation officer. Congratulations on the approval of this project. If you have questions regarding this award or the implementation of your project, please contact Debbie Messmer at (804) 267-7732 or by e-mail at debbie.messmer@vdem.virginia.gov.

Sincerely,

A handwritten signature in black ink, appearing to read "Curtis C. Brown".

Subject: Draft AHMP - Ready for Public Comment!
Importance: High

Good Morning Folks,

I have completed the draft of the regional All Hazards Mitigation Plan. It is currently posted on the MPPDC website (https://www.mppdc.com/articles/service_centers/mandates/All%20Hazards%20Mitigation%20Plan%20Update/DRAFT_AHMP_for%20Public%20Comment_RED.pdf) and on the MPPDC facebook page for public comment. The public comment period opens today and will close on November 1st. Here is the announcement on the MPPDC Facebook page:

The Regional All Hazards Mitigation Plan (AHMP) for the Middle Peninsula is now available for public comment through November 1, 2021. View the draft AHMP here - <https://bit.ly/3ARbcV1>.

Comments? Email them directly to Jackie Rickards, Senior Planning Project Manager for the Middle Peninsula Planning District Commission, at jrickards@mppdc.com.

All nine Middle Peninsula localities, including Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex Counties and the Towns of Tappahannock, Urbanna, and West Point, participated in the plan's development and amendments. In addition to the nine regional localities, the federally recognized Indian Tribes in the region participated in the 2021 AHMP update.

Please share this information with your IT folks and have this posted on your social media pages and/or on your websites.

After the comment period ends I will let you know if we have received any comments. With public comments in hand I will go ahead and schedule a meeting with the LPT to discuss the comments and to make any necessary changes to the draft. If I do not receive any comments I will send you an email with the next steps.

If you have any questions about this please let me know.

Jackie

Subject: Middle Peninsula Regional All Hazards Mitigation Plan - Neighboring Communities Review Request
Importance: High

Good Morning,

With funding through FEMA and the Virginia Department of Emergency Management, Middle Peninsula Planning District Commission (MPPDC) staff has worked with Middle Peninsula localities over the past year to update the Middle Peninsula Regional All Hazards Mitigation Plan (AHMP). The AHMP evaluates hazards that may impact the region and proposes mitigation strategies to reduce the impacts of future hazardous events.

According to 44 CFR §201.6(b)(2) of the mandate, *The planning process shall include an opportunity for neighboring communities, local and regional agencies involved in hazard mitigation activities, and agencies that have the authority to regulate development, as well as businesses, academia and other private and non-profit interests to be involved in the planning process.* Therefore, as you are a neighboring community I am sending you the current draft of the [Middle Peninsula Regional All Hazards Mitigation Plan](#) to review. Please take some time to review this document and provide feedback no later than Friday, March 18, 2022.

If you have any questions about this endeavor or if you would like more information feel free to contact me.

Thanks for your help,
Jackie Rickards

Public input wanted for the Middle Peninsula All Hazard Mitigation Plan Update!

The Middle Peninsula Planning District Commission (MPPDC) was funded through the Federal Emergency Management Agency (FEMA) and the Virginia Department of Emergency Management (VDEM) to work with Middle Peninsula localities (i.e. Essex, Gloucester, King & Queen, King William, Mathews and Middlesex Counties and the Towns of Urbanna, Tappahannock, and West Point) and Middle Peninsula Tribes (i.e. Rappahannock, Upper Mattaponi, and Pamunkey) to update the 2016 Middle Peninsula All Hazards Mitigation Plan (AHMP). The AHMP assesses all hazards that may affect the region and proposes mitigation strategies to reduce the impacts to citizens, critical facilities, infrastructure, private property, public property, and the natural environment from future hazardous events.

As part of the AHMP update, public outreach and input is critical to shape the plan. This survey requests information on local hazards and your thoughts on mitigation actions. Mitigation actions can be defined as any action taken to reduce or eliminate the long-term risk to human life and property from hazards. Please note this survey should take less than 10 minutes to complete. All responses should be submitted no later than March 15th. Finally, survey results will remain anonymous and will be summarized in the 2021 AHMP update. Please continue to check the MPPDC website project page at mppdc.com and here on the MPPDC Facebook page for more opportunities to provide input. A draft plan will be available for public review by August 2021.

Thank you for your participation and your input! Please encourage your neighbors to participate. www.surveymonkey.com/r/AllHazardPlanUpdate

INTRODUCTION

As part of the Middle Peninsula Planning District Project, Dewberry was asked to perform HAZUS flood and hurricane wind modeling for the next Hazard Mitigation Plan (HMP) revision. The goal and intent of the effort is that Dewberry would provide the MPPDC updated Hazard Identification and Risk Assessment (HIRA) elements that can be incorporated into the final MPPDC HMP. The effort is also a repeat effort in that Dewberry had provided the same services for the currently approved HMP.

Therefore, the work performed seeks to update the previous HIRA section maps, text and tables. Given the nature of hazard mitigation planning and the goals that the Federal Emergency Management Agency (FEMA) has set for jurisdictions to continually improve HMP's from one revision to the next, Dewberry has significantly improved the nature of the Hazus Flood modeling on behalf of the MPPDC. This report documents the various modeling efforts performed and, where appropriate, denotes modeling efforts that transcend previous efforts given available scope, schedule and budget of the project.

This report documents the methodology used to construct the HAZUS modeling efforts and also discusses core model results where applicable. Users of this document are directed to the final HMP that will be completed in the future (2015/2016) by the MPPDC but will include this work effort by Dewberry in the HIRA sections for Hurricane Wind and Flooding to include certain Sea Level Rise scenarios.

Flood Modeling – Riverine Streams

The previous Plan flood modeling utilized Hazus Version 1 – Maintenance Release 4; a.k.a. MR4. Significant changes have occurred with the Hazus software and models over the past five (5) years and the software has moved through the following versions:

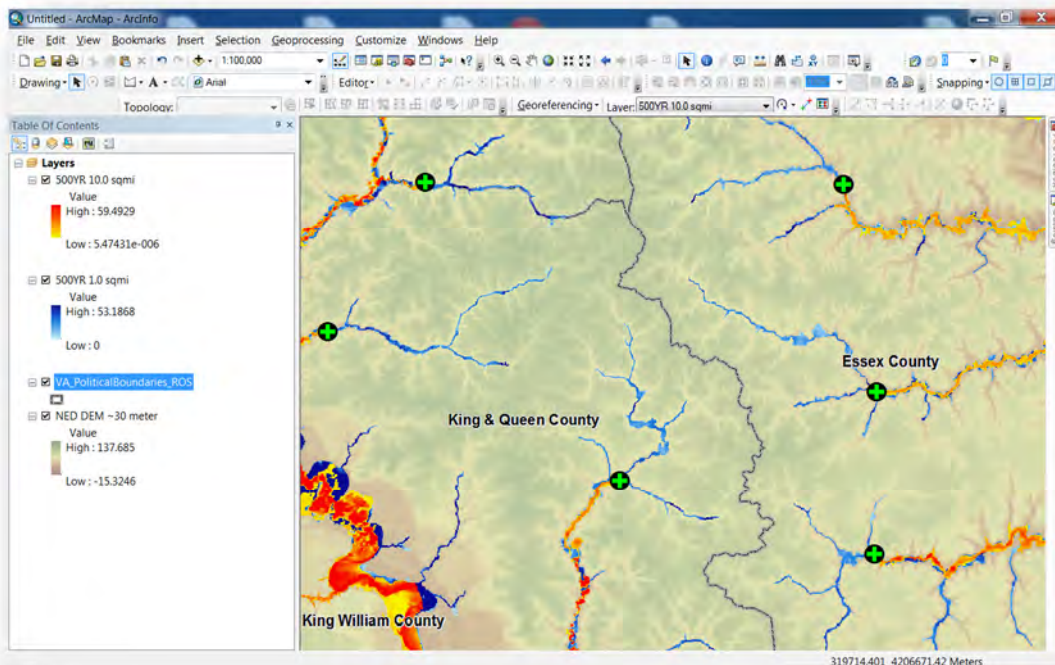

- Version 1 – Maintenance Release 4 (MR4)
- Version 1 – Maintenance Release 5 (MR5)
- Version 2.0
- Version 2.1
- Version 2.2 (current)

In addition to the version releases noted above there have also been various patches deployed in-between the version releases. One notable improvement to the Flood - Riverine Module is the automated methodology of cross section placement which, along with typical advancements in computing hardware and software, helps in the ability to process smaller drainage thresholds. Dewberry in-fact processed the project area at the one-square mile (1 mi²) as had been suggested in the previous Plan as a mitigation action that could improve the Hazus Flood modeling efforts. This new Riverine analysis included use of the most recent National Elevation Dataset (NED) digital elevation

model (DEM) at the one-arc second resolution (i.e., ~ 30 meter resolution). The previous Plan Riverine modeling effort only included one-square mile (1 mi²) delineation for Mathews County and the remainder of the Planning District utilized ten-square mile (10 mi²). The beneficial effect of using the smaller drainage area threshold means that the analysis of flooded streams will extend further upstream - offering a more complete representation of potential flooding as is shown in **Figure 1** below. It can be seen that the blue-scale depth grid delineations of the 0.2% Annual Chance or 500-year event at one-square mile (1 mi²) extends much further upstream as compared to the red-yellow scale grid of the same event delineated at ten-square miles (10 mi²). The point-marker has been added to show the relative most upstream extent of the ten-square mile (10 mi²) delineation.

Figure 1: Riverine 0.2% Annual Chance (500 Year) Depth Grids Comparison

Furthermore, the (1 mi²) delineations, for most riverine streams are consistent with the current effective or new revised preliminary FEMA floodplain mapping. **Figure 2** shows the same example area with the FEMA digital Flood Insurance Rate Map (FIRM) data overlaid with the blue-scale depth grid delineations of the 1% Annual Chance (i.e., 100-Year Event) of the one-square mile (1 mi²) depth grid. The example area shown includes primarily 1% Annual Chance Approximate Zone (i.e., Zone A) delineations and are shown as red outlined areas. The marker symbols have been left for reference.

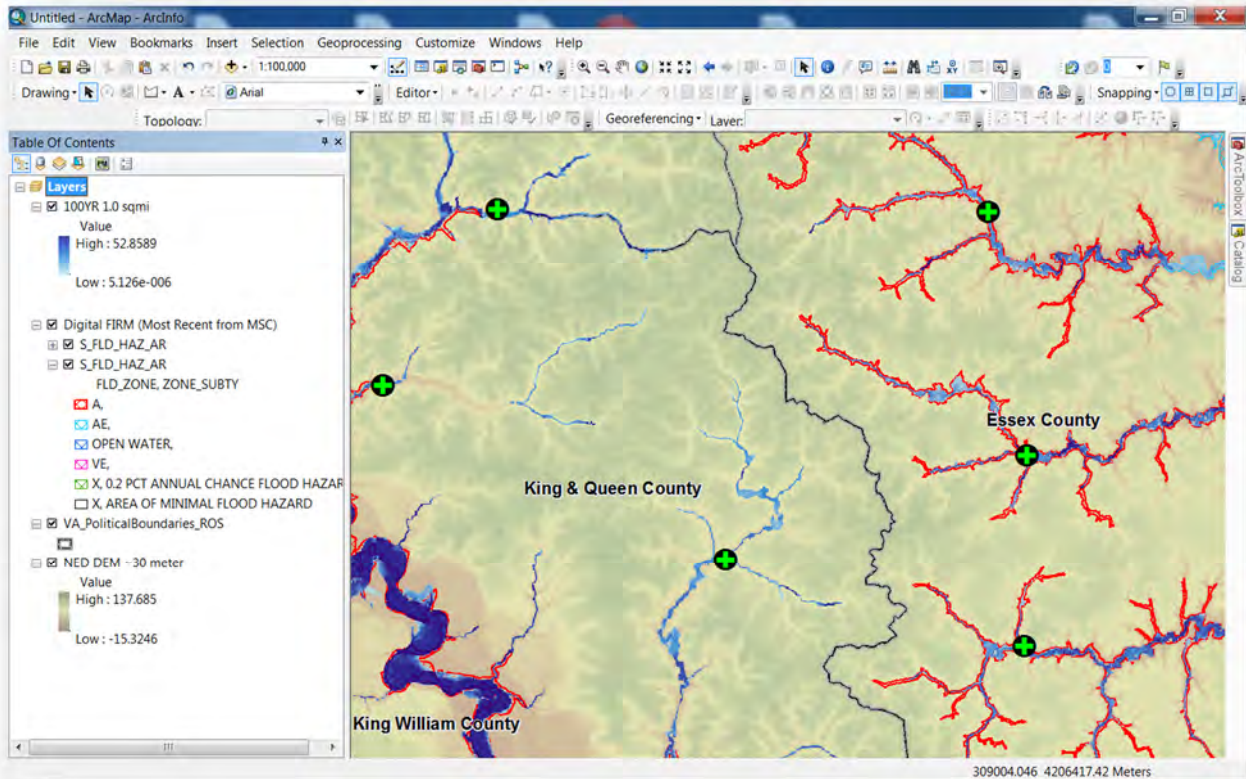

Figure 2: Riverine 1% Annual Chance Depth Grid vs. FEMA Digital FIRM Comparison

It is also important to note that most FEMA-initiated flood insurance studies use a one-square mile (1 mi²) drainage threshold for delineation of floodplains. However, users should be warned and realize that FEMA flood studies also require the use of ground data that is much more precise than one-arc second resolution (i.e., ~ 30 meter resolution); i.e., typical FEMA studies require DEM resolution of two-meter (2 m. or ~6.6 ft.) resolution or better.

Issues & Challenges Encountered:

As noted earlier, the previous Plan riverine modeling only utilized one-square mile (1 mi²) drainage threshold for Mathews. While the most recent effort now has accomplished one-square mile (1 mi²) drainage threshold for the remainder of the MPPDC planning area, there were still a few issues and challenges that existed; some were overcome and others may warrant additional consideration in the future.

- **Issue 1:**
 - Issue: Hydrology or Hydraulics would not complete for a given County.

- **Solution:** Divide the County into smaller sub-geographies to reduce the number of stream segments that Hazus must process. There were three (3) counties that had to be divided into two (2) portions each - Essex, King and Queen and lastly, King William each had to be divided into portions. Dividing these counties into smaller portions enabled Hazus to process a smaller quantity of streams and produce usable results.
- **Issue 2:**
 - **Issue:** Hazus produced “Failed Reaches” or “Problem Reaches”.
 - **Solution:** Utilize successful reaches (i.e., non-failed) from adjacent geography where it exists. For example, Dragon Swamp which borders both Essex and King and Queen Counties failed in the riverine model portion of Essex County yet, the same reach did not fail in the companion model of King and Queen. In order to overcome such issues all grids were merged across the MPPDC area to compensate for the deficiency of failed reaches. Inevitably, the Hazus software will utilize the damages estimated from the flooding source that generates the greatest amount of estimated damage. Therefore, another consideration regarding failed reaches is the interaction within Hazus between riverine and coastal hazards as defined by the depth grids from each flooding source. There are failed reaches for which the riverine module did not create a depth grid, however in-reality the same reach may actually be influenced by coastal forces and therefore the coastal methodology is able to supplement or compensate for the lack of a riverine depth grid. An example (see **Figure 3** – next page) where the coastal module generated depth for a riverine failed reach includes Hoskins Creek which runs through the Town of Tappahannock or nearby Piscataway Creek and its tributaries - Mussel Creek or Mill Creek. Also, Cohoke Mill Pond in King William County presents another example of same.

Intentionally Blank

Figure 3: Riverine Failed/Problem Reaches and Riverine Depth Grid vs. Coastal Depth Grid

- Other Discussion: Regarding failed reaches, the Hazus documentation has little information that explains the reasons why reaches fail. However, Dewberry experience has shown that reaches fail for a few common reasons that are not always in the user's control; for example given a particular geography a reach may fail due to lack of hydrologic stream gauges within the vicinity. Another possibility is that the hydrologic methodology employed by Hazus does not produce any flow (i.e., discharge or "Q" modeling parameter); this is most common where rural regression equations are employed. Notably, it is also possible that Hazus has not been updated with the most recent regression equation parameters available from the United States Geologic Survey (USGS). While Dewberry did not verify the equation parameters in Hazus Version 2.2, based on other work that Dewberry has performed in Virginia, it was known that Hazus Version 2.1 did not include the most recent rural regression equations available from the USGS.

- **Issue 3:**
 - Issue: FEMA Region III concern over the use of Hazus Level 1 functionality.
 - Solution: The solution employed included the suggestion that the MPPDC and Dewberry discuss with FEMA Region III expectations of the Hazus modeling. The call that was held on March 13, 2015 included such discussions. Ultimately, the MPPDC and the Virginia Department of Emergency Management (VADEM) agreed that the Dewberry plan of action was reasonable and appropriate. However, for reference, Dewberry has compiled an explanation of the specific concerns expressed by the Region during the March 13, 2015 call. Dewberry agrees with the Region in that the best data is in-fact the best, however needs to be tempered with the realities of effort, time and cost. The Region expressed concern over the use of the Level 1 methodology which means the Region would prefer the use of the following:
 - Hydrology & Hydraulics (H&H) – preference would be to use data typical of FEMA Risk MAP Flood Insurance Studies (FIS) and Non-Regulatory Depth Grid creation versus the Hazus methodology. Typical H&H is accessed via models such as US Army Corps of Engineers HEC-RAS models. Where such models are not available or inaccessible, digital FIRM data may be used but legacy riverine data typically only includes water surface elevations for the 1% annual chance event which is not conducive to generating annualized loss values expected of hazard mitigation planning. Last, where models and digital FIRM data are not complete or not available, the remaining H&H data would typically be gleaned from Flood Insurance Study (FIS) reports; more specifically, users wishing to develop the flood hazard into depth grids for direct-use in Hazus, would have to convert water surface profiles within the FIS-text into digital data. Lastly, regardless of which H&H inputs mentioned are available, the user would be required to process all data to digital water surfaces for further processing into depth grids.
 - Topographic Data – preference is to use LiDAR-based topography at a resolution consistent with FEMA Risk MAP Flood Insurance Studies (FIS) and Non-Regulatory Depth Grid creation versus the one-arc second or ~ 30-meter DEM employed.
 - Depth Grid Creation – preference is again suggested to develop depth grids consistent with FEMA Risk MAP Non-Regulatory Depth Grid creation which means the use of hydraulic stream models (if they exist and are accessible), and/or the use of digital FIRM data, and/or the use of flood profiles published in FIS reports. Notably, while there is definitely benefits associated with the most accurate inputs, Dewberry noted on the call that the level of effort to produce such depth grids is quite extensive and typically is not feasible under budgets available for HMP's.

Flood Modeling – Coastal

As with the Flood Riverine, the previous Plan flood modeling utilized Hazus Version 1 – Maintenance Release 4; a.k.a. MR4. The coastal flood module has also experienced certain changes; the primary difference in the coastal model is that users no longer define certain shoreline characteristics such as wave exposure (i.e., Open Coast, Moderate/Minimal Exposure or Sheltered) and shoreline type (e.g., Rocky bluffs, sandy beaches w/ small dunes, open wetlands, etc.). Otherwise, much of the coastal module is the same in that users are still asked to choose shoreline segments and then users have the option of sub-dividing the shorelines and entering water surface and wave characteristics.

Dewberry followed user guidance for the entry of water surfaces by obtaining the most recent versions of either effective (or) newly released preliminary FIS-text from the FEMA Map Service Center (MSC). Dewberry obtained the following FEMA FIS documents:

- ESSEX COUNTY,VIRGINIA AND INCORPORATED AREAS – Revised May 4, 2015
 - FLOOD INSURANCE STUDY NUMBER - 51057CV000B
- GLOUCESTER COUNTY,VIRGINIA (ALL JURISDICTIONS) – Revised November 19, 2014
 - FLOOD INSURANCE STUDY NUMBER - 51073CV000B
- KING AND QUEEN COUNTY,VIRGINIA AND INCORPORATED AREAS – Preliminary October 3, 2013
 - FLOOD INSURANCE STUDY NUMBER - 51097CV000B
- KING WILLIAM COUNTY,VIRGINIA AND INCORPORATED AREAS – Preliminary October 3, 2013
 - FLOOD INSURANCE STUDY NUMBER - 51101CV000B
- MIDDLESEX COUNTY,VIRGINIA AND INCORPORATED AREAS – Revised May 18, 2015
 - FLOOD INSURANCE STUDY NUMBER - 51119CV000B
- MATHEWS COUNTY,VIRGINIA (ALL JURISDICTIONS) – Revised December 9, 2014
 - FLOOD INSURANCE STUDY NUMBER - 51115CV000B

Per Hazus User guidance the shoreline was divided as closely as possible to the Transect Location Map found within each respective FIS and the Starting Stillwater Elevations (typ. TABLE 2 – Transect Data) were utilized to populate the Hazus menu of Stillwater elevations. Therefore, the Hazus Level 1 methodology was utilized to perform hydrology, hydraulics and coastal hazard delineation. The resulting depth grids were created from the same NED one-arc second DEM utilized for the Riverine analysis.

Issues & Challenges Encountered:

The coastal modeling performed for the previous Plan utilized the Hazus Level 1 methodology. The original intent for the current Plan update was to utilize the same depth grids as the previous Plan, however because new FEMA FIS have been released for all of the counties in the MPPDC region, it was determined that the previous analysis depth grids would not be valid to re-run through the new version

of Hazus (Version 2.2) because of the new FEMA coastal studies. There were a few issues and challenges that existed; some were overcome and others may warrant additional consideration in the future.

- **Issue 1:**

- **Issue:** Hazus stock Shoreline file does not adequately intersect King and Queen nor King William Counties.
- **Solution:** Dewberry made specific adjustments to the stock Hazus shoreline file in order to match, to the greatest extent possible, the most recent Flood Insurance Studies (FIS) performed along coastal Virginia and within the MPPDC region. Most importantly, all six (6) of the MPPDC counties now have coastal hazards as of the most recent FEMA Flood Studies. However, this differs from that which is in Hazus; the stock Hazus shoreline data does not intersect two (2) of six (6) counties (King William and King and Queen) and only covers a portion of Gloucester County. Inherently, if a user creates a Hazus Flood Project for any county that does not intersect with the shoreline, the user cannot define the Hazus project as having a coastal hazard. **Figure 4** shows the original stock Hazus shoreline and the edited shoreline used to extend the coastal potential up the York River along Gloucester, King and Queen, and King William Counties.

Figure 4: Hazus Shoreline Revisions

- **Issue 2:**
 - Issue: Unable to produce Coastal results for Gloucester County.
 - Solution: Simplifying the coastal shoreline was required to produce results.
 - Other Discussion: Dewberry made no less than five (5) separate attempts to produce coastal analyses for Gloucester County. In short, the coastal module would fail at the process of performing Hydrology. Based on similar experiences with other counties, it was determined that the Hazus shoreline could not be sub-divided to match the same transect divisions as documented in the FEMA FIS; the detail is too great for the simplified functionality of Hazus. The solution employed to produce results included simplifying the shoreline as also noted in **Figure 4**. The simplified shoreline enabled Hazus to no longer “stall” or “fail” at the Hydrology process. Other counties had to be re-run by simplifying the shoreline sub-divisions (see **Issue 3** below) however, the shoreline line work was not revised for other counties (except up the York River).

- **Issue 3:**
 - Issue: Unable to produce Coastal results for other counties.
 - Solution: Simplifying the manner in which the coastal shoreline is sub-divided enabled Hazus to no longer “stall” or “fail” at the processes for Hydrology.
 - Other Discussion: Dewberry made multiple attempts (as necessary) to produce coastal analyses results for each of the MPPDC counties. However, the coastal module would fail at the process of performing Hydrology **if and when** the shoreline sub-divisions were too detailed for Hazus to process. As noted earlier, in some cases the Hazus shoreline could not be sub-divided to match the same transect divisions as documented in the FEMA FIS because the detail is too great for the simplified functionality of Hazus. **Figure 5** (below) includes King and Queen County and shows an example where the Hazus shoreline was able to be sub-divided almost exactly to match the FIS; the colored shoreline segments are those defined for the coastal run in Hazus and are overlaid on a geo-referenced image of the FIS Transect Map. **Figure 6** is a zoom-in view showing the slight differences between the detailed shoreline of King and Queen; the importance is to note how the FIS Transect #9 is positioned upstream in the Mattaponi River, however the shoreline that Dewberry created to extend Hazus functionality along the York River is simplified near the Town of West Point. However **Figure 7** shows that Dewberry still utilized the appropriate “Starting Stillwater Elevations” as published in FIS Table 2 – Transect Descriptions. Consequently, the combination of **Figures 5 through 7** are shown to exemplify how Dewberry performed the Level 1 coastal shoreline work; i.e., matching the FIS as closely as possible. Other counties were not as simple and in some cases engineering judgments were applied to 1.) Simplify the shoreline sub-divisions coupled with 2.) Applying average water surface elevations and wave heights or in some cases applying a weighted average of water surface elevations and wave heights.

Mattaponi River	9	N 37 544698 W -76.777167	2.2	2.9	5.4	6.4	6.9	9.9

- **Issue 4:**
 - Issue: The 0.2% Annual Chance flood hazard (500 Year) of Gloucester County appears to be significantly under-estimated.
 - Solution: Discuss the matter with MPPDC and substitute the 500 Year depth grid from the previous Plan effort.
 - Other Discussion: As discussed earlier, Dewberry made multiple attempts (as necessary) to produce coastal analyses results for each of the MPPDC counties. Gloucester presented the greatest challenge and the 500 Year flood hazard of the Level 1 methodology did not produce a result that – as compared to the new digital FIRM data – seemed reasonable to use. Therefore, Dewberry contacted the MPPDC and offered the option of substituting the 500 Year depth grid from the previous Plan effort as an alternative solution. The MPPDC agreed that while the previous Plan 500 Year depth grid likely over-estimates the potential hazard, it is better to side with caution and Plan around a conservative approach. It is also important to note that Dewberry compared the Level 1 hazard delineations in all counties with the new digital FIRM data. While the digital FIRM data only includes delineations of 1% and 0.2% (100 Year & 500 Year) flood hazard, a visual comparison offers a minimal means by which to gauge how well the Hazus hazard delineations are being created. All issues and challenges being equal, Dewberry is satisfied that the Level 1 delineations are perfectly acceptable for the nature of the work – Hazard Mitigation Planning.

- **Issue 5:**
 - Issue: Level 2 Coastal Risk MAP 1% Annual Chance (100 Year) losses greater than Level 1 0.2% Annual Chance (500 Year) losses.
 - Solution: Do not substitute the Level 2 Coastal Risk MAP 1% Annual Chance (100 Year) for the Level 1 Coastal 1% Annual Chance (100 Year) in the calculation of annualized results. Rather, produce a separate result for comparison of the 100 Year coastal only.
 - Discussion: Original intent was to substitute the new Risk MAP 1% Annual Chance (100 Year) depth grid and subsequent losses for the Hazus-generated Level 1 Coastal 1% Annual Chance (100 Year) depth grid and subsequent losses. However, noting that the new Risk MAP 100 Year depth grid would have been created with much greater detail in all aspects as discussed in detail under **Issue 6** (below) the most appropriate solution is to separate the runs and respective results for comparative purposes. Furthermore, noting the goal and expectation of the Risk MAP Program as well as the nature of Hazard Mitigation Planning; as new, updated or more detailed analyses are available, professionals would endeavor to integrate and utilize new information in the planning, preparation and resilience of communities.

- **Issue 6:**
 - Issue: FEMA Region III concern over the use of Hazus Level 1 functionality.
 - Solution: The solution employed included the suggestion that the MPPDC and Dewberry discuss with FEMA Region III expectations of the Hazus modeling. The call that was held on March 13, 2015 included such discussions. Ultimately, the MPPDC and the Virginia Department of Emergency Management (VADEM) agreed that the Dewberry plan of action was reasonable and appropriate. However, for reference, Dewberry has compiled an explanation of the specific concerns expressed by the Region during the March 13, 2015 call. Dewberry agrees with the Region in that the best data is in-fact the best, however needs to be tempered with the realities of effort, time and cost. The Region expressed concern over the use of the Level 1 methodology which means the Region would prefer the use of the following:
 - Hydrology & Hydraulics (H&H) – preference would be to use data typical of FEMA Risk MAP Flood Insurance Studies (FIS) and Non-Regulatory Depth Grid creation versus the Hazus methodology. Typical H&H for *coastal studies* are limited to the development of Stillwater elevations for four (4) frequencies (10, 50, 100 & 500 Yr.) and Static Base Flood Elevations are only mapped for one (1) frequency; namely the 1% annual chance or 100 Year Event. Consequently, even the core H&H of the coastal modeling would require further analyses by qualified coastal engineers and mapping specialists to effectively produce the data required for coastal depth grid creation.

- Topographic Data – preference is to use LiDAR-based topography at a resolution consistent with FEMA Risk MAP Flood Insurance Studies (FIS) and Non-Regulatory Depth Grid creation versus the one-arc second or ~ 30-meter DEM employed.
- Depth Grid Creation – preference is again suggested to develop depth grids consistent with FEMA Risk MAP Non-Regulatory Depth Grid creation which means the use of hydraulic coastal models that have been fully-developed to produce wave-propagated water surface elevations. Again, FEMA flood studies only do this for the 100 Year. Therefore specialized additional work would be required to produce similar data for other frequencies in order to create multi-frequency hazard data that would support the expected annualized analysis typical of Hazard Mitigation Plans. Dewberry again agrees with the Region that there is definitely benefits associated with the most accurate inputs, Dewberry noted on the call that the level of effort to produce such depth grids is quite extensive and typically is not feasible under budgets available for HMP's.
- Other Discussion: As discussed (above) regarding Issue 5, Dewberry has provided the Solution of separating out certain results of the 100 Year Coastal Only Hazus runs so that these can be directly compared. Again, as already noted, over time as more detailed hazard analyses is expected, desired or deemed necessary - future modeling efforts can be sought to produce Risk MAP-based or otherwise detailed depth grids and associated loss analyses.

Hurricane (Wind) Modeling – Probabilistic Scenario

As with the previous Plan, Dewberry again performed a Probabilistic scenario in the Hazus Level 1 Hurricane (Wind) module. Notably, Dewberry ran the scenario in a Region that was created for both Flood and Hurricane as this allows results to be accessed at the census block-level. In contrast, if a Hazus project is created for only Hurricane Hazus will default to using only census tract-level geography. Ultimately, the level of detail that is able to be accessed, displayed and planned for offers a better representation of Hurricane Wind loss when mapped by census block versus census tract. **Figure 8** shows this very comparison.

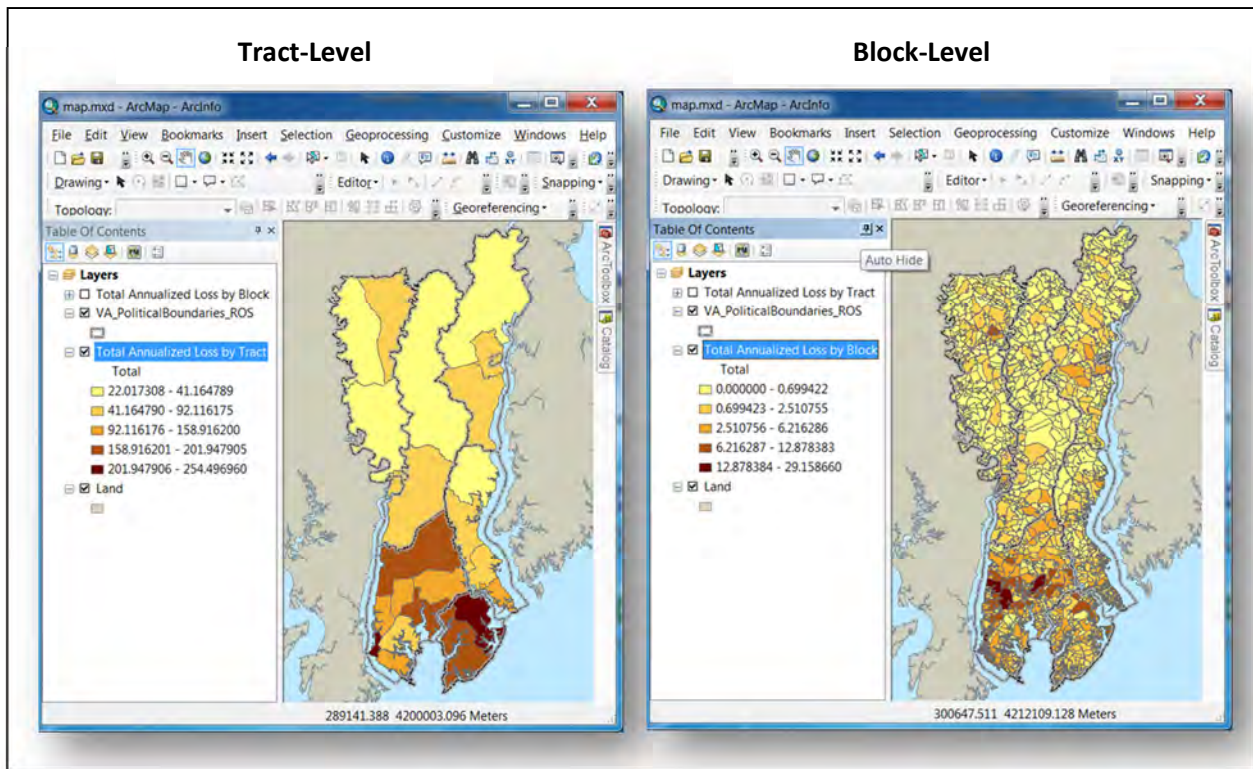

Figure 8: Hurricane (Wind) Model Results at the Tract versus Block Geography

Issues & Challenges Encountered:

None.

Sea Level Rise Modeling – Hazus Flood Model

As proposed, Dewberry utilized depth grids available from NOAA Coastal Services Center Sea Level Rise Data. Dewberry obtained and utilized the depth grid of the Mean Higher High Water or Base Scenario and also the Plus 6 feet Sea Level Rise. As a benefit to the MPPDC, Dewberry estimated the addition of depth values in the upstream areas of both the Pamunkey and Mattoponi Rivers; the NOAA depth grids do not extend upstream from these areas as it is the limit of the NOAA data. The method utilized to estimate these small additional areas of depth grid included estimating the water surface elevation where the NOAA depth grids terminated. Next, Spatial Analyst was used to query all elevations in the vicinity that were equal to (or) less than the estimated elevation. The areas were extracted, assigned the estimated water elevation and then converted to a water surface grid. Last the water surface grid was subtracted from the NED one-arc second grid to produce depth values. The additional depth grids were mosaicked with the NOAA grids and ultimately run through the Hazus Flood Module.

Figure 9: Depth Grid Areas Added (Red) where NOAA data terminated

Issues & Challenges Encountered:

None.

Hazus Modeling Results

Dewberry has exported various Hazus modeling results to ESRI File Geodatabase format as standalone GIS layers and tables as necessary. These various result export files will be used to update the HIRA sections to include text, maps and tables. As a benefit to the MPPDC, Dewberry is providing the various result exports to be used as deemed necessary. As scoped, Dewberry is providing final Hazus Project Files – otherwise known as HPR files. A Hazus HPR file is essentially a zipped version of all files that are created by Hazus in the course of a given Hazus project. The HPR archive can be imported on any computer that has an active installation of Hazus Version 2.2. The delivery of HPR’s includes an Excel spreadsheet that has basic information about each Hazus Project and HPR file (see **Figure 10**). Importantly, the spreadsheet includes file size information as users need to know how much drive space may be required for a given Hazus Project if they import the HPR file.

- **Results Exports to GIS:**
 - About: Result export files will be used to update the HIRA sections to include text, maps and tables.

- **Hazus Project Files (HPR):**
 - About: Zipped version of all files that are created in the course of a given Hazus project.

Figure 10: HPR File Information

Hazard	Application	HPR Name	HPR File Size	Expanded File Size	Info/Source
FLD*	Level 1 Annualized	MPPDC2015_DasymV22.hpr**	407 MB	10.6 GB	Riverine and Coastal Level 1 Annualized Scenarios were run separately. One-square mile (1 mi ²) drainage threshold used for all Riverine Level 1 modeling. One-Arc Second (~ 30 meter) National Elevation Dataset (NED) Digital Elevation Model (DEM) utilized. All depth grids were extracted and mosaiced into Region-wide depth grids. The Region-wide depth grids were then imported into a new Hazus Project of the entire MPPDC Region and then the loss analysis was run. The Hazus version used in Version 2.2; which includes the new 2010 census-based data. Additionally, the new Hazus Dasymeric General Building Stock (GBS) was used. Note however that final report mapping does not display the losses by dasymeric spatial geometry, rather the results dasymeric data is joined to the stock full block geometry and displayed as such.
	Level 2 RiskMap Coastal 1% (100 YR) Only	MPPDC2015_DasymV22_RskMp100yrDG.hpr**	774 MB	25.3 GB	The depth grids provided by the US Army Corps of Engineers (USACE) were utilized as Level 2 scenario. Dewberry mosaiced all of the 1% (100 YR) depth grids provided and ran them through a Hazus Project created of the entire MPPDC Region. This HPR also includes a second scenario that is the Level 1 depth grid of the coastal-only 1% (100YR) which was run through Hazus for comparison to the Level 2 RiskMap coastal-only 1% (100YR).
	Sea Level Rise Scenarios (Base and Plus 6FT)	MPPDC2015_SLR.hpr**	232 MB	6.92 GB	NOAA depth grids of Sea Level Rise (SLR) utilized per scope of work; Base Scenario or MHHW along with the Plus 6 Feet Scenario.
HUR*	Probabilistic	MPPDC2015_HUR_ByBlockvFLD_Probabilistic.hpr	163 MB	3 GB	Hurricane model probabilistic was run with new 2010 inventory provided by MOTF.

*NOTES: All Hazus Model Runs using Version 2.2
 All Hazus Flood Model Runs using Version 2.2 Dasymeric Data for Virginia.

HAZUS Modeling Report

Appendix H -
National Flood Insurance Program Survey

NATIONAL FLOOD INSURANCE PROGRAM (NFIP) SURVEY

MUNICIPALITY: ESSEX COUNTY

1. FLOODPLAIN IDENTIFICATION AND MAPPING			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality maintain accessible copies of an effective Flood Insurance Rate Map (FIRM)/Digital Flood Insurance Rate Map (DFIRM)? Does the municipality maintain accessible copies of the most recent Flood Insurance Study (FIS)?	Place these documents in the local libraries or make available publicly.	Yes	All information is on file and available in the Essex County Building and Zoning Department
b. Has the municipality adopted the most current DFIRM/FIRM and FIS?	State the date of adoption, if approved.	Yes	Adopted April 14, 2015 by the Essex County Board of Supervisors
c. Does the municipality support request for map updates?	If yes, state how.	Yes	We assist citizens in all their requests
d. Does the municipality share with Federal Emergency Management Agency (FEMA) any new technical or scientific data that could result in map revisions within 6 months of creation or identification of new data?	If yes, specify how.	No	We reviewed the maps and gave our opinion of history of areas
e. Does the municipality provide assistance with local floodplain determinations?	If yes, specify how.	Yes	We require property owners to get elevation certifications when in question
f. Does the municipality maintain a record of approved Letters of Map Change?	If yes, specify the responsible office.	Yes	Essex County Building & Zoning Department (202 South Church Lane Tappahannock, VA 22560

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Has the municipality adopted a compliant floodplain management ordinance that, at a minimum, regulates the following:	If yes, answer questions (1) through (4) below.	No	?
(1) Does the municipality issue permits for all proposed development in the Special Flood Hazard Areas (SFHAs)?	If yes, specify the office responsible.	Yes	Building and Zoning Dept.
(2) Does the municipality obtain, review, and utilize any Base Flood Elevation (BFE) and floodway data, and/or require BFE data for subdivision proposals and other development proposals larger than 50 lots or 5 acres?	If yes, specify the office responsible.	Yes	
(3) Does the municipality identify measures to keep all new and substantially improved construction reasonably safe from flooding to or above the BFE, including anchoring, using flood-resistant materials, and designing or locating utilities and service facilities to prevent water damage?	If yes, specify the office responsible.	Yes	
(4) Does the municipality document and maintain records of elevation data that document lowest floor elevation for new or substantially improved structures?	If yes, specify the office responsible.	Yes	
b. If a compliant floodplain ordinance was adopted, does the municipality enforce the ordinance by monitoring compliance and taking remedial action to correct violations?	If yes, specify how.	Yes	

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
c. Has the municipality considered adopting activities that extend beyond the minimum requirements? Examples include: <ul style="list-style-type: none"> • Participation in the Community Rating System • Prohibition of production or storage of chemicals in SFHA • Prohibition of certain types of structures, such as hospitals, nursing homes, and jails in SFHA • Prohibition of certain types of residential housing (manufactured homes) in SFHA • Floodplain ordinances that prohibit any new residential or nonresidential structures in SFHA 	If yes, specify activities.	Yes	Education certificates

3. FLOOD INSURANCE			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality educate community members about the availability and value of flood insurance?	If yes, specify how.	Yes	Community meetings/ FEMA
b. Does the municipality inform community property owners about changes to the DFIRM/FIRM that would impact their insurance rates?	If yes, specify how.	Yes	Public notice, local newspaper
c. Does the municipality provide general assistance to community members regarding insurance issues?	If yes, specify how.	Y	We review maps, explain scenarios. Refer property owners to insurance companies

NATIONAL FLOOD INSURANCE PROGRAM (NFIP) SURVEY

MUNICIPALITY: TOWN OF TAPPAHANNOCK

1. FLOODPLAIN IDENTIFICATION AND MAPPING			
Requirement	Recommended Action	Yes/No	Comments
a. Does the municipality maintain accessible copies of an effective Flood Insurance Rate Map (FIRM)/Digital Flood Insurance Rate Map (DFIRM)? Does the municipality maintain accessible copies of the most recent Flood Insurance Study (FIS)?	Place these documents in the local libraries or make available publicly.	yes	
b. Has the municipality adopted the most current DFIRM/FIRM and FIS?	State the date of adoption, if approved.	5-4-2015	
c. Does the municipality support request for map updates?	If yes, state how.	no	We forward anyone who has a request to FEMA
d. Does the municipality share with Federal Emergency Management Agency (FEMA) any new technical or scientific data that could result in map revisions within 6 months of creation or identification of new data?	If yes, specify how.	yes	By forwarding information to FEMA
e. Does the municipality provide assistance with local floodplain determinations?	If yes, specify how.	yes	With the assistance of Essex County Building Inspector office
f. Does the municipality maintain a record of approved Letters of Map Change?	If yes, specify the responsible office.	no	

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Has the municipality adopted a compliant floodplain management ordinance that, at a minimum, regulates the following:	If yes, answer questions (1) through (4) below.		
(1) Does the municipality issue permits for all proposed development in the Special Flood Hazard Areas (SFHAs)?	If yes, specify the office responsible.		
(2) Does the municipality obtain, review, and utilize any Base Flood Elevation (BFE) and floodway data, and/or require BFE data for subdivision proposals and other development proposals larger than 50 lots or 5 acres?	If yes, specify the office responsible.		
(3) Does the municipality identify measures to keep all new and substantially improved construction reasonably safe from flooding to or above the BFE, including anchoring, using flood-resistant materials, and designing or locating utilities and service facilities to prevent water damage?	If yes, specify the office responsible.		
(4) Does the municipality document and maintain records of elevation data that document lowest floor elevation for new or substantially improved structures?	If yes, specify the office responsible.		
b. If a compliant floodplain ordinance was adopted, does the municipality enforce the ordinance by monitoring compliance and taking remedial action to correct violations?	If yes, specify how.		

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
c. Has the municipality considered adopting activities that extend beyond the minimum requirements? Examples include: <ul style="list-style-type: none"> • Participation in the Community Rating System • Prohibition of production or storage of chemicals in SFHA • Prohibition of certain types of structures, such as hospitals, nursing homes, and jails in SFHA • Prohibition of certain types of residential housing (manufactured homes) in SFHA • Floodplain ordinances that prohibit any new residential or nonresidential structures in SFHA 	If yes, specify activities.		

3. FLOOD INSURANCE			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality educate community members about the availability and value of flood insurance?	If yes, specify how.		
b. Does the municipality inform community property owners about changes to the DFIRM/FIRM that would impact their insurance rates?	If yes, specify how.		
c. Does the municipality provide general assistance to community members regarding insurance issues?	If yes, specify how.		

NATIONAL FLOOD INSURANCE PROGRAM (NFIP) SURVEY

MUNICIPALITY: GLOUCESTER COUNTY

1. FLOODPLAIN IDENTIFICATION AND MAPPING			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality maintain accessible copies of an effective Flood Insurance Rate Map (FIRM)/Digital Flood Insurance Rate Map (DFIRM)? Does the municipality maintain accessible copies of the most recent Flood Insurance Study (FIS)?	Place these documents in the local libraries or make available publicly.	Y	On the emergency management website.
b. Has the municipality adopted the most current DFIRM/FIRM and FIS?	State the date of adoption, if approved.	Y	FIRM adopted by BOS
c. Does the municipality support request for map updates?	If yes, state how.	N	
d. Does the municipality share with Federal Emergency Management Agency (FEMA) any new technical or scientific data that could result in map revisions within 6 months of creation or identification of new data?	If yes, specify how.	?	We provide VDEM with information and not directly to FEMA
e. Does the municipality provide assistance with local floodplain determinations?	If yes, specify how.	Y	Planning Development, Building officials and EM assist
f. Does the municipality maintain a record of approved Letters of Map Change?	If yes, specify the responsible office.	Y	County Administration

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Has the municipality adopted a compliant floodplain management ordinance that, at a minimum, regulates the following:	If yes, answer questions (1) through (4) below.	Y	
(1) Does the municipality issue permits for all proposed development in the Special Flood Hazard Areas (SFHAs)?	If yes, specify the office responsible.		Permits Building officials
(2) Does the municipality obtain, review, and utilize any Base Flood Elevation (BFE) and floodway data, and/or require BFE data for subdivision proposals and other development proposals larger than 50 lots or 5 acres?	If yes, specify the office responsible.	Y	Planning, Building Officials, Information Technology
(3) Does the municipality identify measures to keep all new and substantially improved construction reasonably safe from flooding to or above the BFE, including anchoring, using flood-resistant materials, and designing or locating utilities and service facilities to prevent water damage?	If yes, specify the office responsible.	Y	Building Official, Planning
(4) Does the municipality document and maintain records of elevation data that document lowest floor elevation for new or substantially improved structures?	If yes, specify the office responsible.	Y	Code Compliance, Building Officials
b. If a compliant floodplain ordinance was adopted, does the municipality enforce the ordinance by monitoring compliance and taking remedial action to correct violations?	If yes, specify how.	Y	BOS, County Adminsitration

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
<p>c. Has the municipality considered adopting activities that extend beyond the minimum requirements? Examples include:</p> <ul style="list-style-type: none"> • Participation in the Community Rating System • Prohibition of production or storage of chemicals in SFHA • Prohibition of certain types of structures, such as hospitals, nursing homes, and jails in SFHA • Prohibition of certain types of residential housing (manufactured homes) in SFHA • Floodplain ordinances that prohibit any new residential or nonresidential structures in SFHA 	If yes, specify activities.	Y	Established VE construction zone

3. FLOOD INSURANCE			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality educate community members about the availability and value of flood insurance?	If yes, specify how.	Y	CRS-PPI
b. Does the municipality inform community property owners about changes to the DFIRM/FIRM that would impact their insurance rates?	If yes, specify how.	Y	CRS-PPI
c. Does the municipality provide general assistance to community members regarding insurance issues?	If yes, specify how.	Y	CRS-PPI

MUNICIPALITY: KING & QUEEN COUNTY

1. FLOODPLAIN IDENTIFICATION AND MAPPING			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality maintain accessible copies of an effective Flood Insurance Rate Map (FIRM)/Digital Flood Insurance Rate Map (DFIRM)? Does the municipality maintain accessible copies of the most recent Flood Insurance Study (FIS)?	Place these documents in the local libraries or make available publicly.	Yes	Located at the Front Counter of Building/Zoning & Planning Office
b. Has the municipality adopted the most current DFIRM/FIRM and FIS?	State the date of adoption, if approved.	Yes	New maps to be adopted around May of 2016 once letter of determination is received from FEMA in November of 2015
c. Does the municipality support request for map updates?	If yes, state how.	?	
d. Does the municipality share with Federal Emergency Management Agency (FEMA) any new technical or scientific data that could result in map revisions within 6 months of creation or identification of new data?	If yes, specify how.	No	N/A
e. Does the municipality provide assistance with local floodplain determinations?	If yes, specify how.	Yes	Only as found on the adopted FEMA Flood Maps, field determination/Flood Elevation Certificate is to be done by surveyor (required for all flood zones other than X)
f. Does the municipality maintain a record of approved Letters of Map Change?	If yes, specify the responsible office.	yes	Planning & Zoning Department

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Has the municipality adopted a compliant floodplain management ordinance that, at a minimum, regulates the following:	If yes, answer questions (1) through (4) below.	Yes	
(1) Does the municipality issue permits for all proposed development in the Special Flood Hazard Areas (SFHAs)?	If yes, specify the office responsible.	Yes	Planning & Zoning Department
(2) Does the municipality obtain, review, and utilize any Base Flood Elevation (BFE) and floodway data, and/or require BFE data for subdivision proposals and other development proposals larger than 50 lots or 5 acres?	If yes, specify the office responsible.	Yes	Planning & Zoning Department
(3) Does the municipality identify measures to keep all new and substantially improved construction reasonably safe from flooding to or above the BFE, including anchoring, using flood-resistant materials, and designing or locating utilities and service facilities to prevent water damage?	If yes, specify the office responsible.	Yes	Planning & Zoning Department
(4) Does the municipality document and maintain records of elevation data that document lowest floor elevation for new or substantially improved structures?	If yes, specify the office responsible.	Yes	Planning & Zoning Department
b. If a compliant floodplain ordinance was adopted, does the municipality enforce the ordinance by monitoring compliance and taking remedial action to correct violations?	If yes, specify how.	Yes	Require Flood Elevation Certificates for all construction located in a floodplain other than Zone X

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
<p>c. Has the municipality considered adopting activities that extend beyond the minimum requirements? Examples include:</p> <ul style="list-style-type: none"> • Participation in the Community Rating System • Prohibition of production or storage of chemicals in SFHA • Prohibition of certain types of structures, such as hospitals, nursing homes, and jails in SFHA • Prohibition of certain types of residential housing (manufactured homes) in SFHA • Floodplain ordinances that prohibit any new residential or nonresidential structures in SFHA 	If yes, specify activities.	Yes	Our new proposed ordinance and map adoption will require free board and recognize LimWa

3. FLOOD INSURANCE			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality educate community members about the availability and value of flood insurance?	If yes, specify how.	Yes	FEMA Handouts
b. Does the municipality inform community property owners about changes to the DFIRM/FIRM that would impact their insurance rates?	If yes, specify how.	Yes	During latest map change, all property owners were notified by U.S. mail and news article for an Open House held in November of 2014.
c. Does the municipality provide general assistance to community members regarding insurance issues?	If yes, specify how.	No	

NATIONAL FLOOD INSURANCE PROGRAM (NFIP) SURVEY

MUNICIPALITY: KING WILLIAM COUNTY

1. FLOODPLAIN IDENTIFICATION AND MAPPING			
Requirement	Recommended Action	Yes/No	Comments
a. Does the municipality maintain accessible copies of an effective Flood Insurance Rate Map (FIRM)/Digital Flood Insurance Rate Map (DFIRM)? Does the municipality maintain accessible copies of the most recent Flood Insurance Study (FIS)?	Place these documents in the local libraries or make available publicly.	Yes	Available from County Building and Planning Department
b. Has the municipality adopted the most current DFIRM/FIRM and FIS?	State the date of adoption, if approved.	Yes	9/2/15
c. Does the municipality support request for map updates?	If yes, state how.	Yes	
d. Does the municipality share with Federal Emergency Management Agency (FEMA) any new technical or scientific data that could result in map revisions within 6 months of creation or identification of new data?	If yes, specify how.	No	
e. Does the municipality provide assistance with local floodplain determinations?	If yes, specify how.	Yes	Provided information to FEMA
f. Does the municipality maintain a record of approved Letters of Map Change?	If yes, specify the responsible office.	Yes	Building and Planning Department

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Has the municipality adopted a compliant floodplain management ordinance that, at a minimum, regulates the following:	If yes, answer questions (1) through (4) below.	Yes	
(1) Does the municipality issue permits for all proposed development in the Special Flood Hazard Areas (SFHAs)?	If yes, specify the office responsible.	Yes	Building and Planning Department
(2) Does the municipality obtain, review, and utilize any Base Flood Elevation (BFE) and floodway data, and/or require BFE data for subdivision proposals and other development proposals larger than 50 lots or 5 acres?	If yes, specify the office responsible.	Yes	Building and Planning Department
(3) Does the municipality identify measures to keep all new and substantially improved construction reasonably safe from flooding to or above the BFE, including anchoring, using flood-resistant materials, and designing or locating utilities and service facilities to prevent water damage?	If yes, specify the office responsible.	Yes	Building and Planning Department
(4) Does the municipality document and maintain records of elevation data that document lowest floor elevation for new or substantially improved structures?	If yes, specify the office responsible.	No	
b. If a compliant floodplain ordinance was adopted, does the municipality enforce the ordinance by monitoring compliance and taking remedial action to correct violations?	If yes, specify how.	No	

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
<p>c. Has the municipality considered adopting activities that extend beyond the minimum requirements? Examples include:</p> <ul style="list-style-type: none"> • Participation in the Community Rating System • Prohibition of production or storage of chemicals in SFHA • Prohibition of certain types of structures, such as hospitals, nursing homes, and jails in SFHA • Prohibition of certain types of residential housing (manufactured homes) in SFHA • Floodplain ordinances that prohibit any new residential or nonresidential structures in SFHA 	If yes, specify activities.	Yes	Considered CRS but decided not to pursue at the time Adopted BFE over minimum

3. FLOOD INSURANCE			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality educate community members about the availability and value of flood insurance?	If yes, specify how.	No	
b. Does the municipality inform community property owners about changes to the DFIRM/FIRM that would impact their insurance rates?	If yes, specify how.	Yes	Mailings & Community Meeting
c. Does the municipality provide general assistance to community members regarding insurance issues?	If yes, specify how.	Yes	Provided FEMA contact and website information

NATIONAL FLOOD INSURANCE PROGRAM (NFIP) SURVEY

MUNICIPALITY: URBANNA

1. FLOODPLAIN IDENTIFICATION AND MAPPING			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality maintain accessible copies of an effective Flood Insurance Rate Map (FIRM)/Digital Flood Insurance Rate Map (DFIRM)? Does the municipality maintain accessible copies of the most recent Flood Insurance Study (FIS)?	Place these documents in the local libraries or make available publicly.	Yes	
b. Has the municipality adopted the most current DFIRM/FIRM and FIS?	State the date of adoption, if approved.	4-22-15	
c. Does the municipality support request for map updates?	If yes, state how.	Yes	Town staff will assist update requests
d. Does the municipality share with Federal Emergency Management Agency (FEMA) any new technical or scientific data that could result in map revisions within 6 months of creation or identification of new data?	If yes, specify how.	Yes	All data obtained by the town will be forwarded to State Floodplain Coordinating Office (DCR) for their assistance in forwarding to the appropriate FEMA offices
e. Does the municipality provide assistance with local floodplain determinations?	If yes, specify how.	No	
f. Does the municipality maintain a record of approved Letters of Map Change?	If yes, specify the responsible office.	Yes	Town Zoning Office

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Has the municipality adopted a compliant floodplain management ordinance that, at a minimum, regulates the following:	If yes, answer questions (1) through (4) below.	Yes*	*Middlesex County provides cooperative administration of the Floodplain Ordinance. County Building Official is co-administrator for the Town. See Middlesex Co. for additional information
(1) Does the municipality issue permits for all proposed development in the Special Flood Hazard Areas (SFHAs)?	If yes, specify the office responsible.		
(2) Does the municipality obtain, review, and utilize any Base Flood Elevation (BFE) and floodway data, and/or require BFE data for subdivision proposals and other development proposals larger than 50 lots or 5 acres?	If yes, specify the office responsible.		
(3) Does the municipality identify measures to keep all new and substantially improved construction reasonably safe from flooding to or above the BFE, including anchoring, using flood-resistant materials, and designing or locating utilities and service facilities to prevent water damage?	If yes, specify the office responsible.		
(4) Does the municipality document and maintain records of elevation data that document lowest floor elevation for new or substantially improved structures?	If yes, specify the office responsible.		
b. If a compliant floodplain ordinance was adopted, does the municipality enforce the ordinance by monitoring compliance and taking remedial action to correct violations?	If yes, specify how.	Yes	All construction requiring a building permit and/or land disturbance permit receives site visits and stop work orders can be issued if violations are found.

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
<p>c. Has the municipality considered adopting activities that extend beyond the minimum requirements? Examples include:</p> <ul style="list-style-type: none"> • Participation in the Community Rating System • Prohibition of production or storage of chemicals in SFHA • Prohibition of certain types of structures, such as hospitals, nursing homes, and jails in SFHA • Prohibition of certain types of residential housing (manufactured homes) in SFHA • Floodplain ordinances that prohibit any new residential or nonresidential structures in SFHA 	If yes, specify activities.	Yes	Investigating the feasibility of participating in the CRS program

3. FLOOD INSURANCE			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality educate community members about the availability and value of flood insurance?	If yes, specify how.	Yes	Brochure/periodic web site info
b. Does the municipality inform community property owners about changes to the DFIRM/FIRM that would impact their insurance rates?	If yes, specify how.	Yes	Direct notification of effected land owners
c. Does the municipality provide general assistance to community members regarding insurance issues?	If yes, specify how.	Yes	Information and Referral

NATIONAL FLOOD INSURANCE PROGRAM (NFIP) SURVEY

MUNICIPALITY: MATHEWS COUNTY

1. FLOODPLAIN IDENTIFICATION AND MAPPING			
Requirement	Recommended Action	Yes/No	Comments
a. Does the municipality maintain accessible copies of an effective Flood Insurance Rate Map (FIRM)/Digital Flood Insurance Rate Map (DFIRM)? Does the municipality maintain accessible copies of the most recent Flood Insurance Study (FIS)?	Place these documents in the local libraries or make available publicly.	Yes	Available in the Building Department and online VIA FEMA MSC link on County website
b. Has the municipality adopted the most current DFIRM/FIRM and FIS?	State the date of adoption, if approved.	yes	Effective date is 12-09-2014
c. Does the municipality support request for map updates?	If yes, state how.	yes	Providing assistance and guidance through the process
d. Does the municipality share with Federal Emergency Management Agency (FEMA) any new technical or scientific data that could result in map revisions within 6 months of creation or identification of new data?	If yes, specify how.	yes	Enforcing requirements as adopted in floodplain management ordinance
e. Does the municipality provide assistance with local floodplain determinations?	If yes, specify how.	yes	On a daily basis by reviewing FIRM's and making interpretations and determinations
f. Does the municipality maintain a record of approved Letters of Map Change?	If yes, specify the responsible office.	yes	Building Department

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Has the municipality adopted a compliant floodplain management ordinance that, at a minimum, regulates the following:	If yes, answer questions (1) through (4) below.	yes	
(1) Does the municipality issue permits for all proposed development in the Special Flood Hazard Areas (SFHAs)?	If yes, specify the office responsible.	yes	Flood zone permit, building permits, etc (Building Department)
(2) Does the municipality obtain, review, and utilize any Base Flood Elevation (BFE) and floodway data, and/or require BFE data for subdivision proposals and other development proposals larger than 50 lots or 5 acres?	If yes, specify the office responsible.	yes	Per our floodplain management ordinance (Building Department)
(3) Does the municipality identify measures to keep all new and substantially improved construction reasonably safe from flooding to or above the BFE, including anchoring, using flood-resistant materials, and designing or locating utilities and service facilities to prevent water damage?	If yes, specify the office responsible.	Yes	USBC and floodplain management ordinance enforcement; plan review process (Building Department)
(4) Does the municipality document and maintain records of elevation data that document lowest floor elevation for new or substantially improved structures?	If yes, specify the office responsible.	yes	FEMA elevation certificate required for new construction and substantial improvement (Building Department)
b. If a compliant floodplain ordinance was adopted, does the municipality enforce the ordinance by monitoring compliance and taking remedial action to correct violations?	If yes, specify how.	yes	Permitting process; inspections; and requiring elevation certificates be submitted for verification

2. FLOODPLAIN MANAGEMENT

<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
<p>c. Has the municipality considered adopting activities that extend beyond the minimum requirements? Examples include:</p> <ul style="list-style-type: none"> • Participation in the Community Rating System • Prohibition of production or storage of chemicals in SFHA • Prohibition of certain types of structures, such as hospitals, nursing homes, and jails in SFHA • Prohibition of certain types of residential housing (manufactured homes) in SFHA • Floodplain ordinances that prohibit any new residential or nonresidential structures in SFHA 	If yes, specify activities.	yes	Higher standards were considered, but were not adopted at this time; minimum required standards were adopted.

3. FLOOD INSURANCE

<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality educate community members about the availability and value of flood insurance?	If yes, specify how.	yes	Online info; handouts; various presentations and community events
b. Does the municipality inform community property owners about changes to the DFIRM/FIRM that would impact their insurance rates?	If yes, specify how.	yes	Every single property owner was notified VIA mail regarding map changes and the new ordinance. In addition the public was notified VIA newspaper ads, online ads, PSA's (radio)
c. Does the municipality provide general assistance to community members regarding insurance issues?	If yes, specify how.		Not specifically regarding insurance, but assistance is provided to ensure both FEMA-NFIP requirements are met and the requirements of the floodplain management ordinance are met. Assistance is also provided for flood zone determinations and providing FIRMettes. ICC letters are also provided if documentation is submitted (as required).

NATIONAL FLOOD INSURANCE PROGRAM (NFIP) SURVEY

MUNICIPALITY: MIDDLESEX COUNTY, VA

1. FLOODPLAIN IDENTIFICATION AND MAPPING			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality maintain accessible copies of an effective Flood Insurance Rate Map (FIRM)/Digital Flood Insurance Rate Map (DFIRM)? Does the municipality maintain accessible copies of the most recent Flood Insurance Study (FIS)?	Place these documents in the local libraries or make available publicly.	Yes	
b. Has the municipality adopted the most current DFIRM/FIRM and FIS?	State the date of adoption, if approved.	Yes	3-3-15
c. Does the municipality support request for map updates?	If yes, state how.	N	Not Asked
d. Does the municipality share with Federal Emergency Management Agency (FEMA) any new technical or scientific data that could result in map revisions within 6 months of creation or identification of new data?	If yes, specify how.	N	
e. Does the municipality provide assistance with local floodplain determinations?	If yes, specify how.	Yes	Review FIRM Map, Required Elevation Certification
f. Does the municipality maintain a record of approved Letters of Map Change?	If yes, specify the responsible office.	Yes	Flood Plain Manager/Planning Department

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Has the municipality adopted a compliant floodplain management ordinance that, at a minimum, regulates the following:	If yes, answer questions (1) through (4) below.	Yes	
(1) Does the municipality issue permits for all proposed development in the Special Flood Hazard Areas (SFHAs)?	If yes, specify the office responsible.	Yes	Building Department
(2) Does the municipality obtain, review, and utilize any Base Flood Elevation (BFE) and floodway data, and/or require BFE data for subdivision proposals and other development proposals larger than 50 lots or 5 acres?	If yes, specify the office responsible.	Yes	Planning Department
(3) Does the municipality identify measures to keep all new and substantially improved construction reasonably safe from flooding to or above the BFE, including anchoring, using flood-resistant materials, and designing or locating utilities and service facilities to prevent water damage?	If yes, specify the office responsible.	Yes	Building Department
(4) Does the municipality document and maintain records of elevation data that document lowest floor elevation for new or substantially improved structures?	If yes, specify the office responsible.	Yes	Building Department
b. If a compliant floodplain ordinance was adopted, does the municipality enforce the ordinance by monitoring compliance and taking remedial action to correct violations?	If yes, specify how.	Yes	Inspections and Notices of Violation

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
c. Has the municipality considered adopting activities that extend beyond the minimum requirements? Examples include: <ul style="list-style-type: none"> • Participation in the Community Rating System • Prohibition of production or storage of chemicals in SFHA • Prohibition of certain types of structures, such as hospitals, nursing homes, and jails in SFHA • Prohibition of certain types of residential housing (manufactured homes) in SFHA • Floodplain ordinances that prohibit any new residential or nonresidential structures in SFHA 	If yes, specify activities.	NO	

3. FLOOD INSURANCE			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality educate community members about the availability and value of flood insurance?	If yes, specify how.	No	
b. Does the municipality inform community property owners about changes to the DFIRM/FIRM that would impact their insurance rates?	If yes, specify how.	No	
c. Does the municipality provide general assistance to community members regarding insurance issues?	If yes, specify how.	No	

NATIONAL FLOOD INSURANCE PROGRAM (NFIP) SURVEY

MUNICIPALITY: TOWN OF WEST POINT

1. FLOODPLAIN IDENTIFICATION AND MAPPING			
Requirement	Recommended Action	Yes/No	Comments
a. Does the municipality maintain accessible copies of an effective Flood Insurance Rate Map (FIRM)/Digital Flood Insurance Rate Map (DFIRM)? Does the municipality maintain accessible copies of the most recent Flood Insurance Study (FIS)?	Place these documents in the local libraries or make available publicly.	Y	
b. Has the municipality adopted the most current DFIRM/FIRM and FIS?	State the date of adoption, if approved.	Y	Adopted by Town Council on 8/10/2015. Sent to FEMA, waiting for approval
c. Does the municipality support request for map updates?	If yes, state how.	N	
d. Does the municipality share with Federal Emergency Management Agency (FEMA) any new technical or scientific data that could result in map revisions within 6 months of creation or identification of new data?	If yes, specify how.	Y	We would if we had data that resulted in map revisions
e. Does the municipality provide assistance with local floodplain determinations?	If yes, specify how.	Y	We have new maps that we supply citizens and agents with
f. Does the municipality maintain a record of approved Letters of Map Change?	If yes, specify the responsible office.	Y	Community Development

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Has the municipality adopted a compliant floodplain management ordinance that, at a minimum, regulates the following:	If yes, answer questions (1) through (4) below.	Y	
(1) Does the municipality issue permits for all proposed development in the Special Flood Hazard Areas (SFHAs)?	If yes, specify the office responsible.	Y	Community development and building official
(2) Does the municipality obtain, review, and utilize any Base Flood Elevation (BFE) and floodway data, and/or require BFE data for subdivision proposals and other development proposals larger than 50 lots or 5 acres?	If yes, specify the office responsible.	Y	Community development
(3) Does the municipality identify measures to keep all new and substantially improved construction reasonably safe from flooding to or above the BFE, including anchoring, using flood-resistant materials, and designing or locating utilities and service facilities to prevent water damage?	If yes, specify the office responsible.	Y	Community development and building official
(4) Does the municipality document and maintain records of elevation data that document lowest floor elevation for new or substantially improved structures?	If yes, specify the office responsible.	Y	Community Development and building official
b. If a compliant floodplain ordinance was adopted, does the municipality enforce the ordinance by monitoring compliance and taking remedial action to correct violations?	If yes, specify how.	Y	Notice of violations would be mailed. Notification to owner and applicant

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
<p>c. Has the municipality considered adopting activities that extend beyond the minimum requirements? Examples include:</p> <ul style="list-style-type: none"> • Participation in the Community Rating System • Prohibition of production or storage of chemicals in SFHA • Prohibition of certain types of structures, such as hospitals, nursing homes, and jails in SFHA • Prohibition of certain types of residential housing (manufactured homes) in SFHA • Floodplain ordinances that prohibit any new residential or nonresidential structures in SFHA 	If yes, specify activities.	Y	Considered CRS

3. FLOOD INSURANCE			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the municipality educate community members about the availability and value of flood insurance?	If yes, specify how.	Y	When requested and community meetings
b. Does the municipality inform community property owners about changes to the DFIRM/FIRM that would impact their insurance rates?	If yes, specify how.	Y	When requested and community meetings
c. Does the municipality provide general assistance to community members regarding insurance issues?	If yes, specify how.	Y	When requested, suggest they speak to insurance agents

NATIONAL FLOOD INSURANCE PROGRAM (NFIP) SURVEY

TRIBE: UPPER MATTAPONI INDIAN TRIBE

1. FLOODPLAIN IDENTIFICATION AND MAPPING			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the tribe maintain accessible copies of an effective Flood Insurance Rate Map (FIRM)/Digital Flood Insurance Rate Map (DFIRM)? Does the tribe maintain accessible copies of the most recent Flood Insurance Study (FIS)?	Place these documents in the local libraries or make available publicly.	No	
b. Has the tribe adopted the most current DFIRM/FIRM and FIS?	State the date of adoption, if approved.	No	
c. Does the tribe support request for map updates?	If yes, state how.	No	
d. Does the tribe share with Federal Emergency Management Agency (FEMA) any new technical or scientific data that could result in map revisions within 6 months of creation or identification of new data?	If yes, specify how.	No	
e. Does the tribe provide assistance with local floodplain determinations?	If yes, specify how.	No	
f. Does the tribe maintain a record of approved Letters of Map Change?	If yes, specify the responsible office.	No	

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Has the tribe adopted a compliant floodplain management ordinance that, at a minimum, regulates the following:	If yes, answer questions (1) through (4) below.	No	
(1) Does the tribe issue permits for all proposed development in the Special Flood Hazard Areas (SFHAs)?	If yes, specify the office responsible.	No	
(2) Does the tribe obtain, review, and utilize any Base Flood Elevation (BFE) and floodway data, and/or require BFE data for subdivision proposals and other development proposals larger than 50 lots or 5 acres?	If yes, specify the office responsible.	No	
(3) Does the tribe identify measures to keep all new and substantially improved construction reasonably safe from flooding to or above the BFE, including anchoring, using flood-resistant materials, and designing or locating utilities and service facilities to prevent water damage?	If yes, specify the office responsible.	No	
(4) Does the tribe document and maintain records of elevation data that document lowest floor elevation for new or substantially improved structures?	If yes, specify the office responsible.	No	
b. If a compliant floodplain ordinance was adopted, does the tribe enforce the ordinance by monitoring compliance and taking remedial action to correct violations?	If yes, specify how.	No	

2. FLOODPLAIN MANAGEMENT			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
c. Has the tribe considered adopting activities that extend beyond the minimum requirements? Examples include: <ul style="list-style-type: none"> • Participation in the Community Rating System • Prohibition of production or storage of chemicals in SFHA • Prohibition of certain types of structures, such as hospitals, nursing homes, and jails in SFHA • Prohibition of certain types of residential housing (manufactured homes) in SFHA • Floodplain ordinances that prohibit any new residential or nonresidential structures in SFHA 	If yes, specify activities.	No	

3. FLOOD INSURANCE			
<i>Requirement</i>	<i>Recommended Action</i>	<i>Yes/No</i>	<i>Comments</i>
a. Does the tribe educate community members about the availability and value of flood insurance?	If yes, specify how.	No	
b. Does the tribe inform community property owners about changes to the DFIRM/FIRM that would impact their insurance rates?	If yes, specify how.	No	
c. Does the tribe provide general assistance to community members regarding insurance issues?	If yes, specify how.	No	

Appendix I –
Dams in the Middle Peninsular Region

County	Dam Name	Hazard Potential Classification	Dam Type	Year Constructed	Purposes	Dam Height (ft)	Emergency Action Plan - date of last revision
Middlesex County	Healys Dam	Undetermined	Earth	1930	Recreation	15	N

Appendix L-
Gloucester County Stormwater Management Ordinance

Chapter 6 - STORMWATER MANAGEMENT¹¹

Pursuant to Virginia Code § 62.1-44.15:27, this ordinance is adopted as part of an initiative to integrate the Gloucester County stormwater management requirements with the Erosion and Sediment Control Ordinance of Gloucester County, Virginia (Chapter 7.5) and the Chesapeake Bay Preservation Ordinance (Chapter 5.5) requirements into a unified stormwater program. The unified stormwater program is intended to facilitate the submission and approval of plans, issuance of permits, payment of fees, and coordination of inspection and enforcement activities into a more convenient and efficient manner for both Gloucester County and those responsible for compliance with these programs.

Footnotes:

--- (I) ---

Editor's note—An ordinance adopted Aug. 6, 2013, repealed ch. 6, §§ 6-1—6-13, which pertained to demonstrations and parades. Subsequently, an ordinance adopted June 3, 2014, §§ 1-1—1-16, enacted new provisions to the Code, but did not specify manner of inclusion; hence, codification as ch. 6, §§ 6-1—6-16 was at the discretion of the editor.

Sec. 6-1. - Purpose and authority.

- (a) The purpose of this chapter is to ensure the general health, safety, and welfare of the citizens of the county and protect the quality and quantity of state waters from the potential harm of unmanaged stormwater, including protection from a land-disturbing activity causing unreasonable degradation of properties, water quality, stream channels, and other natural resources, and to establish procedures whereby stormwater requirements related to water quality and quantity shall be administered and enforced.
- (b) This chapter is adopted pursuant to Article 2.3 (§ 62.1-44.15:24 et seq.) of Chapter 3.1 of Title 62.1 of the Code of Virginia.

(Ord. of 6-3-2014(1), § 1-1)

Sec. 6-2. - Definitions.

In addition to the definitions set forth in 9VAC25-870-10 of the Virginia Stormwater Management Regulations, as amended, which are expressly adopted and incorporated herein by reference, the following words and terms used in this chapter have the following meanings unless otherwise specified herein. Where definitions differ, those incorporated herein shall have precedence.

"Administrator" means the VSMP authority including the County Administrator, or her designee.

"Agreement in lieu of a stormwater management plan" means a contract between the VSMP authority and the owner or permittee that specifies methods that shall be implemented to comply with the requirements of a VSMP for the construction of a single family residence; such contract may be executed by the VSMP authority in lieu of a stormwater management plan.

"Administrative Guidance Manual" means the latest version of policies and procedures for documentation and calculations verifying compliance with the water quality and quantity requirements, review and approval of Stormwater Pollution Prevention Plans and Stormwater Management Plans, site inspections, obtaining and releasing sureties, reporting and recordkeeping, and compliance strategies for reviews, enforcement, and long-term maintenance and inspection programs.

"Applicant" means any person submitting an application for a permit or requesting issuance of a permit under this chapter.

"Best management practice" or "BMP" means schedules of activities, prohibitions of practices, including both structural and nonstructural practices, maintenance procedures, and other management practices to prevent or reduce the pollution of surface waters and groundwater systems from the impacts of land-disturbing activities.

"Chesapeake Bay Preservation Act land-disturbing activity" means a land-disturbing activity including clearing, grading, or excavation that results in a land disturbance equal to or greater than 2,500 square feet and less than one acre in all areas of jurisdictions designated as subject to the regulations adopted pursuant to the Chesapeake Bay Preservation Act, Virginia Code § 62.1-44.15:67 et seq.

"Common plan of development or sale" means a contiguous area where separate and distinct construction activities may be taking place at different times on different schedules.

"Control measure" means any best management practice or stormwater facility, or other method used to minimize the discharge of pollutants to state waters.

"Clean Water Act" or "CWA" means the federal Clean Water Act (33 U.S.C § 1251 et seq.), formerly referred to as the Federal Water Pollution Control Act or Federal Water Pollution Control Act Amendments of 1972, Public Law 92-500, as amended by Public Law 95-217, Public Law 95-576, Public Law 96-483, and Public Law 97-117, or any subsequent revisions thereto.

"Department" means the Department of Environmental Quality.

"Development" means land disturbance and the resulting landform associated with the construction of residential, commercial, industrial, institutional, recreation, transportation or utility facilities, structures, uses or the clearing of land for non-agricultural or non-silvicultural purposes.

"General permit" means the state permit titled GENERAL PERMIT FOR DISCHARGES OF STORMWATER FROM CONSTRUCTION ACTIVITIES found in Part XIV (9VAC25-880-1 et seq.) of the Regulations authorizing a category of discharges under the CWA and the Act within a geographical area of the Commonwealth of Virginia.

"Land disturbance" or "land-disturbing activity" means a man-made change to the land surface that potentially changes its runoff characteristics including clearing, grading, or excavation except that the term shall not include those exemptions specified in section 6-3(c) of this chapter.

"Layout" means a conceptual drawing sufficient to provide for the specified stormwater management facilities required at the time of approval.

"Locality" or "County" means Gloucester County, Virginia.

"Minor modification" means an amendment to an existing general permit before its expiration not requiring extensive review and evaluation including, but not limited to, changes in EPA promulgated test protocols, increasing monitoring frequency requirements, changes in sampling locations, and changes to compliance dates within the overall compliance schedules. A minor general permit modification or amendment does not substantially alter general permit conditions, substantially increase or decrease the amount of surface water impacts, increase the size of the operation, or reduce the capacity of the facility to protect human health or the environment.

"Municipal separate storm sewer system" or "MS4" means all separate storm sewers that are defined as "large", "medium," or "small" municipal separate storm sewer systems or designated under 9VAC25-870-380(A)(1).

"Operator" means the owner or operator of any facility or activity subject to regulation under this chapter.

"Permit" or "VSMP Authority Permit" means an approval to conduct a land-disturbing activity issued by the Administrator for the initiation of a land-disturbing activity, in accordance with this chapter, and which may only be issued after evidence of general permit coverage has been provided by the Department.

"Permittee" means the person to whom the VSMP Authority Permit is issued.

"Person" means any individual, corporation, partnership, association, state, municipality, commission, or political subdivision of a state, governmental body, including federal, state, or local entity as applicable, any interstate body or any other legal entity.

"Regulations" means the Virginia Stormwater Management Program (VSMP) Permit Regulations, 9VAC25-870 et seq., as amended.

"Site" means the land or water area where any facility or land-disturbing activity is physically located or conducted, including adjacent land used or preserved in connection with the facility or land-disturbing activity. Areas channelward of mean low water in tidal Virginia shall not be considered part of a site.

"State" means the Commonwealth of Virginia.

"State Board" means the Virginia Water Control Board.

"State permit" means an approval to conduct a land-disturbing activity issued by the State Board in the form of a state stormwater individual permit or coverage issued under a state general permit or an approval issued by the State Board for stormwater discharges from an MS4. Under these state permits, the Commonwealth imposes and enforces requirements pursuant to the federal Clean Water Act and regulations, the Virginia Stormwater Management Act and the Regulations.

"State Water Control Law" means Chapter 3.1 (§ 62.1-44.2 et seq.) of Title 62.1 of the Code of Virginia.

"State waters" means all water, on the surface and under the ground, wholly or partially within or bordering the Commonwealth or within its jurisdiction, including wetlands.

"Stormwater" means precipitation that is discharged across the land surface or through conveyances to one or more waterways and that may include stormwater runoff, snow melt runoff, and surface runoff and drainage.

"Stormwater Board" means the body of Board of Supervisor-appointed individuals who convene to arbitrate written decisions of the Stormwater Authority administration.

"Stormwater management plan" means a document(s) containing material describing methods for complying with the requirements of section 6-6 of this chapter. An agreement in lieu of a stormwater management plan as defined in this chapter shall be considered to meet the requirements of a stormwater management plan.

"Stormwater Pollution Prevention Plan" or "SWPPP" means a document that is prepared in accordance with good engineering practices and that identifies potential sources of pollutants that may reasonably be expected to affect the quality of stormwater discharges from a construction site, and otherwise meets the requirements of this chapter. In addition, the document shall identify and require the implementation of control measures, and shall include, but not be limited to the inclusion of, or the incorporation by reference of, an approved erosion and sediment control plan, an approved stormwater management plan, and a pollution prevention plan.

"Subdivision" means the division of any lot, tract, or parcel of land into two (2) or more lots or parcels, for the purpose, whether immediate or future, of transfer of ownership, or building development.

"Total maximum daily load" or "TMDL" means the sum of the individual wasteload allocations for point sources, load allocations for nonpoint sources, natural background loading and a margin of safety.

TMDLs can be expressed in terms of either mass per time, toxicity, or other appropriate measure. The TMDL process provides for point versus nonpoint source trade-offs.

"Virginia Stormwater BMP Clearinghouse website" means a state-designated website that contains detailed design standards and specifications for control measures that may be used in Virginia to comply with the requirements of the Virginia Stormwater Management Act and associated regulations.

"Virginia Stormwater Management Act" or "Act" means Article 2.3 (§ 62.1-44.15 et seq.) of Chapter 3.1 of Title 62.1 of the Code of Virginia.

"Virginia Stormwater Management Program" or "VSMP" means a program approved by the State Board after September 13, 2011, that has been established by a locality to manage the quality and quantity of runoff resulting from land-disturbing activities and shall include such items as local ordinances, rules, permit requirements, annual standards and specifications, policies and guidelines, technical materials, and requirements for plan review, inspection, enforcement, where authorized in this article, and evaluation consistent with the requirements of Article 2.3 of Chapter 3.1 of Title 62.1 of the Code of Virginia, and associated regulations.

"Virginia Stormwater Management Program authority" or "VSMP authority" means an authority approved by the State Board after September 13, 2011, to operate a Virginia Stormwater Management Program.

(Ord. of 6-3-2014(1), § 1-2)

Sec. 6-3. - Stormwater permit requirement; exemptions.

- (a) Except as provided herein, no person may engage in any land-disturbing activity until a VSMP authority permit has been issued by the Administrator in accordance with the provisions of this chapter.
- (b) Chesapeake Bay Preservation Act land-disturbing activities do not require completion of a registration statement or require coverage under the general permit but shall be subject to an erosion and sediment control plan consistent with the requirements of the Erosion and Sediment Control Ordinance, a stormwater management plan as outlined under section 6-6 of this chapter, the technical criteria and administrative requirements for land-disturbing activities outlined in section 6-9 of this chapter, and the requirements for control measures long-term maintenance outlined under section 6-10 of this chapter.
- (c) Notwithstanding any other provisions of this chapter, the following activities are exempt from the requirements and regulations contained in this chapter, unless otherwise required by federal law:
 - (1) Permitted surface or deep mining operations and projects, or oil and gas operations and projects conducted under the provisions of Title 45.1 of the Code of Virginia;
 - (2) Clearing of lands specifically for agricultural purposes and the management, tilling, planting, or harvesting of agricultural, horticultural, or forest crops, livestock feedlot operations, or as additionally set forth by the State Board in regulations, including engineering operations as follows: construction of terraces, terrace outlets, check dams, desilting basins, dikes, ponds, ditches, strip cropping, lister furrowing, contour cultivating, contour furrowing, land drainage, and land irrigation; however, this exception shall not apply to harvesting of forest crops unless the area on which harvesting occurs is reforested artificially or naturally in accordance with the provisions of Chapter 11 (§ 10.1-1100 et seq.) of Title 10.1 of the Code of Virginia or is converted to bona fide agricultural or improved pasture use as described in Virginia Code § 10.1-1163(B);

- (3) Single-family residences separately built and disturbing less than one acre and not part of a larger common plan of development or sale, including additions or modifications to existing single-family detached residential structures;
- (4) Land-disturbing activities that disturb less than one acre of land area, except for land-disturbing activity exceeding an area of 2,500 square feet in all areas of the county designated as subject to the Chesapeake Bay Preservation Area Designation and Management Regulations (9VAC25-830) adopted pursuant to the provisions of the Chesapeake Bay Preservation Act (Virginia Code § 62.1-44.15:67 et seq.) or activities that are part of a larger common plan of development or sale that is one acre or greater of disturbance;
- (5) Permitted or authorized discharges to a sanitary sewer or a combined sewer system;
- (6) Activities under a State or federal reclamation program to return an abandoned property to an agricultural or open land use;
- (7) Routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original construction of a project. The paving of an existing road with a compacted or impervious surface and reestablishment of existing associated ditches and shoulders shall be deemed routine maintenance if performed in accordance with this subsection; and
- (8) Conducting land-disturbing activities in response to a public emergency where the related work requires immediate authorization to avoid imminent endangerment to human health or the environment. In such situations, the Administrator shall be advised of the disturbance within seven days of commencing the land-disturbing activity and compliance with the administrative requirements of Virginia Code § 62.1-44.15:34(A) is required within 30 days of commencing the land-disturbing activity.

(Ord. of 6-3-2014(1), § 1-3)

Sec. 6-4. - Stormwater management program established; submission and approval of plans; prohibitions.

- (a) Pursuant to § 62.1-44.15:27 of the Code of Virginia, Gloucester County hereby establishes a Virginia stormwater management program for land-disturbing activities and adopts the applicable Regulations that specify standards and specifications for VSMPs promulgated by the State Board for the purposes set out in section 6-1 of this chapter. The Gloucester County Board of Supervisors hereby designates the County Administrator as the Administrator of the Virginia stormwater management program.
- (b) No VSMP authority permit shall be issued by the Administrator until the following items have been submitted to, and approved by, the Administrator as prescribed herein:
 - (1) A permit application that includes a general permit registration statement;
 - (2) An erosion and sediment control plan approved in accordance with the Erosion and Sediment Control Ordinance of Gloucester County, Virginia (Chapter 7.5); and
 - (3) A stormwater management plan that meets the requirements of Section 6-6 of this chapter or an agreement in lieu of a stormwater management plan as determined appropriate by the Administrator.
- (c) No VSMP authority permit shall be issued until evidence of general permit coverage is obtained by the Administrator from the Department.
- (d) No VSMP authority permit shall be issued until the fees required to be paid pursuant to section 6-15 of this chapter are received, and a reasonable performance surety required pursuant to section 6-16 of this chapter has been submitted.

- (e) No VSMP authority permit shall be issued unless and until the permit application and attendant materials and supporting documentation demonstrate that all land clearing, construction, disturbance, land development and drainage will be done according to the approved permit.
- (f) No grading, building or other local permit shall be issued for a property unless a VSMP authority permit has been issued by the Administrator.

(Ord. of 6-3-2014(I), § 1-4)

Sec. 6-5. - Stormwater pollution prevention plan; contents of plans.

- (a) The Stormwater Pollution Prevention Plan (SWPPP) shall include the content specified by Section 9VAC25-870-54 and must also comply with the requirements and general information set forth in Section 9VAC25-880-70, Section II [stormwater pollution prevention plan] of the general permit.
- (b) The SWPPP shall be amended by the operator whenever there is a change in design, construction, operation, or maintenance that has a significant effect on the discharge of pollutants to state waters which is not addressed by the existing SWPPP.
- (c) The SWPPP must be maintained by the operator at a central location onsite. If an onsite location is unavailable, notice of the SWPPP's location must be posted near the main entrance at the construction site. Operators shall make the SWPPP available for public review in accordance with Section II of the general permit, either electronically or in hard copy.

(Ord. of 6-3-2014(I), § 1-5)

Sec. 6-6. - Stormwater management plan; contents of plan.

- (a) The Stormwater Management Plan, required in section 6-4 of this chapter, must apply the stormwater management technical criteria set forth in section 6-9 of this chapter to the entire land-disturbing activity. Individual lots in new residential, commercial, or industrial developments, including those developed under subsequent owners, shall not be considered separate land-disturbing activities. The Stormwater Management Plan shall consider all known sources of surface runoff and all known sources of subsurface and groundwater flows converted to surface runoff, and include the following information:
 - (1) Information on the type and location of stormwater discharges; information on the features to which stormwater is being discharged including surface waters or karst features, if present, and the predevelopment and post-development drainage areas;
 - (2) Contact information including the name, address, email address, and telephone number of the owner and the tax reference number, parcel number, and RPC of the property or properties affected;
 - (3) A narrative that includes a description of current site conditions and final site conditions;
 - (4) A general description of the proposed stormwater management facilities and the mechanism through which the facilities will be operated and maintained after construction is complete and a note that states the stormwater management meets the requirements set forth in the VSMP Permit Regulations (9VAC25-870-55) and the Administrative Guidance Manual;
 - (5) Information on the proposed stormwater management facilities, including:
 - (i) The type of facilities;

- (ii) Location, including geographic coordinates;
 - (iii) Acres treated; and
 - (iv) The surface waters or karst features, if present, into which the facility will discharge.
- (6) Hydrologic and hydraulic computations, including runoff characteristics;
- (7) Documentation and calculations verifying compliance with the water quality and quantity requirements of section 6-9 of this chapter and the Administrative Guidance Manual; and
- (8) A map or maps of the site that depicts the topography of the site and includes:
- (i) All contributing drainage areas;
 - (ii) Existing streams, ponds, culverts, ditches, wetlands, other water bodies, and floodplains;
 - (iii) Soil types, geologic formations if karst features are present in the area, forest cover, and other vegetative areas;
 - (iv) Current land use including existing structures, roads, and locations of known utilities and easements;
 - (v) Sufficient information on adjoining parcels to assess the impacts of stormwater from the site on these parcels;
 - (vi) The limits of clearing and grading, and the proposed drainage patterns on the site;
 - (vii) Proposed buildings, roads, parking areas, utilities, and stormwater management facilities; and
 - (viii) Proposed land use with tabulation of the percentage of surface area to be adapted to various uses, including but not limited to planned locations of utilities, roads, and easements.
- (b) If an operator intends to meet the water quality and/or quantity requirements set forth in section 6-9 of this chapter through the use of off-site compliance options, where applicable, then a letter of availability from the off-site provider must be included. Approved off-site options must achieve the necessary nutrient reductions prior to the commencement of the applicant's land-disturbing activity except as otherwise allowed by § 62.1-44.15:35 of the Code of Virginia.
- (c) Elements of the stormwater management plans that include activities regulated under Chapter 4 (§ 54.1-400 et seq.) of Title 54.1 of the Code of Virginia shall be appropriately sealed and signed by a professional registered in the Commonwealth of Virginia pursuant to Article 1 (§ 54.1-400 et seq.) of Chapter 4 of Title 54.1 of the Code of Virginia.
- (d) A construction record drawing for permanent stormwater management facilities shall be submitted to the Administrator. The construction record drawing shall be appropriately sealed and signed by a professional engineer, architect, landscape architect, or land surveyor registered in the Commonwealth of Virginia, certifying that the stormwater management facilities have been constructed in accordance with the approved plan.

(Ord. of 6-3-2014(1), § 1-6)

Sec. 6-7. - Pollution prevention plan; contents of plans.

- (a) A Pollution Prevention Plan, required by 9VAC25-870-56, shall be developed, implemented, and updated as necessary and must detail the design, installation, implementation, and maintenance of effective pollution prevention measures to minimize the discharge of pollutants. At a minimum, such measures must be designed, installed, implemented, and maintained to:

- (1) Minimize the discharge of pollutants from equipment and vehicle washing, wheel wash water, and other wash waters. Wash waters must be treated in a sediment basin or alternative control that provides equivalent treatment to a sediment basin or better treatment prior to discharge;
 - (2) Minimize the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, and other materials present on the site to precipitation and to stormwater; and
 - (3) Minimize the discharge of pollutants from spills and leaks and implement chemical spill and leak prevention and response procedures.
- (b) The pollution prevention plan shall include effective best management practices to prohibit the following discharges:
- (1) Wastewater from washout of concrete, unless managed by an appropriate control;
 - (2) Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds, and other construction materials;
 - (3) Fuels, oils, or other pollutants used in vehicle and equipment operation and maintenance; and
 - (4) Soaps or solvents used in vehicle and equipment washing.
- (c) Discharges from dewatering activities, including discharges from dewatering of trenches and excavations, are prohibited unless managed by appropriate controls.

(Ord. of 6-3-2014(1), § 1-7)

Sec. 6-8. - Review of stormwater management plan.

- (a) The Administrator shall review stormwater management plans and shall approve or disapprove a stormwater management plan according to the following:
- (1) The Administrator shall determine the completeness of a plan in accordance with section 6-6 of this chapter, and shall notify the applicant, in writing, of such determination, within 15 working days of receipt of VSMP permit application notification. If the plan is deemed to be incomplete, the above written notification shall contain the reasons the plan is deemed incomplete.
 - (2) The Administrator shall have an additional 60 calendar days from the date of the communication of completeness to review the plan, except that if a determination of completeness is not made within the time prescribed in subdivision (1), then the plan shall be deemed complete and the Administrator shall have 60 calendar days from the date of submission to review the plan.
 - (3) For plans not approved by the Administrator, including an incomplete submittal, all comments shall be addressed and resubmitted by the applicant within 180 calendar days of the latest plan-review comment letter addressed to the applicant. Plans that are not resubmitted within this time period may be subject to a new application fee, as outlined in the Administrative Guidance Manual or referenced as a re-submittal fee in the Fee Schedule.
 - (4) The Administrator shall review any plan that has been previously disapproved, within 45 calendar days of the date of resubmission.
 - (5) During the review period, the plan shall be approved or disapproved and the decision communicated in writing to the Applicant. If the plan is not approved, the reasons for not approving the plan shall be provided in writing to the Applicant. Approval or denial shall be based on the plan's compliance with the requirements of this chapter and the Administrative Guidance Manual.

- (6) If a plan meeting all requirements of this chapter is submitted and no action is taken within the time provided above in subdivision (2) for review, the plan shall be deemed approved.
- (b) Approved stormwater plans may be modified as follows:
 - (1) Modifications to an approved stormwater management plan shall be allowed only after review and written approval by the Administrator. The Administrator shall have 60 calendar days to respond in writing either approving or disapproving such request.
 - (2) The Administrator may require that an approved stormwater management plan be amended, within a time prescribed by the Administrator, to address any deficiencies noted during stormwater inspection.
- (c) The operator shall submit to the Administrator construction record drawings for permanent stormwater management facilities.

(Ord. of 6-3-2014(1), § 1-8)

Sec. 6-9. - Technical criteria for regulated land-disturbing activities.

- (a) To protect the quality and quantity of state water from the potential harm of unmanaged stormwater runoff resulting from land-disturbing activities, the county hereby adopts the technical criteria for regulated land-disturbing activities set forth in 9VAC25-870-62 [Part II B of the Regulations], as amended, expressly to include 9VAC25-870-63 [water quality design criteria requirements]; 9VAC25-870-65 [water quality compliance]; 9VAC25-870-66 [water quantity]; 9VAC25-870-69 [offsite compliance options]; 9VAC25-870-72 [design storms and hydrologic methods]; 9VAC25-870-74 [stormwater harvesting]; 9VAC25-870-76 [linear development projects]; 9VAC25-870-85 [stormwater management impoundment structures or facilities]; and 9VAC25-870-92 [comprehensive stormwater management plans], which shall apply to all land-disturbing activities regulated pursuant to this chapter, except as expressly set forth in subsection (b) and (c) of this section.
- (b) Any land-disturbing activity shall be considered grandfathered and shall be subject to 9VAC25-870-93 thru 99 [Part II C Technical Criteria of the Regulations], provided:
 - (1) A proffered or conditional zoning plan, zoning with a plan of development, preliminary or final subdivision plat, preliminary or final site plan, or any document determined by the locality to be equivalent thereto (i) was approved by the locality prior to July 1, 2012, (ii) provided a layout as defined in 9VAC25-870-10, (iii) will comply with the Part II C technical criteria of the VSMP Regulations, and (iv) has not been subsequently modified or amended in a manner resulting in an increase in the amount of phosphorus leaving each point of discharge, and such that there is no increase in the volume or rate of runoff;
 - (2) A state permit has not been issued prior to July 1, 2014; and
 - (3) Land disturbance did not commence prior to July 1, 2014.
- (c) County, state, and federal projects shall be considered grandfathered by the VSMP authority and shall be subject to the Part II C technical criteria of the VSMP Regulations, provided:
 - (1) There has been an obligation of county, state, or federal funding, in whole or in part, prior to July 1, 2012, or the department has approved a stormwater management plan prior to July 01, 2012;
 - (2) A state permit has not been issued prior to July 1, 2014; and
 - (3) Land disturbance did not commence prior to July 1, 2014.

- (d) Land-disturbing activities grandfathered under subsections b and c of this section shall remain subject to the Part II C Technical Criteria of the Regulations for one additional state permit cycle. After such time, portions of the project not under construction shall become subject to any new technical criteria adopted by the State Board.
- (e) In cases where governmental bonding or public debt financing has been issued for a project prior to July 01, 2012, such project shall be subject to the technical criteria of Part II C of the VSMP Regulations.
- (f) The Administrator may grant exceptions to the technical requirements of Part II B or Part II C of the Regulations, provided that (i) the exception is the minimum necessary to afford relief, (ii) reasonable and appropriate conditions are imposed so that the intent of the Act, the Regulations, and this chapter are preserved, (iii) granting the exception will not confer any special privileges that are denied in other similar circumstances, and (iv) exception requests are not based upon conditions or circumstances that are self-imposed or self-created. Economic hardship alone is not a sufficient reason to grant an exception from the requirements of this chapter. Exceptions granted shall be reported to the Department.
 - (1) Exceptions to the requirement that the land-disturbing activity obtain required VSMP authority permit shall not be given by the Administrator, nor shall the Administrator approve the use of a BMP not found on the Virginia Stormwater BMP Clearinghouse Website, or any other control measure duly approved by the Department.
 - (2) Exceptions to requirements for phosphorus reductions shall not be allowed unless offsite options otherwise permitted pursuant to 9VAC25-870-69 have been considered and found not available.
- (g) Nothing in this section shall preclude an operator from constructing to a more stringent standard at his discretion.

(Ord. of 6-3-2014(1), § 1-9)

Sec. 6-10. - Long-term maintenance of permanent stormwater facilities.

The Administrator shall require the provision of long-term responsibility for and maintenance of stormwater management facilities and other techniques specified to manage the quality and quantity of runoff. Such requirements shall be set forth in an instrument recorded in the county land records prior to general permit termination or earlier as required by the Administrator, and shall at a minimum:

- (a) Be submitted to the Administrator for review and approval prior to the approval of the stormwater management plan;
- (b) Be stated to run with the land;
- (c) Provide for all necessary access to the property for purposes of maintenance and regulatory inspections;
- (d) Provide for inspections and maintenance and the submission of inspection and maintenance reports to the Administrator; and
- (e) Be enforceable by all appropriate governmental parties.

(Ord. of 6-3-2014(1), § 1-10)

Sec. 6-11. - Monitoring and inspections.

- (a) Pursuant to § 62.1-44.15:37 of the Code of Virginia, the Administrator or any duly authorized agent of the Administrator shall provide for periodic inspections of a land-disturbing activity during construction for:
 - (1) Compliance with the approved erosion and sediment control plan;
 - (2) Compliance with the approved stormwater management plan;
 - (3) Development, updating, and implementation of a pollution prevention plan; and
 - (4) Development and implementation of any additional control measures necessary to address a TMDL.
- (b) The Administrator or any duly authorized agent of the Administrator may, at reasonable times and under reasonable circumstances, enter any establishment or upon any property, public or private, for the purpose of obtaining information or conducting surveys or investigations necessary in the enforcement of the provisions of this chapter when reasonable notice has been provided to the owner/agent.
- (c) In accordance with a performance bond with surety, cash escrow, letter of credit, any combination thereof, or such other legal arrangement or instrument, the Administrator may also enter any establishment or upon any property, public or private, for the purpose of initiating or maintaining appropriate actions which are required by the permit conditions associated with a permitted activity when a permittee, after proper notice, has failed to take acceptable action within the time specified.
- (d) Pursuant to § 62.1-44.15:40 of the Code of Virginia, the Administrator may require every VSMP authority permit applicant or permittee, or any such person subject to VSMP authority requirements under this chapter, to furnish when requested such application materials, plans, specifications, and other pertinent information as may be necessary to determine the effect of his discharge on the quality of state waters, or such other information as may be necessary to accomplish the purposes of this chapter.
- (e) Post-construction inspections of stormwater management facilities required by the provisions of this chapter and the recorded maintenance agreement shall be conducted by the owner and at the owner's cost pursuant to the county's adopted and Board approved inspection program, and shall occur within the minimum frequencies shown in BMP Inspection Frequency Table within the Administrative Guidance Manual following approval of the final construction record report for each stormwater facility.
- (f) The owner shall furnish to the Administrator an inspection report prepared by a qualified inspector within the time frames provided in the BMP Inspection Frequency Table within the Administrative Guidance Manual. This report shall include, but not be limited to, current photographs of the BMP, a summary of the current BMP condition, and any recommendations for improvements, if necessary.
- (g) Qualified inspection personnel include a professional engineer, architect, landscape architect, or land surveyor registered in the Commonwealth of Virginia and project inspector or combined administrator for stormwater authority who have met the certification requirements of Virginia Code § 62.1-44.15:30.
- (h) Post-construction inspections of stormwater management facilities required by the provisions of this chapter shall be conducted by the Administrator pursuant to the County's adopted and State Board approved inspection program, and shall occur, at a minimum, at least once every five (5) years.

(Ord. of 6-3-2014(1), § 1-11)

Sec. 6-12. - Hearings.

- (a) Any permit applicant or permittee, or person subject to the requirements of this chapter, aggrieved by any action of the county taken without a formal hearing, or by inaction of the county, may demand in writing a formal hearing by the Stormwater Board considering such grievance, provided a petition requesting such hearing is filed with the Administrator within 30 days after notice of such action is given by the Administrator.
- (b) The hearings held under this section shall be conducted by the Stormwater Board at a time and place identified by the Stormwater Board.
- (c) A verbatim record of the proceedings of such hearings shall be taken and filed with the Stormwater Board.

(Ord. of 6-3-2014(1), § 1-12)

Sec. 6-13. - Appeals.

The final decision of the county under this chapter shall be subject to review by the Circuit Court of Gloucester County, provided an appeal is filed within thirty (30) days from the date of any written decision adversely affecting the rights, duties, or privileges of the person engaging in or proposing to engage in land-disturbing activities. An appeal shall not stay the decision of the County.

(Ord. of 6-3-2014(1), § 1-13)

Sec. 6-14. - Enforcement.

- (a) If the Administrator determines that there is a failure to comply with the VSMP authority permit conditions or determines there is an unauthorized discharge, notice shall be served upon the permittee or person responsible for carrying out the permit conditions by, but shall not be limited to, any of the following: verbal warnings and inspection reports, notices of violation, notices of corrective action, consent special orders, and notices to comply. Written notices shall be served by registered or certified mail to the address specified in the permit application or by delivery at the site of the development activities to the agent or employee supervising such activities.
 - (1) The notice shall specify the measures needed to comply with the permit conditions and shall specify the time within which such measures shall be completed. Upon failure to comply within the time specified, a stop work order may be issued in accordance with subsection (2) or the permit may be revoked by the Administrator.
 - (2) If a permittee fails to comply with a notice issued in accordance with this section within the time specified, the Administrator may issue an order requiring the owner, permittee, person responsible for carrying out an approved plan, or the person conducting the land-disturbing activities without an approved plan or required permit to cease all land-disturbing activities until the violation of the permit has ceased, or an approved plan and required permits are obtained, and specified corrective measures have been completed.

Such orders shall be issued in accordance with the Administrative Guidance Manual. Such orders shall become effective upon service on the person by certified mail, return receipt requested, sent to his address specified in the land records of the county, or by personal delivery by an agent of the Administrator. However, if the Administrator finds that any such violation is grossly affecting or presents an imminent and substantial danger of causing harmful erosion of lands or sediment deposition in waters within the watersheds of the Commonwealth or otherwise substantially impacting water quality, she may issue, without advance notice or hearing, an emergency order directing such person to cease immediately all land-disturbing activities on the

site and shall provide an opportunity for a hearing, after reasonable notice as to the time and place thereof, to such person, to affirm, modify, amend, or cancel such emergency order. If a person who has been issued an order is not complying with the terms thereof, the Administrator may revoke the permit and institute a proceeding for an injunction, mandamus, or other appropriate remedy in accordance with subsection 6-14(c).

- (b) In addition to any other remedy provided by this chapter, if the Administrator determines that there is a failure to comply with the provisions of this chapter, she may initiate such informal and/or formal administrative enforcement procedures in a manner that is consistent with the Administrative Guidance Manual.
- (c) Any person violating or failing, neglecting, or refusing to obey any rule, regulation, ordinance, order, approved standard or specification, or any permit condition issued by the Administrator may be compelled in a proceeding instituted in Circuit Court of Gloucester County to obey the same and to comply therewith by injunction, mandamus or other appropriate remedy.
- (d) Any person who violates any provision of this chapter or who fails, neglects, or refuses to comply with any order of the Administrator, shall be subject to a civil penalty not to exceed \$32,500 for each violation. Each day of violation of each requirement shall constitute a separate offense.
 - (1) Violations for which a penalty may be imposed under this subsection shall include but not be limited to the following:
 - (i) No state permit registration;
 - (ii) No SWPPP;
 - (iii) Incomplete SWPPP;
 - (iv) SWPPP not available for review;
 - (v) No approved erosion and sediment control plan;
 - (vi) Failure to install stormwater BMPs or erosion and sediment controls;
 - (vii) Stormwater BMPs or erosion and sediment controls improperly installed or maintained;
 - (viii) Operational deficiencies;
 - (ix) Failure to conduct required inspections;
 - (x) Incomplete, improper, or missed inspections; and
 - (xi) Discharges not in compliance with the requirements of Section 9VAC25-880-70 of the general permit.
 - (2) The Administrator may issue a summons for collection of the civil penalty and the action may be prosecuted in the appropriate court.
 - (3) In imposing a civil penalty pursuant to this subsection, the court may consider the degree of harm caused by the violation and also the economic benefit to the violator from noncompliance.
 - (4) Any civil penalties assessed by a court as a result of a summons issued by the county shall be paid into the treasury of the county to be used for the purpose of minimizing, preventing, managing, or mitigating pollution of the waters of the county and abating environmental pollution therein in such manner as the court may, by order, direct.
- (e) Notwithstanding any other civil or equitable remedy provided by this section or by law, any person who willfully or negligently violates any provision of this chapter, any order of the Administrator, any

condition of a permit, or any order of a court shall be guilty of a Class 1 misdemeanor punishable by confinement in jail for not more than 12 months, or a fine of not more than \$2,500, or both.

- (f) Violation of any provision of this chapter may also result in the following sanctions:
- (1) The VSMP authority, where authorized to enforce Virginia Code § 62.1-44.15:24 et seq., may apply to the Circuit Court of Gloucester County to enjoin a violation or a threatened violation of the provisions of Virginia Code § 62.1-44.15:24 et seq. or of this chapter without the necessity of showing that an adequate remedy at law does not exist.
 - (2) With the consent of any person who has violated or failed, neglected, or refused to obey any ordinance, any condition of a permit, any order of the VSMP authority, or any provision of Virginia Code § 62.1-44.15:24 et seq., the VSMP authority may provide, in an order issued against such person, for the payment of civil charges for violations in specific sums, not to exceed the limit specified in this section. Such civil charges shall be instead of any appropriate civil penalty that could be imposed under this section. Any civil charges collected shall be paid to the treasury of the county pursuant to subsection (d)(4). Charges collected shall be applied to environmental restoration.

(Ord. of 6-3-2014(1), § 1-14)

Sec. 6-15. - Fees.

- (a) Fees to cover costs associated with implementation of a VSMP related to land-disturbing activities and issuance of general permit coverage and VSMP authority permits shall be imposed in accordance with Table I.
- (b) The applicable fees designated to the Administrator shall be paid by the Applicant directly to the Administrator at the initial plan submittal; fees designated to the Department shall be paid by the Applicant directly to the Department through the online reporting system. A minimum 50-percent of the fee is required upon submittal; the difference shall be due prior to issuance of permit.

Table I: Stormwater Ordinance Permitting Fees

Type of Permit	Fee Amount	
	County	State
Chesapeake Bay Preservation Act Land-Disturbing Activity (not subject to General Permit coverage; sites within designated areas of Chesapeake Bay Act localities with land-disturbance acreage equal to or greater than 2,500 square feet and less than 1 acre)	\$290	\$0
VSMP General/Stormwater Management - Small Construction Activity/Land Clearing (Areas within common plans of development or sale with land-disturbance acreage less than one acre, except for single-family detached residential structures)	\$209	\$81

VSMP General/Stormwater Management - Small Construction Activity/Land Clearing (single family detached residential structure with a site or area, within or outside a common plan of development or sale, that is equal to or greater than one acre but less than five acres)	\$209	\$0
VSMP General/Stormwater Management - Small Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land disturbance acreage equal to or greater than 1 acre and less than 5 Acres)	\$1,944	\$756
VSMP General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land disturbance acreage equal to or greater than 5 acres and less than 10 acres)	\$2,448	\$952
VSMP General/Stormwater Management - Large Construction Activity/Land Clearing [Sites or areas within common plans of development or sale with land disturbance acreage equal to or greater than 10 acres and less than 50 acres]	\$3,240	\$1,260
VSMP General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land disturbance acreage equal to or greater than 50 acres and less than 100 acres)	\$4,392	\$1,708
VSMP General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land disturbance acreage equal to or greater than 100 acres)	\$6,912	\$2,688
VSMP Individual Permit for Discharges of Stormwater From Construction Activities	\$0	\$15,000

(c) Fees for the modification or transfer of registration statements from the general permit issued by the Board shall be imposed in accordance with VSMP Permit Regulations and adopted by this chapter in accordance with Table 2 and shall be paid directly to the Administrator.

Table 2: Fees for the modification or transfer of registration statements for the General Permit for Discharges of Stormwater from Construction Activities

Type of Permit	Fee Amount
Chesapeake Bay Preservation Act Land-Disturbing Activity (not subject to General Permit coverage; sites within designated areas of Chesapeake Bay Act localities with land-disturbance acreage equal to or greater than 2,500 square feet and less than 1 acre)	\$20
General/Stormwater Management - Small Construction Activity/Land Clearing (Areas within common plans of development or sale with land-disturbance acreage less than one acre, except for single-family detached residential structures)	\$20

General/Stormwater Management - Small Construction Activity/Land Clearing (Single-family detached residential structures within or outside a common plan of development or sale with land-disturbance acreage less than 5 acres)	\$20
General/Stormwater Management - Small Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land-disturbance acreage equal to or greater than one and less than five acres)	\$200
General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land-disturbance acreage equal to or greater than five acres and less than 10 acres)	\$250
General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land-disturbance acreage equal to or greater than 10 acres and less than 50 acres)	\$300
General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land-disturbance acreage equal to or greater than 50 acres and less than 100 acres)	\$450
General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land-disturbance acreage equal to or greater than 100 acres)	\$700
Individual Permit for Discharges of Stormwater from Construction Activities	\$5,000

- (d) If the general permit modifications result in changes to stormwater management plans that require additional review by the county, such reviews shall be subject to the fees set out in the VSMP Permit Regulations and this chapter.
- (e) The fee assessed shall be based on the total disturbed acreage of the site. In addition to the general permit modification fee, applicants seeking modifications resulting in an increase in total disturbed acreage shall pay the difference in the initial permit fee paid and the permit fee that would have applied for the total disturbed acreage in this chapter. These fees shall be paid directly to the Administrator.
- (f) Annual permit maintenance shall be imposed in accordance with Table 3 of this chapter, including fees imposed on expired permits that have been administratively continued. With respect to the general permit, these fees shall apply until the permit coverage is terminated.

Table 3: Permit Maintenance Fees

Type of Permit	Fee Amount
Chesapeake Bay Preservation Act Land-Disturbing Activity (not subject to General Permit coverage; sites within designated areas of Chesapeake Bay Act localities with land-disturbance acreage equal to or greater than 2,500 square feet and less than 1 acre)	\$50
General/Stormwater Management - Small Construction Activity/Land Clearing (Areas within common plans of development or sale with land-disturbance acreage less than one acre)	\$50
General/Stormwater Management - Small Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land-disturbance equal to or greater than one acre and less than five acres)	\$400
General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land-disturbance acreage equal to or greater than five acres and less than 10 acres)	\$500
General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land-disturbance acreage equal to or greater than 10 acres and less than 50 acres)	\$650
General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land-disturbance acreage equal to or greater than 50 acres and less than 100 acres)	\$900
General/Stormwater Management - Large Construction Activity/Land Clearing (Sites or areas within common plans of development or sale with land-disturbance acreage equal to or greater [than] 100 acres)	\$1,400
Individual Permit for Discharges from Construction Activities	\$3,000

- (g) General permit coverage maintenance fees shall be paid annually to the county, by the anniversary date of general permit coverage. No permit will be reissued or automatically continued without payment of the required fee. General permit coverage maintenance fees shall be applied until a Notice of Termination is effective.
- (h) The fees set forth in subsections (a) through (g) above, shall apply to:
 - (1) All persons seeking coverage under the general permit.
 - (2) All permittees who request modifications to or transfers of their existing registration statement for coverage under a general permit.
- (i) No general permit application fees will be assessed to:
 - (1) Permittees who request minor modifications to general permits as defined in section 6-2 of this chapter. Permit modifications at the request of the permittee resulting in changes to stormwater management plans that require additional review by the Administrator shall not be exempt pursuant to this section.

- (2) Permittees whose general permits are modified or amended at the initiative of the Department, excluding errors in the registration statement identified by the Administrator or errors related to the acreage of the site.
- (j) All incomplete payments will be deemed as nonpayment, and the applicant shall be notified of any incomplete payments. Interest may be charged for late payments at the underpayment rate set forth in § 58.1-15 of the Code of Virginia and is calculated on a monthly basis at the applicable periodic rate. A 10% late payment fee shall be charged to any delinquent (over 90 days past due) account. The county shall be entitled to all remedies available under the Code of Virginia in collecting any past due amount.
- (k) The fee for applications brought for hearing through the Stormwater Board, section 6-12 of this chapter, shall be \$275.

(Ord. of 6-3-2014(1), § 1-15)

Sec. 6-16. - Performance bond.

Prior to permit issuance, the Applicant shall submit a reasonable performance bond with surety, cash escrow, letter of credit, any combination thereof, or such other legal arrangement acceptable to the county attorney and Administrator to ensure that measures could be taken by the county at the Applicant's expense should he fail, after proper notice, within the time specified to initiate or maintain appropriate actions which may be required of him by the permit conditions as a result of his land disturbing activity. If the county takes such action upon such failure by the Applicant, the county may collect from the Applicant the difference should the amount of the reasonable cost of such action exceed the amount of the security held, if any. Within 60 days of the completion of the requirements of the permit conditions, such bond, cash escrow, letter of credit or other legal arrangement, or the unexpended or unobligated portion thereof, shall be refunded to the Applicant or terminated.

(Ord. of 6-3-2014(1), § 1-16)

Appendix M –
MOU amongst Rappahannock Fire Association Participants

GVERS

MEMORANDUM OF UNDERSTANDING AND COOPERATION

THIS AGREEMENT, made and entered into this *25th* day of *August 2011*, by and among the rated fire and rescue departments of the Rappahannock Volunteer Fireman's Association.

WITNESSETH:

THAT, WHEREAS, the General Assembly of Virginia did enact into law act as Va. Code Section 27-1, which provides, in part, "Whenever the necessity arises during any actual or potential emergency resulting from fire, personal injury, or other public disaster, the fire fighters or emergency medical technicians of any county, city or town may, together with all necessary equipment, lawfully go or be sent beyond the territorial limits of such county, city or town to any point within or without the Commonwealth, to assist in meeting such emergency."

WHEREAS, when responding to a call and while working at a fire or other emergency outside the territorial limits which it normally services, members and employees of county, municipal corporation, fire protection district, sanitary district and incorporated fire departments shall have all of the laws, ordinances, and regulations, and shall have all of the benefits and immunities from liability and exemptions including coverage under the Workmen's Compensation Laws, as they have when responding to a call and while working at a fire or other emergency inside the territorial limits normally served; and

WHEREAS, the purpose of this agreement is to provide a mechanism for each of the parties hereto, through their mutual cooperation, by which they may render aid to each other in case of conflagration, holocaust, civil disorder or natural disaster, which requires fire services beyond the existing capabilities of any party; and

WHEREAS, it is in the public interest for the parties hereto to enter into an agreement for mutual assistance in fire protection in order to increase fire defenses and to assure the community of adequate protection; and

WHEREAS, fire departments within the Rappahannock Volunteer Fireman's Association desire a mechanism to receive mutual aid assistance from and to send mutual aid assistance to other fire service agencies within the region;

NOW THEREFORE, in consideration of the mutual covenants contained herein by and among the parties hereto, it is hereby agreed as follows:

1. Upon receipt of a request for assistance, the Chief of the responding party will determine whether the request may be honored without impairing the respondent's capacity to provide fire protection within its own jurisdiction. The Chief or officer in charge of the responding party may authorize or provide such equipment, manpower and assistance to the requesting party, as he deems appropriate. The decision to respond and the degree of response shall remain in the discretion of the Chief or other officer in charge of the responding party.
2. No party to this agreement shall be bound to dispatch equipment, supplies or personnel to assist any other party, but every effort should be made to furnish such assistance and resources as are indicated so long as, in the judgment of the chief officer of that party, such dispatch would not seriously impair the fire defenses and protection of his own jurisdiction.
3. The Chief or other officer in charge of the party in whose jurisdiction the emergency exists and who requests assistance shall, in all instances, be in command of the emergency, controlling strategy, fire control tactics and direction of the operations.
4. It shall be the responsibility of the responding party to ensure that all personnel responding to the request for assistance are adequately trained. Each of the parties hereto shall be responsible for the conduct and actions of its personnel.
5. Each party to this agreement shall assume all liability and financial responsibility for death of or injury to any member of its own command responding to a request for assistance.
6. A party responding under the terms of this agreement shall not be responsible or financially liable for property damaged or destroyed at the scene of any civil disorder,

- holocaust, conflagration or natural disaster due to firefighting and rescue operations, fire control tactics and strategy or other operations as may be required or ordered; said liability and responsibility shall rest solely with the party requesting such aid and within whose boundaries the property shall exist, or the incident occurs.
7. The party responding to the request for mutual aid under the terms of this agreement shall assume all liability and responsibility for damage to its own apparatus and/or equipment. The responding party shall also assume liability and responsibility for any damage caused by its apparatus or equipment while en route to or returning from a specific location.
 8. The party who requests mutual aid shall in no way be deemed liable or responsible for the personal property of the members of the responding party which may be lost, stolen or damaged while they are performing their duties under the response terms herein.
 9. Each party to this agreement shall assume all costs of salaries, wages, bonuses or other compensation for its own personnel responding for duty under the terms of this agreement and shall assume all costs of the responding party's apparatus, equipment, and supplies used in the response. The responding party shall make no charge for such use to the party requesting assistance except for any special chemicals or supplies by the responding party. Such chemicals shall be paid for by the party requesting aid upon receipt of an itemized statement of costs.
 10. Any party may, at any time, terminate this agreement upon thirty-day written notice to all signatories within the agreement. Written notice shall be sent by registered mail to each department.
 11. When fire department personnel are sent to another jurisdiction pursuant to this agreement, all rights, privileges and immunities as employees or agents of the responding party, including Workmen's Compensation insurance coverage, shall be extended to include their activities when acting within the scope of this agreement.

12. If a party to this agreement does not attempt to send requested assistance aid, with the provision that such aid would not seriously impact the party's own fire protection needs, it should not request or expect to receive assistance from other parties to this agreement.
13. The parties to this mutual aid agreement may amend or alter the agreement by written amendment, signed by each of the Fire Chief of all parties involved.
14. This mutual aid agreement shall remain in force for an initial term of five years, and may be extended by authorization of the governing board of any party.

THEREFORE, the governing boards of each agency agree to this regional mutual aid agreement and cause this instrument to be signed and adopted by their duly authorized officers.

Appendix N –
Adoption Resolutions for Localities and Tribes

PROPOSED RESOLUTION TO ADOPT THE MIDDLE PENINSULA REGIONAL ALL HAZARDS MITIGATION PLAN 2021 UPDATE

WHEREAS, the County of Essex, Virginia has experienced severe damage from a host of hazards such as communicable diseases, winter storm snow and ice, flooding from hurricanes, nor'easters, wildfires, winter storms, tornadoes and lightning on many occasions in the past century that have resulted in property losses, loss of life, economic hardships, and threats to public health and safety for all community residents, and

WHEREAS, the first Middle Peninsula Regional All Hazards Mitigation Plan ("the Plan") was undertaken as a regional planning project with all nine (9) jurisdictions participating in its development and adoption in 2006, 2011, and 2016, and

WHEREAS, all nine (9) Middle Peninsula jurisdictions and federally recognized Tribes in the region participated in the update of the AHMP within the Federal Emergency Management Agency's required 5-year period, and

WHEREAS, the County of Essex, Virginia will submit yearly progress reviews and plan discussion to state and FEMA, and

WHEREAS, MPPDC has executed the contract with Dewberry to run HAZUS, which is a risk modeling software to assess the region's risk from flooding, hurricane winds, and sea level rise. Based on discussions with the LPT there will be two sea level rise scenarios assessed: (1) the baseline of Mean High Water (MHHW) and (2) projected sea level rise elevation of the 2060 intermediate-high scenario of MHHW plus 3.02 feet; and

WHEREAS, the Plan update recommends many mitigation strategies that will help to protect the residents and their property from the adverse effects of hazards that face the County of Essex, Virginia, and

WHEREAS, the Plan update was reviewed at a meeting of the County of Essex, Virginia's Board of Supervisors held on April 12, 2022, as required by law.

NOW, THEREFORE, BE IT RESOLVED, by the County of Essex, Virginia, that:

1. The Middle Peninsula Regional All Hazards Mitigation Plan 2021 update is hereby adopted as the official Plan for the County of Essex, Virginia.
2. The respective officials/staff identified in the implementation section of the Plan update are encouraged to implement the mitigation strategies and report on their activities, accomplishments, and progress to the County of Essex, Virginia Board of Supervisors.

3. The County Administrator/Town Administrator/Chief of the County of Essex, Virginia's Board of Supervisors will report status updates on mitigation strategies to the Middle Peninsula Planning District Commission and the Federal Emergency Management Agency on an annual basis.
4. Obtain the latest version of the FEMA: Region 3 High Hazard Potential Dams State and Local Mitigation Planning Tips Resource from FEMA Region 3 and/or State staff and use it to inform the development of the next plan update or amendment.

Adopted the 12th day of April 2022.

CERTIFICATION OF ADOPTION RESOLUTION

The undersigned Clerk of the Board of Supervisors of the County of Essex, Virginia certified that the Resolution set forth above was duly adopted during an open public meeting on the 12th day of April 2022 by a majority of the members of the Essex County Board of Supervisors with the following votes:

AYE: Gill, Johnson, Magruder, Smith

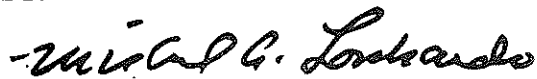

NAY: N/A

**MIDDLE PENINSULA ALL HAZARDS MITIGATION PLAN
UPDATE**

WHEREAS, Gloucester County has experienced severe damage from a host of natural hazards such as flooding from hurricanes and nor'easters, wildfires, winter storms, tornados, and lightning on many occasions in the past century that have resulted in property losses, loss of life, economic hardships as well as threats to public health and safety for all community residents; and

WHEREAS, the first Middle Peninsula Natural Hazards Mitigation Plan (the Plan) was undertaken as a regional planning project with nine jurisdictions participating in its development and adoption in 2006, 2011, and 2016; and

WHEREAS, all nine Middle Peninsula jurisdictions and federally recognized Tribes in the region actively participated in the update of the Plan to become the Middle Peninsula Regional All Hazards Mitigation Plan within the Federal Emergency Management Agency's required 5-year period; and

WHEREAS, the Plan update recommends many mitigation strategies that will help to protect the residents and their property from the adverse effects of natural hazards that face Gloucester County; and

WHEREAS, the Plan update was reviewed at a meeting of the Gloucester County Board of Supervisors held on April 19, 2022, as required by law.

NOW, THEREFORE, BE IT RESOLVED, by Gloucester County, Virginia, that:

1. The Middle Peninsula Regional All Hazards Mitigation Plan Update is hereby adopted as the official Plan for Gloucester County.

2. The respective officials/staff identified in the implementation section of the Plan update are hereby directed to implement the recommended strategies assigned to them, with these officials/staff reporting on their activities, accomplishments, and progress to the Board of Supervisors on a quarterly basis.
3. The Gloucester County Emergency Management Coordinator will report status updates on mitigation strategies to the Middle Peninsula Planning District Commission and the Federal Emergency Management Agency on an annual basis.

PAMUNKEY INDIAN RESERVATION
KING WILLIAM, VA 23086

2022-RES-003
**RESOLUTION TO ADOPT THE MIDDLE PENINSULA ALL HAZARDS
MITIGATION PLAN**

WHEREAS, This Resolution (this “Resolution”) is being adopted by the Chief and Tribal Council (the “Tribal Council”), the governing body of the Pamunkey Indian Tribe (the “Tribe”) as referred to in the Laws of the Pamunkey Indians (the “Laws”); and

WHEREAS, Pursuant to Article II of the Laws, the affairs of the Tribe shall be administered and directed by a Chief and Tribal Council, which includes the power to administer the affairs and government of the Tribe, and Article VII of the Laws the Chief and Council have the authority to adopt an ordinance; and

WHEREAS, Pursuant to Ordinance LVII, Section M, the Chief and Council have the authority to adopt, rescind and modify ordinances. Such action should include a resolution. Except in emergency situations, such action requires a minimum 15-day announcement satisfied by either public posting, announcement at tribal meeting or direct mail or distribution to resident tribal members;

WHEREAS, The Tribe is committed to the safety and well-being of Tribal citizens living on the Pamunkey Indian Reservation; and

WHEREAS, tHE Middle Peninsula All Hazards Mitigation Plan that has been adopted and approved by the Federal Emergency Management Agency (FEMA) on April 12, 2022 that covers the geographic area of the Pamunkey Indian Reservation; and

WHEREAS, The Tribe has worked in coordination with Virginia Department of Emergency Management to develop a portion of this plan that affects the Pamunkey Indian Tribe and the Pamunkey Indian Reservation;

NOW, THEREFORE, BE IT RESOLVED: The Tribal Council hereby indicates its adoption of the Middle Peninsula All Hazards Mitigation Plan.

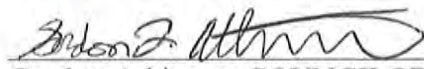

CERTIFICATION

We, the undersigned, do hereby certify that the Pamunkey Indian Tribal Chief and Tribal Council, which is composed of eight (8) members, certify that the foregoing Resolution was adopted on SEPT, 2022 by the affirmative vote of 5 Council persons for, 0 Council persons against, and 0 Council persons abstaining.

J. Mark Fortune
Assistant Chief

Rappahannock Tribe Resolution Number 2022 - 009

Faye Fortune
Secretary

WHEREAS, The Rappahannock Tribe is a Federally Recognized and Acknowledged Tribe, possessing the inherent sovereign powers of a Tribal Government; and

Paula Pitts
Treasurer

WHEREAS, pursuant to Resolution 2018-04, Constitution and By-Laws of the Rappahannock Tribe ("Tribal Council") is the governing body of the Tribe, and

WHEREAS, The Tribal Government recognizes the Articles of Incorporation of Rappahannock Tribe, Inc. and certifies the members of the Rappahannock Tribe, Inc of eighteen years or more, do hereby associate as a Corporation, not for profit by virtue of the provision of Chapter Two of Title 13.1 of the code of Virginia and to that is set forth in the Articles of Incorporation; and

WHEREAS, The area covered by the Middle Peninsula Planning District Commission Regional All Hazard Mitigation Plan 2021 includes Essex, Gloucester, King William, King & Queen, Mathews, and Middlesex Counties and the Towns of West Point, Urbanna and Tappahannock and the three federally recognized Tribes, including the Pamunkey Tribe, Rappahannock Tribe and the Upper Mattaponi Tribe of the Middle Peninsula. As part of the mitigation planning requirement of the Disaster Mitigation Act of 2000 (DMA 2000), localities and tribes worked to identify, assess, and mitigate risks within their communities to ensure that critical services would continue to function if a disaster were to occur; and

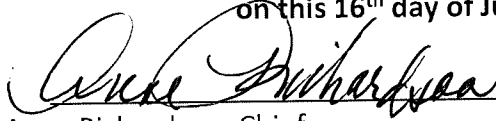

WHEREAS, The Rappahannock Tribe has experienced severe damage from natural hazards such as flooding, wind damage, winter storms, and lightning on many occasions in the past as well as threats to public health and safety for all community residents: and

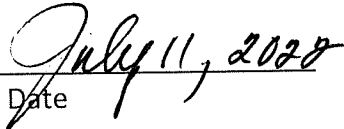

WHEREAS, All nine Middle Peninsula jurisdictions and federally recognized Tribes in the region actively participated in the update of the Plan to become the Middle Peninsula Planning District Commission Regional All Hazard Mitigation Plan 2021 within the Federal Emergency Management Agency's required 5-year period; and

WHEREAS, The Plan update recommends many mitigation strategies that will help to protect the residents and their property from the adverse effects of natural hazards that face the counties community areas.

NOW, THEREFORE, BE IT RESOLVED that the Rappahannock Tribal Council agreed to approve and adopt the Middle Peninsula Planning District Commission All Hazard Mitigation Plan 2021.

The Tribal Council of Rappahannock Tribe does hereby certify that the forgoing resolution was adopted and approved at a duly called meeting of the Tribal Council on this 16th day of July 2022, by consensus.

Resolution Number 2022-___

WHEREAS, the Upper Mattaponi Indian Tribe of Virginia, has experience severe damage from a host of hazards such as flooding from hurricanes, nor'easters, wildfires, winter storms, tornadoes and lightning on many occasions in the past century that have resulted in property losses, loss of life, economic hardships, and threats to public health and safety for all community residents, and

WHEREAS, the first Middle Peninsula Regional All Hazards Mitigation Plan ("the Plan") was undertaken as a regional planning project with all nine (9) jurisdictions participating in its development and adoption in 2006, 2011, 2016, and 2022, and

WHEREAS, all nine (9) Middle Peninsula jurisdictions and federally recognized Tribes in the region participated in the update of the AHMP within the Federal Emergency Management Agency's required 5-year period, and

WHEREAS, the Plan update recommends many mitigation strategies that will help to protect the residents and their property from the adverse effects of hazards that face the Upper Mattaponi Indian Tribe, and

WHEREAS, the Plan update was reviewed at a meeting of the Upper Mattaponi Indian Tribe Council held on 29 June 2022 as required by law.

NOW, THEREFORE, BE IT RESOLVED, by the Upper Mattaponi Indian Tribe of Virginia, that:

1. The Middle Peninsula Regional All Hazards Mitigation Plan update is hereby adopted as the official Plan for the Upper Mattaponi Indian Tribe.

2. The respective officials/staff identified in the implementation section of the Plan update are encouraged to implement the mitigation strategies and report on their activities, accomplishments, and progress to Upper Mattaponi Indian Tribe Council.
3. The Emergency Manager of the Upper Mattaponi Indian will report status updates on mitigation strategies to the Middle Peninsula Planning District Commission and the Federal Emergency Management Agency on an annual basis.

VOTING AND CERTIFICATION

This resolution was read and considered by the Tribal Council on behalf of the Tribe with 5 voting in favor, 0 voting against, and 1 abstention.

W. Fred Adams, Chief

ATTEST

The foregoing resolution was presented and votes cast as indicated on the 29th day of June in the year 2022 by the duly elected government of the Upper Mattaponi Indian Tribe with a quorum present and voting.

Carol Ann Adams, Tribal Secretary

Vision and Value Statements

The Tribe promotes the general welfare of its members by establishing duties, responsibilities and procedures for the conduct of domestic and external affairs.

All Hazard Mitigation Vision

The Tribe will strive to work with surrounding communities and local emergency responders to create an active and results-oriented all hazard mitigation plan that will make the reservation, its residents and visitors a safer and more sustainable place.

Note Concerning Sacred Sites

“The land within the Tribe’s jurisdiction and surrounding areas may contain natural and cultural resources and historic property of significance to the Tribe’s culture, history and values, including burial grounds and other sacred sites. The Tribe intends by this action to fully incorporate Sacred Sites into its disaster and emergency preparedness, mitigation and response plans and procedures by reference while addressing the needs and values of its community.

The entire Pamunkey Indian Reservation is listed on the National Register of Historic Places as an Archaeological District. Sacred sites of public knowledge include a cemetery behind the Pamunkey Indian Baptist Church and a site known as Powhatan’s Mound. We do not wish to disclose any other site.

Background: Federal Trust Lands

The U.S. government has a trust responsibility to act as a protectorate for American Indian Tribal governments. This trust responsibility was an underlying promise made by the United States through treaties and agreements with Indian tribes. The U.S. government acquired virtually all of its land through treaties or agreements with Indian tribes. Today, most lands that Indian tribes use are owned by the United States and held in trust by the U.S. government for those tribes. The U.S. government promised that if Indian tribes would accept the limited jurisdiction of the United States, it would then extend a protectorate status to tribal governments. The U. S. Supreme Court affirmed the U.S. government's trust responsibility to American Indians in the 1830s. The court ruled that when the government entered into treaties with Indian tribes, it made a promise to protect and enhance Indian tribes.

The U.S. government assumes a trust responsibility for all lands that it owns, whether they are national parks, national forests, military reserves or Indian trust lands. The government's responsibility is to manage those lands in a way that best serves the people who use them. The United States is responsible for ensuring decisions affecting Indian trust land will benefit the tribes involved. In recent years, the United States has said that every federal agency has an obligation to ensure the protection of tribal governments, even though the trust relationship is administered primarily through the Bureau of Indian Affairs.

At this time the Pamunkey Indian Reservation is NOT federal trust land but is considered by the Commonwealth of Virginia to be state trust land. The Pamunkey Tribe does intend to request the land be taken into federal trust at a later date.

Tribal Government Structure

Indian tribes have sovereign powers over their members and their territories. These powers derive from their status as sovereign nations that existed before the formation of the United States. These powers also derive from treaties with the United States and acts of Congress.

The purpose of the tribal government of the Tribe is to promote the general welfare of its citizens by establishing duties, responsibilities and procedures for the conduct of domestic and external affairs.

Pamunkey Tribe Community Profile

This section was reviewed by Chief Robert Gray. The Community Profile provides a broad overview of the Tribe's physical, geopolitical, historical, cultural and socioeconomic characteristics, based on the most currently available information.

The coordinated use and implementation of these combined documents form a sound basis for all hazard mitigation projects, plans and activities and ensure that they are tied to the King William County's land use and environmental regulations.

General Overview

The Pamunkey Indian Reservation is a Native American reservation located in King William, Virginia, United States. The reservation lies along the Pamunkey River in King William County, Virginia on the Middle Peninsula. The Pamunkey Reservation contains approximately 1,200 acres (4.8 km²) of land, 500 acres (2 km²) of which is wetlands with numerous creeks. Forty-Three families reside on the reservation and many Tribal members live in nearby Richmond, Newport News, and other parts of Virginia.

The Pamunkey Indian Tribe is one of eleven Virginia Indian tribes recognized by the Commonwealth of Virginia, and the state's first federally recognized tribe, receiving its status in January 2016. The historical tribe was part of the Powhatan paramountcy, made up of Algonquian-speaking tribes. The Powhatan paramount chiefdom was made up of over 30 tribes, estimated to total about 10,000–15,000 people at the time the English arrived in 1607. The Pamunkey tribe made up about one-tenth to one-fifteenth of the total, as they numbered about 1,000 persons in 1607. When the English arrived, the Pamunkey were one of the most powerful groups of the Powhatan chiefdom. They inhabited the coastal tidewater of Virginia on the north side of the James River near Chesapeake Bay.

The Pamunkey tribe is one of only two that still retain reservation lands assigned by the 1646 and 1677 treaties with the English colonial government. The Pamunkey reservation is located on some of its ancestral land on the Pamunkey River adjacent to present-day King William County, Virginia. The Pamunkey tribe maintains its own laws and its own governing body, which consists of a chief and seven council members. The reservation was confirmed to the Pamunkey tribe as early as 1658 by the Governor, the Council, and the General Assembly of Virginia. The treaty of 1677 between the King of England, acting through the Governor of Virginia, and several Native American tribes including the Pamunkey is the most important existing document describing Virginia's relationship towards Indian land.

Reservation Boundaries

The reservation boundary begins at the railroad crossing on Rte 673, Pocahontas Trail and ends at the Pamunkey River.

Physical Characteristics

As the Pamunkey Reservation is located in the Virginia coastal plain, it has a relatively flat topography.

Primary Transportation Connections

Ingress and egress to the reservation is solely via Rte 673, Pocahontas Trail which requires crossing a railroad track and, immediately adjacent, a low area that has flooded at times. Access to Rte 673 is solely via Rte 633, Powhatan Trail which extends for approximately one mile from the end of Rte 673 before branching off to any other access road.

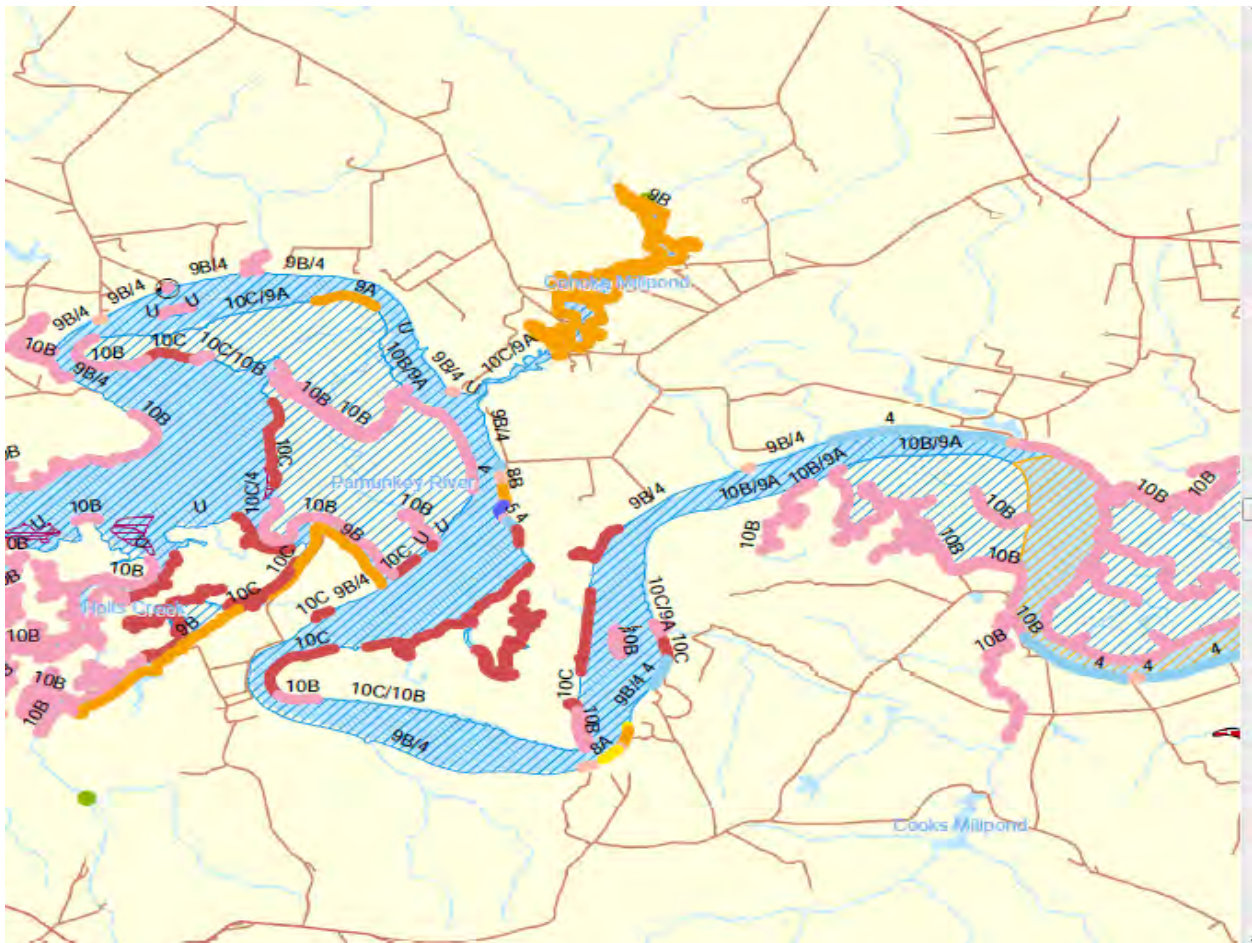

Land Use

The Pamunkey Tribe's land use consists of recreation-based activities, limited agriculture, a fish hatchery and historic, cultural sites with a museum.

Pamunkey Indian Tribe Virginia Area
Contingency Plan (Guide 58)

Climate

Climate Average Precipitation and Snowfall

At the West Point station in King William County, snow cover data was collected for 44 years between 1953 and 1997. Based on snowfall frequency and accumulation during this period, a general risk of snow cover and snow depth in a given year was calculated. Rayburn and Lozier determined that there is a 50% risk of having between 1 and 8 inches of snow on the ground for 8 days or more. This means that, in one year out of two, the Pamunkey Indian reservation will probably have snow of up to 8 inches on the ground for 8 days.

In one year out of 4, the Pamunkey Indian reservation may have snow cover up to 8 inches deep for 15 days (in other words, there is a 25% chance of having snow for 15 days).

In one year out of ten, the Pamunkey Indian reservation may have up to 8 inches of snow for 19 days (there is a 10% chance of having snow for 19 days). For deeper accumulations (greater than 8 inches), the risk is the same. There is a 10% risk of having snow cover for 2 days or more. This means that, in 1 year out of 10, this location probably will have snow cover of at least 8 inches for 2 days. The average annual snowfall for 2014 at the Pamunkey Indian reservation was 10.1 inches.

Compared to western, northern, and mountainous regions of the state, the risk of high snow accumulations in the Middle Peninsula is low and will vary amongst localities. According to the National Climatic Data Center, mean annual snowfall in the Middle Peninsula ranges from between 6 and 12 inches at the lower reaches of the region (primarily in Gloucester and Mathews Counties) to as much as 12 to 24 inches in the upper reaches of the region (primarily in Essex, King and Queen, King William, and Middlesex Counties). The proximity of adjacent water bodies bordering the region (Chesapeake Bay and its tributaries) to the Atlantic Ocean allows the Bay to retain heat and buffer to the region from intense snow. The amount of snow that falls across the watershed varies both from year to year and from location to location.

Hydrology

Based on the regions low topography, 1200+ miles of coastline, and its proximity to waterways-broad rivers, meandering creeks, wide bays and tidal marshes, the Pamunkey Reservation is highly susceptible to floods and coastal storms. Tidal surges associated with these severe storms often compound the flooding within this region.

Community Infrastructure

Critical Structure Survey

Infrastructure Name	Address	City	State	Zip	Phone
Museum & Cultural Center	175 Lay Landing Road	King William	VA	23086	(804) 339-1629

Tribal Resource Center	1084 Pocahontas Trail	King William	VA	23086	(804) 339-1629

Sacred Sites

The land within the Tribe's jurisdiction and surrounding areas may contain natural and cultural resources and historic property of significance to the Tribe's culture, history and values, including burial grounds and other sacred sites.

Railroads and Waterways

The railroad borders the northern part of the reservation with a railroad crossing on Rte 673 (Pocahontas Trail). The Pamunkey River borders the southern part of the reservation.

Emergency Response Capabilities

The Tribe employs a full time, Emergency Management Coordinator. The Emergency Management Coordinator has been active participants in county, regional, tabletop, functional and full scale exercises. The Tribe routinely conducts similar exercises internally to ensure unified command skills and responsibilities from mobilization to demobilization are maintained.

Police and Conservation Officers

Law Enforcement is provided King William County because the Pamunkey Indian Reservation is currently state trust land. When the land transfers to federal trust, the Pamunkey Tribe may choose to provide law enforcement or enter into a compact with the Commonwealth and/or King William County.

Fire Services

Provided by the King William County Fire and EMS. King William County is responsible for fire protection on state forest and park land. Because the Pamunkey Indian Reservation is currently state trust land, the County is responsible for fire protection. When the land transfers to federal trust, the Pamunkey Tribe may choose to provide fire protection or enter into a compact with King William County.

Risk Assessment: Hazards Facing the Reservation

The probability of future occurrence for each hazard is identified in the risk assessment conclusions portion of each hazard analysis. Overall risk was determined by Pamunkey Tribe assessments of hazard areas, hazard impacts, and probability of occurrence.

Natural Hazards

1 Violent Storms

A Winter Storms

- Blizzards, Heavy Snows
- Ice Storms, Sleet

B Summer Storms

- Tornadoes, Straight-line Winds
- Thunderstorms, Hail, Lightning,

2 Flood

3 Extreme Temperatures

4 Drought

Other Hazards

1 Structural Fire

2 Hazardous Materials

Natural Hazards

The future probability of some identified hazards is difficult to ascertain given the lack of data available to perform such an analysis. Prior to the next plan update, needed data on events and their impacts to improve future analysis will be researched and completed.

Hazard: Violent Storms (1).

Summer Storms include straight line wind events and are a clearly defined natural hazard that can unexpectedly cause downed trees, power outages, etc. These storms are specific to the warmer months and are clearly different and separate from other storm events.

Tornadoes

The National Weather Service (NWS) defines a tornado as a violently rotating column of air in contact with the ground and extending from the base of a thunderstorm. A condensation funnel does not need to reach to the ground for a tornado to be present; however a debris cloud beneath a thunderstorm is all that is needed to confirm the presence of a tornado, even without a condensation funnel.

Tornadoes are distinguishable from waterspouts, which are small, relatively weak rotating columns of air over water beneath a cumulonimbus or towering cumulus cloud. Waterspouts are most common over tropical or subtropical waters. The exact definition of waterspout is debatable. In most cases the term is reserved for small vortices over water that are not associated with storm-scale rotation (i.e., they are the water-based equivalent of land spouts). Yet there is sufficient justification for calling virtually any rotating column of air a waterspout if it is in contact with a water surface. Between 1950 and 2014, twelve tornadoes were reported in Gloucester County, seven in Middlesex, seven in Mathews, six in King and Queen County, two in Essex County, and seven in King William County (NCDC Storm Event Database, 2015).

Tornado Vulnerability

Weak tornadoes may break branches or damage signs. Damage to buildings (ie. mobile homes or weak structures) primarily affects roofs and windows, and may include loss of the entire roof or just part of the roof covering and sheathing. Windows are usually broken from windborne debris.

In a strong tornado, some buildings may be destroyed but most suffer damage like loss of exterior walls or roof or both; interior walls usually survive. Violent tornadoes cause severe to incredible damage, including heavy cars lifted off the ground and thrown and strong frame houses leveled off foundations and swept away; trees are uprooted, debarked and splintered.

Probability

The probability of a Tornado is difficult to ascertain given the lack of data available to perform such an analysis. Even so, Tornado events are considered to be a low-probability event, but with the potential to have a significant impact when and where they do occur.

Snow Storm

The winter months can bring a wide variety of hazards to the Middle Peninsula, including blizzards, snowstorms, ice, sleet, freezing rain, and extremely cold temperatures. All of these weather events can be experienced throughout the state, depending on the depth of cold air that is in place over the region when the storm event comes. The Middle Peninsula's biggest winter weather threats come from Northeasters or Nor'easters. These large storms form along the southern Atlantic coast and move northeast into Virginia along the Mid-Atlantic coast. Winter

storm events can bring strong winds and anything from rain to ice to snow to even blizzard conditions over a very large area. This combination of heavy frozen precipitation and winds can be quite destructive and lead to widespread utility failures and high cleanup costs. Nor'easters may occur from November through April, but are usually at their worst in January, February, and March.

The impacts of winter storms are minimal in terms of property damage and long-term effects. The most notable impact from winter storms is the damage to power distribution networks and utilities. Severe winter storms with significant snow accumulation have the potential to inhibit normal functions of the Middle Peninsula. Governmental costs for this type of event are a result of the needed personnel and equipment for clearing streets. Private sector losses are attributed to lost work when employees are unable to travel. Homes and businesses suffer damage when electric service is interrupted for long periods. Health threats can become severe when frozen precipitation makes roadways and walkways very slippery and due to prolonged power outages and if fuel supplies are jeopardized. Occasionally, buildings may be damaged when snow loads exceed the design capacity of their roofs or when trees fall due to excessive ice accumulation on branches. The primary impact of excessive cold is increased potential for frostbite, and potentially death as a result of over-exposure to extreme cold. Some secondary hazards extreme/excessive cold present is a danger to livestock and pets, and frozen water pipes in homes and businesses.

Hazard: Flooding and erosion (2).

Floodplain Properties and Structures

While floodplain boundaries are officially mapped by FEMA's National Flood Insurance Program (NFIP), flood waters sometimes go beyond the mapped floodplains and/or change courses due to natural processes (e.g., accretion, erosion, sedimentation, etc.) or human development (e.g., filling in floodplain or floodway areas, increased imperviousness areas within the watershed from new development, or debris blockages from vegetation, cars, travel trailers, mobile homes and propane tanks).

In addition to tidal flooding, some regions of the Middle Peninsula are subject to flooding events induced by rain associated with a hurricane or a tropical storm, which can produce extreme amounts of rainfall in short periods of time. In August 2004, Tropical Storm Gaston dumped 14 inches of rain in a matter of hours on King William County, washing out numerous roads and bridges. This storm qualified the county for disaster aid through a Presidential Disaster Declaration.

Flooding of vacant land or land that does not have a direct effect on people or the economy is generally not considered a problem. Flood problems arise when floodwaters cover developed areas, locations of economic importance, infrastructure or any other critical facility. Low-lying land areas of Essex, Gloucester, Mathews, and Middlesex Counties and the lower reaches of King and Queen and King William Counties are highly susceptible to flooding, primarily from coastal storm when combined with tidal surges.

Probability

Floods typically are characterized by frequency, for example, the “1%-annual chance flood,” commonly referred to as the “100-year” flood. While more frequent floods do occur, in addition to larger events that have lower probabilities of occurrence, for most regulatory and hazard identification purposes, the 1%-annual chance flood is used.

Hazard: Extreme Temperatures (3).

Extreme heat, generally associated with drought conditions, is a phenomenon that is generally confined the months of July and August, although brief periods of excessive heat have occurred in June and September. Extreme heat can be defined either by actual air temperature, or by the heat index, which relates the combined effects of humidity and air temperature on the body. Extreme heat is not an annual event in the Middle Peninsula. Although heat advisories are issued near every year, life-threatening extreme heat is a rare occurrence in the Middle Peninsula region. The frequency of occurrence is dependent entirely upon the extreme heat criteria used (i.e. heat index vs. air temperature). The primary impact of extreme heat is increased potential for hyperthermia, which can be fatal to the elderly and infirmed. In addition, there is an increased risk of dehydration, if proper steps are not taken to ingest adequate amounts of non-alcoholic fluids. The impact of extreme heat is most prevalent in urban areas, which are not found in the Middle Peninsula. Secondary impacts of excessive heat are severe strain on the electrical power system, and potential brownouts or blackouts.

Drought(4).

Empirical studies conducted over the past century have shown that drought is never the result of a single cause. It is the result of many causes, often synergistic in nature, and therefore often difficult to predict more than a month or more in advance. In fact, an area may already be in a drought before drought is even recognized. The immediate cause of drought is the predominant sinking motion of air (subsidence) that results in compressional warming or high pressure, which inhibits cloud formation and results in lower relative humidity and less precipitation. Most climatic regions experience varying degrees of dominance by high pressure, often depending on the season. Prolonged droughts occur when large-scale anomalies in atmospheric circulation patterns persist for months or seasons (or longer). The extreme drought that affected the United States and Canada during 1988 resulted from the persistence of a large-scale atmospheric circulation anomaly (National Drought Mitigation Center, 2004). There have been four major statewide droughts since the early 1900's (USGS, 2002).

Other Hazards

Structural Fire (1)

An urban-wild land interface fire includes situations in which a wildfire enters an area that is developed with structures and other human developments. In UWI fires, the fire is fueled by both naturally occurring vegetation and the urban structural elements themselves. According to the National Fire Plan issued by the U.S. Departments of Agriculture and Interior, the urban-wild land interface is defined as “...the line, area, or zone where structures and other human development meet or intermingle with undeveloped wild lands or vegetative fuels.”

A wildfire hazard profile is necessary to assess the probability of risk for specific areas. Certain conditions must be present for a wildfire hazard to occur. A large source of fuel must be present; the weather must be conducive (generally hot, dry, and windy); and fire suppression sources must not be able to easily suppress and control the fire. After a fire starts, topography, fuel, and weather are the principal factors that influence wildfire behavior. VDOF defines woodland home communities as clusters of homes located along forested areas at the wild land-urban interface that could possibly be damaged during a nearby wildfire incident.

The Virginia wildfire season is normally in the spring (March and April) and then again in the fall (October and November). During these months, the relative humidity is 5-76 usually lower and the winds tend to be higher. In addition, the hardwood leaves are on the ground, providing more fuel and allowing the sunlight to directly reach the forest floor, warming and drying the surface fuels.

Probability

The probability of wildfires is difficult to predict and is dependent on many things, including the types of vegetative cover in a particular area, and weather conditions, including humidity, wind, and temperature.

Hazardous Materials (2)

HAZMAT can be defined as a material (as flammable or poisonous material) that would be a danger to life or to the environment if released without precautions. Furthermore, a hazardous material is any substance or material in a quantity or form that may pose a reasonable risk to health, the environment, or property. The risk of hazardous material risks will vary amongst Middle Peninsula as it includes incidents involving substances such as toxic chemicals, fuels, nuclear wastes and/or products, and other radiological and biological or chemical agents. In addition to accidental or incidental releases of hazardous materials due to fixed facility incidents and transportation accidents, regions must be ready to respond to hazmat releases as potential terrorism. It's important to note that the risk of a Hazmat incident are unpredictable and will vary amongst Middle Peninsula localities.

HAZMAT is carried by a number of vehicles throughout the region, and while the Commonwealth has a HAZMAT plan, local jurisdictions would be the first responders on scene if an accident/spill were to occur.

HAZMAT Vulnerability

The effects of hazardous material is ultimately dependent on the type and amount of hazardous material, however injuries and/or deaths could occur as a result of a hazmat incident. They can pose risk to health, safety, and property during transportation. According to VDEM, "A business might have to evacuate depending on the quantity and type of chemical released or local officials might close a facility or area for hours, possibility days until a substance is properly cleaned up. Businesses that store, produce or transport hazardous materials will be fined for spills. The business involve in the release would typically be responsible for the cost of the clean up. A business that is located near the site of the hazardous site of a hazardous materials spill or release is likely to be unaffected unless the substance is airborne and poses a threat to areas outside the accident site. In that case local emergency official would order an immediate evaluation of areas that could potentially be affected. Depending on the type of hazardous substance, it could take

hours or days for emergency official to deem the area safe for return.” Ultimately this would impact business productivity and could impact the local/regional economy.

Hazards Not Addressed In This Plan

Some hazards addressed by Virginia’s All-Hazard Mitigation Plan are not addressed in this Plan. After profiling these hazards, it was determined that a full risk assessment was not necessary because risks from these hazards are extremely low for the Tribe’s land located in King William County and mitigation efforts either are unnecessary or difficult to address.

Hazards Addressed In This Plan

The Tribe has decided to focus on addressing the following hazards in this Plan: Wildfire, Flood, Violent Storms (includes both winter storms and summer storms), Structural Fire, and Hazardous Materials.

Goals and Mitigation Strategies

Hazard Mitigation, as defined by the Disaster Mitigation Act of 2000, is any sustained action taken to reduce or eliminate the long-term risk to human life and property from hazards. Studies on Hazard Mitigation show that for each dollar spend on mitigation; society saves an average of four dollars in avoided future losses (Multi-hazard Mitigation Council, 2001). Mitigation can take many different forms from planning, construction projects to public education.

This mitigation strategy for the Tribe, in partnership with federal and state planning activities establish a common set of goals. The goals are broad, forward-looking statements that outline in general terms what the Tribe would like to accomplish.

Mitigations Goals:

1. Maintain and enhance the Reservation’s capacity to continuously make it less vulnerable to all hazards.
2. Improve the coordination and communication with Federal, State, Other Tribal, Regional, Local emergency management personnel and other potential partners.
3. Improve communication with Tribal members to make the community less vulnerable to all hazards, and increase their understanding of hazard mitigation.

Objectives:

1. Prevent hazard losses through planning and administrative activities.
2. Protect tribal members by structural security measures such as the building of a “safe house” for tornado or flooding risk reduction.
3. Educate Tribal members through outreach projects, media campaigns, and social media about safety and risk reduction.
4. Improve and maintain structures and infrastructure to reduce the impact of hazards on people and property.

Mitigation Strategy

The Pamunkey Tribe’s Mitigation Strategy is:

1. Ongoing with a long range strategy plan being currently conducted
2. Reviewed periodically
3. Agile in order to address current needs within the overall goals of the Plan
4. Responsive to the community
5. Coordinated with partners

Priorities

The coordination of the process to establish priorities for the hazard mitigation action plan is the responsibility of Tribal Emergency Manager. Depending on the type, extent, cost and other factors about specific actions, the responsibility for approvals, funding and approaches may fall with another part of the Tribal Government.

Prioritization of Hazard

The Tribe is susceptible to a number of hazards, ranging from natural hazards to deliberate acts of vandalism, sabotage and violence. The Tribe has identified seven potential hazards.

Although it is beneficial to review and prepare for likely, specific hazards, such as Tornados, Wildfires and Winter Storms, which are frequent and have the potential to be a threat to human life and infrastructure, this approach alone does not protect the community.

Because of this, the goals, objectives and strategies are not based on individual threats of specific Hazards, but the resource being protected. Many of these resources are vulnerable to specific hazards, and risk from those specific hazards will be addressed.

Prioritizing Strategies

The process used by the Tribe's Emergency Management Coordinator involved first identifying goals and their respective objectives based on risk assessments and review of the historical risks and probabilities.

This information was presented to the Tribe by the Emergency Management Coordinator. The Tribe reviewed the information based on the following.

Actions are based on:

1. The potential risk associated with each particular hazard;
2. The ability of the proposed action to have a positive impact upon minimizing or eliminating the risk from the hazard;
2. Overall cost of associated with the proposed action; and
4. The ability of resources to fund and implement the action in a timely manner

Capability Assessment

This benefits the Tribe in obtaining grant funding for equipment and hazard mitigation plan updates as Virginia includes Tribal Governments as an eligible government entity both on the regional and state level. This process demonstrates the commitment Virginia has to the Tribal Governments than having them apply through the county which contains their Tribal lands or directly to the federal government for these. The Virginia Department of Emergency Management (VDEM) Grants Office works cooperatively with the Reservation's Emergency Manger in the application and grant monitoring process.

The Planning Process

The Tribe used the planning process developed by the Federal Emergency Management Agency (now U.S Dept of Homeland Security/FEMA) as a guide for its planning process. The four elements of that process are:

1. Organize Resources
 - a. Create Tribal Annex to existing Middle Peninsula Hazardous Mitigation Plan
 - b. Fire and EMS MOA between Pamunkey Tribe and Prince William County
2. Assess Risk
 - a. Identify and prioritize natural, technical and human caused hazards
 - b. Prioritize those hazards
 - c. Identify how those hazards could affect key facilities
3. Develop Mitigation Plan
 - a. Develop mitigation strategies
 - b. Determine priorities of addressing potential hazards
4. Implement the plan and monitor the progress
 - a. Community members from the Pamunkey Tribe and King William County put the plan into action
 - b. Evaluate efforts for effectiveness
 - c. Revisit and revise plans annually

Authority

- U.S. Public Law 106-390 (Disaster Mitigation Act of 2000).

Documentation of the Planning Process

The Tribe assigned the Tribal Emergency Manager as the entity responsible to guide and direct the planning process.

The Tribe coordinated with King William County bordering the reservation. Emergency services professionals from King William County are invited to the Tribe's meetings where the Disaster Mitigation Planning is discussed. This relationship is ongoing, and has grown to the point that all parties are full partners and exercise plans together.

Public Participation

The Tribe conducts monthly tribal meetings. These meetings were used as the platform to inform the community about the Tribe's Hazard Mitigation grant and planning. In addition Tribe member feedback about past hazards and concerns were documented and recorded at these same meetings to meet the hazard mitigation grant requirements. Chief Robert Gray, the Tribe's Emergency Management Coordinator, facilitates the discussion on hazard mitigation planning. This information was used in the risk assessments and action plans.

HAZARD MITIGATION PLAN SURVEY

The Reservation's Emergency Management Office is currently in the process of updating its Hazard Mitigation Plan. An important area is to receive community feedback on what hazards are facing residents that may affect their daily lives.

Below is a list of hazards which we would like to have you make comments on about your concerns if any of these would affect you or your families. Also, if there are areas we missed, please feel free to add those concerns. We have also provided an area for comments – you may use this area to provide any information or opinion you believe we should incorporate into the planning.

Once you have written your comments please bring back to the next Community Meeting.

Continued Public Involvement

Community involvement is an essential ingredient of the planning process. We will continue to use all of our communications opportunities, including regularly scheduled meetings and our website to engage the community in its mitigation planning and implementation.

Project Implementation

Project implementation will be the responsibility of the Tribe's Emergency Management Coordinator.

Each year the action plan will be reviewed and updated by the Emergency Management Coordinator. The Emergency Management Coordinator will inform Tribe members in which projects have been completed and those left to be implemented. Those activities not completed during the first year will be re-evaluated and included in the first year of the new action plan if deemed appropriate.

Incorporation into Existing Planning Resources

This action plan serves as a guide to spending priorities but will be adjusted annually to reflect current needs and financial resources. Some strategies will require outside funding from the state or federal agencies to implement. Priority for Capital Improvement on the Pamunkey Reservation is the establishment of a safe house with development of directions for residents to follow in the event of wind or flood events. If outside funding is not available the strategy will be set aside until new sources of funding can be identified.

Project Monitoring, Evaluation, Updating and Plan Adoption

The Hazard Mitigation Plan Annex will be reviewed and updated yearly by the Emergency Management Coordinator. The Emergency Management Coordinator will advise the community 30 days in advance of the monthly community meeting of the intent to review the mitigation plan. The content and scope of the Plan review and evaluation will address the following questions:

1. Hazard Identification: Have the risks and hazards changed?
2. Goals and objectives: Are the goals and objectives still able to address the current and expected conditions?
3. Mitigation Projects and Actions:
 - a. What is the status of the project?
 - b. Has it been completed? If not completed, has it been started?
 - c. Identify the date that the project was started and any challenges faced.
 - d. What percentage has been completed

- e. And the amount of funds expended?
- f. The status of funding for the project: projected costs less than expected, currently on target or will require additional funds.

For FEMA supported projects, progress reports will be submitted to FEMA on a quarterly basis, or as required throughout the project duration. The quarterly reporting will depend on the type of project, its funding source and the associated requirements. At a minimum, the quarterly report shall address:

1. Project Completion Status
2. Project Challenges/Issues (if any)
3. Budgetary Considerations (Cost Overruns or Underruns)
4. Detailed Documentation of Expenditures

The VDEM Grants Department will handle the financial reports and the Tribal Emergency Management Coordinator will monitor and prepare the progress reports. When FEMA supported projects are completed, the project closeout documents will be prepared by the VDEM Grants Department with any necessary input by the Tribal Emergency Management Coordinator.

The State and FEMA approved Plan will be presented before the Tribal Council for an official concurrence and adoption of the changes. Community members will have access to the Plan at the office of the Tribal Emergency Management Coordinator.

Going forward the Tribal Emergency Management Coordinator will participate with the Middle Peninsula PDC in their annual review to ensure regional impacts and initiatives are shared and included the Middle Peninsula Hazard Mitigation Plan.

Tribal Assurances

The Tribe will continue to comply with all applicable Federal statutes and regulations in effect for those periods when the Tribe receives grant funding.

Appendix A: HAZARD MITIGATION STRATEGY/ACTIONS

2018 Mitigation Goals

1. Winter/summer storm risks reduced.
2. Flooding risk reduced
3. Wildfires risks reduced.
4. Hazardous Material release risk reduced.

Each of the 2018 mitigation strategy/actions is discussed below:

- 1) Construction of a safe house on the reservation for storm sheltering.

This strategy/action is to be scheduled in 2018 with the application for a FEMA Hazardous Mitigation Grant.

- 2) NOAA weather radios to be placed in all public buildings for early storm warnings.

This strategy/action is to be scheduled in 2018. They will maintain their rating as a NOAA Storm Ready Community by recertifying every two years.

- 3) Update land use plans to include flood plains; prepare flood maps

This strategy/action is to be scheduled in 2018.

- 4) Ensure new residential home sites have large enough fire breaks to reduce wildfire risks, and conduct yearly controlled burns.

This action is to be scheduled in 2018. It has been determined to be a viable ongoing strategy/action.

After the assessment was completed, the Tribal Emergency Management Coordinator, using the response from the community members, then brainstormed new strategies/actions to be added, reviewing the results of the vulnerability analysis, the capability assessment, and the goals and objectives. Each strategy/action was reviewed based on the categories of the Tribe's cultural beliefs, spirituality, care takers of the land and to ensure adherence to Tribal laws, and statutes. Once the strategies/actions were finalized, the lead agency, potential funding sources and timeframe was completed for each strategy/action.

The following table includes the strategies for the 2018 plan and indicates the status of the actions, who is responsible (lead agency) potential funding sources and the timeframe.

Strategies/Actions to Mitigate Effects of Hazards

ALL HAZARDS

Goal	Strategy/Action	Status: New/Ongoing /Completed	Lead Agency	Potential Funding Sources	Timeframe
2018 #1	Tribe members vulnerable to severe Summer storms such as tornado activity. Action desired is to construct a safe house of the reservation for storm sheltering.	New	Emergency Management Coordinator	FEMA Grants	Ongoing
2018 #1	NOAA weather radios to be placed in all government buildings for early storm warnings	New	Emergency Management Coordinator	Net Revenue	Ongoing

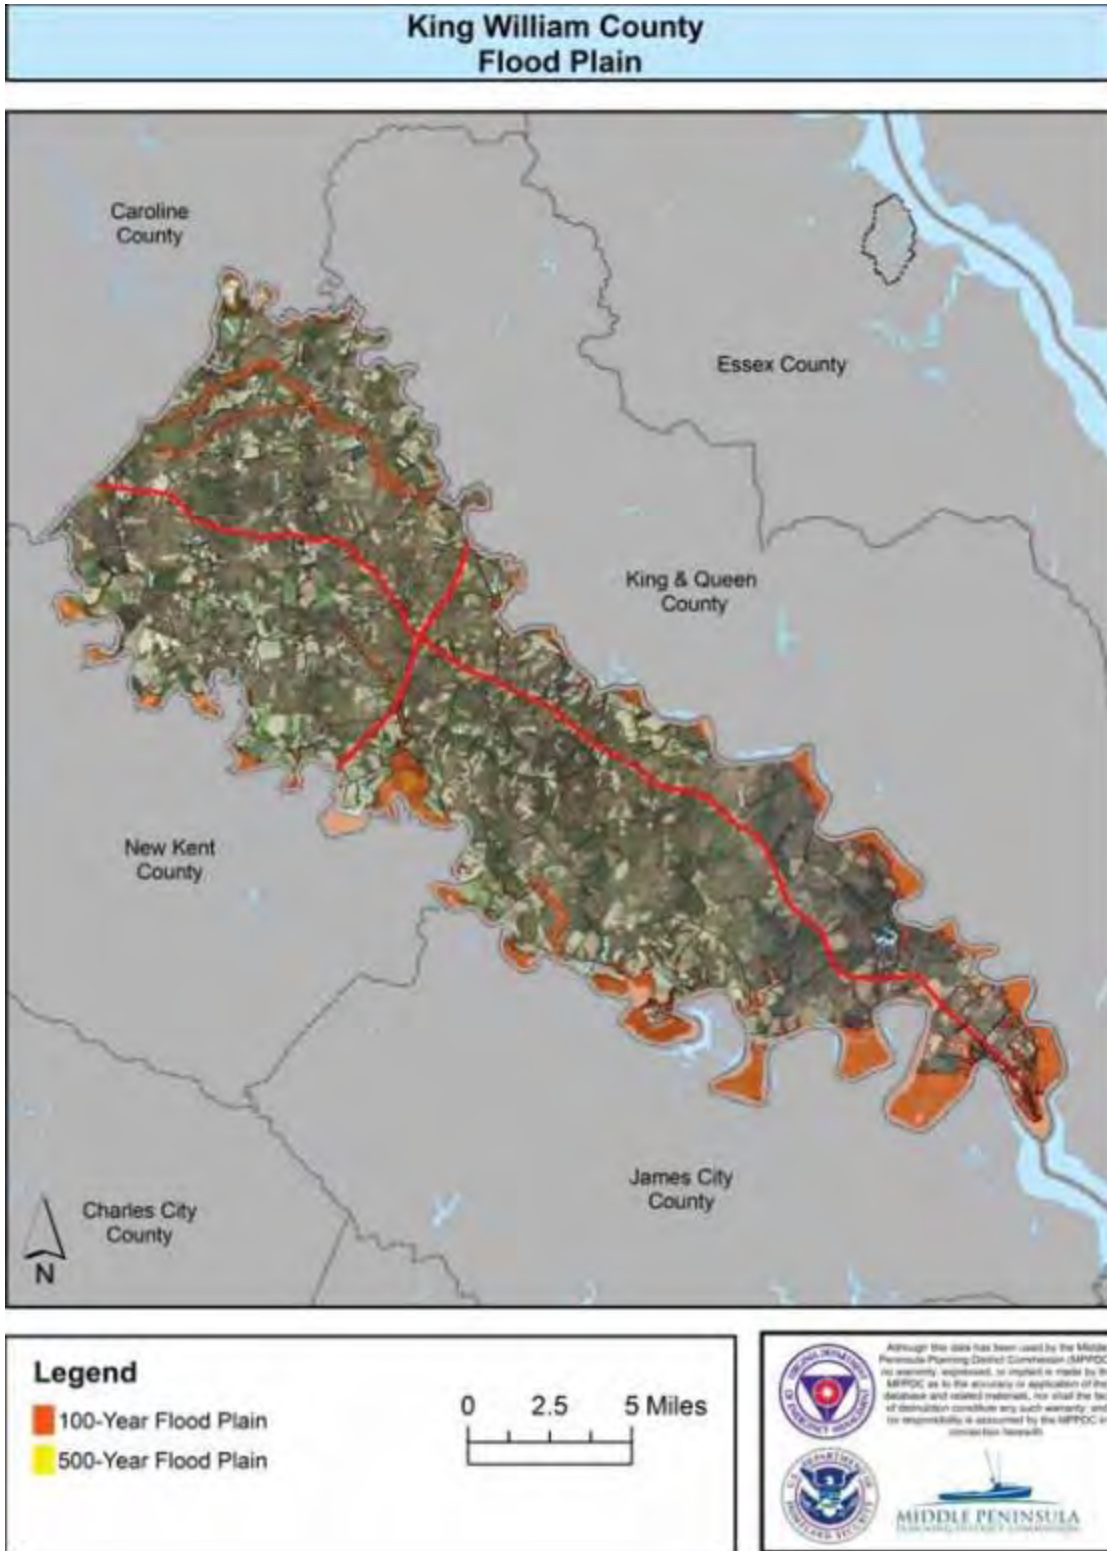

Goal	Strategy/Action	Status: New/Ongoing /Completed	Lead Agency	Potential Funding Sources	Timeframe
FLOOD <i>Probability-High, Impact-Moderate to High and Overall Risk-High</i>					
2018 #2	Update land use plans to include flood plains; prepare flood maps	No SFHA	Emergency Management Coordinator	N/A	N/A

Dear Mr. Jake Shaw,

This is authorization for MPPDC staff to request funding through Virginia Department of Conservation and Recreation's Community Flood Preparedness Fund Round 4.

If you have any questions about the proposal application, please feel free to reach out to me by email at llawrence@mppdc.com or by phone at 804-758-2311.

Sincerely,

Lewis Lawrence

		The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on **11/2/2023 at 8:34 AM** and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Chapter 8.5 FLOODPLAIN MANAGEMENT¹

ARTICLE I. IN GENERAL

Sec. 8.5-1. Title.

This chapter shall be known and may be cited as the Floodplain Management Ordinance of Gloucester County, Virginia.

(Ord. of 7-7-87, § 1-1; Ord. of 8-3-2010)

Sec. 8.5-2. Definitions.

For the purposes of this chapter:

Accessory structure means a structure situated on the same parcel of property as a principal structure and the use of which is incidental to the use of the principal structure. Accessory structures are defined as being not larger than 600 square feet in flood zones AE, A and AO. Within Coastal A and V Zones, accessory structures are defined as being not larger than 100 square feet.

Agricultural structure means any structure used exclusively for agricultural purposes or in connection with the production, harvesting, storage, raising, or drying of agricultural commodities and livestock.

Area of special flood hazard means land in the community floodplain subject to a one (1) percent or greater chance of flooding in any given year. The area may be designated as Zone A, AE, AO, Coastal A, V, or VE on the official Flood Insurance Rate Map (FIRM) for Gloucester County and defined as follows:

1. *A Zone* means those areas subject to inundation by the one percent annual chance flood event which were determined using approximate methodologies and for which no detailed flood profile and no detailed flood elevations exist. For these areas, the base flood elevations and floodway information from federal, state, and other acceptable sources shall be used, when available. Where the specific one percent annual chance flood elevation cannot be determined for this area using other sources of data, such as the U.S. Army Corps of Engineers Floodplain Information Reports, U.S. Geological Survey Flood-Prone Quadrangles, etc., then the applicant for the proposed use, development and/or activity shall determine this base flood elevation.
2. *AE Zone* means areas subject to inundation by the 1 percent annual chance flood event determined by detailed methods. Base Flood Elevations (BFE) are identified on the FIRM.

¹Editor's note(s)—An ordinance adopted July 7, 1987, amended the Code by adding provisions designated as ch. 8.5 by the editor. Titles and classification of articles and sections herein have also been designated by the editor, as authorized by the ordinance.

Cross reference(s)—Erosion and sediment control, ch. 7.5; drainage and flood control in subdivisions, § 15-13; site plans, ch. 15.5; wetlands zoning, ch. 20; zoning, app. B.

-
3. *AO Zone* means an area of shallow flooding with a 1 percent or greater annual chance of flooding to an average depth of 1 to 3 feet where a clearly defined channel does not exist, where the path of flooding is unpredictable, where velocity flow may be evident. Such flooding is characterized by ponding or sheet flow.
 4. *Coastal A Zone* means flood hazard areas that have been delineated as subject to wave heights between 1.5 feet and 3 feet, and identified on the FIRM as areas seaward of the Limit of Moderate Wave Action (LiMWA).
 5. *V or VE Zone* means those areas that are known as Coastal High Hazard areas, extending from offshore to the inland limit of a primary frontal dune along an open coast subject to high velocity wave action 3 feet or greater.

Base flood means the flood elevation having a one percent chance of being equaled or exceeded in any given year (formerly known as the one hundred-year flood).

Base flood elevation (BFE) means the water surface elevation of the base flood, that is, the flood level that has a one percent chance of occurrence in any given year as specified on the community's Flood Insurance Rate Map.

Basement means any area of a building having its floor subgrade (below ground level) on all sides.

Board of building code appeals means the board appointed to review appeals made by individuals with regard to decisions of the floodplain administrator in the interpretation of this chapter, as defined by section 5-35, et seq., of this Code.

Breakaway wall means a wall that is not part of the structural support of the building and is intended through its design and construction to collapse under specific lateral loading forces, without causing damage to the elevated portion of the building or supporting foundation system.

Buffer modification means an approved reduction of the one-hundred-foot resource protection area buffer as defined by section 5.5-3 of this Code.

Coastal high hazard area means an area of special flood hazard extending from offshore to the inland limit of a primary frontal dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources.

Critical facility means those structures or facilities which produce, use or store highly volatile, flammable, explosive, toxic and/or water-reactive materials; hospitals, nursing homes and housing which are likely to contain occupants who may not be sufficiently mobile to avoid death or injury during a flood event; police stations, vehicle and equipment storage facilities and emergency operations centers which are needed for flood response activities before, during and after a flood event; and public and private utility facilities which are vital to maintaining or restoring normal services to flooded areas before, during and after a flood event. Structures used solely for private residential purposes are excluded from this definition.

Development means any man-made change to improved or unimproved real estate, including, but not limited to, buildings or other structures, mining, dredging, filling, grading, paving, excavation, or drilling operations or storage of equipment or materials.

Elevated building means a non-basement building built to have the lowest floor elevated above the ground level by means of solid foundation perimeter walls, pilings, or columns (posts and piers).

Elevation certificate (EC) means a Federal Emergency Management Administration (FEMA) document providing flood related information for regulatory and insurance purposes.

Encroachment means the advance or infringement of uses, plant growth, fill, excavation, buildings, permanent structures or development into a floodplain, which may impede or alter the flow capacity of a floodplain.

Flood means a temporary inundation of normally dry land areas.

Flood-related erosion means the collapse or subsidence of land along the shore of a lake or other body of water as a result of undermining caused by waves or currents of water exceeding anticipated cyclical levels or suddenly caused by an unusually high water level in a natural body of water, accompanied by a severe storm, or by an unanticipated force of nature, such as a flash flood or an abnormal tidal surge, or by some similarly unusual and unforeseeable event which results in flooding.

Flood-related erosion area or *flood-related erosion prone area* means a land area adjoining the shore of a lake or other body of water, which due to the composition of the shoreline or bank and high water levels or wind-driven currents, is likely to suffer flood-related erosion damage.

Flood Insurance Rate Map (FIRM) means the official map of the community, on which the Federal Emergency Management Agency has delineated both the special hazard areas and the risk premium zones applicable to the community. A FIRM that has been made available digitally is called a Digital Flood Insurance Rate Map (DFIRM).

Flood Insurance Study (FIS) means a report by FEMA that examines, evaluates and determines flood hazards and, if appropriate, corresponding water surface elevations, or an examination, elevation and determination of mudflow and/or flood-related erosion hazards.

Floodplain means (1) a relatively flat or low land area adjoining a river, stream or watercourse which is subject to partial or complete inundation; or (2) an area subject to the unusual and rapid accumulation or runoff of surface waters from any source.

Floodplain administrator means an individual who is designated by the County Administrator to administer and implement the regulations herein.

Floodproofing means any combination of structural and nonstructural additions, changes or adjustments to properties and structures which reduce or eliminate flood damage to lands, water and sanitary facilities, structures and contents of buildings.

Floodway means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than one foot at any point within the community.

Floodway fringe means the area between the floodway and base flood floodplain boundaries. The floodway fringe encompasses the portion of the floodplain that could be completely obstructed without increasing the water surface elevation of the base flood by more than one (1.0) foot at any point (shown on FIRM).

Freeboard means a factor of safety usually expressed in feet above a flood level for purposes of floodplain management.

Functionally dependent use means a use which cannot perform its intended purpose unless it is located or carried out in close proximity to water. The term includes only docking facilities, port facilities that are necessary for the loading and unloading of cargo or passengers, and shipbuilding and ship repair facilities, but does not include long-term storage or related manufacturing facilities.

Highest adjacent grade means the highest natural elevation of the ground surface prior to construction next to the proposed walls of a structure.

Historic structure means any structure that is:

- (a) Listed individually in the National Register of Historic Places;
- (b) Certified or preliminarily determined by the Secretary of the Interior as contributing to the historical significance of a registered historic district or a district preliminarily determined by the Secretary to qualify as a registered historic district;
- (c) Individually listed on the Virginia inventory of historic places; or

-
- (d) Individually listed on the local inventory of historic places that has been certified by and approved by the state program.

Hydrologic and Hydraulic Engineering Analysis means an analysis performed by a licensed professional engineer, in accordance with standard engineering practices that are accepted by the Virginia Department of Conservation and Recreation and FEMA, used to determine the base flood, other frequency floods, flood elevations, floodway information and boundaries, and flood profiles.

Land development means (i) the improvement of one (1) lot, or two (2) or more contiguous lots, tracts, or parcels of land for any purpose involving (a) a group of two (2) or more buildings, or (b) the division or allocation of land or space between or among two (2) or more existing or prospective occupants by means of, or for the purpose of, streets, common areas, leaseholds, condominiums, building groups or other features; or (ii) a subdivision of land.

Letters of Map Change (LOMC) means an official FEMA determination, by letter, that amends or revises an effective Flood Insurance Rate Map or Flood Insurance Study. Letters of Map Change include:

1. *Letters of Map Amendment (LOMA)*: an amendment based on technical data showing that a property was incorrectly included in a designated special flood hazard area. A LOMA amends the current effective Flood Insurance Rate Map and establishes that a parcel of land as defined by metes and bounds or structure is not located in a special flood hazard area.
2. *Letter of Map Revision (LOMR)*: a revision based on technical data that may show changes to flood zones, flood elevations, floodplain and floodway delineations, and planimetric features. A Letter of Map Revision Based on Fill (LOMR-F) is a determination that a structure or parcel of land has been elevated by fill above the base flood elevation and is, therefore, no longer exposed to flooding associated with the base flood. In order to qualify for this determination, the fill must have been permitted and placed in accordance with the community's floodplain management regulations.
3. *Conditional Letter of Map Revision (CLOMR)*: a formal review and comment as to whether a proposed flood protection project or other project complies with the minimum NFIP requirements for such projects with respect to delineation of special flood hazard areas. A CLOMR does not revise the effective Flood Insurance Rate Map or Flood Insurance Study.

Lowest floor means the lowest floor of the lowest enclosed area (including basement). An unfinished or flood resistant enclosure, usable solely for parking of vehicles, building access or storage in an area other than a basement area is not considered a building's lowest floor; provided, that such enclosure is not built so as to render the structure in violation of the applicable non-elevation design requirements of 44 CFR 60.3 of the Code of Federal Regulations.

Manufactured home means a structure subject to federal regulation, which is transportable in one or more sections; is eight body feet or more in width and forty body feet or more in length in the traveling mode, or is 320 or more square feet when erected on site; is built on a permanent chassis; and is designed to be used as a single-family dwelling, with or without a permanent foundation, when connected to the required utilities.

Manufactured home park or subdivision (Existing) means a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale.

Mean sea level means, for purposes of the National Flood Insurance Program, the National Geodetic Vertical Datum (NGVD) of 1988 or other datum, to which base flood elevation shown on a community's flood insurance rate map are referenced.

Nonconforming structure means a structure or use of a structure or premises which lawfully existed before the enactment of these provisions.

Principally above ground means where at least fifty-one (51) percent of the actual cash value of a structure, not including land value, is above ground.

Recreational vehicle means a vehicle which is built on a single chassis; contains four hundred feet (400) square feet, or less, when measured at the largest horizontal projection; is designed to be self-propelled or permanently towable by a light duty truck; and is designed primarily not for use as a permanent dwelling but as temporary living quarters for recreational camping, travel, or seasonal use.

Regulatory floodway means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than a designated height (one (1) foot).

Repetitive Loss Structure means a building covered by a contract for flood insurance that has incurred flood-related damages on at least two occasions during a 10-year period ending on the date of the event for which a second claim is made, in which the cost of repairing the flood damage, on the average, equaled or exceeded 25 percent of the market value of the building at the time of each flood event.

Resource protection area (RPA) means lands at or near the shoreline that have an intrinsic value to water quality due to the ecological and biological processes they perform, or are sensitive to impacts which may result in significant degradation to the quality of state waters. This definition includes tidal wetlands, tidal shores, non-tidal wetlands adjacent to tidal wetlands, and a one hundred (100) foot buffer area adjacent to and landward of the components listed above, and along both sides of any perennial stream, all as defined in section 5.5-3 of this Code.

Special flood hazard area means the land in the floodplain subject to a one percent (1%) or greater chance of being flooded in any given year.

Start of construction - For other than new construction and substantial improvement under the Coastal Barriers Resource Act (P.L. - 97-348), means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, rehabilitation, addition, placement, substantial improvement or other improvement was within 180 days of the permit date. The actual start means either the first placement of permanent construction of a structure on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footings, piers, or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main structure. For substantial improvement, the actual start of the construction means the first alteration of any wall, ceiling, floor, or other structural part of the building, whether or not that alteration affects the external dimensions of the building.

Structure means a walled and roofed building, including a gas or liquid storage tank, that is principally above ground, as well as a manufactured home.

Subdivision means the division or redivision of lots, tracts, or parcels of land by any means into two (2) or more lots, tracts, parcels, or other divisions of land, including a change in existing lot lines for the purpose, whether immediate or future, of lease, transfer of ownership, or building, or lot development.

Substantial damage means damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed fifty (50) percent of the market value of the structure before the damage occurred.

Substantial improvement means any repair, reconstruction, or improvement of a structure, the cost of which equals or exceeds fifty (50) percent of the market value of the structure either (a) before the improvement or repair is started, or (b) if the structure has been damaged and is being restored, before the damage occurred. For the purposes of this definition, "substantial improvement" is considered to occur when the first alteration of any wall, ceiling, floor, or other structural part of the building commences, whether or not that alteration affects the external dimensions of the structure. The term does not, however, include either (1) any project for improvement of a structure to comply with existing state or local health, sanitary, or safety code specifications which are solely

necessary to assure safe living conditions, or (2) any alteration of a structure listed on the National Register of Historic Places or a state inventory of historic places.

Variance means a grant of relief by a community from the terms of a floodplain management regulation.

Violation means the failure of a structure or other development to be fully compliant with Gloucester County's floodplain management regulations.

Water dependent use or facility means a development of land that cannot exist outside of the resource protection area (RPA) and must be located on the shoreline because of the intrinsic nature of its operation. These facilities include, but are not limited to, ports, the intake and outfall structures of power plants, water treatment plants, sewage treatment plants, and storm sewers, as well as marinas, boat docking structures, beaches and other public water orientated recreation areas, and fisheries and other marine resource facilities.

(Ord. of 7-7-87, Art. II; Ord. of 9-6-94; Ord. of 8-3-2010; Ord. of 9-2-2014(2); Ord. of 9-21-2021)

Sec. 8.5-3. Statement of intent.

These regulations shall apply to all property located within an area identified as being subject to inundation by water of the base flood event, and as such shall supplement the regulations of the zoning district within which such property is located. These regulations are intended to ensure the health, safety and general welfare of the public by ensuring that inhabitants and property within a designated floodplain area are safe from damage due to flooding. This chapter complies with the requirements of the National Flood Insurance Program (42 U.S.C. 4001—4128) of the Federal Insurance Administration. These regulations are necessary in order for all property owners within the county to be eligible for the National Flood Insurance Program and thereby purchase such insurance at nominal rates. Where these regulations are at variance with the general regulations of the county, it is intended that these regulations shall apply. Records of actions associated with administering this chapter shall be kept on file and maintained by or under the direction of the floodplain administrator in perpetuity.

(Ord. of 7-7-87, § 1-2; Ord. of 8-3-2010; Ord. of 9-21-2021)

Sec. 8.5-4. Authority.

This chapter is adopted pursuant to the authority granted by Va. Code Sections 15.2-2280 and 10.1-600 et seq., and all amendments thereto.

(Ord. of 7-7-87, § 1-3; Ord. of 8-3-2010)

Sec. 8.5-5. Purpose.

The purpose of these provisions is to prevent the loss of property and life, the creation of health and safety hazards, the disruption of commerce and governmental services, the extraordinary and unnecessary expenditure of public funds for flood protection and relief, and the impairment of the tax base by:

- (1) Regulating uses, activities and development which, acting alone or in combination with other existing or future uses, activities and development, will cause unacceptable increases in flood heights, velocities and frequencies;
- (2) Restricting or prohibiting certain uses, activities and development from locating within areas subject to flooding;
- (3) Requiring all those uses, activities, and developments that do occur in flood-prone areas to be protected and/or flood-proofed against flooding and flood damage; and

-
- (4) Protecting individuals from buying lands and structures which are unsuited for intended purposes because of flood hazards.

(Ord. of 7-7-87, § 1-4; Ord. of 8-3-2010; Ord. of 9-2-2014(2))

Sec. 8.5-6. Applicability.

These provisions shall apply to all lands within the jurisdiction of Gloucester County, Virginia, and identified as areas subject to inundation by water of the base flood event.

(Ord. of 7-7-87, § 1-5; Ord. of 8-3-2010; Ord. of 9-21-2021)

Sec. 8.5-7. Compliance.

No land shall hereafter be developed and no structure shall be located, relocated, constructed, reconstructed, enlarged, or structurally altered except in full compliance with the terms and provisions of this chapter and any other applicable ordinances and regulations.

(Ord. of 7-7-87, § 1-6; Ord. of 8-3-2010)

Sec. 8.5-8. Abrogation and greater restrictions.

This chapter supersedes any less restrictive, conflicting ordinance currently in effect in flood-prone areas. However, any underlying ordinance shall remain in full force and effect to the extent that those provisions are more restrictive.

(Ord. of 7-7-87, § 1-7; Ord. of 8-3-2010; Ord. of 9-2-2014(2))

Sec. 8.5-9. Existing structures in floodplain district.

A structure or use of a structure or premises which lawfully existed before the enactment of these provisions, but which is not in conformity with these provisions, may be continued subject to the following conditions:

The modification, alteration, repair, reconstruction or improvement of any kind to a structure and/or use regardless of its location in a floodplain district to an extent or amount of fifty (50) percent or more of its market value shall be undertaken only in full compliance with the provisions of the Virginia Uniform Statewide Building Code and this chapter.

(Ord. of 7-7-87, Art. VIII; Ord. of 8-3-2010)

Sec. 8.5-10. Penalties.

Any person who fails to comply with any or all of the requirements or provisions of this chapter or direction of the floodplain administrator or any other authorized employee of the county shall be guilty of an offense and, upon conviction, shall pay a fine to the County of Gloucester, Virginia, of not less than twenty-five dollars (\$25.00) nor more than one thousand dollars (\$1,000.00). Each day during which any violation of this chapter continues shall constitute a separate offense. In addition to the above penalties, all other actions are hereby reserved including an action for the proper enforcement of this chapter. The imposition of a fine or penalty for any violation of, or noncompliance with, this chapter shall not excuse the violation or noncompliance or permit it to continue; and all such persons shall be required to correct or remedy such violations or noncompliances within a reasonable

time. Any structure constructed, reconstructed, enlarged, altered or relocated in noncompliance with this chapter may be declared by the board of supervisors to be a public nuisance and abatable as such.

(Ord. of 7-7-87, Art. VII; Ord. of 8-3-2010; Ord. of 9-21-2021)

Sec. 8.5-11. Warning and disclaimer of liability.

The degree of flood protection required by the floodplain management ordinance of Gloucester County, Virginia, is considered reasonable for regulatory purposes and is based on engineering and scientific methods of study. Larger floods may occur on rare occasions. Flood heights may be increased by man-made or natural causes. This chapter and the districts established hereby shall not create liability on the part of the county or any officer, agency or employee thereof for any flood damage that results from reliance on this chapter or any administrative decision lawfully made hereunder.

(Ord. of 7-7-87, Art. IX; Ord. of 8-3-2010)

Sec. 8.5-12. Severability.

If any section, subsection, paragraph, sentence, clause, or phrase of this chapter shall be declared invalid for any reason whatsoever, such decision shall not affect the remaining portions of this chapter. The remaining portions shall remain in full force and effect, and for this purpose, the provisions of this chapter are hereby declared to be severable.

(Ord. of 9-6-94; Ord. of 8-3-2010)

Secs. 8.5-13—8.5-20. Reserved.

ARTICLE II. ESTABLISHMENT OF FLOODPLAIN DISTRICTS

Sec. 8.5-21. Basis of districts.

The various floodplain districts shall include areas subject to inundation by waters of the base flood. The basis for the delineation of these districts shall be the Flood Insurance Study (FIS) and the Flood Insurance Rate Map (FIRM) for Gloucester County prepared by the Federal Emergency Management Agency, Federal Insurance Administration, dated November 19, 2014, as amended. Effective October 21, 2021, the FIS and the FIRM shall be the one dated October 21, 2021, and any subsequent revisions or amendments thereto.

- (1) The floodway district is delineated, for purposes of this chapter, using the criterion that certain areas within the floodplain must be capable of carrying the waters of the base flood without increasing the water surface elevation of that flood more than one (1) foot at any point. The areas included in this district are specifically defined in Table 23 of the above-referenced flood insurance study and shown on the accompanying flood insurance rate map.
- (2) The flood-fringe district (AE and AO zones) shall be that area of the base floodplain not included in the floodway district. The basis for the outermost boundary of the district shall be the base flood elevations contained in the flood profiles of the above-referenced flood insurance study and as shown on the accompanying flood insurance rate map.
- (3) The approximated floodplain district (A zones) shall be that floodplain area for which no detailed flood profiles or elevations are provided, but where a base flood floodplain boundary has been

approximated. Such areas are shown as Zone A on the maps accompanying the flood insurance study. For these areas, the base flood elevations and floodway information from federal, state, and other acceptable sources shall be used, when available. Where the specific base flood elevation cannot be determined for this area using other sources of data, such as the U.S. Army Corps of Engineers Floodplain Information Reports, U.S. Geological Survey Flood-Prone Quadrangles, etc., then the applicant for the proposed use, development and/or activity shall determine this elevation in accordance with hydrologic and hydraulic engineering techniques. Hydrologic and hydraulic analysis shall be undertaken only by professional engineers or others of demonstrated qualifications, who shall certify that the technical methods used correctly reflect currently accepted technical concepts. Studies, analyses, computations, etc., shall be submitted in sufficient detail to allow a thorough review by Gloucester County office of building inspections.

- (4) Coastal A zones shall be those areas, as defined by the VA USBC, that are subject to wave heights between 1.5 feet and 3 feet, and identified on the FIRM as areas of Limit of Moderate Wave Action (LiMWA).
- (5) Coastal high-hazard areas district (V and VE zones) shall be those portions of land within the coastal floodplain subject to inundation by high velocity waters and wave action.

(Ord. of 7-7-87, § 3-1; Ord. of 9-6-94; Ord. of 8-3-2010; Ord. of 9-2-2014(2); Ord. of 9-21-2021)

Sec. 8.5-22. Official floodplain map.

The boundaries of the floodplain districts are established as shown on the flood insurance rate maps which are declared to be a part of this chapter and which shall be kept on file at the county office of building inspections.

(Ord. of 7-7-87, § 3-2; Ord. of 8-3-2010; Ord. of 9-2-2014(2))

Sec. 8.5-23. District boundary changes.

The delineation of any of the floodplain districts may be revised by the board of supervisors where natural or man-made changes have occurred and/or more detailed studies conducted or undertaken by the U.S. Army Corps of Engineers or other qualified agency or individual documents the need for such change. However, prior to any such change, approval must be obtained from the Federal Insurance Administration.

(Ord. of 7-7-87, § 3-3; Ord. of 8-3-2010)

Sec. 8.5-24. Interpretation of district boundaries.

Initial interpretation of the boundaries of the floodplain districts shall be made by the agent. Should a dispute arise concerning the boundaries of any of the districts, the board of building code appeals shall make the necessary determination. The person questioning or contesting the location of the district boundary shall be given a reasonable opportunity to present his case to the board of building code appeals and to submit his own technical evidence if he so desires.

(Ord. of 7-7-87, § 3-4; Ord. of 9-6-94; Ord. of 8-3-2010; Ord. of 9-2-2014(2))

Sec. 8.5-25. Designated official.

The floodplain administrator is hereby appointed to administer and implement these regulations and is referred to herein as the floodplain administrator. The floodplain administrator may delegate duties and responsibilities set forth in these regulations to qualified technical personnel.

(Ord. of 7-7-87, § 3-5; Ord. of 8-3-2010; Ord. of 9-2-2014(2); Ord. of 9-21-2021)

Sec. 8.5-26. Submitting technical data.

The county's base flood elevations may increase or decrease resulting from physical changes affecting flooding conditions. As soon as practicable, but not later than six months after the date such information becomes available, the county shall notify the Federal Insurance Administrator of the changes by submitting technical or scientific data. Such submission is necessary so that upon confirmation of those physical changes affecting flooding conditions, risk premium rates and floodplain management requirements will be based upon current data.

(Ord. of 8-3-2010)

Secs. 8.5-27—8.5-35. Reserved.

ARTICLE III. DISTRICT PROVISIONS

Sec. 8.5-36. General requirements.

- (a) All uses, activities and development occurring within any floodplain district shall be undertaken only upon the issuance of a building permit. Such development shall be undertaken only in strict compliance with the provisions of this chapter and with all other applicable codes and ordinances such as the Gloucester County Zoning Ordinance, the Gloucester County Wetlands Zoning Ordinance [Chapter 20], the Gloucester County Soil and Erosion Sedimentation Control Ordinance [Chapter 7.5], the Gloucester County Site Plan Ordinance [Chapter 15.5], the Gloucester County Subdivision Ordinance [Chapter 15], the Gloucester County Chesapeake Bay Preservation Ordinance [Chapter 5.5], and the Virginia Uniform Statewide Building Code [Chapter 5, Article I]. Prior to the issuance of any such permit, the floodplain administrator shall require all applications to include a certification of compliance with all applicable state and federal laws.
- (b) Under no circumstances shall any use, activity, and/or development adversely affect the flood carrying capacity of the channels or floodways of any watercourse, drainage ditch, or any other drainage facility or system.
- (c) Prior to any proposed alteration or relocation of any channels or of any water course, stream, etc., within this jurisdiction, an approved permit shall be obtained from the U.S. Army Corps of Engineers, the Virginia Department of Environmental Quality (DEQ), and the Virginia Marine Resources Commission (a joint permit application is available from any of these organizations or from the office of environmental programs). Furthermore, notification of the proposal shall be given by the applicant to all affected adjacent jurisdictions, the Department of Conservation and Recreation (Division of Soil and Water Conservation) and the Federal Insurance Administration.
- (d) All proposals for the subdivision of land and/or new development shall include a plan drawing showing the location of all existing and proposed public and private utilities, facilities and drainage structures. If the base flood elevation has been determined by the flood insurance study or other reliable source approved by the County of Gloucester, Virginia, such flood elevation shall be delineated on the proposed plan, provided that

the more stringent elevation data shall control. In addition, within the approximated floodplain district, flood and floodway information from federal, state, or other acceptable sources shall be used when available. If the proposal is greater than fifty (50) lots or greater than five (5) acres, whichever is the lesser, and the base flood elevation has not been determined for the land area, the developer shall determine the base flood elevation and delineate such flood elevation on the proposed plan. Until a regulatory floodway is designated, no new construction, substantial improvements, or other development, including fill, shall be permitted within Zone AE on the FIRM, unless it is demonstrated that the cumulative effect of the proposed development, when combined with all other existing and anticipated development, will not increase the water surface elevation of the base flood more than one foot at any point within the community. All plans shall be certified by a registered professional engineer and shall be reviewed by the subdivision agent to assure that:

- (1) All such proposals are consistent with the need to minimize flood damage;
 - (2) All necessary permits have been received from the State of Virginia and appropriate federal agencies;
 - (3) All public and private utilities and facilities (including sewer, water, telephone, electric, gas, etc.) are located and constructed to minimize or eliminate flood damage. New and replacement sanitary sewage systems are to be designed to minimize or eliminate infiltration of flood waters into the systems and discharges from the systems into flood waters as approved and permitted by the State Health Department for private systems and the Gloucester County department of public utilities for public systems;
 - (4) Adequate drainage is provided to reduce exposure to flood hazard. Storm drainage facilities shall be designed to convey the flow of stormwater runoff in a safe and efficient manner. The system shall ensure proper drainage along streets, and provide positive drainage away from buildings. The system shall also be designed to prevent the discharge of excess runoff onto adjacent properties; and
 - (5) Adequate measures have been taken to minimize the adverse environmental impacts of the proposed development.
- (e) Recreational vehicles placed on sites shall either: (1) be on the site for fewer than one hundred eighty (180) consecutive days and be fully licensed and ready for highway use, or (2) meet the permit requirements for placement and the elevation and anchoring requirements for manufactured homes as contained in the Uniform Statewide Building Code. A recreational vehicle is ready for highway use if it is on its wheels or jacking system, is attached to the site only by quick disconnect type utilities and security devices, and has no permanently attached additions.
- (f) All new buildings must be constructed on properly designed and compacted fill (ASTM D-698 or equivalent) that extends beyond the building walls before dropping below the base flood elevation and has appropriate protection from erosion and scour. The design of the fill or the fill standard must be approved by a registered engineer.
- (g) Where a nonresidential structure is intended to resist the intrusion of water below the base flood level, (i) a registered professional engineer or architect shall develop and/or review structural design, specifications, and plans for the construction, and shall certify that the design and methods of construction are in accordance with accepted standards of practice for meeting the applicable provisions of this chapter, and (ii) a record of certificate which includes the specific elevation (in relation to mean sea level) to which such structures are floodproofed shall be maintained with the floodplain administrator.
- (h) Man-made alterations to sand dunes and mangrove stands that would increase potential flood damage are prohibited.

(Ord. of 7-7-87, § 4-1; Ord. of 9-6-94; Ord. of 8-3-2010; Ord. of 9-2-2014(2); Ord. of 9-21-2021)

Sec. 8.5-37. Floodway district.

In the floodway district, no encroachments, including fill, new construction, substantial improvements, or other development shall be permitted unless it has been demonstrated through hydrologic and hydraulic analyses performed in accordance with standard engineering practice that the proposed encroachment would not result in any increase in the base flood evaluation.

(Ord. of 7-7-87, § 4-2; Ord. of 9-6-94; Ord. of 8-3-2010; Ord. of 9-21-2021)

Sec. 8.5-38. Flood-fringe and approximated floodplain districts (AE, AO and A zones).

In the flood-fringe and approximated floodplain districts, the development and/or use of land shall be permitted in accordance with the regulations of the underlying area, provided that all such uses, activities, and/or development shall be undertaken in strict compliance with the floodproofing and related provisions contained in the Virginia Uniform Statewide Building Code and all other applicable codes and ordinances.

Within the approximated floodplain district, the applicant shall also delineate a floodway area based on the requirement that all existing and future development not increase the base flood elevation more than one (1) foot at any one (1) point. The engineering principle-equal reduction of conveyance shall be used to make the determination of increased flood heights.

Within the floodway area, the provisions of section 8.5-37 shall apply.

(Ord. of 7-7-87, § 4-3; Ord. of 9-6-94; Ord. of 8-3-2010; Ord. of 9-2-2014(2); Ord. of 9-21-2021)

Editor's note(s)—An ordinance adopted Sept. 2, 2014, changed the title of § 8.5-38 from "Flood-fringe and approximated floodplain districts (AE and A zones)" to read as herein set out.

Sec. 8.5-39. Coastal high hazard district (V, VE and Coastal A zones).

In the coastal high hazard area district (V, VE and Coastal A zones), the following regulations shall apply in addition to the regulations cited in sections 8.5-36 through 8.5-38:

- (1) No land below the level of the base flood event may be developed unless the new construction or substantial improvement is located outside the resource protection area (RPA) (measured landward one hundred (100) feet from the mean high tide or associated tidal wetlands) or a buffer modification to the RPA requirement has been granted by the Chesapeake Bay Preservation Ordinance Administrative Board. This one hundred-foot buffer requirement excludes water dependent uses as defined;
- (2) All manufactured homes to be placed or substantially improved within V or VE or Coastal A zones shall comply with the same standards as set forth for conventional housing in V or VE or Coastal A zones;
- (3) There shall be no fill used as structural support;
- (4) Existing nonconforming uses and/or structures located on land below the level of the base flood event shall not be expanded; and
- (5) All new construction and substantial improvements in zones V, VE and Coastal A shall be elevated on pilings or columns so that:
 - a. the bottom of the lowest horizontal structural member of the lowest floor (excluding the pilings or columns) is elevated at least three feet above the base flood level; and

-
- b. the pile or column foundation and structure attached thereto is anchored to resist flotation, collapse, and lateral movement due to the effects of wind and water loads acting simultaneously on all building components.

(Ord. of 7-7-87, § 4-4; Ord. of 9-6-94; Ord. of 8-3-2010; Ord. of 9-2-2014(2); Ord. of 9-21-2021)

Editor's note(s)—An ordinance adopted Sept. 2, 2014, changed the title of § 8.5-39 from "Coastal high hazard district (V and VE zones)" to read as herein set out.

Sec. 8.5-40. Critical facilities.

The building of critical facilities in the five hundred-year floodplain is prohibited.

(Ord. of 9-6-94; Ord. of 8-3-2010)

Sec. 8.5-41. Specific standards.

In all special flood hazard areas where base flood elevations have been provided in the Flood Insurance Study or in the case of areas for which no detailed flood profiles or elevations are provided, the base flood elevations and floodway information from federal, state, and other acceptable sources shall be used when available. All new construction and substantial improvements shall be designed (or modified) and adequately anchored to prevent flotation, collapse, or lateral movement of the structure resulting from hydrodynamic and hydrostatic loads, and be constructed by methods and practices that minimize flood damages using materials that are resistant to flood damage, with the electrical, heating, ventilation, plumbing, and air conditioning equipment and other services so designed and/or located so as to prevent water from entering or accumulating within the components during conditions of flooding. Mechanical equipment, ductwork and electrical systems serving the building must be elevated no lower than three feet above the base flood elevation. The following provisions shall apply:

- (1) *Residential Construction.* New construction or substantial improvement of any residential structure (including manufactured homes) shall have the lowest floor, including basement, elevated no lower than three feet above the base flood elevation.
- (2) *Non-Residential Construction.* New construction or substantial improvement of any commercial, industrial, or non-residential building shall have the lowest floor, including basement, elevated to no lower than three feet above the base flood elevation. Buildings located in all A or AE zones may be flood-proofed in lieu of being elevated, provided that all areas of the building components below the base flood elevation are made to resist the intrusion of water and with walls substantially impermeable to the passage of water, and use structural components having the capability of resisting hydrostatic and hydrodynamic loads and the effect of buoyancy. A registered professional engineer or architect shall certify that the standards of this subsection are satisfied. Such certification, including the specific elevation to which such structures are floodproofed, shall be maintained in the building inspections office.
- (3) *Elevated Buildings.* Fully enclosed areas of new construction or substantially improved structures, which are below the regulatory flood protection elevation, shall:
 - a. Not be designed or used for human habitation, but shall only be used for parking of vehicles, building access, or limited storage.
 - b. Be constructed entirely of flood resistant materials below the regulatory flood protection elevation.

-
- c. Include in zones A and AE measures to automatically equalize hydrostatic flood forces on walls by allowing for the entry and exit of floodwaters. To meet this requirement, the openings must be certified by a professional engineer or architect, or meet the following minimum design criteria:
 - i. Provide a minimum of two openings on different sides of each enclosed area subject to flooding.
 - ii. The total net area of all openings must be at least one (1) square inch for each square foot of enclosed area subject to flooding.
 - iii. If a building has more than one enclosed area, each area must have openings to allow floodwaters to automatically enter and exit.
 - iv. The bottom of all required openings shall be no higher than one (1) foot above the adjacent finished grade.
 - v. Openings may be equipped with screens, louvers, or other opening coverings or devices, provided they permit the automatic flow of floodwaters in both directions.
 - vi. The inside finished grade of each enclosed area must be as high or higher than the outside finished grade.
 - vii. Foundation enclosures made of flexible skirting are not considered enclosures for regulatory purposes, and therefore, do not require openings. Masonry or wood underpinning, regardless of structural status, is considered an enclosure and requires openings as outlined above.
 - d. The AO Zone on the FIRM accompanying the FIS shall be those areas of shallow flooding identified as AO on the FIRM. For these areas, the following provisions shall apply [44 CFR 60.3(c)]:
 - i. All new construction and substantial improvements of residential structures shall have the lowest floor, including basement, elevated to or above the flood depth specified on the FIRM, above the highest adjacent grade at least as high as the depth number specified in feet on the FIRM plus three feet. If no flood depth number is specified, the lowest floor, including basement, shall be elevated no less than five feet above the highest adjacent grade.
 - ii. All new construction and substantial improvements of non-residential structures shall:
 - (1) Have the lowest floor, including basement, elevated to or above the flood depth specified on the FIRM plus three feet. If no flood depth number is specified, the lowest floor, including basement, shall be elevated at least five feet above the highest adjacent grade; or,
 - (2) Together with attendant utility and sanitary facilities, be completely floodproofed to the specified flood level so that any component below that level is made to resist the passage of water and made with walls substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy.
 - iii. Adequate drainage paths shall be provided around proposed structures on slopes to guide floodwaters around and away from proposed structures.
 - e. In zones V, VE and Coastal A, a registered design professional engineer or architect shall develop and seal the structural design, specifications and plans for the construction, and shall certify that

the design and methods of construction used are in accordance with accepted standards of practice for meeting the provisions of Article III, Sec. 8.5-39.

- i. The space below the lowest floor shall be either free of obstruction or constructed with nonsupporting breakaway walls, open wood-lattice work, or insect screening intended to collapse under wind and water loads without causing collapse, displacement, or other structural damage to the elevated portion of the building or supporting foundation system;
 - ii. Breakaway walls shall collapse from water loads that are less than that which would occur during the base flood; and,
 - iii. The elevated portion of the building and supporting foundation shall not be subject to collapse, displacement or other structural damage due to the effects of wind and water loads acting simultaneously on all building components. Water loading values used shall be those associated with the base flood. Wind loading shall be those required by the Virginia Uniform Statewide Building Code (USBC). The enclosed space below the lowest floor shall be used solely for parking of vehicles, building access, or storage.
 - iv. All new construction of structures intended for occupation shall be located landward of the reach of mean high tide.
- (4) *Standards for Manufactured Homes.* All new, substantially improved, or relocated manufactured homes must meet all of the elevation requirements for new construction. They shall be placed on reinforced piers or other equivalent foundation elements and anchored to prevent flotation, collapse, or lateral movement. Methods of anchoring may include, but are not limited to, use of over-the-top or frame ties to appropriate ground anchors. This standard shall be in addition to and consistent with manufacturers' requirements for resisting wind forces.
- (5) When development does not meet the criteria for substantial improvement, the lowest floor of a new addition to an existing structure must be elevated no lower than the base flood elevation or the adjoining structure's floor elevation, whichever is higher.

(Ord. of 8-3-2010; Ord. of 9-2-2014(2); Ord. of 9-21-2021)

Secs. 8.5-42—8.5-50. Reserved.

ARTICLE IV. ADMINISTRATIVE PROVISIONS

Sec. 8.5-51. Permit requirements.

A permit is required for all development (including, but not limited to, the subdivision of land, construction of buildings and structures, placement of manufactured homes, fill or any combination of these) in the floodplain district and shall be granted only after necessary permits from all applicable local, state and federal agencies have been obtained. The floodplain administrator or his designee shall review all proposed development to assure it is reasonably safe from flooding.

- (1) The application for a permit shall contain information including, but not limited to, the following:
 - a. Name and address of applicant. The applicant must be the owner or any authorized agent of the owner.
 - b. Name and address of owner of land on which construction is proposed.
 - c. Name and address of contractor.

-
- d. Site location.
 - e. A plan of the site showing the size and location of the proposed construction as well as any existing buildings or structures.
 - f. Summary description of proposed work and estimated cost.
 - g. Topographic information showing existing and proposed ground elevations.
 - h. Depending on the type of structure involved, the following information shall also be included in the application:

For the structures to be elevated above the base flood elevation, the plans shall show:

1. The size of the proposed structure(s) and its relation to the lot where it is to be constructed.
 2. The elevations of the proposed final grading and lowest floor, and the existing ground and base flood elevation as certified by a registered professional engineer, surveyor or architect.
 3. The method of elevating the proposed structure, including details of proposed fills, pile structures, retaining walls, foundations, erosion protection measures, etc. These plans shall be prepared by a registered professional engineer or architect.
- (2) Upon completion of construction and prior to the issuance of the occupancy permit, the elevation certificate shall be completed and submitted to the building official who shall ensure that construction is in accordance with this chapter. If the structure has been floodproofed, the elevation to which the structure has been floodproofed shall also be supplied. Records of actions associated with the administration of this chapter shall be kept on file and maintained by the floodplain administrator.
- (3) Elevation certificates are required for new construction and may be required at different phases of construction depending upon the type of development. Elevation certificates must be approved by the floodplain administrator prior to the issuance of an occupancy permit.

(Ord. of 7-7-87, § 5-1; Ord. of 9-6-94; Ord. of 8-3-2010; Ord. of 9-2-2014(2); Ord. of 9-21-2021)

Sec. 8.5-52. Variances.

- (a) *Appeal procedure.* Whenever any person is aggrieved by a decision of the floodplain administrator with respect to the provisions of this chapter, it is the right of that person to appeal to the board of building code appeals for a variance. Such appeal must be filed, in writing, within thirty (30) days after the determination by the floodplain administrator. Upon receipt of such an appeal, the board of building code appeals shall set a time and place for the purpose of hearing the appeal, which shall be not less than ten (10) nor more than thirty (30) days from the date of receipt of the appeal. Notice of the time and place of the hearing of the appeal shall be given to all parties at which time they may appear and be heard. The determination by the board of building code appeals shall be final in all cases.
- (b) *Consideration and issuance of variances.*
- (1) In passing upon applications for variances, the board of building code appeals shall consider the following factors:
 - a. The danger to life and property due to increased flood heights or velocities caused by encroachments. No variance shall be granted for any proposed use, development or activity within any floodway area that will cause an increase in the base flood elevation.
 - b. The danger that materials may be swept on to other lands or downstream to the injury of others.

-
- c. The proposed water supply and sanitation systems and the ability of these systems to prevent disease, contamination, and unsanitary conditions.
 - d. The susceptibility of the proposed facility and its contents to flood damage and the effect of such damage on the individual owners.
 - e. The importance of the services provided by the proposed facility to the community.
 - f. The requirements of the facility for a waterfront location.
 - g. The availability of alternative locations not subject to flooding for the proposed use.
 - h. The compatibility of the proposed use with existing development and development anticipated in the foreseeable future.
 - i. The relationship of the proposed use to the comprehensive plan and floodplain management program for the area.
 - j. The safety of access to the property in time of flood of ordinary and emergency vehicles.
 - k. The expected heights, velocity, duration, rate of rise, and sediment transport of the floodwaters expected at the site.
 - l. The repair or rehabilitation of historic structures upon a determination that the proposed repair or rehabilitation will not preclude any structure's continued designation as a historic structure and the variance is the minimum necessary to preserve the historic character and design of the structure.
 - m. A showing of good and sufficient cause and such other factors which are relevant to the purposes of this chapter.
- (2) The board of building code appeals may refer any application and accompanying documentation pertaining to any request for a variance to any engineer or other qualified person or agency for technical assistance in evaluating the proposed project in relation to flood heights and velocities, and the adequacy of the plans for protection and other related matters.
 - (3) Variances shall only be issued after the board of building code appeals has determined that the granting of such will not result in (a) unacceptable or prohibited increases in flood heights, (b) additional threats to public safety, (c) extraordinary public expense, (d) the creation of nuisances, (e) fraud or victimization of the public, or (f) conflict with local laws or ordinances.
 - (4) A variance shall only be issued after the board of building code appeals has determined that the variance will be the minimum relief to any hardship.
 - (5) The board of building code appeals shall notify the applicant for a variance, in writing, that the issuance of a variance to construct a structure below the base flood elevation (a) increases risks to life and property, and (b) will result in increased premium rates for flood insurance.
 - (6) A record of the above notification as well as all variance actions, including justification for their issuance, shall be maintained by the floodplain administrator, and a record of all variances which are issued shall be noted in the annual report submitted to the Federal Insurance Administrator.

(Ord. of 7-7-87, §§ 6-1, 6-2; Ord. of 9-6-94; Ord. of 8-3-2010; Ord. of 9-2-2014(2); Ord. of 9-21-2021)

An aerial photograph of a coastal town, likely Gloucester County, Virginia. The image shows a mix of suburban and rural landscapes. In the foreground, there's a large, light-colored house with a dark roof, surrounded by trees and a lawn. A winding road leads from the house towards a marina filled with numerous sailboats. The town extends into the background, with houses and buildings scattered across a hilly area. The water is a deep blue, and the sky is clear. The overall scene is peaceful and scenic, capturing the essence of a coastal retreat.

Vision Statement

Gloucester County enjoys a diversity of suburban and rural characteristics while remaining a magnificent retreat from the nearby city life. The county is positioned at the southern tip of Virginia's Middle Peninsula, and its location provides citizens with the ability to access the more urban areas of Hampton Roads, Williamsburg, and Richmond, while maintaining a peaceful lifestyle found in the rural comforts and resources within the county. The exceptional quality of life found in Gloucester is based on the combination of its rural, small town character, and the abundance of natural, cultural and historic resources available within and adjacent to its boundaries.

Gloucester will protect and improve the quality of life enjoyed by its residents through preserving these resources and our rural character. The county will provide opportunities for growth by promoting development and redevelopment aimed at enhancing, encouraging and promoting community livability, prosperity and pride in "the land of the life worth living."

CHAPTER 1

Introduction

Gloucester County's Comprehensive Plan is intended to assist community decision-makers in developing informed choices that shape the County's future through infrastructure investment and improvements, land use and transportation planning, and the need for community services and funding. County staff and the Planning Commission prepared this document, adopted on February 2, 2016 by the Board of Supervisors, with input from citizens and stakeholders.

This Introduction provides an overview of the following:

- What is a Comprehensive Plan?
- Why does Gloucester County have a Comprehensive Plan?
- The History of Comprehensive Planning in Gloucester
- How This Plan Was Developed

What is a Comprehensive Plan?

A Comprehensive Plan presents a representation of a community's vision for the future through a general, all-inclusive, long-range plan, an official public document prepared by the Planning Commission and adopted by the Board of Supervisors. The plan includes broad recommendations and policy discussions (general), comprises the entire County and the sectors related to its physical development (all-inclusive), and identifies current and future needs and conditions over a 20 year horizon (long-range). A local government's Comprehensive Plan accounts for all growth considerations within the entire jurisdiction, performed at the local level with local input addressing local issues. This living document evolves over time through regular reviews and updates as change occurs.

Although the Comprehensive Plan is not a legal document, it serves as a guide for decisions regarding

County development and informs land development ordinance revisions and other policy decisions, such as infrastructure improvements. The Comprehensive Plan's goals are achieved through implementation tools, as outlined in state code¹ and by the Virginia Chapter of the American Planning Association².

Why does Gloucester have a Comprehensive Plan?

The Community's Vision

Gloucester's vision for its future has been established through community input and review, starting with the first Comprehensive Plan, adopted in 1974. Gloucester continues to plan for tomorrow as it considers the existing conditions and expected future opportunities.

Legal Basis for Comprehensive Plans

Local authority and responsibility to develop and update the Comprehensive Plan originates from several state laws mandating the plan's contents, including elements such as transportation improvements, community facilities, land use, and affordable housing, and directing its adoption:

The local planning commission shall prepare and recommend a comprehensive plan for the physical development of the territory within its jurisdiction and every governing body shall adopt a comprehensive plan for the territory under its jurisdiction.

In the preparation of a comprehensive plan, the commission shall make careful and comprehensive surveys and studies of the existing conditions and trends of growth, and of the probable future requirements of its territory and inhabitants. The comprehensive plan shall be made with the purpose of guiding and accomplishing a coordinated, adjusted

*and harmonious development of the territory which will, in accordance with present and probable future needs and resources, best promote the health, safety, morals, order, convenience, prosperity and general welfare of the inhabitants, including the elderly and persons with disabilities.*³

In addition to the above requirements, there are other mandates due to Gloucester's inclusion as a Chesapeake Bay locality. Since 2013, state code has required that Gloucester provide a coastal resource management section⁴ in conjunction with additional material mandated by the Chesapeake Bay Preservation Act⁵ and the Chesapeake Bay Preservation Area Designation and Management Regulations.⁶

Past Comprehensive Planning Efforts

Gloucester County's first Comprehensive Plan, adopted in 1974, contained three (3) key components: future land use, traffic circulation, and community facilities, leading to various implementation efforts regarding natural resources studies, parks and recreation facilities, property assessment, and establishing the precursor to the current Economic Development Authority. Due to the 1974 Plan's generality along with changing growth patterns, the Plan was updated in 1980 to be more comprehensive, address local population, housing, and economic trends, and include goals, objectives, and implementation strategies.

In 1991, the County adopted a new Comprehensive Plan, which included, among other elements, a contained growth strategy through a Development District. This Plan has been updated several times to include the Gloucester Point Plan (1995), update the Environmental, Parks and Recreation, and Economic chapters (1998), add a new Natural Resources and Environmental Quality chapter (2001), and incorporate the Dragon Run Watershed Management Plan (2004),

Comprehensive Plan Update Public Meeting - Source: Gloucester Planning and Zoning

Gloucester Point/Hayes Village Development Area Plan (2011), and the Gloucester Court House Village Sub-Area Plan (2013).

Other implementation measures for Gloucester's Plans have included the County's first zoning ordinance, adopted in 1984 and updated in 1998, and a revised Subdivision Ordinance in 2000 (originally adopted in 1965). Although minor amendments to each ordinance have occurred since these actions, broad updates are anticipated upon this Plan's adoption.

Process for Plan Development and Adoption

This document has resulted from citizen, elected officials, and staff efforts through surveys, workshops, presentations, and public meetings. This process created a vision for the County's future to preserve the characteristics valued by residents and identify strategies to improve and enhance the quality of life for those who live, work, and play within Gloucester. This Plan reflects the residents' preferences for local development while addressing future needs. County staff conducted surveys in 2006, 2010, and 2015

to gauge residents' opinions and concerns. Although these surveys had low participation, similar input resulted from each exercise. The respondents' major concerns included environmental, historic, and rural resource preservation as well as growth considerations. The results of the surveys are available in Appendices B, F, and G of this document.

A Steering Committee was also appointed by the Planning Commission to review the previous Comprehensive Plan and guide this document's development. The Steering Committee membership included:

- Dr. W. Keith Belvin
- Mr. David Birdsall, Jr.
- Ms. Reba Bolden
- Mr. Jeff Breaks
- Mr. Christopher Corr (Chair)
- Mr. Warren Deal
- Mr. Scott Harwood
- Ms. Clara Hines
- Mr. Corky Hogge
- Mr. Mark Holthaus
- Mr. Breck Montague
- Mr. Jack Musick
- Mr. Philip Olekszyk
- Dr. Wes Wilson

Mr. George Zahn

Mr. Kenny Richardson (Planning Commission Representative)

Ms. Louise Theberge (Board of Supervisors Representative)

Col. Tom Arnold (Planning Commission Alternate)

Mr. Buddy Rogers (Planning Commission Alternate)

Mr. Mark Strawn (Planning Commission Alternate)

Several community meetings were held in 2008 and 2010. The 2008 meetings aimed to provide initial information to citizens, discuss the Comprehensive Plan, and gather feedback. Although a limited number of citizens attended these, they provided further feedback for this document. These responses can be found in Appendix I. The 2010 meetings provided citizens with updated information based upon the surveys and Steering Committee meetings and featured stations for citizens to react to various issues covered in this Plan's chapters.

Through the various events held, several major issues were identified, including:

1. Natural Resource Preservation
2. Rural Character Preservation
3. Cultural and Historic Resource Preservation
4. Route 17 Access and Safety
5. Balancing Growth and Use Conflicts

Following this public input period, from 2009 to 2015, the Hampton Roads Planning District Commission (HRPDC) and Gloucester County Department of Planning and Zoning staff produced the draft and final versions of the Comprehensive Plan for the Planning Commission's review at their monthly meetings as well as joint meetings with the Board of Supervisors, the Public Hearing before the Planning Commission, and the Commission's recommendation to the Board of Supervisors. The chapters have been available on the County's Comprehensive Plan webpage,⁷ created in 2008, and have been regularly updated as data became available, including incorporating the 2010 Census, the 2012 Agricultural Census, and annual zoning and permitting data.

Vision Statement

In 2015, the Board of Supervisors conducted a strategic planning effort, developing the following Vision Statement for 2035 to guide the Board's priorities through 2018:

Founded in 1651, Gloucester County has a rich and varied history that includes Werowocomoco, the cultural and political center of the Powhatan Confederacy; Revolutionary War battlefields; and the homes of Dr. Walter Reed, and early civil rights activist T.C. Walker. Today, Gloucester citizens enjoy the beauty of a rural Virginia countryside, while remaining within a short commute of the activities and shopping opportunities offered by metropolitan Hampton Roads.

Moving towards the future, Gloucester will benefit from steady and consistent economic growth enabled by a robust infrastructure, business-friendly government and a top-notch public education system. Gloucester's citizens will enjoy a wealth of recreational activities, shop locally at numerous and varied markets and stores, and have access to county-based, world-class health care. Gloucester will offer all the amenities of modern life, while continuing to surround its citizens with the tranquility of rural and waterfront living.

Gloucester is, and will continue to be, "The Land of the Life Worth Living."

During the Board of Supervisor's review of the Plan, the Comprehensive Plan Steering Committee's Vision Statement was amended to reflect the Board's Vision Statement for 2035. The following Vision Statement, as amended, was adopted:

Gloucester County enjoys a diversity of suburban and rural characteristics while remaining a magnificent retreat from the nearby city life. The county is positioned at the southern tip of Virginia's Middle Peninsula, and its location provides citizens

with the ability to access the more urban areas of Hampton Roads, Williamsburg, and Richmond, while maintaining a peaceful lifestyle found in the rural comforts and resources within the county. The exceptional quality of life found in Gloucester is based on the combination of its rural, small town character, and the abundance of natural, cultural and historic resources available within and adjacent to its boundaries.

Gloucester will protect and improve the quality of life enjoyed by its residents through preserving these resources and our rural character. The county will provide opportunities for growth by promoting development and redevelopment aimed at enhancing, encouraging and promoting community livability, prosperity and pride in “the land of the life worth living.”

CHAPTER 2

Existing Conditions

Gloucester County, located at the southern tip of Virginia’s Middle Peninsula, was officially established in 1651 and has historically maintained a lower population than its neighbors to the south (Peninsula) and an agriculture, forestry, and water-based economy. Regional neighbors on the Middle Peninsula include Middlesex, King and Queen, and Mathews Counties, with York County located immediately to the south across the York River. The County, consisting of 218 square miles of land, is defined by its shoreline, being surrounded by over 296 miles of waterways, including the York River to the south, the North, Severn, and Ware Rivers to the east, and the Piankatank River to the north, as shown on Map EC-1.

Gloucester remained a primarily rural, agricultural community through the Civil War, where the County’s economy consisted of large, tobacco-growing plantations. Following the war, cultivation of other agricultural products, such as corn, soybeans, and flower bulbs increased. The County remained rural

with a stable population through 1970, covered by scattered countryside houses spread across farmlands and surrounded by undisturbed natural areas, although a few small, rural settlements existed.

The George P. Coleman Bridge, constructed in 1952 to connect Gloucester Point and Yorktown by a two-lane toll bridge, opened the opportunity for regular travel

George P. Coleman Bridge - Source: William Thomas, Virginia Beach

Map EC-1: Regional Context

Data Source: US. Census Bureau

Gloucester County is located at the southern end of Virginia’s Middle Peninsula. It is bordered by King and Queen County to the west, Middlesex County to the north, and Mathews County to the east. York County lies across the York River to the south. In addition to the York, several other rivers form Gloucester’s shorelines. These include the Piankatank, which separates Gloucester County from Middlesex County, and the North, Severn, and Ware Rivers, which extend from Gloucester County into the Mobjack Bay. Gloucester’s regional context is discussed on pages 7 & 8.

Figure EC-1: Gloucester County Total Population, 1790 to 2010

Source: U.S. Census Bureau, University of Virginia Geospatial and Statistical Data Center. 2010 values are based on the 2010 Census Redistricting Data (Public Law 94-171) Summary File.

and job opportunities on the Peninsula as previous access occurred through a small-scale ferry service. Gloucester was situated to experience suburban growth due to its proximity to jobs in the Hampton Roads metropolitan area and its undeveloped, rural character. Although the Coleman Bridge tolls limited some growth, their removal in 1976 produced a roughly 15% population increase in the 1960's and 1970's and a roughly 40% increase in the 1980's and 1990's. In 1996, the bridge was expanded to four (4) lanes to accommodate increased traffic, financed by reintroduced bridge tolls, contributing to a declining growth rate, as show in Figure EC-1.

Gloucester's 83% population growth since 1980 reflected regional growth trends, where Hampton Roads and the Middle Peninsula grew by over 37% and 50%, respectively,¹ outpaced by only James City County, Chesapeake, and York County during this time period.

¹ Population data obtained from the U.S. Census Bureau.

As a result, the County has become the largest Middle Peninsula community and remains of substantial size within Hampton Roads. Although the County's population has grown, local economic growth has not kept pace and many residents commute to other localities for employment, primarily to Hampton, Newport News, and York County. Gloucester's connection to Hampton Roads established the County as a bedroom community that offers lower taxes and housing costs as well as a high, rural quality of life compared to its southern neighbors that provide greater job variety and more employers than found locally.

More recently, local growth has slowed to a minimal rate as a result of a number of factors, including the national recession and a continued toll on the Coleman Bridge. As the economy rebounds, the local growth rate should increase to a level near the regional and statewide rate in combination with increased local economic development and revenue.

Local growth through the twenty-first century has increased demand for government services, utilities, and transportation infrastructure with some loss of the natural environment, increased roadway congestion, and a varied quality of commercial and residential construction. Gloucester encourages appropriate growth balanced with adequate services and protection of the County’s attractive qualities.

Population Characteristics

Demographic analyses reveal a community’s population trends, helping to identify current needs and project future conditions. This section examines Gloucester’s population characteristics compared to its regional neighbors.

Population

Although Gloucester is geographically located on the Middle Peninsula, the County is economically connected to the Peninsula, two regions with very different characteristics. Gloucester is the largest Middle Peninsula locality, but significantly smaller than the most populated Peninsula localities as Middle Peninsula localities are typically smaller and more rural than those on the Peninsula. Gloucester contributes to nearly 41% of the Middle Peninsula’s population, but only about 7% of the Peninsula’s. Figures EC-2 and EC-3 show the population change from 1960 to 2010 for the Middle Peninsula and Peninsula, respectively.

Figure EC-2: Population Change on the Middle Peninsula, 1960-2010

Source: U.S. Census Bureau, University of Virginia Geospatial and Statistical Data Center

Figure EC-3: Population Change on the Peninsula, 1960-2010

Source: U.S. Census Bureau, University of Virginia Geospatial and Statistical Data Center

Age

Gloucester’s median age of 42.6 years old is younger than most Middle Peninsula localities, but older than many Peninsula localities. Gloucester’s greatest concentration is between 40 and 60 years old, representing roughly 32% of the total population, and over 60% of all residents are of working age, as shown in Figure EC-4. However, 21% of the County’s population is of school age and 18% is over 65, providing insight into current and potential future educational and senior needs. Figures EC-5 and EC-6 compare the age distribution for Middle Peninsula and Peninsula localities, respectively.

Gender and Race

Gloucester consists of a nearly even distribution of men and women, similar to most surrounding localities. Gloucester County contains an approximately 87%

white population, higher than most of the Peninsula and Middle Peninsula. However, Blacks and African Americans are the largest minority group and Gloucester has received many contributions from notable African Americans throughout its history.

Population Projections

The Hampton Roads Planning District Commission produces regional projections for population, households, and workers as it creates economic and transportation plans, with the most recent projections forecasting 2040 populations. Gloucester is expected to grow by roughly 9% to over 40,000, slower than many Hampton Roads localities. Figure EC-7 compares Gloucester’s projected growth to other Peninsula localities.

Map EC-2: Land Cover

Data Source: NOAA Coastal Change Analysis Program (C-CAP), NOAA Coastal Services Center

Land cover refers to actual conditions on the ground and is usually described in terms of impervious surfaces and vegetation. The most recent land cover data available for Gloucester County is from the 2005-2006 survey of the Coastal Change Analysis Program (C-CAP), part of the National Oceanic and Atmospheric Administration. The CCAP data classifies land cover into nine (9) categories and twenty-four (24) classifications.

Land Cover is discussed on page 15.

Existing Land Uses and Development Patterns

The County consists of relatively concentrated residential development surrounded by agricultural and forested land. Recently, Gloucester has served as a suburb for residential populations commuting to the Hampton Roads and Richmond metropolitan areas with the local economy comprised of mainly service and retail occupations. Past and current land development practices have established two (2) historic centers, surrounded by residential development, natural features, and agricultural activities with the majority of residents and businesses primarily located along Route 17 and Main Street. Current local land uses cover five (5) broad categories: residential, agricultural/forestral, commercial, industrial, and public/institutional, as shown by local land cover and zoning data.

Land cover data for the County is available through the National Land Cover Dataset, produced by the United

States Geological Survey, and the Coastal Change Analysis Program (C-CAP), generated by the NOAA Coastal Services Center.² Local C-CAP data shows both the most recent conditions (as of 2010) and land cover changes since 1992, as shown in Table EC-1 and Map EC-2.

A misty morning on the Dragon Run (Credit: Teta Kain) - Source: Dragon Run Watershed Management Plan

Developed Land describes areas modified for human use, such as for buildings, parking lots, or lawns. The four categories of developed areas are High Intensity (80% to 100% impervious cover), Medium Intensity (50% to 79% impervious cover), Low Intensity (21% to 49% impervious cover), and Open Space (less than 20% impervious cover).

Agricultural Land refers to areas used for the production of crops or livestock. They are classified as either Cultivated Crops or Pasture/Hay.

Grasslands (Grassland/Herbaceous) are areas with 80% or greater total vegetative cover and are generally unmanaged.

Forest Lands are areas dominated by trees generally greater than 5 meters in height and that have greater than 20% vegetative cover. Forest lands are classified as Deciduous, Evergreen, or Mixed.

Scrub/Shrub refers to areas dominated by shrubs or small trees less than 5 meters in height that make up greater than 20% of total vegetation.

Barren Lands are areas with little or no vegetation and include Barren Land, Tundra, Perennial Ice/Snow, and Unconsolidated Shore.

Wetlands are areas that are regularly or permanently saturated with water and divided into two broad categories: Estuarine Wetlands, which occur in tidal areas with salinity greater than 0.5%, and Palustrine Wetlands, which include other tidal and nontidal wetlands. Wetlands are either Forested, Scrub/Shrub, or Emergent.

Water and Submerged Lands are areas covered by water and include Open Water and Palustrine and Estuarine Aquatic Beds, which are characterized by plant growth on or at the water's surface.

Table EC-1: Land Cover Change in Gloucester County, 1992-2006

Classification Name	1992 Acres	1996 Acres	2001 Acres	2005 Acres	2010 Acres	Change, 1992-2010	% Change, 1992-2010

Zoning

Zoning designations indicate land designated for certain uses. Gloucester County’s Zoning Ordinance contains seventeen (17) designations, including four (4) commercial, four (4) conservation, five (5) residential, two (2) overlay, one (1) industrial, and one (1) special designation, with fifteen (15) designations currently in use, as listed in the Table EC-2 and shown on Map EC-3. Additionally, two (2) Village Development Areas, Gloucester Court House and Gloucester Point/Hayes, are identified for additional density and mixed uses.

Residential

Residential land comprises the largest developed land use within the County, with the highest residential

concentrations located in the Court House and Gloucester Point/Hayes areas. As public water and sewer are available throughout much of the Route 17 corridor between Gloucester Point and the Court House (within the Development District shown in Map EC-3), areas inside the Development District are identified for higher density commercial and residential development. Gloucester Point/Hayes and the Court House are identified as Village Development Areas (VDA’s), areas designated for higher density development due to proximity to transportation facilities, public water and sewer availability, and/or a developed area to be used for redevelopment or infill development. Outside of the VDA’s, residential development has primarily occurred along major roadways with scattered residential lots and subdivisions dispersed throughout other rural areas.

Recent residential subdivisions have contained single-

* The Highway Corridor Development District was revised in 2014 to include all parcels along the US Route 17 corridor within 150 feet, from Gloucester Court House to the Coleman Bridge, as well as parcels zoned business and industrial outside of that area but still adjacent to the US Route 17 corridor.

Map EC-3: Zoning

Data Source: Gloucester County Planning and Zoning Department, Gloucester County Zoning Ordinance

Zoning refers to legal designations developed and assigned by a local government to parcels that describe what uses can occur and what structures can be built on those properties. Gloucester’s Zoning Ordinance contains seventeen (17) designations covering commercial, conservation, residential, industrial, and special uses, of which fifteen (15) are currently in use. Most of Gloucester is zoned to permit residential uses.

Zoning is discussed on page 16.

Business Districts (B-1) are appropriate for general business uses. **Village Business Districts (B-2)** are appropriate for retail, office, service, and public use establishments and are intended to foster village scale commercial development in activity centers. **Office Business Districts (B-3)** are intended for business parks or campuses. **Rural Business Districts (B-4)** are intended to provide for the needs of rural areas and include a range of business and industrial uses.

Conservation Districts (C-1) are intended to protect natural resources, open space, and watersheds and reduce hazards. **Bayside Conservation Districts (C-2)** are intended to protect natural resources and reduce hazards while allowing some limited low density residential development in areas near the Chesapeake Bay. **Rural Countryside Districts (RC-1)** are intended to protect and encourage agricultural activities. **Rural Conservation Districts (RC-2)** are intended to protect natural resources in areas along the Chesapeake Bay while allowing some limited residential development.

Suburban Countryside Districts (SC-1) are intended for low density residential development in areas constrained by natural conditions. **Single-Family Detached Residential Districts (SF-1)** are intended to preserve existing neighborhoods by encouraging similar development. **Hamlet Cluster Districts (HC-1)** are intended for clustered, moderate density residential development at rural service centers. **Medium Density Multifamily Residential Districts (MF-1)** are intended to provide for moderate to high density development in areas served by public utilities. **Manufactured Home Districts (MH-1)** are intended to allow for the development of manufactured home parks. Gloucester does not currently have any land designated as either HC-1 or MH-1.

Other designations include **Limited Industrial Districts (I-1)**, **Historic Preservation Districts (H-1)**, the **Highway Corridor Development District (HCDD)**, and **Planned Unit Development Districts (PUD-1)**.

family detached homes, with some located outside the Development District. Should residential development increase, the County's rural, agricultural areas not served by public water or sewer may experience residential growth, especially in the Suburban Countryside district. New on-site waste treatment technology has increased development in more rural areas as these alternative septic systems allow for residences on land that was previously unbuildable with a conventional septic system. Since septic system maintenance is required by state code, appropriate use of on-site septic systems will serve to protect groundwater and surface water supplies.

Approximately 6% of the County's total housing stock is multifamily, including structures with two or more dwelling units³ and much of this housing was built prior to 1990. Although most areas zoned for multifamily housing are near Gloucester Point/Hayes and the Court House, multifamily housing rezoning requests have increased due to the limited number of vacant, multifamily parcels. Additionally, Planned Unit Developments may include multifamily housing when compatible with the overall project.

Agricultural/Forest

Forests and forested lands, including deciduous, evergreen, and mixed forests, and palustrine and estuarine forested wetlands, cover approximately

³ 2009-2013 American Community Survey 5-Year Estimates

Agriculture land off Fletcher Road - Source: Gloucester Planning and Zoning

Map EC-4: Prime Farmland

Data Source: Natural Resource Conservation Service Soil Survey for Gloucester County, Virginia

The Natural Resources Conservation Service (NRCS) identifies areas that are appropriate for farming through its soil surveys. Gloucester County possesses over 53,000 acres of prime farmland, over 22,000 acres of land that would be considered prime farmland if properly drained, and over 7,500 acres of farmland that is of statewide importance. The NRCS classifies farmland based on its potential agricultural productivity. **Prime farmland** is considered the best for agricultural use in terms of climate, location, physical and chemical properties, available water supply, permeability, and erosion potential. **Farmland of statewide importance** is land that is not quite as good as prime farmland for agricultural uses or that requires additional treatment to produce high agricultural yields. The precise definition of farmland of statewide importance varies by state, while prime farmland meets a national standard. Prime farmland is discussed in greater detail on pages 19-21 & 127.

98,000 acres of Gloucester,⁴ over two-thirds of all County land. Additionally, Gloucester contains approximately 21,500 acres of farmland, including pastureland and cropland, a decrease from the 23,000 acres of farmland reported in 2007. Although soybeans and corn are the major crops produced, a significant amount of livestock, including cattle and horses, are also kept. Many local farms are small-scale, with nearly 60% selling less than \$2,500 in product, and over 70% are less than 50 acres. The number of farms over 500 acres has also decreased since 2007.

The Natural Resources Conservation Service conducts soil surveys to identify farmland as prime farmland, farmland of statewide importance, farmland of local importance, and unique farmland. Nearly 53,300 acres within the County is classified as prime farmland (most suitable for crop production), 22,000 acres is considered prime farmland if drained, and over 7,500 acres is categorized as farmland of statewide importance (suitable for crop production). As shown on Map EC-4, most of the County's prime farmland is located west of Route 17 and north of Route 3/14 and some undeveloped areas near Gloucester Point/Hayes are classified as farmland of statewide importance.

Both forestland and farmland benefit the County and contribute to its quality of life. Conversion of agricultural lands is an important consideration since farms and forestlands significantly contribute to the local economy and are identified with the County's rural character and rich history. Additionally, agriculture, forestry, and conservation lands require less County resources, providing both fiscal and environmental benefits.

Commercial

Route 17 land use has shifted from rural residential to commercial since the 1950's due to the Coleman Bridge construction and establishment of Route 17, which is reflected in the County's current zoning pattern. As newer, convenience-oriented shopping centers, retail, service, and fast food establishments were built, commercial activity within the Court House,

Typical commercial development along Route 17 - Source: Gloucester Planning and Zoning

primarily along Main Street, decreased. However, recent enhancement and redevelopment efforts have since helped to revive this traditional commercial corridor.

Most of Gloucester's commercial developments are located along Route 17 between Gloucester Point and the Court House, Main Street in the Court House, and at intersections along Route 17 north of the Court House, with some water-dependent uses near the coastlines. These commercial uses, primarily retail, medical care, recreation, and entertainment, provide employment and shopping destinations for County and other Middle Peninsula residents. There are also some small- and medium-sized commercial establishments along secondary roads, which generally include neighborhood-oriented businesses.

Increased development on Route 17 intensified congestion along this roadway due to additional site entrances and exits and a more dispersed development pattern. Route 17 features many strip developments with undeveloped or vacant land interspersed within, creating a linear development pattern between the Court House and Gloucester Point/Hayes, which contrasts with the rural character north of the Court House. As growth is encouraged throughout this corridor, it is important to consider potential impacts on aesthetics, traffic congestion, connectivity, access management and natural resource preservation and

⁴ Coastal Change Analysis Program Regional Land Cover. NOAA Coastal Services Center. <http://www.csc.noaa.gov/digitalcoast/data/ccapregional/>

*Rappahannock Concrete Corp along Route 17 -
Source: Gloucester Planning and Zoning*

potential conflicts between pedestrian, cyclists, and other transportation modes are also important factors as active transportation becomes more practical with increased commercial activity and proximity to services.

Industrial

Industrial uses are not established in a central location and exist at varying intensities. Light industrial uses are found throughout the County while heavier industries are typically located away from other incompatible uses. Light industries include laboratory testing, ink cartridge recycling, and rental storage facilities, medium industrial uses contain warehousing and trucking or contractor storage, and heavy industries involve sand and gravel operations, concrete manufacturing, asphalt manufacturing, wood processing, a landfill, and a recycling facility.

Many Industrial uses in the County were established prior to zoning or are located on existing industrial zoned properties. Vacant land zoned for future industrial operations is limited and the establishment of most industrial uses requires a rezoning or special exception. Impediments to establishing new, large industrial facilities include considerations such as major roadway access, proximity to incompatible uses and environmentally sensitive areas, and the absence of rail or natural gas.

Institutional

Local institutional uses include schools, fire stations, libraries, government office buildings, post offices, churches, the Riverside Walter Reed Medical Center, the County's water treatment plant, and the Virginia Institute of Marine Science and Rappahannock Community College campuses. These uses occupy only a small percentage of the total land area but are important community resources and employment centers.

Special Areas

Gloucester possesses several areas specified for smaller area planning efforts due to their economic contributions, population concentrations, or environmental characteristics. Special plans have been conducted for Gloucester Court House, Gloucester Point/Hayes, and the Dragon Run Special Planning Area.

Gloucester Court House

Gloucester Court House, the County seat and a major population center located in the middle of the County, consists of historic structures, a public square, and several land uses, including residential, commercial, and public uses. Most residents would consider the Court House to be a distinct village due to its courthouse green, grid street system, and historic downtown Main Street.

The Court House has progressed through several development phases with the original courthouse complex built between 1679 and 1684 to include a jail, Clerk's office, and lawyers' offices. Through the late 1800's, this area contained only a few establishments, but as the population increased following the Civil War, private and public buildings, including those along Main Street, were established. However, come the 1900's, more development occurred outside the Court House, especially along Route 17 following its construction.

Currently, Gloucester Court House is a major historical

Gloucester Court House Main Street - Source: Gloucester Parks, Recreation & Tourism

area, designated in the County's Historic Overlay District as well as the State and National Historic Registers and retaining several historic structures along with the traditional small-town character. The Court House also includes a mixture of uses, such as commercial, residential, and institutional, along with the Edgehill and Main Street shopping centers. This area houses the County's government offices, an elementary school, the main library branch, a fire and rescue station, several churches, and the Riverside Walter Reed Medical Center, containing a hospital, doctors' offices, and other medical facilities. The local residential pattern, based off of Main Street, is of greater density than most of the County, with many single-family detached residences and other multi-family units.

The Court House Village Sub-Area Plan, adopted in February 2013, was the Court House's first specific area plan, with prior efforts designating business and single- or multi-family residential uses. This Sub-Area Plan, conducted through a collaborative effort between the Main Street Preservation Trust and the County, examines the Main Street core along with the surrounding areas that contribute to a functional mix of uses typically seen in village areas.

Gloucester Point/Hayes

The Gloucester Point/Hayes area, located at the southern end of the County, is the most densely developed population center within the County, containing roughly 27% of the total population within 3% of the County. This area rapidly grew when the Coleman Bridge opened (1952), resulting in primarily concentrated residential development. Although Gloucester Point/Hayes has long been considered a "Village Center," it does not contain certain characteristics of traditional villages and most commercial development has occurred along Route 17.

This first specific area plan, the Gloucester Point Plan, adopted in 1995, contained the Census Bureau's geographic boundaries for the Census Designated Place (CDP) due to Gloucester Point's concentrated population. A subsequent plan, the Gloucester Point/Hayes Village Development Area Plan (2011), updated this sub-area planning effort. Through significant local stakeholder input, the sub-area plan established a vision for this area through three (3) "core" village centers and outlying neighborhood development.

Dragon Run Special Planning Area

The Dragon Run watershed, home to various plant and animal species and recognized for its ecological integrity, is an important natural area within the County. Historically an important natural resource for Native American and European inhabitants, this area continues to support forestry, farming, hunting, and fishing activities.

Although development pressure in the watershed is currently low, future land development could disrupt the area's natural and economic resources and rural character. The Middle Peninsula Planning District Commission (MPPDC) formed the Dragon Run Steering Committee in 1985 (composed of local elected officials and landowners) to promote local cooperation and coordination to address watershed issues and encourage proactive development and implementation of goals, objectives, and action plans to form a watershed management plan. The MPPDC, in partnership with the Virginia Coastal Zone Management Program, create the Dragon Run Watershed Special Area Management Plan (SAMP) in 2002 to protect the Dragon Run through collaborative, multi-level planning that develops and implements enforceable policies as well as identifies and helps mitigate land use conflicts through open discussion and consensus building. During this process, the

Steering Committee identified two (2) main conflicts: balancing conservation and private property rights and weighing private land use and public water use. The SAMP process culminated in the Dragon Run Watershed Management Plan, adopted in 2003, and aimed to support and promote community-based efforts to preserve the cultural, historic, and natural character of the Dragon Run, while preserving property rights and the traditional uses within the watershed.⁵ This plan included three (3) main goals:

1. Establish a high level of cooperation and communication among the four (4) counties within the Dragon Run Watershed to achieve consistency across county boundaries.
2. Foster educational partnerships and opportunities to establish the community's connection to and respect for the land and water of the Dragon Run.
3. Promote the concept of landowner stewardship that has served to preserve the Dragon Run Watershed as a regional treasure.

Through adopting the Watershed Management Plan, Gloucester embraced several policies that include preservation tools and recommendations for this area.

CHAPTER 3

Economic Development

Assessing a locality’s current economic conditions and planning for growth are important functions of a comprehensive plan, especially for local governments striving to attract and retain businesses, provide residents with employment opportunities, and support the local tax base. Employment patterns, population changes, and the types and availability of jobs give insight into a locality’s growth or decline. Analysis of this information will help to better understand Gloucester’s economic climate along with that of Hampton Roads and the Middle Peninsula. This chapter provides an overview of the current local economy and future opportunities.

Service industries are the County’s primary source for employment and sales tax revenues resulting from Gloucester’s history and position in the regional economy. Located on the outskirts of Hampton Roads’ urban centers, many residents commute to jobs outside the County closer to regional centers. Gloucester is also limited by a single major transportation corridor, Route 17, which, combined with the historically agrarian economy, has resulted

in slower economic development compared to other Hampton Roads localities.

Existing Conditions and Trends

Gloucester is located within the Virginia Beach-Norfolk-Newport News, VA-NC Metropolitan Statistical Area (MSA), also referred to as the Hampton Roads MSA, an urban area with a population of 50,000 or more including adjacent counties that have a high degree of social and economic integration (as measured by commuting to work) with the urban core.¹ This region contains nine (9) cities and seven (7) counties, as shown on Map ED-1, and is part of a larger Combined Statistical Area with two (2) North Carolina Micropolitan Statistical Areas that consist of Camden, Dare, Pasquotank, Perquimans, and Tyrell Counties. Gloucester is contained in the Hampton

¹ <http://www.census.gov/population/www/metroareas/metroarea.html>

Map ED-1: Hampton Roads MSA

Data Source: Office of Management and Budget, U.S. Census Bureau

Metropolitan Statistical Areas (MSA's) are designed by the Office of Management and Budget and are defined as urban areas with a population of 50,000 or more and any adjacent counties that have "a high degree of social and economic integration (as measured by commuting to work) with the urban core." Urban cores are identified based on evidence of development, such as roads, homes, businesses, and infrastructure. Each MSA contains principal cities, central counties, and outlying counties. The Hampton Roads MSA (the formal designation is the Virginia Beach-Norfolk-Newport News, VA-NC MSA) consists of five (5) counties (Gloucester, Isle of Wight, James City, Mathews, Surry, and York) and nine (9) independent cities (Chesapeake, Hampton, Newport News, Norfolk, Poquoson, Portsmouth, Suffolk, Virginia Beach, and Williamsburg) in Virginia, as well as Currituck County and Gates County in North Carolina. The current population of the region is estimated at 1.7 million residents.

In addition, Hampton Roads now forms the largest part of a new Combined Statistical Area with two (2) micropolitan statistical areas in North Carolina: the Elizabeth City Micropolitan Statistical Area, which consists of Camden, Pasquotank, and Perquimans Counties, and the Kill Devil Hills Micropolitan Statistical Area, which consists of Dare and Tyrell Counties. The regional economy is discussed on page 25.

Map ED-2: Planning District Commissions

Data Source: Hampton Roads Planning District Commission, Code of Virginia

Planning District Commissions (PDC’s) are voluntary, state-enabled, locally-created regional planning agencies and forums. The purpose of a PDC is “to encourage and facilitate local government cooperation and state-local cooperation in addressing, on a regional basis, problems of greater than local significance,” according to §15.2-4207 of the Code of Virginia. The authorization for and responsibilities of PDC’s are described in the Regional Cooperation Act, as amended. Functional areas that PDC’s may address include, but are not limited to: economic and physical infrastructure development, solid waste, water supply, and environmental management, transportation, criminal justice, emergency management, human services, and recreation. Primary duties of PDC’s include conducting studies on regional issues and problems, providing technical assistance to state agencies and localities, serving as liaisons between localities and state agencies, and conducting regional strategic planning. Gloucester County is a member of two (2) PDC’s: the Hampton Roads Planning District Commission and the Middle Peninsula Planning District Commission. The Hampton Roads Planning District Commission members include six (6) counties (Gloucester, Isle of Wight, James City, Southampton, Surry, and York) and ten (10) cities (Chesapeake, Franklin, Hampton, Newport News, Norfolk, Poquoson, Portsmouth, Suffolk, Virginia Beach, and Williamsburg). The Middle Peninsula Planning District Commission includes six counties (6) as members: Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex. Planning District Commissions are discussed on page 28.

CHAPTER 3 - ECONOMIC DEVELOPMENT

Roads MSA because of its commuter ties to the urban core, including Newport News, Hampton, James City County and York County.

Gloucester is a member of both the Hampton Roads and Middle Peninsula Planning District Commissions, though Hampton Roads has historically had a greater regional impact on local economic growth and development. However, as the Middle Peninsula continues to grow, its influence is likely to increase. The boundaries of the Hampton Roads and Middle Peninsula Planning Districts are shown on Map ED-2.

Gloucester Court House, the County seat, is 59 miles east of Richmond, 135 miles south of Washington, D.C., and 45 miles north of Norfolk and the Hampton Roads ports, one of the world's largest and busiest natural, deep-water harbors. Several military installations, including Naval Station Norfolk, Naval Air Station Oceana, and Joint Base Langley-Eustis, employ over 140,000 individuals and the federal government is Hampton Road's most significant employer. Newport News Shipbuilding is the MSA's largest private employer and the region's economy is comprised of

service-based industries along with other new, diverse industries. Regional employment increased by 50,000 jobs between 2000 and 2010.

Income

The County's Annual per capita income (PCI) in 2013 was \$28,673, lower than the Hampton Roads MSA average of \$28,894.² However, the County's median household income was \$60,519, slightly higher than the MSA's median household income of \$58,844, but lower than Virginia's median household income of \$63,907, as shown in Table ED-1.

Roughly 25% of Gloucester County's households earn between \$25,000 and \$50,000, while nearly 34% earn between \$50,000 and \$100,000. Approximately 17% of Gloucester's households earn less than \$25,000, while almost 25% earn more than \$100,000, as shown in Figure ED-1.

² 2009-2013 5-year American Community Survey

Table ED-1: 2009-2013 Income Comparisons

	Per Capita Income	Median Household Income	Median Family Income
Gloucester County	\$28,673	\$60,519	\$72,719
Virginia Beach-Norfolk-Newport News, VA-NC MSA	\$28,894	\$58,844	\$70,343
Virginia	\$33,493	\$63,907	\$76,754
United States	\$28,155	\$53,046	\$64,719

Source: 2009-2013 American Community Survey

Real Estate and Finance

Gloucester County collects various taxes, including real estate tax and personal property taxes on automobiles, trucks, motor homes, mobile homes, motorcycles, trailers, airplanes, business personal property, farm machinery, and tools. Local taxes are set annually with each budget and are typically

lower than most Hampton Roads localities. The Board of Supervisors adopts the County’s annual budget each Spring, with the largest components being the County’s Public Schools, Public Safety, capital needs, and debt funds.

Construction and Housing

Gloucester averaged over 220 single- and multi-family housing permits annually between 2000 and 2011, a significant decrease from the 30-year average of over 250 permits per year since 1980. However, residential building permits were rising through the 2000’s (reaching a high of 353 permits in 2007) until the housing market decline in 2008 slowed this pace to roughly 100-125 per year since 2008. Although manufactured homes account for approximately 15% of the current housing stock (nearly 2,200 homes), the number of permits for new manufactured homes has declined over time.³

³ Gloucester County Housing Needs Assessment, 2007

Figure ED-2: Building Permits Issued in Gloucester and the Peninsula, 1990-2011

Source: Gloucester County Building Inspections, HRPDC 2012 Data Book

The number of building permits issued regionally has varied over the last 30 years, as shown in Figure ED-2. While permits issued has remained relatively stable in Gloucester, the Peninsula's yearly variation resulted from additional permits issued in James City County and Newport News between 2001 and 2005.⁴

Although the amount of building permits issued decreased during the housing decline and recession, as the economy recovers, development is likely to rise, resulting in increased permitting and residential construction.

Retail Sales

Local retail sales have grown faster than the regional average over the past 20 years, increasing by 4.8% annually (compared to the Peninsula and HRPDC annual averages of 3.3%) from 1990 to 2011. However, the County's share of regional retail sales has remained below its population and income shares, indicating room for expansion in this sector, as shown in Table ED-2.

Table ED-2: 2010 Share of Population, Income, and Retail Sales

	Population	Income	Retail Sales
Gloucester – Peninsula	7.2%	6.8%	5.9%
Gloucester – Hampton Roads	2.2%	2.1%	1.9%

Source: HRPDC

Regional Employment Trends

From 2000 to 2010, Hampton Roads' civilian employment expanded at a 0.4% average annual rate,⁵ slightly lower than Virginia's 0.8% rate, as shown in Table ED-3. Of the eleven (11) metropolitan statistical areas within Virginia, the Hampton Roads MSA had the fifth fastest average annual employment growth and the second largest total employment.

Gloucester Employment Trends

In 2014, Gloucester's unemployment rate was 4.8%, compared to 5.6% on the Peninsula, 5.7% in Hampton Roads, 5.2% in Virginia, and 6.2% across the nation.⁶ From 1990 to 2011, the County's civilian labor force increased by 33.5%, from 15,217 to 20,316, and civilian employment increased by 30.2%, from 14,679 to 19,124. Unemployment remained relatively level, between 400 and 800 persons, from 1990 to 2008, but increased in 2009 (1,254) and 2010 (1,349), primarily due to the economic downturn, before declining in 2011 to 1,112.

Although the County contains approximately 7% of the Peninsula's population and 2% of the Hampton Roads regional population, the local employment share is slightly higher, with roughly 8% of the Peninsula's total employment and nearly 2.4% of the region's total employment.

Major Industries

Gloucester’s economy has historically been natural resource-based, with local land and water providing farmers and watermen jobs and income for decades. More recently, these industries, while still important components, are declining as other industries, such as retail and health care, have increased locally. Should this trend continue, Gloucester’s economy will likely become even more diverse in the future.

Agriculture

In 2012, Gloucester County had over 130 active farms, with the average size being 149 acres and the median size being 34 acres. The number of large farms (500 acres and above) has remained relatively stable since the late 1980’s, between 10 and 15 farms, while the number of smaller farms (fewer than 50 acres) has increased, from 61 in 1987 to 85 in 2007. The average farm size has decreased by nearly 25% since the 1987 Census of Agriculture, from 199 acres to 149 acres and the median farm size (recorded since 1997) has decreased by over 40%, from 58 acres to 34 acres, as shown in Table ED-5.

Source : USDA Census of Agriculture

* Data not collected in this year.

Total cropland decreased by 25% since 1987, from 18,315 acres to 13,673 acres. However, the average value of local farms increased by over 60% from 1987 to 2007, from \$460,069 to \$750,378 and the market value of agricultural products, including crops and livestock, increased by more than 200%, from \$3,570,000 to \$11,273,000. While there were more farms with total sales over \$100,000 in 2012 (when compared to 1987), there were also more farms with total sales less than \$10,000. The number of operators whose primary occupation is farming has fluctuated over the last quarter-century, and, especially, the last decade. In 2007, there were 92 operators who were farmers and 67 who had other primary occupations. However, in 2012, those number reversed, to 53 farmers and 83 with other primary occupations, indicating that farming is still practiced within Gloucester, but farming trends are changing, as shown in Table ED-6. While traditional agriculture may be declining, existing local agricultural lands still provide opportunities for diversified agricultural-based businesses, agritourism, niche farms, farmers’ markets, and similar enterprises, allowing property business owners to capitalize on the community’s rural character while providing sufficient revenues. These businesses also cater to tourists, particularly those from urban areas seeking to experience rural recreational opportunities. The County should look

for opportunities to support and expand these forms of agriculture as a component of the local culture as well as an economic opportunity.

Working Waterfronts

Watermen are uniquely referenced in the Chesapeake Bay region, with many identifying themselves by their

catch or gear, such as “oyster tongers,” “crabbers,” “clammers,” “pound netters,” or “scallop dredgers.” This historic lifestyle has occurred for hundreds of years and continues to define our coastal heritage.

Watermen impact the local economy beyond their catch as they harvest seafood and distribute their product to processing plants, wholesalers, retailers, and restaurants, resulting in indirect economic benefits for those who build and repair boats, sell ice, and run marinas. The Virginia Institute of Marine Science (VIMS) estimates that fishing within the County generates nearly 600 full-time jobs throughout Virginia. Although watermen are independent and adaptable to change, they currently face increased challenges, causing a decline in their total catch and the total number of practicing watermen. Similar to agriculture, working waterfronts are tied to the County’s culture and efforts to protect this industry, such as recreational and tourism opportunities, are crucial. Specific land use designations to preserve working waterfronts can be found in the Future Land Use chapter.

CHAPTER 3 - ECONOMIC DEVELOPMENT

Other Industries

The largest local employment sector in 2015 was retail trade, with over 1,700 employees, followed by health care and social assistance, educational services, accommodation and food services, and professional, scientific, and technical services, as shown in Table ED-7. Although not included in U.S. Bureau of Labor Statistics reports, government is another substantial sector.

Expanded local sales and services has increased economic diversity, but most residents commute outside the County for employment, increasing from 35% in 1960 to 58% in 2010. Approximately 82% of commuters travel to Hampton Roads, 6% travel to other Middle Peninsula and Northern Neck localities, and 12% travel to Richmond and the surrounding areas.⁸

Tourism

In 2014, domestic tourism and travel spending in Virginia totaled \$22.4 billion, an increase of 4.1% from 2013, and nearly 217,000 Virginians are directly supported by domestic travel, with a total 2014 payroll

of over \$5 billion.⁹ The recent economic downturn has resulted in less tourism revenue, but this industry still influences Gloucester's economy. Although local tourism does not significantly contribute to the regional economy, this industry is growing, with employment and local tax revenue increasing by 7% and 11%, respectively, since 2010. Continued and expanded partnership with key stakeholders will assist in improving tourism opportunities and revenues.

Projections

The Hampton Roads Planning District Commission (HRPDC) produces projections for local and regional population, employment, and workforce. These figures, shown in Tables ED-8, ED-9, and ED-10, are used for long-range regional and local planning efforts.

Gloucester’s 2040 population is expected to increase by 9.1%, a slower rate than the regional (22.2%) and Peninsula (13.5%) rates, as listed in Table ED-8.

Gloucester also expects a workforce increase of 8.9%, slightly below the anticipated population growth, but lower than those for the Peninsula (12.9%) and Hampton Roads (18.7%), as shown in Table ED-9.

Additionally, local employment is expected to increase, although not as much as the projected population increase. Overall employment is estimated to rise by 26.2%, similar to the Peninsula (25%) and Hampton Roads (28.5%) rates, as listed in Table ED-10, and local retail employment is expected to increase by nearly 30%.

Table ED-8: Projected Population Growth

	1970	1980	1990	2000	2010	2040 (Forecast)	Projected Growth, 2010-2040

Challenges and Opportunities

Gloucester’s economic development strategies and policies are crucial components to the Comprehensive Plan since the type and extent of economic growth directly impacts land use decisions and infrastructure investments. The ability to pay for new services and appropriately guide growth depends on the balance between economic growth and residential development. Increased high-paying jobs allow the County to provide additional services and facilities without raising real estate or personal property taxes and having these jobs outside the County provides revenue to other localities while Gloucester still must provide resident services. Balancing economic development with residential growth maintains and improves quality of life while local economic development and the County’s fiscal capacity are directly linked to the region’s economy, affecting residential development, infrastructure, needs, and services.

Job location also impacts local infrastructure needs since jobs outside the County increase the transportation infrastructure investment needed to support commuters while local economic

development requires additional community facility investment, including transportation, utilities, and communications, to support increased jobs and workers. Employment expansion beyond the County’s borders, specifically in the Hampton Roads area, influences local growth as well as transportation facilities and other types of infrastructure. Travel to employment outside the County will require further investments in commuter highway capacity or transit service, potentially in the form of an express bus serving Gloucester Court House and Gloucester Point/Hayes with connections to York County, Oyster Point, and Newport News, as envisioned in the Hampton Roads Regional Transit Vision Plan.¹⁰ As the village areas grow, development and redevelopment that provides commuter parking to support a dedicated bus service should be considered.

Over the past few decades, Gloucester has experienced considerable residential growth along with some economic growth. As Hampton Roads commuters choose to live on the Middle Peninsula, additional residential development strains the County’s ability to provide the necessary services and facilities. Industrial and commercial growth can increase the County’s fiscal capacity without impacting the local quality

¹⁰ http://www.drpt.virginia.gov/activities/files/Final_Report_03-17-11.pdf

CHAPTER 3 - ECONOMIC DEVELOPMENT

of life. Appropriate residential, commercial, and industrial growth that addresses potential conflicts is critical for balancing local economic development with history and culture.

The County's two (2) urbanized areas, Gloucester Court House and Gloucester Point/Hayes, connected by the Route 17 corridor, are more appropriate for development than the outlying areas. Concentrating the majority of industrial and commercial development in the Development District will assist in providing efficient infrastructure improvements and reduce the negative impacts of development in other areas of the County.

Sustaining Farms - On and Off the Water

Within Gloucester, the commercial seafood industry has had to adapt to changes in coastal land use and waterfront property. Historically, coastal communities featured strong fishery and shipbuilding industries that supported recreational and commercial uses.

However, in-migration and additional coastal development have threatened traditional working waterfront industries, as described by Jack Wiggin:

"The viability of many businesses on the Gloucester (Massachusetts) waterfront has been and remains tied to the health of the commercial fisheries...without an economically viable waterfront business, property owners are unable, and lending institutions unwilling, to invest in capital improvements needed to maintain piers, wharves and other waterfront infrastructure."¹¹

As local waterfront properties become more desirable, increased market values and real estate taxes may force seafood processing businesses to close and watermen to operate elsewhere. Additionally, traditional access points become privately maintained, further limiting access for watermen. Although the community values working waterfronts and their cultural heritage, the County lacks the resources to support this industry through publicly owned and maintained facilities, compelling watermen to either seek innovative options or cease operations.

¹¹ Preserving and Promoting a Working Harbor: The Experience of Gloucester, Massachusetts

Perrin River landing during the 2012 Chesapeake Bay blue crab season, September 2012. Photo taken from The Perrin River Commercial Seafood Harbor Master Plan.

Many local water bodies, such as the Perrin River and Aberdeen Creek, are established commercial seafood points. The Middle Peninsula Planning District Commission (MPPDC) and the Middle Peninsula Chesapeake Bay Public Access Authority (PAA) have focused efforts in these waterbodies to explore and improve commercial watermen conditions through funding from the Virginia Coastal Zone program to develop *The Perrin River Commercial Seafood Harbor Master Plan (2012)* and the *Aberdeen Creek Harbor Master Plan (2014)*,¹² with their recommendations incorporated into this Comprehensive Plan. As a result, the County, PAA, and other partners have taken steps to remove barriers threatening the commercial seafood industry while looking for other ways to preserve the local working waterfront culture and provide for growth of new and traditional waterfront industries.

Despite its recent decline, agriculture is still an important component to Gloucester's economy and culture. Agritourism is one option to help maintain local agriculture through combining entertainment, economic, and educational uses, such as corn mazes, markets, festivals, wineries, and retail and educational garden centers. Through an agritourism policy backed by the Comprehensive Plan and supportive zoning ordinances, Gloucester can maintain, attract, and develop options to promote local agriculture.

Maintaining viable working lands for agriculture, forestry, and aquaculture preserves the rural character

12 <http://www.mppdc.com/index.php/reports/abc-reports>

while providing economic stability for these property owners. Specific efforts to promote agriculture, such as establishing special agriculture, aquaculture, and forestry districts and promoting conservation easements,¹³ along with developing policies that resolve use conflicts, will help preserve Gloucester's traditional culture and economy and provide benefits to the County while requiring few services in return.

This Plan begins to identify and protect working waterfronts and agriculture by designating areas on the Future Land Use Map for these uses, reflecting the County's support of these activities in their current locations and desire for their continuance while recognizing their specific infrastructure needs.

Increased Tourism

Gloucester possesses many cultural, historic, and natural resources that provide various benefits, including increased tourism, a major component of the local and regional economy. Tourism opportunities include lodging, dining, and other activities that accommodate day travelers from the Hampton Roads and Richmond regions. Gloucester should support travel-related businesses, especially those centered on the County's natural and historic resources. Resource preservation is vital to continuing and expanding local tourism. The Middle Peninsula State Park and

CHAPTER 3 - ECONOMIC DEVELOPMENT

Werowocomoco are examples of increased tourism opportunities stemming from the County's unique historical and natural attributes. There are a number of destinations throughout Hampton Roads, such as Williamsburg and Yorktown, that could generate a greater market for overnight visitors traveling to and staying within Gloucester.

Outdoor recreation is both a component of local tourism and residents' quality of life, with many localities providing land for outdoor recreational activities such as hiking, camping, biking, birding, boating, fishing, and swimming. Numerous economic benefits are associated with parks, open spaces, and sports and recreation programs since residents and businesses consider parks and recreational programs important "quality of life" factors. These services offer other benefits, such as reduced crime, greater community health, increased property values, and local tax revenues. Potential homebuyers often desire natural open space and walking and bicycling trails, and parks located near residences have a

positive impact on property values while reducing health care costs.¹⁴ Gloucester's natural and historic resources, along with its geographic location, offer many ecotourism and agritourism opportunities that highlight the County's rural character. Local facilities, such as parks, water access, and dedicated open space, also encourage visitors. These resources can be linked together to maintain and promote existing industries and traditions, such as agriculture, forestry, and working waterfronts, benefiting both tourists and County residents.

Special area plans that encourage tourism and growth will maximize returns on infrastructure investments. The Gloucester Courthouse Village Plan, adopted in 2010, makes recommendations for physical design, economic development, and marketing of this area, including lighting and landscaping upgrades, infrastructure improvements, and business incentives. Additionally, the Gloucester Point/Hayes Village

¹⁴ 2013 Virginia Outdoors Plan, DCR

An aerial view of the archaeological core of Werowocomoco (a national park), on the York River in Gloucester County, VA - Source: Virginia Department of Historic Resources

Development Area Plan, adopted in 2011, focuses on encouraging economic growth in southern Gloucester and the Gloucester Court House Village Sub-Area Plan, adopted in 2013, includes connectivity, preservation, and economic vitality components.

Industrial Development Opportunities

The VIMS-Industry Partnership, established in 2003 as a joint venture between VIMS and the College of William & Mary's (W&M) Office of Economic Development, is a forum for facilitation and collaboration between faculty and staff and the Virginia business community that advises the VIMS Dean and Director regarding long-term partnerships with industry professionals and improved collaboration and technology transfer. More than 30 industry members from 19 companies, including the Gloucester County Director of Economic Development, participate in various initiatives,

from small, concept-based projects to multi-million dollar, multi-year programs that include Bio-Sensors, Autonomous Underwater Vehicles (AUV's), Algae-Biofuels, and Observing Systems.

The Gloucester Business Park, a 70-acre development located south of the Court House, was specifically designed to attract new and expanding commercial and industrial businesses within the County. This site is owned by the Gloucester County Economic Development Authority and includes various tenants, such as Canon Environmental Technologies, Inc. and Sentara Health Systems. The business park can accommodate business expansion and has been identified as a site for employment and light industrial uses.

In addition to the Gloucester Business Park, the County's Economic Development Authority has considered the prospect of establishing or supporting a future industrial park to provide opportunities for small trade and contracting business start-up or

The Gloucester Business Park, a 70-acre development located south of the Court House - Source: Gloucester Economic Development

expansion. Additional industrial development should be located where sufficient access is available and conflicts are mitigated.

Business Development

Small-business development is crucial to local economic development and programs promoting new business start-up and development may play an important role in future economic expansion. Numerous new or existing programs provided by Rappahannock Community College, the Virginia Department of Business Assistance, and the U.S. Small Business Administration can support economic development. Vocational programs for students, similar to existing programs offered through New Horizons and the Rappahannock Community College Workforce Development Center, provide other opportunities.

Advances in telecommunication technologies along with flexible work arrangements have increased the amount of people working from home, resulting in positive community impacts, such as decreased congestion, energy consumption, and air pollution. Similarly, infrastructure and training creates opportunities for individuals that otherwise might have difficulty finding work, such as single parents, elderly, and disabled individuals. The County can promote alternative working environments for residents through efforts that increase opportunities for at-home businesses and improved information technology resource access.

Goals, Objectives, and Implementation Strategies

Effective economic development requires coordinated decisions across multiple sectors and entities. Gloucester County Administration along with the Departments of Economic Development, Planning and Zoning, Public Utilities, and Parks, Recreation, and Tourism, among others, can facilitate discussions between developers and other agencies, such as

VDOT, to promote projects that serve the public, increase economic opportunities, and accomplish the County's goals. Involvement during the early stages of discussions is especially important. Sites or uses considered for development should be consistent with the County's Future Land Use Plan and the Pan's goals and objectives. Since efforts by the various entities require cooperation, the Department of Economic Development should continue to coordinate these pursuits as they consider flexible economic development strategies that expand the local economy and achieve other goals.

Goal ED-1: Expand and create diverse economic and commercial development opportunities that promote a balanced local economy.		
Objectives	Implementation Strategies	Time Frame
Support and promote economic opportunities for existing county institutions and stakeholders.	Review ordinances to ensure they support and promote economic opportunities.	Short Term
Provide necessary services and facilities for commercial and industrial development.	Work with the Economic Development Authority and other partners to ensure that resources are available.	Short Term
	Increase the availability of necessary infrastructure for existing and future commercial and industrial development, including water, sewer, and telecommunications infrastructure.	Ongoing
Encourage economic development by streamlining development processes.	Regularly evaluate existing processes for improvement.	Ongoing
Goal ED-2: Promote local employment.		
Objectives	Implementation Strategies	Time Frame
Encourage a diverse workforce.	Establish partnerships with local and regional businesses and associations that equip employees.	Ongoing
	Encourage training and educational programs that provide continuous vocational and enrichment opportunities for County small business owners.	Ongoing
	Encourage cooperation and partnerships between the County's educational institutions.	Ongoing
Goal ED-3: Promote industries that preserve Gloucester's cultural, historical, and natural resources.		
Objectives	Implementation Strategies	Time Frame
Support industries that are culturally and historically significant, such as agriculture, forestry, and water-based occupations.	Encourage commercial recreation, tourism, fisheries, and water- and boating-related industries.	Ongoing
	Revise current ordinances to ensure the continuance of these uses.	Short Term
	Encourage industries that minimize impacts on the natural environment.	Ongoing

CHAPTER 3 - ECONOMIC DEVELOPMENT

Goal ED-4: Promote quality commercial and industrial development and redevelopment within the community.		
Objectives	Implementation Strategies	Time Frame
Minimize conflicts resulting from commercial and industrial development.	Work to mitigate conflicts between business development adjacent to residential areas during the review process.	Ongoing
Encourage existing businesses to maintain high-quality structural soundness, aesthetic appearance, circulation systems, and accessibility.	Encourage Universal Design within development and redevelopment projects to increase accessibility for all users.	Ongoing
Encourage all businesses to provide necessary accommodations for the disabled and elderly.	Maintain consistency with the Americans with Disabilities Act in development and redevelopment projects.	Ongoing
	Encourage Universal Design within development and redevelopment projects to increase accessibility for all users.	Ongoing
Goal ED-5: Promote economic development in appropriate and suitable areas.		
Objectives	Implementation Strategies	Time Frame
Identify appropriate sites for retail, commercial, and industrial development based on topography, geology, accessibility, infrastructure, and proximity to complementary uses.	Consider location and design of commercial and industrial development in plans for transportation and other infrastructure improvements.	Ongoing
	Ensure that land access and utility provisions are adequate for commercial development and are suitable for other land uses.	Ongoing
	Develop and implement a plan for the County's waterfronts that promotes various uses, including residential, recreational, commercial, and industrial in appropriate areas and addresses use conflicts.	Short Term
	Identify areas with unique economic development potential and encourage similar land uses on adjacent land when possible.	Ongoing
	Encourage utilization of existing and vacant buildings for economic development.	Ongoing

CHAPTER 4

Housing

Housing location and type influences transportation, services, employment, and the local economy while neighborhoods that provide quality housing promote civic pride.

Comprehensive planning and the corresponding implementation efforts guide the amount, type, and quality of housing, which furthers Gloucester's primary housing goal to provide safe, adequate, and affordable housing for all County residents.

The Housing chapter aims to assess the County's existing housing stock by reviewing current demographics and housing supply and identifying housing needs. It further sets a framework to address current and future housing needs and provide guidelines to protect and enhance the quality of life throughout Gloucester.

Housing Inventory

Overview

The 2010 U.S. Census estimates 15,852 existing housing units within the County, resulting in an average density of 73 units per square mile, with 11,463 units being owner-occupied, 2,830 renter-occupied, and 1,559 vacant, as shown in Table H-1.

From 1990 to 2000, owner and renter occupied units increased by 21.0% and 14.3%, respectively, while vacant units decreased by 7.9%. Increases in owner-occupied units (7.3%), renter-occupied units (15.7%), and vacant units (14%) also occurred between 2000 and 2010 and increases occurred for owner-occupied units (29.9%), renter-occupied units (32.2%), and vacant units (5%) over the 20-year period. Overall occupied units have increased, likely resulting from migration into the County.

Housing Type

Gloucester’s housing types include single-family and multifamily housing as well as manufactured housing, with Figure H-1 illustrating the current percentage share for each housing type and Table H-2 providing a 20-year comparison. Roughly 84% of Gloucester’s housing is single-family (including modular homes), whereas multi-family housing (including duplexes or two-family homes) represents 6% of the housing units and manufactured housing (commonly known as mobile homes) comprising

10% of the County’s housing stock. Since 1998, new mobile homes are allowed only within mobile home parks and agriculturally zoned districts and American Community Survey data¹ shows a decline in existing mobile homes since 1990.

¹ The American Community Survey (ACS) produces annual and multi-year estimates of population and housing characteristics along with data for small areas, including tracts and population subgroups.

Housing Location

Of the eight (8) County Census Tracts, most of the housing stock (20.2%) is located in Tract 1001, which has the second lowest population density (87 persons per square mile). Census tract 1004 has the lowest housing stock and population density, with 4.3% of the County's housing stock and a population density of 58 persons per square mile, and Census Tract 1003.01 is the most populated tract, with a population density of 1,390 persons per square mile. Table H-3 details the County's housing stock and Map H-1 illustrates the population density.

Age and Quality

Housing age may indicate housing quality as quality declines over time unless repairs and renovations occur. The majority of the County's housing stock is under 40 years old and over 60% has been constructed since 1980, compared to only 11% constructed before 1950, as shown in Table H-4. Much of the local housing stock was constructed according to national standards (since replaced by international standards), established in the 1960's, and only 1% of Gloucester's housing stock lacks complete plumbing or kitchen facilities.

Table H-3: Housing by Census Tract (1990-2010)

Census Tract		1990		2000		2010	
1990 & 2000	2010	Number	Percentage	Number	Percentage	Number	Percentage

Map H-1: Housing Density

Data Source: U.S. Census Bureau

The location, type, and density of development directly impacts a community's quality of life, environmental conditions, the need for services, and many other aspects. Identifying changes in development patterns and trends assist localities in evaluating current and future community needs. Residential development within the County is concentrated primarily in and around Gloucester Court House and Gloucester Point/Hayes in proximity to existing services. Future growth is encouraged within and between these areas with lower densities and less intensive and more traditional uses of land supported in other areas of the County.

Housing density is discussed on pages 45-49.

On average, houses within the County are larger than those in other jurisdictions, averaging 6.1 rooms per housing unit, slightly higher than the 5.9 rooms per housing unit average for Hampton Roads and Virginia. Typically, a larger house will be located on a more sizable lot, indicating that lots within Gloucester are, on average, also larger than other jurisdictions.

Local residential densities, measured in homes per acre, are also relatively low, a characteristic common throughout the Middle Peninsula. Gloucester’s minimum lot sizes for conventional subdivisions within residential zoning districts, as set forth in the 2015 Zoning Ordinance, range from 10,000 square feet with public water & sewer (2 acres without) in the most populated districts to five (5) acres in rural districts. Higher density and alternative housing options have been identified as a need in Gloucester.

Example of older home in Gloucester County -

Housing Occupancy and Tenure

Housing Occupancy and Tenure, as detailed in Table H-5, describes the amount of occupied (non-vacant) housing units and the type of occupant (owner or renter). Although 90% of the County’s housing stock is occupied, the 10% vacancy rate is slightly higher than the 9% state average and roughly 80% of local occupied housing is owner-occupied, with 20% rented.

Table H-5: Housing Occupancy and Tenure

Total Housing Units	15,852
Occupied Housing Units	14,293 (90%)
Owner-Occupied Housing Units	11,463 (80%)
Renter-Occupied Housing Units	2,830 (20%)
Vacant Housing Units	1,559 (10%)
Homeowner Vacancy Rate	1.9%
Rental Vacancy Rate	6.1%
Average Household Size of Owner-Occupied Units	2.59
Average Household Size of Renter-Occupied Units	2.4

Special Needs Population

Persons with special needs include the frail elderly, persons with disabilities, mental illness, substance abuse or addiction, HIV/AIDS, and homeless families or individuals. Although Census data estimates the number of special needs individuals, it is difficult to determine how many have housing needs and, as many have very low incomes, their needs may have been accounted for within low income household estimates.

Persons with Disabilities

The Middle Peninsula/Northern Neck Community Services Board (CSB) assists mentally ill and mentally disabled clients with housing services throughout a 10-county region. Lack of affordable housing units is a limiting factor in client release from the Eastern State Hospital. A 60-bed adult living facility in Gloucester Court House provides daily case management for elderly, mentally disabled clients referred by the CSB. Gloucester permits group homes serving up to eight

Source: Riverside Health System

(8) physically or mentally disabled residents in all zoning districts which allow for single family homes. Group homes with more than eight (8) residents are permitted by right in the multifamily zoning district and as a special exception in residential and agricultural zoning districts.

Community Service Board clients may also qualify for the Belroi Home, a transitional housing facility in Gloucester that independently houses up to four (4) individuals with mental illness and controlled substance addiction. Gloucester permits transitional homes serving up to eight (8) residents as a conditional use in some zoning districts and transitional community facilities serving between eight (8) and fifty (50) residents as a conditional use in some business zoning districts. Local and regional housing options for residents with illegal or controlled substance addictions are limited due to a lack of transitional homes and community facilities.

Elderly and Frail Elderly

The elderly have special housing needs, which limit the available housing options. In most cases, the homes they raised their families in are too large, costly, and difficult to maintain, or lack necessary safety and convenience items. Houses with stairways or high cupboards or residences located far from shopping opportunities often become unsuitable as people age and struggle to perform daily activities. Although a home still provides security for the elderly, it is often economically unfeasible for them to remain in their house without assistance or costly renovations. However, it may also be difficult to find suitable alternatives.

Gloucester’s 2007 Housing Needs Assessment estimated 780 frail elderly requiring supportive services with the County. In 2010, Bay Aging established the Service Coordination Program at Daffodil Gardens (among other regional elderly apartment properties), where a designated service coordinator provides community-based support services for residents on a weekly basis, which often prevents the need for an alternative living situation (assisted living or a nursing home). Other services provided to Daffodil

Gardens residents include demand response public transportation (Bay Transit), Meals on Wheels, and additional programming through the Active Lifestyle Center, Adult Day Break, Home Care, and Options Counseling. However, Daffodil Gardens currently has a waiting list for new residents and Bay Aging hopes to expand these services if funding becomes available.

Homeless Families and Individuals

Gloucester, in conjunction with 11 other counties, participates in the annual “Point in Time” Survey through the U.S. Department of Housing and Urban Development (HUD), which estimates the number of homeless families and individuals in each locality. Although the January 2015 count found 12 homeless individuals living within Gloucester, the local homeless population may be higher since homeless families and individuals often double-up with relatives and friends when limited affordable housing is available, a temporary solution that may result in periods of homelessness.

In 2014, the Gloucester Resource Council, in partnership with various community groups and faith-based organizations, established the Gloucester United Emergency Shelter Team (GUEST), a collaborative

Homeless camp in Gloucester - Source: Northern Neck Middle Peninsula Housing Coalition “Point in Time” presentation to the Board of Supervisors on 4/17/18

effort to provide homeless sheltering during winter months that includes overnight living arrangements, daily meals, and transportation with shelters hosted by local nonprofit and faith-based organizations. In 2015, this group also opened an adult day program to assist the homeless in finding jobs and housing and provide a place to shower and receive other assistance.

Section 8 Housing Choice Voucher Program

Bag Aging administers the County’s Section 8 Housing Choice Voucher Program, eligible for single-family homes, townhomes, apartments, and mobile homes. As of June 2015, 70 leased vouchers were in use in Gloucester, but qualified applicants may have an extended waiting period prior to finding eligible housing.

Inventory of Supportive Housing for Persons with Special Needs

Several supportive housing facilities for persons with special needs (those with physical and mental disabilities, the elderly, and the homeless) are located within the County, as shown in Table H-6.

Housing Cost & Affordability Analysis

Housing Cost and Value

Housing cost (measured by total value) in Gloucester is increasing according to the current value of an individual’s home and actual sales data. The 2011-2013 American Community Survey lists the median value for a single-family unit as \$225,000, as shown in Table H-7. Income increases generally have not kept pace with increased housing cost, presenting an extra challenge for those seeking adequate housing.

Gloucester County Assessors Median Home Sale Price

The County Assessor reports the 2014 median and mean sale price within the County as \$181,500 and \$206,397, respectively. Between 2000 and 2014, both median and mean sales prices increased along with a real estate market increase.

Table H-6: Inventory of Supportive Housing for Persons with Special Needs

Facility Name	Type of Facility	Location of Facility
Village Green Apartments	Low Income Housing	Gloucester Court House, VA
Daffodil Gardens	Income Restricted Elderly Housing	Gloucester Court House, VA

Woodland Pointe Apartments	Disabled Low Income Housing	Gloucester Court House, VA

Source: Middle Peninsula-Northern Neck Community Services Board

Affordability

The U.S. Department of Housing and Urban Development (HUD) establishes “affordable” housing costs (including home mortgage or rent payments and all other anticipated payments directly associated with housing) as no more than 30% of a household’s (owner or renter) gross annual income. Since the 2011-2013 American Community Survey lists Gloucester’s median household income as \$59,134, monthly housing costs for a family with this income should not exceed \$1,478, as noted in Table H-9. Households paying more than what is “affordable” may sacrifice other basic necessities, such as food, clothing, and health care, and have trouble with routine household maintenance, which has greater impacts on lower income households who have fewer housing choices.

Home Ownership Affordability

Local affordable housing options have decreased since 2000, with the median home sales price increasing from \$117,000 to \$181,500 and over 60% of closings in 2014 selling for \$150,000 or more. For a family to afford the median home in Gloucester, an annual income of at least \$59,000 is necessary.

The most common job industries, including industries containing teachers, nurses, police officers, clerks,

Table H-7: Housing Value

Range	Units	Percentage
Less than \$50,000	588	5%
\$50,000 to \$99,999	378	3%
\$100,000 to \$149,999	910	8%

localities, with the median rent being \$837 and 34% of renters paying at least 30% of their income on rent. Section 8 Vouchers, Village Green Apartments, and Daffodil Gardens Apartments provide the only publicly-subsidized housing within the County and increasing the affordable rental housing stock is a major need.

Gloucester Residents and Service Providers Input

In 2011, Gloucester conducted a survey, distributed to Gloucester Resource Council members to seek housing needs input. Of the 35 responses, 57.1% represented non-profit organizations and housing was the primary function for 16.3%. The results, which are located in the Appendices, offered insight on local service provision, housing needs, and unmet needs.

Planning Issues for the Future

Housing Density

Typical single-family residential developments in the County are approximately three (3) houses per acre, relatively low compared to other areas, and minimum lot sizes for conventional subdivisions in residential and agricultural zoning districts are listed in Table H-10. Future growth will require new, creative housing techniques that increase housing affordability and

Table H-10: Minimum Lot Sizes for Subdivisions

Zoning District	Minimum Lot Size	
	Public Water and Sewer	Private Water and/or Sewage Disposal
C-2 (Bayside Conservation)	5 Acres	5 Acres
RC-1 (Rural Countryside)	5 Acres	5 Acres
RC-2 (Rural Conservation)	5 Acres	5 Acres
SC-1 (Suburban Countryside)	2 Acres	2 Acres
SF-1 (Single Family)	10,000 Sf	2 Acres

Note: Lots created on a private road require a minimum of five (5) acres.

MissingMiddleHousing.com is powered by Opticos Design. Illustration © 2015 Opticos Design, Inc.

density where appropriate while maintaining the local quality of life and rural character.

Housing Alternatives

Gloucester can supplement the existing housing supply through incorporating housing options, such as various housing types, densities, and styles into its ordinances, which can aid in expanding Gloucester's housing stock to include high-quality rental and ownership housing options available to all.

The County has since ceased administrating the VHDA Section 8 Housing Choice Voucher Program, terminated its Administrative Service Agreement with VHDA, ended the Gloucester Housing Department, and dissolved the GHAB. The Gloucester Resource Council is working to address some of these recommendations through their affiliated groups.

Housing Programs

Various federal, state, and regional housing programs are available in addition to those provided by non-profit organizations, churches, and humanitarian groups. Since Gloucester does not currently have a Housing Department, assistance is provided by local and regional agencies and non-profit groups.

Housing Needs Assessment

The County's previous Housing Department administered the Virginia Housing Development Authority's (VHDA) Section 8 Housing Choice Voucher Program for the six (6) Middle Peninsula localities and served as staff to the Gloucester Housing Advisory Board (GHAB). The Housing Needs Assessment and Strategy Study,² promoted by the Resource Council, GHAB, and Housing Department to assess housing conditions and community needs, identify workforce and affordable housing production barriers, prioritize needs, and establish a strategic action plan, was presented to the Board in 2008 and referred to the Comprehensive Plan Steering Committee for incorporation into the Comprehensive Plan. The Planning Commission reviewed the Housing Needs Assessment recommendations and incorporated several, but not all, into the final goals and implementation strategies, found in the Appendices.

CHAPTER 4 - HOUSING

H-1: To encourage housing of various types and price levels so as to accommodate current and future County residents.		
Objectives	Implementation Strategies	Time Frame
To encourage the use of existing housing stock through incentivizing renovation and improvement to the minimum standards.	Support Bay Aging, Bay Family Housing, and other non-profit agencies to encourage rehabilitation of existing substandard housing through grants, loans, and other funding options.	Ongoing
Encourage the removal and replacement of vacant or blighted housing where renovation is not feasible though available federal, state, or local programs.	Review and revise Ordinances to encourage redevelopment of existing nonconforming houses within the Development District.	Short Term
	Encourage increased densities in the Village Development Areas (VDAs) for properties on public water and sewer in exchange for traditional neighborhood design performance standards.	Short Term
	Adopt a Traditional Neighborhood Design District (TND) to implement density bonuses and incentives for redevelopment.	Short Term
To consider revisions to the land development and construction codes that reflect new techniques and innovations in order to facilitate housing development, rehabilitation, and construction.	Review Ordinances to determine impediments to innovative techniques and flexibility in design.	Short Term
Establish standards for multifamily, joint use, and mixed density developments to ensure high quality projects in appropriate locations within the county.	Develop and adopt a TND Ordinance for the VDA's where higher densities and mix use development are most appropriate.	Short Term
H-2: Promote the use of safe and livable neighborhood designs in new residential developments, including planned mixed use and density, pedestrian, context sensitive, and transit friendly designs.		
Objectives	Implementation Strategies	Time Frame
Encourage roads, bikeway, and walkways connectivity in new and existing residential and commercial developments to promote an increased sense of community safety while decreasing traffic congestion.	Review and revise the Subdivision Ordinance to provide appropriate context-sensitive standards for new development.	Long Term
	Develop and adopt a TND Ordinance for the VDA's encouraging active transportation alternatives, connectivity, and Transit Oriented Development for future transit opportunities.	Short Term

H-3: Use recommendations of the 2008 Housing Study to explore ways to meet low, moderate, and fixed-income housing needs.		
Objectives	Implementation Strategies	Time Frame
Reinforce neighborhood sustainability through an expanded code enforcement program that adopts and administers a property maintenance code.	Consider the benefits of a property maintenance code compared to the additional staff time and resources required to enforce such a code to determine if the County wishes to pursue this.	Long Term
Increase the amount of land zoned for multi-family housing.	Rezone areas where higher density, multi-family, and mixed use housing would be appropriate as shown on the Future Land Use Plan.	Short Term
	Adopt quality design and development standards for all multi-family housing developments through revised Zoning Ordinances for VDA's and other areas.	Short Term
	In the revised ordinances, increase the allowable density within the multi-family zoning districts on public water and sewer to make redevelopment financially feasible for developers.	Short Term
	Define overall development standards that establish a high quality of development to achieve the type of development specified in the Comprehensive Plan and Village Sub-Area Plans.	Short Term
Provide benefits to developments creating workforce and affordable housing.	Through board policy and code amendments, create a streamlined permitting process, assist in financing infrastructure improvements, and waive local fees.	Long Term
	Adopt local legislation to increase the workforce and affordable housing supply through inclusionary zoning requiring developers set aside a portion of proposed housing units for lower income households.	Long Term
	Designate a department or agency to administer the affordable housing program.	Long Term
Streamline the review and approval process.	Establish a proffer policy and clear guidelines for rezoning expectations, especially those increasing density and having other impacts.	Long Term
	Review current checklists, handbooks, and processes to improve efficiency.	Short Term
	Dedicate appropriate staff time towards permit review.	Long Term

CHAPTER 5

Transportation

Maintaining and improving an efficient transportation network to serve residents, commuters, and visitors is important for Gloucester's future growth and quality of life and collaboration with local, regional, state, and federal partners as well as private stakeholders is necessary to achieve and maintain an adequate transportation system. The current network includes state highways, secondary and subdivision roads, private roads, sidewalks, transit service, and water access that serves three (3) primary functions: to move traffic through the County along major corridors, allow for safe and efficient travel within the County, and promote commerce by providing access to goods and services for residents and visitors.

State code requires Virginia localities to identify "infrastructure needs and recommendations that include the designation of new and expanded transportation facilities and that support the planned development of the territory covered by the plan and shall include, as appropriate, but not be limited to, roadways, bicycle accommodations, pedestrian

accommodations, railways, bridges, waterways, airports, ports, and public transportation facilities. The plan shall recognize and differentiate among a hierarchy of roads such as expressways, arterials, and collectors. In developing the plan, the locality shall take into consideration how to align transportation infrastructure and facilities with affordable, accessible housing and community services that are located within the territory in order to facilitate community integration of the elderly and persons with disabilities."¹

Existing Conditions and Trends

Gloucester residents depend on the County's 95 miles of primary roads, 320 miles of secondary roads, and 295 miles of private roads to meet their transportation needs. The Virginia Department of Transportation (VDOT) classifies roads based upon their location and

¹ Code of Virginia § 15.2-2223

CHAPTER 5 - TRANSPORTATION

service character, with functional usage combining mobility, the ability to get from place to place, and accessibility, connections or access between various land uses. Roads are categorized as urban or rural based upon population and further divided into principal and minor arterials, collectors, and local (secondary) roads, with arterials having the highest mobility but least accessibility, local roads having high accessibility but the least mobility, and collectors falling in between. Gloucester's existing public roadway system includes one (1) principal arterial (U.S. Route 17), four (4) minor arterials (State Routes 3, 14, 33, and 198), numerous major collectors, and a system of secondary roads serving the remainder of the County, as shown on Map TR-1. Route 17 carries a

significant portion of all traffic with limited alternate routes.

In 2013, the highest average traffic volumes in Gloucester, as determined by VDOT, were seen on four (4) segments of Route 17 between the York County line and TC Walker Road and three (3) stretches of road experienced at least 25% traffic volume growth between 2000 and 2013: Route 3 between Ware Neck Road and Main Street, Route 14 between the King and Queen County Line and Route 17, and Route 17 between the northern intersection with Main Street and the southern intersection with Main Street, as listed in Table TR-1.

*Minor Collector, Indian Road (Route 605)
Source: Gloucester Planning and Zoning*

Map TR-1: Road Classifications

Data Source: Virginia Department of Transportation

Gloucester’s transportation system consists of roughly 95 miles of primary roads and 320 miles of secondary roads, both maintained by the Virginia Department of Transportation (VDOT). These roads are further categorized based upon their location (urban or rural) and intended level of service: arterials (principal or minor), collectors (major or minor), and local (secondary) roads. Arterial roads have the highest speed limits and most lanes, but few access points, while local roads have many access points, but less lanes and lower speed limits. Additionally, Gloucester has nearly 300 miles of private, named roads serving at least three (3) homes. The County has one (1) principal arterial (U.S. Route 17), four (4) rural minor arterials (State Routes 3, 14, 33, and 198), various collector roads , and many local and private roads. Road classification is discussed on pages 59-60.

Abby Gale Lane - Gloucester County Private Road - Source: Gloucester Planning and Zoning

Private Roads

Many residential areas are served by private roads and lack of maintenance and enforceable upkeep provisions causes some of these roads to fall into poor condition, posing risks to residents and hindering emergency access, deliveries, and other essential services. New private road development is currently limited by subdivision ordinance requirements and the zoning ordinance mandates an association or other entity be responsible for private road and common area maintenance.

Use of public funds for private road upgrades to be accepted into the state system is at the discretion of the governing body, but funding is limited and some roads are not eligible as right-of-way dedication may not be feasible or desired by private road owners. Educational materials for property owners, including information

on private road maintenance and establishing road maintenance agreements, would benefit and inform property owners served by private roads.

Commuting Patterns

An estimated 58.1% of County residents commute to work outside the County, as shown in Table TR-2,² with 83.3% of residents driving alone to work, 11.2% carpooling, 3% working from home, and 2.6% taking public transportation, walking, or using other means. Between 2000 and 2013, commuters increased by 5.8%, with out-commuters growing by 3%, commuters driving alone rising by 4%, and carpoolers declining by 2.8%.

² The ACS defines commuters as workers who take some form of transportation to get to work; those working from home are not included in this figure.

Table TR-2: Number of Commuters and Destinations, 2000-2013

	Within County	Outside County	Total	Percent Commute Outside County

Sources: U.S. Census, American Community Survey

Level of Service

Level of service (LOS) refers to a roadway's traffic operational condition, measured alphabetically, A-F, with Levels A, B, and C representing uncongested conditions with minimal delays in traffic flow, Level D signifying unstable flow with substantial drops in operating speed, and Levels E and F characterizing congested conditions with stop-and-go traffic. Peak afternoon traffic flows along major County road segments have acceptable LOS's (ranging from A-C), as shown in Table TR-3 and Map TR-2, although not all road segments have been studied. Hickory Fork Road (Route 614), from Route 17 to Belroi Road (Route 616), was rated a LOS D in 2013, but has since been improved to include a new bridge and road reconstruction.

Park and Ride Facility on Guinea Road - Source: Planning and Zoning Department

Levels of Service

Levels of Service A, B, and C (LOS A-C) represent free flow or uncongested conditions with minimal delays. Most of Gloucester's roadways have received this grade.

Level of Service D is characterized by unstable flow with substantial drops in speed possible. Hickory Fork Road from Belroi Road to U.S. Route 17 is graded as LOS D.

Level of Service F represents congested conditions with stop-and-go traffic. There are currently no roads graded as LOS F with in the County.

Level of Service is shown for the entire road and not by road segment as listed in Table TR-3.

Park and Ride Facilities

Alternative transportation mode provision is important for congestion management along Gloucester's roadways. In addition, this improves residents' quality of life and increases job accessibility locally and regionally. The Middle Peninsula Rideshare is Gloucester's designated Transportation Demand Management Agency and aims to provide ridesharing services to employment centers from Middle Peninsula locations. Traffix, a Transportation Demand Management Agency for Hampton Roads Transit, also serves Gloucester County. These programs provide carpool and vanpool assistance, park-and-ride lots, and Guaranteed Ride programs. Park-and-ride lots in Gloucester are located at the Guinea Road Convenience Center (the intersection of Routes 17 and 216) and Rappahannock Community College's Glenns Campus along Route 33. A potential additional lot to serve central Gloucester County could be located in the Court House area.

Map TR-2: Level of Service

Data Sources: Hampton Roads Transportation Planning Organization, Gloucester County, & Virginia Department of Transportation

Level of Service (LOS) refers to a roadway's traffic operation conditions (capacity and traffic) at the peak afternoon traffic flow. Roads with multiple lanes and/or low traffic volume typically have the highest LOS grade. Roadways with sufficient traffic or capacity (heavily-traveled primary roads and highways) are normally evaluated for their level of service.

Level of Service is discussed on page 64. Alternative transportation is discussed on pages 68-70.

Safety

Local crash data, provided by the Virginia Department of Motor Vehicles (DMV), reports an overall downward trend since 1994, with the highest number of crashes occurring in 1998 and 1999 and spikes in 2003 and 2008. Additionally, crash-related injuries peaked in 1998, but have followed an overall downward trend and fatalities have remained relatively low, averaging six (6) fatalities annually between 1994 and 2013, as illustrated in Figure TR-1. Crashes and injuries commonly occurred along Route 17, the most traveled road.

The Hampton Roads Rural Safety Study, completed in 2006 by the Hampton Roads Planning District Commission (HRPDC), examined rural roadway safety data and trends. This study found that although the highest number of crashes between 1999 and 2004 occurred in Gloucester, the total crashes decreased

by 10.9% during that time, whereas Hampton Roads increased by 8.7%. Additionally, the County saw the second highest amount of vehicle-miles traveled but the second lowest crashes per million vehicles-miles traveled among rural jurisdictions. The study noted that Gloucester had the highest number of injuries and rate of alcohol-related crashes (12%) in 2004, compared to the regional rate of 7.8%. Multiple countermeasures for unsafe road segments were recommended, including increased police enforcement, widened shoulders, rumble strips, and additional distance to trees for Glenns/Dutton Road (Route 198) between Route 17 and Turks Ferry Road (Route 637) and adding shoulders and rumble strips, increasing the distance between trees and the road, and improving roadway marking visibility for Dutton Road (Route 198) between Harcum Road (Route 606) and Burkes Pond Road (Route 602). The County and VDOT should coordinate future maintenance and safety projects to implement these recommendations.

Figure TR-1: Gloucester Crash Data, 1994-2013

Sources: Virginia Department of Motor Vehicles: Virginia Traffic Crash Facts

High Risk Rural Roads

In 2009, VDOT completed a study of high risk rural roads, which included several intersections in Gloucester:

- Route 17 and Davenport Road/Woods Cross Road (Route 610)
- Route 3/14 and Ware Neck Road (Route 623)
- Route 17 and TC Walker Road (Route 628)
- Route 17 and Burleigh Road/Short Lane (Route 615)
- Route 17 and Business 17 South/Main Street

Recommendations included replacing stop bars, adding advanced intersection warning signs, relocating turn lanes, providing signage, installing warning lights, and reducing speed limits. The intersection of Route 17 and Davenport Road/Woods Cross Road (Route 610) meets three (3) of nine (9) signalization warrants (although warrant satisfaction does not mean that a signal will be installed) and, consequentially, a flashing warning signal has been placed on both sides of this intersection to reduce accident risks. Along with intersection improvements associated with the new Page Middle School on TC Walker Road, a traffic signal has been installed at the intersection of Route 17 and TC Walker Road (Route 628).

Alternative Transportation

Bicycle and Pedestrian Facilities

Gloucester County has limited local bicycle and pedestrian infrastructure and facilities. Although sidewalks exist along Main Street in the Court House area, along Route 17 at Gloucester Point, and in certain subdivisions, they are not found as commonly elsewhere. County Code requires sidewalk improvements based upon a development's location, such as within the Highway Corridor Development District, and use, such as commercial uses and some major subdivisions. Limited pedestrian facilities and connections across Route 17 inhibit safe pedestrian

travel to commercial centers and other areas, even over short distances. The County promotes active transportation improvements within the Village Development Areas, residential subdivisions, and where pedestrian connections are desirable and attainable. Pedestrian facilities are not only important safety measures, but also provide alternative transportation, recreation, and exercise options.

Bicycle usage in Gloucester is hindered by a lack of on-road facilities and safety concerns. Beaverdam Park features a 9.5 mile multi-use trail between the Roaring Spring Road and Fary's Mill Road entrances that accommodates horseback riding, mountain biking, hiking, and other activities, but dedicated bike trails are not available within the County.

Active transportation planning, including bicycle and sidewalk facilities, is needed to fully determine existing needs and improvement opportunities. Several completed studies and plans, including the two (2) Village Sub-Area Plans and the Business 17 Corridor Study, have been used for improvement funding to establish active transportation, primarily in the Village Development Areas.

Biker at James Store on Route 3/14 - Source: Gloucester Parks, Recreation & Tourism

Non-Drivers

Non-drivers include those who cannot or do not use automobiles to meet their transportation needs and certain groups, such as children, teens, the elderly, and the disabled, are more likely to be non-drivers. Therefore, it is important to recognize their needs when performing local transportation planning, especially because rural non-driver mobility is often limited by automobile-centric transportation networks, inadequate bicycle and pedestrian facilities, and a lack of transit options. The Non-Driver Opportunity Analysis, published in 2009 by the Hampton Roads Transportation Planning Organization (HRTPO), found that although Gloucester does not have many non-drivers, those present have little access to activity centers, and that the County was a low-mobility area. Gloucester Court House was identified as a higher mobility area, but the amount of non-drivers in the Court House is below average. The highly dispersed local non-driver population provides challenges for solutions like a fixed-route bus service and alternative transportation options. The two (2) Sub-Area Plans include pedestrian and bicycle facility provisions, improved transit options, and increased connectivity, helping to expand non-driver opportunities. Affected groups should be included during transportation planning to ensure that their needs are met and specific steps are outlined, such as promoting walking and biking for school-aged children where appropriate, coordinating federal and state-funded sidewalk improvements with VDOT, and working with Bay Transit to establish additional and expanded fixed-route bus services.

Rail Service

Rail service does not exist within the County, but rail freight and passenger options are available in Newport News and Williamsburg, with the Newport News Marine Terminal providing lines to Chicago and St. Louis and the Norfolk Southern Corporation serving industries in West Point.

Amtrak stations in Williamsburg and Newport News offer passenger rail service to Richmond, Washington, D.C., and the Northeast Corridor. A high-speed

passenger rail service through the existing corridor is planned, although passenger rail directly serving the Middle Peninsula is not included in this expansion.

Air Service

The Newport News-Williamsburg International Airport (PHF), located in Newport News 24 miles south of the Court House, is the closest major commercial airport and offers regular passenger service on two (2) major airlines. Additionally, the Norfolk International Airport (ORF), located roughly 50 miles south of the Court House, offers passenger service on four (4) major airlines, and the Richmond International Airport (RIC), located 53 miles westward in Henrico County, offers regular passenger service on eight (8) major airlines, with air freight service available at both airports.

General aviation services are also available at the Middle Peninsula Regional Airport (FYJ), located 19 miles northwest of the Court House in King and Queen County, which offers a 5,000 foot lighted runway and refueling, among other services, and is the only airport in proximity to Gloucester without requiring a major river crossing. The Middle Peninsula Regional Airport Authority, of which Gloucester is a member, operates this airport.

Bus Service

Intercity bus service, provided by Greyhound Lines, runs through the Virginia (Lower) Peninsula, with stations in Williamsburg and Hampton. Newton's Bus Service, Inc., a private charter service based in Gloucester, provides service to and from Northrop-Grumman Shipbuilding, a major employer of Gloucester residents.

Public Transit

Bay Transit, a non-profit community transit service operating in the County, provides on-demand service and a limited number of fixed routes, including the Courthouse Circulator within Gloucester. Bay

CHAPTER 5 - TRANSPORTATION

Transit also offers a weekday service for trips to work, shopping, and healthcare locations.

Other Services

The Middle Peninsula Rideshare is the designated Transportation Demand Management (TDM) agency within the MPPDC region and provides ridesharing services to destinations outside the Middle Peninsula. Gloucester is also served by Traffix, a TDM agency operated by Hampton Roads Transit. Both the Middle Peninsula Rideshare and Traffix provide carpool and vanpool assistance, Guaranteed Ride programs, and service the County's two (2) park-and-ride lots, located at the intersection of Guinea Road (Route 216) and Route 17 and at Rappahannock Community College on Route 33, as shown on Map TR-2.

Water Access

Although water is an extensive component of Gloucester's geography, with 12 marinas and over 100 boat ramps in the County, local public water access is limited, as only 14 public boat ramps exist

and six (6) of these ramps service trailered boats. Shoreline recreational facilities, including marinas and boat ramps, are shown on Map NR-11 in the Natural Resources chapter. A minimum 22-foot deep shipping channel is maintained through the York River to provide upriver access as far north as West Point. Water access contributes to the local economy through marina sales and fees, recreational boating and fishing, transient tourism, and the commercial fishing industry. Additionally, the Virginia Institute of Marine Science (VIMS), a world-class marine research facility, is located at Gloucester Point along the York River.

The Virginia Department of Game and Inland Fisheries (DGIF) provides public boating access in Gloucester at four (4) locations along the Piankatank, Poropotank, Ware, and York Rivers and the County features public beach access at the Gloucester Point Beach Park. Additional beach and boating access information can be found in the Natural Resources and Community Facilities chapters.

Kayakers - Source: Gloucester Parks, Recreation & Tourism

Planned Improvements to the Transportation System

Public road construction and maintenance within Gloucester is conducted by VDOT and private developers. The Virginia Department of Transportation's Six-Year Improvement Program (SYIP) is the Commonwealth's Transportation Board's (CTB) plan for allocating funding over a six (6) year period for projects related to rail, public transportation, commuter assistance, bicycle and pedestrian facilities, and interstate and primary highway transportation systems. Project allocations in the SYIP are determined by the CTB with input from the public and individual localities. Recent SYIP's have included funding for several local projects, including Route 17 access management and bicycle-pedestrian improvements through Congestion Mitigation and Air Quality (CMAQ) funds. Bicycle and pedestrian improvement projects have occurred in the Gloucester Point/Hayes area on Route 17 and others are currently being designed and planned for areas such as Hayes Road (Route 1216) and Guinea Road (Route 216), implementing some

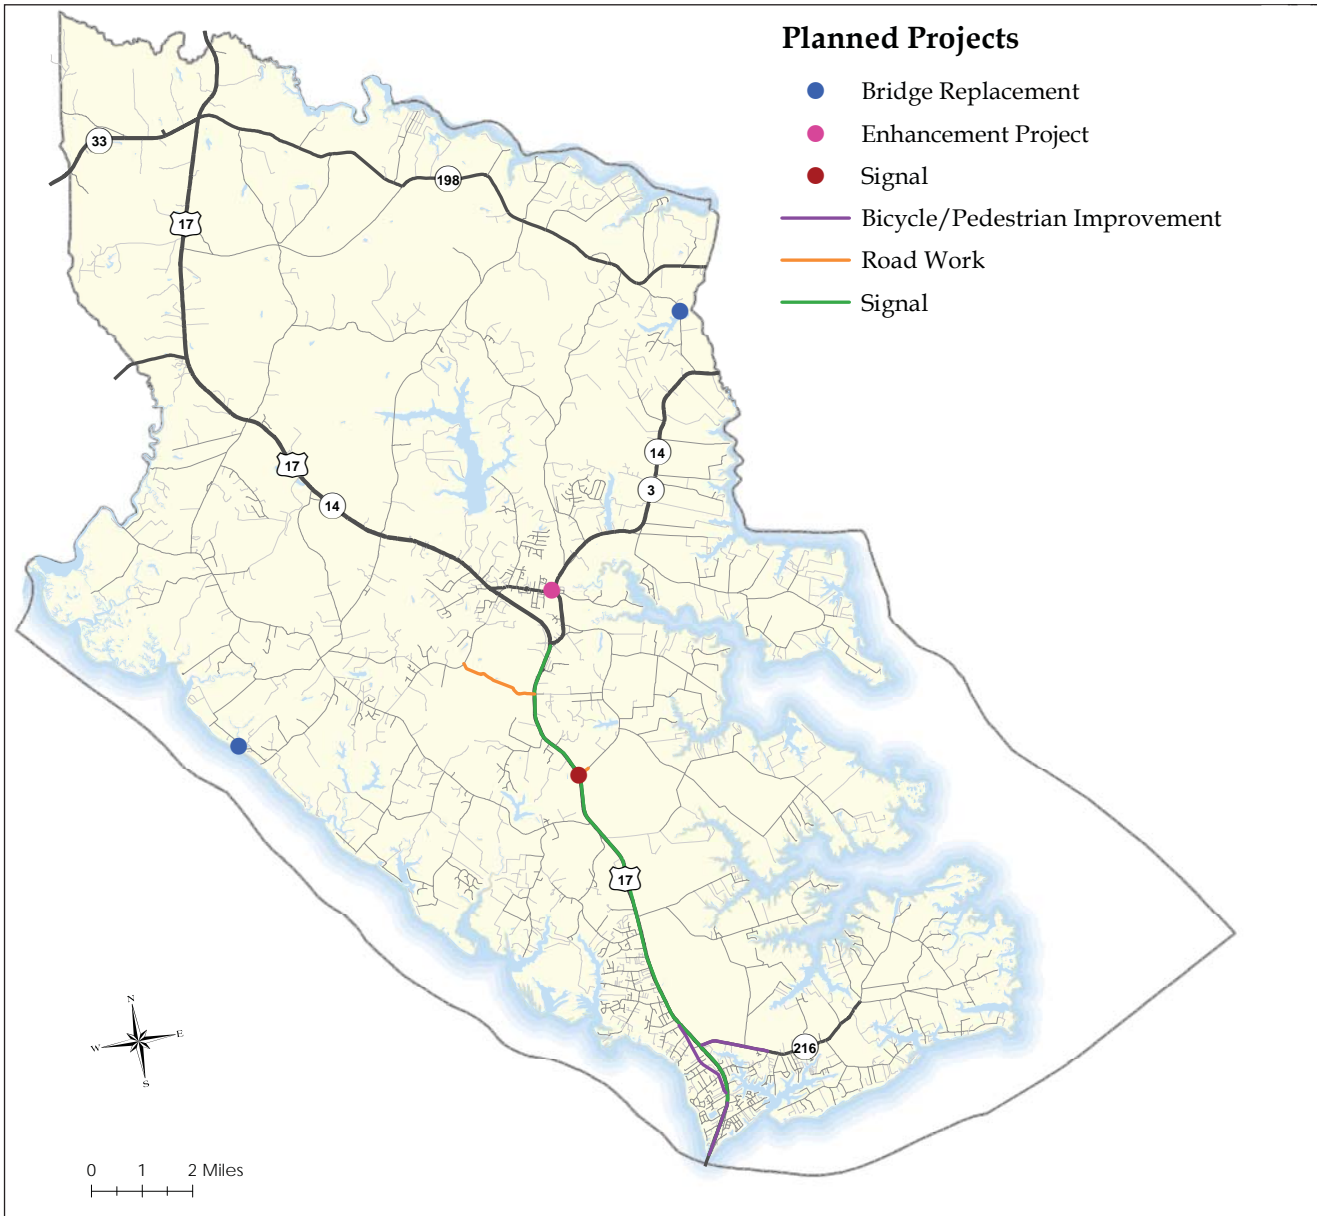

infrastructure recommendations from the Gloucester Point/Hayes Village Development Area Plan. Planned improvements along Roaring Springs Road (Route 616) to link Beaverdam Park to the Court House also furthers long-term planning goals for connectivity. The most recent SYIP includes funding for one (1) enhancement, five (5) primary road, and four (4) secondary road projects in Gloucester, as shown on Map TR-3.³ As preliminary design and engineering is completed and acquisition and construction occurs, their scope may change with adjustments to actual costs and funding allocations. The County coordinates with VDOT and the HRTPO to continually monitor and modify projects to determine the best use for available resources. Based on changes enacted by the General Assembly in 2014 and 2015, some CTB projects are competitively funded according to a screening and scoring process instead of distribution formulas and State regions will be evaluated differently based on local typology. Projects in Gloucester and other Middle Peninsula localities will consider economic

³ The most recently approved SYIP (Fiscal Year 2015- Revised) can be found on the VDOT website at the following link: <http://syip.virginiadot.org/Pages/allProjects.aspx>.

Construction of the Hayes Road Sidewalk - Source: Gloucester Planning and Zoning

Map TR-3: Planned Projects

Data Source: Hampton Roads Transportation Planning Organization, Virginia Department of Transportation, Gloucester County Planning and Zoning Department

Road and transportation improvements are classified by the road system they occur on (primary or secondary) and can identify miscellaneous projects or transportation enhancements. Planned transportation projects are identified by the Virginia Department of Transportation’s Six-Year Improvement Program or the Hampton Roads Transportation Planning Organization’s Transportation Improvement Program and may change as the project costs and allocations change. In addition, planned secondary roads are shown on proposed subdivisions’ development plans.

Planned transportation improvements are discussed on pages 71-75.

development and safety more heavily than traffic congestion, a strong factor for Hampton Roads and Northern Virginia projects,⁴ and funding modification is likely to continue as the CTB evaluates this process.

The Six-Year Improvement Program (SYIP), which focuses on the interstate, primary, rail, and public transit systems, differs from subdivision street and secondary road improvement funding, which is prioritized annually by the Board of Supervisors through the County's Secondary Six-Year Plan (SSYP). Each locality is required by state law to develop and publish the SSYP. The SYIP is entirely administered by VDOT and is, therefore, reviewed and approved by the County with consideration to VDOT's recommendations. Tele-fees collected from private utility use of VDOT's right-of-way have been the only secondary road funding source, leading to limited secondary road improvement options.

Multiple secondary roads included in the SSYP may be eligible for paving through VDOT's Rural Rustic Road Program, which provides funding for unpaved VDOT roads with upgrades occurring within the existing right-of-way. Unlike other secondary road requirements, this program considers each road's rustic nature and the area it serves with vegetation, slopes, and open drainage adjacent to the roadway being preserved where possible. This provision precludes bike and pedestrian access improvements, except for "Share the Road" enhancements.

⁴ More information about the changes to the CTB process for funding the SYIP can be found at: <http://www.virginiahb2.org/about.html>

Virginia Code requires that localities develop transportation plans within their comprehensive plans including maps of planned road and transportation improvements while discussing the local and regional planning district's current and future transportation needs. Transportation plans must be consistent with the Statewide Transportation Plan and Six-Year Improvement Program.

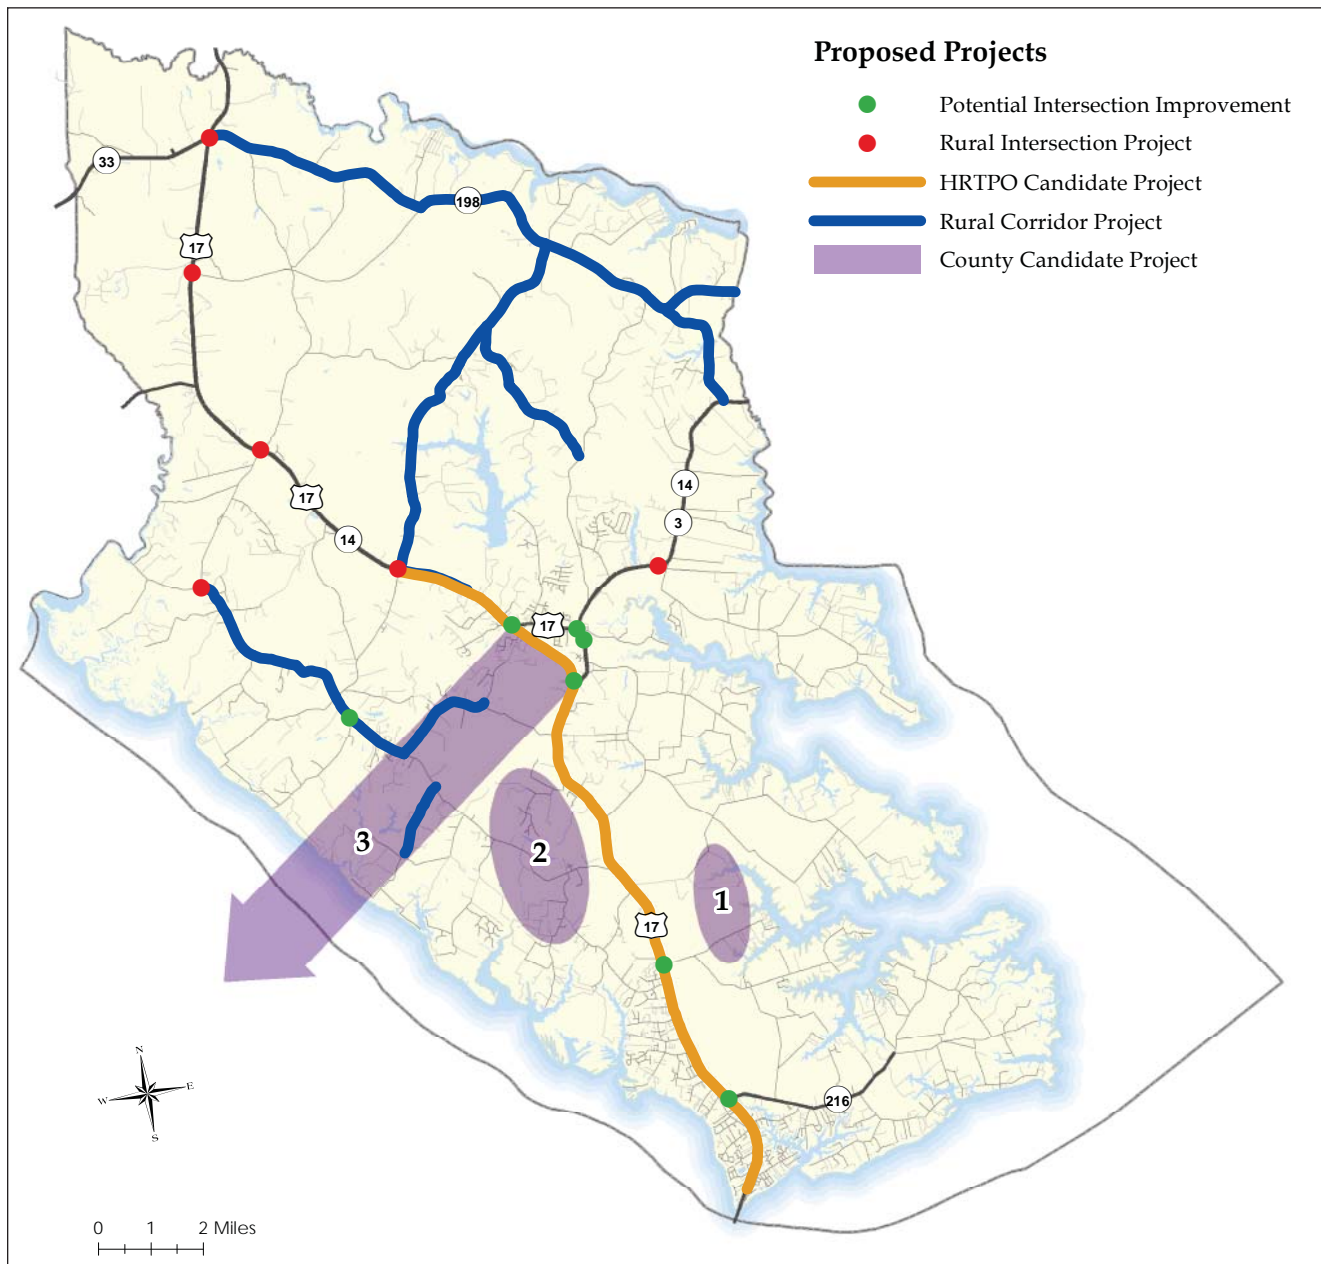

The County has chosen to use 5% of its SSYP allocation to improve certain existing private roads as necessary for their inclusion into the state's secondary road maintenance system through the Rural Additions Program.⁵ County residents can request a road be taken into the state system on a "first come, first serve" basis and an applicant list is maintained, but it can take decades for private road upgrades and acceptance into the state system due to a lack of funding and other requirements as noted above.

In addition to VDOT's improvement programs, Gloucester has explored the need and local desire for Route 17 congestion management projects, with three (3) options considered: Route 17 widening and potential Coleman Bridge expansion to three (3) lanes, connecting existing secondary roads between the Court House and Gloucester Point/Hayes to run parallel to Route 17, and constructing a York River crossing upstream of the Coleman Bridge. Future plans and proposals should consider these options along with updates to previous efforts, both of which require VDOT and HRTPO coordination. The County should consider the community's desire and willingness to proceed with these options by planning and mapping alternative routes and allocating resources for plan implementation.

Smaller projects, such as intersection turn lane improvements, improved alignments, and pedestrian accommodations at key crossings, could further safety, congestion, and accessibility efforts and create economic development opportunities throughout the County. Main Street (Business 17), West Main Street, and Fiddlers Green Road (Route 619) intersection improvements and pedestrian accommodations at Route 17 intersections in the Gloucester Point/Hayes area are examples of these projects. Additionally, continued improvements along Hickory Fork Road (Route 614) and on Route 17 at Brays Point Road (Route 636) would improve safety and provide better accessibility to park and historic sites. Alignment improvements at Cappahosic Road (Route 618) and Hickory Fork Road and an increased turn lane on Route 17 (southbound) at Ark Road (Route 606) would address specific safety issues at these intersections.

⁵ More information on the Rural Additions Program can be found at: <http://www.virginiadot.org/info/faq-2ndaryroads.asp>.

Map TR-4: Proposed Projects

Data Source: Hampton Roads Transportation Planning Organization, Gloucester County Planning and Zoning Department, Middle Peninsula Planning District Commission

Should funding be available, several additional projects within the County have been considered beyond state and regionally-planned projects. Projects may be proposed by County staff or included in regional long-range planning initiatives.

Proposed transportation improvements are discussed on pages 71-75.

Potential and planned projects that address short-term and long-range transportation concerns are shown in Map TR-4.

The Middle Peninsula Planning District Commission prepares a Rural Long-Range Transportation Plan, which includes northern Gloucester County. The plan recommends regional roadway and transportation facilities improvements.

The Hampton Roads Transportation Planning Organization (HRTPO), which includes southern Gloucester County, prepares a Long-Range Transportation Plan. The plan is limited to projects funded by the planning horizon's estimated budget (typically 20 years). Projects with the greatest regional need and impact are prioritized within the plan. County personnel has proposed two (2) potential projects, which together would widen Route 17 to six (6) lanes (shown in orange). The proposal for Route 17 from the southern intersection with Main Street to the Coleman Bridge was selected to be included in the 2040 Long Range Transportation Plan.

Route 17 serves the majority of the County's traffic, with likely increases in demand in the future. County staff has proposed several local alternatives to Route 17 by connecting existing secondary roads east (Candidate Project 1) or west (Candidate Project 2) of this route. A third alternative is an up stream York River crossing (Candidate Project 3). Currently, these alternatives are conceptual and studies for these planned routes have not yet occurred.

Smaller projects such as intersection improvements for turn lanes, better alignment, and pedestrian accommodations at key crossings could improve safety, congestion, and accessibility as well as create opportunities for increased economic development within and outside the designated village areas.

Other Plans and Programs

While most local transportation planning needs are coordinated with VDOT, the County is also a member of the Hampton Roads Transportation Planning Organization (HRTPO). This is the federally-mandated Metropolitan Planning Organization (MPO) for the Hampton Roads Transportation Planning Area and consists of the more densely populated portions of the County, from just north of the Court House to Gloucester Point.

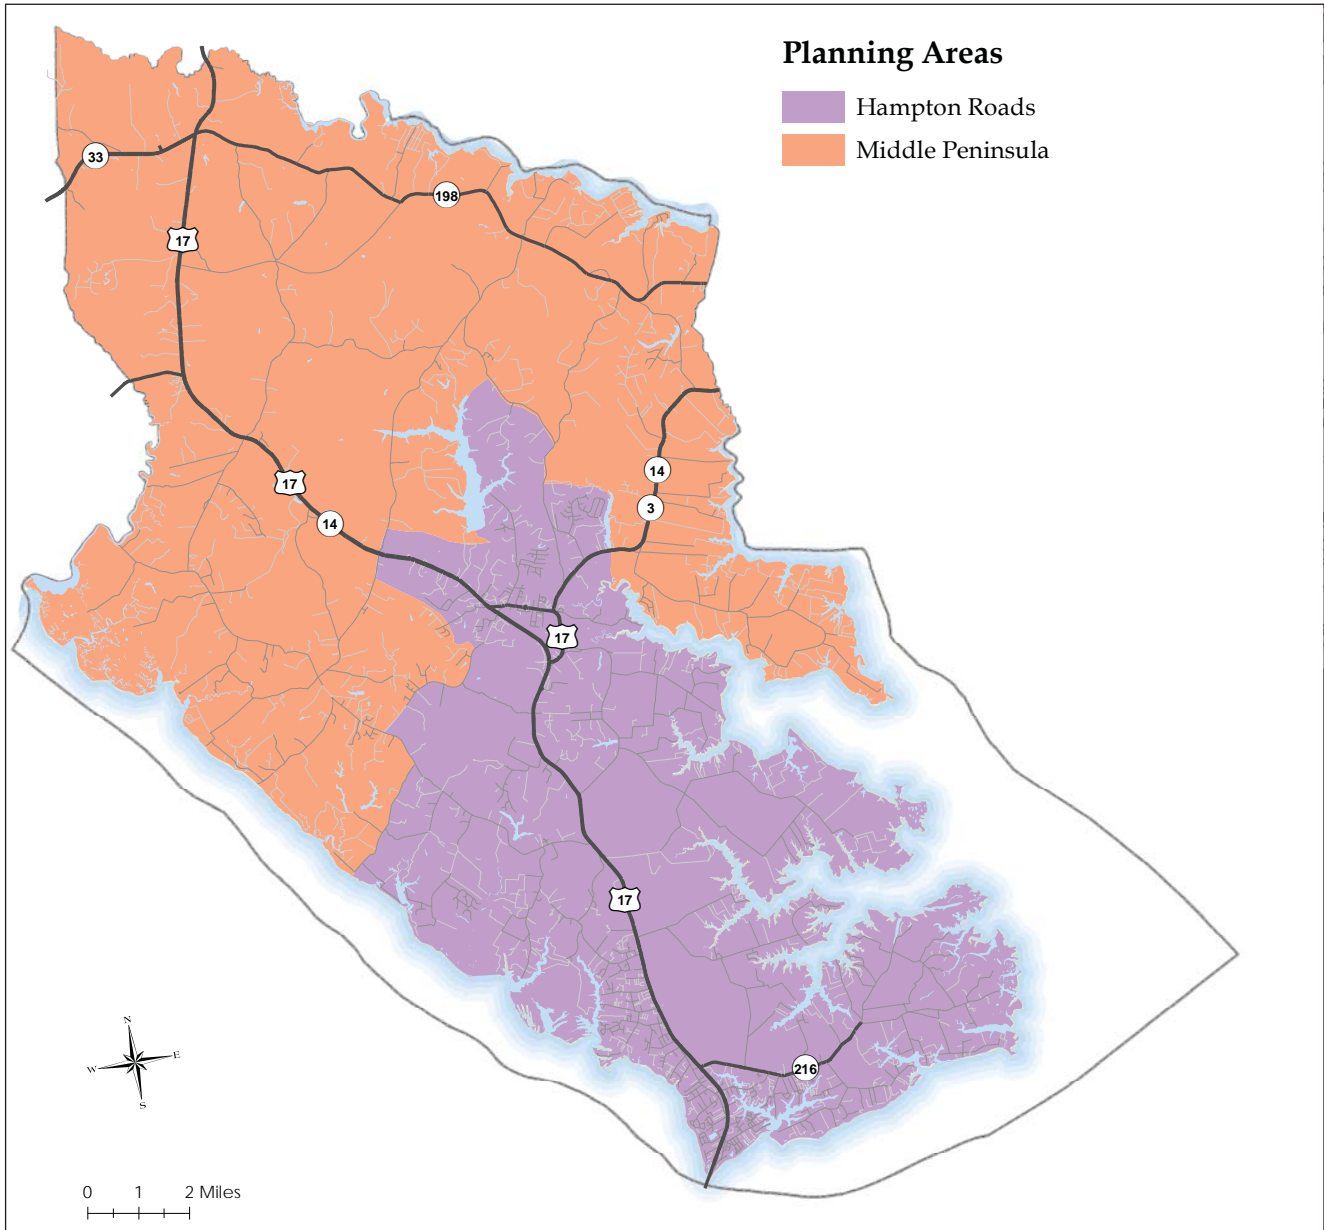

The HRTPO's main functions are to develop the Regional Long-Range Transportation Plan and congestion management plans, establish the region's Transportation Improvement Program, and conduct transportation needs studies. The HRTPO Board, composed of elected officials and local, regional, state, and federal representatives, approves the Long Range Transportation Plan, including planned regional transportation improvements consistent with federal air quality standards and transportation funding financial constraints. The 2040 Long Range Transportation Plan will include a planned Route 17 widening to six (6) lanes from the southern intersection with Main Street to the Coleman Bridge.⁶

Gloucester, north of the Court House, is a member of the Middle Peninsula Planning District Commission (MPPDC), which performs similar functions to the HRTPO for its member localities, including working with localities and VDOT to develop the Regional Long-Range Transportation Plan, recommending roadway and transit improvements to VDOT, and maintaining a transportation demand management program.⁷ The Planning District boundaries are shown on Map TR-5.

⁶ More information on HRTPO can be found on its website: <http://www.hrtpo.org>.

⁷ More information on MPPDC's transportation efforts can be found on its website: <http://www.mppdc.com>.

Map TR-5: Planning Areas

Data Source: Hampton Roads Planning District Commission, Hampton Roads Transportation Planning Organization

Gloucester’s transportation planning (road design, construction, and maintenance) is typically conducted by the Virginia Department of Transportation’s Fredericksburg District Office. However, some issues and projects impact multiple localities and are discussed by planning district commissions and metropolitan planning organizations. Gloucester is a member of two (2) regional planning districts: the Hampton Roads Transportation Planning Organization (HRTPO) (Gloucester Court House and areas southward) and the Middle Peninsula Planning District Commission (MPPDC) (northward of the Court House).

Planning areas are discussed on page 75.

Challenges and Opportunities

Gloucester faces many transportation challenges as past and current development trends, combined with its geography, have placed strains on the County's major thoroughfares. As growth continues, congestion will increase and, if unaddressed, negatively affect economic development and quality of life. Congestion amplified by commuters and travelers can make local travel more time-consuming and state mandates and increased funding competition for improvements will continue to be a major challenge as the County plans for future growth.

Congestion and Commuter Mobility

Identifying and establishing alternative routes are important goals for reducing congestion and improving mobility as commuters use the limited available routes, primarily Routes 3/14 and 17. The Route 3/14 and Main Street (Business 17) intersection in the Court House area was not designed for large traffic volumes and several studies and plans have looked to address the bottlenecks and other issues created on and around Main Street.⁸

⁸ Gloucester County Business 17 Corridor Planning Study, Gloucester Court House Village Sub-Area Plan

The **HRTPO** develops regional long-range transportation and congestion management plans as well as the region's Transportation Improvement Program and conducts regional and local transportation needs studies. Regionally significant projects occurring in Gloucester and within the HRTPO's planning area undergo the HRTPO Board's discussion and approval processes.

The **MPPDC** develops the rural long-range transportation plan for its planning area, recommending roadway and transit improvements to VDOT and maintains the transportation demand management program.

Other back-ups occur along Route 17, particularly at Gloucester Point/Hayes near the Coleman Bridge. Similar to the Court House, historic sites, surrounding businesses, and geographical conditions limit and factor into the available congestion management solutions. Additional funding for capacity and access management projects, combined with increased alternative transportation options, carpool programs, telecommuting, and alternative work schedules, may provide solutions. Since Route 17 is the primary road for commuters and residents entering, exiting, and traveling through the County for work or other trips, high levels of congestion occur throughout the day. Consequentially, several long-term congestion mitigation solutions may be considered.

In 2000, VDOT completed the York River Crossing Travel Demand Study, which forecasted that, by 2014, the Coleman Bridge would reach four-lane capacity and, by 2033, six-lane capacity. If current demand continues, alternative solutions for Route 17 will be critical to maintain safe and efficient travel throughout the County. Two (2) potential options include creating a parallel road network between the Court House and Gloucester Point/Hayes or constructing an upriver bridge across the York River between Gloucester Point/Hayes and West Point, which would reduce demand on both Route 17 and the Coleman Bridge and directly connect Gloucester and Williamsburg. Both options should be carefully studied by VDOT in coordination with the County as potential transportation and community development projects.

Alternative Transportation

Alternative transportation, such as biking, walking, and transit, can help to alleviate roadway congestion as well as provide other benefits, including air quality and quality of life improvements. The Future Land Use Plan identifies existing and potential Village Development Areas (referred to as Urban Development Areas in state code), which are intended to support safe and convenient active transportation and increased mobility options due to the type, scale, and density of development proposed in these areas.

Bicycle Planning

The Pedestrian/Bicycle Path Feasibility Study for the Gloucester County Courthouse and Beaverdam Park Area, was prepared by Buchart-Horn, Inc. in 2002 through a Middle Peninsula Planning District Commission (MPPDC) grant. The study explored potential routes for a multi-use trail between the Court House and Beaverdam Park with consideration to transportation infrastructure, land uses, landmarks, points of interest, natural resources, existing and planned improvements, and noted bicyclist and pedestrian traffic. This study included public input and alternative cost evaluations in the recommended final alignment beginning at the Court House Circle's County Museum near historical and commercial amenities through natural wooded areas and along local roads, while featuring signage, painted shoulders, and pavement markings.

Additional recommendations included Main Street sidewalk extensions to the Riverside Walter Reed Medical Center campus as well as along Roaring Springs Road and bike route indicators on Main

Street. This project was accepted as a CMAQ project, but funding allocations for the entire project have not been provided. Staff will continue to work with VDOT to utilize available funding to fulfill this project.

In 2004, the MPPDC published the Middle Peninsula Regional Bicycle Facility Plan in conjunction with the HRTPO and VDOT to integrate rural regional transportation planning in Gloucester. This plan evaluated bicycle facility needs in northern Gloucester, identified cycling facility deficiencies throughout the Middle Peninsula, and recommended potential routes while considering safety, funding, and ride quality.

Bicycle facility planning should be expanded throughout the County to cover areas not included in these plans and reflect current bicycle usage and routes. As improved connectivity is important for transportation, tourism, and recreational opportunities, continued coordination with VDOT is necessary to ensure that future road construction, maintenance, and improvement projects accommodate bicycles, pedestrians, and other forms of active transportation. Although dedicated

*Cyclists participating in the “Ride the Dragon” cycling event through the northern portion of the county.
Source: Gloucester Parks, Recreation & Tourism*

sidewalks and/or bikeways provide the greatest safety and separation from vehicular traffic, paved shoulders and/or signage may be appropriate on rural roadways.

Other Opportunities

Existing roads need to be evaluated based upon the necessary improvements and their ability to safely support bicycle traffic and greenways, identified through a green infrastructure planning process, which may provide off-road connections between designated routes. Future planning efforts should consider connections to existing and proposed recreation and tourism sites, such as Beaverdam Park, the Court House area, the planned Middle Peninsula State Park, and Gloucester Point Beach.

Pedestrian and bicycle programs and facilities combined with development standards forming “complete streets” in the Village Development Areas, could create pedestrian-friendly environments in Gloucester Point/Hayes and the Court House while accommodating active transportation throughout the County through signage, traffic calming measures, and physical improvements. These improvements might include:

- Widening shoulders where appropriate
- Posting signage on existing streets
- Planting landscape strips separating pedestrian/bicycle facilities from roadways
- Installing crosswalks and pedestrian signals
- Providing pedestrian refuge medians
- Constructing additional sidewalks
- Introducing traffic controls and turn restrictions in Gloucester Point/Hayes and the Court House
- Creating multi-use trails
- Adding bicycle parking facilities
- Establishing trees and street furnishings, such as street lamps, benches, or plantings

The Hampton Roads Regional Transit Vision Plan, developed by the Virginia Department of Rail and Public Transit, envisions an express bus route connecting Oyster Point to Yorktown, Gloucester Point/Hayes, and the Court House, with potential links to a future light-rail service at an Oyster Point

transit hub. Although express bus service may require sizable park-and-ride facilities, walkable, mixed-used developments may include parking structures with multifamily residential developments sharing park-and-ride facilities, potentially on currently oversized parking areas. The Village Areas may incorporate these and other Transit Oriented Development (TOD) concepts to facilitate the density and parking facilities necessary for additional transit services.

Although dedicated rights-of-way are not required for express bus service, peak hour lanes and high-occupancy vehicle (HOV) lanes typically expedite service times and increase ridership. Additionally, signal priority systems and intersection queue-jump lanes can improve service efficiency, especially through incorporating these systems in congested areas. Future Route 17 roadway improvements should consider these transit options.

State Regulatory Requirements

The Virginia Department of Transportation administers roadway and transportation infrastructure requirements that include access management, secondary street acceptance into the state road network, and Corridors of Statewide Significance designation.⁹ These standards are important for localities where VDOT owns and maintains the public roads and the County should be aware of any state code or regulation changes that govern transportation infrastructure.

Access Management Regulations

Access management focuses on entrance location, spacing and design, street intersections, median openings, and traffic signals to reduce traffic flow disruptions. Since traffic congestion and crashes rise as conflict points increase, improved highway access management can reduce these points and mitigate their impact on highway operation and public safety. As critical public resources, roadway access

⁹ All independent cities, as well as Arlington County and Henrico County, maintain their own roads.

management helps to maximize this investment. Additionally, access management improves traffic flow by increasing the average speed and allowing efficient traffic flow, maximizing fuel efficiency, reducing air pollution, and shortening commuting times along with providing an expanded market area.¹⁰

Secondary Street Acceptance Requirements

Secondary Street Acceptance Requirements detail the standards and process for accepting new, privately-built roads into the state-maintained road network, such as those constructed in new residential subdivisions. These requirements promote cost-effective public fund expenditure on roadways with connectivity to adjacent developments, pedestrian accommodations, public benefits, and stormwater management features.¹¹

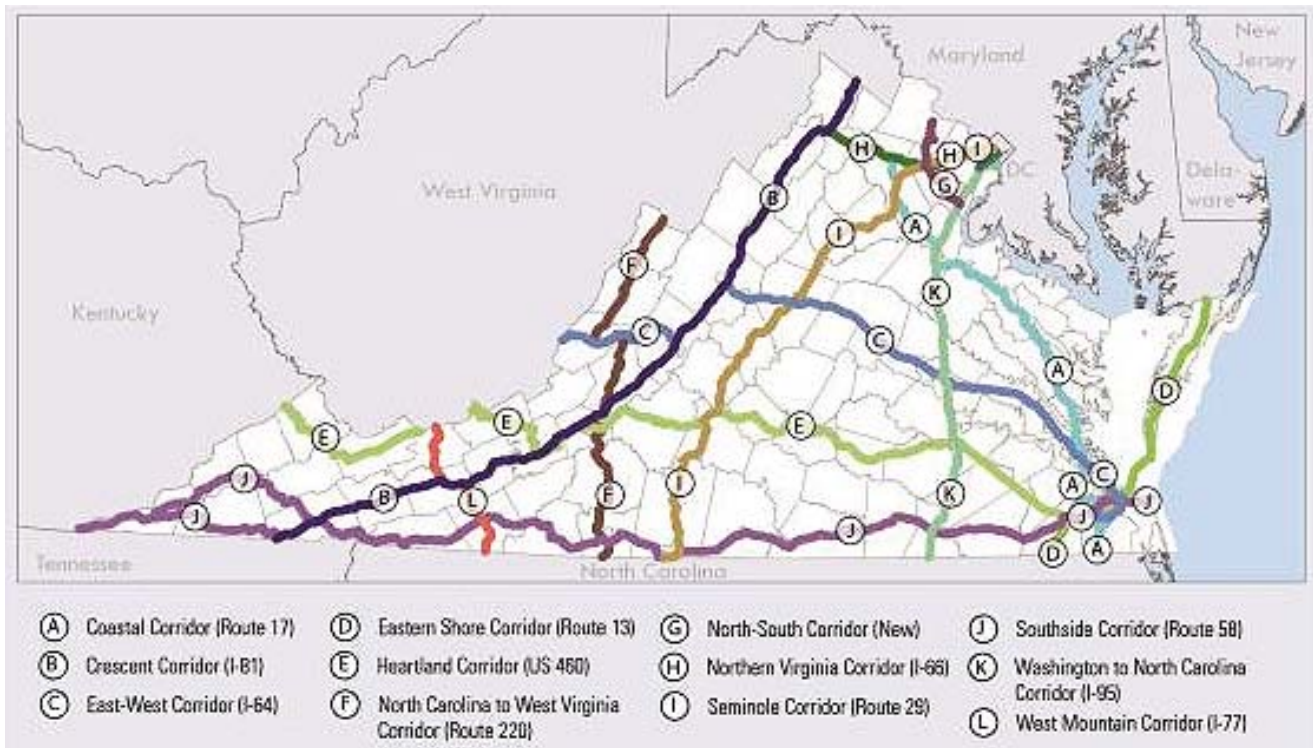

10 Current information about Virginia's access management requirements can be found on VDOT's website at the following link: http://www.virginiadot.org/info/access_management_regulations_and_standards.asp.

11 The most recent version of the State's SSAR can be found on VDOT's website by using the following link: http://www.virginiadot.org/info/secondary_street_acceptance_requirements.asp.

Corridors of Statewide Significance

In 2009, the General Assembly passed Senate Bill 1398, requiring that Corridors of Statewide Significance be specified by the Commonwealth Transportation Board and incorporated into local comprehensive plans with maps. These roadways are defined as "an integrated, multimodal network of transportation facilities that connect major centers of activity within and through the Commonwealth and promote the movement of people and goods essential to the economic prosperity of the state."¹² Designation is intended to be a tool for guiding local land use planning and transportation investments along major multimodal transportation routes. Each corridor must be multimodal, connect regions, states, and/or activity centers, have a high travel volume, and perform a unique statewide function or address statewide goals. The Commonwealth Transportation Board has identified eleven Corridors of Statewide Significance, including the Coastal Corridor, consisting of Route 17 from

12 VTrans2035: Virginia's Long-Range Multimodal Transportation Plan

Corridors of Statewide Significance - Source: Virginia State Office of Intermodal Planning and Investment, http://www.vtrans.org/significant_corridors.asp

Winchester southward to the Virginia-North Carolina border, with the portion located in the County shown on Map TR-1. Major Coastal Corridor components include the Ports of Virginia and Richmond, several rail corridors (Norfolk Southern and CSX), and the Norfolk and Newport News airports and this corridor also provides an alternative to I-95 between Hampton Roads and Northern Virginia, establishes a trucking connection between Hampton Roads and I-95, and grants travel and tourism access to the Northern Neck and Middle Peninsula. The Commonwealth's Coastal Corridor improvement strategies include:

- Improving capacity through roadway widening, intersection improvements, or constructing interchanges at strategic locations
- Increasing freight rail capacity from the Port of Virginia and coordinating multimodal freight movement with the Craney Island expansion
- Supporting increased freight capacity by expanding intermodal facilities
- Improving transit in rural areas by broadening existing fixed-route services and offering additional demand response, elderly, and disabled services
- Improving capacity through high-density areas by traffic and access management techniques and utilizing Intelligent Transportation Systems (ITS) technologies
- Improving airport facility ground access along the corridor

These strategies are consistent with several local and regional goals and objectives for Route 17 within Gloucester, the Middle Peninsula, and Hampton Roads.

Linking Transportation and Land Use

Coordinating transportation system and land development planning improves the local quality of development and Gloucester's appeal to residents and employers. The transportation system should connect residents to services and jobs, encourage commerce through efficient access to stores and

businesses, and improve quality of life by offering choices. The County's long-range land use goals strive to maintain rural character while serving suburban areas and concentrating future development where adequate infrastructure and land capacity is available. The areas within and around the Court House and Gloucester Point/Hayes are specifically designated as Village Development Areas in accordance with the Code of Virginia, Section 15.2-2223.1, which encourages transportation system development and improvements, including active transportation and future transit options, to be supported by more intense, village-type development and higher population densities. Additionally, the corridor between these village areas can accommodate additional highway-oriented, employment generating growth. Long-term enhancements in growth centers will preserve the County's rural areas for working lands, recreation, tourism opportunities, and lower-density residential development while improving community facility and natural resource access.

Goals, Objectives, and Implementation Strategies

Local transportation planning and implementation requires collaboration between multiple agencies and partners. While Gloucester contributes to regional transportation planning efforts, the County also works with the VDOT's Fredericksburg District and Saluda Residency offices. Increased private sector transportation planning involvement may create opportunities to accomplish certain projects quicker than traditional funding mechanisms, benefiting both the community and the private sector.

CHAPTER 5 - TRANSPORTATION

T-1: To guide the development of the County road system into a safe transportation system that facilitates efficient movement of goods and people.		
Objectives	Implementation Strategies	Time Frame
Coordinate with the Virginia Department of Transportation (VDOT) to confirm that new or maintenance projects are consistent with the County's existing and future needs.	Continued and regular communication between County staff and VDOT staff in the Fredericksburg District and Saluda Residency to discuss projects and priorities for existing and new funding sources.	Ongoing
Work with the HRTPO, MPPDC, and VDOT on regional planning for transportation and potential partnerships to improve the transportation network on a regional scale.	Provide staff to participate in monthly and quarterly meetings with regional agencies in order to identify available funding and regional partnerships.	Ongoing
Develop long-range transportation plans in coordination with all other development plans, regional transportation plans and transit plans.	Provide staff to participate in regional planning efforts.	Ongoing
Develop corridor plans that provide multi-modal recommendations for portions of Route 17, Business 17, and collector roads based on the functions of each segment and the appropriate design given the context of existing and proposed development and access needs.	Identify specific corridors for individual study in order to achieve the goals and objectives outlined for each area. Study corridors could include Business 17 (completed in 2013), Route 17 in the Development District, Alternative Routes (parallel roads) to Route 17, Greate Road, Hayes Road, Guinea Road, or an upriver crossing corridor.	Long Term
Encourage and implement a "complete streets" program that provides for the needs for all transportation users, including automobile drivers, transit systems, and non-drivers.	For each corridor studied specifically, identify the users and provide recommendations to accommodate all users within that corridor.	Long Term
	Consider all existing and potential users in any road maintenance or construction project.	Short Term
Designate certain roads as greenways to preserve and protect existing rural, historic, scenic, or other important characteristics to preserve existing viewsheds from adverse effects of the transportation system.	Establish greenways with larger setbacks for new construction and to create a Rural Corridors with different requirements than the Highway Corridor Development District for commercial development.	Long Term

T-1 (Continued): To guide the development of the County road system into a safe transportation system that facilitates efficient movement of goods and people.

Objectives	Implementation Strategies	Time Frame
Provide for sufficient right of way width to accommodate drainage and other facilities on public roads to accommodate future levels of use and forms of transportation such as passing lanes, bicycle lanes, and turn lanes.	Consider future levels and types of use for all new and existing roadways serving new development and re-development proposals and obtain the necessary right-of-way, easements or access to provide for needed and proposed infrastructure preferably based on adopted plans.	Ongoing & Long Term
Endeavor to provide all residents safe, and where feasible, multiple access points to and from all neighborhoods.	Use subdivision ordinance and the State’s Subdivision Street Acceptance Requirements to create safe streets and multiple connections where possible.	Ongoing & Long Term
Provide for safe access to parcels throughout the County.	<p>Continue to use the rural rustic road program to improve existing substandard state roads.</p> <p>Continue to use the rural additions program to bring eligible roads private roads into the state system for maintenance.</p> <p>Educate residents about private roads in the county and their responsibilities for care and maintenance of these roads.</p>	<p>Short Term</p> <p>Long Term</p> <p>Ongoing</p>
Maintain effective County enforcement of land use ordinances for the efficient and safe use of the roadways within the County.	Review the County’s current ordinances to determine whether the current requirements are achieving the desired results with regard to access management, congestion and safety as well for improved economic development, tourism and quality of life for residents and commuters.	Long Term
To improve safety of rural roads and reduce the number and severity of vehicle crashes.	Work with VDOT to implement recommended improvements such as widened shoulders and rumble strips to roads identified as high crash areas.	Short & Long Term
Identify available funding mechanisms for transportation needs.	Pursue innovative funding mechanisms for priority transportation improvements which increase safety and improve mobility for all transportation modes.	Short & Long Term

CHAPTER 5 - TRANSPORTATION

T-2: To work to ensure that development and redevelopment result in minimal negative impact on road systems and traffic patterns within the County.		
Objectives	Implementation Strategies	Time Frame
Consider performance standards for new developments based on the impact to level of service for the receiving road networks.	Establish a policy regarding the acceptable Levels of Service (LOS) desired for existing roadways and evaluate the impact of new developments based on the impact to the LOS over time.	Short Term
	For rezoning applications with more intense transportation impacts, ask for consideration off-site improvements to offset transportation costs for projects.	Ongoing
Minimize the use of private roads within the County. Where private roads are used, promote adequate maintenance by the users of the road to ensure the road is accessible by emergency vehicles.	Continue to limit the use of private roads for new subdivisions.	Ongoing
	Review the current ordinances for their effectiveness in limiting the number of new private roads.	Short Term
	Require minimum standards for private road development and maintenance to provide accessibility for emergency vehicles.	Ongoing
	Develop informational brochures to educate citizens about private roads and responsibilities for maintenance.	Long Term
Continue to work with VDOT to ensure state standards for all entrances to primary and secondary roads are met as part of all new construction or major modifications of land use.	Coordinate site plan and development plan review with the County and VDOT as well as other agencies on new developments and major redevelopments or changes of use.	Ongoing
Promote and encourage commuting alternatives such as transit, carpooling, ride shares, telecommuting and other options to typical commuting patterns.	Continue promotion and support of programs such as MidPen Rideshare, Traffix, and Bay Aging Transit.	Ongoing
	Coordinate with agencies to provide commuter parking lots.	Long Term
	Improve and increase high-speed internet access and available technologies to assist with telecommuting capabilities for citizens.	Long Term
Consider location and access to important historic, tourist and recreational amenities as part of long term transportation planning.	Locate amenities on the Future Land Use Plan and incorporate them into corridor studies and green infrastructure planning.	Short & Long Term

T-3: To use state mandates for transportation planning and other transportation considerations as an opportunity to further transportation plans and projects within the County.

Objectives	Implementation Strategies	Time Frame
Implement the recommendations in the two Village Development Area plans.	Incorporate the recommendations into ordinances that encourage traditional neighborhood design and transit oriented development.	Short Term
Consider implementation of impact fees to help fund transportation projects, using the process established in the state code for Impact Fee Service Areas.	Conduct a Fiscal Impact Assessment and establish a proffer policy for new development to cover the cost of infrastructure improvements or revenue sharing for transportation projects.	Long Term
Consider strategies for improvements to Route 17 in the context of its designation as a corridor of state wide significance.	Incorporate this designation into update of corridors as discussed strategies under Goal T-1.	Short Term

T-4: To encourage the provision of adequate mobility for all segments of the community.

Objectives	Implementation Strategies	Time Frame
Encourage adequate, diverse and accessible transportation for all residents who have difficulty finding or using public or private transportation such as the handicapped, elderly, and those of low income.	Continue to support Bay Transit in the County particularly to serve the rural and less densely developed areas.	Ongoing
	Support existing and enhanced fixed routes for Bay Transit such as the Court House Circulator.	Short & Long Term
	Inventory existing sidewalks and prepare a plan for connectivity between activity areas.	Short & Long Term
	Require all future pedestrian facilities and new developments to be ADA compliant.	Short Term
Coordinate with regional agencies for the development of a mass transit network to serve the needs of our region.	Plan for future transit options within the development district.	Long Term
	Continue to support regional funding for mass transit and the implementation plans such as the HRTPO Transit Vision Plan for eventual expansion to and connection with Gloucester by an express bus service or other means.	Long Term
Encourage the development of innovative and effective means of improving ground, water and air transportation systems.	Continue to participate in the Middle Peninsula Airport Authority, HRTPO, MPPDC and other regional entities as incubators for innovative ideas for improved transportation networks.	Long Term

T-4 (Continued): To encourage the provision of adequate mobility for all segments of the community.		
Objectives	Implementation Strategies	Time Frame
Develop alternative transportation methods through available funding sources.	Create and adopt a plan for safe active transportation within the County.	Short & Long Term
	Provide appropriate signage for areas of the County used for active transportation.	Short & Long Term
	Determine improvements and infrastructure needed to implement the active transportation plan in phases.	Long Term
	Continue to work with VDOT and HRTPO to identify funding sources to implement alternative transportation plans that have been embraced by the community and the Board through appropriate planning processes.	Ongoing & Long Term

CHAPTER 6

Community Facilities and Services

Community facilities and public services play an essential role in Gloucester citizens' quality of life and directly impact the County's ability to guide growth. It is important to consider the current and future population when planning for adequate public facilities and services. This chapter identifies existing and projected community facility capacities, distinguishes the impacts growth may have on service provision, and highlights issues to be considered in future planning efforts.

General Government

Gloucester is governed by a Board of Supervisors whose seven (7) members represent the Abingdon, Gloucester Point, Petsworth, Ware, and York Magisterial Districts along with two (2) at-large members, all of whom are elected to four (4) year terms.

The Board appoints a County Administrator as the local government's chief administrative officer, implementing the Board's policies, directing County government operations, and proposing actions for the Board to consider. The Board also appoints the County Attorney as legal counsel for the Board and County government and the local governmental structure contains additional elected officials, including the Circuit Court Clerk, Treasurer, Commissioner of the Revenue, Commonwealth's Attorney, and Sheriff.

Gloucester's relationship as a "bedroom" community to other Hampton Roads localities and the resulting exurban growth presents certain challenges. Gloucester's large residential lots are desirable for those seeking a rural lifestyle, but some services, including public sewer service, are limited. New development occurring in rural areas may make public facility and service provision and highway system maintenance difficult.

Map CF-1: Community Facilities

Data Source: Gloucester County

Providing community facilities and services is one of the primary duties and functions of local government. Gloucester's community facilities include schools, emergency response facilities, libraries, and health services.

Community facilities are discussed on pages 89-94.

Public Buildings

The County owns or leases several buildings for administration departments, constitutional officers, the court system, the state Health Department, Bay Aging, the Virginia Cooperative Extension Service, and the Department of Social Services, which contributes state revenues for the building through the Central

Currently Gloucester County maintains the following facilities:

Seven (7) public schools, including five (5) elementary schools (Abingdon, Achilles, Bethel, Botetourt, and Petsworth), two (2) middle schools (Page and Peasley), and one (1) high school (Gloucester).

The Sheriff's Department is located in Gloucester Court House, which includes the Gloucester County Jail.

Six (6) fire and rescue stations, three (3) of which (Station 1 on Main Street, Station 4 in Harcum, and Station 6 in Sassafrass) are operated by the Gloucester Volunteer Fire and Rescue Squad, and three (3) of which (Station 2 in Bena, Station 3 in Hayes, and Station 5 in Ordinary) are operated by Abingdon Volunteer Fire & Rescue.

Two (2) public library branches in Gloucester Court House and Gloucester Point/Hayes and a Bookmobile.

Gloucester County is also home to one (1) hospital (Riverside Walter Reed Hospital located near Gloucester Court House), three (3) urgent care clinics (M.D. Express in the Court House, Sentara Urgent Care in the Gloucester Business Park, and Riverside Urgent Care in Gloucester Point/Hayes), and two (2) higher education facilities (a branch of Rappahannock Community College in Glenss and the Virginia Institute of Marine Science, part of the College of William & Mary, in Gloucester Point).

Cost Allocation Plan. As population growth and service demands increase, the local government staff and facilities may also need to expand to continue providing a satisfactory level of service. Planning for facility needs and implementation through a Capital Improvements Program can assist in meeting demands.

Numerous facilities have been constructed, purchased, improved, or leased since the County's previous Comprehensive Plan was adopted in 1991. Most of this work was planned through commissioned Space Needs Assessments, the largest conducted in 1986 and updated in 1998 and 2005. The most recent update identified positive improvements but projected an unmet need of 56,743 square feet of office space by 2010. Renovation of the former T.C. Walker Elementary school for school administration staff allowed central government staff to be located on a single campus in the Court House and facilitated the sale of County Office Building Three, which now operates as a commercial facility. The Gloucester Court House Village Plan (2009), conducted to address future Court House development, recommends keeping County offices in the Court House area.¹

Nearly all existing County office facilities have been recently renovated, including the old Health Department building on Carriage Court, which now houses the County's Public Utilities office. County office facilities requiring additional updates include the modular office buildings that house the Extension Office and Public Utilities locker facilities, and the Buildings and Grounds garage and shop. Additionally, the building housing Social Services exceeds capacity due to increased citizen services and requires additional record storage and staff space. Although a long-term strategy for these facilities is still needed, short-term upgrades have extended their useful lives.

The Historic Court Green buildings, including the Colonial Courthouse, have changed occupants and function over time and County-supported operations, departments, and personnel are no longer located within the Historic Court Green. The Colonial Courthouse annex has been renovated as a

¹ Gloucester Court House Village Plan, 2009

handicapped-accessible visitor's center, the remaining historical buildings now host tourism functions, and the Botetourt Building, located across from the Court Green, is utilized as the Gloucester Museum of History. The 350th Strategic Plan, updated in January 2011, prioritized efforts to "evaluate, preserve, restore and maintain the historical treasures on the Court House Circle."

The County also owns and maintains a law enforcement office, Emergency Communications Center/Emergency Operations Center (ECC/EOC), jail, senior citizens center, animal shelter, automotive and equipment repair shop, facility maintenance shop, storage buildings, park facilities, beach concession stand, ranger stations, the Whitcomb Lodge, and a reservoir containing water treatment and transmission facilities. The County has a Fire Training Facility, operated and maintained by the Gloucester Volunteer Fire and Rescue Squad, and leases three (3) buildings housing the Health Department, Main Street Library, and Gloucester Point Library.

Issues

Gloucester's residents rely on efficient, adequately planned and staffed local government services. In order to facilitate retaining the County seat within the Colonial Court House/Main Street area long-term, capital improvement planning must include funding mechanisms to acquire appropriate real estate when it becomes available. The County should adopt a plan to anticipate and address the long-term (greater than 10 years) local government facility demands as reflected in the long-term service demands for Gloucester citizens. The existing County Office Complex, which includes the Birkhofer Building, Building and Grounds Shop, Jail, Law Enforcement Office Building, ECC/EOC, Office Buildings One and Two, and Courthouse could be expanded to utilize County-owned land to the west along Main Street to meet future County needs. Private property located between the aforementioned buildings and the property that supports the Botetourt Museum, Public Utilities Office, and modular buildings provides another possible area for future County office building construction if such property was acquired. Future County Office Complex expansions should be

compatible with the other structures and uses along Main Street, as indicated in the Court House Village Plan.²

The County's Public Utilities Department's offices, vehicles, and equipment, located on County-owned land east of the County Office Complex, should be relocated to a centralized Utility Yard on County-owned land near the center of Gloucester or private property acquired in the future, to maintain a satisfactory level of service.

Information Technology

Most municipal infrastructure components (water, sewer, electricity, and roads) remain unchanged and are governed by technical and legal standards with complex municipal service models. However, the dynamic, pervasive, and unique nature of Information Technology (IT) allows departments to establish IT goals through specialized systems and applications. These needs must be considered in the County's overall planning processes since implementation strategies will differ and information technology planning must be similar to other infrastructure planning efforts. Illustrating the existing fiber network and prioritizing network expansion along Route 17 could be an initial step in these efforts.

Commercial and government network application and associated devices increases network access and capacity demand. A reliable, secure network with adequate capacity also improves opportunities for education and commerce advancement. Ensuring utility availability for citizens is an IT responsibility requiring approaches to assessment, planning, and operations similar to those applied to other utilities. In short term, the County must consider infrastructure, services, and access issues, including service types provided by the County and/or private sector and service costs, especially as IT service provisions change with technological changes.

² Gloucester Court House Village Plan, 2009

Gloucester County Schools Image Collage - Source: Gloucester County Schools

Community Factors

Although digital connections are available in many locations, services are not always available in outlying geographic locations. Increased citizen demand for network-based services will continue as e-commerce applications become more prevalent, requiring greater access and bandwidth. To be economically competitive and satisfy local service demand, fiber optic service to residences and businesses should be expanded, keeping pace with similar technology offered in larger metropolitan areas. An enhanced technology network also allows more citizens to work from home (telework), reducing roadway congestion.

Large telecommunications companies have been slow to provide new infrastructure and services to Gloucester relative to Northern Virginia or other Hampton Roads localities due to the County's size and density. Currently, no commercial announcements, plans, requests to the County, or development projects have begun to bring fiber to the premises (FTTP) locally.

Education

Gloucester County Public Schools (GCPS) is the County's public educational system, supported by local, state, and federal funds. The Gloucester County School Board, the elected body governing school operations, consists of seven (7) members elected to four-year terms, with five (5) members representing the five (5) magisterial districts (Abingdon, Gloucester Point, Petsworth, Ware, and York) and two (2) at-large members.

Elementary and Secondary Education

Gloucester County operates eight (8) schools, including five (5) elementary schools, two (2) middle schools, and one (1) high school serving children from preschool (Pre-K) through Grade 12, with the five (5) elementary schools, Abingdon, Achilles, Bethel, Botetourt, and

CHAPTER 6 - COMMUNITY FACILITIES AND SERVICES

Petsworth, enrolling students in Grades Pre-K through 5.

The two (2) middle schools, Page and Peasley, accommodate middle school students Grades 6 through 8. Page Middle School, which opened for the 2015-16 academic year, was reconstructed on a new site on TC Walker Road across Route 17 from the former Page Middle School that was damaged during the April 16, 2011 tornado.

Gloucester High School, enrolls students in Grades 9 through 12. As a comprehensive high school, advanced and career-technical courses are offered through on-site programs and the New Horizons Regional Educational Center along with extended learning opportunities through the Chesapeake Bay Governor's School, New Horizons Regional Governor's School, and Rappahannock Community College. Virtual high school credits are available, with the opportunity extended to middle school students.

Special needs students are served in all grades through regional programs located in Gloucester, Middlesex,

and the New Horizons Educational Center, while early learning opportunities are available through the Virginia Preschool Initiative (VPI) and Headstart. Students struggling with traditional education may be placed in an alternative educational environment, providing them access to certified teachers and technology. Gloucester, Mathews, Middlesex, New Kent, King and Queen, and King William Counties and the Town of West Point participate in the Regional Alternative Educational Program with locations in Gloucester and King William County.

Higher Education

The County contains two (2) higher education facilities, as shown on Map CF-1. Rappahannock Community College is located at Glenss and the Virginia Institute of Marine Science (VIMS), a William and Mary graduate facility, is located at Gloucester Point. Gloucester residents also have access to other colleges, universities, and technical schools within the Hampton Roads and Richmond regions.

Figure CF-1: Gloucester County Public School Enrollment by Year (March ADM)

Source: Gloucester County Public Schools

Enrollment and Funding

Enrollment trends (K-12) and school capacities are monitored annually to determine facility needs. Additionally, this data is utilized for public education funding received from local, state, and federal sources. For the 2015-2016 academic year, GCPS enrolled a total of 5,372 students. Student enrollment over the past 20 years grew throughout the 1990's, peaking in the 1998-99 academic year, and has declined since, as shown in Figure CF-1.

Gloucester's decline in enrollment and state funding has led to consolidating elementary schools, with T.C. Walker Elementary School closing following the 2011-2012 academic year. This facility was repurposed and renamed as the T.C. Walker Educational Center, serving as the central office location for school administration staff, and planning is underway to determine the additional facility uses.

Future Capital Needs

As the School Board considers educational facilities and recent enrollment trends, elementary school consolidation and the T.C. Walker Elementary repurposing will provide alternative community services. In addition, expanded preventive maintenance programs will maintain, repair, and replace facility structures, fixtures, utilities, and services as needed, extending equipment life and improving efficiency. Some small-scale capital improvements are completed annually, with funding included in the operating budget. Future capital projects include replacing HVAC equipment at Achilles, Botetourt, and Petsworth Elementary Schools as well as Gloucester High School, roof replacement at Petsworth Elementary, smaller roof improvements at other schools, and continued upgrades to or replacement of restrooms, flooring, playground equipment, and buses.³ Unfortunately, capital projects needs currently exceed the funding available.

³ Gloucester County Public Schools. (2010). CIP 2012-2016 Long Range Plan., 2013

Issues

Although the overall population is growing, school enrollment has declined, a trend projected to continue in the future, and Job opportunities for young families, the economy, and increases in the retired population will also impact school enrollment. The School Board will continue to monitor demographics and provide educational services, ensuring that public education is considered a local economic development and quality of life consideration.

Land owned by the School Board is available near the new Page Middle School for additional school construction should the need arise and the School Board is working with County officials to fund other future capital needs. The School Board has also considered establishing a consolidated garage for school and County vehicles. If the current bus compound is relocated, the School Board will determine the best site use for the land housing the old Page Middle School.

Table CF-1: Capacity vs. Current Enrollment

School	Capacity	2014-2015 Enrollment
Abingdon Elementary	594	584
Achilles Elementary	419	433
Bethel Elementary	492	502
Botetourt Elementary	626	539
Petsworth Elementary	346	319
T.C. Walker Elementary*	368	N/A
Page Middle**	484	390
Peasley Middle***	802	888
Gloucester High	2,255	1,750
Total	6,386	5,405

* T.C. Walker Elementary closed following the 2011-2012 academic year

**During the 2014-2015 academic year, Page Middle School contained Grade 8

*** During the 2014-2015 academic year, Peasley Middle School contained Grades 6 and 7

Source: Gloucester County Public Schools

GCPL is a leader in early childhood education: Storytime! - Source: Gloucester Public Library

Monitoring enrollment, meeting federal and state regulations, and maintaining and managing school facilities are important current and future School Board considerations since the County school system contributes to making Gloucester the “Land of the Life worth Living.”

Libraries

The Gloucester County Public Library (GCPL) system consists of the Main Library, a 24,000 square foot facility in the Main Street Center in Gloucester Court House, the Gloucester Point Branch Library, a 3,916 square foot facility in the York River Crossing Shopping Center in Hayes, and a bookmobile. The three (3) service points have a collection of over 95,000 items, containing books, DVD’s, eBooks, CD books, music, magazines, newspapers, computers with public internet access, and wireless internet access. An interlibrary loan service provides borrowed materials from other county and state libraries. Library card holders can access self-service computers through a PC reservation system.

The library offers community events, activities, and classes for all ages, such as story time, reading programs, educational entertainers, and crafts for children up to fifth grade, and clubs, book groups, and other events for teens and adults. The Main Library contains a large community room and three (3) small study rooms for library events and non-profit group

meetings and work sessions and the Gloucester Point Branch Library includes a similar meeting room. The bookmobile travels to daycare centers, preschools, schools, senior centers, and neighborhoods, providing opportunities to participate in system-wide events such as the annual Summer Reading Program and utilize iPads and Wi-Fi access. A quarterly Library Newsletter (in print and online) provides a calendar of upcoming events and activities and patrons can register to receive the latest edition upon publication.

Although not a traditional structure, the library’s website is considered as the system’s fourth branch. The website provides numerous resources accessible with a library card, such as online book reservation, eBook and eAudiobook downloads, and research databases. Other information, including weekly events, activities, and library system and service information is also available on the website.

Issues

State and local funding availability is one of the biggest challenges facing this community resource. The Gloucester County Friends of the Library fund staff development activities and events for the public, which would be reduced otherwise. The Gloucester County Department of Information Technology (DIT) provides technical support and computer access for library patrons, visitors, and staff in order to offer numerous options and a high level of service.

Sand soccer - Source: Gloucester Parks, Recreation & Tourism

Parks and Recreation

Parks and recreational opportunities are essential components to local quality of life. Parks and recreation systems that are planned, maintained, and implemented with multiple benefits promote community health, protect the environment, enhance the County's image, and provide positive economic impacts. Gloucester must continue to plan for recreation and open space, offering recreational opportunities close to citizens.

Recent population growth and future projections indicate that more open space land is needed as population changes from land conversion increases the need for land preservation. Opportunities to obtain land for public recreation becomes more difficult as property values increase. The County has acquired parkland during the past decade through land donations, but the current park acreage does not meet the residents' needs. Gloucester should obtain additional land serving future developments when fiscally feasible while considering several factors, including community needs, infrastructure availability and development potential.

Provision of Parks and Recreation Facilities and Services

Gloucester offers residents over 350 activities and events annually at County parks and school facilities, efficiently utilizing publicly-funded assets, including 264 acres of park land for outdoor recreational opportunities, such as fishing, hiking, biking, and boating. In addition, public agencies, private entities, and non-profits also provide facilities and services in collaboration with the County. Private facilities and organizations, such as marinas, campgrounds, historic sites, civic clubs, youth leagues, and homeowners associations also assist in meeting residents' and tourists' recreational needs. The County should support private recreational facilities that increase amenity availability and recreational opportunities through measures such as notifying residents of parks and recreation programs, reviewing development plans, and providing recreational equipment information to vendors and suppliers. Public-private partnerships should be explored to create and expand recreational opportunities within the County, such as providing private entities with public land to lease in exchange for publically-available facilities, public

CHAPTER 6 - COMMUNITY FACILITIES AND SERVICES

facility naming and sponsorships rights to fund park improvements, and grant application collaboration.

The state purchased local land for the Middle Peninsula State Park that, once developed, will provide various recreational opportunities and the school system also allows private and public use of some athletic facilities, reducing public park demand.

Gloucester is also supported by Park Partners, Inc., a non-profit group created in 1994 that assists the Department of Parks, Recreation, and Tourism in fundraising to develop parks, purchasing park equipment, sponsoring community activities, and providing financial assistance to youth participating in recreational activities.

Citizen Survey

The County's Department of Parks, Recreation, and Tourism, with assistance from the Parks and Recreation Advisory Committee, conducted a public survey in 2008 to evaluate activities, receive public comments, and provide direction from residents and focus groups. The random survey was mailed to citizens with a written questionnaire and a prepaid return envelope to increase participation. Most respondents indicated a willingness to pay higher taxes for parks and recreational facility improvements and identified bike paths along roadways as their highest priority, as listed in Table CF-2. Goals and strategies will be developed to guide future planning efforts.

Table CF-2: 2008 Survey's Top 10 Parks and Recreation Facility Priorities

Priority
1. Bike paths along roadways
2. Community center
3. Senior center
4. Walk/Bike greenway around Court House area
5. Acquire land for future parks
6. Acquire land adjacent to Beaverdam Park
7. Add lights to athletic fields
8. Install more playground equipment
9. Add more picnic shelters
10. Skateboard park (since opened in Brown Park)

Middle Peninsula State Park dedication - Source: Gloucester Parks, Recreation & Tourism

Park and Open Space Inventory

The Department of Parks, Recreation, and Tourism currently oversees 10 County parks and open space properties totaling 264.69 acres, as shown on Map CF-2 and summarized in Table CF-3. In addition to County-owned facilities, several other public and private facilities are available for residents' use. As demonstrated by the results of the 2008 survey, availability of land for both passive and active recreation is important for local quality of life.

Middle Peninsula State Park

The Middle Peninsula State Park master plan has been adopted but development funds have not been budgeted. This 438 acre site located on the York River is proposed to have a beach, fishing pier, roughly seven (7) miles of hiking trails, boat launch, picnic areas, playground, primitive camping, cabins, and an environmental education center.

Public School Facilities

Since County-owned athletic fields and indoor spaces are insufficient, local recreational programs rely

on public school facilities for additional locations. Gloucester County Public Schools allow public and private groups to use some facilities and the County-run athletic programs would be significantly reduced without these facilities. County athletic leagues utilize nine (9) fields at Bethel Elementary, one (1) at Peasley Middle School, and two (2) at Gloucester High School.

Damage to the former Page Middle School fields from the 2011 tornado has reduced the amount of facilities available to public and private athletic leagues. Fields at Woodville Park have been created and the park is equipped with electricity and ballfield lighting, but additional infrastructure funding is needed to provide water and sewer service as well as restroom and concession facilities.

Table CF-3: Gloucester County Parks and Open Space Facilities

Facility	Description	Acres
Abingdon Park	Abingdon Park, leased land located next to Abingdon Elementary, primarily hosts athletic events.	14.07
Ark Park	Ark Park, leased land formerly home to the Gloucester County Fair, contains several athletic fields.	29.7
Beaverdam Park	Beaverdam Park, a premier park, has two (2) entrances and a combined seventeen (17) acres of recreational property along with a 635-acre freshwater lake and over 20 miles of trails).	9 (Main) 8 (Secondary)
Brown Park	Brown Park, opened in 2005, consists of a skate park with a half-pipe, grinding rails, and bank ramps.	19.5
Gloucester Point Beach	This park contains the only County-owned public beach access, two (2) public access boat ramps, a saltwater fishing pier, and concession, shower, and restroom facilities.	5
Hunter's Run	Hunters Run, a small park within the Founder's Mill Subdivision, includes a children's playground.	1.36
Tyndall's Point	Located in Gloucester Point, Tyndall's Point Park illustrates the area's military history through preserved earth works built by Confederate Soldiers during the Civil War.	4
Woodville Park	Woodville Park is the County's largest park and has been partially developed, with other areas currently under construction. Existing facilities include seven (7) athletic fields, three (3) of which are lighted, two (2) ponds, a sand soccer/volleyball court, memorial garden, raised boardwalk, and community garden. The park's master plan includes expanded trails, a playground, and community buildings.	100
Fox Mill Tract	The Fox Mill Tract is County-owned property that has not yet been developed and with no established planned use.	74.06
TOTAL		264.69

Map CF-2: Parks and Recreation

Data Source: Gloucester County

Parks and recreation facilities help create and maintain Gloucester citizens' quality of life. A well-planned system can have several benefits, including promoting healthy activity, providing enjoyable recreational activities and sports, protecting the environment, beautifying the community, and attracting economic growth. Several other organizations also own and maintain parks and recreation facilities or protected lands in Gloucester County, including the Middle Peninsula Land Trust, the Virginia Outdoors Foundation, the Chesapeake Bay National Estuarine Research Reserve (CBNERR), The Nature Conservancy, and Thousand Trails Campground. The County is home to several types of municipal parks and recreation facilities, including boat access facilities, nature trails, parks, and athletic fields. Parks and recreation facilities are discussed on pages 95-102.

Gloucester Point boat ramp - Source: Gloucester Parks, Recreation & Tourism

Gloucester County has seven (7) parks:

Abingdon Park includes athletic fields and a picnic area.

Ark Park includes athletic fields, a basketball court, a playground, and a picnic area.

Beaverdam Park is home to several trails for hiking, mountain biking, and horseback riding, boat ramps, fishing facilities, playgrounds, and a picnic area.

Brown Park includes picnic tables and the County's skateboard park.

Gloucester Point Beach Park includes a fishing pier, boat ramps, grills, picnic facilities, and volleyball areas.

Tyndall's Point Park is an interpretive historical trail, with earthworks dating from the Civil War.

Woodville Park is a new park that includes natural areas and athletic facilities and is planned to include additional athletic fields, walking trails, gardens, and possibly an amphitheater.

Shoreline Access

Gloucester's heritage is deeply connected economically and recreationally to the water. As residents and visitors regularly spend time in or around the water and participate in numerous water-based activities, public shoreline access is a major priority for the County and the region. The Middle Peninsula Chesapeake Bay Public Access Authority coordinates with Gloucester and other localities to increase public access along the waterfront.

Public boat access opportunities are available through four (4) Virginia Department of Game and Inland Fisheries (VDGIF) boat ramps located at Gloucester Point, Tanyard Landing, Deep Point, and Warehouse Road and the Virginia Department of Transportation (VDOT) also allows public access at several landings throughout the County, as shown on Map CF-2. Gloucester owns several small parcels for fishing or boating access, but most are only suitable for car-top boats. In addition, several privately-owned marinas and docks provide boat access. Public access review, inventory, and definition, as recommended in the York River Use Conflict Study,⁴ will assist in public access planning and the associated revisions to the County's

⁴ York River Use Conflict Committee Report and Recommendations, 2008

Beaverdam Park - Source: Gloucester Parks, Recreation & Tourism

Code. A Blueways Committee has already designed a Blueways Trail Guide with five (5) access points and plans to add more as funding allows.

Gloucester's only public beach, located on the York River at the Gloucester Point Beach Park, is used by both residents and tourists and features two (2) boat ramps, a saltwater fishing pier, picnic areas, and restroom and shower facilities. However, limited parking poses some issues when nearby lots are also utilized by VIMS students.

Trails and Greenways

Most County-maintained trails are located at Beaverdam Park, which features hiking, mountain biking, and horseback riding trails. The Point Walk at Gloucester Point Beach, an interpretive walking trail at Tyndall's Point Park, and a raised boardwalk, walking trail, and nature trail at Woodville Park are other County-maintained trails.

The Virginia Birding and Wildlife Trail, developed by VDGIF, includes a Gloucester Loop with destinations at

many of the publicly-owned boat landings, providing opportunities to observe waterfowl, shorebirds, and Chesapeake Bay coastal habitats.

Beaverdam Park - Source: Gloucester Parks, Recreation & Tourism

Recreational Programs

The Parks, Recreation, and Tourism Department offers numerous recreational activities for County residents, including adult and youth soccer, basketball, softball, and field hockey leagues, and special interest classes, such as dance, exercise, arts and crafts, yoga, and karate. Although the department does not offer a therapeutic recreation program, it sponsors “STAR,” a program for special needs children that holds several recreational activities throughout the year, including a therapeutic horseback riding camp during the summer, and offers accommodations for special needs youth and adults participating in general recreation programs.

Locations for Future Parks

Several factors should be considered when identifying new parks or recreational facility locations, such as development potential, land suitability, funding, public utility and road access, park and public facility connectivity, and proximity to areas of need.

Access to public utilities and roads

Public facilities can accommodate many visitors, but when special events are held, public water and sewer infrastructure may be necessary to serve large attendances, lighted athletic facilities that consume more electricity may require access to three-phase power, and effective road access is necessary to minimize site ingress and egress conflicts. Therefore, Gloucester County should focus future park site establishment to within the Development District.

Connectivity to other parks and public facilities

In the 2008 Needs Assessment Survey, Gloucester residents indicated their desire for trails and bikeways. The County should create a comprehensive

Baseball camp - Source: Gloucester Parks, Recreation & Tourism

sidewalk plan for the village areas and greenway plan illustrating a green infrastructure network, a multiple-benefits framework linking open space and working lands through corridors protecting wildlife habitat and drinking water supply while providing recreational opportunities. This plan should show potential sidewalk and trail locations connecting parks, schools, public facilities, residential areas, retail, and work centers while providing alternative transportation routes and future park and open space sites.

Need based on demographics and geographic placement

Currently, local parkland is unevenly distributed, with some parks located in densely populated areas and

few in the northern portion of the County. Parks are used more often when located near residential areas since people walk or bicycle to them, reducing road traffic and parking demands. Demographic patterns should be reviewed to determine the underserved populations and future park sites should be located accordingly.

Planned Facilities

The County currently owns three (3) undeveloped sites, including the old landfill, a planned future park that is currently in post-closure care, requiring slope and cap protection and gas monitoring.

Definitive plans for the Fox Mill Tract, land donated to the County, have not been established, but passive usage is anticipated due to challenges presented by wetlands and the site's terrain. This tract is part of a larger potential greenway that could be preserved as open space surrounding future developed land.

Although Woodville Park is currently operational, areas are still under construction and the master plan envisions concessions, a storage facility, restrooms, a playground, amphitheater and performance barn, community building, and additional walking trails.

A 2002 study considered a multi-use trail between the Court House and Beaverdam Park,⁵ with the recommended trail alignment shown on Map CF-2. However, funds are not presently available for development.

Issues

The Department of Conservation and Recreation (DCR) recommends at least ten (10) acres of parks and recreation sites providing active and passive recreational opportunities per thousand (1,000) people.⁶ Based upon this recommendation, Gloucester is deficient, and, with two (2) parks currently leased

and subject to repurposing by the property owners, parkland shortages could increase. While park acreage is important, assets and facilities serving recreation are just as crucial. According to DCR's recreational asset recommendations, the amount of local facilities is insufficient for our County's residents. Parks and recreation has historically been underfunded, causing the local system to fall below minimum capacity and space guidelines (based upon population) and have insufficient assets.

Although school facilities are not considered in DCR's standards because they are not exclusively publicly available, DCR recommends that localities utilizing school or private facilities establish alternative options to meet recreational needs. Therefore, alternative facilities for County and school recreational needs should be planned.

Since planning for a comprehensive trail network has not yet occurred, the County should develop a greenways plan that contains bikeways and blueways and includes community involvement. Trail planning should be incorporated into green infrastructure planning efforts to ensure that new facilities contribute to the overall connectivity.

Public shoreline access and related use conflicts is a local concern that can be addressed by following the York River Use Conflict Committee Report's recommendations⁷ to minimize recreational and non-recreational use conflicts, including developing a master public access infrastructure plan that addresses shoreline management issues.

Other parks and recreation concerns include developing individual park master plans and establishing park facility design and maintenance standards. Since park design and maintenance is not regularly addressed, standards would direct planning efforts and assist annual budgeting.

⁶ Virginia Outdoors Plan, 2013

⁷ York River Use Conflict Committee Report and Recommendations, 2008

Riverside's Heron Cove at Sanders Retirement Community - Source: Riverside Health System

Health Services

County health services include general practitioners and specialists at local medical offices, a hospital, local public health center, regional mental health clinic, services for the intellectually disabled, and substance abuse counseling.

Riverside Walter Reed Hospital

Riverside Walter Reed Hospital (RWRH) provides numerous primary and secondary services, including inpatient, outpatient, and home-based care, an Emergency Center, surgical procedures, laboratory work, diagnostic radiology, nuclear medicine, ultrasound, C.T., M.R.I. (mobile), mammography, dialysis, physical therapy, cardiac rehabilitation, sports medicine, and stress testing. The facility's campus also has a medical office complex and home health services, such as hospice. The RWRH campus was renovated and expanded in 1995, opened the Riverside Middle Peninsula Cancer Center (RMPCC) in 2004, and recently began further expansions.

Additionally, M.D. Express, operated by the Riverside Health System and located just south of Gloucester Court House, provides urgent care services and the

Riverside Hayes Medical Center, located in southern Gloucester County, specializes in family practice and includes an urgent care facility.

Sentara Gloucester Medical Arts

Sentara Gloucester Medical Arts, constructed in 2006 and located in the Gloucester Business Park, offers various comprehensive family care services, including urgent care, family practice, pediatrics, obstetrics, gynecology, and diagnostic imaging services.

Gloucester Health Department

The Gloucester County Health Department, operated by the Virginia Department of Health's (VDH) Three Rivers Health District, offers numerous community services, including general health care, family planning, immunizations, sexual health counseling and testing, communicable disease screenings, outbreak investigation, rabies control, women's cancer education and detection, cardiovascular health education, lead screening, school-based prevention, genetic disease counseling, the Infant Safety Seat Program, Family Assessment and Planning Teams, dental health services, and community health

education. In addition, the Department provides environmental health services, such as on-site sewage disposal permits, well permits, restaurant/food service permits, and inspection.

Gloucester County Department of Social Services

The Gloucester County Department of Social Services offers social work, programs, and financial services for individuals, families, and children who meet specific program eligibility criteria, with information and referral services provided to those seeking human service related resources. Available programs include, but are not limited to, child and elderly/disabled protective services, foster care services, child placement (adoption), custody investigations, Medicaid, Energy Assistance, Supplemental Nutritional Assistance Program (SNAP, formerly known as Food Stamps), and Temporary Assistance to Needy Families (TANF), with some programs operating on a limited timeframe. Departmental services aim to promote healthy families and self-sufficient adults.

Middle Peninsula-Northern Neck Community Service Board

The Community Service Board (CSB) serves as the primary entity for publicly-funded mental health, intellectually disabled, and substance abuse services, including state mental health and intellectually disabled facility service access through preadmission screening, case management, and service coordination. The Middle Peninsula-Northern Neck Mental Health and Substance Abuse Clinic provides counseling, psychotherapy, and psychiatric and diagnostic services to regional residents. The Community Services Board also offers substance abuse services for drug and alcohol addiction, prevention, and crisis intervention and advisory services to families with intellectually disabled individuals through coordinating local and state services and operating an Adult Activity Center that provides structured schedules while aiming to help

these individuals participate in normal community activities, avoid placement in state institutions, and relieve total family dependence.

Arc of Virginia Peninsula

The Arc of Virginia Peninsula offers a therapeutic, social, and vocational Work Activity Center for the intellectually disabled and physically handicapped to reduce their financial and personal dependency on family and guardians.

Bay Aging

Bay Aging, a nonprofit organization, serves the Middle Peninsula and Northern Neck's elderly and disabled by addressing critical needs in four (4) major divisions: Health Services, Bay Transit, Senior Apartments, and Single-Family Housing. These divisions include various programs, such as home health and living skills care, an Alzheimer's Support Group, "Meals on Wheels," public transportation to the Middle Peninsula and surrounding counties, an Adult Day Break Respite Care Center, Adult Life Style Senior Center, Daffodil Gardens (an affordable independent senior living complex), weatherization, and the Section 8 Virginia Housing Development Authority (VHDA) Housing Voucher Program.

Gloucester-Mathews Care Clinic

The Gloucester-Mathews Care Clinic provides medical care for Gloucester and Mathews County residents at or below the poverty level without health insurance, funded through grants, foundations, churches, individual contributions, and fundraising events and is equipped with doctors, a pharmacy, and a dental program.

Tails on the Trail event - Source: Gloucester Parks, Recreation & Tourism

Animal Control

Gloucester employs three (3) full-time Animal Control Officers and a Dispatcher/Clerical Assistant. The County operates a state-mandated certified animal shelter that houses dogs identified as unlicensed or violating the County's Leash Law, strays, dogs that are sick, injured, or to be quarantined at the Health Department's request, dogs with pending court action or under court-ordered placement, and unwanted dogs. The shelter accepts dogs brought by residents and works with citizens and the Gloucester Mathews Humane Society to address concerns for cats and other animals.

Issues

Uncontrolled cat populations within the County present an on-going public health and safety issue. Programs to address this issue, including citizen education on unchecked populations, spaying, and neutering, are critical. Additionally, a corresponding policy and reception site for stray and feral cats should be established.

Public Utilities

Public utility planning is critical for successful community growth. Current service provision and future service needs are discussed in the following section.

Water Service

Gloucester provides water service through surface and groundwater sources in conjunction with state and federal requirements. Gloucester has addressed future water and sewer service planning in its Master Water and Sewer Plan, completed in 2005, with an updated plan anticipated in the near future,⁸ and also participated in the Hampton Roads Regional Water Supply Plan, completed in July 2011.⁹

Water Supply

Gloucester's community water system runs along U.S. 17, delivering water to approximately 14,000 people (roughly 37% of local residents) between Gloucester Court House and Gloucester Point/Hayes, as shown on Map CF-3.

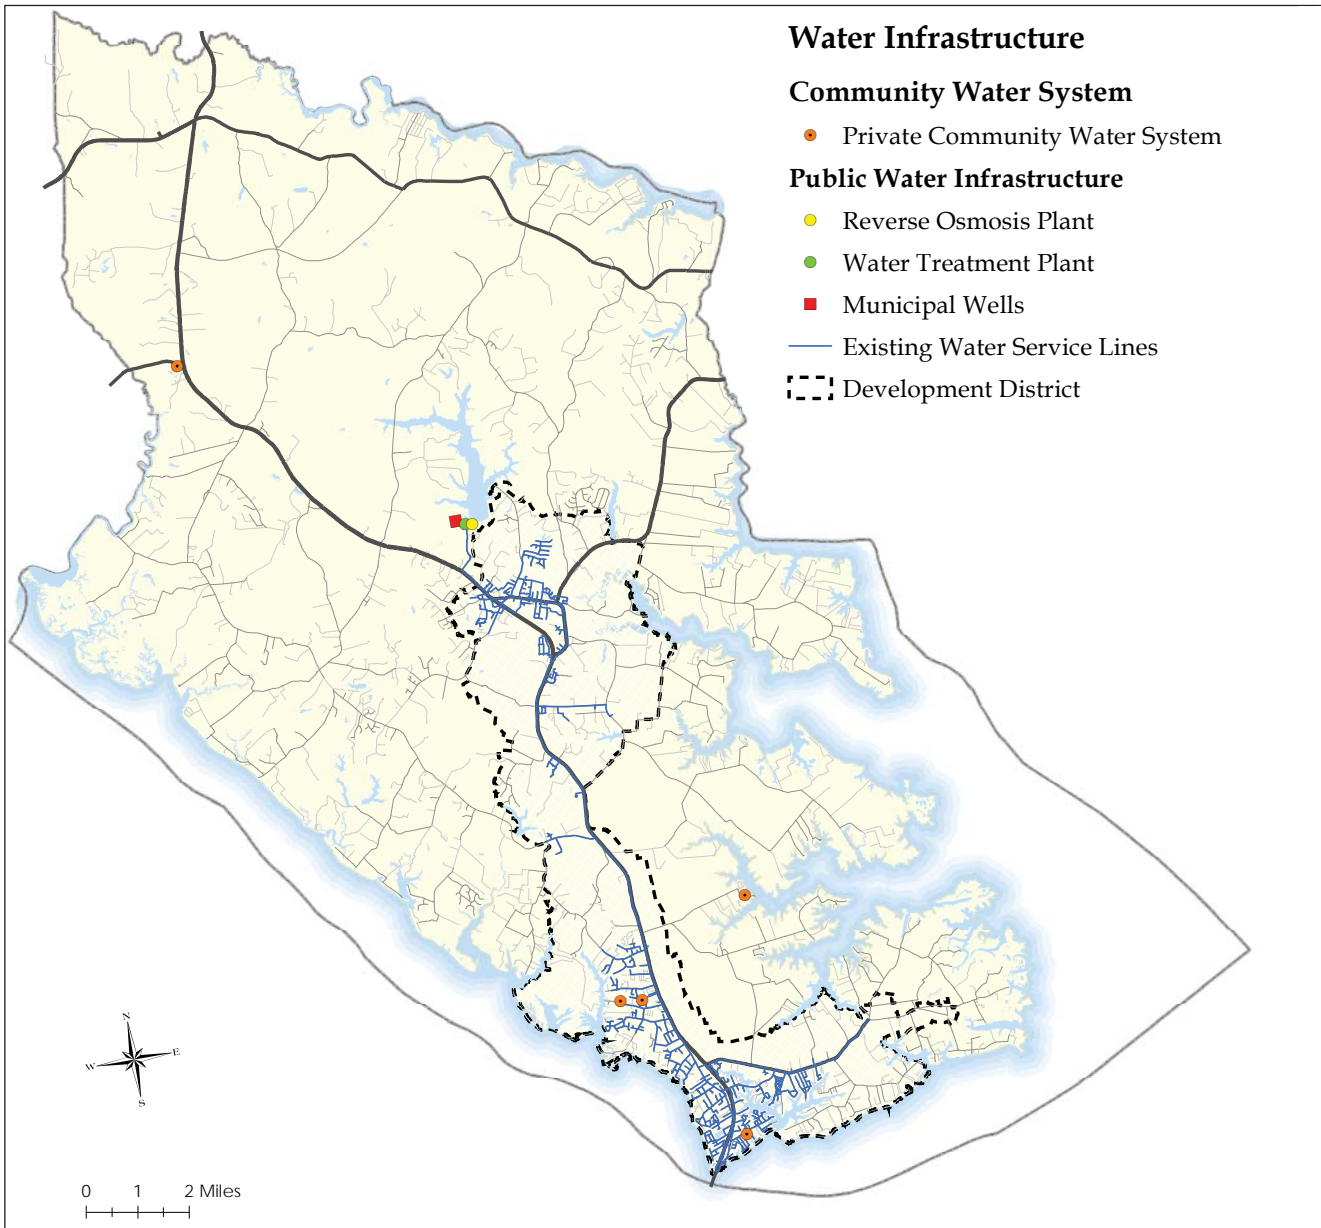

The Beaverdam Reservoir, the County's surface water source, has a drainage area of approximately 24 square miles, storage capacity of 1,460 million gallons, and provides a safe yield of 5 million gallons per day (based upon a 10 foot minimum drawdown).

Gloucester lies within the Coastal Plain Province and has water-bearing, unconsolidated sediments ranging from approximately 1,200 feet deep in the western region to approximately 2,400 feet deep along the County's eastern edge. Ten (10) hydrogeologic units in the Coastal Plain, including eight (8) aquifers and two (2) confining units, contribute to groundwater supply sources, covered in further detail in the Plan's Natural Resources chapter. The Yorktown and Potomac

⁸ Gloucester County Master Water and Sewer Plan, 2005

⁹ Hampton Roads Regional Water Supply Plan, 2011

Map CF-3: Public Water Systems

Data Source: Gloucester County

Gloucester’s public water system serves the most developed areas of the County, from the Court House south to Gloucester Point/Hayes and along part of Guinea Road. This service allows for these areas to support more residential, commercial, and industrial development than would otherwise be possible with wells. Gloucester’s public water system incorporates both surface and groundwater sources. The Beaverdam Reservoir is the County’s principal source of drinking water. The public water system also includes a deep well, a reverse osmosis treatment plant, and a surface water treatment plant.

Gloucester’s public water system is discussed on pages 105-109.

Confining Zones, local aquifers, have been used as municipal and industrial well sources. The County pumps from the Potomac Aquifer through 1,500 and 1,600 feet deep wells that require reverse osmosis (RO) treatment at two (2) facilities located near the reservoir to offset the natural salinity.

Groundwater availability is affected by the chloride transition zone, a wedge formed by the convergence of oceanic saltwater and fresh groundwater along the coast. Additionally, the Chesapeake Bay Impact Crater's edge, located within the County, contains nearly impermeable sediments and forces groundwater to flow around the rim, resulting in brackish water not recommended for use as potable water.

The Surface Water Treatment Plant (SWTP) can deliver up to two (2) million gallons per day (MGD) and was designed and built to accommodate future expansion. The RO Plant, completed in 2003, treats 2 MGD and can expand to 4 MGD. Water from the RO Plant is blended with water treated at the SWTP, which is pumped to the County's distribution system.

Water Use and Projected Demand

In 2014, the County's Department of Public Utilities delivered an estimated 1.3 MGD of treated water, ranging from 1.1 MGD in the winter to 1.4 MGD in the summer, to approximately 4,990 accounts utilizing the combined surface and groundwater sources.

According to the US Geological Survey (USGS), an estimated 9,478 private domestic wells supply potable water to approximately 25,000 people not served by public water, with a yield of approximately 1.87 MGD. Private wells primarily utilize shallow aquifers, specifically the Yorktown-Eastover (94%) and Piney Point (6%) Aquifers.¹⁰

There are three (3) private community water systems in the County with VDH permits, as listed in Table CF-4, with no reported withdrawals of more than 300,000 gallons of water per month.

¹⁰ Private Domestic-Well Characteristics and the Distribution Withdrawals among Aquifers in the Virginia Coastal Plain, 2007

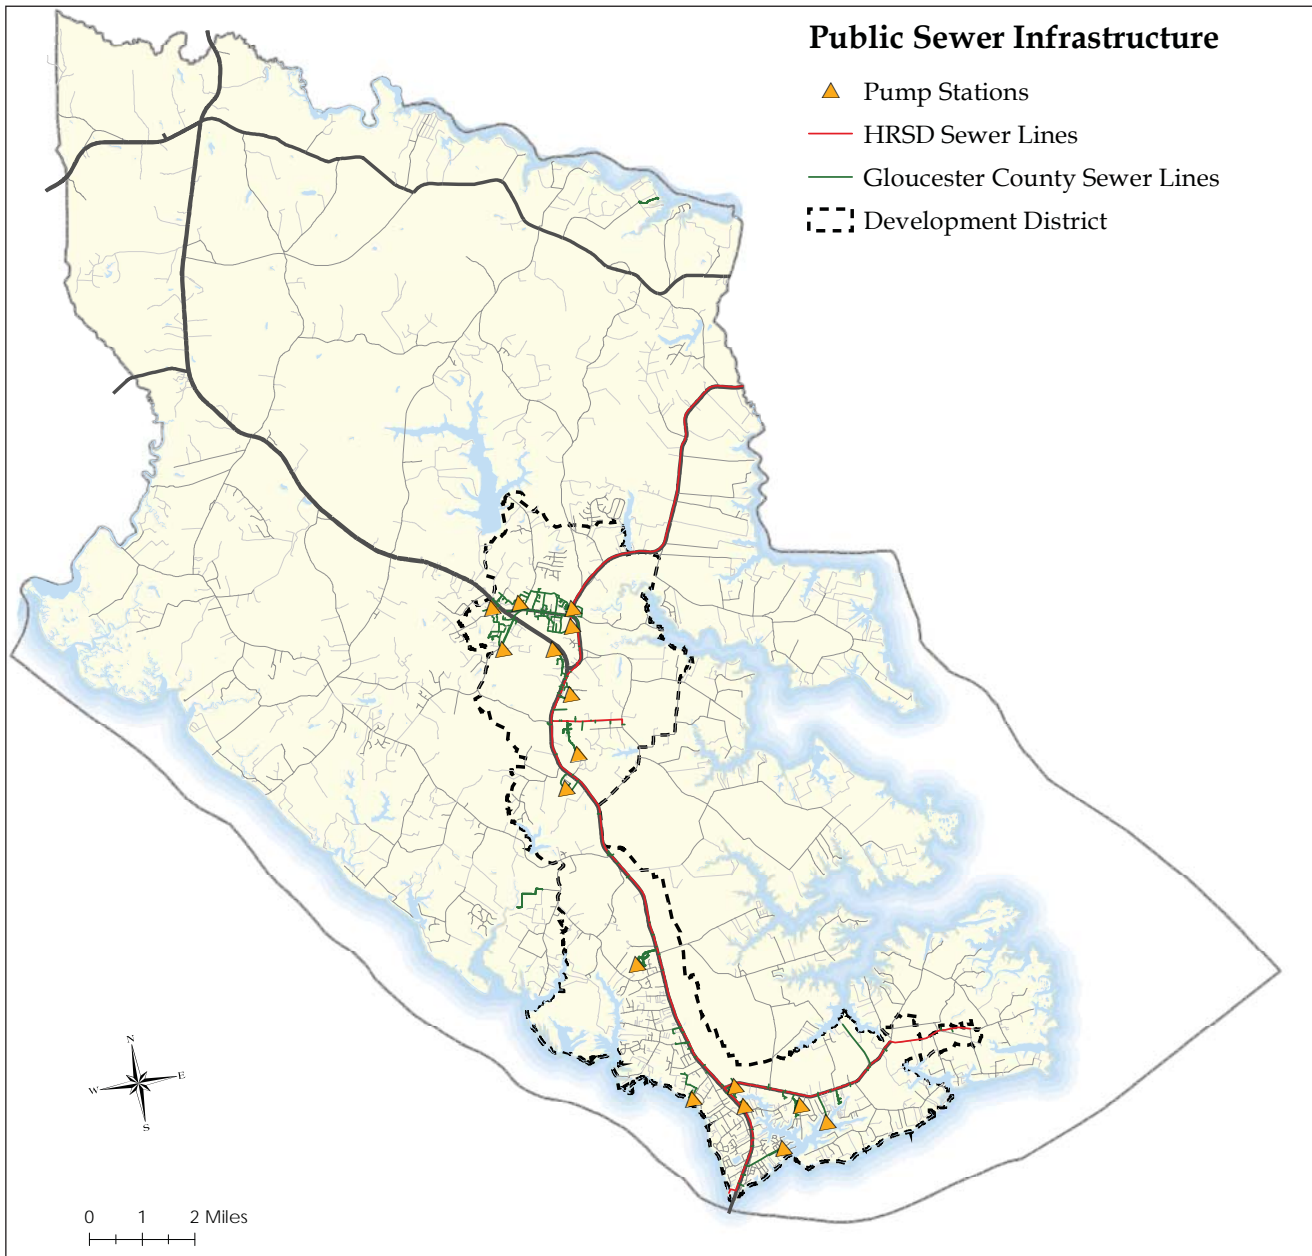

Table CF-2: Private Community Water Systems in Gloucester County

Private Community Water System	People Served	Aquifer	Permitted System Capacity (2007)
Laurelwood Estates Trailer Park	175	Potomac	30,000 gallons/day
R&L Trailer Park	45	Yorktown-Eastover	6,300 gallons/day
Waterview Mobile Home Park	80	Yorktown-Eastover	10,400 gallons/day

Table CF-3: Projected Water Supply and Demand in Gloucester County (Hampton Roads Planning District Commission, 2010)

Year	Projected Water Demand (MGD)	Projected Population Served by Public Water	Projected Population of County	Percent of Population Served by Public Water
2020	1.5	18,551	44,495	42%
2030	1.9	23,689	51,835	46%
2040	2.4	29,675	60,387	49%
2050	3.0	36,649	70,349	52%

Map CF-4: Public Sewer Systems

Data Source: Gloucester County

Gloucester County’s public sewer service is provided by the Hampton Roads Sanitation District (HRSD), which owns and maintains pump stations and a major interceptor line that runs under Routes 17 and 14 from Mathews County to Gloucester Point/Hayes and under the York River into a treatment facility in York County. A second HRSD line extends along Guinea Road. Gloucester County owns and operates additional sewer lines and pump stations that feed into the main HRSD lines. The Development District, established by the County, contains areas which are currently served or planned to receive service within 12 years. This district is reviewed by the County annually to assess and incorporate new development. Gloucester’s public sewer system is discussed on pages 109-111.

Gloucester has adequate water supply to meet future public water demands. By 2030, nearly 24,000 residents are expected to be served public water. This demand will require 1.9 MGD, an amount that can be handled by the existing treatment facilities, as identified in Table CF-3, which describes the County's projected public water demand through 2050. An estimated 70% of future growth is anticipated to occur in areas already served by public water. However, Gloucester may see increased demand for public water should County aquifers experience salt water intrusion.

Sewerage Service

Local sewer service is provided by the Hampton Roads Sanitation District (HRSD), which owns a 30-inch interceptor running under the York River along Route 17 to the Court House area, as shown on Map CF-4. From Gloucester Point/Hayes to the Court House, numerous businesses, residences, and communities are connected to HRSD's interceptor and all other parcels are served by County-owned and maintained public sewer lines and pump stations. Wastewater from these systems is piped to an HRSD treatment facility in York County and approximately 1,450 local accounts exist.

Hampton Roads Sanitation District sewerage service provides adequate capacity for the planning horizon, with an agreement ensuring that HRSD will upgrade their primary force mains should they reach capacity. However, HRSD will not install or maintain County sewer lines.

The County's Development District, as shown on Map CF-5, identifies areas with existing public utilities or where future development and utilities expansion should occur and this boundary is required to be reviewed and updated annually by the County's Water and Sewer Ordinance.

Special Order by Consent

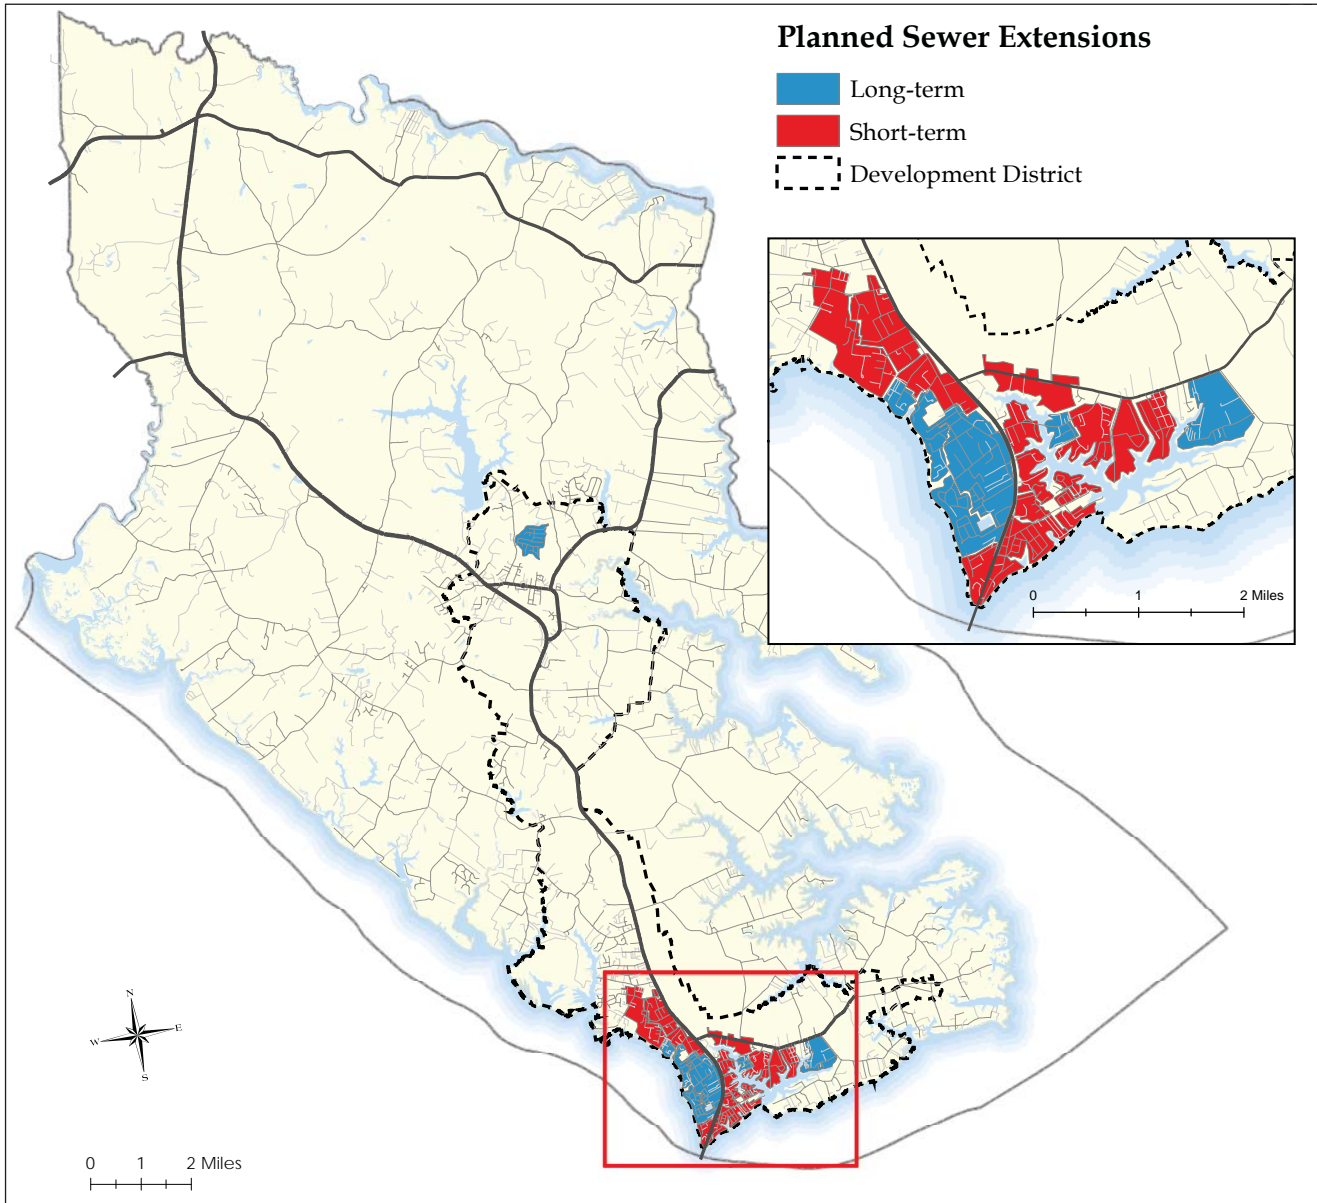

Gloucester will continue to work with the region to fulfill the requirements of the Special Order

by Consent (SOC) issued between the State Water Control Board, HRSD, and Hampton Roads localities in 2007 and modified in 2014, which aims to resolve declared environmental law violations and prevent sewer overflows and associated local water quality impacts. Regional sewer system overflows discharging untreated sewage into public waters occur due to wet weather events, pipe breaks, electrical outages, infiltration and inflow, insufficient sewer system capacity, and other factors, such as Hampton Roads' low-lying nature, high groundwater table, and periodic flooding. The Hampton Roads Sanitation District, localities, and HRPDC coordinate SOC activities through a 2007 Memorandum of Agreement that was revised in March 2014.

Under the SOC, HRSD and Hampton Roads localities agreed to a two-phased approach that addresses regional and local sanitary sewer system capacity and performance conditions causing or contributing to unpermitted sewage discharges. The initial phase included data collection, evaluation, and plan development with regional elements that established uniform standards to identify wet-weather flow infrastructure improvements and local components that addressed unpermitted discharges and necessary system repairs. Gloucester participated in the regional technical standards and sewer system hydraulic model development and has evaluated County sewer lines to identify and prioritize areas of concern.

The SOC's second phase will include sewer rehabilitation plan implementation and long-term system capacity enhancements, such as regional infrastructure project construction and local system improvements identified in the first phase. Gloucester cooperated with HRSD and other localities to develop rehabilitation plans and Gloucester's rehabilitation plan addresses publicly-owned gravity sewer facilities and assesses peak flow reduction feasibility and costs. The Regional Wet Weather Management Plan (RWWMP), completed by HRSD and the localities in 2013, identified long-term system capacity improvements, analyzed existing and future peak flow system performance scenarios, evaluated alternatives to determine an acceptable level of service, and established a regional capital program and implementation schedule for the next 10-20 years.

Map CF-5: Planned Sewer Extensions

Data Source: Gloucester County

Gloucester’s public sewer service is provided by the Hampton Roads Sanitation District (HRSD), which owns and operates a major interceptor line that runs along Route 17 and conveys wastewater to a treatment facility in York County. Additional sewer infrastructure, including collection lines and pump stations, is owned and maintained by the County. Identifying appropriate areas for the expansion of services is a major component of planning for the orderly development of the County. Gloucester has established a Development District, which includes areas currently served and identified as appropriate for potential expansion. In addition, the County has identified several specific areas within the Development District that should receive extensions over the next 20 years, shown in red and blue on the map. Planned sewer extensions are discussed on page 109.

Gloucester continues to participate in SOC-related activities through the HRPDC's Directors of Utilities Committee and other intergovernmental events.

Issues

Water Service

The Department of Environmental Quality (DEQ) expanded the Eastern Virginia Groundwater Management Area (EVGMA) limits to include Gloucester and all remaining Virginia Coastal Plain localities, requiring a DEQ withdrawal permit for the County's two (2) deep wells. Future local groundwater withdrawal increases will require new permits subject to the Eastern Virginia Groundwater Management Area evaluation process and the County should be aware that additional withdrawals may not be available at that time and plan accordingly.

Sewage Service

Gloucester has historically used soil suitability to address septic tank disposal system concerns, resulting in large lot development or, in some locations, development limitations until public sewer service is provided.

State code permits development on previously limited property, specifically those with clay soils or high water tables, through alternative on-site sewage systems (AOSS), which may not require a drainfield and are exempt from some Health Department requirements. This has allowed for residential development in areas where it was not previously possible.

The Special Order by Consent requires Gloucester to plan for ongoing maintenance and long-term sewer system enhancement and consider the rehabilitation plan's recommendations in the County's Capital Improvement Plan. The rehabilitation plan will define specific sewer overflow reduction measures, address local system deficiencies, and identify system-wide improvements, such as infiltration and inflow source control that ensures sewer infrastructure sustainability and reduces peak flows to acceptable

levels. As sewer system flow monitoring and reporting will be necessary to demonstrate system performance and evaluate infiltration and inflow reduction effectiveness, appropriate monitoring equipment has been installed at all County pump stations.

The rehabilitation plan describes the County's regional sewer system peak flow commitment and affects downstream improvements' sizing and performance. The County must also plan for continued system maintenance to ensure that wet-weather peak flows meet the acceptable thresholds. As of March 2014, HRSD and localities are collaborating on budgeting and planning tools to finance regional consistent rehabilitation efforts.

Sewer system capacity projects to accommodate long-term flow conditions and provide appropriate service levels will be identified as a part of the Regional Wet Weather Management Plan (RWWMP), which assumes full implementation and continued project performance identified in the HRSD and locality rehabilitation plans. The level of service defined in the RWWMP was cooperatively developed, mutually agreed upon by HRSD and the localities, and accepted by the U.S. Environmental Protection Agency. Gloucester County must allocate plan improvement and project implementation resources to maintain compliance with the approved plan and avoid regional system impacts or be subject to potential legal action. The SOC also requires flow monitoring, reporting, and system performance assessment after Regional Wet Weather Management Plan implementation and the County should plan for these associated costs.

Public Works

Solid Waste Management

Planning for future solid waste disposal needs occurs through the Solid Waste Management Plan of 1997, which is updated every five (5) years, with the 2015 update accepted by DEQ.

Gloucester opened the 510-acre Middle Peninsula Landfill & Recycling Facility (MPLRF), operated by

Map CF-6: Solid Waste Facilities

Data Source: Gloucester County

Gloucester’s solid waste management facilities are owned by the County and operated by Waste Management Disposal Services of Virginia, Inc. The main facility is the 510-acre Middle Peninsula Landfill and Recycling Facility located near Glenss. The County also owns five (5) convenience centers that are operated by Waste Management located south of Gloucester Court House on Beehive Drive (Convenience Center #1), at the active landfill (Convenience Center #2), on Guinea Road (Convenience Center #3), on Hickory Fork Road (Convenience Center #4), and on Burkes Pond Road (Convenience Center #5). Gloucester also owns and cares for a closed landfill located in the Court House.

Solid waste facilities are discussed on pages 111-113.

Waste Management Disposal Services of Virginia, Inc. (WMD), in 1995. This facility is managed at no cost to the County through a long-term agreement running through the landfill's available capacity, meeting the County's current waste disposal needs. Contracted waste disposal is limited to 2,000 tons per day and estimates the facility's remaining life expectancy at approximately 80 years.

In addition to the MPLRF, Gloucester owns five (5) convenience centers open and fully-staffed six (6) days per week, as shown on Map CF-6, that are operated by WMD through the long-term agreement. Each center accommodates solid waste disposal for recyclable materials, white goods, and brush and also collects household hazardous wastes on a biannual basis.

The County's long-term agreement with WMD also requires WMD to pay associated fees, including host government rent and taxes, ranging from \$300,000 to \$500,000 per year. The no-cost waste disposal, landfill and convenience center operations, and annual County revenue provides numerous long-term benefits from services that are often liabilities for similar localities.

Gloucester owns a closed landfill that is currently in a post-closure care period to monitor the landfill's cap integrity, slopes, and resulting gases, funded through the County's contract with WMD. The Virginia Department of Environmental Quality (DEQ) has ended groundwater monitoring requirements at this landfill after determining that long-term facility monitoring results have not shown adverse impacts to the public health, safety, or the environment.

Disasters and Solid Waste

Natural disasters typically produce additional waste, including putrescent wastes, wet carpeting and furniture, building demolition items, and arboreal wastes. Gloucester adopted the Solid Waste Management Plan (1997, revised in 2015), which covers daily capacities, and a Disaster Solid Waste Plan (1998, revised in 2001), addressing when a state of emergency is declared in the County. When Hurricane Isabel struck in 2003, the County deployed

Damage to Gloucester Point pier during Isabel - Source: Gloucester Parks, Recreation & Tourism

contractors, opened the temporary debris storage and reduction area, and broadcasted public emergency debris disposal informational messages.

Issues

The County's existing agreement with WMD, which provides for solid waste disposal through the landfill's life along with local revenue, benefits the County. The agreement's length and consistent benefits are particularly valuable during a time when other localities experience solid waste management cost inflation from increased regulation and economic inflation.

Potential increased annual host government fees from an increase in the landfill's 2,000 ton-per-day disposal limit, resulting in a shortened landfill life and reduced local benefits, is the County's greatest solid waste concern. Increases in daily disposal may provide additional income in the short-term, but long-term benefits would be reduced, outweighing any short-term benefits.

The existing convenience centers' ability to handle increased customer traffic is another concern since the long-term agreement only covers operations of the existing centers, with future centers funded by the County. Although future usage estimates are undetermined, population increases will increase the centers' operational demand. Conversely, suburban development utilizing commercial door-to-door refuse collection companies may reduce convenience center demand.

Environmental Programs

Stormwater Management

As discussed in the Plan's Natural Resources chapter, Gloucester is not state or federally-regulated as a Municipal Separate Storm Sewer System (MS4) and, therefore, does not have a municipal stormwater program or maintain stormwater infrastructure. The County regulates stormwater runoff through the Chesapeake Bay Preservation Ordinance, Erosion and Sediment Control Ordinance, and Stormwater Management Program. However, recent local growth may result in the U.S. Census Bureau redefining Gloucester as urbanized and subject to increased state and federal stormwater regulations through the Virginia stormwater regulations and the Chesapeake Bay Total Maximum Daily Load (TMDL) mandated by the Environmental Protection Agency (EPA).

Issues

Planning, designing, and installing stormwater infrastructure to meet the program requirements may

increase development costs and future classification as an MS4 would involve state and federal permitting/fees through "Phase II" improvements,¹¹ including:

- Public education and outreach on stormwater impacts
- Public involvement and participation
- Illicit discharge detection and elimination
- Construction site stormwater runoff control
- Post-construction stormwater management for new development and redevelopment
- Pollution prevention/housekeeping for municipal operations

These requirements would result in structural and non-structural investments and Gloucester should continue to monitor this situation.

Public Safety

Gloucester is serviced by numerous law enforcement and fire and rescue squads, as described in the following section.

¹¹ <http://www.deq.virginia.gov/Programs/Water/StormwaterManagement/VSMPPermits/MS4Permits.aspx>

Law Enforcement

Public safety needs are served by the Gloucester County Sheriff’s Office, currently housed in the Law Enforcement Office Addition at the Gloucester County Jail and consisting of five (5) divisions (Law Enforcement, Investigations, Communications, Civil, and Corrections) and eighty-six (86) sworn officers, eleven (11) E-911 dispatchers, and six (6) civilian staff. The Sheriff’s Office coordinates with the Virginia State Police and neighboring locality Sheriff Offices and Police Departments. The Gloucester County Jail is staffed to provide services for 81 inmates with office capacity for 65 individuals and public access for 48 individuals.

County crime statistics are compiled annually by the Virginia State Police with the most serious crimes designated as “Group A” offenses and less serious

crimes designated as “Group B” offenses. There were 1,472 Group A incidents within the County in 2014, the highest among Middle Peninsula localities, with 33% occurring as larceny, 13% as vandalism, 34% as simple assault, and 10% as drug offenses. Figure CF-2 shows the 10-year trends for all crimes and Figure CF-3 shows the 10-year trends for Group A crimes.

Although Gloucester’s crime rate is higher than other Middle Peninsula localities, its population is also greater and increased crime is to be expected. Further urbanization will require expanded and more sophisticated public safety services.

Figure CF-2: Total Crime Incidents in Gloucester County 2004 – 2014

Source: Virginia Department of State Police, 2004-2014

Figure CF-3: 10-year crime trends in Gloucester County (Group A Crimes by % of Total)

Source: Virginia Department of State Police, 2004-2014

Fire Protection and Emergency Services

County fire protection and emergency rescue services are provided by the Gloucester Volunteer Fire and Rescue Squad (GVFRS) and Abingdon Volunteer Fire and Rescue (AVFR). The GVFRS serves the northern two-thirds of the County and has three (3) fire and rescue stations, while AVFR serves the southern third of the County through three (3) fire and rescue stations, as shown on Map CF-1. All County fire and rescue stations have working Mutual Aid agreements with neighboring localities for additional protection and services.

The County belongs to a Regional 800 MHz Emergency Communications System that provides the highest emergency interoperability level with nearby localities, including York County, James City County, Poquoson, and Williamsburg.

As a member of the Hampton Roads Planning District Commission (HRPDC), Gloucester also belongs to the Hampton Roads Tactical Regional Area Network (HRTacRAN), a regional microwave network funded by a Homeland Security grant that provides a survivable phone/data connection between all Emergency Operation Centers (EOC's) in the sixteen (16) member localities.

Regional Emergency Management

Gloucester's Emergency Management community coordinates with other agencies and Middle Peninsula and Hampton Roads localities to maintain communication in times of need.

Issues

As population increases, maintenance of adequate police and fire protection, emergency medical services, and emergency management is necessary. Since existing facilities' proximity to new developments

impact response time during emergency situations and public safety facility development costs grow as response distances increase, police and fire protection should be located near proposed residential, commercial, and industrial developments and within the Development District when possible. If growth outside the Development District occurs, new facilities will need to be considered.

Law Enforcement

International City/County Managers Association studies suggest an average of 2.07 police personnel per thousand residents in jurisdictions of Gloucester's size. Although the current police service level is approximately 2.33 personnel per thousand, this ratio is lower after accounting for Sheriff's staff serving the Courts and performing other administrative duties. Reduced personnel needs resulting from the County's low crime rate and rural nature are offset by the increased response time and distances for rural service delivery. The current service level reflects the importance of monitoring personnel needs and providing personnel as the population increases. By 2030, law enforcement personnel should increase by 26 sworn officers and administrative office and detention facility expansions should occur.

Due to the County Jail's limited capacity, Gloucester rents bed space from the Middle Peninsula Regional Security Center, located in Saluda. A long-term inmate housing solution should be developed, including a Community-Based Corrections Plan, which would estimate the inmate population and needs over the next 18 years.

Fire Prevention and Emergency Medical Service (EMS)

Volunteer fire and rescue services rely upon citizen participation to maintain staffing and service levels and large localities like Gloucester typically contain services near the population centers. Although, these population centers are adequately protected, future needs are difficult to determine.

The National Fire Protection Association (NFPA) recommends fire and rescue stations be located at four (4) mile intervals to provide rapid response and Virginia's Insurance Service Organization (ISO) generates insurance rates based upon residential structures within a five (5) mile radius from a fire station and hydrant service (including dry hydrants), with residences within five (5) miles of a fire station and 600 feet of a hydrant receiving the best rating and reduced insurance premiums. Gloucester's two (2) fire squads have received an improved ISO rating from increased firefighting abilities, updated equipment, and additional training, resulting in lower homeowner insurance premiums throughout the County.

To provide a five (5) to six (6) minute response time, some fire departments plan future stations at a 2.5 mile radius. Most County population centers are within a 2.5 mile service radius, as shown in Map CF-7, which illustrates 2.5 and 5 mile response areas around current station locations. Given sufficient volunteer staff is available, stations should be developed near Owl Trap and White Marsh, areas not currently served within these distances.

Water supply may be a concern in areas not serviced by public water and can be addressed through a water supply plan ensuring that pumper, tanker, and surface water supply is coordinated. Currently, both GVFRS and AVFR operate tankers in rural areas and mutual aid agreements provide adequate water supply within five (5) miles of the stations. However, tanker response times are longer at the County's edges and additional dry hydrants should be planned. There are currently five (5) dry hydrants installed in the County, but other fire suppression systems may be necessary for larger subdivisions not served by public water.

Volunteer recruitment and retention is the greatest fire and rescue concern and staffing the existing six (6) stations full-time while meeting NFPA standards would require increased taxes. With current staffing transitioning to a volunteer-paid staff combination, both departments can continue volunteer fire response service during daytime emergencies. Under this staffing format, the departments maintain a full-time volunteer EMS staff capable of Advanced Life Support (ALS) supplemented by paid staffing when

Map CF-7: Fire and Rescue Service

Data Sources: Gloucester County, Gloucester Volunteer Fire and Rescue Squad, Abingdon Volunteer Fire and Rescue

Providing emergency medical, rescue, and fire response is a critical public service of local government. While Gloucester does not have a municipal fire and rescue department, the County is served by two (2) volunteer fire and rescue organizations, Gloucester Volunteer Fire and Rescue Squad (GVFRS) and Abingdon Volunteer Fire and Rescue (AVFR). The map shows areas that are located within 2.5 miles and 5 miles of the County’s fire and rescue stations. Most of the county is located within five (5) miles of a fire and rescue station, though actual travel distances will vary based upon road and access conditions.

Fire and rescue service is discussed on pages 116-119.

Gloucester Volunteer Fire and Rescue - Source: www.gvfrs.org

Gloucester County is served by two (2) volunteer fire and rescue organizations.

Gloucester Volunteer Fire and Rescue was first established in 1946 and provides fire, rescue, and emergency medical service to the County's central and northern areas. Gloucester Volunteer Fire and Rescue currently operates three (3) stations (Station 1 on Main Street, Station 4 in Harcum, and Station 6 in Sassafraß) that, together, house six (6) engines, one (1) tower, one (1) rescue vehicle, five (5) medic vehicles, two (2) brush trucks, one (1) boat, and one (1) tanker. Station 4 is also home to the Middle Peninsula Regional Fire Training Center.

Abingdon Volunteer Fire and Rescue was first established in 1953 and provides fire, rescue, and emergency medical service to the southern areas of the County. Abingdon Volunteer Fire and Rescue currently operates three (3) stations (Station 2 in Bena, Station 3 in Hayes, and Station 5 in Ordinary) that, together, house four (4) engines, four (4) medic vehicles, two (2) rescue trucks, two (2) brush trucks, two (2) boats, two (2) utility vehicles, one (1) tanker, and an EMS support vehicle.

a full volunteer crew is not available. However, even when a full volunteer staff is available, simultaneous calls stretch the departments' capabilities. Although both departments have accommodated additional calls through volunteer responses and mutual aid, increased call volumes and additional events strain resources.

State fire and EMS requirements for initial and continued training and certification maintenance demands additional volunteer time. Though both GVFRS and AVFR maintain recruitment programs to attract new members, retaining existing members after completing basic training presents a greater issue since younger members (particularly EMS members) resign as duty and training requirements conflict with everyday life. As the national average EMS retention time is three (3) years, the first year to year-and-a-half is primarily spent in training, providing a response life of one (1) to two (2) years. Similarly, the national average fire fighter retention time is five (5) years with the first year spent in training. Therefore, joint members trained in both fire and EMS response provide the most valuable service, but initial training requires significant time dedication. Volunteer recruitment and retention is a common issue for both volunteer and combination departments (over 75% of nationwide departments) that must manage growing response and training demands with minimal or no budget increases.

CHAPTER 6 - COMMUNITY FACILITIES AND SERVICES

Goal CF-1: Review and prioritize capital improvements and public facilities to meet existing and future level of service needs for the County.		
Objectives	Implementation Strategies	Time Frame
Develop and adopt a plan to anticipate and address the long-term public facility needs to serve Gloucester residents based on the Comprehensive Plan, School Board Comprehensive Plan, and other plans and policies.	Regularly review and update the Capital Improvements Plan to address capital needs and upgrades.	Ongoing
	Consider capital investments and upgrades to cover replacement costs based upon facility life cycles.	Ongoing
	Develop a funding source for routine capital repair items.	Short Term
	Initiate funding requests through the County Capital Improvements Program.	Short Term
The County should assess and budget for capital improvements to provide residents and visitors with adequate facilities.	Develop and update County facilities serving residents as necessary.	Ongoing
	Modernize and upgrade school facilities to sufficiently serve existing and future student needs.	Ongoing
	Continue to evaluate facility needs through School Board and Board of Supervisors collaboration.	Short Term
	Improve County maintenance facilities to ensure a continued level of service.	Short Term
	Develop plans to address specific public needs and issues, such as public access, utility expansion, and inmate housing, among others.	Long Term
Provide facilities that fulfill state and federal requirements and meet industry-accepted standards.	Ensure that community facilities are built or upgraded to meet state and federal regulations.	Ongoing
	Expand local parks, recreation, library, and other services to meet accepted standards based upon industry guidelines.	Long Term
Coordinate non-profit services and private development to ensure that planning efforts and community services are met.	Support non-profit and private groups that perform community services to leverage state and federal funding to meet residents' needs.	Ongoing
	Ensure that private development is consistent with local plans and planning efforts.	Ongoing
	Establish a fee in lieu service to provide a funding source to develop infrastructure and facilities necessary to serve future development.	Short Term

CHAPTER 7

Natural Resources

Gloucester’s various woodlands, rivers, creeks, and wetlands, along with its abundant farm land, have provided residents with a livelihood and high quality of life for over 350 years.

Watermen benefit from the extensive shoreline and proximity to the Chesapeake Bay, farmers profit from fertile soils, and residents live near waterways, forests, rural landscapes, and waterfront vistas. Preserving these resources is a local priority and a future development consideration. Population growth and land development that do not consider these resources may have the following impacts:

- Plant and wildlife habitat loss
- Groundwater contamination
- Saltwater intrusion
- Surface water quality degradation
- Limited groundwater recharge and availability
- Natural drainage system disruption
- Air pollution
- Increased solid waste
- Visual quality loss

Detrimental development patterns can be identified and mitigated by encouraging growth in appropriate areas and ensuring that new development is designed and constructed with respect to existing resources. Areas of the County more susceptible to environmental degradation should be identified for limited development with more intense development guided towards regions with less severe potential for impacts. The County’s Development District along with local ordinances, such as the Zoning, Erosion and Sediment Control, Chesapeake Bay Preservation, and Storm Water Ordinances, and state and federal regulations, establish the framework to encourage future growth in a responsible manner.

Legal Framework

State Code requires that Comprehensive Plans address specific environmental issues and recommends designating areas for agricultural uses, mineral resources, floodplains, and groundwater protection

measures.¹ Plans must also include data on various conditions, including land use, agricultural and forested land preservation, natural resources, ground and surface waters, geologic and environmental factors, drainage, and flood control.

The Chesapeake Bay Preservation Act and related regulations address environmental concerns regarding state waterway quality, which should be incorporated into local Plans and Zoning, Subdivision Ordinances and other ordinances.² This Act includes Chesapeake Bay Preservation Area Designation and Management Regulations that specify local program elements, including:³

1. A map delineating Chesapeake Bay Preservation Areas (CBPA's)
2. Performance criteria for developments within CBPA's
3. A Comprehensive Plan incorporating water quality preservation for state waters adjacent to CBPA's
4. Zoning, Subdivision, Erosion and Sediment Control (E&S), and other Ordinances (or revisions to the E&S Ordinance) that incorporate measures consistent with state regulations
5. A building permitting process assuring development within CBPA's comply with local and state requirements

Comprehensive Plans also are required to contain data and analysis, policy discussions, maps, and state and local implementation measures to meet water quality goals, with specific topics including the CBPA location and extent, development constraints, fisheries and other aquatic resources, shoreline and streambank erosion issues, land use, existing and potential water pollution sources, public and private waterfront access, water quality mitigation measures for development impacts, and practices to improve water quality during redevelopment.

In 2011, the General Assembly passed legislation establishing "living shorelines" as Virginia's preferred shoreline management alternative for erosion control

and water quality protection. This action required the Virginia Marine Resources Commission (VMRC) to develop and implement a general permit authorizing and encouraging living shoreline use as the preferred alternative for stabilizing Virginia's tidal shorelines and instructed the Virginia Institute of Marine Science (VIMS) to establish local comprehensive coastal resource management guidance (completed in 2013),⁴ with Comprehensive Plans (and subsequent updates) featuring these guiding principles.⁵ Guidance for Gloucester County has been generated and is available through VIMS's Comprehensive Coastal Resource Management Portal.⁶

Existing Conditions and Trends

Location

Annual weather conditions are influenced by Gloucester's proximity to the Chesapeake Bay and Atlantic Ocean, which produce mild winters and warm, humid summers. National Weather Service (NWS) data indicates that the average annual local temperature is between 57°F and 59°F, with January featuring the coldest temperatures and July having the warmest, and average annual rainfall totaling 45 inches equally distributed throughout the year.

The National Climatic Data Center (NCDC) reports that frequent weather events include thunderstorms, severe lightning, high winds, and flash flooding and severe weather occurring as northeasters, tropical storms, and hurricanes that producing heavy rain, high winds, and tidal flooding. Hurricane Isabel (September 18, 2003) and an April 2011 tornado have been the most significant recent weather events, with flooding from Hurricane Isabel's storm surge uprooting trees and causing extensive property damage. The April 2011 tornado also damaged homes and other facilities, including Page Middle School, resulting in three (3) fatalities. Other storms, such

as the November 2009 Nor'easter have also produced local flooding.

Soils

A Countywide soil survey, available through the Natural Resources Conservation Service (NRCS), a division of the U.S. Department of Agriculture,⁷ identifies that local soils are formed from sediments such as sand, gravel, and silt, at varying degrees throughout Gloucester. The NRCS classifies soils taxonomy through six (6) levels: orders, suborders, great groups, subgroups, families, and series, with the County's soil types falling under five (5) soil orders: histosols, ultisols, alfisols, inceptisols, and entisols. Histosols, composed of decomposed organic matter, are often found in wetlands or bogs. Ultisols and Alfisols are forest soils that can support agriculture, with Ultisols having a low mineral content and Alfisols consisting of a high mineral content. Inceptisols are

⁷ This data can be viewed online through the NRCS Web Soil Survey Tool at <http://websoilsurvey.nrcs.usda.gov/app/HomePage.htm>

relatively undeveloped soils and Entisols are the most undeveloped, containing unconsolidated material.⁸ Specific soil types cataloged by the NRCS are described in Table NR-1 and shown on Map NR-1.

Soils suitability is evaluated for agricultural uses and conventional septic systems, with deep, well-drained, permeable soils commonly found west of Route 3/14 and U.S. 17 (south of the Court House), where most agricultural and forested lands are located. East of Route 3/14 and U.S. 17 (south of the Court House), the County contains lower elevations and soils with drainage issues due to their high clay content, restricting water filtration and limiting other uses. Soils suitable for agriculture, as shown on Map NR-2, are also typically compatible for conventional septic systems and highly permeable soils, unsuitable for conventional septic drainfields, are shown on Map NR-3. These classifications help identify areas that present favorable development conditions.

As shown in Map NR-4, most soils in the County's southeastern region are classified as hydric, where

⁸ <http://soils.cals.uidaho.edu/soilorders/index.htm>

Table NR-1: Soil Types

Soil Name	Order	Description
Alaga	Entisols	The Alaga series consists of very deep, excessively drained, rapidly permeable soils on the Coastal Plain's uplands, non-flooding streams, and marine terraces. These soils consist of loamy sand and formed in sandy marine or fluvial sediments.
Caroline	Ultisols	The Caroline series consists of very deep, well drained soils with moderately slow or slow permeability on the Coastal Plain's marine terraces. These soils contain loam, clay, and sandy clay loam and formed in clayey, fluvial, and marine sediments.
Craven	Ultisols	The Craven series consists of very deep, moderately well drained soils with slow permeability found on the Coastal Plain's marine terraces and uplands. These soils contain silt loam, clay, and sandy clay loam and formed in marine deposits.
Dogue	Ultisols	The Dogue series consists of very deep, moderately well drained soils with moderately slow permeability found on the Coastal Plain's stream terraces. These soils contain fine sandy loam, clay loam, and sandy loam and formed from marine deposits.
Emporia	Ultisols	The Emporia series consists of very deep, well drained soils with moderately slow to slow permeability found on the Coastal Plain's marine terraces and uplands. These soils contain sandy loam, clay loam, and sandy clay loam and formed from marine deposits.
Eunola	Ultisols	The Eunola series consists of very deep, moderately well drained soils with moderate permeability found on the Coastal Plain's low streams and marine terraces. These soils contain fine sandy loam and sandy clay loam and formed in fluvial or marine sediments.
Fluvaquents	Entisols	The Fluvaquents series consists of very deep, poorly drained soils with moderate permeability found on the Coastal Plain's floodplains. These soils contain loam, sandy clay loam, and gravelly sand and formed from alluvium.
Fluvaquents, Saline	Entisols	The Saline Fluvaquents series consists of very deep, poorly drained soils with moderate permeability found on the Coastal Plain's floodplains. These soils contain very fine and fine sandy loam and formed from alluvium.
Hapludults	Ultisols	The Hapludults series consists of very deep, moderately well drained soils with moderately slow permeability found on the Coastal Plain's marine terraces. These soils contain fine sandy loam and sandy loam and formed from marine deposits.
Haplaquepts	Inceptisols	The Haplaquepts series consists of very deep, somewhat poorly drained soils with moderately rapid permeability found on the Coastal Plain's flats. These soils contain loam, sandy loam, and loamy sand and formed from marine deposits.
Johns	Ultisols	The Johns series consists of very deep, moderately well drained soils with moderate permeability found on the Middle or Upper Coastal Plain's stream terraces and river valleys. These soils contain sandy loam, sandy clay loam, and loamy sand and formed from alluvium or fluviomarine deposits.
Kalmia	Ultisols	The Kalmia series consists of very deep, well drained soils with moderate permeability found on the Coastal Plain's stream terraces and river valleys. These soils contain sandy loam, sandy clay loam, and loamy sand and formed from marine deposits.
Kempsville	Ultisols	The Kempsville series consists of very deep, well drained soils with moderate permeability found on the upper Coastal Plain. These soils contain fine sandy loam, sandy clay loam, and stratified sandy loam and formed in loamy sediments.
Kenansville	Ultisols	The Kenansville series consists of very deep, well drained soils with moderately rapid permeability found on the Coastal Plain's uplands and stream terraces. These soils contain loamy fine sand, sandy loam, and loamy sand and formed in marine and fluvial sediments.

Source: Natural Resources Conservation Service, U.S Department of Agriculture

Table NR-1: Soil Types (Continued)

Soil Name	Order	Description
Lumbee	Ultisols	The Lumbee series consists of very deep, poorly drained soils with moderate permeability found on the Coastal Plain's stream terraces, flats, and river valleys. These soils contain sandy loam, sandy clay loam, and sand and formed from marine deposits.
Meggett	Alfisols	The Meggett series consists of very deep, poorly drained soils with slow permeability found on the Coastal Plain's marine terraces. These soils contain sandy loam, sandy clay, and very gravelly sandy loam and formed from marine deposits.
Ochlockonee	Entisols	The Ochlockonee series consists of very deep, well drained soils with moderately rapid permeability found on the Coastal Plain. These soils contain sandy loam, stratified loamy sand, and stratified sandy clay loam and formed from marine deposits.
Ochraquults	Ultisols	The Ochraquults series consists of very deep, poorly drained soils with moderate permeability found on the Coastal Plain's flats. These soils contain fine sandy loam and loam and formed from marine deposits.
Okeetee	Alfisols	The Okeetee series consists of very deep, somewhat poorly drained soils with very slow to slow permeability found on the Coastal Plain's marine terraces, stream terraces, and river valleys. These soils consist of sandy loam and sandy clay and formed from marine deposits.
Osier	Entisols	The Osier series consists of very deep, poorly drained soils with rapid permeability found on the Coastal Plain's floodplains and low stream terraces. These soils contain loamy fine sand and formed from marine deposits.
Pactolus	Entisols	The Pactolus series consists of very deep, moderately well drained soils with rapid permeability found on the Coastal Plain's marine terraces. These soils contain loamy sand and formed from marine deposits.
Pamlico	Histosols	The Pamlico series consists of very deep, very poorly drained soils with moderate to moderately rapid permeability found on the Coastal Plain's depressions. These soils contain muck and sand and formed from organic material.
Portsmouth	Ultisols	The Portsmouth series consists of very deep, very poorly drained soils with moderate permeability found on the Coastal Plain's depressions. These soils contain loam, silt loam, and stratified loamy sand and formed from marine deposits.
Psammets	Entisols	The Psammets series consists of very deep, moderately well drained soils with rapid permeability found on the Coastal Plain's marine terraces. These soils contain fine sand and sand and formed from marine deposits.
Rumford	Ultisols	The Rumford series consists of very deep, well drained soils with moderately rapid permeability found on the Coastal Plain's marine terraces. These soils contain loamy fine sand, fine sandy loam, and stratified fine sand and formed from marine deposits.
Suffolk	Ultisols	The Suffolk series consists of very deep, well drained soils with moderate permeability found on the Coastal Plain's marine terraces. These soils contain fine sandy loam, sandy clay loam, and loamy sand and formed from marine deposits.
Sulfaquents	Entisols	The Sulfaquents series consists of very deep, very poorly drained soils with very slow to slow permeability found on the Coastal Plain's salt marshes. These soils contain mucky silty clay loam and mucky silty clay.
Wrightsboro	Ultisols	The Wrightsboro series consists of very deep, moderately well drained soils with moderate permeability found on the Coastal Plain's stream terraces. These soils contain fine sandy loam and sandy clay loam and formed from marine deposits.

Source: Natural Resources Conservation Service, U.S Department of Agriculture

Map NR-1: Soil Types

Data Source: Natural Resource Conservation Service Soil Survey for Gloucester County, Virginia

The Natural Resources Conservation Service (NRCS) evaluates and classifies soils for common uses (agriculture, development, etc.). Areas are assessed based upon their soil composition, such as clay, silt, sand, and parent materials (marine deposits), and location, including uplands, floodplains, or marine terraces. Soil slopes, bedrock depths to bedrock or other restrictive features, drainage capacity, permeability, and water table depth are other documented properties. Soil characteristics determine the area's utility (appropriateness), for agriculture, sanitary facilities, construction, recreation, and other uses. Gloucester contains many different soil types, with most formed from marine deposits. Soil types are discussed on pages 123-127.

inundation occurs for periods of time, creating anaerobic conditions. Additionally, hydric soils are found along some County streams, rivers, and wetlands, which have high water tables, poor drainage, and are typically subject to flooding and unsuitable for development or traditional septic systems.

Residential and commercial development in southeastern Gloucester, where soils present unfavorable conditions, generally occurred prior to current state and local environmental and land use ordinance establishment and future incompatible development may present wastewater and groundwater quality issues, discussed in greater detail later in this chapter. Previous Comprehensive Plans outlined the general characteristics of the Bayside and Resource Conservation Districts (as identified in the Plan's Future Land Use chapter), which containing large areas with soils unsuitable for traditional septic system use and unfavorable conditions for high density or commercial development.

Slopes

Although development is not encouraged where slopes exceed 15%, Gloucester does not prohibit building on steep slopes. As the County is relatively flat, most

steep slopes are located along streams and other water bodies, as shown on Map NR-5.

Prime Farmland

Agriculture is an important local historic and economic component and identifying prime farmland assists in preserving areas for agricultural uses. The County contains over 53,000 acres of prime farmland, roughly 7,500 acres of farmland of statewide importance, and more than 22,000 acres of land considered prime farmland if properly drained,⁹ with farmland classified based upon its potential agricultural productivity. Prime farmland, defined by the NRCS and shown on Map NR-2, is the best agricultural land due to climate, location, physical and chemical properties, available water supply, permeability, and erosion potential. Farmland of statewide importance, a state standard, is not considered prime farmland but still suitable for agriculture or land and requires additional treatment to produce high yields. Prime soils for agriculture and forestry should be considered in future land use planning.

⁹ Soil Survey for Gloucester County, Virginia. Natural Resource Conservation Service. 2013.

Farm located on Fletcher Road - Source: Gloucester Planning and Zoning

Map NR-2: Prime Farmland

Data Source: Natural Resource Conservation Service Soil Survey for Gloucester County, Virginia

The Natural Resources Conservation Service (NRCS) identifies appropriate farming lands through its soil surveys. The NRCS classifies farmland based on its potential agricultural productivity:

- **Prime farmland** is excellent for agricultural use due to climate, location, physical and chemical properties, available water supply, permeability, and erosion potential.
- **Farmland of statewide importance** is acceptable for agricultural uses, but may require additional treatment for high agricultural yields. Farmland of statewide importance criteria is established by each state, while prime farmland meets national standards.

Gloucester contains over 53,000 acres of prime farmland, more than 22,000 acres of land considered prime farmland if properly drained, and roughly 7,500 acres of farmland of statewide importance. Much of the County's prime farmland is in areas that have been developed for another use.

Prime farmland is discussed in greater detail on page 127.

Map NR-3: Permeable Soils

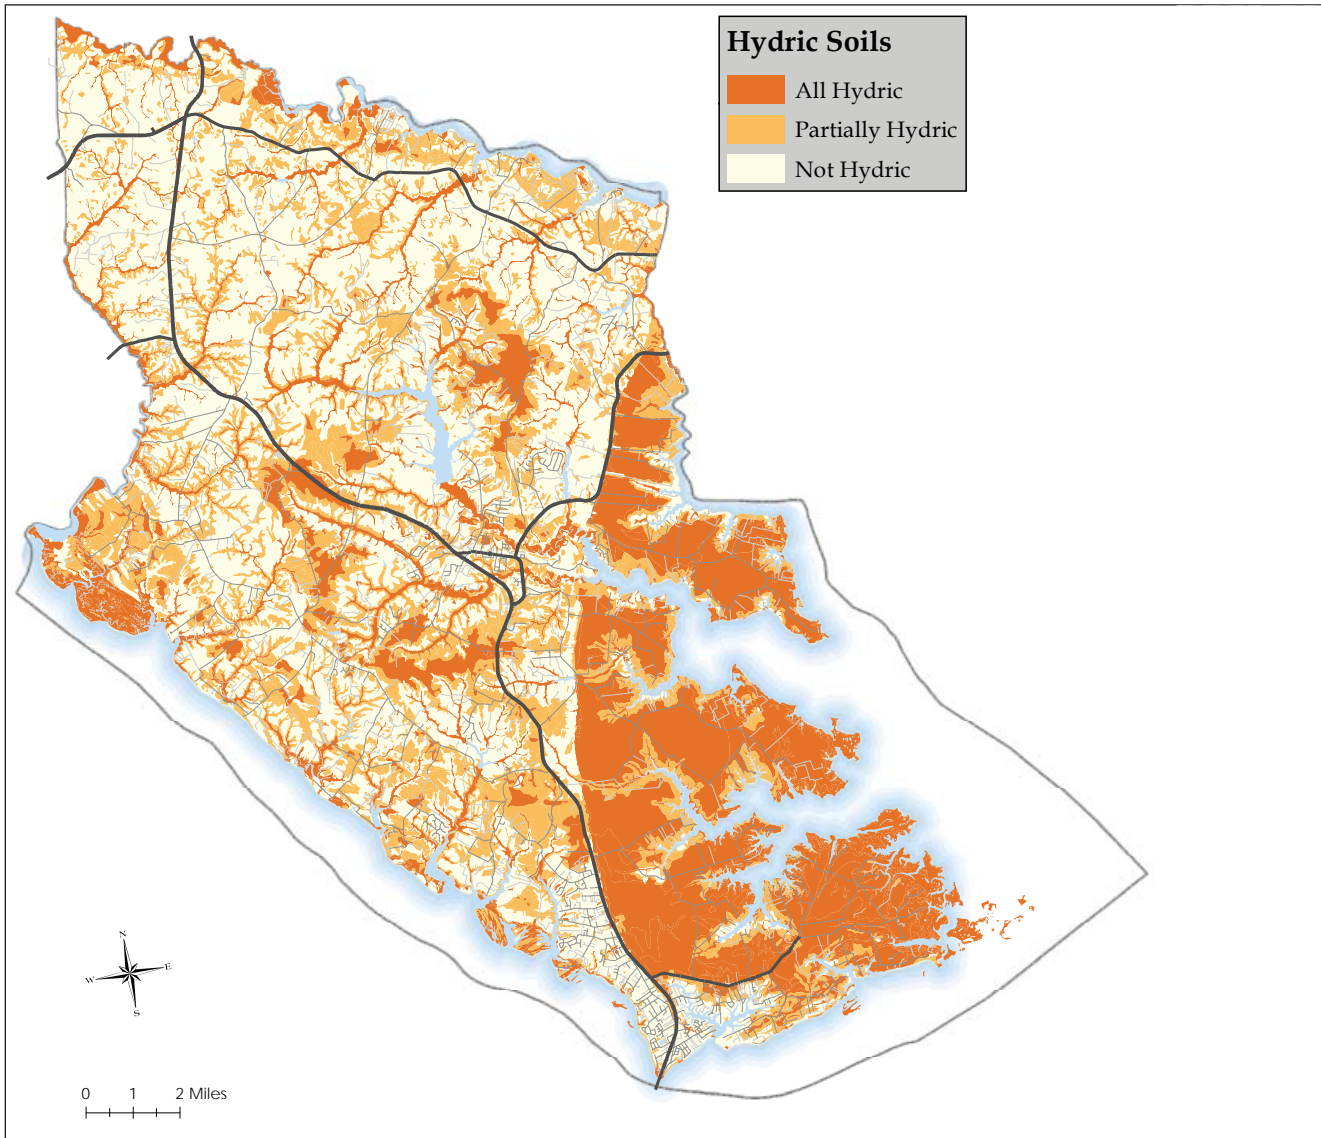

Data Source: Natural Resource Conservation Service Soil Survey for Gloucester County, Virginia

The Natural Resources Conservation Service (NRCS) classifies soils by their saturated hydraulic conductivity or ability to transmit air or water (permeability). Hydraulic conductivity evaluates the rate which water moves through soil, measured in micrometers per second. Highly permeable soils are appropriate and useful for low impact development (LID) stormwater management practices since they allow runoff to infiltrate into the ground and can serve as a buffer between waterways and development, but construction may require alternative septic systems. Soil permeability is a consideration for determining hydric soils and prime farmland.

- **Moderate permeable soils** have a saturated hydraulic conductivity rate of 4 - 14 micrometers/second (0.6-2.0 inches/hour).
- **Moderately rapid permeable soils** have a saturated hydraulic conductivity rate of 14 - 42 micrometers/second (2.0-6.0 inches/hour).
- **Rapidly permeable soils** have a saturated hydraulic conductivity rate of 42 - 141 micrometers/second (6.0-20.0 inches/hour).

Soil permeability is discussed on pages 123-127.

Map NR-4: Hydric Soils

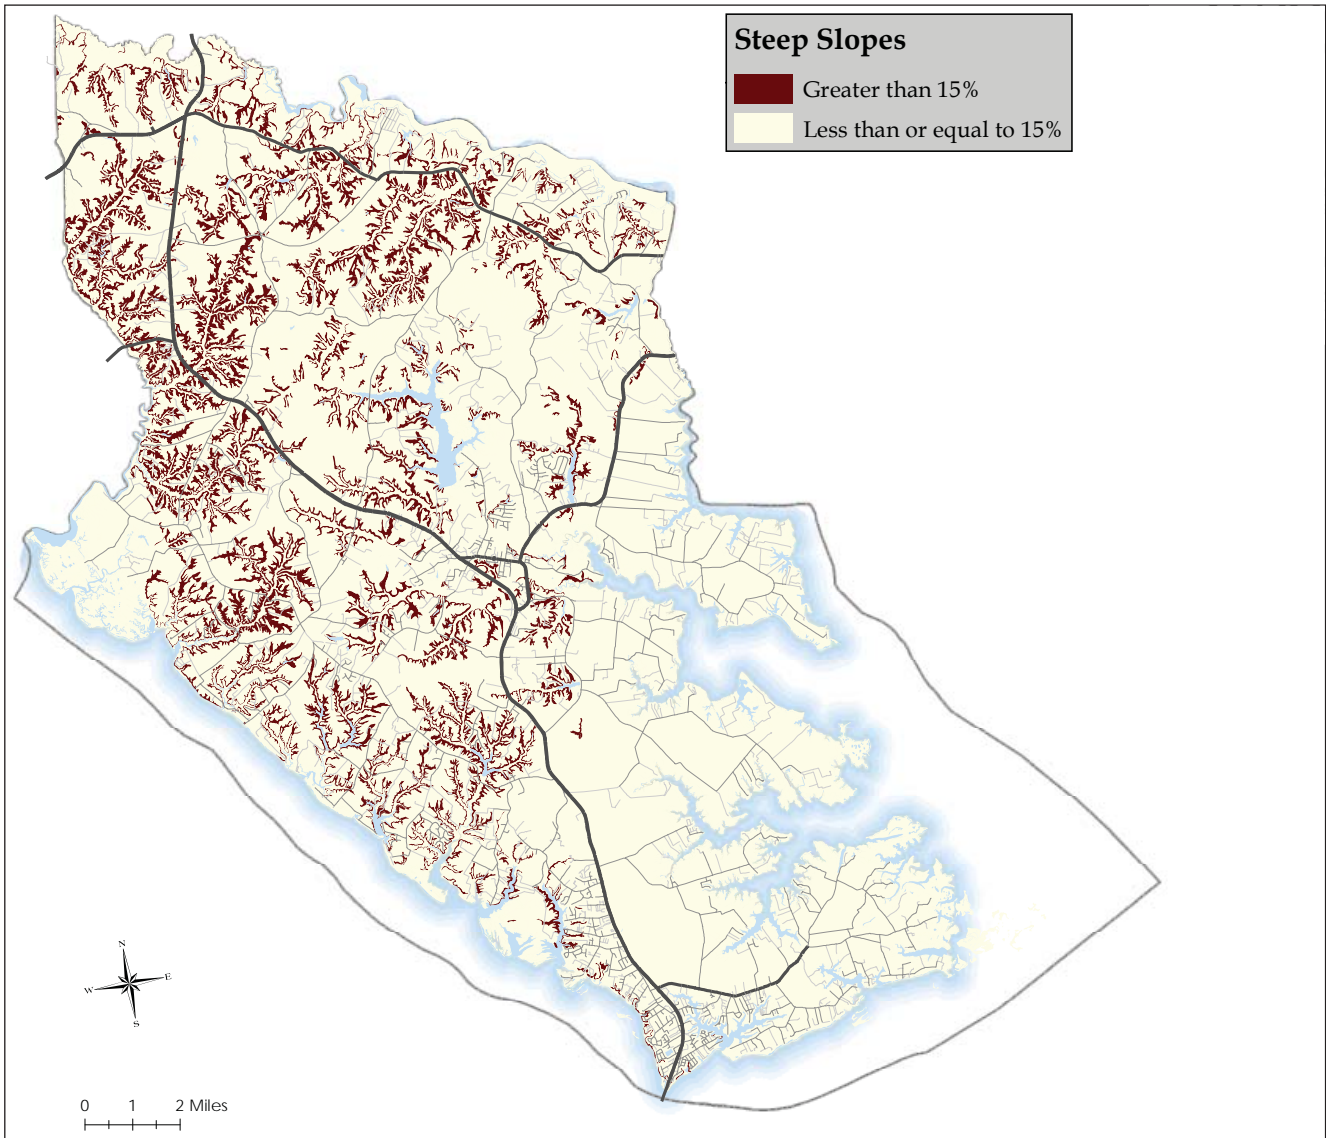

Data Source: Natural Resource Conservation Service Soil Survey for Gloucester County, Virginia

The Natural Resources Conservation Service (NRCS) identifies hydric soils through its soil surveys, characterizing map units by soil type. According to the NRCS, hydric soils form under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part. These soils are typically saturated long enough for hydrophytic vegetation to grow and reproduce. County soils are characterized as all hydric, partially hydric, or not hydric.

- **All hydric** regions have only hydric soil components or types within the area.
- **Partially hydric** regions have at least one hydric and one non-hydric soil component.
- **Not hydric** regions have only non-hydric soil components.

Hydric soils are indicators of potential wetlands and may limit development and conventional septic system installation. Hydric soils are discussed on pages 123-127.

Map NR-5: Steep Slopes

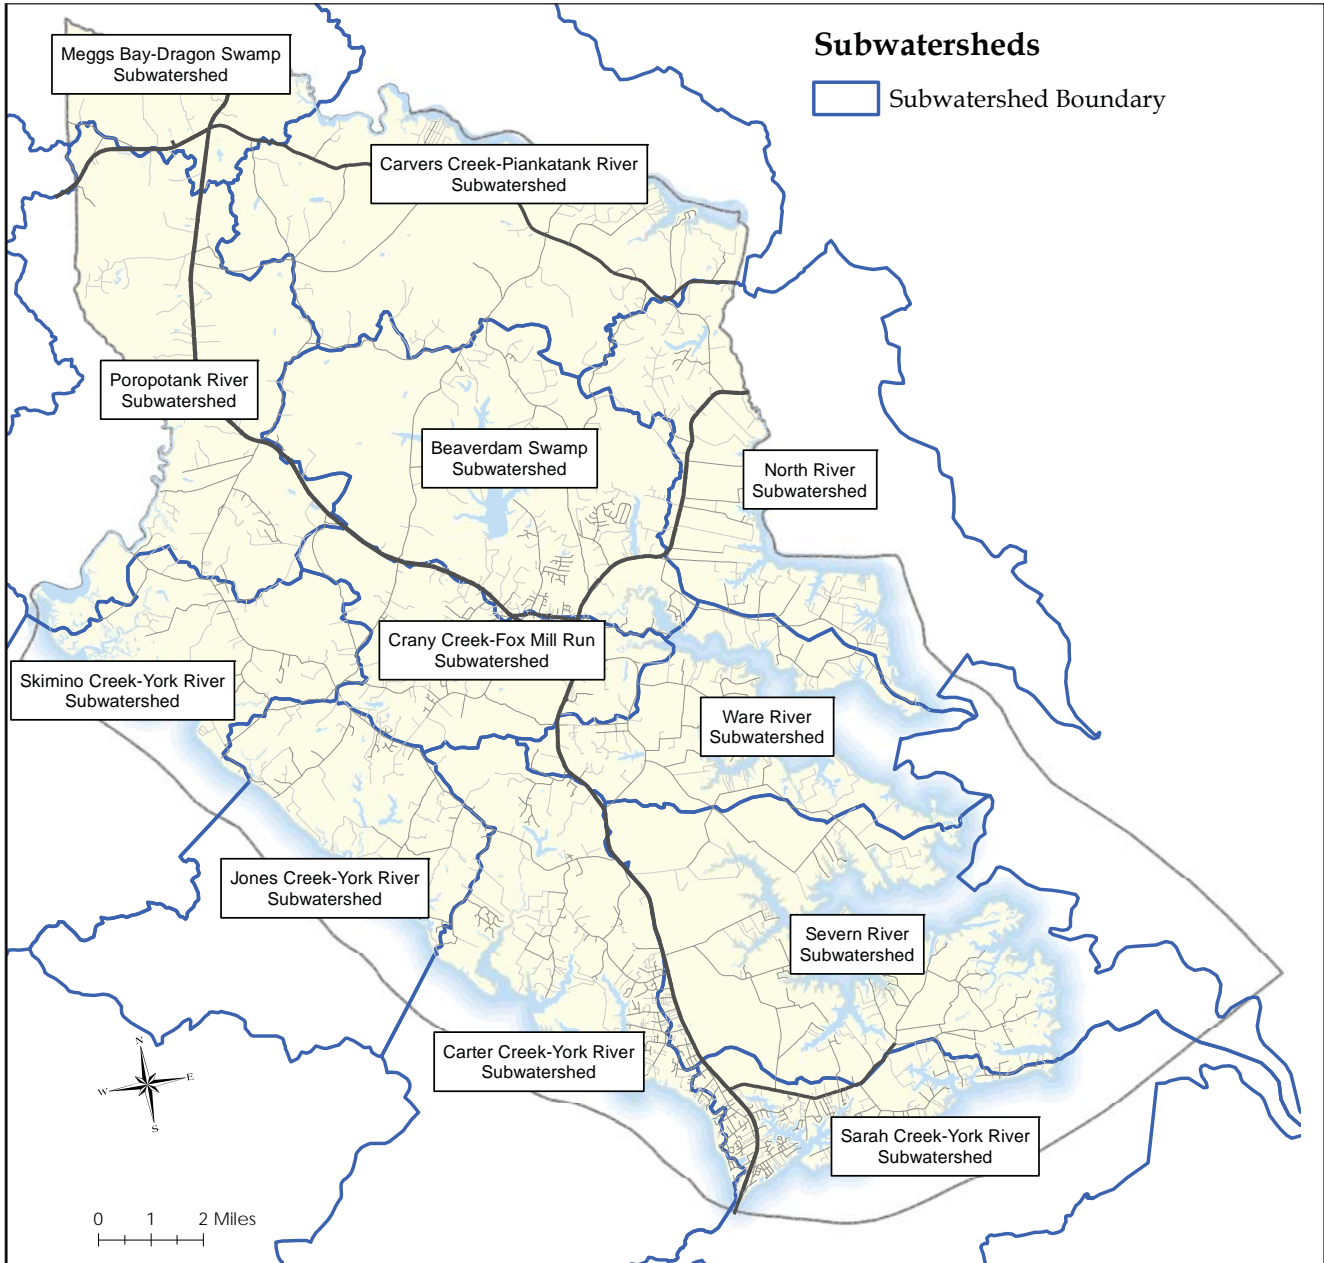

Data Source: Natural Resource Conservation Service Soil Survey for Gloucester County, Virginia

The Natural Resources Conservation Service (NRCS) also characterizes soil type by slope. Each soil type (component) has an associated slope range, described by low, representative, and high values. Representative slopes are the “expected” value for a given soil type. Generally, slopes over 15% may present development challenges.

Slope is discussed on page 127.

Map NR-6: Subwatersheds

Data Source: US Geological Survey

A watershed is an area of land where all water, sediments, nutrients, and other dissolved materials drain into a common outlet. As there are many watershed sizes, the U.S. Geological Survey (USGS) classifies them by six (6) hydrological unit levels, ranging from large regions to much smaller subwatersheds. Watershed health may impact water quality, erosion and flood control, and environmental quality.

Watersheds are discussed on page 133.

Watersheds and Drainage

Watersheds are areas where all water, sediments, nutrients, and other dissolved materials drain into a common outlet. When precipitation occurs, water runs

Regions, the largest watershed unit, average 177,560 square miles. The United States (including Alaska, Hawaii, and U.S. possessions or interests in the Caribbean Sea) has 21 Regions, with Gloucester lying in the Mid-Atlantic Region.

Sub-regions, the second-largest watershed unit, average 16,800 square miles. The U.S. has 222 Sub-regions, with the County lying in the Lower Chesapeake Subregion.

Basins, the third-largest watershed unit, average 10,596 square miles. The U.S. has 352 Basins, with Gloucester lying in the Lower Chesapeake Basin.

Sub-basins, the third-smallest watershed unit, average 703 square miles. The U.S. has 2,149 Sub-Basins, with the County containing the Great Wicomico-Piankatank, Lower Chesapeake Bay, and York Sub-Basins.

Watersheds, the second-smallest watershed unit, range from 40,000 to 250,000 acres. The U.S. has approximately 22,000 Watersheds, with Gloucester containing the Dragon Swamp, Lower York River, Mobjack Bay-Lower Chesapeake Bay, Piankatank River-Lower Chesapeake Bay, and Upper York River Watersheds.

Subwatersheds, the smallest watershed unit, range from 10,000 to 40,000 acres. The U.S. has approximately 160,000 Subwatersheds, with the County containing the Beaverdam Swamp, Carter Creek-York River, Carvers Creek-Piankatank River, Crany Creek-Fox Mill Run, Jones Creek-York River, Meggs Bay-Dragon Swamp, North River, Poropotank River, Sarah Creek-York River, Severn River, Skimino Creek-York River, and Ware River Subwatersheds.

to the lowest point, typically a stream, river, or lake, and, eventually, to the ocean. The County lies entirely within the Chesapeake Bay Watershed, which includes parts of six (6) states (Delaware, Maryland, New York, Pennsylvania, Virginia, and West Virginia) as well as the District of Columbia. This watershed eventually drains to major rivers and significant development impacts can affect regional water quality.

Effective flood control, fresh water protection, water quality preservation, and erosion and sedimentation control are important throughout the watershed. Local runoff drains to the York, Piankatank, North, Ware, and Severn rivers and their tributaries, as identified in Table NR-2. The County's subwatersheds (Hydrologic Unit Code 12), as cataloged by the United States Geological Survey (USGS), are shown on Map NR-6.

Sources of Potable Water and Water Use

Current water use is a product of local geography, water needs, transportation demands, social and economic forces, and development patterns. Water resources and the natural environment adjacent to these resources are important components of the community's physical and economic health and can be impacted by development.

Gloucester began providing public water service from the Beaverdam Reservoir, located north of Gloucester Court House and surrounded by low density zoning with two (2) to five (5) acre minimum lot sizes, and associated water treatment plant in July 1990. Beaverdam Park consists of a buffer surrounding the reservoir and hosts various recreational activities, such as fishing, boating, nature study, picnics, hiking, bicycling, and horseback riding with reservoir algae counts monitored weekly. A survey is conducted every three (3) years to evaluate development around the reservoir and the existing buffer and neighboring low density zoning are the primary water quality preservation measures. If deemed necessary, the County may consider other strategies should water quality be threatened. In addition to the reservoir,

CHAPTER 7 - NATURAL RESOURCES

Gloucester also has two (2) deep wells supplying water from underground aquifers. Further water supply details can be found in the Plan's Community Facilities chapter.

Regional Water Supply Planning

In 2007, six (6) counties, ten (10) cities, eight (8) towns, and the Hampton Roads Planning District Commission (HRPDC) signed a Memorandum of Agreement to

develop the Hampton Roads Regional Water Supply Plan, which was accepted by the HRPDC, authorized for distribution for local adoption in July 2011, and adopted by the County's Board of Supervisors in August 2011. The regional plan assists local efforts to meet state water supply planning requirements aiming to ensure that adequate and safe drinking water is available, encourage, promote, and protect other beneficial water resource uses, and encourage, promote, and develop alternative water source incentives. The regional plan addresses the existing water supply,

Table NR-2: Gloucester County Streams

Stream Name	Drainage Area (Sq. Miles)	Length (Miles)	Elevation at Source (Feet)	Elevation at Mouth (Feet)	Mouth in County

projects future water needs and alternatives, and provides water demand management information and drought response plans. All participating localities have adopted this plan and a copy has been submitted to the Department of Environmental Quality (DEQ).

Groundwater Framework

The County is located within the Virginia Coastal Plain Physiographic Province, which extends from the Fall Line (west of Gloucester) to the Atlantic Ocean and ranges as far north as the Maryland border and as far south as the North Carolina border. The Virginia Coastal Plain's surface consists of multiple broad, gently sloping, highly dissected, north-south trending terraces bounded by seaward facing, ocean cut escarpments. The Plain's subsurface is characterized by wedge-shaped, unconsolidated sedimentary deposits sloping and thickening towards the east at depths of 0 feet at the western edge to over 6,000 feet along the Atlantic coast.¹⁰ These deposits contain clay, silt, sand, gravel, and some shell material overlaying a

bedrock basement of igneous and metamorphic rocks sloping gently to the east.

Many depositional environments existed during the Virginia Coastal Plain's deposit formation. The stratigraphic section (vertical profile) generally consists of a thick sequence of non-marine (riverine and alluvial) sedimentary deposits overlaid by a thinner sequence of marine (near shore beach, estuarine, and delta) sedimentary deposits. Beneath Gloucester, there also exists breccia type sedimentary deposits resulting from the Chesapeake Bay Impact Crater, as shown on Map NR-7.

The Virginia Coastal Plain's groundwater flow system contains multiple aquifers, with the most recent hydrogeologic study completed in 2006,¹¹ revealing eight (8) water-bearing hydrogeologic units (aquifers) and eleven (11) less permeable units that restrict groundwater flow (confining zones and units). The aquifers and confining units are stacked on top of each other, often alternating, causing eastwardly lateral aquifer flow toward large withdrawal discharge areas near large rivers and the Atlantic Coast. However, the

¹⁰ The Virginia Coastal Plain Hydrogeologic Framework

¹¹ The Virginia Coastal Plain Hydrogeologic Framework

Map NR-7: Chesapeake Bay Impact Crater

Data Source: U.S. Geological Survey

The Chesapeake Bay Impact Crater formed over 35 million years ago by an asteroid or comet collision near the mouth of the Chesapeake Bay, creating a depression over 50 miles in diameter. The crater influences the region's hydrology, groundwater, deepwater aquifers, and vulnerability to potential subsidence and sea level rise.

The Chesapeake Bay Impact Crater is discussed on pages 135-136.

Figure NR-1: Hydrogeology of the Coastal Plain of Virginia

Source: *The Virginia Coastal Plain Hydrologic Framework*

flow pattern is disrupted by the Chesapeake Bay Impact Crater, formed by an asteroid or comet collision with the Chesapeake Bay over 35 million years ago, creating a crater over 50 miles in diameter and destroying the deepest aquifers. As a result, various materials rushed into the crater, producing a layer of sediments (breccia) differing from the non-marine sediments present before the impact.

As illustrated in Figure NR-1, the groundwater system beneath Gloucester contains five (5) aquifers and five (5) confining units. The Columbia Aquifer, also called the Surficial Aquifer, is the water table aquifer throughout most of Gloucester. In some areas, the Columbia Aquifer and underlying confining unit have been split by the Bay, with the Yorktown-Eastover Aquifer as the water table aquifer, whereas in other areas of the County, the Yorktown-Eastover Aquifer is a confined aquifer covered by the Yorktown-Eastover Confining Unit. The Piney Point, Aquia, and Potomac Aquifers are deeper confined aquifers separated from other aquifers lying above and below them by confining

beds. The northwest portion of the Chesapeake Bay Impact Crater covers southern Gloucester where the Aquia and Potomac Aquifers previously existed prior to the crater impact and have been replaced by breccia sedimentation with low conductivity and stagnant saltwater in its pores, causing regional groundwater to diverge and flow around the crater rim. The Piney Point Aquifer, created after the crater impact, is located throughout the County. These aquifers are further described below from youngest (top) to oldest (bottom).

Columbia Aquifer

The Columbia Aquifer, the uppermost aquifer, is unconfined throughout its extent and consists of sand and gravel. This aquifer is primarily used for domestic water supplies (drinking water and irrigation) and has historically been an important water source due to its shallow, easily accessible nature. However, it is

susceptible to drought and contamination, making it less reliable than confined aquifers. In favorable conditions, wells may yield ten (10) gallons per minute or greater.¹²

Yorktown-Eastover Aquifer

The Yorktown-Eastover Aquifer, separated from the Columbia Aquifer by the Yorktown Confining Zone, consists of sand and interbedded silt. The confining zone leaks more than a confining unit and, in some areas, the Yorktown Confining Zone may function as an aquifer. In cross section, the Yorktown-Eastover Aquifer is wedge-shaped, sloping and thickening eastwardly, and in Gloucester, the top of the aquifer is between 50 and 75 feet below the ground surface. Numerous wells withdraw water from this aquifer, yielding high-quality water and commonly producing ten (10) to thirty (30) gallons per minute.¹³

Piney Point Aquifer

The Piney Point Aquifer is a homogenous, sandy aquifer extending over the entire County into the impact crater. In Gloucester, the top of this aquifer is between 250 and 400 feet below ground level and wells commonly yield ten (10) to fifty (50) gallons per minute.¹⁴ The Piney Point Aquifer includes two (2) formations, an upper formation rarely used for water supply due to low yields and the prevalence of hydrogen sulfide, and a lower formation that yields water supply. Where this aquifer extends into the crater, sediments containing brackish water do not produce acceptable water supply.

Aquia Aquifer

The Aquia Aquifer, located approximately 400 feet below ground surface in northwest Gloucester, contains medium-to-coarse sands and is less than 50 feet thick. Wells in this aquifer may yield as little

as five (5) gallons per minute or as much as fifty (50) gallons per minute and glauconitic sands may weather and clog well screens, producing poor water quality and potentially brackish water.¹⁵

Potomac Aquifer

The Potomac Aquifer, the Plain's deepest and thickest aquifer, is comprised of sand and gravel with many large clay interbeds. Previous hydrogeologic studies have defined the Potomac Aquifer as three (3) aquifers, but the most recent study has indicated this region as hydraulically continuous with the clay interbeds affecting flow locally. The aquifer's ceiling is roughly 500 feet below ground surface in western Gloucester and over 1000 feet below ground surface in the east. This aquifer is the most heavily used groundwater resource in the Virginia Coastal Plain, with roughly 90% of reported annual withdrawals in 2005. Although major water supply wells in the Plain's central and southeastern regions have yielded 100 to 500 gallons per minute, withdrawals are generally brackish and desalination is required for domestic or industrial use.¹⁶

Groundwater Recharge and Discharge Areas

Groundwater flow in unconfined aquifers typically reflects surface water flow since groundwater flows from higher to lower elevations. Although groundwater recharge, which occurs when rainwater percolates through the ground into the unconfined (water table) aquifer, can occur across almost any upland surface, those with steep slopes are less effective than broad, flat, grassy uplands. Research suggests that some Coastal Plain areas experience groundwater recharge between aquifers when the groundwater hydraulic pressure in one aquifer forces water through a leaking confining unit into an adjacent aquifer,¹⁷ which can transpire upwards or downwards based upon the aquifers' hydraulic properties. Further research

16 The Virginia Coastal Plain Hydrogeologic Framework

17 Hydrogeologic Framework of the Virginia Coastal Plain

may provide greater information on the location and magnitude of recharge between aquifers.

Groundwater discharge areas are located in low-lying areas characterized by rivers, springs, and wetlands with confined aquifers' discharge areas positioned off the coast beneath the Chesapeake Bay or Atlantic Ocean.

Air Quality

As required by the Clean Air Act, the Environmental Protection Agency (EPA) maintains National Ambient Air Quality Standards (NAAQS) for various criteria pollutants, including ozone, carbon monoxide, and particulate matter,¹⁸ which are implemented statewide through the Department of Environmental Quality (DEQ), to protect public health and prevent environmental harm. Regions meeting these standards are identified as attainment areas, whereas those failing to meet these standards are designated as a nonattainment areas, which must develop a State Implementation Plan (SIP) to establish NAAQS compliance and implement transportation conformity requirements. Regional Air Quality Transportation Plans, programs, and projects are analyzed and verified by the EPA to ensure compliance with their Transportation Conformity Rule¹⁹ prior to Federal Highway Administration approval and any changes following approval must be reexamined and reapproved. Transportation conformity and SIP maintenance for 20 years within the maintenance area (as classified by the EPA) is required to demonstrate NAAQS compliance.

Hampton Roads, which includes the counties of Gloucester, Isle of Wight, James City, and York and the cities of Chesapeake, Hampton, Newport News, Norfolk, Poquoson, Portsmouth, Suffolk, Virginia Beach, and Williamsburg, is currently classified as an eight (8) hour ozone maintenance area due to air quality deficiencies resulting from heavy industry and automobile traffic. This region has been reclassified as an attainment area following maintenance plan

development and EPA approval in 2007. Although Gloucester lacks the heavy industry and high traffic levels common throughout the region, open burning limits and potential alternative transportation plans that reduce traffic congestion will positively impact local and regional air quality. These measures alone will not maintain regional attainment, but continued regional efforts and maintenance plan implementation could.

Plants and Animals

Virginia's Division of Natural Heritage (Department of Conservation and Recreation) and Fish and Wildlife Information System (Department of Game and Inland Fisheries) maintain local wildlife resource and habitat inventories. The Fish and Wildlife Information Service Website lists 446 species found in Gloucester, including quail, dove, rabbit, wild turkey, hawks and owls, songbirds, turtles and amphibians, raccoon, beaver, opossum, muskrat, skunk, squirrel, woodchuck, and white-tailed deer. Bald Eagles also nest within the County, tidal marshlands attract Sora Rail, Clapper Rail, wild ducks, and other waterfowl, freshwater fish include large-mouth bass, small-mouth bass, and bream, and saltwater fish, such as shad, croaker, spot, bluefish, channel and black sea bass, menhaden, mackerel, eel, white, and silver perch, can be found.

Map NR-8: Conservation Sites

Data Source: Virginia Department of Conservation and Recreation, Division of Natural Heritage

The Virginia Department of Conservation and Recreation Division of Natural Heritage (DCR-DNH) recognizes and designates the Commonwealth’s critical natural resources into three (3) categories:

1. Rare, threatened, or endangered plant and animal species habitat
2. Unique or exemplary natural communities
3. Significant geologic formations (caves and karst features)

This agency identifies conservation sites that include one (1) or more plant, animal, or natural community and are designed to include the element, its habitat, and a buffer or adjacent land necessary for conservation. These sites are ranked from 1 (outstanding) to 5 (general interest) by their biodiversity. Gloucester contains 25 conservation sites, including the Dragon Run watershed. Conservation sites are discussed on page 141.

Natural Heritage Resources

The Division of Natural Heritage (DNH) defines natural heritage resources as rare, threatened, or endangered plant and animal species habitat, unique or exemplary natural communities, and significant geologic formations, such as caves and karst features. Locally, 28 species and communities have been designated as natural heritage resources, as listed in Table NR-3.

The Department of Conservation and Recreation identifies and protects statewide natural heritage resources, maintains a comprehensive database of all documented occurrences of Virginia's natural heritage resources, and develops conservation sites for known natural heritage resource populations that include adjacent or surrounding habitat. Conservation sites are not officially protected, but stewardship is recommended since they contain one (1) or more rare plant, animal, or natural community and are identified to include the element, its associated habitat where possible, and a buffer or adjacent land necessary for conservation that can be used to screen development from natural heritage resources, assist local and regional planning, identify acquisition and easement locations, and guide restoration activities.

The Dragon Run Watershed, located along Gloucester's northern boundary, is an important natural area, containing a largely undisturbed, spring-fed waterway often studied by local, regional, and state agencies. This watershed supports various fish, wildlife, and plants, including ancient cypress trees and multiple rare species and habitat types, with six (6) natural heritage resources located on this site: Bald Eagles, Red Turtlehead, the Bald Cypress Mixed Tupelo Intermediate Swamp, the Northern Coastal Plain Tidal Bald Cypress Woodland, the Tidal Oligohaline Marsh (Narrow-leaved Cattail – Eastern Rose – Mallow Type), and the Tidal Freshwater Marsh (Wild Rice – Mixed Forbs Type). The Dragon Run's undeveloped nature, with roughly 80% of this resource covered by forests, has preserved the natural ecosystem and this area has received a biodiversity ranking of B2, representing a conservation site of very high significance based upon rarity, quality, and the number of element occurrences it contains.

The Dragon Run Special Area Management Plan, produced by the Dragon Run Steering Committee, Middle Peninsula Planning District Commission (MPPDC), and Virginia Coastal Zone Management Program (part of DEQ), was completed in November 2003. This plan presents a common stakeholder vision, contains an action plan and resource conservation project benchmarks, and was adopted locally as an addendum to the Comprehensive Plan in November 2004. Adjacent land uses are primarily farming and forestry, contributing to this site's regional ecological value, water purity, abundant rare and unique natural species, and rural character. As the Dragon Run Watershed is valued by the County's residents and maintenance is desired, the Watershed Management Plan aims to achieve consistency across county boundaries among land use plans and regulations to maintain farming and forestry and preserve natural heritage areas by protecting plants, animals, natural communities, and aquatic systems.²⁰ The Plan's Future Land Use chapter recommends this area continue to remain rural to retain its natural areas, water quality, and character.

In addition to the Dragon Run, twenty-four (24) other conservation sites exist locally, as listed in Table NR-4 and shown on Map NR-8.

Table NR-3: Rank and Status Descriptions

Term	Definition
S1	Critically imperiled in the state because of extreme rarity or because of some factor(s) making it especially vulnerable to extirpation from the state. Typically five (5) or fewer populations or occurrences, or very few remaining individuals (<1000).
S2	Imperiled in the state because of rarity or because of some factor(s) making it very vulnerable to extirpation from the state. Typically six (6) to twenty (20) populations or occurrences or few remaining individuals (1,000 to 3,000).
S3	Vulnerable in the state either because rare and uncommon, or found only in a restricted range (even if abundant at some locations), or because of other factors making it vulnerable to extirpation. Typically having 21 to 100 populations or occurrences (1,000 to 3,000 individuals).
S4	Apparently secure; Uncommon but not rare, and usually widespread in the state. Possible cause of long-term concern. Usually having >100 populations or occurrences and more than 10,000 individuals.
S5	Secure; Common, widespread and abundant in the state. Essentially ineradicable under present conditions, typically having considerably more than 100 populations or occurrences and more than 10,000 individuals.
S#B	Breeding status of an animal within the state.
S#N	Non-breeding status of animal within the state. Usually applied to winter resident species.
S#?	Inexact or uncertain numeric rank.
SH	Possibly extirpated (Historical). Historically known from the state, but not verified for an extended period, usually > 15 years; this rank is used primarily when inventory has been attempted recently.
S#S#	Range rank; A numeric range rank, (e.g. S2S3) is used to indicate the range of uncertainty about the exact status of the element. Ranges cannot skip more than one (1) rank.
LE	Listed Endangered
LT	Listed Threatened
SOC	Species of Concern species that merit special concern (not a regulatory category)

Map NR-9: Important Bird Areas

Data Source: National Audubon Society, Virginia Department of Game and Inland Fisheries

The National Audubon Society designates Important Bird Areas (IBA's) contributing towards global conservation by providing essential habitat for one (1) or more bird species. These areas can be public or private lands and may or may not be protected. Southeastern areas of the County lie within the Western Shore Marshes IBA, which also covers Hampton, Poquoson, and Mathews and York Counties. This area includes concentrations of salt marsh, high-marsh, and low-marsh habitat, as well as sandy berms and pine hummocks, all providing important bird species habitats.

Important Bird Areas are discussed on page 147.

Important Bird Areas

The Important Bird Areas (IBA) Program, a global effort coordinated by the National Audubon Society, provides essential bird habitat sites as small as a few acres or over thousands of acres, in a discrete manner on protected and unprotected public land, private land, or both. The Virginia IBA Program aims to identify important nesting, mating, feeding, and wintering areas and provide protection through partnerships with local and state agencies along with other groups. Local IBA's are shown on Map NR-9 and should be considered during future preservation efforts.

Forest and Farmland

Vegetation assists in soil stabilization, erosion prevention, increasing soil permeability, decreasing stormwater runoff, buffering adjacent land uses, mitigating noise, wind, and heat impacts, improving air quality, and providing wildlife habitat. Large portions of the County currently exist as forests and suitable soils are present throughout Gloucester's northern and western regions, where most forested lands are found, including Loblolly and Virginia Pine, Yellow Poplar, Red Oak, White Oak, Sweet and Black Gum, Sycamore, Ash, and some Red Maple, all grown and harvested for saw timber. The Virginia Department of Forestry plants between 800 and 1,000 acres of local forestland annually with most reforestation containing Loblolly Pine seedlings at 450 to 500 trees per acre.²¹ However, as forest land is used for other purposes, local reforestation may decrease. The most recent forest surveys indicate that Gloucester contains roughly 89,000 acres of privately owned forests and 500 acres of public forests.²²

The 2012 Census of Agriculture, published by the U.S. Department of Agriculture, lists 136 active farms totaling 20,300 acres with an average farm size of 149 acres. Most farms (68%) produce cropland, commonly soybeans, corn, and wheat. The County contains 4,715 acres of farmland used as woodland, an increase of

741 acres from 2007, with other land utilized as forests or privately owned.²³

Since rural character preservation has been identified as a local goal, maintaining the agricultural economy complements local rural character while providing economic benefits. Land use principles that support agricultural practices and forested lands can provide value-added benefits as the residential population grows.

Critical Areas

The Chesapeake Bay Preservation Act (CBPA) requires local Comprehensive Plans to address existing natural land conditions that can limit development, including flood prone areas, highly-erodible soils, highly-permeable soils, wetlands, steep slopes, hydric soils, seasonally high water tables, groundwater recharge areas, significant wildlife habitat areas, prime agricultural lands, and protected lands, as well as include a soil assessment to identify suitable areas for septic tank, although engineered septic systems now allow for development where soils are unsuitable for traditional septic systems.

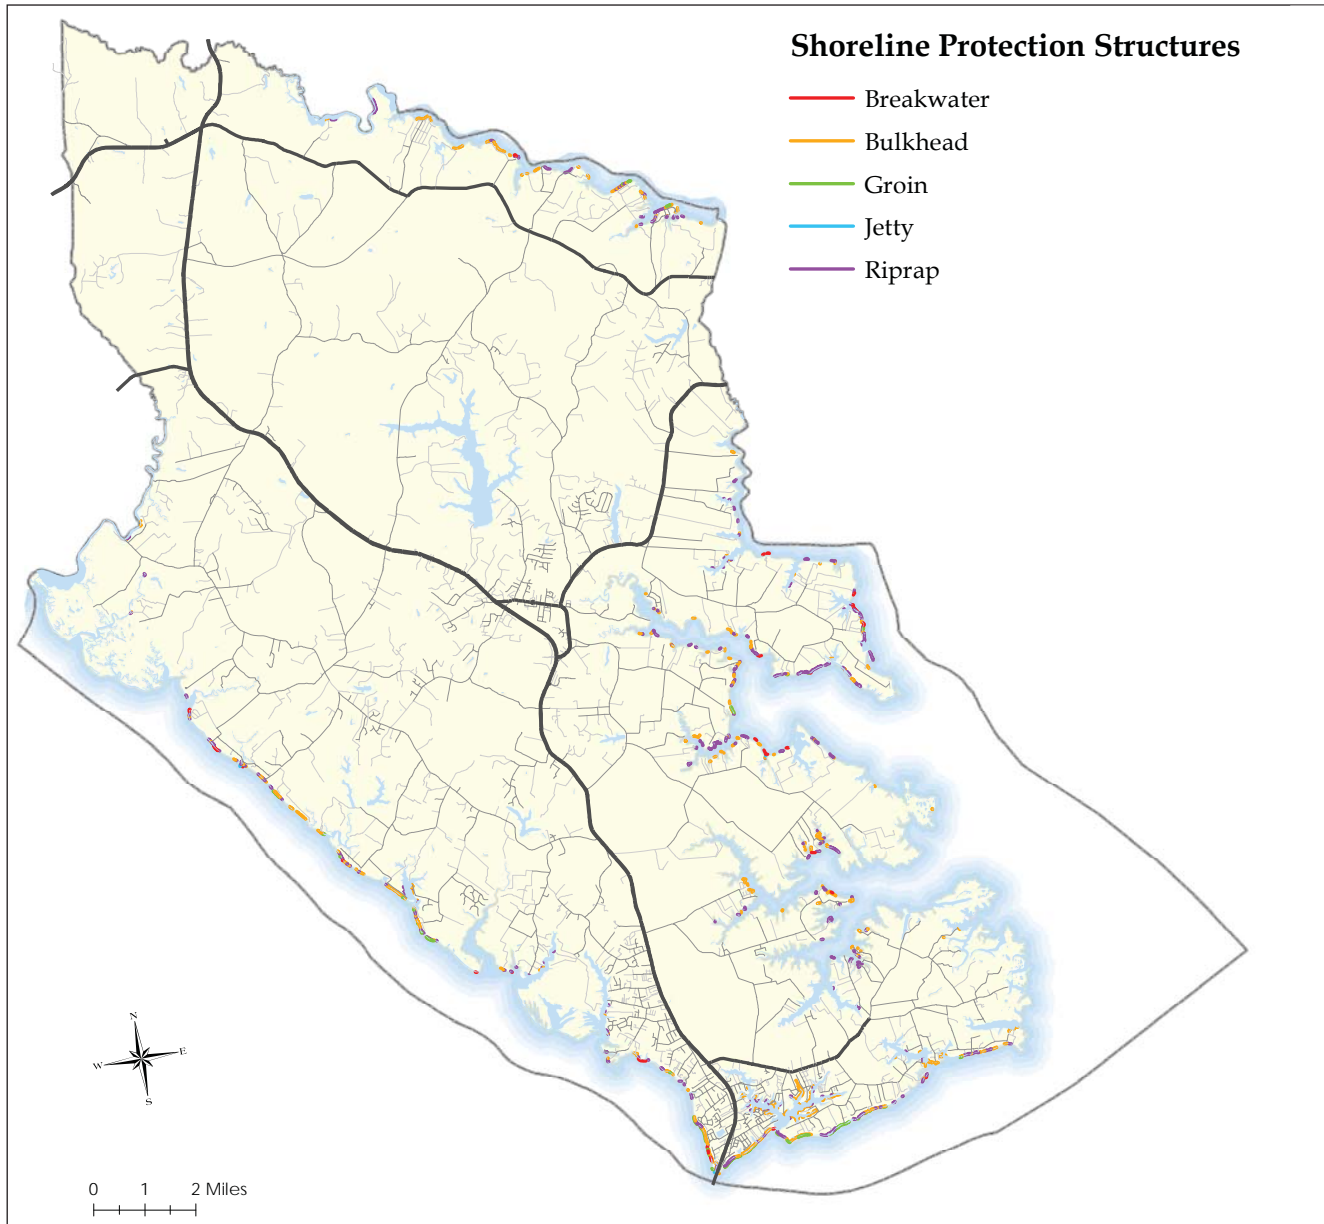

Gloucester adopted a CBPA Ordinance consistent with state and interstate protection and restoration efforts to designate CBPA areas within the County. Sensitive areas, such as tidal shores, wetlands, and highly erodible soils, are identified as Resource Protection Areas (RPAs) and include a 100-foot wide buffer and the remainder of the County is classified as a Resource Management Area (RMA) to preserve all RPAs. This ordinance acts as an overlay district throughout the County regardless of the underlying zoning district and the County's Environmental Programs Department provides direction on this ordinance to assist developers in meeting RPA, RMA, and stormwater management requirements.

Map NR-10: Shoreline Protection Structures

Data Source: Gloucester County Shoreline Inventory Report, Comprehensive Coastal Inventory Program, Center for Coastal Resources Management, Virginia Institute of Marine Science

The Comprehensive Coastal Inventory Program, part of VIMS's Center for Coastal Resources Management, completed a County wide Shoreline Inventory in 2008. This inventory utilized geographic information systems (GIS), global positioning systems (GPS), and remote sensing technology to assess Gloucester's shores, including the shoreline, banks, buffers, and riparian areas. Recreational shoreline structures were identified along with protective structures, including ripraps, bulk heads, break waters, groinfields, jetties, debris, and other miscellaneous structures. Shoreline inventories assist in making informed shoreline management decisions that may impact land use, development, infrastructure, recreation, conservation, and other considerations. Shoreline conditions and features are discussed on page 149.

Shoreline - Source: Gloucester Parks, Recreation & Tourism

Shorelines

The Gloucester County Shoreline Inventory Report describes conditions along primary and secondary shorelines and the characteristics for all contiguous navigable tidal waterways, detailing 492 miles of the County's 507 miles of shoreline.²⁴ Most of Gloucester's natural shoreline contains various types of marshes identified as low shore and composed of beaches, except for portions along the York River from the Poropotank River to Sarah's Creek that are classified as moderately low shore with bluffs ranging 20 to 40 feet high. According to the Virginia Institute of Marine Science (VIMS), three (3) beaches (near Fox Creek, around Gloucester Point, and on lower Jenkins Neck by Sandy Point) have the potential for medium- to high-intensity recreational uses.

Manmade shoreline protection features, as shown on Map NR-10, reinforce roughly 28 miles of shoreline

within the County and shoreline recreational structures, such as marinas, boathouses, docks, and boat ramps, are shown on Map NR-11. Local shorelines are forested (44%), scrub-shrub (29%), or residential (20%), with the rest comprised of open space, agriculture, commercial uses, paved, and timbered areas and most altered shoreline features are found around Gloucester Point and Sarah's Creek.²⁵

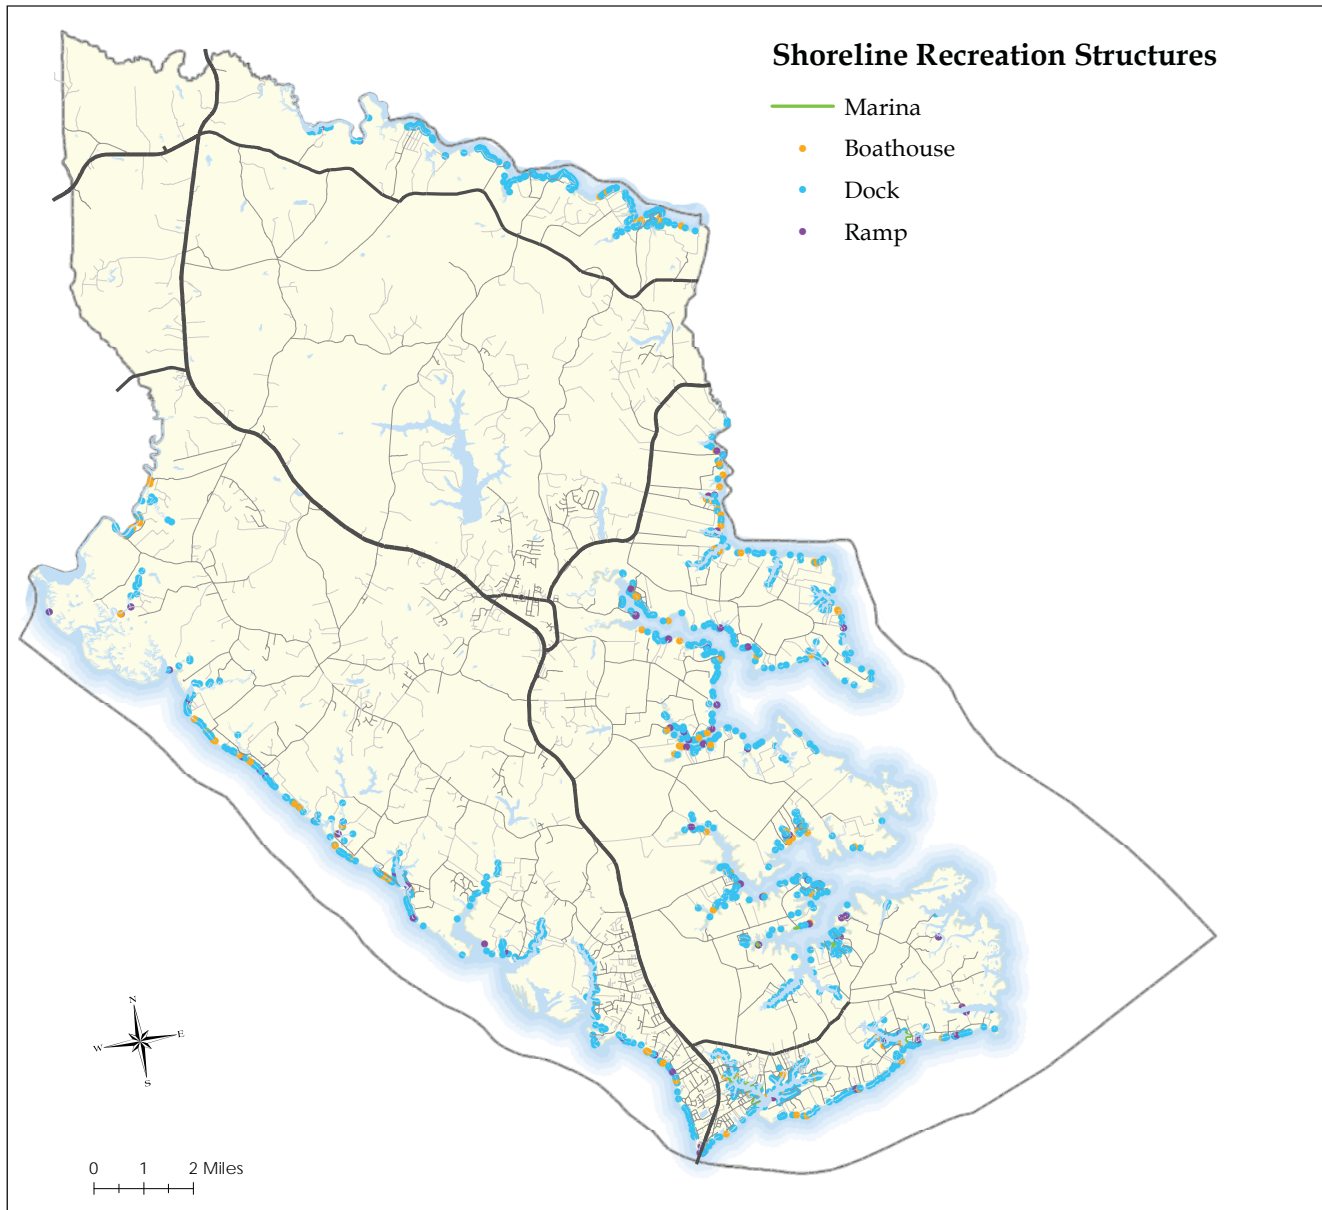

Impacts of Land Development

Comprehensive Plans are required to consider existing and proposed land uses adjacent to the shoreline to identify and analyze land and water use conflicts and water quality issues. Land and water activities may impact water resource utilization and quality, such as increased nutrients, sediment, and pesticides resulting from runoff and increased flows produced by stream bank erosion. In developing areas, land and water uses may conflict with sensitive natural resources, which can be managed by utilizing land

²⁴ The Gloucester County Shoreline Inventory Report includes 34 map plates and a summary table describing shoreline conditions. They are available online through the VIMS Center for Coastal Resources Management website at http://ccrm.vims.edu/gis_data_maps/shoreline_inventories/index.html.

²⁵ http://ccrm.vims.edu/gis_data_maps/shoreline_inventories/index.html

Map NR-11: Shoreline Recreation Structures

Data Source: Gloucester County Shoreline Inventory Report, Comprehensive Coastal Inventory Program, Center for Coastal Resources Management, Virginia Institute of Marine Science

The Comprehensive Coastal Inventory Program, part of VIMS's Center for Coastal Resources Management, completed a Countywide Shoreline Inventory in 2008. This inventory utilized geographic information systems (GIS), global positioning systems (GPS), and remote sensing technology to assess Gloucester's shores, including the shoreline, banks and buffers, and riparian areas. Protective shoreline structures were identified along with recreational structures, including piers, wharfs, boat ramps, boat houses, and marinas. Shoreline inventories assist in making informed shoreline management decisions that may impact land use, development, infrastructure, recreation, conservation, and other considerations. Shoreline conditions and features are discussed on page 149.

use regulations to meet environmental standards. Waterfront redevelopment can also utilize various techniques, such as clustered development, to reduce Chesapeake Bay impacts.

Redevelopment

Stormwater also impacts local water quality when runoff from impervious surfaces transports nutrients, pollutants, and toxic substances into local waterways. Areas of the County that developed prior to the CBPA Ordinance may not include stormwater runoff measures and redevelopment will require water quality measures, such as stormwater best management practices (BMP's), shoreline restoration activities, pervious area and open space provision, and, if necessary, connection to public sewer.

Potential Shoreline Development Sites

Most local seafood processing plants, marinas, and working waterfronts have existed for decades and are considered cultural resources that the County desires to continue, but may also benefit from appropriate redevelopment. This may provide the opportunity to continue the waterfront use while mitigating environmental impacts through decreased stormwater runoff and connection to public sewer, among other measures, especially in areas between Gloucester Point and Achilles.

Restricted Waterway Access

Adjacent waterways typically allow for uninhibited usage, except for portions along the York River where restricted and prohibited areas exist in conjunction with the Naval Weapons Station Yorktown's regular and emergency functions. In restricted access areas, recreational waterway users are permitted to pass through, but prohibited from loitering or anchoring, and restricted anchorage areas prevent loitering and anchoring and may include greater limitations if naval ships are anchored nearby or in need of abandonment due to hazardous conditions.

Flood Prone Areas

Flood prone areas, places periodically subjected to overflows from nearby water bodies or low-lying areas with poor drainage, serve multiple purposes, including enhanced water quality, groundwater aquifer recharge, flooding reduction, fishery and wildlife habitat, recreational opportunities, and historic site preservation.²⁶ However, development in regularly flooded areas may incur greater building costs and face other challenges while increasing flooding due to additional impervious cover. Areas in the County developed prior to Special Flood Hazard Area identification or federal and state floodplain program establishment may require floodplain management measures to reduce and mitigate flood hazards, which can be assisted by open space planning.

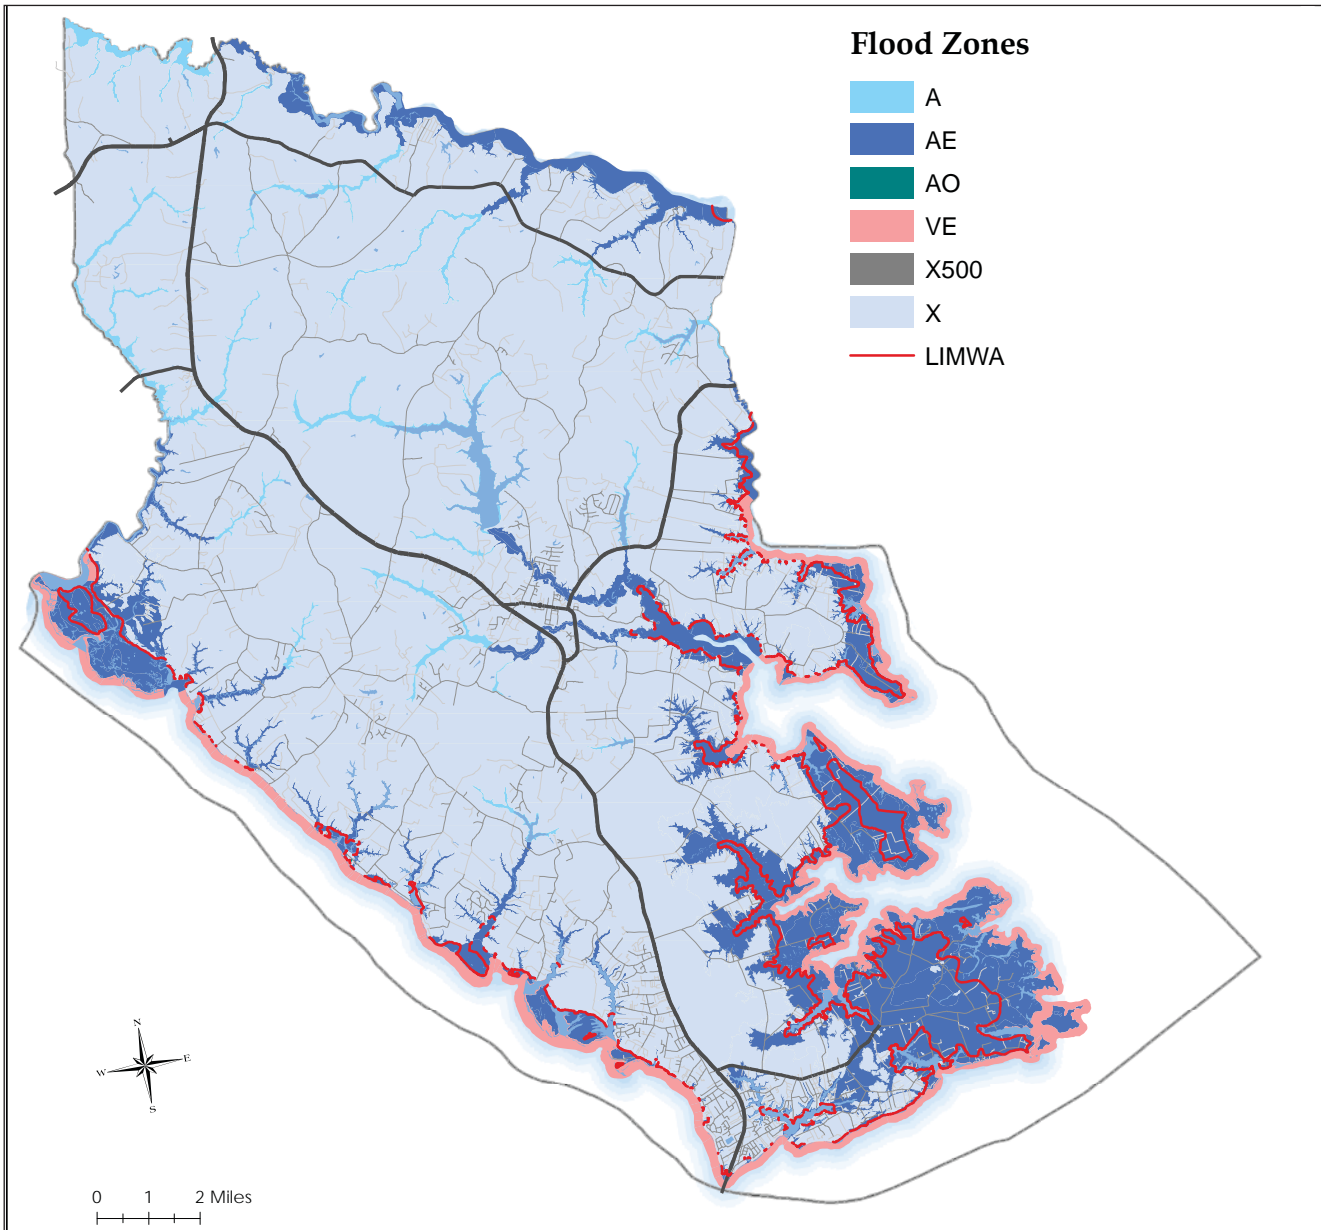

The Federal Emergency Management Agency (FEMA) identifies flood prone areas in its Flood Insurance Rate Maps (FIRM's), most recently revised and adopted in 2014 (as shown on Map NR-12) and available in digital format as well as on the County's Geographic Information System (GIS) website. Roughly 27,000 acres are within the 100-year floodplain and new (inhabited) structures within the floodplain are required to have their lowest finished floor located two (2) feet above the base flood elevation indicated on the maps. Both Zones AE and VE correspond to the 1% annual chance coastal floodplain with established Base Flood Elevations and mandatory flood insurance purchase requirements and Zone VE may face additional hazards from storm waves. Zone A indicates areas with a 1% annual chance of flooding without depths or base flood elevations due to a lack of detailed analyses.²⁷ Zone X-500 has a moderate flood hazard between the limits of the 100- and 500-year floods and all other areas have a minimal flood risk.

Gloucester is a FEMA Community Rating System (CRS) member audited every five (5) years by the Insurance Services Office (ISO) to determine local floodplain regulation administration and enforcement quality. This program recognizes and encourages community floodplain management activities beyond the

²⁶ DCR-CBLA, 1989

²⁷ <https://www.fema.gov/floodplain-management/flood-insurance-rate-map-firm>

Map NR-12: FEMA Flood Zones

Data Source: Federal Emergency Management Agency, Gloucester County Planning Department

As a coastal community, Gloucester County possesses several floodprone areas as vulnerable to extreme weather events or tidal forces. Development in these areas poses several potential challenges, including increased costs (both financial and personal) to the community and home owners when floods damage property or prevent accessibility. Development may also intensify flooding as natural buffers and wetlands are replaced with impervious cover, preventing water infiltration. Gloucester has an adopted Floodplain Management Ordinance and Floodplain Management Plan (adopted in 2009, revised in 2014) that guides actions within floodplains to mitigate impacts.

Flood prone areas are discussed on pages 151-153.

The Federal Emergency Management Agency (FEMA) identifies flood zones through the National Flood Insurance Program (NFIP) and designates these on Flood Insurance Rate Maps (FIRM's) to aid in setting property flood insurance rates. The County's FIRM's include six (6) types of flood zone designations: A, AE, AO, V E, X-500, and X.

A Zones are subject to a one percent (1%) annual chance flood, but Base Flood Elevations (BFE's) are undetermined. Mandatory flood insurance purchase requirements and floodplain management standards apply in this zone.

AE Zones are subject to a one percent (1%) annual chance flood and BFE's have been determined. Mandatory flood insurance purchase requirements and floodplain management standards apply in this zone.

AO Zones are subject to a one percent (1%) annual chance flood with flood depths between one (1) and three (3) feet, as determined by detailed methods. Mandatory flood insurance purchase requirements and floodplain management standards apply in this zone.

VE Zones are subject to a one percent (1%) annual chance flood with additional wave velocity hazards and BFE's have been determined by detailed methods. Mandatory flood insurance purchase requirements and floodplain management standards apply in this zone.

X-500 Zones (Zone X as shaded on FIRM's) are subject to between a 0.2% and 1% annual chance flood. These zones have average flood depths of less than one (1) foot or drainage are as less than one (1) square mile. Mandatory flood insurance purchase requirements and floodplain management standards do not apply in this zone.

X Zones are not subject to at least a 0.2% annual chance flood. Mandatory flood insurance purchase requirements and floodplain management standards do not apply in this zone.

The Limit of Moderate Wave Action (LiMWA) is a new designation that identifies the boundaries of areas subject to waves between 1.5 and 3 feet and a one percent (1%) annual chance of flooding. These areas are usually found between VE Zones and AE zones, and are also known as Coastal A Zones.

minimum National Flood Insurance Program (NFIP) standards and Gloucester currently holds a "Class 7" CRS status, which provides a 15% discount on annual flood insurance premiums.

The County addresses potential floodplain development risks through the Floodplain Management Ordinance, Subdivision Ordinance, and Floodplain Management Plan (FMP). The Floodplain Management Ordinance, updated in 2014, establishes floodplain development and redevelopment performance requirements while the Subdivision Ordinance directs flood prone lands to be set aside for uses not endangered by inundation. The Floodplain Management Plan (FMP), adopted in 2009 and revised in 2014, analyzes coastal flooding causes, identifies vulnerabilities, evaluates existing flood management practices, and discusses current and potential mitigation strategies, developed with the help from citizen input and local, regional, state, and federal agencies and organizations. A 16-member committee consisting of citizens and County staff monitors implementation, reviews progress, and recommends plan revisions, which occur every five (5) years.

Flood prone land - Source: Bruce Nelson Photography

Map NR-13: Dam Break Inundation Zones

Data Source: Gloucester County GIS Department, Virginia Department of Emergency Management

State law requires that localities incorporate potential dam failure effects into their comprehensive plans through mapping dam break inundation zones. Dams fail for various reasons, including prolonged rainfall and flooding, inadequate capacity, improper maintenance or design, and negligent operation, among others.

Dam break inundation zones are discussed on page 155.

Beaverdam Reservoir - Source: Gloucester Parks, Recreation & Tourism

The Virginia Department of Conservation and Recreation, Division of Dam Safety and Floodplain Management is responsible for monitoring and ensuring the dam safety. Dams are categorized based upon their hazard potential (high, significant, or low), identifying both their size and the potential dam failure damage. Every dam requires an annual inspection, but inspection frequency (by professional engineers) varies by hazard potential. High hazard dams are professionally inspected every two (2) years, while low hazard dams are professionally inspected every six (6) years. Gloucester contains one (1) high hazard dam at the Beaverdam Reservoir and three (3) significant hazard dams, while other dams throughout the County are not large enough to require categorization.

The **Probable Maximum Flood (PMF)** results from the Probable Maximum Precipitation estimated by the National Weather Service based upon the most severe meteorological and hydrological conditions.

High Hazard Potential Dam failure will cause probable loss of life or serious economic damage.

Significant Hazard Potential Dam failure may cause loss of human life or appreciable economic damage.

Low Hazard Potential Dam failure would not result in expected loss of human life nor cause more than minimal economic damage, with damage only occurring to the dam's property owner.

Dam Break Inundation Zones

State code requires localities to include information on dam break inundation zones and potential downstream impacts in their Comprehensive Plans. Dams that exceed certain heights and capacities are regulated, with specific uses receiving exemptions, and a dam's structural integrity and the land uses within its dam break inundation zone determine its hazard potential (low, significant, or high). The MPPDC studies dams and their failure potential in its Natural Hazards Mitigation Plan, completed in 2010 and updated every five (5) years, and has identified one (1) high hazard dam (Beaverdam, with a maximum storage capacity of 20,523 acre-feet), three (3) significant hazard dams (including Cow Creek Dam, which has a maximum storage capacity of 931 acre-feet), and seven (7) low hazard dams in the County. Dam break inundation zones are shown on Map NR-13.

Tidal and Non-Tidal Wetlands

Wetlands, defined in state code and classified as non-vegetated or vegetated, include lacustrine, riverine, estuarine, and palustrine based upon certain characteristics. Non-vegetated wetlands are unvegetated lands contiguous to mean low water and between mean low water and mean high water that are subject to flooding by normal and wind tides, but not hurricane or tropical storm tides, whereas vegetated wetlands are lands between and contiguous

Map NR-14: Wetlands

Data Source: U.S. Fish and Wildlife Service

Gloucester County possesses over 12,000 acres of wetlands. Wetlands provide numerous benefits, including producing food and energy for marine ecosystems, providing birds, fish, and wildlife habitat, protecting shorelines from erosion, filtering runoff pollutants, and reducing flooding impacts. The 1972 Wetlands Protection Act, as amended, and the 1988 Chesapeake Bay Preservation Act, as amended, enable and/or require that local governments take steps to preserve critical environmental areas, including wetlands. Nontidal wetland preservation receives direction from the Nontidal Wetlands Act of 2000 and the 1977 Clean Water Act, as amended, which grants the U.S. Army Corps of Engineers the authority to regulate activities affecting waters of the United States.

Wetlands are discussed on pages 155-157.

to mean low water and a defined elevation above mean low water with certain types of vegetation present.²⁸ Lacustrine wetlands are formed around interior waterbodies or dammed rivers, riverine wetlands are found along rivers before they reach lakes or ocean salinity levels, estuarine wetlands are commonly called tidal wetlands, and palustrine wetlands are known as non-tidal wetlands. Wetland types and extent are shown on Map NR-14.

The Virginia Wetlands Management Handbook lists five (5) wetlands benefits, including marine ecosystem food and energy production sites, wildlife habitat, natural shoreline erosion protection, pollutant (sediment and nutrient) filters that reduce water quality impacts, and flood reduction.²⁹

In 2008, VIMS published a shoreline situation report that studied over 492 miles of local shoreline, identifying 90% as wetlands, including fringe, embayed, and extensive marshes, with marsh and wetland acreage ranking fifth throughout Virginia. Over 12,000 acres of wetlands include high and low marshes (5,000 acres),

²⁸ Code of Virginia §28.2-1300

²⁹ Virginia Wetlands Management Handbook

Estuarine wetlands are tidal wetlands with salinity (from ocean-derived salts) equal to or greater than 0.5%. These are found locally along the Chesapeake Bay and its tributaries' shores.

Lacustrine wetlands are formed around interior waterbodies or dammed rivers. These are mainly found around the Beaverdam Reservoir.

Palustrine wetlands are both non-tidal and tidal wetlands with salinity (from ocean-derived salts) less than 0.5%. These are found throughout the County.

Riverine wetlands are formed along rivers before they reach lakes or saline conditions. These wetlands are found along the Dragon Run and Carvers Creek.

creeks (3,500 acres), tidal flats (1,800 acres), hammocks (1,000 acres), swamps (600 acres), ponds, and wooded areas. Gloucester's hammock wetlands, areas elevated above the surrounding marsh and typically dominated by pines, cedars, and wax myrtle, account for roughly 40% of the state's total hammock-type geography.

Existing Wetlands Protection Policies

Gloucester's Wetlands Zoning Ordinance requires tidal wetland development to receive local wetlands board or Virginia Marine Resources Commission (VMRC) permitting in conjunction with the U.S. Army Corps of Engineers' Section 404 permit program. Additionally, tidal wetlands are considered Resource Protection Area (RPA) features under the Chesapeake Bay Preservation Ordinance, requiring a 100-foot buffer, and non-tidal wetlands and other areas not included in the RPA are designated as Resource Management Area (RMA) features, as shown in Map NR-15. Some shoreline projects may require coordinated reviews under the Wetlands and Chesapeake Bay Preservation Ordinances to address both programs' requirements.

Tidal wetlands also fall under the state's 1972 Wetlands Protection Act, which enables the County to adopt a Wetlands Ordinance and establish the joint-permit process for construction, dredging, or filling tidal wetlands, supporting the local Wetlands Board's actions. The Virginia Marine Resources Commission coordinates the joint-permit review with all appropriate agencies and administers the Wetlands Protection Act, reviewing all Wetlands Board decisions.

Non-tidal wetlands fall under Section 404 of the nation's 1977 Clean Water Act, which prohibits disposal of dredged or fill material into United States waters and adjacent wetlands, and an Army Corps of Engineers permit is required for non-tidal wetlands impacts. Additionally, the Virginia Nontidal Wetlands Act of 2000 oversees non-tidal wetlands activities in the following ways:

- Requires permittees to primarily avoid, then minimize wetland damage and, if wetlands must be destroyed, to replace their acreage and function.

Map NR-15: Chesapeake Bay Preservation Areas

Data Source: Gloucester County Planning Department, Chesapeake Bay Preservation Act, Chesapeake Bay Preservation Area Designation and Management Regulations

The Chesapeake Bay Preservation Act (CBPA) and associated regulations direct Tidewater localities (including Gloucester) to protect the state water quality through various measures. The CBPA includes requirements for local ordinances, including zoning, subdivision, erosion and sediment control ordinances, and comprehensive plans. Localities must designate and map Chesapeake Bay Preservation Areas, such as Resource Management Areas, Resource Protection Areas, and/or Intensely Developed Areas, in their comprehensive plans. Gloucester has outlined Resource Protection and Resource Management Areas.

Chesapeake Bay Preservation Areas are discussed on pages 157-159.

- Adopts the scientifically-accepted wetlands definition, establishing consistency with the federal government and State Water Control Board.
- Requires permitting and mitigation for proposed drainage, dredging, excavating, ditching, flooding, impounding, filling, or discharging into non-tidal wetlands.
- Requires the state to seek a Corps of Engineers'

State Programmatic General Permit (SPGP) for most activities, streamlining the permitting process. Virginia has received this permit and DEQ issues state permits based on the general permit.

- Exempts normal agricultural and silvicultural activities and homeowner landscaping and maintenance.
- Requires general permits (issued by DEQ) for various activities, including sand, coal, and gas mining, linear public utility and transportation project easements, and activities affecting less than 0.5 acres.

Resource Protection Areas are lands adjacent to perennially-flowing waterbodies with intrinsic water quality value due to ecological and biological processes or impact sensitivity that may result in significant state water quality degradation. These include tidal wetlands, non-tidal wetlands contiguous to tidal wetlands and connected by surface flow or water bodies with perennial flow, tidal shores, lands designated by local governments necessary to protect state water quality, and a buffer not less than 100 feet in width adjacent to and landward of the aforementioned features.

Resource Management Areas contain areas contiguous to Resource Protection Areas that assist in maintaining Resource Protection Area water quality or value. These include floodplains, steep slopes, highly erodible soils, highly permeable soils, non-tidal wetlands not within in the Resource Protection Area, and other lands designated by local governments necessary to protect state water quality. In adopting its Chesapeake Bay Preservation Ordinance, the County established that all lands not within the Resource Protection Area are considered Resource Management Areas. However, the designation of the Resource Management Area can vary from locality to locality.

Intensely Developed Areas are within Chesapeake Bay Preservation Areas and have been developed to the extent that little natural environment remains. In adopting its Chesapeake Bay Preservation Ordinance, Gloucester has not designated any Intensely Developed Areas.

Green Infrastructure

Guided development offers the opportunity to plan for rural character and environmental resource preservation to support the local quality of life. Green infrastructure planning systematically addresses community needs and identifies valuable lands for natural resource and water quality preservation, recreation, and working land and cultural resource continuation, which helps to specify areas most suitable for future development.

The Hampton Roads Planning District Commission (HRPDC) has produced reports that identify important environmental areas in order to develop a regional green infrastructure network that extends from Gloucester through the Peninsula to the Southern and Western Tidewater region, as shown on Map NR-16, to include areas that provide water quality and wildlife habitat benefits. These reports describe the methods used to identify the network and contain a resource inventory of parks and recreational areas, among others. A more detailed local network can be developed from this regional network to connect the County's natural, cultural, and historic resources. Additionally, it can be a planning tool used to connect assets as develops occurs, such as preserving existing rural and cultural landscapes, scenic views, and recreational and historic sites.³⁰

³⁰ HRPDC Green Infrastructure reports include A Green Infrastructure Plan for Hampton Roads (2010), Green Infrastructure in Hampton Roads (2007), and The Hampton Roads Conservation Corridor Study (2006).

Map NR-16: Green Infrastructure

Data Source: Hampton Roads Planning District Commission

Green infrastructure provides a systematic conservation planning approach that addresses multiple community needs, including habitat preservation, water quality improvement, recreation, flood protection, and working land and cultural resource conservation. This approach can guide development and resource preservation. The Hampton Roads Planning District Commission (HRPDC) completed multiple regional green infrastructure plans that include important water quality and wildlife habitat areas. These plans can assist local planning efforts that incorporate historic resources, working lands, and other areas the residents desire to protect and integrate with other natural resources. The HRPDC identified approximately 900 acres of land with high water quality value, 16,000 acres of land with high habitat protection value, and 26,000 acres of land with high water quality and habitat protection value within Gloucester. Green Infrastructure is discussed on pages 159-161.

The regional green infrastructure network identifies important areas for water quality and habitat protection, identifying approximately 900 acres valuable for water quality, over 16,000 acres valuable for habitat protection, and nearly 26,000 acres of valuable for both within the County. This analysis can aid in prioritizing conservation, preservation, and outdoor recreational areas as well as designing an active and passive recreational network connecting to environmental, cultural, and historic resources.

Major Issues

Soil Suitability for Septic Systems

As most soils in southeastern Gloucester as well as those along local streams and rivers are at least partially hydric with inundation occurring for periods of time sufficient enough to create anaerobic conditions, these areas generally have a high water tables susceptible to poor drainage and flooding, making them unfavorable for development or conventional septic systems.

However, prior to the existing environmental and land use ordinances, some residential and commercial development occurred on soils poorly suited for development, where wastewater disposal and groundwater quality issues potentially increasing if future development does not account for these factors. The Future Land Use Plan identifies local areas unsuitable for septic system use or unfavorable for intensive residential, commercial, or industrial development due to these physical constraints.

Chesapeake Bay Impact Crater

The Chesapeake Bay Impact Crater, resulting from a comet or asteroid collision into the Chesapeake Bay, creates development limitations in portions of the County east of Routes 17 and 3/14. Groundwater reserves from the Piney Point aquifer are rarely used due to hydrogen sulfide prevalence and low yields and, although lower aquifers contain water suitable for consumption, these withdrawals typically are brackish and require desalinization.

Septic suitability also limits development in areas within the Impact Crater and numerous characteristics, including water table proximity and natural features, provide challenges for identifying suitable soils for drainfields and limit development. Due to these factors, the Future Land Use Plan designates lands within the Impact Crater for natural resource preservation and low density development where appropriate.

Shoreline Erosion and Erosion Rates

Severely eroding shorelines, those eroding at a rate greater than three (3) feet per year, are generally small in size, accounting for roughly four percent (4%) of Gloucester's shoreline. Several local high bank erosion areas exist, including the Carmine and Mumfort Islands in the York River, isolated lands around Timberneck Creek, and much of Mill Creek and high marsh erosion regions are reported around Morris Bay, Monday Creek, and along the Ware River near Page Creek, Goat Point Creek, Four Point Marsh, and Mud Point.

A recommended stabilization hierarchy, provided in Table NR-5, measures low, moderate, and severely eroding shorelines consistent with Chesapeake Bay Preservation Act goals and provides applications for installing new or replacing existing stabilization structures. Although erosion control options are individually ranked (with "1" being the most preferable option), a combination of methods is often necessary and the General Assembly adopted living shorelines as the preferred shoreline stabilization measure over shoreline hardening measures in 2011.

Where stabilization is necessary, a regional approach (rather than individual) is recommended, sharing costs and mitigating nearby erosion issues. Section V of the HRPDC's Shoreline Erosion Control and Access Policy Options provides further erosion control options and DCR studies report that marsh grass maintenance and establishment should be the first choice considered for shoreline erosion control in low energy areas with adequate site conditions.³¹

³¹ Shoreline Erosion Control Guidelines

Table NR-5: Hierarchy of Possible Shoreline Stabilization Measures

Ranking	Stabilization Measure
Areas with a Low Erosion Rate (<1 foot/year)	
1	Vegetative stabilization with/without bank regrading (if applicable)
2	Revetments
3	Bulkheads
Areas with a Moderate Erosion Rate (1-3 feet/year)	
1	Vegetative stabilization (depending on site-specific conditions)
2	Beach nourishment
3	Revetments
4	Breakwaters
5	Groins
6	Bulkheads (depending on site-specific conditions)
Areas with a Severe Erosion Rate (>3 feet/year)	
1	Relocation
2	Beach nourishment
3	Revetments
4	Breakwaters
5	Groins
6	Seawall

Living Shorelines, with vegetative and non-structural erosion control measures, are preferred over other stabilization techniques since this method also provides water quality and aquatic habitat benefits. However, as wave energy and erosion increases, non-structural erosion control is not an effective shoreline stabilization measure and shorelines with less than 0.5 nautical miles of fetch may benefit more from combining marsh planting and breakwater structures, such as a submerged sills that protect the marsh toe of interior creeks with high erosion, an approach that has been successful throughout the Chesapeake Bay.

The Erosion and Sediment Control Ordinance allows for local erosion impact area designation and a conservation plan, which must be submitted by the property owner subject to the review, bonding, inspection, and enforcement provisions of land-disturbance permits. Since Gloucester has not designated any erosion impact areas because many with high erosion are currently developed, buffers

and mitigation may be the most appropriate shoreline stabilization strategies. When off-site erosion impacts existing development, property owners are responsible for proper erosion control measures.

Stormwater Management

Virginia municipalities may choose to administer stormwater management requirements locally or through DEQ on their behalf. Since Gloucester does not directly manage stormwater infrastructure, this is primarily addressed through the local Stormwater Management Ordinance and secondarily through the County’s Chesapeake Bay and Erosion and Sediment Control Ordinances along with the state’s Total Maximum Daily Load (TMDL) requirements.

Gloucester Point Beach Park - Source: Gloucester Parks, Recreation & Tourism

Coastal Resources Management

Coastal ecosystems, located at the land-water boundary, provide both direct and indirect local benefits and perform various functions, including shoreline stabilization, water quality preservation, flood protection, and fish, wildlife, and plant habitat, which may be limited by traditional resource management practices. Statewide coastal resources, such as beaches, dunes, and wetlands, have been lost as a result of development and erosion control practices, among other factors, and shoreline resource management is important for coastal ecosystem continuance.

Living shorelines, the state's preferred shoreline stabilization alternative, encompasses multiple design options, including marsh plantings, rock sills, and beach nourishment, depending on the tidal and erosion concerns. These approaches prevent shoreline erosion, minimize natural coastal ecosystem impacts, and support integrated tidal shorelines management strategies, with guidance and practices recommended by VIMS to assist local coastal ecosystem preservation efforts, including:

- Utilizing VIMS Decision Trees to review and select appropriate erosion control and shoreline

management practices³²

- Adopting shoreline best management practices as the recommended approach and requiring justification to use another approach
- Training local staff on decision-making tools
- Making local policies consistent with the VMRC's general permit
- Educating citizens and stakeholders on living shoreline benefits
- Evaluating and considering a locality-wide permit to promote living shorelines
- Considering open space preservation adjacent to marshlands for inland retreat and sea level rise mitigation
- Evaluating and considering living shoreline construction cost-share opportunities

Storm Surges

As Hampton Roads is relatively flat and low-lying, the region is vulnerable to storm surge damage and potential sea level rise when allowing storms to come ashore and cause flooding. Similarly, Gloucester is

³² More information on the VIMS Decision Trees is available on the website for the Center for Coastal Resources Management at <http://ccrm.vims.edu/decisiontree/index.html>.

Map NR-17: Storm Surge

Data Source: Virginia Department of Emergency Management, Federal Emergency Management Agency, U.S. Army Corps of Engineers, National Oceanic and Atmospheric Administration

As a coastal community with significant low-lying areas, Gloucester is vulnerable to coastal hazards such as tidal flooding and storm surges. Tidal flooding can regularly occur in low-lying areas or in upland areas resulting from high tides. The National Weather Service defines a storm surge as a change in water level due to a storm, resulting in higher water levels than predicted. Similarly, a storm tide is the combination of a storm surge and the normal tide. Where storm surges are measured without a reference point, storm tides are measured relative to a datum, such as mean sea level or mean high water.

Storm surges are discussed on pages 163-164.

susceptible to these threats, especially regions east of Route 17 that lie in defined Storm Surge Areas, such as the Mobjack Bay, Jenkins Neck, Maryus, Severn, Achilles, Bena, Perrin, Robins Neck, Glass, Dutton, Ware Neck, White Marsh and portions of Gloucester Point, as detailed in Table NR-6 and illustrated on Map NR-17.

In addition to tidal and surge flooding, hurricanes and other storms can significantly damage buildings and impact the natural environment in coastal areas through beach erosion, downed trees, and other vegetation loss. An HRPDC study found that many Hampton Roads natural areas are susceptible to storm

Table NR-6: Cumulative Area Vulnerable to Storm Surge in Gloucester County

Storm Surge Category	Area (acres)	Area (Percentage of Entire County)
1	21,476	15.41%
2	35,518	25.48%
3	40,254	28.88%
4	43,904	31.50%

Source: Hampton Roads Planning District Commission

surges, with approximately 84,000 acres (16.5%) of the region's green infrastructure network impacted by a Category 1 storm surge.

Potential sea level rise, resulting from melting ice that increases the volume of ocean water and causes oceanic warming and thermal expansion, along with local and regional currents, could inundate or erode eastern areas of Gloucester, as shown on Map NR-18. Additionally, Gloucester, like much of Hampton Roads and eastern Virginia, is sinking (subsiding) due to several geological processes, which also contributes to local sea level rise. The National Oceanic and Atmospheric Administration (NOAA) reports that long-term sea level rise trends at the Gloucester Point/Yorktown Tide Station increase roughly 0.15 inches/year (approximately 1.25 feet every 100 years) and climate change is projected to increase the global rate by roughly 1.5 and 6.5 feet by the end of the century, resulting in higher local rates.³³

In 2008, numerous federal, state, and local governments and agencies completed a hurricane evacuation study for Virginia localities along the lower Chesapeake Bay to identify areas vulnerable to various storm intensities. These storm intensities are categorized based upon the Saffir-Simpson Hurricane Scale (Category 5, or catastrophic, hurricanes were not included). Although previous ratings included storm surge estimates and wind speed, the current version only includes wind speed. The storm tide depends on various factors, including the storm's direction, landspeed, windspeed, wave action, and offshore topography. Therefore, this study is most appropriate for general planning purposes.

Category 1 storms have maximum sustained windspeeds between 74 and 95 miles per hour with storm surges between 4 and 5 feet.

Category 2 storms have maximum sustained windspeeds between 96 and 110 miles per hour with storm surges between 6 and 8 feet.

Category 3 storms have maximum sustained windspeeds between 111 and 129 miles per hour with storm surges between 9 and 12 feet.

Category 4 storms have maximum sustained windspeeds between 130 and 156 miles per hour with storm surges between 13 and 18 feet.

Surface Water Quality

Point Source Pollution

Point source pollution, including municipal and industrial dischargers and individual waste treatment systems, contributes to surface water quality issues. The Clean Water Act requires that wastewater dischargers have a permit establishing allowable discharge limits and specifying monitoring and reporting requirements

³³ U.S. Army Corps of Engineers Engineering Circular 1165-2-212, Sea-Level Change Considerations for Civil Works Programs

Map NR-18: Sea Level Rise

Data Source: Virginia Geographic Information Network, U.S. Geological Survey, U.S. Army Corps of Engineers, National Oceanic and Atmospheric Administration, Hampton Roads Planning District Commission

The U.S. Army Corps of Engineers has developed a tool that combines global sea level rise estimates with local historic rates to project local sea level rise. This tool can be combined with global scenarios (0.2 meters, 0.5 meters, 1.2 meters, and 2.0 meters by 2100), developed by the National Oceanic and Atmospheric Administration for the U.S. National Climate Assessment and results, along with high resolution elevation data and tide records, can identify vulnerable areas within the County under each scenario. Between 1.6 and 7.5 feet of local sea level rise is projected for Hampton Roads by 2100. This map shows the areas below mean high water for each scenario.

Sea level rise is discussed on page 165.

and National Pollutant Discharge Elimination System (NPDES) permits monitor household and industrial wastes collected in sewers and at municipal treatment plants and regulate industrial point sources and concentrated animal feeding operations discharging into other wastewater collection systems or receiving waters. These contaminants include conventional (human wastes, disposed food, laundry waters, etc.), toxic (organics and metals), and nonconventional pollutants (nitrogen, phosphorus, etc.) and Virginia Pollution Discharge Elimination System (VPDES) Permits are administered by DEQ. There are three (3) local VPDES permit holders, including the County's Water Treatment Plant.

Thirteen (13) Hampton Roads localities, including Gloucester, are currently under a Special Order by Consent with the Virginia Department of Environmental Quality for sanitary sewer overflows and the Hampton Roads Sanitation District (HRSD) has entered into a separate Consent Decree with the U.S. Environmental Protection Agency (EPA). The HRSD consent decree, resulting from the EPA's expanded enforcement priorities, focuses on sanitary sewer systems serving more than one (1) million people and requires local and regional wastewater utilities to make assessments, test their conveyance systems for failures and capacity-related issues, and provide necessary system replacements and

enhancements. The Hampton Roads localities and HRSD have approved a Memorandum of Agreement defining the roles, responsibilities, and obligations for implementing a Regional Wet Weather Management Plan in order to reach compliance.

The Toxic Release Inventory (TRI) contains information on over 650 toxic chemicals used, manufactured, treated, transported, or released into the environment and the Resource Conservation and Recovery Information System (RCRIS), a national program management and inventory system, provides hazardous waste handler information. Generally, entities that generate, transport, treat, store, and dispose of hazardous wastes are required to report their activities to state environmental agencies. According to the EPA, there are not any TRI permit holders in Gloucester and 51 RCRIS permits have been issued, as listed in Table NR-7.

Hazardous material release at designated facilities or along major transportation routes within the County poses potential surface water and groundwater resource threats, addressed by the Local Emergency Planning Committee (LEPC). In addition to public safety benefits, the LEPC aims to reduce surface water and groundwater contamination concerns through quick responses to transportation accidents and hazardous material release.

Non-Point Source Pollution

Non-point sources have significant impacts on surface water quality and contain all pollution that does not originate from a distinct discharge point. These sources include stormwater runoff, rain and snow, solid waste disposal, sludge and wastewater land application, septic tanks, dredging, development/construction material spills and leaks, marinas and shipyards, along with impacts from natural processes, such as soil weathering that releases metals, acids, etc. Non-point pollution is not readily quantified, but increased precipitation produces additional runoff and a greater impact. In Gloucester, agricultural runoff, residential septic system discharges, stormwater runoff, or marina discharges affect shellfish grounds and may also impact groundwater resources.

Potential sea level rise may significantly impact Virginia's coastal communities, including Gloucester. Local, or relative, sea level rise results from the combination of global sea level rise and local land movement (subsidence). Climate change producing reduced ice levels and warmer ocean temperatures increase sea levels. Similarly, geological processes are causing subsidence in Gloucester and the greater coastal Hampton Roads region. Consequently, Gloucester has experienced sea level rise over the past century, with recent projections indicating that local sea level rise will continue.

Impaired Waters

The 2013 Virginia Water Quality Assessment identified several local water quality issues, including polychlorinated biphenyls (PCB's) and mercury in fish tissue, dissolved oxygen, enterococcus, benthic-macroinvertebrates, and fecal coliform contamination. Additionally, DEQ reports that impairments exist for shellfishing (especially due to the presence of fecal coliform bacteria), fish consumption, aquatic life, and recreation,³⁴ as shown in Table NR-8. These impairments have caused closures for multiple local creeks and PCB's found in fish tissue have resulted in a fish consumption advisory for the main stems of both the Chesapeake Bay and the York River.³⁵

Total Maximum Daily Loads

Virginia has established a goal that all streams support beneficial uses, including primary contact/swimming, fishing, shellfishing, drinking water, and aquatic life. To achieve this goal and fulfill EPA directives, the state identified point and non-point pollution sources, such as residential, municipal, or industrial discharges, and runoff, determined necessary reductions to meet water quality standards, and developed Total Maximum Daily Loads (TMDL's) that specify annual pollutant discharge limits for impaired waterways.

The Virginia Department of Environmental Quality has completed eight (8) local TMDL's that address water quality impairments in the following waterways:

- Browns Bay and Monday Creek
- North River
- Piankatank River and Harper Creek
- Severn River Watershed
- Ware River Watershed
- Poropotank River and Adams Creek
- Sarah Creek and Upper Perrin River
- York River shellfish waters (growing area 47)

An implementation plan has been developed for the

Piankatank River and the state with input from the County should develop similar plans for the other TMDL's to improve local water quality.

Chesapeake Bay-Wide TMDL's

The EPA has established a Total Maximum Daily Load for the Chesapeake Bay and its tidal tributaries to meet the Chesapeake 2000 Agreement's water quality goals, with impaired Chesapeake Bay segments remaining on the state's Clean Water Act Section 303(d) list. The Chesapeake Bay TMDL, released in 2010 and Virginia's Phase II Watershed Implementation Plan, completed in 2012, assigns nutrient allocations for nitrogen, phosphorus, and sediments by major river basins and requires reductions for these segments.³⁶ Gloucester is within the York River and Chesapeake Bay Coastal basins, with statewide allocations and reductions established in the Phase I Watershed Implementation Plan (WIP). Virginia's Phase II WIP includes allocation strategies for each basin and Chesapeake Bay TMDL implementation will occur between 2018 and 2025 following Phase III WIP establishment. This will require new development, redevelopment, and agricultural lands in all localities to reduce nutrient loads or follow best management practices (BMP's) to eliminate load increases over the life of the TMDL.

Map NR-19: Septic Tank Suitability

Data Source: Natural Resource Conservation Service Soil Survey for Gloucester County, Virginia

The Natural Resources Conservation Service (NRCS), within their soil surveys, assesses areas for limitations that could affect installation, use, and maintenance of septic tanks. These surveys categorize lands based upon their septic tank absorption field suitability, with ratings based upon factors such as saturated hydraulic conductivity, ponding, depth to water table, depth to bedrock, and flooding. A significant portion of the County is rated “very limited” for septic tank absorption field use and alternative septic systems may be required for development. Areas rated as **Somewhat Limited** have features moderately favorable for septic tank absorption field use and fair system performance can be expected with moderate maintenance costs. Areas that are **Very Limited** have one (1) or more features unfavorable for septic tank absorption field use and poor system performance can be expected with high maintenance costs. Septic tank suitability is discussed on pages 173-174.

Groundwater Protection

The Columbia Aquifer, an unconfined aquifer utilized locally, may not produce an adequate potable drinking water supply due to relatively low yields, poor water quality, and groundwater contamination occurrences, with the upper confined aquifers providing better drinking water. The Aquia and Potomac Aquifers likely contain brackish water requiring desalination and the Yorktown-Eastover and Piney Point Aquifers are the best local groundwater resources. The USGS domestic water use study estimated that 94% of wells serving individual homes or businesses are in the Yorktown-Eastover Aquifer or confining zone and 6% are in the Piney Point Aquifer, with approximately 1.87 million gallons per day used domestically.

Seven (7) high priority groundwater threats exist for Southeastern Virginia, including inefficient septic systems, leaky underground storage tanks, spills and improper hazardous materials disposal, leaky surface waste impoundments, leaky landfills, improper pesticide and fertilizer applications, and pumping-induced saltwater encroachment.

Local Groundwater Protection

Local government decisions, such as groundwater management plans that incorporate community-specific goals and management techniques (especially combined techniques) and reflect local groundwater protection needs, may also impact groundwater quality. The HRPDC Groundwater Protection Handbook for Southeastern Virginia provides groundwater management plan development guidance. Gloucester has already taken steps to minimize negative groundwater impacts from septic systems by requiring minimum drainfields for traditional septic tanks where soils can accommodate these systems. However, engineered alternative on-site sewage systems (AOSS) may allow for development where traditional septic systems are not suitable.

The Chesapeake Bay Preservation Area Ordinance also aims to preserve groundwater quality through mitigation measures, including best management

practices, vegetative buffers, Resource Preservation Areas (RPAs), and impervious cover limitations for development sites. These measures prevent surface and groundwater pollution and guide water percolation into aquifers.

In 2013, the state code was amended to include Gloucester as a locality within the groundwater management program, requiring a ten (10) year DEQ permit for large industrial users, such as paper mills, nurseries, or golf courses, that have withdrawals over 300,000 gallons per month. In state reviews of withdrawal requests, multiple factors are considered, including groundwater availability and withdrawal amount justification.

Potential Groundwater Pollution Sources

Defective Septic Systems

Failing or deficient sewage disposal systems can threaten surface and groundwater supplies if they release pesticides, herbicides, and household and septic tank cleaning products into groundwater systems or if nutrients, such as nitrogen and phosphorus, are dissolved in wastewater. The Chesapeake Bay Preservation Area Ordinance requires all conventional on-site sewage disposal systems to be pumped-out at least once every five (5) years, a process coordinated between the County's Environmental Programs Department and local septic system contractors, with notices sent to those needing pump-out services. The County holds periodic septic tank maintenance workshops and its Natural Resource Map and Assistance Guide, published in 1999, includes septic tank pump-out details. New lots are required to have primary and reserve drainfields outside the RPA and a reserve location is required for previously recorded lots where an acceptable site is available.

The Virginia Department of Health (VDH) has documented septic system issues during shoreline sanitary surveys, with failing septic systems of particular concern in southeastern Gloucester where hydric soils and wetlands exist. The Three Rivers

CHAPTER 7 - NATURAL RESOURCES

Health District has committed to addressing failing septic systems by tracking violations and instituting corrective measures through enforcement or cooperative septic repair efforts providing financial assistance through grants or low interest loans. However, properties lacking indoor facilities are not addressed in shoreline surveys and homes relying on outhouses are not cited unless the structure is unusable or dispersing sewage onto the ground surface. Currently, approximately 13,700 homes utilize private septic systems³⁷ and local septic systems experience a 10%-15% failure rate and a 20-year replacement rate.³⁸

In 2000, the state implemented new sewage disposal system installation measures to address groundwater resource treatment and protection, including requiring that existing septic system repairs comply to the greatest extent possible with these new standards.³⁹ Soil types in southeastern Gloucester necessitate engineered systems for sewage treatment prior to disposal, which may now be permitted where previously not possible. System installation may be more expensive than a traditional system and may require continual maintenance, which may not be financially feasible for some residents. If properly installed and maintained, pre-treatment systems are effective, but improper maintenance discharges effluent into surface and groundwater resources. In 2006, the County revised its Zoning Ordinance, requiring new lots under two (2) acres to connect to public water and sewer, in order to reduce the occurrence of failing septic systems on small lots.

In 2011, VDH adopted new alternative on-site sewage system (engineered septic system) standards, requiring drainfields that percolate similar to conventional septic systems and do not produce point source discharges. These systems can be installed on soils that do not support conventional systems through a general permit without requiring specific VDH approval. However, specific system operation and maintenance standards exist, including the following owner responsibilities:⁴⁰

1. Maintaining a system operator relationship
2. AOSS operation and maintenance
3. Regular AOSS operator visits
4. Sample collection by an operator
5. AOSS operator records available to VDH upon request and making a reasonable effort to transfer the records to any future owner
6. Operation and Maintenance (O&M) Manual kept on the property available to VDH upon request and making a reasonable effort to transfer the O&M Manual to any future owner
7. On-site sewage system requirement compliance with the Chesapeake Bay Preservation Act and the Chesapeake Bay Preservation Act Designation and Management Regulations if an AOSS is located within a Chesapeake Bay Preservation Area.

The standards also specify setbacks for drinking water sources, shellfish waters, sinkholes, and wetlands and require testing by a certified operator every five (5) years. This system may allow residential development where it was not previously possible, especially in the areas shown on Map NR-19 as having limited favorability for conventional septic systems due to multiple factors, including water table levels, bedrock depth, soil permeability, subsidence rates, and slope.

Leaking Underground Storage Tanks

Above and Underground Storage Tanks (UST's) contain hazardous substances, such as petroleum, gasoline, diesel fuel, acetone, or kerosene, and can be another pollution source when they corrode and leak, resulting in soil, groundwater aquifer, and local waterway contamination.

The Department of Environmental Quality oversees underground storage tanks and participates in annual, federally-funded Leaking Underground Storage Tank (LUST) clean-up. In 1998, LUST standards were established, requiring new tanks to be made of non-corrodible materials, equipped with overflow and spill prevention devices, and possessing prevention devices and leak detection equipment. Tanks existing prior to 1998 require replacement or retrofitting to meet these standards, which do not apply to residential UST's.

37 Gloucester County Commissioner of Revenue

38 Virginia Department of Health

39 12 VAC §5-610

40 12VAC5-613-140

The Department of Environmental Quality's 2015 database lists 97 local petroleum release sites, with three (3) sites open. Concentrations of LUST's are found in the Court House and Gloucester Point/Hayes areas as well as along Route 17.

Preventive measure requirements have been established to reduce leak risks for petroleum storage tanks used by businesses. The Building Inspection Department works with the state to implement UST and LUST permitting, monitoring, and inspection programs.

Solid Waste Management Facilities

Gloucester currently has three (3) solid waste management facilities and the Middle Peninsula Landfill and Recycling Facility, located on Route 17 in Adner, is permitted as an active landfill, transfer station, and yard waste composting facility. The former County landfill, located in the Court House area along Beehive Drive, was closed in 1994 and has been capped to meet state and federal post-closure requirements. In addition to the existing landfill, Waste Management operates five (5) local waste disposal convenience centers, as shown on Map CF-5:

- Adner-Glenns (3714 Waste Management Way)
- Belroi (5122 Hickory Fork Road)
- Court House (6550 Beehive Drive)
- Dutton (10403 Burkes Pond Road)
- Hayes (7599 Guinea Road)

These centers serve the County's residential and business waste disposal and recycling needs. The County's Clean Community Program, in partnership with Waste Management, sponsors a harmful household waste collection biannually, with collection and disposal aiming to reduce water resource impacts resulting from improper dumping.

Canon Environmental Technologies, located in the County's industrial park, and Joseph Harris Tire Disposal, located on Crab Thicket Road, are local materials recovery facilities permitted through the state's procedural requirements.

Land Conversion and Use Conflicts

Gloucester's higher population growth and residential development rates compared to other Middle Peninsula localities, facilitated by its connection to Hampton Roads, may result in agricultural, forested, and natural land conversion to residential developments. Agriculture and water-based lifestyles, especially along the York River and Chesapeake Bay, are fundamental to Gloucester's identity and it is important to preserve working lands and reduce residential land use conflicts as the County continues to grow. This Comprehensive Plan and the ensuing actions aim to address these issues while promoting appropriate development that complements Gloucester's natural resources.

Land preservation provides many benefits, such as creating jobs and supporting the County's history and identity. Options include agritourism, ecotourism, and cultural and historic tourism, which support the local economy, promote the County's resources and identity, and increase economic potential, all while benefiting the natural environment.

CHAPTER 7 - NATURAL RESOURCES

Goal NR-1: Preserve Gloucester's rural character.		
Objectives	Implementation Strategies	Time Frame
Encourage growth away from areas such as farms and other working lands	Zone for increased density and development in the Development District and Village Areas	Short Term
Identify areas that should be protected as working lands and zone them accordingly	Maintain Agricultural Zoning for Working Lands and develop a Working Waterfront Zoning District	Short Term
Consider the creation of a Transfer of Development (TDR) or Purchase of Development Rights (PDR) program incentivize working land preservation	Initiate a study to determine appropriate transfer and receiving areas as well as determine incentives and a process for the use of TDR or PDR	Long Term
Allow working lands as part of the open space requirement for cluster developments	Modify the Zoning Ordinance related to cluster development and agricultural, forestry, and water uses	Short Term
Consider the creation of a Purchase of Agricultural Conservation Easements program to provide incentives to preserve working lands	Work with local land trusts and state agencies to encourage Conservation Easements	Short Term
Encourage new forms of agriculture and natural resources-based businesses such as agritourism	Modify the Zoning Ordinances to encourage and support natural resource-based businesses	Short Term
	Promote and provide support for natural resource-based businesses	Short Term
Encourage development in areas where public utilities such as water and sewer are provided	Zone for increased density and development in the Development District and Village Areas	Short Term
	Develop incentives for connection to public water and sewer	Long Term

Goal NR-2: Protect and improve water quality.		
Objectives	Implementation Strategies	Time Frame
Restore the quality of Gloucester's surface waters to meet standards for swimming, shellfish harvesting, and other uses	Work with the State to develop TMDL's for impaired waterways	Long Term
	Work with the State to develop TMDL implementation plans for impaired waterways to reduce current nutrient loads and offset future loads	Long Term
	Implement water quality BMP's on public riparian properties	Long Term
	Encourage the implementation of water quality BMP's on private property	Short Term
Work with state and regional agencies to educate farmers and residents about and encourage the use of agricultural and other best management practices, nutrient management planning, and available state and federal cost-share programs	Partner with other agencies to inform and educate the community	Short Term
	Provide continued information and education during staff interaction with the public	Ongoing
Support state and regional agencies that educate farmers and residents about proper fertilizer and pesticide use and efficient irrigation and watering practices to protect surface and groundwater resources	Continue to support agencies that provide these resources for the community such as the Cooperative Extension and Tidewater Soil and Conservation District	Ongoing
Utilize a growth management strategy to protect groundwater recharge areas and surface water sources	Identify appropriate groundwater protection areas	Short Term
	Identify appropriate buffers for the protection of surface water sources	Short Term
	Implement low-density zoning near groundwater recharge areas and surface water sources	Short Term
Work with the Virginia Department of Health and other agencies to address issues with failing septic systems and their replacement through alternative designs or connections to the County's sewer system	Support and promote low-cost loan and replacement grants offered by other agencies and non-profit groups	Short Term
	Continue to seek enabling legislation from the General Assemble to allow the County to require mandatory connections to public water and sewer if the County invests in extending the system to address failing septic systems	Long Term

CHAPTER 7 - NATURAL RESOURCES

Goal NR-2: Protect and improve water quality. (Continued)		
Objectives	Implementation Strategies	Time Frame
Work with the Virginia Department of Health and other agencies to educate residents about the importance of maintaining septic systems, both conventional and alternative	Continue educational outreach regarding septic maintenance through a multimedia approach and through staff interaction during permitting and inspection	Short Term
Consider the use of impaired water bodies as the basis for watershed management planning to improve water quality based on the source of the impairment	Participate in the state's preparation of Implementation Plans for local impaired water bodies	Short Term
	Coordinate land use plans and development proposals with recommendations found in TMDL implementation plans	Long Term
Consider water quality benefits when deciding when and where to extend public water and sewer infrastructure	Coordinate with VDH to identify areas most susceptible to failing septic systems	Short Term
	Develop a cost-benefit analysis tool to determine the effectiveness of extending public utilities and the costs to the environment and the economy of impaired water bodies	Long Term
Consider impacts to water quality caused by private and public development decisions, including capital project and public improvements	Ensure compliance with the Stormwater, Erosion and Sediment Control, and Chesapeake Bay Preservation Ordinances on all projects	Ongoing
Encourage or require nutrient management plans for agricultural and land-based uses (such as athletic fields, golf courses, parks, etc.)	Support and promote educational efforts of regional agencies such as the Tidewater Soil and Conservation District	Ongoing
	Develop Nutrient Management Plans for public properties	Long Term
	Encourage developers to provide nutrient management plans and maintenance on private developments	Short Term
Consider the adoption of a Clean Marina program	Support and promote participation in the state's program	Short Term
Identify areas as appropriate for designation as "No Discharge" zones	Explore the possibility and requirements to establish "No Discharge" zones	Ongoing
	Develop the process for designation and evaluate the resources needed to implement "No Discharge" zones	Short Term

Goal NR-2: Protect and improve water quality. (Continued)		
Objectives	Implementation Strategies	Time Frame
Continue to work with the state to register existing and proposed underground storage tanks and identify leaking tanks through the building permit process	Maintain active database of UST's and enforce corrective action on Leaking UST's	Ongoing
Designate watershed management areas and consider impacts to watersheds when reviewing development proposals	Develop Watershed Management Plans for each watershed in the County	Long Term
Monitor the location and effectiveness of stormwater Best Management Practices to implement the County's Chesapeake Bay Total Maximum Daily Load Watershed Implementation Plan	Inventory existing BMP's in the County	Ongoing
	Develop and maintain a database of BMP's	Short Term
	Monitor the effectiveness of the existing BMP's	Long Term
	Monitor and enforce long-term maintenance of BMP's	Long Term
Goal NR-3: Protect air quality.		
Objectives	Implementation Strategies	Time Frame
Promote alternative modes of transportation such as walking, bicycling, and carpooling to reduce congestion and automobile emissions	Allow and encourage pedestrian scale development in Village Areas	Short Term
	Encourage carpooling through maintenance of park and ride lots	Short Term
	Support local carpooling and transit providing agencies	Ongoing
	Promote and enforce local and state burning ordinances	Ongoing
Encourage the preservation of existing tree canopy on new developments and redevelopments	Evaluate and modify local ordinances to provide for tree protection and canopy cover	Long Term
	Provide incentives for tree preservation	Short Term
Encourage the planting of trees and native vegetation on public and private property	Coordinate with state and regional agencies to identify appropriate native plants	Short Term
	Provide incentives for use of native species in new developments	Short Term

CHAPTER 7 - NATURAL RESOURCES

Goal NR-4: Conserve and manage Gloucester’s natural resources.		
Objectives	Implementation Strategies	Time Frame
Consistently and effectively enforce and implement the Zoning, Subdivision, Stormwater, Erosion and Sediment Control, Wetlands, Floodplain, and Chesapeake Bay Preservation Ordinances	Review and modify development ordinances for effectiveness and efficiency	Ongoing
Continue to process development applications such that the early identification of wetlands in the development process is ensured	Use available on-line resources to determine the potential for wetlands	Ongoing
	Work with local, state, and federal agencies to evaluate properties for potential impacts and design developments to reduce impacts where possible	Ongoing
Support the Virginia Department of Conservation and Recreation in conducting additional natural heritage and habitat planning studies of the County’s natural resources	Consider impacts to natural heritage features and species in future planning efforts	Long Term
Prepare a Countywide open space and natural resources inventory and evaluation as a baseline for an open space plan, which would guide the County’s land use, preservation, and infrastructure decisions	Develop a green-infrastructure plan for the county or for various regions within the county	Long Term
Protect and preserve open space through ordinances and policies	Develop incentives for cluster development in areas used for agriculture or conservation lands	Long Term
	Consider the use of a Conservation Zoning Ordinance to require critical natural resource features to be preserved during development	Long Term
	Create a Green Infrastructure Plan identifying open spaces and potential connections	Long Term
	Review Ordinances to better define “open space” and provide appropriate protection based on the use of the open space as buffers, natural habitat, or recreation areas	Short Term

Goal NR-4: Conserve and manage Gloucester’s natural resources. (Continued)		
Objectives	Implementation Strategies	Time Frame
Protect wetlands and other natural resources from unnecessary destruction due to drainage, filling, or construction that would unnecessarily hamper or destroy vegetation, water storage, erosion control, or plant and wildlife habitats	Work with developers and other agencies to design projects to minimize impacts	Ongoing
Evaluate opportunities to educate residents about the benefits of preserving and protecting natural resources	Promote and support local and regional opportunities and agencies that inform residents about the local environment and the benefits provided by natural resources	Ongoing
Promote public awareness and community participation in natural resources protection through educational programs and events	Continue collaborative educational efforts and events in the county and look for opportunities for new events and programs that promote the county’s abundant natural resources	Short Term
Identify appropriate sites for public waterfront access and boating facilities and preserve those that exist	Inventory existing public access sites and identify their current and potential uses	Long Term
	Work with the Chesapeake Bay Public Access Authority, FEMA, and other agencies to identify new site for public access	Ongoing
	Develop management plans for open space and public access parcels	Long Term
	Develop a county policy for acquiring new sites through dedication, donation, or acquisition	Long Term

Goal NR-5: Address impacts related to Sea Level Rise and Recurrent Flooding.		
Objectives	Implementation Strategies	Time Frame
Protect residents and County assets from sea level rise and recurrent flooding impacts	Apply the recommendations within the Floodplain Management Plan, Open Space Plan, and Natural Hazards Mitigation Plan	Short Term
	Review and regularly update the Floodplain Management, Open Space, and Natural Hazards Mitigation Plans	Ongoing
	Continue participation in region discussions and planning efforts regarding sea level rise and recurrent flooding	Ongoing
	Consider sea level rise and recurrent flooding in County-funded projects	Short Term
Maintain citizens' ability to continue everyday activities	Continue participation in the Community Rating System	Ongoing
	Provide educational opportunities to minimize impacts on citizens' lives	Ongoing
	Review and update the Zoning, Subdivision, Stormwater, Erosion and Sediment Control, Wetlands, Floodplain, and Chesapeake Bay Preservation Ordinances as appropriate	Long Term
	Direct growth away from vulnerable areas	Long Term

Battle of the Hook Reenactment - Source: Gloucester Parks, Recreation & Tourism

CHAPTER 8

Cultural and Historic Resources

Established over 360 years ago, Gloucester County is one of the oldest continuously settled jurisdictions in the country. Gloucester has maintained a rural character throughout most of its existence, but recent decades have seen increased growth and development. This change brings increased local economic vitality along with related planning challenges, including preserving important historic and cultural sites, structures, and districts. Historic resource preservation is supported in this Comprehensive Plan by clear goals and objectives prioritized to promote resource protection for their continued use and enjoyment by Gloucester's citizens and visitors.

Gloucester's Rich History

The Powhatans were the earliest local residents, with their capital located at Werowocomoco, on the north shore of the York River near Purtan Bay. Chief Powhatan

ruled over the Eastern Virginia Native Americans and interacted with English colonists exploring Gloucester shortly after Jamestown's settlement in 1607. In addition, the legend of Pocahontas helping to save Captain John Smith's life originated at Werowocomoco, where they likely met.

Gloucester was part of the eight (8) original shires of Virginia established in 1634, though the county was officially formed from York County in 1651. Named for Henry Stuart, Duke of Gloucester and son of King Charles I, the earliest local land patents were granted in 1639 with subsequent settlement proceeding rapidly. By the mid-17th century, Gloucester was a major tobacco producer primarily settled with major plantations. A number of these colonial buildings have survived, such as the Ware and Abingdon Episcopal Churches and the Colonial Courthouse in the historic Court Circle, or are preserved as archaeological sites, such as the Fairfield Plantation.

Since the County was established, many historically significant events have occurred within its borders,

Battle of the Hook Reenactment at Warner Hall - Source: Gloucester Parks, Recreation & Tourism

including Nathaniel Bacon's passing in 1676 following Bacon's Rebellion and retreat from Jamestown. In addition, Tyndall's Point, near Gloucester Point, was originally built in 1667 and reinforced as an important military stronghold through two (2) major wars. During the Siege of Yorktown and Gloucester, the Battle of the Hook, occurring along several miles of the current U.S. Route 17 from Seawell's Ordinary to Gloucester Point/Hayes, played a crucial role in the surrender of Cornwallis' forces. Gloucester Point was the scene of Cornwallis's "Second Surrender" after Cornwallis' forces laid down their arms in Yorktown. It later served as a re-fortified Confederate Army position during the Civil War before falling to the Union and utilized as an operations base and gathering point for former slaves during the war.

Gloucester was also home to several prominent citizens, including George Washington's ancestors, most notably his grandmother, who resided at Warner Hall. In addition, Rosewell, once a home to John Page (a Virginia Governor and U.S. Congressman), was one of the largest Virginia estates prior to being destroyed by a fire in 1916. Thomas Jefferson often visited this estate and attended services at Abingdon Episcopal

Church, occasionally with Washington. Lewis Burwell I settled at Fairfield in 1651 where he produced tobacco. Fairfield stayed in the family for several generations. Burwell's great-grandson, known as Lewis Burwell I/II, was named to the governor's council and served as Acting Governor of the Colony in 1751.¹

Other notable Gloucester residents are John Clayton, an 18th century botanist who had a wildflower named after him, and Dr. Walter Reed, an Army surgeon who made discoveries about yellow fever, leading to medical advancements that ultimately allowed the Panama Canal to be built. Additionally, several influential 20th century African-American leaders, such as Robert R. Moton, a Hampton Institute educator and Tuskegee Institute principal who retired to Holly Knoll, a "think tank" for African-American advancement along the York River in Cappahosic. Thomas Calhoun Walker, a former slave, gained an education at the Hampton Institute. Walker later became the first African-American lawyer in Gloucester and served two (2) terms on the Board of Supervisors. He also served as the superintendent of the Negro Schools of Gloucester County, without pay, in order to ensure education for

¹ Thomas Jefferson Foundation

Historic Abingdon Church with daffodil plantings - Source: David Girard & Gloucester Parks, Recreation & Tourism

members of the community. In addition, Gloucester was the home of Irene Morgan who, in 1944, refused to give up her bus seat to a white man. Thurgood Marshall argued and won Morgan's case in 1946 before the United States Supreme Court. While the resulting law was not clear-cut, Morgan's efforts paved the way for Rosa Parks to make a similar stand more than a decade later.

Likewise, agricultural resources have played an important role in local history, including daffodils, which were first brought here with the original colonists in the 17th century. Although bulbs could be found throughout the County during the springtime, the first commercial daffodils were not harvested and shipped until the late 19th century. Shortly thereafter, Gloucester became known as the "Daffodil Capital of the World" in the 1930's and 1940's, bringing tourists and media, until the decline of the local daffodil industry. The importance of the daffodil to the history of the County is honored each spring during the Daffodil Festival.

Protection and Preservation Programs

Historic preservation enhances community character and reflects a community's civic pride. There are multiple historic preservation methods and many opportunities exist through protection, preservation, tax benefits, and professional historical/architectural consulting. Gloucester should continue to explore and promote these programs in collaborative efforts to preserve the County's history.

National Register of Historic Places

The National Register of Historic Places (NRHP), created in 1966 and administered by the National Park Service (NPS), is intended to document properties important to United States history. Historic property registration provides numerous benefits, including tax credits, maintenance or rehabilitation technical assistance, and the ability to donate historic preservation easements. Register inclusion does not

CHAPTER 8 - CULTURAL AND HISTORIC RESOURCES

Table HR-1: Officially Designated Gloucester County Historic and Cultural Resources

Property	VLR	NRHP	Historic Preservation District
Rosewell	11/5/1968	10/1/1969	Yes
Toddsbury	9/9/1969	11/12/1969	Yes
Abingdon Church	7/7/1970	9/15/1970	Yes

Hockley	3/18/2010	7/9/2010	No
Gloucester Downtown Historic District	9/30/2010	12/27/2010	No

* This site is also a National Historic Landmark. Source: Virginia Department of Historic Resources

directly affect property values or taxes, but specific guidelines must be met to receive the aforementioned benefits. In addition, National Register designation may provide certain commercial uses relief from some modern building code requirements.

Virginia Landmarks Register

The Virginia Landmarks Register (VLR), established in 1966 and administered by the Virginia Department of Historic Resources (DHR), is the state's official list of Virginia historical properties. Property seeking NRHP nomination must first obtain VLR designation, which has similar criteria to the National Register. There are currently 31 local properties listed in the VLR and NRHP, as shown on Table HR-1.

National Historic Landmarks

The County is home to one (1) National Historic Landmark (NHL), the Robert R. Moton House (Holly Knoll). This program recognizes nationally significant historic properties demonstrating an exceptional value in interpreting United States heritage.

Virginia Historic Preservation Easements

Since most state-recognized historic landmarks are owned privately, they are more vulnerable to loss or deterioration. The Virginia Historic Preservation Easement Program allows historic property owners to establish an easement, letting a property to remain in ownership while protecting it from future development. The owner may also receive financial benefits, such as inheritance or personal property tax reduction. Currently, five (5) historic easements are established locally: Burgh Westra, Roaring Springs, Cappahosic House, Rosewell, and Gloucester Women's Club, as shown on Map HR-1.

Historic Overlay District

Gloucester's 2015 Zoning Ordinance includes a Historic Overlay District (H-1), shown on Map HR-1. This overlay district, created in 1984, was established to protect historical structures or sites that contribute to Gloucester's heritage. The County's Historical Committee reviews applications for construction, demolition, or alteration within the district and advises property owners within the Historic Preservation District on property maintenance, including requirements mandated by DHR's historical easements. This district contains properties listed on the NRHP during the district's enactment and, although sites have not been added since, new properties can be included if rezoned.

Many individual sites throughout the County are listed in the Historic Overlay District and the Courthouse Square Historic District is the only local multi-parcel site. As the community has desired that private historic properties preservation efforts occur through incentives instead of regulations, the Committee's role is somewhat limited. Structural adaptive re-use, the most common preservation technique, is encouraged along with any other applicable methods.

Non-Profit and Private Preservation

Other non-profit or private preservation and maintenance opportunities are available for local historical and archaeological resources. Examples include Preservation Virginia's previous ownership and maintenance of Walter Reed's Birthplace, Warner Hall and the Toddsbury properties' private operation as a country inn and bed and breakfast, respectively, and preservation efforts by the Rosewell and Fairfield Foundations. Though the Historical Society has contributed to several historic site and structural preservation initiatives, rehabilitation and long-term maintenance costs often exceed private, non-profit financial and personnel resources. A coordination of these groups could provide increased synergy and efficiency while helping private property owners obtain historic preservation benefits.

Historic and Cultural Resources

The numerous historic properties, districts, and archaeological sites preserved for their local, state, and national importance reflects Gloucester's rich history. The following unique historical and cultural resources have been found within the County.

Historic Sites and Structures

Gloucester includes several cultural and historic resources of statewide and national importance, some of which are established in the local Historic Preservation District, as listed in Table HR-1. There are also many local historically and culturally significant sites that may be eligible for the VLR and NRHP but are not yet listed. It is important that the County identify these sites and plan for their preservation. Local historic resource inventory should assess the site or district's historical or cultural importance and recommend the necessary preservation tools, such as voluntary easements, land use measures, zoning, and

There are thirty-one (31) sites in Gloucester County that are listed on both the National Register of Historic Places and the Virginia Landmarks Register. Examples of registered properties include Abingdon Church, the Courthouse Square Historic District, the Downtown Historic District, White Hall, Ware Neck Store and Post Office, and the T.C. Walker House. Seventeen (17) of these sites are also designated as Historic Overlay Districts according to the County's Zoning Ordinance. The Virginia Department of Historic Resources owns five (5) historic easements in Gloucester. The Robert R. Morton House (Holly Knoll), in addition to being on both the National and Virginia Registers, is also designated as a National Historic Landmark, signifying that it demonstrates an exceptional value in interpreting the heritage of the United States.

greenways, among others. As Historical Committee members work with the Departments of Planning & Zoning and Information Technology to compile this inventory, this information can also be used for educational, research, and tourism opportunities.

Historic Districts

Gloucester contains two (2) historic districts listed on the NRHP and VLR, both located in the downtown Court House area.

The **Gloucester County Courthouse Square Historic District** is found along Main Street, providing an example of an early Virginia county seat complex. The large green, enclosed by a red brick wall, comprises a circular courtyard with five (5) buildings: an old debtor's prison, a jail, the Roane Building, the Clayton Building, and the 1766 courthouse, and is surrounded by other historic structures, including "lawyer's row," the Botetourt Hotel, and the Birkhofer Building. The County owns and maintains the Court Circle buildings, the courthouse is used for local public meetings, and this building and others within the Court Green are open to the public during the day.

The **Gloucester Downtown Historic District** contains seven (7) Main Street blocks from the Court House Circle to Ware House Road and demonstrates characteristics of both an independent rural Colonial town and modern day Main Street. This District, nominated by the Main Street Preservation Trust (MSPT) based on the Gloucester Court House Village Sub-Area Plan's recommendations, was achieved to encourage Main Street's commercial property owners to take advantage of structural maintenance and improvement tax incentives within the district.²

Archaeological Resources

Archaeological resources include specific areas where previous human life or activities of a certain age and historical significance warrant special protection. Careful study gives insight into previous generations and site disturbance may result in a loss of these resources. Although many local archaeological sites

² Gloucester Court House Village Sub-Area Plan

Water Battery at Gloucester Point - Source: Gloucester Parks, Recreation & Tourism

have been identified, two (2) major areas contain outstanding archaeological resources.

The **Gloucester Point Archaeological District**, located on Greate Road and Route 17 near Gloucester Point, includes portions of Tyndall's Point Park, remnants of Confederate and Union fortifications, and the original colonial Gloucestertown site. The Virginia Institute of Marine Science (VIMS) campus is located on the western half of colonial Gloucestertown.

Werowocomoco, a Native American village located on Purtan Bay, was the Powhatan chiefdom capital, governed by Chief Powhatan at the time Jamestown was settled in 1607 by the English. Werowocomoco was abandoned in 1609 to move away from English colonists and the site is reported to be where Captain John Smith was held and later rescued by the chief's daughter, Pocahontas. Smith's notes, maps, and other historic documents combined with field research conducted since 2003 have confirmed this location. This site is located on private property, but the current

owners have allowed continued study and the site was added to the NRHP in 2006.

Gloucester does not currently have requirements for determining potential impacts on archaeological or cultural resources during development. Cultural Resource Surveys (CRS) are sometimes requested during rezoning proposals, but this is a voluntary proffer by the applicant. The County formed a committee to evaluate the opportunity to utilize Cultural Resource Surveys, but subsequent efforts did not gain the necessary support and the Board voted to not pursue requirements for archaeological assessment at their May 21, 2013 meeting.

One item identified by the committee's work was the ability for archaeological assessments to assist staff and decision makers in determining potential CRS candidate areas, informing developers of historically and culturally important areas that may warrant additional study and planning. Survey utilization could encourage developers to preserve these cultural

Gloucester Museum of History - Source: Gloucester Parks, Recreation & Tourism

resources through clustering, density bonuses, or other means allowing for increased site and lot design flexibility in return for cultural resource protection.

tourism opportunities, such as driving tours, festivals, historic homes, and museums. The following cultural heritage programs and facilities are already established in the County.

Cultural Heritage Tourism

Cultural heritage tourism, traveling to experience the places, artifacts and activities that authentically represent the stories and people of the past and present,³ includes tourism for cultural, historic, and natural resources. Tourism as an economic development tool can effectively promote both culture and heritage. Heritage tourism provides economic benefits through new businesses, jobs, and increased property values while cultural heritage tourism also offers residents' a higher quality of life and promotes community pride.

Gloucester has developed several cultural heritage

Gloucester Museum of History

The Gloucester Museum of History is housed in the Botetourt Building, a late-18th century structure originally constructed as a tavern or ordinary, but also used as a hotel and County administration building. This museum houses several permanent exhibits throughout the year and also showcases traveling or seasonal exhibits.

Gloucester Visitors Center

The Visitors Center, located in the Roane Building (built in 1894 and formerly housed the Clerk's Office) within

³ National Trust for Historic Preservation

CHAPTER 8 - CULTURAL AND HISTORIC RESOURCES

the Court Green, is staffed by volunteers coordinated by the Department of Parks, Recreation, and Tourism. In 2014, this department initiated a request for proposal to establish a second visitor's center through a public-private partnership at a private business that would meet the state's requirements. The designation was awarded to Whitley's Peanuts in Gloucester Point, which helps to capture visitors entering the County from the Coleman Bridge. Both centers are certified through the Virginia Tourism Corporation.

Historic Tours

Gloucester's three (3) driving tours offer residents and visitors a chance to see sites highlighting different aspects of the local history and culture. The African American Heritage Trails Tour visits several African American historical sites that have influenced the County's past. The History and Adventure Trail is a seasonal program leading visitors to several local historic properties. The Driving Tour of Gloucester County's Country Stores and Rural Post Offices covers sites illustrating early rural life for Gloucester residents.

Thomas Calhoun Walker, the first black man to practice law in Gloucester County; served 2 terms on the Board of Supervisors 1891-1895 - Source: BlackPast.org

The Virginia Civil War Trails is a statewide driving tour with two (2) stops in Gloucester at Tyndall's Point Park, where Confederates fortifications and earthworks helped block General George McClellan's efforts during the Peninsula Campaign, and the Court Green on Main Street.

2018 Daffodil Festival - Source: Gloucester Parks, Recreation & Tourism

The Captain John Smith Chesapeake National Historic Trail has identified several interpretive locations in the County on both land and water. Gloucester Point is designated as a Gateway to the York River section and the John Smith Trail follows routes taken by John Smith during several Chesapeake Bay explorations between 1607 and 1609, such as Capahosic Landing, Werowocomoco, Poropotank, and Rosewell.

Historical Markers

Gloucester includes several historical highway markers installed through the DHR Historical Marker Program, providing historical education opportunities while promoting local tourism. New markers can be established for places, events, or persons with over 50 years of historical significance.

Similarly, Gloucester's Department of Parks, Recreation, and Tourism administers a local Historic Marker Program for properties that add significant

historical value for the County's residents and visitors. New markers are established based upon guidelines similar to those used by DHR and two (2) local properties have been recognized. Table HR-2 lists the existing historical markers in the County.

Festivals and Other Events

The Daffodil Festival, an annual event held in the Spring, celebrates the local history and importance of daffodils, which date back to the County's original English settlers. This weekend event features various activities, including a parade, 5K run, classic cars, live music, and Daffodil Queen crowning, among others.

Additional cultural events include the Historic Garden Week, Guinea Jubilee, Renaissance Festival, and military reenactments, such as the Battle of the Hook, which has drawn thousands of visitors from throughout the country and beyond.

Linking Cultural, Historic, and Natural Resources

Gloucester contains significant natural resources that contribute to the local cultural history. Green infrastructure links areas of ecological significance through linear green spaces (corridors), such as conservation lands, open space, working forests, farms, historic areas, parks, stream buffers, scenic byways, and hiking trails. Existing local historic, cultural, and natural resources provide the framework to establish a green infrastructure network and plan that would link these resources together into an interconnected system, preserving the streetscapes and areas surrounding these resources, and guide tourism and agritourism activities while maintaining the rural character. The plan could be used to identify

potential rural historic districts, such as Ware Neck and other areas containing historic farms, noteworthy low-density residential development, and active agricultural lands. The County's rural character and historic landscapes can be preserved through various tools, such as historic and open space easements, Purchase or Transfer of Development Rights (PDR and TDR) programs, cluster development tools, and greenway overlay designation.

Mapping these features provides opportunities for preservation efforts as well as unique tourism and recreational opportunities. The County can also develop plans for bike routes, blueways, and other alternative transportation options that visit historic sites and natural areas.

Rosewell - Source: Gloucester Parks, Recreation & Tourism

CHAPTER 8 - CULTURAL AND HISTORIC RESOURCES

Goal CHR-1: To respect historic and cultural values, including preservation of historic sites and buildings, archaeological and cultural sites representing various periods of architecture and history within the County.		
Objectives	Implementation Strategies	Time Frame
Establish a clear directive for decision makers for how the community wishes to protect and manage historical and cultural resources for future generations.	Review and revise the Historic Ordinance to provide clear directives based on community input and outreach.	Long Term
Preserve and maintain structures of significant historical, architectural, or cultural value and their immediate environment and/or historical setting.	Develop an inventory of the county's resources using a gradient approach for significance. The inventory should include historical structures and sites, archaeological sites, and sites of cultural significance, and identify the level of importance from a national, state, or local level.	Long Term
	Based on an inventory of important historic buildings and sites, plan for development in the surrounding areas through appropriate land use regulations, such as zoning, overlay districts, greenways, and other tools that will protect or enhance the historically or culturally significant features in the context in which they currently exist.	Long Term
	Work with the historical committee, historical society, and other agencies and non-profit groups to have historic properties listed on the National and State Registers.	Short Term
Encourage and promote the adaptive reuse of historically or culturally significant buildings and structures.	Educate property owners about tax incentives for the preservation and restoration of historic structures.	Ongoing
	Provide incentives for the adaptive reuse of buildings.	Short Term
	Provide flexibility in the zoning ordinance to accommodate historic structures and sites.	Short Term
Promote the economic benefits of historic resources as a source of community pride, enhancement, and tourism.	Continue to monitor the tourist activities generated by historic resources, and continue to celebrate the community's rich history through on-going efforts and activities of the Department of Parks, Recreation and Tourism and Historic Committee in partnership with multiple other groups and agencies.	Ongoing

CHAPTER 8 - CULTURAL AND HISTORIC RESOURCES

Goal CHR-1: To respect historic and cultural values, including preservation of historic sites and buildings, archaeological and cultural sites representing various periods of architecture and history within the County. (Continued)		
Objectives	Implementation Strategies	Time Frame
Investigate opportunities for funding a complete survey of historical, archaeological, and cultural structures and sites. The landmarks would be ranked by priority for preservation or conservation efforts.	Provide funding for cost sharing with the Department of Historic Resources (DHR) to complete a survey.	Long Term
Establish a program for encouraging or assisting owners of important historical buildings and sites to submit applications to the National Register of Historic Places and the Virginia Landmarks Register.	Task the Historical Committee with the role of outreach to other organizations and individuals to provide information regarding these programs and provide assistance in completing the forms necessary to apply.	Short Term
Promote historic, archaeological, and cultural resources through education and identification by signs, markers, maps, and other means.	Task the Historical Committee and Tourism Department to work with other organizations and property owners to continue to promote the County's resources through these various mechanisms.	Ongoing
Advance the activities, responsibilities, and capacity of the Historical Committee in order to be able to assist the County and other groups in implementation of the community's goals for historic and cultural resources.	Develop a strategic plan for the Historical Committee and determine the resources needed to implement the plan.	Long Term
	Review and revise the Committee's mission statement and bylaws to reflect the strategies outlined in the plan	Long Term
	Establish a Historical Review Committee qualified with appropriate credentials to make informed and fair decisions and recommendations regarding the impacts to significant historic structures and sites.	Long Term
Discourage the loss of historically or culturally significant structures through "benign neglect" or natural causes by encouraging the repair and maintenance of these structures in a stable and secure condition until such time as the owner can restore the structure in a historically compatible manner.	Explore the possibility of developing a property maintenance code.	Long Term
	Create a fund, loan program, or other mechanism through the county or non-profit group to assist property owners in repairing and maintaining significant historic structures to prevent further deterioration and damage.	Long Term

Goal CHR-1: To respect historic and cultural values, including preservation of historic sites and buildings, archaeological and cultural sites representing various periods of architecture and history within the County. (Continued)

Objectives	Implementation Strategies	Time Frame
Protect and preserve archaeological resources affected by, or adjacent to, any acquisition, stabilization, preservation, rehabilitation, restoration, construction, or reconstruction project.	Encourage developers to conduct Cultural Resource Surveys on projects that occur within Historic Districts.	Short Term
Provide incentives for developers to preserve archaeological resources as part of their plan of development through flexibility in site design, density bonuses, and other tools.	Amend the Zoning and Subdivision Ordinances to provide incentives to preserve cultural resources along with other features - such as natural resources.	Short Term

Goal CHR-2: To improve accessibility and levels of use of historic places.

Objectives	Implementation Strategies	Time Frame
Explore the possibility of acquiring major historical or archaeological sites for public use as museums, tourist attractions, and parkland.	Task the Departments of Parks, Recreation and Tourism, Planning and Zoning, and Economic Development along with other agencies and organizations to continue to monitor sites such as the Woodville School and T.C. Walker House for opportunities for community use.	Ongoing
Promote Gloucester's historic landmarks and local contributions to the nation's history to enhance tourism.	<p>Continue to support the Department of Parks, Recreation and Tourism as well as other organizations' efforts to promote the County's historic landmarks as tourism opportunities.</p> <p>Continue to work with regional and state agencies to promote Gloucester's contributions to national historic events.</p>	Ongoing
To promote the economic benefits of protecting historic resources for both tourism and for attracting businesses to the community.	Continue to support and work with the Economic Development Authority, the Department of Parks, Recreation and Tourism, the Historical Committee, Planning Commission and many other organizations that recognize the economic benefits of protecting historic resources for economic development and tourism.	Ongoing

CHAPTER 8 - CULTURAL AND HISTORIC RESOURCES

Goal CHR-2: To improve accessibility and levels of use of historic places. (Continued)		
Objectives	Implementation Strategies	Time Frame
Use a green infrastructure planning approach to create alternative recreational opportunities for enjoying the County’s cultural and natural resources.	Develop a green infrastructure plan based on the County’s known historic sites and resources, parks, greenways, and other cultural and natural amenities in order to better plan for the continued protection of these resources within their current context and to prevent incompatible uses and development from degrading the integrity of these resources in the long term.	Long Term

Gloucester Point - Source: Gloucester Parks, Recreation & Tourism

CHAPTER 9

Future Land Use

Over the 20 year planning horizon, anticipated change will create both opportunities and challenges. Current development policies are based upon providing adequate public services while encouraging growth that contributes to current and future residents' quality of life. The Future Land Use Plan aids in coordinating infrastructure improvements with future residential and commercial developments.

Planning Considerations

Rural Character Preservation

As agricultural lands have been converted into residential and commercial developments, the remaining rural, undeveloped areas may undergo similar changes, resulting in a loss of important features, such as natural landscapes, unobstructed

agricultural areas, and working lands. Housing development in agricultural districts can also create conflicts between residential and working land uses. Since low-density residential development requires larger lots, greater land is consumed and working lands are lost. Clustering can mitigate these conflicts by creating compact growth while leaving large, contiguous tracts for farming, forestry, and open space in areas beyond the Village Development Areas. Other potential tools for protecting rural character include Transfer of Development Rights (TDR), Purchase of Development Rights (PDR), conservation easements, and green infrastructure planning.

Waterway Considerations

Water-based industries have declined as working waterfronts have been converted into coastal residential developments. These challenges and land use conflicts must be proactively addressed if working waterfronts are to remain a part of the community.

Rural development along Route 17 in the northern portions of the County - Source: Bruce Nelson Photography

Naval Weapons Station Yorktown has a Pier Safety Arc extending into the York River near Gloucester Point/Hayes where water traffic and aquaculture is permitted, but inhabited buildings are not. Any development within or near the arc or its buffer should be coordinated with the Navy. Nearby areas may experience noise from the pier, which could increase as waterfront development occurs.

Cost of Public Services

As Gloucester's has previously experienced primarily residential development, service and facility demands have increased due to the resulting population growth. Balanced growth strategies that encourage efficient service and facility provision guides new development to appropriate areas while planning system improvements elsewhere over time.

Congestion Management

Since most residents travel by private automobile, increased growth will add vehicular traffic on major

routes, especially Route 17. Under the current zoning, residential development is permitted by-right in a majority of the County. As a result, developers are not required to provide off-site transportation system improvements to maintain sufficient capacity. Congestion management and capacity should be considered in future land use decisions and include development strategies that support alternative transportation, especially within the Village Development Areas.

The Environment

Gloucester's natural resources attract visitors and residents, but are also threatened or lost as areas develop. Natural environment, local agriculture, and local forestry preservation can be supported by encouraging compatible land use techniques such as preventing fragmentation through Transfer or Purchase of Development Rights programs, clustering, or alternative tax policies. In addition, supporting alternative working land uses, such as non-traditional, value-added, agricultural-based businesses and tourism centers, will reduce the threat

Gloucester County Business Park along Route 17 in the southern portion of the County - Source: Gloucester Economic Development

to these resources while also contributing towards meeting Total Maximum Daily Load water quality requirements.

Non-Residential Uses

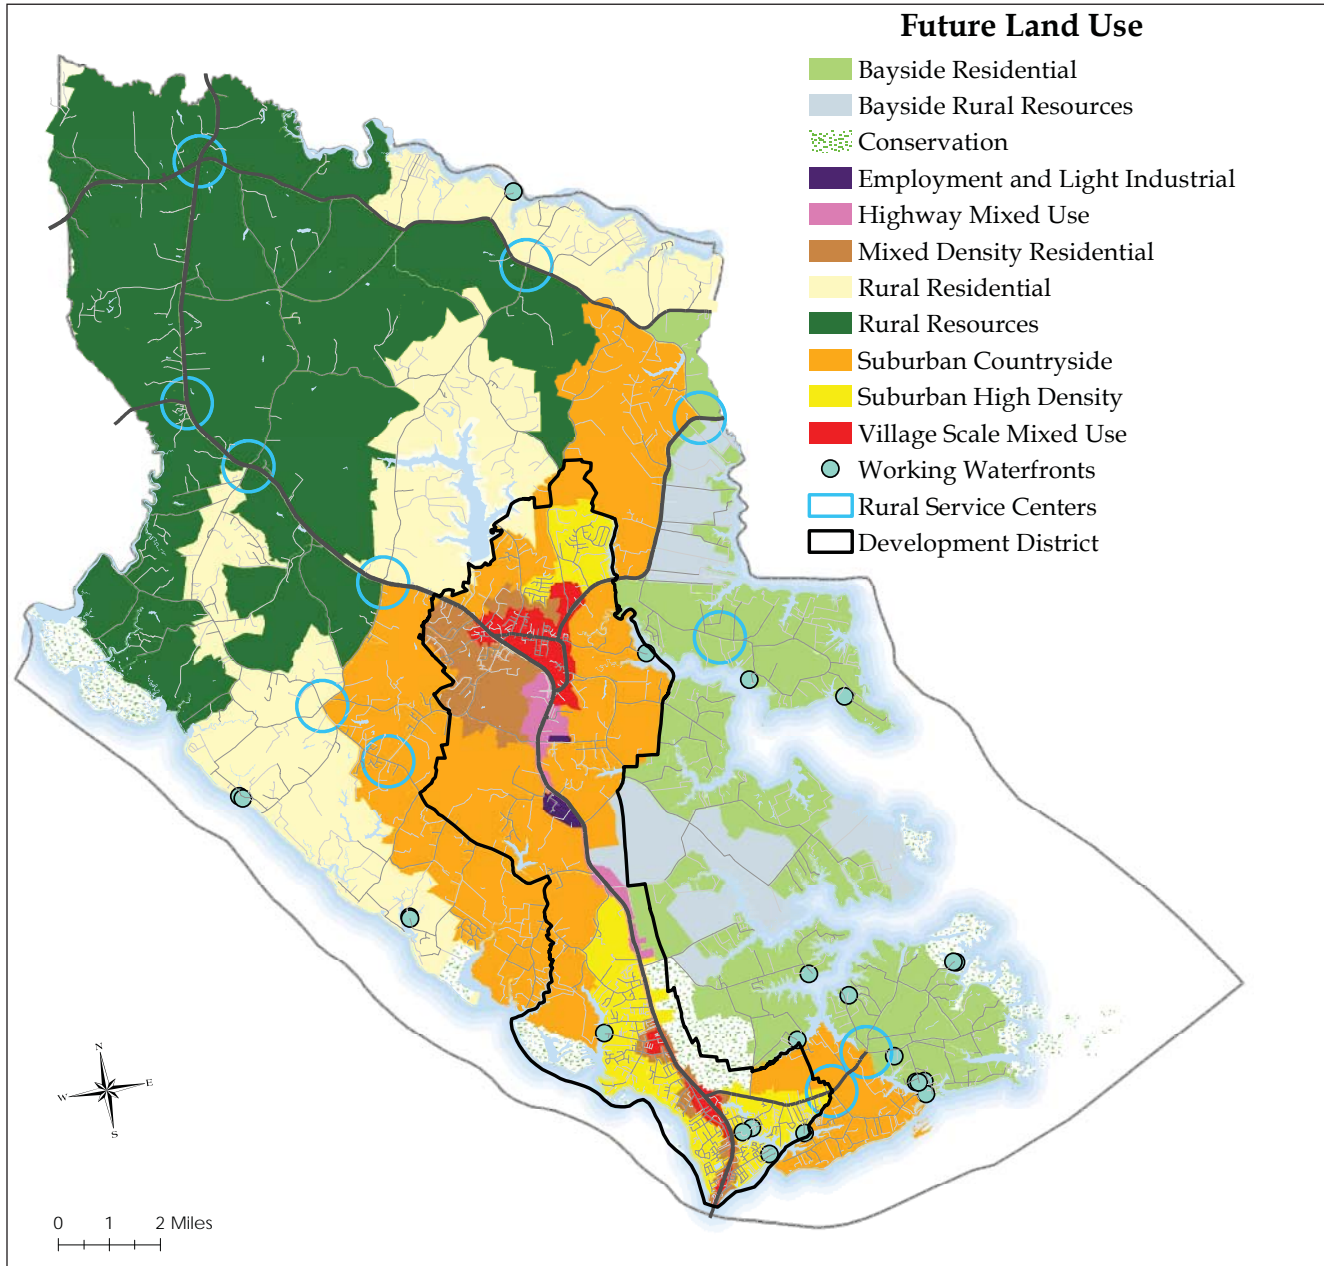

Gloucester is primarily a residential community and increased economic development, especially those utilizing existing assets within and around the Village Areas, supports the Plan’s goals. Certain industries may require additional services and suitable locations in proximity to major transportation routes. Economic and commercial development benefits need to be balanced with potential negative impacts of increasing corridor congestion and may require alternative transportation routes.

Character and Built Environment Appearance

Much of Gloucester’s development occurred before land use or development ordinances existed,

impacting portions of the built environment, especially around Gloucester Point, the Court House, and the corridor connecting these two areas. Encouraging quality design in new developments and existing community improvements contributes to Gloucester’s future viability and attractiveness. Street design standards can promote compatibility between new projects, redevelopment, and existing development. Development standards, including architectural design, building setbacks, and site maintenance can promote complementary development, enhance visual appearance, and support roadway safety efforts, especially if these standards provide increased development incentives. The built environment can be integrated with the natural landscape within site designs that preserve existing vegetation, contribute to site appearance and functionality, and shade parking areas. Additionally, a green infrastructure network linking natural, historic, and cultural resources to developed areas can be established, which would provide air quality, water quality, stormwater management, and wildlife habitat benefits.

Map FLU-1: Future Land Use

Data Source: Gloucester County

Planning for future land use is one of the major functions of the comprehensive planning process. Assessing existing conditions across a range of sectors such as transportation, housing, economics, and the environment can help a locality identify where development currently exists and which areas can most successfully incorporate new development without harming the environment or overburdening infrastructure. Gloucester developed the Future Land Use Plan and Map to guide growth and new development to suitable locations within the County based on existing conditions and considerations identified by the community. Planning considerations begin on page 1. Future Land Use classifications begin on page on page 203.

The Land Use Plan and corresponding map identifies the most appropriate areas for specific uses ranging from residential to conservation to industrial at varying development intensities. The Land Use Map incorporates the County's **Proposed Development District**, identifying areas suitable for public water and sewer service and expansion as well as distinguishing **Rural Service Centers** to serve residents outside of the Development District.

Residential classifications in the Land Use Plan include **Bayside Residential, Rural Residential, Suburban Countryside, Mixed Density Residential, and Suburban High Density** as well as **Village Scale Mixed Use** which encourages higher density residential and commercial development within the village areas. Multifamily development may also be appropriate in the Highway Mixed Use areas.

Employment and service classifications in the Land Use Plan include **Rural Service Centers, Working Waterfronts, and Employment and Light Industrial**.

Mixed-use designations in the Land Use Plan include **Village Scale Mixed Use** and **Highway Mixed Use** and are recommended for both residential and commercial development at different scales and intensities.

Working Lands and Conservation designations in the Land Use Plan include **Rural Resources, Bayside Rural Resources, and Conservation**. These areas are intended to protect and promote traditional uses such as farming and forestry while allowing compatible development in limited circumstances.

The Land Use Plan also includes optional overlay designations for **Highway Corridors, Historical and Cultural Preservation Districts, Rural and Scenic Corridors**, and the **Dragon Run Overlay** as well as **Planned Unit Developments**, areas with customized development standards.

Future Land Use Plan

The Land Use Plan is intended to guide growth, development, and change within the County over the next 20 years by identifying areas for new development, redevelopment, and existing working lands. This Plan aids County decision-makers when considering land use decisions and capital improvements based upon the community's vision for the County's future.

Future Land Use Classifications

Future Land Use classifications describe the type and intensity of uses planned for different areas within the County, including residential, commercial, industrial, agricultural, special uses, such as environmentally sensitive areas, and overlay designations, which include specific design standards or resource allocations beyond the underlying planned uses. The land use classifications shown on Map FLU-1 are based on the planning considerations previously mentioned and issues identified in the other chapters. The Future Land Use Map shows the general location of different designations, identifying the general type, intensity, and character encouraged. The classifications and map guide land use policies and decisions as well as planning efforts.

Future land use designations can be divided into four (4) categories: residential, employment, mixed-use, and working or conservation lands. Overlay designations and floating zones are also included and may be mapped in the future.

Development District

The Future Land Use Plan identifies a Development District that coincides with areas that are expected to be served by public water and sewer facilities or could be served with these facilities within the next 20 years as funding becomes available. Additionally, this region is currently or planned to be the County's principal population, service, and employment center.

The Development District and adjacent lands comprise the most suitable areas for new population growth based upon the infrastructure availability and current development patterns. Growth in and around this District is intended to discourage residential sprawl into the County's rural areas and provide utilities, services, and employment near the primary population centers while minimizing impacts on local roads.

These considerations further rural preservation in the County's outlying areas, protecting traditional and value-added working lands and maintaining the rural character desired by the community. The Development District should accommodate most local population growth through 2030, supporting residential and economic objectives and recommendations contained in other Plan chapters. Although growth and infrastructure improvements are recommended to occur within the Development District, some adjacent lands may be appropriate for future development and should be considered if service provision is feasible.

Residential Classifications

Residential land use designations apply to areas where the majority of development is proposed to be residential with various other complementary, compatible uses included. Residential development intensity depends on service availability and the surrounding natural and built environment, with lots ranging from five (5) or more acres to 10,000 square feet or smaller. The Plan promotes housing and development diversity that meets residents' needs without straining the surrounding environment and service availability. Although most residential development consists of moderate to low density single-family detached homes, the Village Areas around Gloucester Point, Hayes, and Gloucester Court House can accommodate more intense residential development due to the availability of existing infrastructure and proximity of uses to encourage active and alternative transportation modes.

Bayside Residential

Bayside Residential uses are designated in the eastern part of the County generally following the Chesapeake Bay Impact Crater, an environmentally-sensitive, flood-prone area. These areas can support limited low-density residential and some incentivized development that encourages ecological and cultural site preservation where site conditions permit. Due to a lack of public utilities and the environmental characteristics, large lot, single-family detached residential development or low-density cluster development is recommended. Historically, this region has been utilized for water-dependent uses, such as working waterfronts and marinas and other water dependent uses. Areas within this district classified as working waterfronts or marinas should be preserved with conflicts minimized. Conservation easements and similar measures protecting existing natural and cultural features are supported and encouraged in classification.

Rural Residential

Rural Residential is designated in several areas of the County along the York River and Dragon Run and north of Gloucester Court House surrounding the Beaverdam Reservoir. These areas are mainly rural with low-density residential development on private wells and septic systems and served by secondary roads with limited capacity. Cluster development may be appropriate if site characteristics permit and development is consistent with preservation goals. Additionally, lands in this region would be appropriate as sending zonings if the County considers using Transfer of Development Rights (TDR) to preserve rural character. The Rural Residential designation supports low-density residential development (more than five acres) in accordance with existing forestry and agricultural activities as compatible uses. The continuance of traditional uses is encouraged in these areas. Conservation easements and similar measures protecting existing natural and cultural features are also supported.

York River Villas Townhouse Development - Source: Gloucester Planning and Zoning

Suburban Countryside

Suburban Countryside is designated for large portions of the County surrounding the more intensely-developed Gloucester Court House Village Area and Gloucester Point/Hayes Village Area. This district intends to serve as a transitional district between areas with working and rural lands and densely developed Village Areas and may be served by public water and sewer. This region contains moderate suburban residential development (two-acre minimum) with extensive open space of a more rural nature than typical suburban development. Although much of the region is already developed as residential subdivisions, additional development is possible where services are available and characteristics permit. New clustered development with smaller lots that preserves ecological and cultural sites is encouraged where adequate infrastructure is available. These areas are appropriate as a potential TDR sending zones. Existing forestry and agricultural activities are compatible uses and their continuance is supported. New or expanded agricultural uses should be carefully evaluated for

their compatibility with the residential character of the area. Conservation easements and similar measures protecting existing natural and cultural features are supported in these areas.

Mixed Density Residential

Mixed Density Residential is designated for regions near and around the Village Development Areas at Gloucester Point/Hayes and Gloucester Court House. This designation aims to provide a variety of housing types including higher-density, village-scale neighborhood development served by public water and sewer with characteristics of Village Development Areas. These areas would be appropriate as TDR receiving zones. Form-based zoning or similar techniques are recommended to preserve service access and neighborhood character by encouraging a mix of densities and compatible building characteristics. Housing variety at higher densities with amenities such as sidewalks, street lighting and furniture, trees, and open space are encouraged in

these areas to connect to existing traditional and mixed-use development.

Suburban High Density

Suburban High Density areas are designated for established residential neighborhoods in and around Gloucester Court House, Gloucester Point, Bena, Hayes, and up to Ordinary. Similar to Mixed Density Residential, this district intends to support most of the County's future single-family residential development and is appropriate for moderately-dense intensities (two units per acre or greater) where public water and sewer is available. Trails, sidewalks, parks, and other residential amenities are promoted and clustering is encouraged to preserve open space. The Suburban High Density areas would be appropriate as TDR receiving zones.

Employment and Service Classifications

Commercial and industrial growth is vital to balancing living and working within a community. Existing developments include service, retail, and industrial facilities, primarily concentrated in the Village Development Areas, but also along Route 17 between the Court House and Gloucester Point and in some areas outside the Development District. The following classifications aim to promote economic development throughout the County that is appropriate for various sites and surroundings.

Rural Service Centers

Rural Service Centers are areas where concentrated development can occur in the County's rural regions, usually within a half-mile of major intersections, that serve many functions, ranging from individual establishments to expanding community centers with post offices, small stores and offices, and fire and emergency stations. Rural Service Centers are typically surrounded by residential and agricultural

uses (but at times commercial, public, or institutional uses). These areas that should remain relatively rural in nature but allow for some mixture of uses. More intensive industrial or commercial development that extend beyond a half-mile may also be appropriate where compatible with nearby uses and transportation corridors.

Working Waterfronts and Marinas

The water is an important component of Gloucester's culture, history, and economy. As shoreline residential development increases, conflicts with water-based industries, including seafood and boat operations, as well as recreation and other activities, can occur. The Land Use Plan designates certain areas as working waterfront and marina areas, such as commercial seafood operations, boatyards, marinas, and accessory uses, to clearly acknowledge that these uses exist and the County desires them to continue

Working waterfront - Source: David Girard & Gloucester Parks, Recreation & Tourism

York River Yacht Haven, Gloucester County, VA - Source: Gloucester Planning and Zoning

into the future. Complimentary residential and mixed-use development, potentially through Planned Unit Developments, may be appropriate surrounding and supporting active working waterfronts. A specific zoning or overlay district is recommended to protect existing working waterfront uses and allow for new development in compatible locations that do not negatively impact existing residential development or local waterway quality.

Employment and Light Industrial

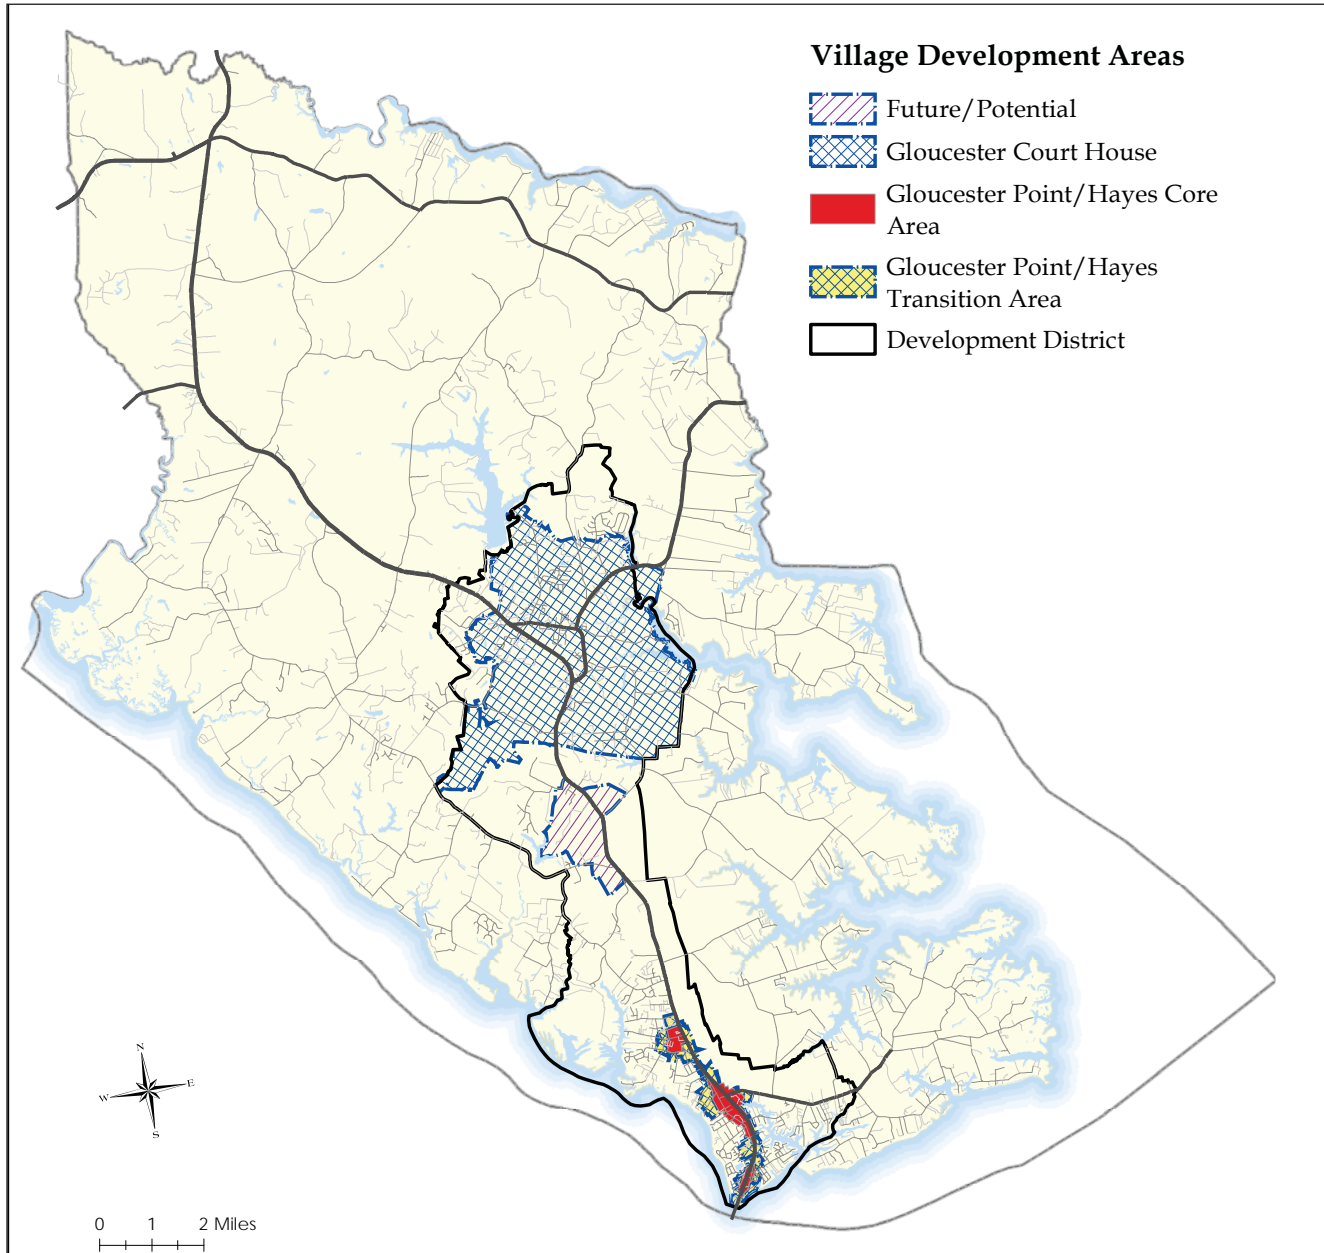

Employment and Light Industrial areas are intended for large-scale industrial or employment facilities, such as manufacturing plants or office and industrial parks that contribute to Gloucester’s economic growth and employment opportunities. As these uses require significant acreage and access to major transportation routes, an area has been designated adjacent to and including the County’s Business Park on Route 17 between Gloucester Point and the Court House. Landscaping, setbacks, and buffering may be used to mitigate potential conflicts between industrial uses

and surrounding residences. Mixed-use development, where employees have the opportunity to live, work, play, and obtain services within the same proximity, may also be appropriate in this area of the County. However, the capacity of the County to absorb new mixed-use development without adversely impacting the economic viability of existing Village Areas should be considered in any land use decisions for this type of development outside the designated Village Development Areas.

Service Business Centers

Service Business Centers is a floating designation aimed to accommodate various commercial enterprises and services, including light, medium, and heavy manufacturing, land-consumptive commercial activities, and small businesses spaces, which may or may not require public water and/or sewer service. Examples included truck terminals, contractor’s office and storage yards, and other service based industries. Most existing commercial development occurs along Route 17 within the Development District, a linear

Map FLU-2: Village Development Areas

Data Source: Gloucester County

Village Development Areas (VDA's) are regions that can support additional commercial and residential development in a pedestrian oriented, village-scale environment. Encouraging growth in VDA's, combined with development standards, can preserve the County's rural character and natural resources while increasing housing and commercial use variety in these historically mixed-use areas. Gloucester has two (2) designated Village Development Areas, **Gloucester Court House** and **Gloucester Point/Hayes**, and has identified another region near the Gloucester Business Park as a potential future VDA. Specific area plans containing development guidance have been produced for both existing VDA's. Village Development Areas are discussed on page 209.

development pattern that effects traffic and visual qualities of the corridor. Concentrated commercial development in a Service Business Center is encouraged for areas off of Route 17 where similar uses can be clustered together to share services and infrastructure improvements without impacting adjacent existing or planned uses.

Mixed-Use Designations

Some regions in Gloucester have historically included a mixture of uses, such as offices, homes, and stores that allows for diverse living and working arrangements and promotes efficient infrastructure use. These areas are generally more intensely developed than other parts of the County and are served by public water and sewer.

Village Development Areas (VDA's)

Village Development Areas (VDA'S), as shown on Map FLU-2, are historically mixed-use regions or newly planned areas that can support commercial and residential development in a pedestrian-oriented, village-scale environment. Form-based codes or design guidelines are recommended to ensure traditional neighborhood design standards that encourage economic vitality. Relatively high residential densities and commercial uses with pedestrian-oriented improvements such as street lights, sidewalks, and crosswalks are appropriate. Currently, parts of Gloucester Court House, Gloucester Point, and Hayes are designated as VDA's within the Future Land Use Plan, but a future VDA may be appropriate adjacent to the existing Business Park or in other areas along Route 17 between the existing VDA's that are designated to promote a pedestrian-oriented, mixed-use built environment. Within each VDA, sub-area planning is recommended to identify suitable mixed-uses and housing types. The guidance provided within the Gloucester/Point Hayes Village Development Area Plan and Gloucester Court House Village Sub-Area Plan should be referenced when considering applications within these VDA's.

Highway Mixed Use

The Route 17 corridor between Gloucester Point and the Court House is a major residential, commercial, and industrial region within Gloucester that provides significant commercial and recreational access to other parts of the County and surrounding region. The Highway Mixed Use designation is recommended in several locations along Route 17 within the Development District, aiming to create identifiable places defined by form instead of use while maintaining highway capacity and efficiency. These areas encourage different types of development along and adjacent to the corridor with access management standards that promote efficient traffic flow and compatible development patterns which do not reduce the existing Route 17 capacity or level of service.

Working Lands and Conservation Designations

Many parts of the County are notable for their environmental characteristics and agrarian economy. Natural resources provide residents many benefits and resource protection helps maintain ecological services, supports the local economy, and promotes Gloucester's quality of life. Most of these areas are designated as working lands where the primary use is continued traditional land-based activities such as farming, forestry, and habitat preservation (hunting and outdoor recreation), but allowing for limited, compatible residential development.

Rural Resources

The Rural Resources designation is intended as an agricultural district to maintain and conserve the character and economy of agricultural and forested

lands in northwest. These areas lack the public facilities necessary to support high-density residential or commercial development, and uses are primarily agriculture, silviculture, and related activities. Limited low-density residential development and supporting businesses are also acceptable. Potential conflicts between agricultural and residential uses can be minimized through larger minimum lot sizes (greater than five acres per house). As portions of this area transition from agriculture to service-based businesses, non-traditional agriculture and other uses may be suitable if the infrastructure can support them. This region is appropriate for conservation easements, as sending areas for Transfer of Development Rights, and other development incentives that preserve the rural nature and surrounding environment. Limited residential development protects farming rights while allowing minor land subdivisions and larger lot sizes maintains the rural character while recognizing property rights.

Bayside Rural Resources

Bayside Rural Resources is intended to support sustainable agricultural and forestry uses while allowing limited residential development. Characterized by many small inlets from the Chesapeake Bay, this area is susceptible to flooding and storm surges and should remain largely undeveloped or as working lands. Development occurring on large lots can coexist with agricultural lands and ecologically important areas, but residential development should be dependent on site characteristics. Conservation and other preservation easements are supported and encouraged in these areas.

Conservation

Conservation regions contain areas with development constraints due to environmental features, including steep slopes, floodplains, tidal and non-tidal wetlands, and Resource Protection Areas (RPA's). Natural resource-based uses, such as forestry, hunting and outdoor recreation, may be appropriate if site characteristics permit. This area is suitable for conservation easements and other measures that preserve and protect the region's environmental integrity.

Overlay Designations

Overlay designations identify areas where the underlying uses are not changed, but are subject to additional standards due to special circumstances, such as location, environmental characteristics, or cultural and historical importance. These designations allow the County to target specific areas for special protection or programs without limiting the uses permitted.

Highway Corridor Development District

The Highway Corridor Development District (HCDD), intends to encourage growth and development along

Route 17 from Gloucester Point to the Court House, while protecting the corridor's safety and long term capacity. This district aims to ensure the corridor's continued viability as an economic development tool, maintain the corridor's transportation safety by access and visibility management, ensure the corridor's long-term transportation efficiency, and enhance the corridor's visual quality as a County entry point. The HCDD extends 150 feet from the right-of-way on both sides of Route 17 within the Development District as well as onto business and industrial zoned properties along Route 17 outside of the Development District. Areas within the district are subject to additional access management and architectural standards, pedestrian accommodations, and yard setbacks.

Historical and Cultural Preservation Overlay

Gloucester's history is a central part of the community's identity and plays an important role in the local and regional economy. The Historical and Cultural Preservation Overlay designates certain important historical or cultural sites, which includes several parcels throughout the County and a portion of the Court House in and around the Court Circle. This designation can accompany property owners' efforts to protect historical resources and promote the County's historical and cultural sites as economic and educational sources. In designated areas, this overlay could establish architectural review standards for new development or redevelopment that ensures compatible character in and around this district. Many historic resources, especially those included or proposed for inclusion on State and Federal listings can benefit from this overlay and the County should encourage historic property owners to also consider local designation.

Rural and Scenic Corridor Overlay

The Rural and Scenic Corridor Overlay intends to identify and preserve existing scenic and rural streetscapes along County roads that provide views of natural and cultural resources and add to the

local rural character. This designation could apply along the rural sections of Route 17 and Route 3/14 outside of the Development District as well as Route 14 in Adner, Route 198 along the northern end of the County, along Aberdeen Creek Road, and other roads providing access to local and regional places of interest to include access management standards and additional setbacks.

Dragon Run Overlay

The Dragon Run Overlay is a conservation designation intended to preserve the Dragon Run watershed, a regionally significant ecosystem that is sensitive to development impacts. The designation aims to promote the watershed's conservation and protection through conservation easements and other measures that support traditional land uses while encouraging responsible and viable residential and economic development in the surrounding area. The Rural Resources and Rural Residential designations are located within the Dragon Run watershed and both designations seek to preserve natural resources while allowing low density residential development. Traditional land uses such as forestry and farming as well as other uses that protect and enhance the region's environmental and cultural assets are encouraged.

Site Specific Designations

Planned Unit Development

Planned Unit Developments are typically developments with a preplanned design unique to the site's conditions that allow for flexible site development characteristics, such as density, setbacks, and landscaping, in exchange for community facilities, infrastructure improvements, natural resource, historic, or cultural feature preservation, or similar public benefits. Planned unit developments are reviewed and approved on an individual basis, designed to be compatible with surrounding areas. Applications are subject to Planning Commission review and Board of Supervisors approval to ensure that potential impacts are addressed by offsetting

public benefits through improvements furthering the Comprehensive Plan's goals and objectives.

Summary

The Future Land Use map corresponds to the designations mentioned in this chapter, though those not shown are incorporated by text reference and support compatible land use decisions. Together, the map and designations summarize the Plan's chapters, representing potential future land uses written and geographically. This plan intends to protect and improve the local quality of life through preserving the County's resources and rural character as well as providing growth opportunities by encouraging quality development and redevelopment aimed at enhancing, encouraging and promoting community livability, prosperity, and pride in "the land of the life worth living."

Appendix A

Glossary of Terms

Term	Definition
Access Management	The systematic control of the location, spacing, design, and operation of entrances, median openings/crossovers, traffic signals, and interchanges for the purpose of providing vehicular access to land development in a manner that preserves the safety and efficiency of the systems of state highways.
Accessory Residential Unit	A residence which is associated with a commercial use or structure. An example of this type of use is an apartment above a shop. This definition does not include a farm tenant dwelling.
Accessory Use	A use or structure on the same lot or on a contiguous lot, in the same ownership, and of a nature customarily incidental and subordinate to, the principal structure and operated and maintained for the benefit or convenience of the owners, occupants, employees, customers, or visitors of the zoning lot with the principal use.
Activities Of Daily Living	Daily tasks such as bathing, dressing, toileting, transferring, bowel control, bladder control, and eating/feeding that an individual can perform independently.
Adaptive Reuse	The renovation and reuse of pre-existing structures for new purposes.
Affordability	A measure of the total cost for a good or service relative to an individual or family's ability to pay.
Affordable Housing	Housing that is affordable to households with incomes at or below the area median income, provided that the occupant pays no more than thirty percent (30%) of his gross income for gross housing costs, including utilities.
Agricultural-Based Business	Secondary businesses, such as retail sales, that are accompany a primary agriculture business, such as a farm or winery.
Agritourism Activity	An activities carried out on a farm that allows members of the general public, for recreational, entertainment, or educational purposes, to view or enjoy rural activities, including farming, wineries, ranching, historical, cultural, harvest-your-own activities, or natural activities and attractions. An activity is an agritourism activity whether or not the participant paid to participate in the activity.
Alternate Septic Systems	See Alternative On-site Sewage System
Alternative On-site Sewage System	A sewage/wastewater treatment works that is not conventional on-site sewage system and does not result in a point source discharge.
American Community Survey	An ongoing survey, conducted by the U.S. Census Bureau, that samples a percentage of the population every year to develop demographic, social, and economic data.
Aquaculture	The propagation, rearing, enhancement, and harvest of aquatic organisms in controlled or selected environments, conducted in marine, estuarine, brackish, or fresh water.

APPENDIX A

Term	Definition
Aquifer	A geologic formation, group of geologic formations, or a portion of a geologic formation capable of yielding groundwater to wells or springs.
Bedroom Community	A residential area, typically a suburb of a major urban center, which includes a large number of commuters among the home-owning population.
Best Management Practice	A practice, or combination of practices, that is determined by a state, local or regional governmental agency to be the most effective, practicable means of preventing or reducing the amount of pollution generated by nonpoint sources to a level compatible with water quality goals.
Blight	Areas or properties that have become dilapidate or deteriorated or violate minimum health and safety standards, endanger the public's health, safety, or welfare.
Blueway	Marked routes on waterways, such as rivers, lakes, canals and coastlines, for people using nonmotorized boats, kayaks, rafts, or canoes
Bookmobile	An automobile, small truck, or trailer constructed to carry books and serve as a traveling library, as for communities where libraries are not accessible.
Capital Improvement Plan	A guiding document comprised of an annual capital budget and a five-year capital program and adopted by a locality used coordinating community planning, fiscal capacity, and physical development through an implementation schedules.
Census Of Agriculture	A census conducted every five years by the U.S. Department of Agriculture to collect national data on farms and ranches. The most recent Census of Agriculture was conducted in 2012.
Census Tract	A small (usually between 1,200 and 8,000 people), relatively permanent statistical subdivision of a county or equivalent entity updated by local participants prior to each decennial census.
Census-Designated Place	An area delineated to provide data for settled concentrations of population that are identifiable by name but are not legally incorporated under the laws of the state in which they are located.
Chesapeake Bay Preservation Act	Article 2.5 (§ 62.1-44.15:67 et seq.) of Chapter 3.1 of Title 62.1 of the Code of Virginia.
Chesapeake Bay Preservation Area	All land in Gloucester County designated by the board of supervisors pursuant to Part III of the Chesapeake Bay Preservation Area Designation and Management Regulations 9 VAC 10-20-10 et seq. and Section 10.1-2107 of the Code of Virginia. The Chesapeake Bay Preservation Area (CBPA) shall consist of Resource Protection Areas (RPAs) and Resource Management Areas (RMAs). CBPA's are generally considered sensitive to development and other activities due to the prevalence of certain land types that if improperly developed would contribute to the degradation of water quality.
Clean Marina	A marina that practices environmentally sound operating and maintenance procedures, such as regular boat engine inspection, proper waste disposal, and less boat discharge.
Cluster Development	A form of development that permits a reduction in lot area and bulk requirements, provided the remaining land area is devoted to open space, active recreation, preservation of environmentally sensitive areas, or agriculture. Open space is generally to be contiguous.

Term	Definition
Coastal Zone Management Act	An Act of Congress passed in 1972 and overseen by the National Oceanic and Atmospheric Administration that provides for the management of the nation's coastal resources through three national programs: the National Coastal Zone Management Program, the National Estuarine Research Reserve System, and the Coastal and Estuarine Land Conservation Program.
Code Of Virginia	A compilation of Virginia's laws, enacted through legislation of the Virginia General Assembly.
Commonwealth Transportation Board (CTB)	An 18-member board appointed by the governor to establish the administrative policies for Virginia's transportation system, allocate highway funding to specific projects, and locate routes and provide funding for airports, seaports, and public transportation.
Commuter	A person who travels regularly to and from a place, and especially between where they live and where they work.
Complete Streets	Streets that are designed and operated to enable safe access for all users, including pedestrians, bicyclists, motorists, and transit riders of all ages and abilities.
Comprehensive Plan	Any plan or part thereof officially adopted pursuant to Virginia law for the physical development of the County of Gloucester, Virginia, showing the long-range proposals for the general development of the county and including, but not necessarily limited to: a land use plan designating areas for various types of public and private development and uses; a major thoroughfare and transportation plan as may be approved designating a comprehensive system of transportation facilities; and, a community facilities plan designating a comprehensive system of community facilities such as parks and recreational areas, schools, public buildings, community centers, waterworks, sewage disposal, refuse disposal, and the like.
Conditional Use	A use which, because of its unique characteristics or potential impacts on adjacent land uses, are not generally permitted in certain zoning districts as a matter of right, but which may, under the right set of circumstances and conditions, be acceptable in certain specific locations.
Conditional Use Permit	A permit granted by the Board of Supervisors for a conditional use after ensuring that the use can be appropriately accommodated on the specific property, will be in conformance with the Comprehensive Plan, can be constructed and operated in a manner which is compatible with the surrounding land uses and overall character of the community, and that the public interest, safety, and general welfare of the citizens of the County will be protected.
Confining Unit	A hydrogeologic unit of impermeable or distinctly less permeable material bounding one or more aquifers
Conservation Easement	A nonpossessory interest of a holder in real property, whether easement appurtenant or in gross, acquired through gift, purchase, devise, or bequest imposing limitations or affirmative obligations, the purposes of which include retaining or protecting natural or open-space values of real property, assuring its availability for agricultural, forestal, recreational, or open-space use, protecting natural resources, maintaining or enhancing air or water quality, or preserving the historical, architectural or archaeological aspects of real property.
Corridor Of Statewide Significance	An integrated, multimodal network of transportation facilities that connect major centers of activity within and through the Commonwealth and promote the movement of people and goods essential to the economic prosperity of the state.

APPENDIX A

Term	Definition
Decennial Census	A mandatory survey conducted by the U.S. Census Bureau that counts the total population every ten (10) years to define electoral district boundaries and develop demographic, social, and economic data.
Density	A unit of measurement; the number of dwelling units per acre.
Department of Rails and Public Transit	The agency that oversees public and merchandise transportation throughout the state, including rail, public transportation, and commuter service programs.
Development District	The area defined by the director of public utilities to be served by public water and sewer in accordance with the department's master water and sewer plan.
Dwelling Unit	A single unit providing complete independent living facilities for one (1) or more persons, including permanent provisions for living, sleeping, eating, cooking and sanitation, but not including a tent, cabin, travel trailer, manufactured home, or room in a hotel or motel.
Ecotourism	The practice of touring natural habitats in a manner meant to minimize ecological impact.
Estuarine	Deepwater tidal habitats and adjacent tidal wetlands that are usually semi-enclosed by land but have open, partly obstructed, or sporadic access to the open ocean, and in which ocean water is at least occasionally diluted by freshwater runoff from the land.
Exurban	A region or settlement that lies outside a city and usually beyond its suburbs.
Family Income	The sum of the income of all family members 15 years and older living in the household. Families are groups of two or more people (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such people (including related subfamily members) are considered as members of one family.
Farmland Of Statewide Importance	Land that is of statewide or local importance for the production of food, feed, fiber, forage, nursery, oilseed, or other agricultural crops, as determined by the appropriate state agency or local government agency.
Fiscal Capacity	The ability of a local government to generate revenue through taxes, fees, and industrial capacity.
Floodplains Or Flood Prone Areas	A relatively flat or low land area adjoining a river, stream or watercourse which is subject to partial or complete inundation or an area subject to the unusual and rapid accumulation or runoff of surface waters from any source.
Floor Area Ratio	The ratio of the total floor area of a building or buildings on a parcel to the land area of the parcel where the building or buildings are located.
Green Infrastructure	Strategically planned and managed networks of natural lands, working landscapes, and other open spaces that conserve ecosystem values and functions and provide associated benefits to human populations.
Greenway	A corridor of open land that provides one or more of the following benefits: protection and management of natural and cultural resources; provision of recreational opportunities; and enhancement of the quality of life and the aesthetic appeal of neighborhoods and communities.
Groundwater Management Area	A geographically defined groundwater area in which the State Water Control Board has deemed the levels, supply or quality of groundwater to be adverse to public welfare, health and safety.
Growth Management	The process of using various local planning and development policies, codes, and ordinances to guide the timing, location, and character of land use and development.

Term	Definition
Hampton Roads	The metropolitan statistical area encompassing southeastern Virginia (also known as the Virginia Beach-Norfolk-Newport News, VA-NC MSA), which includes the cities of Chesapeake, Hampton, Newport News, Norfolk, Poquoson, Portsmouth, Suffolk, Virginia Beach, and Williamsburg and the counties of Gloucester, Isle of Wight, James City, Mathews, and York as well as Currituck County and Gates County in North Carolina.
Hampton Roads Planning District	Planning District 23, as designated by the Virginia Department of Housing and Community Development, including the cities of Chesapeake, Franklin, Hampton, Newport News, Norfolk, Poquoson, Portsmouth, Suffolk, Virginia Beach, and Williamsburg, the counties of Gloucester, Isle of Wight, James City, Southampton, Surry, and York, and the town of Smithfield.
Hampton Roads Planning District Commission	The regional planning agency representing seventeen (17) local governments in Hampton Roads, aiming to encourage and facilitate local government cooperation and state-local cooperation in addressing on a regional basis problems of greater than local significance.
Hazard Mitigation	Any action taken to reduce or eliminate the long-term risk to human life and property from natural hazards.
Heritage Tourism	The conduct of activities to attract and accommodate visitors to a site or area based on the unique or special aspects of the history, landscape (including trail systems), and culture of the site or area.
High Occupancy Vehicle	A passenger vehicle carrying more than a specified minimum number of passengers, typically at least two (2) or three (3) passengers.
Highway Corridor Development District	An overlay district along the primary highway corridor (US 17) designated by the County to encourage growth and economic development while maintaining safety, efficiency, and visual aesthetics.
Historic Overlay District	An overlay district designated by the County where development must meet additional requirements, including exterior features, general design, texture, material, and color, to ensure compatibility with the existing district's historic character.
Historic Preservation Easement	Easements that protect properties having historic, architectural, or archaeological significance and can be used to preserve important natural land values that comprise the setting of historic buildings.
Hobby Farm	A small farm operated for pleasure or supplemental income rather than for primary income.
Household Income	The sum of the income of all people 15 years and older living in the household. A household includes related family members and all the unrelated people, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated people sharing a housing unit, is also counted as a household.
Housing Tenure	The distinction between owner-occupied and renter-occupied housing units.
Housing Unit	See Dwelling Unit.
Hydric Soils	Those soils which are defined as soils that are saturated, flooded, or ponded long enough during the growing season to develop anaerobic conditions in the upper part; in general, hydric soils are flooded, ponded or saturated for usually one week or more during the period when soil temperatures are above biological zero, forty-one (41) degrees Fahrenheit, as defined by "Soil Taxonomy".

APPENDIX A

Term	Definition
Impact Fee	A charge or assessment imposed against new development in order to generate revenue to fund or recover the costs of reasonable road improvements benefiting the new development.
Impaired Waters	Waters that have been identified by Virginia pursuant to § 303(d) of the Clean Water Act as not meeting applicable water quality standards. Impaired waters include both waters with approved or established TMDLs, and those for which a TMDL has not yet been approved or established.
Inclusionary Zoning	Stipulating that a certain percentage of new housing will be priced within the reach of middle-income buyers or renters.
Intelligent Transportation System	Electronics, photonics, communications, or information processing used singly or in combination to improve the efficiency or safety of a surface transportation system.
Intensely Developed Area	Areas designated by the local government pursuant to the Chesapeake Bay Preservation Area Designation and Management Regulations that meet at least one of the following conditions at the time the local program was adopted: more than 50% impervious cover, served by public water and sewer or a constructed stormwater drainage system, or housing density equal to or greater than four dwelling units per acre.
Lacustrine	Wetlands and deepwater habitats with all of the following characteristics: situated in a topographic depression or a dammed river channel; lacking trees, shrubs, persistent emergents, emergent mosses or lichens with greater than 30° areal coverage; and total area exceeds 20 acres.
Land Cover	The observed (bio)physical cover on the earth's surface.
Land Use	Specific uses or management-related activities, rather than the vegetation or cover of the land. Land uses may be identified in combination when joint or seasonal use occur and may include land used for support facilities that are an integral part of the use.
Level Of Service	A qualitative measure describing the operational conditions within a vehicular traffic stream, generally in terms of such service measures as speed, travel time, freedom to maneuver, traffic interruptions, and comfort and convenience.
Living Shoreline	A shoreline management practice that provides erosion control and water quality benefits; protects, restores or enhances natural shoreline habitat; and maintains coastal processes through the strategic placement of plants, stone, sand fill, and other structural and organic materials.
Manufactured Home	A structure which is subject to federal regulation, which is transportable in one (1) or more sections; is eight (8) feet or more in width and forty (40) body feet or more in length in traveling mode, or is three hundred twenty (320) or more square feet when erected on-site; is built on a permanent chassis; is designed to be used as a single-family dwelling, with or without a permanent foundation, when connected to the required utilities; and includes the plumbing, heating, air conditioning, and electrical systems contained in the structure. A manufactured home shall not be deemed a single family detached dwelling.
Median Household Income	The total income of all people 15 years and older living in the household where the income falls in the 50th percentile for a specified group or geographical unit.

Term	Definition
Metropolitan Planning Organization	The regional policy body required in urbanized areas with populations over 50,000, and designated by local officials and the governor of the state to carry out the metropolitan transportation planning requirements of federal highway and transit legislation and develop transportation plans and programs for the metropolitan area.
Middle Peninsula Planning District	Planning District 18, as designated by the Virginia Department of Housing and Community Development, including the counties of Essex, Gloucester, King and Queen, King William, Mathews, and Middlesex and the towns of Tappahannock, Urbanna, and West Point.
Middle Peninsula Planning District Commission	The regional planning agency representing nine (9) local governments on the Middle Peninsula, aiming to meet the needs of local and state governments by building regional approaches to issues such as economic development, solid waste management and legislative priorities.
Mobile Home	See Manufactured Home.
Modular Home	Housing that is constructed off-site as prefabricated sections that are then assembled on-site. Also referred to as prefabricated homes.
Multifamily Housing	A building, or portion thereof, containing three (3) or more dwelling units.
Natural Resources Conservation Service	A division of the U.S. Department of Agriculture that provides farmers and ranchers with financial and technical assistance to voluntarily put conservation on the ground.
Neighborhood-Oriented Businesses	Small- and medium-sized offices or retail uses that are located near residential areas and provide services to residents.
No Discharge Zone	An area where a state has received an affirmative determination from the U.S. Environmental Protection Agency that there are adequate holding tank pump-out facilities for the removal of sewage from vessels in accordance with § 312(f)(3) of the Act, and where federal approval has been received allowing a complete prohibition of all treated or untreated discharges of sewage from all vessels.
Nonconforming Use	The otherwise legal use of a building or structure or of a tract of land that does not conform to the use regulations of the Zoning Ordinance for the district in which it is located, either at the effective date of the ordinance or as a result of subsequent amendments to the ordinance.
Nonpoint Source Pollution	Storm-water borne pollutants resulting from land use activities, including, but not limited to sediment, nutrients such as phosphorous and nitrogen, bacteria, viruses, oxygen depletion, hydrocarbons such as fuels and lubricants, toxic metals such as lead, zinc, copper, toxic chemicals, chlorides, and increases in water temperature.
Nutrient Management	The science and art directed to link soil, crop, weather and hydrologic factors with cultural, irrigation, soil and water conservation practices to achieve the goals of optimizing nutrient use efficiency, yields, crop quality, and economic returns, while reducing off-site transport of nutrients that may impact the environment.
Out-commuter	A person who travels regularly from their locality of residence to a locality not within the boundaries of their locality of residence for work.

APPENDIX A

Term	Definition
Overlay District	A zoning district which is applied over one or more previously established zoning districts, establishing additional or stricter standards and criteria for covered properties in addition to those of the underlying zoning district
Owner Occupancy	A housing unit where the owner or co-owner lives in the unit.
Palustrine	Nontidal wetlands dominated by trees, shrubs, persistent emergents, emergent mosses or lichens, and all such wetlands that occur in tidal areas where salinity due to ocean derived salts is below 0.5%.
Per Capita Income	The income of a unit of government divided by the population of the unit of government.
Persons With Special Needs	Individuals with developmental disabilities, mental retardation, emotional disturbance, sensory or motor impairment, or significant chronic illness who requires special health surveillance or specialized programs, interventions, technologies, or facilities.
Planned Subdivision	A development that is designed with a master plan, as opposed to a collection of neighboring parcels developed individually.
Planned Unit Development	An area of land in which a variety of housing types and/or compatible commercial and industrial facilities is accommodated in a preplanned environment under more flexible standards, such as lot size and setbacks, than those restrictions that would normally apply under this ordinance. The procedure for approval of such development contains requirements in addition to those of the standard subdivision, such as building design principles and landscaping plans.
Point Source Pollution	Pollution of state waters resulting from any discernible, defined or discrete conveyances.
Population Density	The population divided by land the area.
Primary Road	Non-interstate major roads (two-to-six lanes), such as U.S. highways and state routes numbered less than 600, that connect cities and towns with each other and with interstates.
Prime Farmland	Land that has the best combination of physical and chemical characteristics for producing food, feed, fiber, forage, oilseed, nursery, and other agricultural crops with minimum inputs of fuel, fertilizer, pesticides, and labor, and without intolerable soil erosion. Prime farmland includes land that possesses the above characteristics but is being used currently to produce livestock and timber.
Proffer	Any money or improvements voluntarily offered by the owner of property subject to rezoning, submitted as part of a rezoning application and accepted by a locality.
Projections	An estimates of a future situation or trend based on a study of present ones.
Purchase Of Agricultural Conservation Easement	Preserving the agricultural use of a property by placing an agricultural conservation easement while purchasing the development rights to allow increased development on another property.
Purchase Of Development Rights	A transaction enabled by local ordinance that allows property owners to sell the developments right of their parcels (thereby conserving them in perpetuity).

Term	Definition
Receiving Area (TDR)	One or more areas identified by an ordinance and designated by the comprehensive plan as an area authorized to receive development rights transferred from a sending area.
Regional Water Supply Plan	A plan developed in accordance with 9VAC25-780 that addresses a locality's existing water source, use, and resources, current conservation practices, drought response and contingency, and projected water demand.
Renter Occupancy	All occupied units which are not owner occupied, whether they are rented for cash rent or occupied without payment of cash rent.
Resource Management Area	That component of the CBPA that is not classified as the resource protection area. Lands of particular sensitivity within RMAs include but are not limited to nontidal wetlands not in RPAs, floodplains, highly erodible soils, highly permeable soils and hydric soils.
Resource Protection Area	That component of a (CBPA) comprised of lands adjacent to water bodies with perennial flow that have an intrinsic water quality value due to the ecological and biological processes they perform or are sensitive to impacts which may result in significant degradation to the quality of state waters. RPAs shall include tidal wetlands, tidal shores, nontidal wetlands connected by surface flow and contiguous to tidal wetlands or adjacent to water bodies with perennial flow and a 100-foot wide buffer area as defined in this chapter, adjacent to and landward of other RPA components and along both sides of any water body with perennial flow.
Rezoning	To reclassify (a property, neighborhood, etc.) as belonging to a different zone or being subject to different zoning restrictions.
Right-of-way	A strip of land taken or dedicated for use as a public way. It may incorporate the roadway, curbs, lawn strips, sidewalks, lighting, and drainage facilities, and may include special features (required by the topography or treatment) such as grade separation, landscaped areas, and bridges.
Rural Service Center	Areas located outside the Development District, including centers for rural residential development and providers of commercial services, that may have post offices, county stores, and fire departments.
Safe Routes To School	A national program that aims to improve the health and well-being of children by enabling and encouraging them to walk and bike to school through examining conditions around schools, conducting projects and activities that work to improve safety and accessibility, and reducing traffic and air pollution in the vicinity of schools.
Sea Level Rise	The combined effects of global sea level variations and local vertical land movement.
Secondary Road	Local connector and county roads numbered 600 and above (with some exceptions) generally maintained by VDOT.
Secondary Street Acceptance Requirements	The conditions and standards, established by the Commonwealth Transportation Board, that must be met before secondary streets constructed by developers, localities, and entities other than VDOT, will be accepted into the state's secondary street system.
Section 404	Part of the Clean Water Act, this section establishes a program to regulate the discharge of dredged or fill material into waters of the United States and adjacent wetlands.
Section 8	Part of the Housing Act of 1937, this section assists very low-income families, the elderly, and the disabled to afford decent, safe, and sanitary housing in the private market through housing vouchers.

APPENDIX A

Term	Definition
Sending Area (TDR)	One or more areas identified by an ordinance and designated by the comprehensive plan as an area from which development rights are authorized to be severed and transferred to a receiving area.
Setback	The minimum distance by which any building or structure must be separated from the right-of-way line or property lines.
Shoreline Stabilization	Shoreline erosion control practices using soft structures (plantings or organic materials), hardened structures, or a combination of the two to restore, protect, or enhance the natural shoreline environment.
Single-Family Housing	Housing that is designed and constructed for individual households as detached structures, as opposed to duplexes (two-family) and multifamily housing.
Soil Survey	A field and other investigation, resulting in a map showing the geographic distribution of different kinds of soils and an accompanying report that describes, classifies, and interprets such soils for use.
Special Area Management Plan	A comprehensive plan providing for natural resource protection and reasonable coastal-dependent economic growth containing a detailed and comprehensive statement of policies, standards and criteria to guide public and private uses of lands and waters, and mechanisms for timely implementation in specific geographic areas within the coastal zone.
Special Flood Hazard Area	Land in the community flood plain subject to a one (1) percent or greater chance of flooding in any given year. The area may be designated as Zone A, AE, AO, Coastal A, V, or VE on the official Flood Insurance Rate Map (FIRM) for Gloucester County.
Sprawl	The extension of residential, commercial, and industrial development into areas beyond a city's boundaries that occurs in an unplanned or uncoordinated manner and characterized by low-density development that is dispersed and situated on large lots, geographic separation of essential places such as work, home, school, and shopping, high dependence on automobiles for travel, increased impervious surface area, and habitat fragmentation and degradation.
Storm Surge	An abnormal rise of water generated by a storm, over and above the predicted astronomical tides.
Strip Development	A linear form of development that generally appears along major transportation arteries, usually with many points of access between the roadway and adjacent businesses.
Suburban Development	An area or town located at the edge of an urban city (contained either just within or just outside of the city boundaries) that is typically a residential area and is often dependent upon the nearby city for employment opportunities and other benefits.
Tele Fees (Right-of-way Use Fees)	Fees which are collected from telecommunications companies to recover increased maintenance and construction costs resulting from the private use of VDOT rights-of-way for utilities.
Total Maximum Daily Load (TMDL)	The sum of the individual wasteload allocations for point sources, load allocations for nonpoint sources, natural background loading and a margin of safety. TMDLs can be expressed in terms of either mass per time, toxicity, or other appropriate measure.

Term	Definition
Traditional Neighborhood Design	Village-style development that includes a variety of housing types, a mixture of land uses, an active center, a walkable design and often a transit option within a compact neighborhood scale area.
Transfer Of Development Rights (TDR)	The process by which development rights from a sending property are affixed to one or more receiving properties.
Transit Oriented Development	An area of commercial and residential development at moderate to high densities near a station for heavy rail, light rail, commuter rail, or bus rapid transit transportation.
Transportation Demand Management	A combination of measures that reduce vehicle trip generation and improve transportation system efficiency by altering demand, including but not limited to the following: expanded transit service, employer-provided transit benefits, bicycle and pedestrian investments, ridesharing, staggered work hours, telecommuting, and parking management including parking pricing.
Transportation System Management	Integrated strategies to optimize the performance of existing infrastructure through the implementation of multimodal and intermodal, cross-jurisdictional systems, services, and projects designed to preserve capacity and improve security, safety, and reliability of the transportation system.
U.S. Census Bureau	Part of the U.S. Department of Commerce. The agency serves as the leading source of quality data about the nation's people and economy through various surveys, such as the decennial U.S. Census, American Community Survey, and the U.S. Economic Survey.
Unemployment Rate	The number of unemployed people actively seeking employment as a percentage of the civilian labor force.
Urban Centers	The heart of an urban area, usually located at the meeting point of the city's transport systems, containing a high percentage of shops and offices.
Village Development Areas	An area designated by a locality that is appropriate for higher density development due to its proximity to transportation facilities, the availability of a public or community water and sewer system, or a developed area and to the extent feasible, to be used for redevelopment or infill development.
Virginia Beach-Norfolk-Newport News, VA-NC MSA	See Hampton Roads.
Virginia Outdoors Plan	The State Comprehensive Outdoor Recreation Plan developed and administered by the Department of Conservation and Recreation.
Waterman	A person who regularly engages in a commercial fishing activity.
Watershed	A defined land area drained by a river or stream, karst system, or system of connecting rivers or streams such that all surface water within the area flows through a single outlet. In karst areas, the karst feature to which water drains may be considered the single outlet for the watershed.

APPENDIX A

Term	Definition
Watershed Implementation Plan	A plan developed to identify how Chesapeake Bay jurisdictions are putting measures in place by 2025 that are needed to restore the Bay, and by 2017 to achieve at least 60 percent of the necessary nitrogen, phosphorus and sediment reductions compared to 2009.
Watershed Management Plan	A detailed vision and strategy, usually at the small watershed level, to achieve watershed management typically initiated by local governments in conjunction with other local planning efforts. Watershed management planning identifies specific actions to restore habitat and water quality, lands for conservation and development, and ways to reduce nonpoint sources of pollution while prioritizing pollution reduction actions.
Wetlands	Those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.
Wetlands, Tidal	Coastal salt and brackish marshes, mudflats, mangroves (tropical maritime trees or shrubs) and other swamps subjected to periodic tidal influence.
Wetlands, Nontidal	Those wetlands other than tidal wetlands that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions, as defined by the U.S. Environmental Protection Agency pursuant to Section 404 of the Federal Clean Water Act, in 33 C.F.R. 328.3b.
Wetlands, Nonvegetated	Unvegetated lands lying contiguous to mean low water and between mean low water and mean high water, including those unvegetated areas of Back Bay and its tributaries and the North Landing River and its tributaries subject to flooding by normal and wind tides but not hurricane and tropical storm tides.
Wetlands, Vegetated	Lands lying between and contiguous to mean low water and an elevation above mean low water equal to the factor one and one-half (1½) times the mean tide range at the site of the proposed project in the county, city, or town in question, and upon which is growing any of the following species: saltmarsh cordgrass, saltmeadow hay, saltgrass, black needlerush, saltwort, sea lavender, marsh elder, groundsel bush, wax myrtle, sea oxeye, arrow arum, pickerelweed, big cordgrass, rice cutgrass, wildrice, bulrush, spikerush, sea rocket, southern wildrice, cattail, three-square, buttonbush, bald cypress, black gum, tupelo, dock, yellow pond lily, marsh fleabane, royal fern, marsh hibiscus, beggar’s tick, smartweed, arrowhead, sweet flag, water hemp, reed grass, or switch grass.
Working Lands	Lands used primarily for crop production and grazing.
Working Waterfront	Parcels of property that provide access for water-dependent commercial activities, or provide public access to the navigable waters of the state.
Zoning	The process of classifying land within a locality into areas and districts, such areas and districts being generally referred to as “zones,” by legislative action and the prescribing and application in each area and district of regulations concerning building and structure designs, building and structure placement and uses to which land, buildings and structures within such designated areas and districts may be put.

Term	Definition
Zoning Designations	A designated geographic area that is subject to controls over types of land uses, density, and lot requirements. A zoning district will be designated in the zoning ordinance text and delineated on the zoning map.
Zoning Ordinance	Local or municipal laws that establish land usage regulations for properties in a specified area.

Appendix B

2006 Citizen Survey Description and Results

In preparation the Comprehensive Plan update, a citizen survey was created to gather the community's opinion. Surveys, commonly used for updates, provide the opportunity to determine public views and concerns. There are various types of surveys used to gauge community opinion, ranging from scientifically-controlled surveys to open surveys, sometimes published in newspapers, online, or with utility bills.

An open survey was utilized for this update as it allowed all the work to be completed internally. The questions posed were written by Planning staff and reviewed by the Planning Commission prior to finalization. Surveys provide a "snapshot" of citizen views and, while they can be a valuable tool for a planning body, this group must prepare the Comprehensive Plan.

The survey was published in the BeeHive, which was mailed to County residents in December 2006, as well as an online version available through the County and Planning Department websites. The County collected submissions over a 3 month period and received 368 responses (224 online and 144 by mail), which were compiled in a database to produce a full summary. The following pages contain the full results of the survey. Since not every participant answered every question, the number of times a question was left blank is shown in parentheses. The final question allowed citizens to write-in their responses. Not every participant chose to provide a response. A general summary of write-in responses is provided with Question 41.

2006 Citizen Survey Summary

1. How long have you lived in Gloucester County? (15)

Less than one year	13
1-5 years	94
5-10 years	60
More than 10 years	147
All my life	39

2. In what District of Gloucester County do you live? (29)

Petsworth	81
Ware	73
York	20
Abingdon	95
Gloucester Point	70

3. In your District, do you think the residential growth is: (25)

Too fast	176
Too slow	12
About right	155

APPENDIX B

4. How long do you expect to continue living in Gloucester County? (19)

Less than one year	9
1-5 years	34
5-10 years	47
More than 10 years	259

5. Are you generally satisfied with the location of your home relative to places that you frequent, such as place of work, grocery, etc.? (19)

Yes	323
No	26

6. Do you own or rent your home? (21)

Own (See Data Below)	301
Rent	46
How long have you owned/ rented your home?	
1-5 Years	115
6-10 Years	46
11-15 Years	34
16-20 Years	27
21-25 Years	20
26-30 Years	19
30 Plus Years	26

7. Do you intend to purchase a home within the next 5 years? (31)

Yes	47
No	255
Maybe	65

With respect to the future growth and development of Gloucester County, how important to you are the following issues?

	Very Important (5)	Moderately Important (4)	Important (3)	Minimally Important (2)	Unimportant (1)	No Opinion (0)
Working in the community in which you live (32)	100	47	65	66	37	21
Broadening the county's tax base (39)	71	44	95	60	41	18
Encouraging industrial growth (32)	47	45	43	107	91	3

	Very Important (5)	Moderately Important (4)	Important (3)	Minimally Important (2)	Unimportant (1)	No Opinion (0)
Attracting new business (33)	74	67	78	60	53	.3
Improving housing availability, affordability & cost (33)	87	56	80	51	55	6
Improving roads & highways (29)	136	66	86	37	11	3
Managing growth in the county (28)	259	36	32	5	7	1
Encouraging planned mixed-use development (36)	81	66	92	42	42	9
Concentrating growth where utilities are provided (34)	93	65	86	53	30	7
Preserving agriculture (26)	196	65	60	11	5	5
Preserving forest land (27)	244	53	33	7	2	2
Protecting water quality & water resources (27)	287	37	15	1	1	27
Preserving the county's rural character (28)	222	61	38	13	4	2
Preserving historic sites and structures (28)	245	53	27	11	2	2
Preserving natural resources and open space (28)	255	53	25	4	2	1
Preserving wildlife habitat (26)	254	45	31	8	2	2
Preserving archeological sites (62)	196	51	40	13	3	3
Protecting scenic views and vistas (30)	223	58	45	8	1	3

APPENDIX B

	Very Important (5)	Moderately Important (4)	Important (3)	Minimally Important (2)	Unimportant (1)	No Opinion (0)
Improving the appearance of Route 17 (31)	154	78	65	23	16	1
Providing public access to the water (34)	115	67	76	46	26	4
Sidewalks in certain areas (31)	78	56	84	73	38	8
Bike trails and/or walking trails (29)	129	62	71	49	20	8

The survey printed in the BeeHive did not include numbers for respondents to circle, however, it did provide the row and most respondents indicated an answer within the row. The online survey did not contain the same error.

8. Which do you feel is more important? (20)

Preserving rural areas such as farms and forest land	192
Encouraging development in our County	14
Both are equally important	142

9. Do you feel there is an adequate amount of affordable housing in Gloucester County? (19)

Yes	158
No	131
No opinion	60

10. What types of new housing do you think are needed in Gloucester County?

Single-family homes	131
Townhouses/Condominiums	42
Apartments	37
A mix of single-family, townhouses/condominiums & apartments	107
Senior living	107
None	91

11. If you think multi-family housing is needed in the County, where in the County should it be located?

Gloucester Courthouse	70
Gloucester Point	78
Hayes	55
White Marsh	57

Northern Gloucester	69
Other* (See data below)	39

*Spread throughout (8), Areas with public water and sewer (3), no preference (3), waterfront (1), Rt14/Ware Neck (1), Bena (1).

12. What types of growth are needed in Gloucester County?

Commercial (retail/businesses)	155
Manufacturing, Processing, Distributing	106
Residential	74
No preference	23
None	115

13. Do you think residential and business growth in Gloucester County should be directed to certain areas of the county so that other areas of the county can remain rural? (24)

Yes	294
No	30
No opinion	20

14. Are you concerned about Route 17 access and safety? (23)

Yes	274
No	60
No opinion	11

15. Would you prefer growth on Route 17 to develop as: (51)

A commercial strip corridor	78
A residential area with buffers	43
Some of A & B	196

16. If there was an alternative route to Route 17 between the Courthouse and the Point would you foresee using it? (33)

Yes	234
No	101

17. Do you work in Gloucester County? (20)

Yes	132
No	130
Retired	86

18. If no, how far do you travel to work one way?

Less than 25 miles	86
25-50 miles	69
50-75 miles	12
Over 75 miles	7

APPENDIX B

19. What city/town/county is your place of work?

Newport News	47
Hampton	22
Williamsburg	15
York County	14
Norfolk	7
James City County	4
Middlesex	4
Mathews	3
Richmond	3
Poquoson	2
Saluda	2

Each with one: Alexandria, Ashland, Fairfax, King & Queen, Naxera, Northern Virginia, Stafford, Maryland, West Point

20. What is the main reason you work outside of Gloucester County?

More money	34
Lack of opportunities here/ comparable work not available	48
Already had job when moved here	14

21. What type of employment opportunities would you like to see created in Gloucester County?

Commercial/Retail/Wholesale	130
Manufacturing, Processing, Distributing	114
Farm related/ Agri-business	109
Construction	39
Technical	182
Other	44
None	48

22. Where do you think industrial and/or manufacturing type uses should be located in the County?

Northern County	76
Current/Designated Business Park	59
Nowhere	33
Along Route 17	29

23. Should the County offer incentives to attract industry? (32)

Yes	107
No	177
No opinion	52

24. Do you think the County should start designating certain roads as Greenways to protect the scenic views and rural character of the area through increased setbacks and/or buffers? (23)

Yes	287
No	31
No opinion	27

25. Would you like to see marina facilities expanded to incorporate mixed-use development with commercial, retail, and residential areas where public utilities exist? (31)

Yes	152
No	103
No opinion	82

26. Should the County strive to limit/protect development in flood-prone areas through zoning and land use regulations? (27)

Yes	297
No	26
No opinion	18

27. If public sewer was available at your home, would you be interested in that service? (28)

Yes	180
No	130
No opinion	30

35. Please check all of the uses you would like to see incorporated in future trails in the county.

Biking	249
Horses	127
Pedestrian	279
Strollers	147

36. Would you like to see these trails link commercial and residential areas, such as Gloucester Courthouse and/or Gloucester Point, where available? (29)

Yes	215
No	52
No opinion	72

37. Would you like to see Gloucester Point developed in a village environment that takes advantage of the existing physical and natural environment to encourage tourism and improve quality of life? (29)

Yes	224
No	67
No opinion	48

Questions 38-40 gave citizens responding to the survey the opportunity to write in responses. Not everyone that completed the survey chose to fill in any or all of these. Below, each question is given with the number of people that responded to it and a summary of the main points of each.

38. What do you see as Gloucester County's greatest problem now or in the future?

Too much residential growth/ development	125
Route 17	98
Appearance	19

Traffic	62
Only route	17
Overcrowded High School	27
Total Responses	329

Other answers with multiple responses:

Empty buildings such as Wal-Mart and Winn-Dixie not being used, No affordable housing, growth without proper infrastructure, too many homes on septic systems, losing rural character

39. What do you see as three of the most desirable characteristics of Gloucester County?

Rural	175
Country-like/Small Town	45
Open/Green Space	32
Water (front, access, proximity)	107
Friendly People	60
Historic	37
Low crime/Safe	36
Schools	27
Parks and Recreation	25
Low Taxes/Cost of Living	23
Less Traffic/Congestion	21
Total Responses	315

Other answers with multiple responses:

Beautiful, Scenic, Quiet, the Courthouse Area, Affordable Housing, Sense of Community

40. What do you see as the three most undesirable characteristics of Gloucester County?

Route 17	167
Appearance	47
Traffic	66
Only route	23
Excessive Residential Growth and Development	90
Secondary Road Conditions	41
Overcrowded Schools	37
Too Much Retail/Chains	30
Lack of Shopping Choices	29
Abandoned Buildings	27
Toll on Coleman Bridge	15
Total Responses	318

Other answers with multiple responses:

Not enough job opportunities, taxes too high for services citizens receive, lack of infrastructure, lack of affordable housing, too many septic systems/issues

APPENDIX B

Question 41 gave citizen responders the opportunity to provide any additional comments. Over 185 citizens chose to take advantage of this space. Below are a few of their comments:

“Gloucester is a great place to live. I just wish they would spend more tax money improving the schools and roadways.”

“Thanks for the survey. This will be difficult with many wanting more services, yet unwilling to change and pay more in taxes. Let’s keep our small town appeal and not try and compete head to head with York County or James City County. That is why Gloucester is a special place to live, enjoy and grow! We love it here!”

“I do not support removing the toll from the Coleman Bridge. I like the idea of paying for what you use.”

“...Gloucester is a beautiful place with BEAUTIFUL trees and wild life, and I truly pray that we will choose to keep it that way.”

“I am concerned with the rapid uncontrolled growth. I am not alone when I say I moved to Gloucester b/c of the rural small town feel. I hate that it’s beginning to look like Newport News.”

“We need higher paying jobs so that citizens do not have to commute out of the county to work to be able to afford to live here.”

“Control the growth on Rt 17 before it’s too late. It may already be too late.”

“County income not keeping pace with the call for services.”

“Especially concerned over the fact that there is only one high school for the whole county.”

“Traffic congestion on the corner of Main Street and Rt. 14.”

“We saw a huge increase in taxes, but no new services offered to us to account for that huge increase!”

“Rt 17 does not provide any support for Pedestrian traffic or Bicycle Traffic. It would be nice if a buffer, or sidewalk, or Bike Trail were provided for Public Use.”

“Although I am against growth, I do think we need another grocery store.”

“I have seen a lot of change in the past 30 years. Some change has been welcome and other things have not been so good. My family moved to Gloucester because of the schools and now I hear more families complain about the high school. I feel that it is a real problem and it needs to be addressed before more homes are built. Also there needs to be affordable housing for all people at all income levels. The price of housing is so high younger families and older people are being priced out of being able to afford a house. Something needs to be done so all can afford a place to live.”

“I would like to see more cultural activities such as concerts and plays brought to the county.”

“Curbside pick-up of debris/heavy objects (not all of us own trucks).”

“The addition of more buildings and development is ludicrous considering that the old Wal-Mart shopping center and many like it are still empty.”

February 2008 Joint Meeting with Board of Supervisors and Planning Commission

On Tuesday, February 19, 2008, a Joint Meeting was held between the Board of Supervisors and Planning Commission. Below is a copy of the agenda, the meeting attendees, and an excerpt from the Joint Meeting Packet regarding topics for discussion.

Gloucester County Board of Supervisors
 Agenda
 Tuesday, February 19, 2008
 6:30 P.M.
 Gloucester Main Street Library Community Room

- I. Call To Order
- II. Roll Call
- III. Invocation and Pledge of Allegiance
- IV. Approval of Minutes – January 15, 2008 & January 16, 2008
- V. National Fish & Wildlife Foundation Chesapeake Bay Stewardship Fund Grant Application
- VI. Gloucester Affordable Housing Needs Assessment Presentation
- VII. Brief Overview of Comprehensive Plan Steering Committee Update Process Followed by Discussion
- VIII. Senate Bill 768- Impact Fees
- IX. Supervisors Announcements
- X. Closed Meeting...pages 137-139
- XI. Adjourn

Steering Committee Topics for Discussion Joint Meeting – February 19, 2008

1. Rural Character
 - A. Setbacks to preserve character of different roads and areas
 - B. Preserve agriculture, forestry, and aquaculture as viable traditional industries in the County
 - C. Recognize suburban versus rural areas of county
 - D. Designate Greenways
 - E. Plan to protect open space through land bank or other funding sources
2. Route 17
 - A. Strip commercial development and zoning
 - B. Existing development/redevelopment - attractive commercial development - create a “vision” for Route 17 - Village Nodes
 - C. Increased setbacks to improve aesthetics
 - D. Revitalization along Route 17 – abandoned buildings, signs
3. Transportation

APPENDIX D

- A. Land use as it relates to transportation
- B. Alternative Routes
- C. Connectivity
- D. Create alternative employment and commuting options in the County to reduce number of vehicles (wireless, telecommuting)
- E. State mandates for UDA's, access and connectivity
- F. Bicycle and pedestrian facilities - streets to serve all users
- G. Greater Access Management
4. SC-1 residentially zoned land
 - A. By right zoning and Comp Plan future land use plan - is there too much?
 - B. Ability of the County to provide for services related to this residential land if it gets developed (schools, roads, fire and rescue, utilities, impacts to the environment)
5. Economic Development
 - A. Courthouse - Historic, EDA initiatives
 - B. Light Industrial, contractors - alternative business park for contractors and other uses
 - C. Create wireless options in the County to allow for high tech businesses and other wireless dependent businesses to locate in the County
6. Affordable Housing (final draft of the housing study will be presented and is already on the agenda for discussion)
 - A. Availability
 - B. Incentives for developers to provide more
7. Quality of life assets (See Steering Committee comments attached)
 - A. Parks and Recreation
 - B. Trails and Greenways
 - C. Educational Opportunities (RCC, Vocational Training)
8. Location of Multi-family housing and industrial uses
9. Historic Resources

Appendix E

March 2008 Community Outreach Public Meeting, Page Middle School, 7:00PM, Thursday, March 20, 2008

Agenda

- I. Welcome
- II. Introductions: Planning Staff, Members of the Citizen's Steering Committee, Planning Commission, and Board of Supervisors
- III. Comp Plan 101: What is a Comprehensive Plan?
- IV. Existing Conditions: Status of Our Community, Current Planning, Trends, & Issues
- V. Survey Summary: Summary of the results from the 2007 Citizen Survey
- VI. Discussion/Group break out
- VII. Conclusion: What is the next step in the process?

Planning Department Staff provided background information through two (2) presentations ("Comp Plan 101" and "Existing Conditions"), summarizing the comprehensive planning process and the committee's work to date. Staff supplied the results of the 2007 Citizen Survey and presented information on the county's website and Planning Newsgroup. The steering committee received comments and questions from the audience, which included a suggestion that the survey be mailed to residents and a comment regarding neighboring locality growth and its effect on Gloucester. A following conversation considered growth in Northern Gloucester and neighboring localities and the resulting traffic impacts on Route 17. Additionally, development density was discussed, including residents' build-out and growth preferences, development density, infrastructure improvement responsibility, and other development impacts on the County.

Following these discussions, the Comprehensive Plan update was presented with staff providing Goals and Objectives examples and informing the committee of future roadway improvements along Route 17 and their effects on the Comprehensive Plan. Staff also covered transportation options highlighted in prior meetings with a citizen requesting specifics within the transportation chapter. Ensuing conversation on transportation included the previous Comprehensive Plan's issues and a secondary (alternative) road network to Route 17. The available commercial property and existing property owner hardships along Route 17 was reviewed, with the audience asking about commercial zoning outside of the Court House. A suggestion for utilizing Rappahannock Community College and Gloucester High School to train high-tech workers who work and live (especially in workforce housing) in Gloucester was made. Following multiple suggestions on housing choices, Mr. Scudder and Mr. Frank Bryan, Executive Director of Habitat of Humanity, discussed multi-family and affordable housing options that maintain the County's rural character.

Conversation continued regarding whether local employers provide salaries that allow employees to live in Gloucester. Warren Deal stated that Gloucester has numerous affordable housing options, but also expressed concerns about the amount currently available. Keith Belvin suggested phased development that offers similar planning opportunities for future generations. Following a comment from an audience member, a discussion ensued regarding the water table, ground water supply, state requirements for a water supply plan, and public water and sewer extension. Christopher Corr examined the next steps in the Comprehensive Plan process and expressed his desire that the next public meeting occur in June or July.

Appendix F

2010 June Meeting Series: Description and Survey Results

In June 2010, the Gloucester County Planning Department held three (3) open-house meetings, inviting residents to provide input on the community's future. Meetings were held from 5 PM to 8 PM on June 15 at Achilles Elementary School, June 22 at the Piankatank Community League, and June 24 at the Main Street Library's Community Room. The community survey and responses are shown on the following pages.

Comprehensive Plan Update 2010 Public Meeting Survey

Thank you for coming out tonight! We would appreciate if you could take a few minutes as you walk around this evening to answer the following questions based on your individual thoughts and feelings about Gloucester County and its future.

Please use the following scale for answering the questions below:
 1-Strongly Disagree 2- Disagree 3- Neutral 4- Agree 5-Strongly Agree

Environment

1. What do you see currently as the largest environmental issue(s) facing Gloucester?

2. I am concerned with future development in Gloucester's flood prone areas.
 1 2 3 4 5
3. More public water access is needed in Gloucester.
 1 2 3 4 5

Green Infrastructure

4. Open spaces are valuable to Gloucester's quality of life.
 1 2 3 4 5
5. New residential and mixed use developments should include a percentage of open space.
 1 2 3 4 5

Housing

6. People of all income levels can find housing in Gloucester.
 1 2 3 4 5
7. The existing housing stock is sufficient to meet the needs of our community.
 1 2 3 4 5
8. I feel Gloucester needs more of the following housing type(s): (Please check all that apply)

<input type="checkbox"/> Apartments	<input type="checkbox"/> Duplexes
<input type="checkbox"/> Condos	<input type="checkbox"/> Single Family Homes
<input type="checkbox"/> Town Houses	<input type="checkbox"/> Manufactured Homes
<input type="checkbox"/> Senior Housing	<input type="checkbox"/> Other _____
9. Affordable workforce housing should be a requirement for new residential developments.
 1 2 3 4 5
10. For Gloucester, in what price range do you consider housing to be affordable?

<input type="checkbox"/> \$75,000-\$100,000	<input type="checkbox"/> \$150,000-\$175,000	<input type="checkbox"/> \$225,000-\$250,000
<input type="checkbox"/> \$100,000-\$125,000	<input type="checkbox"/> \$175,000-\$200,000	<input type="checkbox"/> \$250,000-\$275,000
<input type="checkbox"/> \$125,000-\$150,000	<input type="checkbox"/> \$200,000-\$225,000	<input type="checkbox"/> Above \$275,000

Urban Development Areas

11. There should be more opportunities to walk or bike to shopping or entertainment in Gloucester.

1 2 3 4 5

12. Future growth should be more compact in certain areas of the county, allowing others to remain rural.

1 2 3 4 5

13. Future growth in Gloucester should be concentrated in the following area(s) of the county:

Community Facilities

14. I feel I am served by an adequate amount of community facilities.

1 2 3 4 5

15. For each of the following community facilities/infrastructure items, place a check mark in the box that best applies:

Facility	Need More	Enough	Too Many
Schools (K-12)			
Schools(Vocational/ Higher Education)			
Libraries			
Parks			
Recreation Facilities			
Gathering Spaces			
Water Lines			
Sewer Lines			

16. Which items from question 15, if any, do you support expenditure of public funds to expand upon?

Transportation

17. I commute outside of Gloucester for work.

Yes No (If no, skip to question 19)

18. As a commuter, I am likely to use transit options such as the Express Bus, if and when they become available.

1 2 3 4 5

19. I feel the county should invest in alternative routes to Route 17 for local traffic movement.

1 2 3 4 5

Future Land Use

20. Based on the information I have seen this evening, I feel the revised Comprehensive Plan will capture my vision for Gloucester in the next 20 years.

1 2 3 4 5

21. What's missing to complete *your* vision? _____

Concerned with development in flood prone areas.

More public water access needed.

Open space is valuable.

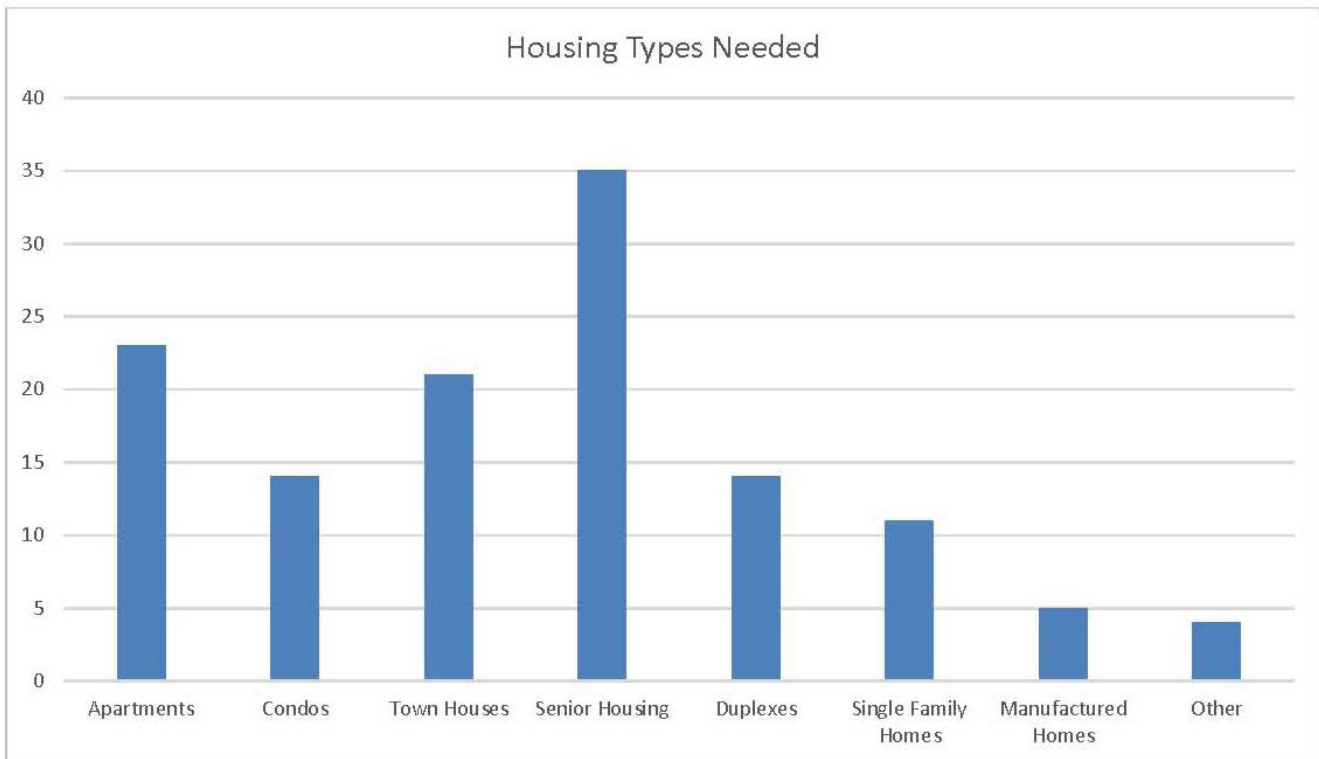

New development should include open space.

All income levels can find housing.

Existing housing stock is sufficient.

Affordable housing should be required.

More opportunities to bike/walk.

Growth should be compact.

Community facilities are sufficient.

Commute outside Gloucester for work.

Likely to use transit.

Need alternative routes to 17.

Comprehensive plan captures my vision.

Appendix G

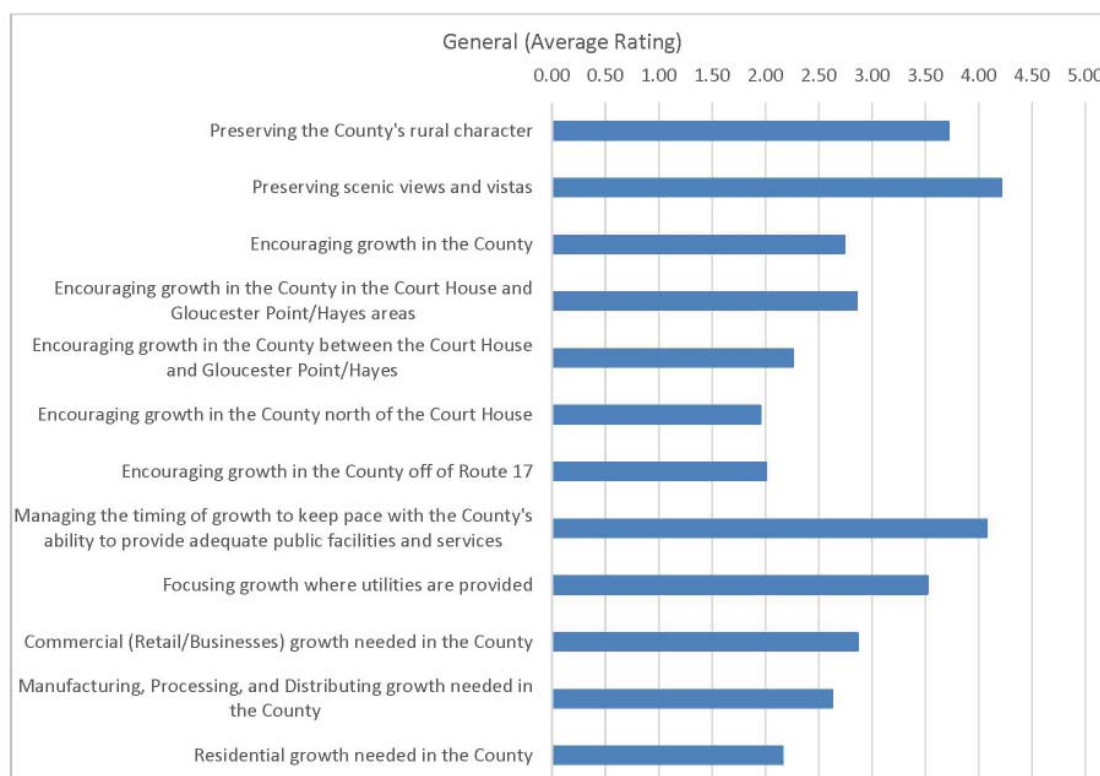

2015 Comprehensive Plan Survey

In October 2015, the Department of Planning and Zoning conducted a Comprehensive Plan Survey at the direction of the Planning Commission. This survey was performed on the County's SpeakUp Gloucester website, aimed to determine any changes in public opinion since the 2006 and 2010 surveys, and was used to advise the Planning Commission prior to finalization of the Comprehensive Plan.

The survey contained 52 topics covering a variety of categories, including General, Economy, Housing, Natural Resources, Cultural Resources, Transportation, and Community Facilities. Participants were asked to rank each topic by their level of importance according to the following scale:

1. Not Important
2. Somewhat Important
3. Important
4. Very Important
5. Extremely Important

Conducted over a one (1) month time period, 149 citizens participated in this survey and the results confirmed that current public opinion on important planning issues was consistent with the feedback received in the previous surveys. The average ranking for each topic is provided on the following pages.

APPENDIX G

APPENDIX G

Appendix H

2007 Affordable Housing Needs Assessment

The 2007 Affordable Housing Needs Assessment identified affordable housing as the County's most critical housing issue. Other housing concerns include transportation, unemployment, homelessness, poor housing conditions, programs for the disabled, financial literacy, homeownership support, and foreclosure.

Critical issues facing Gloucester County's housing

The survey also asked respondents to identify the services and housing types missing or most needed in Gloucester. Every respondent selected affordable rental housing as the highest concern followed by affordable housing ownership (62.5%), low-income services (62.5%), disabled services (56.3%), and senior services (37.5%). Single-family, two-family, multifamily, and accessory dwelling units were recognized as affordable housing options. The survey found the need for housing rehabilitation and redevelopment programs as well as services for the elderly, homeless, and special needs populations. Respondents were not in favor of mobile home park development or expansion.

The top priority services or initiatives in the next 20 years was encouraging builders, developers, and property owners to provide rental and homeownership options, followed by providing safer alternative transportation, developing existing vacant and underused properties, improving the County's visual appeal, developing and passing a property maintenance code, and providing property improvement assistance. Respondents also desire a central referral line for County services and programs.

Gloucester County Provider Survey

1. Gloucester County Service Provider:

This survey is being conducted to gather information for the updating of the Gloucester County Comprehensive Plan, specifically the chapter on housing and housing needs. The Comprehensive Plan is a document that helps guide the County as it faces the challenges of planning for public and private development in Gloucester County. While the County has done several other surveys regarding the general direction for the Comprehensive Plan, we are seeking more guidance regarding housing needs within our community. We are hoping that people in the various agencies and non-profit groups which provide services to individuals that we may not have reached through our previous efforts may be able to provide additional insight regarding some of the housing issues facing our community.

As a resource provider serving the needs of Gloucester County citizens, we welcome your opinions on the housing needs in Gloucester and the role of the County regarding these needs. We ask that you please take a few moments to complete this survey to the best of your knowledge and ability. Your responses will help us to identify needs in the community and formulate recommendations for how those needs can effectively be addressed. Thank you.

What best describes your organization or role as it relates to Gloucester County?

(Check all that apply)

- Gloucester County Resident
- Volunteer
- Advocate
- Non-Profit
- Non-Profit/Housing
- Local Government
- State Government
- Private
- Financial Institution
- Faith Based

2. What area does your organization serve? (Check all that apply)

Appendix J

2022 Public Service Corporations and Public Utilities

Virginia State Code details uses defined as “public service corporations” and “public utilities” in Sections 56-1 and 56-265.1, respectively. Generally, these uses include utilities supplying electric power, natural gas, geothermal power, telephone services, water service, sewer service, and common carriers that transport passengers or property, which can be owned or operated by a public, private, or nonprofit entity. Furthermore, state code details numerous instances where these uses are exempt from being defined as a “public service corporation” or “public utility”, as specified in the aforementioned state code sections.

Furthermore, Section 15.2-2232 of the Code of Virginia requires the Planning Commission to review public service corporations and public utilities for being “substantially in accord with the adopted comprehensive plan.” When the Commission performs this review, they are to consider the “general or approximate location, character and extent” of the feature under review. Similar to the state code sections defining these uses, Section 15.2-2232 details certain exceptions, establishing circumstances where a use shall automatically be deemed to be “substantially in accord with the comprehensive plan”, primarily for by right telecommunications facilities and select solar energy facilities, and, therefore, these uses do not require review by the Planning Commission.

History and Background

Solar Energy Facilities

In 2015, in response to statewide initiatives announced by Virginia’s governor, staff from the Department of Planning and Zoning began receiving an increase in inquiries regarding the ability to develop solar facilities within the County. As a result, the Planning Commission and Board of Supervisors directed staff to study permitting solar development within the County and the Board subsequently amended the County Code to permit solar facilities within the County, including utility-scale solar energy facilities by right in the RC-1 (Rural Countryside) district and by Conditional Use Permit (CUP) in all other districts, along with adopting supplemental regulations for solar uses at various scales. Based on experiences from solar development within the County and in other localities around the state, the Board revisited these regulations in 2017 to revise the requirements regarding decommissioning plans and their associated sureties and in 2020 to require a CUP for utility-scale solar energy facilities in all zoning districts, including the RC-1 district, along

Gloucester Solar Electric Power Plant - Located off Rte. 14, the first Board approved utility-scale solar energy facility within the County.

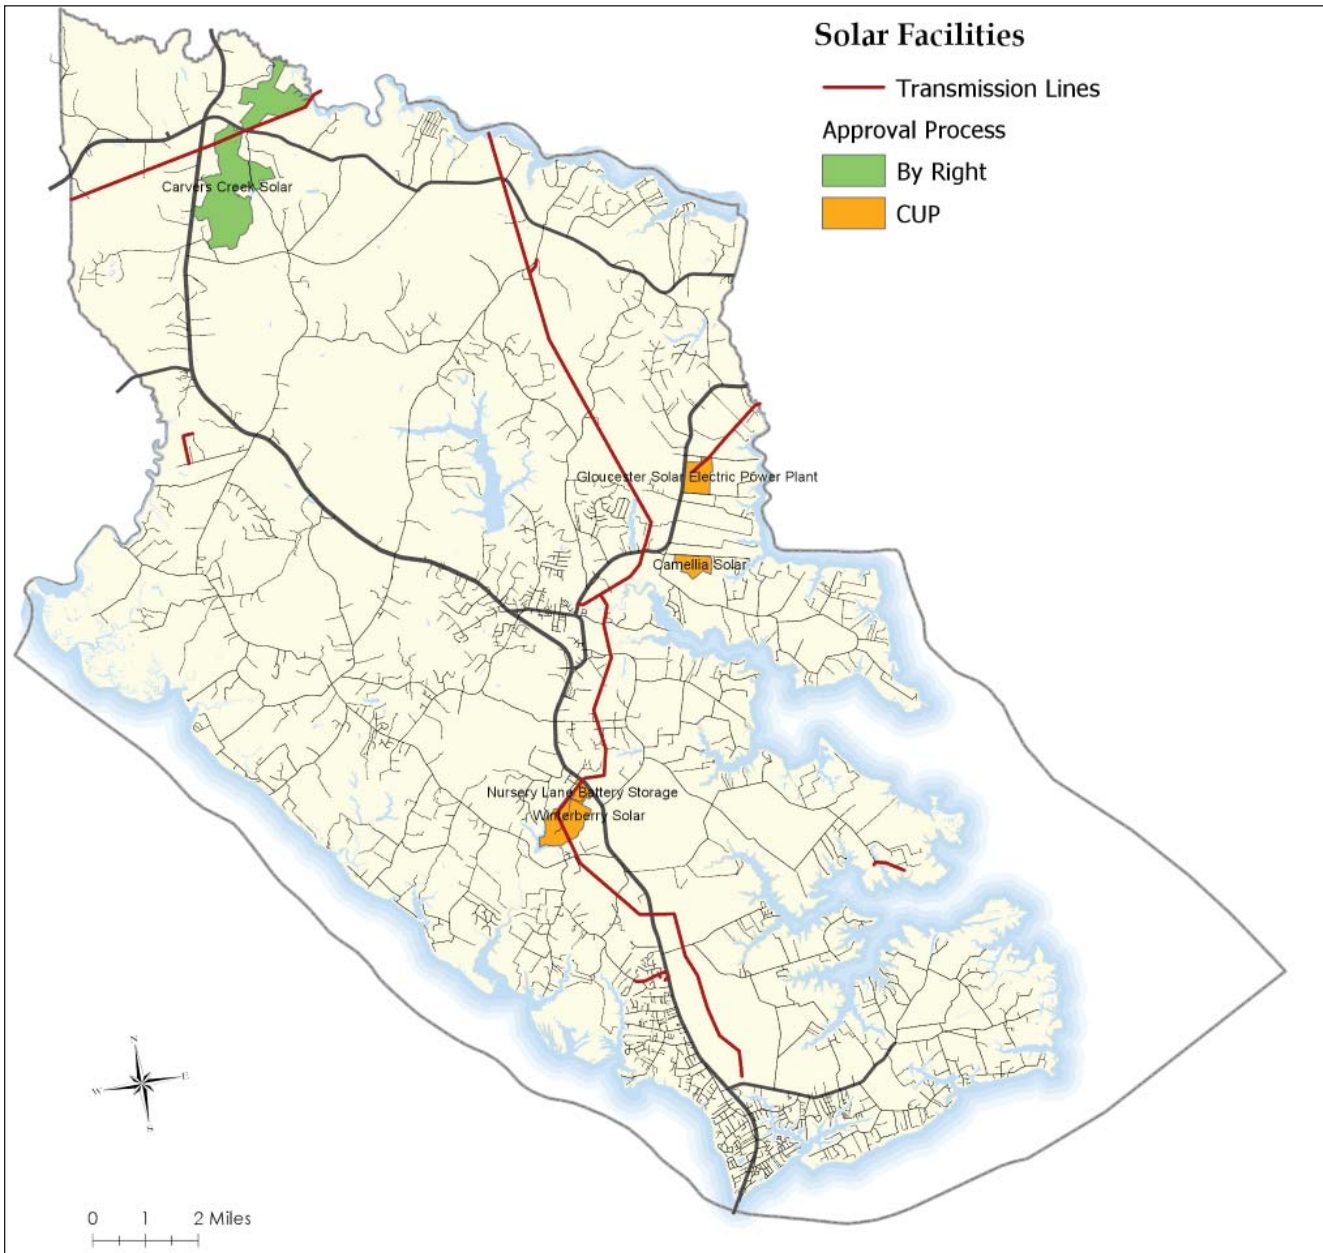

Aerial during construction of Gloucester Solar Electric Power Plant - Located off Rte. 14, the first Board approved utility-scale solar energy facility within the County. Source: SUKUT Construction.

with further revisions to the supplemental regulations for these uses. In 2021, after community opposition to the growing number of utility-scale solar energy facilities in the County, the Board adopted further revisions to these regulations, aligning the scales of solar development with state code and industry practices, limiting the location of solar energy facilities exceeding 25 kilowatts (kW) of electrical power, limiting the percentage of land area within the SC-1 (Suburban Countryside) and RC-1 districts that can be developed by solar facilities to two percent total land area, and further revising the supplemental regulations for these uses at all scales.

Since the Board adopted a solar ordinance in 2015, a number of applications have been reviewed by the Planning Commission and subsequently approved by the Board of Supervisors. In 2017, the Board approved the first utility-scale solar energy facility within the County, the Gloucester Solar Electric Power Plant, through the CUP process. In 2020, two additional utility-scale solar energy facilities were approved by the Board through the CUP process, the Winterberry Solar and Cow Creek Solar Facilities. In addition, the Carver's Creek Solar Facility, another utility-scale solar energy facility, was permitted as a by right use at the time of preliminary site plan approval in 2020 and, therefore, did not require review by the Planning Commission or Board of Supervisors. In 2021, the Camilla Solar Facility was also approved by the Board through the CUP process. For projects approved through the CUP process, customized conditions of approval were established for each project at the time of CUP approval. These conditions of approval, in addition to the applicable supplementary regulations for utility-scale solar energy facilities that existed at the time of CUP approval, have determined the development standards for

Map AJ-1: Solar & Battery Storage Facility Approvals

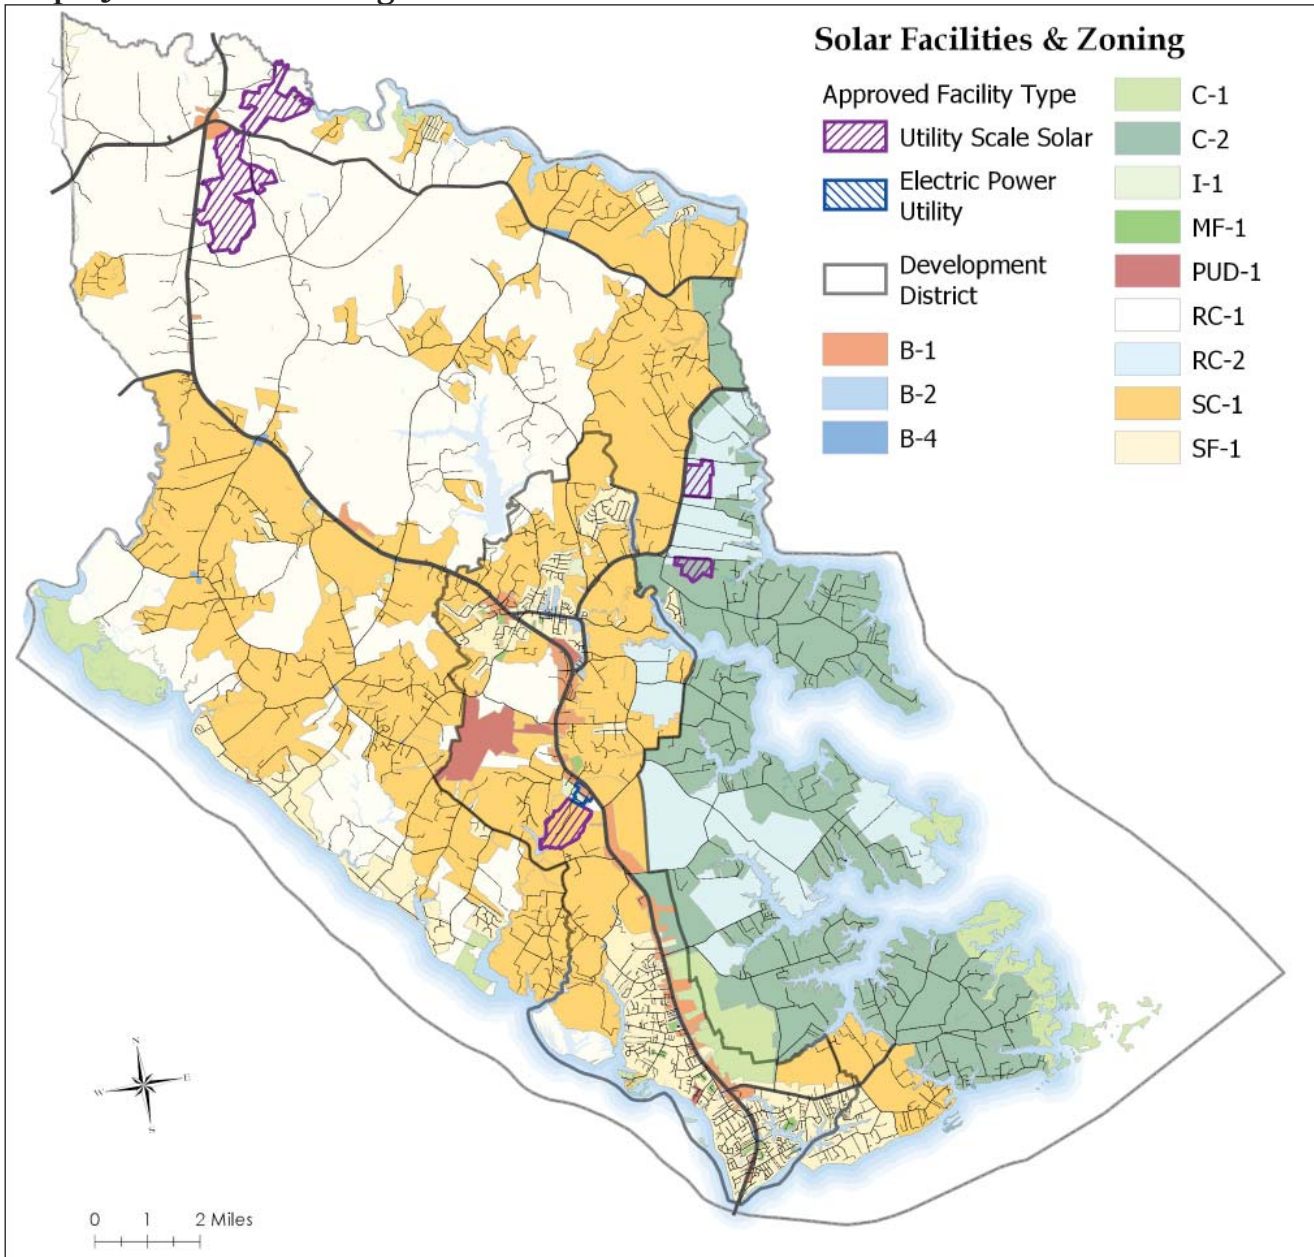

Data Sources: Gloucester County

Four solar facilities and one battery storage facility (classified as an electric power utility) have been approved for development or developed in Gloucester County since these uses were first added to the Zoning Ordinance in 2015 (for solar energy facilities) and 2021 (for electric power utilities). Gloucester Solar Electric Power Plant, Winterberry Solar, and Camellia Solar have been permitted through the Conditional Use Permit (CUP) process while Carvers Creek Solar was permitted as a by-right use. Nursery Lane Battery Storage (an electric power utility) has also been permitted through the CUP process.

Solar facilities are discussed on pages 283-287.

Map AJ-2: Solar & Zoning

Data Source: Gloucester County Planning and Zoning Department

Utility-scale solar facilities were originally permitted by-right in the RC-1 district and by Conditional Use Permit (CUP) in all other districts. However, after community feedback and numerous revisions to the solar ordinance, these facilities (utility-scale and community-scale solar energy facilities) are currently permitted by CUP only in the RC-1 and SC-1 districts with a maximum allowable land area of 2% of total acreage in each of these districts to be utilized by these uses. In addition, electric power utilities are permitted by CUP in all districts.

Solar facilities and zoning are discussed on pages 283-287.

each individual solar energy facility approved through the CUP process within the County to date. Although Carver's Creek Solar Facility did not have additional CUP conditions associated with the project, subsequent final site plan submittals were required to meet the applicable supplementary regulations for utility-scale solar energy facilities that existed at the time of preliminary site plan approval.

Additional small-scale, private solar energy facilities, permitted by right in all zoning districts, have been established within the County as well. These facilities, producing 25 kW or less of electrical power, are typically established as accessory, roof-mounted residential structures or adjacent structures to residences and often solely serve the uses on the lot they are located. As a result, the Board of Supervisors and Planning Commission have not expressed concern regarding these small-scale solar energy facilities and are generally supportive of them. Although the Zoning Ordinance been amended multiple times to address larger facilities, including, but not limited to, utility-scale solar energy facilities, concerns remain for these uses and potential impacts generated by larger facilities in the districts where they are permitted. These concerns are not as focused towards the development standards for these uses, but rather, the guidance from the Comprehensive Plan to be utilized by the Planning Commission and Board of Supervisors when evaluating applications for these uses on a case-by-case basis, especially evaluation of utility-scale solar energy facilities.

Other Utilities

In 2020, due to an inquiry to locate a battery energy storage facility within the County, the Board of Supervisors directed staff to study how to update the Zoning Ordinance to appropriately regulate battery energy storage facilities and other public utilities not previously contemplated as potential uses in the County. In addition, since the Zoning Ordinance classified all utilities (other than solar energy facilities) as "uses required for the provision and maintenance of public utilities", which were not defined in the ordinance and were permitted by right in all districts, all utility uses were included within staff's considerations. In 2021, the Board amended the Zoning Ordinance, defining and regulating electric power utilities and nuclear power utilities as well as clarifying what specific utility uses fall under the definition of "uses required for the provision and maintenance of public utilities".

Example of a battery energy storage facility like that approved by Conditional Use Permit on Nursery Lane adjacent to the Winterberry Solar Facility in 2021.

APPENDIX J

Since the establishment of the “electric power utility” use in the Zoning Ordinance in 2020, the Board has approved one application for this type of use through the CUP process, the Roadview Battery Storage Facility, approved in 2021, which was proposed to be located adjacent to the Winterberry Solar Facility. Similar to the CUP applications approved for solar energy facilities, a unique set of conditions of approval were established for this application, which establish the development standards for this project.

Although the County has addressed how to regulate other utility uses in the Zoning Ordinance, in a similar fashion as solar energy facilities, concern continues to be expressed by the Planning Commission and Board of Supervisors regarding what guidance to use from the Comprehensive Plan to evaluate other utilities, such as battery storage facilities and other, newly emerging utilities.

Section 15.2-2232 Review

As previously discussed, the Code of Virginia Section 15.2-2232, requires the Planning Commission to review public service corporations and public utilities for being “substantially in accord with the adopted comprehensive plan.” Furthermore, when the Commission performs this review, they are to consider the “general or approximate location, character and extent” of the feature under review. Similar to the state code sections defining these uses, Section 15.2-2232 details certain exceptions, establishing circumstances where a use shall automatically be deemed to be “substantially in accord with the comprehensive plan”, primarily for by right telecommunications facilities and select solar energy facilities, and, therefore, these uses do not require review by the Planning Commission.

The Planning Commission has only reviewed one project specifically under Section 15.2-2232 of the Code of Virginia. Although the Gloucester Solar Electric Power Plant was approved as a CUP by the Board of Supervisors in 2017, the Resolution approving this application did not explicitly reference Section 15.2-2232 and, therefore, the applicant for this project requested the Planning Commission review the project to determine it as being “substantially in accord with the adopted comprehensive plan.” As a result, in 2018, the Commission reviewed

§ 15.2-2232. Legal status of plan.

“Whenever a local planning commission recommends a comprehensive plan or part thereof for the locality and such plan has been approved and adopted by the governing body, it shall control the general or approximate location, character and extent of each feature shown on the plan. Thereafter, unless a feature is already shown on the adopted master plan or part thereof or is deemed so under subsection D, no street or connection to an existing street, park or other public area, public building or public structure, public utility facility or public service corporation facility other than a railroad facility or an underground natural gas or underground electric distribution facility of a public utility as defined in subdivision (b) of § 56-265.1 within its certificated service territory, whether publicly or privately owned, shall be constructed, established or authorized, unless and until the general location or approximate location, character, and extent thereof has been submitted to and approved by the commission as being substantially in accord with the adopted comprehensive plan or part thereof.”

the Gloucester Solar Electric Power Plant and determined that the “general location or approximate location, character, and extent of the Solar Facility is substantially in accord with the Gloucester County Comprehensive Plan.”

Resolutions approving solar energy and battery storage facilities submitted subsequent to the Gloucester Solar Electric Power Plant have contained language reflecting Section 15.2-2232 to confirm substantially in accord with the adopted comprehensive plan during the Planning Commission’s review of the CUP application. In addition, since the Carver’s Creek Solar Facility was permitted as a by right project at the time of preliminary site plan approval, it was determined that this project was substantially in accord with the adopted comprehensive plan as a result of its by right zoning status, which had been recently adopted by the Board of Supervisors. Therefore, the Planning Commission has not been approached by any additional solar energy facility developers or other utility providers seeking a determination of substantially in accord with the adopted comprehensive plan for projects not associated with CUP applications since 2018. However, based upon the Commission’s experience reviewing solar energy and battery storage facilities for substantially in accord with the adopted comprehensive plan, the Commission has continued to express concern regarding the limited guidance the Comprehensive Plan has to offer for the Planning Commission’s mandated review under Section 15.2-2232 of the Code of Virginia.

Comprehensive Plan Criteria

In 2021, due to the ongoing concern regarding the limited guidance the Comprehensive Plan offers for the various uses classified as “public service corporations” or “public “utilities”, the Planning Commission requested that staff develop criteria for these uses to assist the Commission during future reviews in accordance with Section 15.2-2232 of the Code of Virginia. After reviewing the relevant state code sections along with the 2016 Comprehensive Plan, staff determined what uses were classified as “public service corporations” or “public utilities” and which of these uses were not already addressed in other chapters of the Comprehensive Plan, including the Transportation and Community Facilities chapters (Chapters 5 and 6, respectively). At a Joint Meeting between the Board of Supervisors and Planning Commission, the Gloucester County Attorney recommended a Vision Statement for how these uses should generally be located, which was supported by the Planning Commission and the Board of Supervisors. At subsequent Planning Commission meetings, County staff and the Planning Commission developed criteria based upon the zoning and/or future land use classification these uses may be proposed to be located within, general criteria for all uses classified as “public service corporations” or “public utilities”, and specific criteria for certain uses where greater concern exists. The Board of Supervisors adopted this appendix as Appendix J of the Comprehensive Plan (2022 Public Service Corporations and Public Utilities Amendment) at their September 6, 2022 meeting. During the adoption process, the Board removed the Vision Statement originally recommended by the County Attorney since the uses reviewed under the adopted criteria should also be “substantially in accord with” the Comprehensive Plan’s Vision Statement and Board of Supervisor’s Vision Statement for 2035, both included in the Introduction of the Comprehensive Plan (Chapter 1).

These criteria have been developed to provide the Commission with appropriate guidance to assess the “general or approximate location, character and extent” of a use under review as they seek to determine whether this use is “substantially in accord with the adopted comprehensive plan.” In addition, the criteria were prepared with the ability for the Planning Commission to use them at their discretion, recognizing that certain uses may not neatly fit within the criteria but may still be appropriate for the proposed location or application if multiple criteria may conflict for uses with unique characteristics and, therefore, flexibility in applying the criteria would be necessary to determine whether these uses are “substantially in accord with the adopted comprehensive plan.”

Zoning District/Future Land Use Types

The Planning Commission may utilize the following zoning district and future land use type recommendations at their discretion when evaluating all public service corporations and public utilities for substantially in accord or consistency with the Comprehensive Plan.

1. Agricultural
 - a. Public service corporations/public utilities should be evaluated for appropriateness on a case-by-case basis in agriculturally zoned areas based upon the location, extent, and character and any applicable criteria detailed in the Comprehensive Plan.
 - b. When public service corporations/public utilities are proposed in agricultural districts, special consideration shall be given to the location of these uses relative to wetlands, prime farmland, forestland, natural heritage sites, and other natural areas.
2. Residential
 - a. Public service corporations/public utilities are generally not appropriate in residential districts unless the use directly serves other uses in the district, specifically (but not exclusively), the residential uses.
 - b. When public service corporations/public utilities are proposed in residential districts, the PC's review of public service corporations/public utilities will be reviewed based upon the location, extent, and character and any applicable criteria detailed in the Comprehensive Plan.
 - c. When public service corporations/public utilities are proposed in residential districts, special consideration shall be given to the location of these uses relative to areas containing parks, schools, other public facilities/amenities, and natural heritage sites.
3. Multifamily
 - a. Public service corporations/public utilities are generally not appropriate in multifamily districts unless the use directly serves other uses in the district, specifically (but not exclusively), the multifamily residential uses.
 - b. When public service corporations/public utilities are proposed in multifamily districts, the PC's review of public service corporations/public utilities will be reviewed based upon the location, extent, and character and any applicable criteria detailed in the Comprehensive Plan.
 - c. When public service corporations/public utilities are proposed in multifamily districts, special consideration shall be given to the location of these uses relative to areas containing higher density housing (greater than 4 units per acre), parks, schools, and other public facilities/amenities, and natural heritage sites.
4. Conservation
 - a. Public service corporations/public utilities are generally not appropriate in conservation districts unless the use directly serves another use in the district.
 - b. When public service corporations/public utilities are proposed in conservation districts, the PC's review of public service corporations/public utilities will be reviewed based upon the location, extent, and character and any applicable criteria detailed in the Comprehensive Plan.
 - c. When public service corporations/public utilities are proposed in conservation districts, special consideration shall be given to the location of these uses relative to wetlands, prime farmland, forestland, natural heritage sites, and other natural areas.
5. Business/Mixed Use
 - a. Public service corporations/public utilities are generally appropriate in **business zoned areas along Route 17** as long as the location, extent, and character are not inconsistent with other criteria detailed in the Comprehensive Plan.
 - b. Public service corporations/public utilities should be evaluated for appropriateness on a case-by-case basis in **business zoned areas not along Route 17** based upon the location, extent, and character and

- any applicable criteria detailed in the Comprehensive Plan.
- c. Public service corporations/public utilities should be evaluated for appropriateness on a case-by-case basis in **mixed-use zoned areas** based upon the location, extent, and character and any applicable criteria detailed in the Comprehensive Plan.
6. Industrial
 - a. Public service corporations/public utilities are generally appropriate in industrially zoned areas as long as the location, extent, and character are not inconsistent with other criteria detailed in the Comprehensive Plan.
 7. PUD
 - a. If specific public service corporations/public utilities are proposed in PUD districts, these uses should be clearly listed in the PUD ordinance.
 - b. In PUD districts where public service corporations/public utilities are not clearly listed as permitted uses in PUD districts (but not expressly prohibited by the district), the PC's review of public service corporations/public utilities will be reviewed based upon guidance for other types of districts (residential, business, etc.) and specific guidance (distance, location, etc.) provided within the Comprehensive Plan.
 - c. When public service corporations/public utilities are proposed in PUD's, special consideration shall be given to the location of these uses relative to areas containing higher density housing (greater than 4 units per acre), parks, schools, other public facilities/amenities, and natural heritage sites.

General Criteria for All Uses

The Planning Commission may utilize the following criteria at their discretion when evaluating all public service corporations and public utilities for substantially in accord or consistency with the Comprehensive Plan.

1. When siting public service corporations or public utilities within Gloucester County, these uses **should**:
 - a. Be located within 1 mile of the uses they directly serve or facilities they are required to directly connect to as part of their regular operations.
 - b. Encourage utility provision to the maximum number of users possible where utility expansion does not conflict with other general or specific criteria for the utility or the district in which it is located.
 - c. Be located outside of wetlands, RPA features, and 100-foot RPA buffers.
 - d. Consider the location, extent, and character of the development when located in proximity to residential, recreational, educational, and other facilities for human use.
 - e. Preserve the rural character unless proposed in conjunction with a larger development.
 - f. Avoid dam break inundation zones.
2. When siting public service corporations or public utilities within Gloucester County, these uses **should not negatively impact**:
 - a. County roadways
 - b. Cultural and historic resources
 - c. Visual resources
 - d. Surface water or ground water resources
 - e. Natural heritage sites, endangered species, and wildlife corridors

Criteria for Specific Uses

The Planning Commission may utilize the following criteria at their discretion when evaluating specific public service corporations and public utilities (where applicable) for substantially in accord or consistency with the

APPENDIX J

Comprehensive Plan.

1. Electric Utilities (including heat and light companies)
 - a. Electric utilities, including those providing heating and lighting services, **should not:**
 - i. Pose a danger to residents or visitors due to hazards resulting from fire at the facility beyond that typically experienced by other uses within the district.
 - ii. Have significant impacts on the quantity of vehicles on or quality of traffic flow through roadways within the County as a result of service vehicles entering and/or exiting maintenance office sites.
 1. Solar Facilities
 - a. Solar facilities **should not:**
 - i. Be developed on areas containing slopes of 15% grade or greater.
2. Natural/Manufactured Gas
 - a. Natural and manufactured gas utilities **should not:**
 - i. Pose a danger to residents or visitors due to hazards resulting from fire at the facility beyond that typically experienced by other uses within the district.
3. Geothermal Energy
 - a. Geothermal energy utilities **should not:**
 - i. Pose a danger to residents or visitors due to hazards resulting from fire at the facility beyond that typically experienced by other uses within the district.
4. Telephone Services
 - a. Telephone utilities, including wireless communication facilities and internet services, **should not:**
 - i. Have significant impacts on the quantity of vehicles on or quality of traffic flow through roadways within the County as a result of service vehicles entering and/or exiting maintenance office sites.
5. Sewer Service Facilities
 - a. Sewerage utilities **should:**
 - i. Encourage public sewer expansion primarily within the County's Development District unless development necessitating expansion outside of the Development District demonstrates the ability for the public sewer system and other public facilities and services to accommodate this expansion.
6. Water Service Facilities
 - a. Water utilities **should:**
 - i. Encourage public water expansion primarily within the County's Development District unless development necessitating expansion outside of the Development District demonstrates the ability for the public water system and other public facilities and services to accommodate this expansion.
7. Common Carries (transporting passengers or property)
 - a. Common carrier utilities **should not:**
 - i. Have significant impacts to the quantity of vehicles on or quality of traffic flow through roadways within the County.

Historic flooding data and hydrologic studies projecting flood frequency

The entirety of the site is located within a mapped floodplain, with portions located within FEMA Flood Zones AE and VE. The shoreline has eroded at a rate of about -1 to -1.5 ft per year since 1994 (Shoreline Studies Program Shoreline Change Database). The project site is impacted by ever increasing effects of coastal and tidal influences, resulting in site flooding and drainage issues. Due to the project site's adjacency to the York River and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. For example, the project location has long been, and continues to be, impacted by tropical, sub-tropical, and Nor'easter events. **According to NOAA's Coastal Flood Mapper, this project location is at the highest risk of coastal flooding.**

The damage from Hurricane Isabel in 2003 was extensive, likely the storm of record in the Park's 40-year existence. In addition to approximately 5' of water in the building, the storm ripped up the Park's pier, pushed the stage through one of the services building's cinderblock walls and damaged the playground.

Despite not being named storm events, the site is subjected to regular flooding events, that result in damages, although perhaps not to the degree of the aforementioned events. With nearly every nor'easter the boat landing, parking lot, and park flood.

During other smaller storms, water ponds within the park and lots. A design is needed to achieve the goals of stormwater management, to keep the Park as usable as possible and to protect the expensive infrastructure and amenities. While flood insurance is maintained for the services building (a claim was filed for approximately \$47,000 in 2003 due to Hurricane Isabel) retaining the building in a condition that is subject to flooding impacts is not the best way to manage resilience long term, subjecting the County, its taxpayers, and even state and federal taxpayers to incremental and varying costs.

Social Vulnerability Classification

-  High Social Vulnerability
-  Moderate Social Vulnerability
-  Not Socially Vulnerable

RE: Applications Submitted by MPPDC to Virginia Community Flood Preparedness
Fund ROUND 4

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Department of Conservation and Recreation (DCR)'s Community Flood Preparedness Fund (CFPF). The proposal submitted by MPPDC staff enhances and builds upon regional and local resilience efforts within the Middle Peninsula. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood (FTF) Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Incentive Program design and the MPPDC FTF Program design provide the operational and administrative oversight for resiliency planning, coordination, and implementation. These programs, especially MPPDC FTF program, recognize the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

Gloucester Point Beach Park is the only public beach access in the County. In addition to beach access, the park also supports boating and fishing recreational activities. This project will protect the park through natural flood mitigation and will ultimately ensure the economic, social, and environmental resilience of this location.

In addition to regional support, Gloucester County will provide the required matching funds as needed.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
County Administrator

MAINTENANCE, MANAGEMENT, AND MONITORING PLAN

The MPPDC and project partners propose the following activities as required by the DCR CFPF Round 4 Manual, which will ensure that the public investment of DCR CFPF funds is protected.

MPPDC staff will utilize the below maintenance agreement template, which includes explanation of the responsibilities for monitoring, replacement (as necessary), and reporting of the project following construction. Each property owner will sign this document and MPPDC staff will submit the signed document to DCR prior to any construction occurring. MPPDC staff is willing to work with DCR to modify the agreement and related maintenance, management, and monitoring activities should DCR wish to see these matters handled differently.

DCR Provided CERTIFICATION OF PROPERTY OWNER Property Protection Project

Grant No. [Insert Number]

Name: [Name of Property Owner/Entity]

County, State Zip: [Address of Property]

Phone: [Insert Phone Number]

Email: [Insert Email]

The undersigned certifies to the Middle Peninsula Planning Commission District (PDC), that

1. I am/we are the owner/co-owner of [Insert address of Property where project is taking place].
2. I am/we are the recipient of Grant [Insert Grant Number] for the purpose of deploying a nature-based solution on my real property or at [Insert Address] for the purposes of flood prevention or mitigation.
3. I/we received [Insert Award Amount] (DCR Funds) to fund, in whole or in part, the stormwater protection activities including construction of a stormwater collection system on the Historic Antioch Rosenwald School Building.
4. I/we understand that it is my/our obligation to maintain the stormwater collection system for a minimum of 10 years.
5. I/we have the necessary resources to maintain the stormwater collection system for a minimum of ten (10) years.
6. That I agree to annually inspect and certify to both the PDC and the Virginia Department of Conservation and Recreation that the project is maintained in good order for no fewer than ten (10) years.
7. That I agree to permit the PDC or the Virginia Department of Conservation and Recreation to inspect the project to ensure that it is being maintained in good order for a period of ten (10) years after its completion. Inspections may occur at the discretion of the PDC or the Virginia Department of Conservation and Recreation; however, reasonable notice shall be given prior to the inspection, and no project shall be inspected more than once in a calendar year, provided that inspection does not result in needed repairs.
8. That I agree that I will repay the full amount listed in Item 3 if the project is not maintained in good repair for a minimum of ten (10) years.

Benefit-cost analysis

Gloucester Point Beach Park is experiencing increased effects from coastal and tidal flooding. Without sufficient mitigation efforts starting at the beachline, secondary and tertiary effects of flooding and drainage issues will continue to plague the Park through faster deterioration of aging infrastructure, degradation of natural habitats, and compromised maintenance and usability of the Park's facilities. This is the County's most popular public recreation site and a central hub for regional commercial seafood activity. Flooding issues are exacerbated by continued sea level rise and the increased frequency and severity of heavy rains and storms in the region.

By widening and adding height to the existing beach and dunes using a living shoreline, the enhanced shoreline will protect the Park through natural flood mitigation and support drainage, thereby minimizing property damage, enhancing the resilience of public infrastructure, and ensuring longer-term viability, and significantly reducing the potential for injuries and/or loss of life.

While no specific economic impact studies exist which quantify the direct, indirect, and induced benefits of the Gloucester Point Beach Park, the County recognizes that the cost of investing in the facility will be returned many times over in the benefits generated from this important recreational and commercial hub. It is anticipated that the DCR and County investments in flood protection through the construction of a living shoreline will result in a reduction in flood damages to the property, reduce general maintenance and repair costs following storm events, and enhance the overall recreational and commercial productivity of the site. All of these benefits provided by the project are anticipated to surpass the project costs many times over, not just over the immediate term, but for decades to come as flood conditions are forecast to worsen.

Budget Narrative- Required for All Categories

Each application must include a detailed Budget Narrative explaining all proposed expenditures. A budget narrative is applicable to requests from any category of grants in this manual. **Applicants must submit a budget narrative via the WebGrants Portal.**

The following items must be included in the Budget Narrative:

Estimated total project cost: This amount must reflect the total cost of bringing the project to completion. Estimates for all work to be completed by third parties (engineers, contractors, etc.) on the specified project should be included. If multiple project types are selected, a detailed breakdown of how the funding is proposed to be allocated must be included for each selected project type.

Based upon the identified scope of work, as well as the cost estimates provided by the VIMS Shoreline Studies Program, the total estimated project cost is \$2,622,466. This total estimate includes the following estimated costs:

VIMS Shoreline Studies Program for procurement and permitting assistance and post construction monitoring: \$50,000.

Description – VIMS-SSP staff, who developed the project design, will provide assistance to Gloucester County staff, who will be overseeing and responsible for permitting and procurement of the construction of the project. VIMS-SSP staff will provide assistance and guidance throughout the permitting and procurement stages of the project regarding technical aspects of the project design and will provide modifications to the project design, as necessary. Funds will be utilized for VIMS-SSP to monitor and document the project using ground and drone imagery.

Gloucester County for Construction and Related Grant Activities: \$2,572,466

Description – Gloucester County staff will be subcontracted to permit, procure and oversee the construction and other necessary and relevant aspects of the grant-funded living shoreline project. Construction costs for the rock, sand, plants, mobilization and demobilization of equipment and materials, and labor were provided by VIMS-SSP staff and reflect recent and current costs involved in other nearby projects. Overall, the system will consist of 4 structures: a 64 ft extension to the existing spur at the park's northern boundary, an 80 ft and 112 ft structure on either side of the existing fishing pier, and a 209 ft structure adjacent to the boat ramp at the southern boundary. Sand will be placed along the shoreline, attaching the structures, and creating 2 stable embayments. In addition, behind the spur extension and 2 structures at the pier, a dune will be created and planted with a crest elevation of +7.4 ft MLW providing protection from a 50-yr flood level (FEMA, 2021). In the embayments and behind the structure on the southern end, the dune will be a little narrower. Estimated costs include 4,700 tons of rock at ~\$140/ton, 15,700 cubic yards of sand at ~\$110/cubic yard, and 12,000 dune plants at ~\$3/plant. Mobilization and demobilization are included at 25%.

Amount of funds requested from the Fund: This is the total amount of any grant assistance sought from the Fund. Include a detailed breakdown of how this funding is proposed to be allocated. At a minimum this should include a breakdown of salaries, including any position requested, position title, 100 percent of salary amount and percent directly dedicated to grant activity fringe benefits,

travel, equipment, supplies, construction, contracts, and any other direct costs. The budget narrative must include details and costs for each budget category sufficient to determine reasonableness and allowability.

The total amount of requested grant assistance is \$2,491,343 or 95% of total project costs, as the project is located in a designated opportunity and low-income geographic area and the project results in a nature-based solution.

Indirect costs are not eligible for funding. Salaries of existing staff are ineligible; however, salaries of staff who provide direct and documented support to the grant effort may be considered as match. Please refer to the match requirements in Part III of this manual. For local governments designated as low-income geographic areas, 100 percent of the estimated total project costs should be included.

Amount of funds available: This amount, when combined with the amount of funding requested from the Fund, must reflect the total estimated project cost to demonstrate that all necessary funding has been secured to complete the project. Include a description of the source of these funds and evidence of the applicant's ability to obtain these funds to complete the project.

Gloucester County will appropriate the requisite 5% or \$131,123 in required local match funds, to be combined with the \$2,491,3343 in grant assistance to equal the total estimated project cost. The County's match commitment letter has been uploaded to the grants portal.

Authorization to request for funding: Local governments seeking funding shall also attach signed documentation authorizing the request for funding.

The authorization to request funding letter has been uploaded to the grants portal.

Is the proposal in this application intended to benefit a low-income geographic area as defined in the Part 1 Definitions? Yes No

Project Grants and Loans (Check All that Apply – Hybrid Solutions will include items from both the “Nature-Based” and “Other” categories)

Nature-based solutions

- Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development, and where the flood mitigation benefits will be achieved as a part of the same project as the property acquisition.
- Wetland restoration.
- Floodplain restoration.

- Construction of swales and settling ponds.
- Living shorelines and vegetated buffers.
- Permanent conservation of undeveloped lands identified as having flood resilience value by *ConserveVirginia* Floodplain and Flooding Resilience layer or a similar data driven analytic tool, or the acquisition of developed land for future conservation.
- Dam removal.
- Stream bank restoration or stabilization.
- Restoration of floodplains to natural and beneficial function.

Other Projects

- Structural floodwalls, levees, berms, flood gates, structural conveyances.
- Storm water system upgrades.
- Medium and large-scale Low Impact Development (LID) in urban areas.
- Developing flood warning and response systems, which may include gauge installation, to notify residents of potential emergency flooding events.
- Dam restoration.
- Beneficial reuse of dredge materials for flood mitigation purposes
- Removal or relocation of structures from flood-prone areas where the land will not be returned to open space.
- Acquisition of property (or interests therein) and/or structures for purposes of allowing floodwater inundation, strategic retreat of existing land uses from areas vulnerable to flooding; the conservation or enhancement of natural flood resilience resources; or acquisition of structures, provided the acquired property will be protected in perpetuity from further development, and where the flood mitigation benefits will not be achieved as a part of the same project as the property acquisition.
- Other project identified in a DCR-approved Resilience Plan.

Location of Project or Activity (Include Maps): Gloucester County - Please see the attached corresponding maps for this application.

NFIP Community Identification Number (CID#): 510071

Is Project Located in an NFIP Participating Community? Yes No

Is Project Located in a Special Flood Hazard Area? Yes No

Flood Zone(s) (If Applicable): AE & VE

Flood Insurance Rate Map Number(s) (If Applicable): 51073C0257F

Total Cost of Project: \$2,622,466

Total Amount Requested: \$2,491,343

Amount Requested as Grant: \$2,491,343

For projects, planning, capacity building, and studies in low-income geographic areas: Are you requesting that match be waived? Yes No

B. SCOPE OF WORK NARRATIVE

General Requirements

1. Needs and problems:

- a. Specific problem being solved (not just that flooding exists or may occur in the future).

This proposal “Gloucester Point Beach Park Living Shoreline” requests funding for construction of a living shoreline that will include widening of the beach, heightening dunes, installation of plants and rock sills at Gloucester Point Beach Park in Gloucester County (Figure 1), to reduce flooding to this county-owned local and regional asset. By widening the beach riverward with the use of gapped, rock attached headland breakwater system and sand, the dune will be able to grow in width and height providing greater protection during storms. A headland breakwater adjacent to the boat ramp will help to hold the sand so that it is not lost to deeper depths in the river. Overall, the system (Figure 2) will consist of 4 structures: a 64 ft extension to the existing spur at the park’s northern boundary, an 80 ft and 112 ft structure on either side of the existing fishing pier, and a 209 ft structure adjacent to the boat ramp at the southern boundary. Sand will be placed along the shoreline, attaching the structures, and creating 2 stable embayments. In addition, behind the spur extension and 2 structures at the pier, a dune will be created and planted with a crest elevation of +7.4 ft MLW providing protection from a 50-yr flood level (FEMA, 2021). In the embayments and behind the structure on the southern end, the dune will be a little narrower.

Figure 1 - Aerial Photograph showing the Gloucester Point Beach Park and associated facilities.

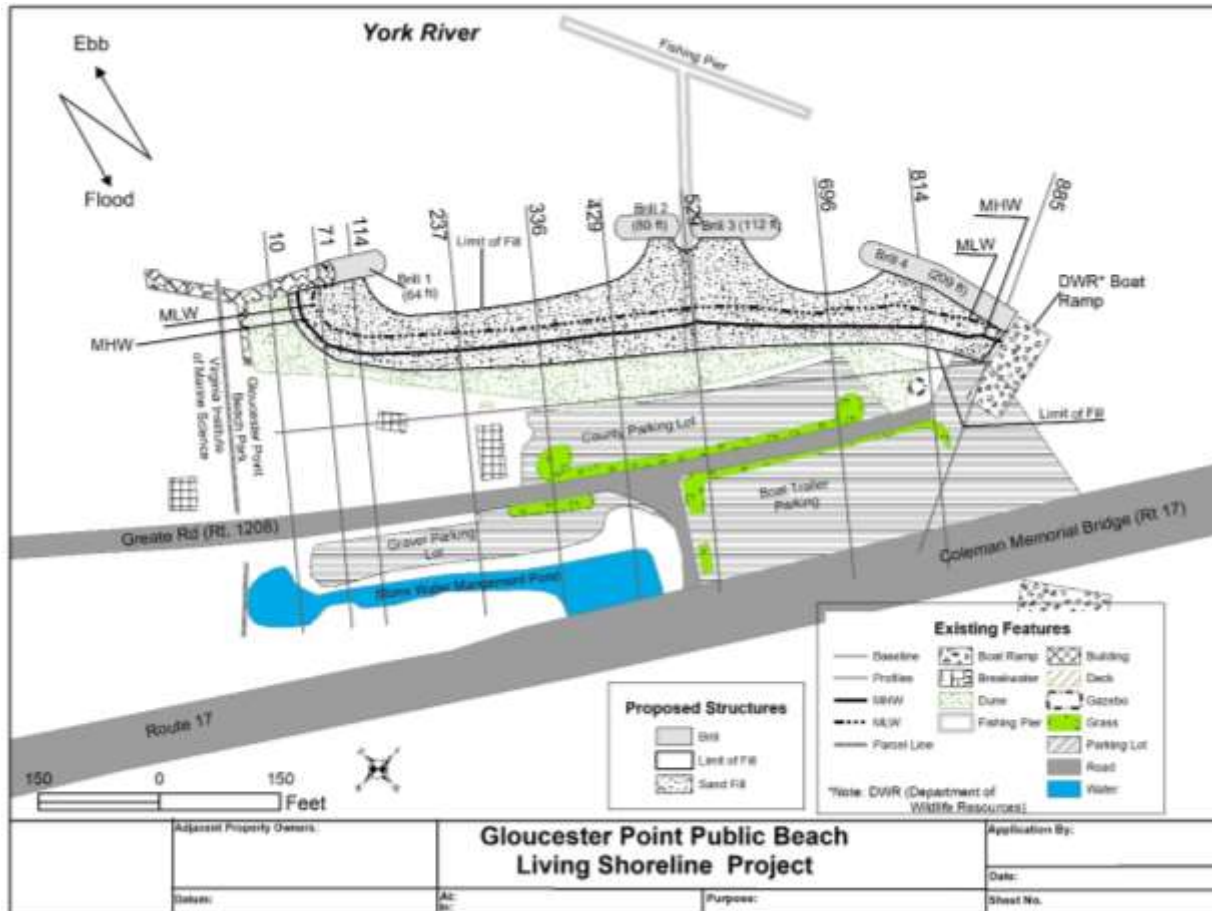

Figure 2 - Living Shoreline Design (VIMS Shoreline Studies Program, 2023)

Adjacent to the Park, VIMS constructed attached headland breakwaters based on living shoreline designs developed by Shoreline Studies Program. The resultant living shoreline is a system of attached headland breakwaters consisting of rock, sand, and plants. Part of the design for the VIMS shoreline project included a stone spur extending southwest from the VIMS revetment 70 feet across the county shoreline. This had a significant positive impact by abating the chronic erosion along that section of the Gloucester Beach. As part of the current breakwater design the spur will be lengthened a bit to extend the diffraction point and work better within the proposal project design. As an added benefit the rocks have and will make excellent habitat for the local small fish species as well as hard substrate for oyster settlement and growth.

Gloucester Point is located at the southern end of Gloucester County, Virginia on the York River. It has a long history of being a hub for public access and recreational and commercial use in Gloucester County including ferry transportation and a working waterfront for various fisheries in the long-past to more recent boating, fishing, and beach recreational access. The site is the most popular public tidal boating site and only public beach access in the county. In addition, the public beach includes the publicly licensed freely accessible fishing pier.

The scope of the proposed project involves permitting, procurement, and construction of a living shoreline consisting of widening of the beach, heightening of the dunes, and installation of plants and

rock sills to mitigate flooding and erosion on site and to sustain the operation of this public access asset for recreational and economic purposes.

Gloucester County staff will manage permitting, procurement, and construction of the project while Virginia Institute of Marine Science Shoreline Studies Program will assist with project procurement and permitting and conduct post construction monitoring.

The Middle Peninsula, including Gloucester Point and the Gloucester County-owned Gloucester Point Beach Park are suffering from one of the highest rates of sea-level rise on the Atlantic seaboard and experiencing increased effects from coastal and tidal flooding. Without sufficient mitigation efforts starting at the beachline, secondary and tertiary effects of erosion, flooding, and drainage issues will continue to plague the Park through faster deterioration of aging infrastructure, degradation of natural habitats, and compromised maintenance and usability of the Park's facilities.

Gloucester Point Beach Park is an extremely visible and popular recreational site, as well as a hub for commercial seafood activity, supporting fishing, boating, beach, and general recreational activities. The 5-acre property includes a 2,000 square foot building that houses public restroom facilities, staff storage and a concession room, an accessible shoreline, free public fishing pier, two boat landings, a play area, paved parking areas, and open green space. Flooding and erosion issues at the site are being exacerbated by continued sea level rise and the increased frequency and severity of heavy rains and storms in the region. The living shoreline design was also done in a manner which will trap and slow the alongshore movement of sand, which has become a major issue for the County with regards to maintenance as large sand deposits left by coastal flooding and daily wave activity frequently occur at the boat ramp. This requires many hours of County maintenance labor to remove the sand on a frequent basis, which should no longer be the case with the construction of a rock breakwater spur to help trap the sediment and facilitate the movement of sediment to deeper water in the river instead of the boat ramp. Shoaling of the boat ramp often leaves the facility unusable for a week or more after flood events, which has major impacts to the recreational and commercial industries in the County and region.

Gloucester County is planning on making many improvements to the site over the coming years with the proposed project representing the most urgent and critical step to protecting and enhancing the property. The County has partnered with the VIMS Shoreline Studies Program to design a living shoreline solution to this critical public facility and is requesting funding to implement the project. The living shoreline project will utilize rock sills, widening and adding height to the existing beach and dunes, and planting of dune grasses. Once constructed, the living shoreline will protect the Park through natural flood mitigation, thereby minimizing property damage, enhancing the resilience of public infrastructure, ensuring longer-term viability of a critical public asset, and significantly reducing the potential for injuries and/or loss of life.

b. Factors which contribute to the identified problem.

The Park's shoreline has been eroding at a rate of about -1 to -1.5 ft per year since 1994 (VIMS Shoreline Studies Program Shoreline Change Database). The wave climate at the Park has an effective fetch of 7.2 miles, but its maximum fetch is 29 miles to the east. The York River channel experiences heavy use by commercial and military ships whose wake affect the overall wave climate at Gloucester Point. The

mean tide range at the site is 2.3 ft. Storms greatly impact this site on a regular and frequent basis. The storm surge elevation of the 10% frequency storm event is +6.2 ft MLW (FEMA, 2021) which overtops the existing beach and dune. The open beach accesses allow water to flood directly into the parking lot and park). In addition, the grassy park area is lower than adjacent areas so when the tide floods, it can get trapped by the bowl effect and has difficulty receding after the storm.

The site receives sand transported south along the shoreline from updrift. However, as the updrift shorelines were protected, less sand was eroded and available to the littoral transport system thereby reducing the amount of sand entering the Gloucester Point beach system. In addition, due to the currents and large depths adjacent to the most southern end of the beach, sand is lost to the York River channel. Overall, the Point is narrow so the beach and dune habitat cannot migrate without impacting park usage. By widening the beach riverward with the use of gapped, rock attached headland breakwater system and sand, the dune will be able to naturally grow in width and height over time providing greater protection during storms.

The Park is over 40 years old and has been damaged several times in storms. Increased effects from coastal and tidal influence have worsened site flooding and drainage issues. Consistent flooding during heavy rains and storms effectively closes the park for public use until natural drainage occurs. Further, these issues speed up deterioration of aging infrastructure and natural habitats and compromises the maintenance and usability of the Park's facilities as the park holds water, limiting and preventing use of the boat ramp and public-use facilities, creating significant life safety issues.

c. Why the project is needed either locally or regionally.

Gloucester Point Beach Park is one of the first things seen from the bridge when entering Gloucester and without this project, it will become increasingly impacted asset and an increasingly monumental loss for the economy of Gloucester County and the Middle Peninsula.

The Park is the County's most popular public recreation site that also serves as a central hub for commercial seafood activity. It is the only public beach in the County. The site supports beach, boating, and fishing recreational activities by providing a concession room, public restroom facilities, an accessible shoreline, free public fishing pier, two boat landings, a play area, paved parking areas, and open green space spread across five acres.

The Gloucester Point Beach Park serves as a popular and important recreational and economic resource. The Park was consistently ranked as *Very Important* in the 2016 Needs Assessment conducted by GreenPlay, LLC, wherein open-ended comments note that the beach needs to be cleaned up and improved, and general improvements ranked very high as a general maintenance note for the County. In 2019, ecotourism in the Middle Peninsula region included \$33.1 million total impact, which increased by 13.5 percent from 2014. Ecotourism in the region includes aquaculture tours, canoeing and kayaking tours, oyster harvesting tours, and wildlife charter cruises.

Recent growth suggests ecotourism is an emerging opportunity in the region as sales grew at an average annual rate of 3.2 percent between 2014 and 2019. For Gloucester County specifically, the marine economy (i.e., businesses dependent on marine resources) accounts for 11.4 percent of the total employment in the County, generating approximately \$19 million in wages (according to NOAA Coastal County snapshots). It should also be noted that these economic activities are more significant during the

peak season, such as warmer weather months. Despite continued maintenance of the facilities, the long-term viability of the site is in question without a resilience focused design intervention and the retrofitting and reconstruction of certain facilities.

d. How the project decreases the risk to public safety through flood risk reduction.

Like many aging park facilities, amplified by the effects of coastal and tidewater influences, drainage and maintenance concerns at the Park are increasing. Improvements to the Park grounds are needed to ensure the economic, social, and environmental resilience of this location. The concession room/restroom building located on the site is over 40 years old and has been damaged several times in storms, the playground deteriorated and was removed for safety reasons, and boat landings are compromised by shoaling. This project will mitigate flooding and drainage issues before it can negatively and irreversibly impact the Park.

By widening the beach riverward with the use of rock, sand, and native plants, the dune will be able to grow in width and height providing greater protection during storms. Sand will be placed along the shoreline creating 2 stable embayments. In addition, a dune will be created and planted with a crest elevation of +7.4 ft MLW, providing protection from a 50-yr flood level (FEMA, 2021). The structures are slightly “over-designed” to provide increased hazard protection for a longer period of time. Doing so significantly reduces the effects of flooding and slows the deterioration of Park facilities, thereby reducing safety concerns for citizens and visitors. At a later date following shoreline construction, the County plans to construct Americans with Disabilities (ADA) compliant walkways over the top of the dunes to increase safe and equitable accessibility to the shoreline for more residents.

e. How the project protects or conserves natural resources.

Dunes are a relatively rare habitat in Chesapeake Bay. With only a narrow beach for protection, the dunes in the Park are impacted greatly during storms. This project protects natural resources by widening the dunes with a living shoreline through placement of sand, rock, and plants local to the region. As an added benefit, the rocks will make excellent habitat for the local small fish species as well as hard substrate for oyster settlement and growth, as observed at other living shorelines in the region.

The applicant and the property owner recognize the importance to do no harm to land owned by the Commonwealth and adjacent property owners as result of the construction elements of this project. The design for the proposed project will be developed and constructed under the auspices of experienced contractors who understand that adverse impacts must be avoided and considered in the design and implementation of the project. The proposed project will work with the permitting agency, designers, and contractors to ensure that the project is built to and functions with no adverse impacts. VIMS-SSP post-construction monitoring will ensure that the project’s ecological functionality is intact and operating at an optimal level.

f. Who is protected.

Gloucester Point Beach Park, positioned as the primary public waterfront facility, is envisioned to serve the next generation of users as a thriving recreational and commercial hub for the County and the wider region. Protecting the beach and park from the impacts of flooding allows the area to meet its complete capacity and prolongs and enhances utilization by both residents and visitors. Given the area’s critical role in the seafood industry, the proposed project will also mitigate potential impacts on the industry

and local economy as a whole.

g. The safety threats, or environmental concerns related to flood risk.

The entirety of the site (1255 Greate Road, Gloucester Point, VA 23062, 37.24634, - 76.50287) is located within a mapped floodplain, with portions located within FEMA Flood Zones AE and VE. Due to the Park's adjacency to the York River and relatively low elevation, the site has an extensive history of flooding that has resulted in significant impacts to infrastructure and the environment. For example, the Park has long been, and continues to be, impacted by tropical, sub-tropical, and Nor'easter events. This creates both safety threats in terms of deteriorated infrastructure and health hazards caused by floods, as well as negative environmental impacts due to habitat deterioration and diminishing coastlines.

Since 2003 there have been at least seven significant coastal events resulting in flooding impacts to the services building:

- Hurricane Isabel in 2003, resulting in 5 feet of water in the concession room/restroom building
- A nor-easter in 2005 resulting in 3 feet of water in the concession room/restroom building
- A nor'easter in 2010
- A nor'easter in June 2011
- Hurricane Irene in August 2011 that resulted in 1 foot of water in the concession room/restroom building
- A nor'easter in 2012
- A coastal storm in October 2015

The damage from Hurricane Isabel in 2003 was extensive, likely the storm of record in the Park's over 40-year existence. In addition to approximately 5 feet of water in the building, the storm ripped up the Park's pier, pushed the stage through one of the services building's cinderblock walls and damaged the playground.

The site is subjected regularly to storm flooding events that result in damages, although perhaps not to the degree of the aforementioned events. With nearly every nor'easter, the boat landing, parking lot, and Park floods with standing water which is then worsened by poor drainage.

Figure 3 below illustrates present site conditions, including instances of flooding and the vulnerability of facilities.

Figure 3 - Site Conditions During Recent Flooding Events

According to a recent study conducted by the Center for Coastal Resources Management, a one-and-a-half-foot rise in sea level coupled with a three-foot storm surge - similar to what would be experienced in a strong tropical storm - would lead to 13% of Gloucester County's land mass being flooded – including 118 miles of roads. Notably, only 3% of this projected flood area is currently developed. Gloucester County's Building and Engineering Department administers the requirements of the NFIP program, Community Rating Service (CRS), and the County's Floodplain Management Ordinance may be accessed at the following link: http://gloucestercounty-va.elaws.us/code/coor_ch8.5.

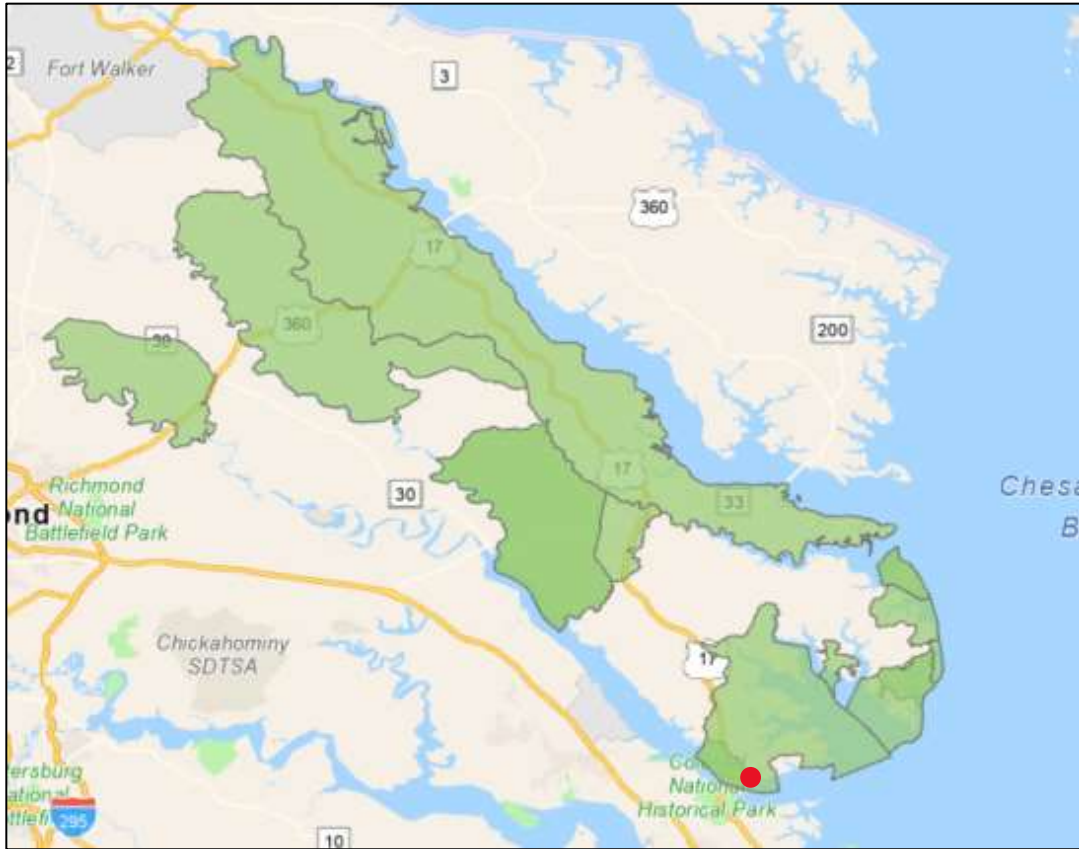

h. Groups to be targeted who might directly benefit from this flood risk reduction effort.

Gloucester Point Beach Park provides access to the only public beach in the County. With the miles of shoreline along the York River and Chesapeake Bay, many County residents have their own private access to waterways; however, this Park provides access to all. The fishing pier attracts the underserved who cannot afford to visit other public and private sites. The County covers the cost of a blanket fishing permit. Additionally, the Park does not have pier access or parking fees, which attracts residents and visitors with fewer resources. In some cases, the fishing activity of individuals may be for food to help with their livelihood. For many low-income and underserved populations, this a key site to access the water and fish without having to pay for a personal license. By enhancing this beach and mitigating flood impacts, it will improve the experience for everyone that uses the park.

Gloucester County’s population totals 38,711 (Census 2020), which makes it the largest of the nine Middle Peninsula localities. According to DCR guidelines, specific areas of the Middle Peninsula region are considered a “low-income geographic area” per the DCR definition included in the 2023 Funding Manual for the Virginia Community Flood Preparedness Fund. Each county had its ‘Eligible Household income’ identified by using US Census data and then calculated by multiplying the County’s median household income by .8. Any census geography identified under the .8 has been identified as low income. This resulted in the following numbers:

	Virginia	Essex	Middlesex	Mathews	King William	King & Queen	Gloucester
Median household income (in 2020 dollars), 2015-2019	\$76,398	\$51,125	\$57,060	\$74,489	\$73,284	\$65,385	\$71,649
Eligible Household income	\$61,118	\$40,900	\$45,648	\$59,591	\$58,627	\$52,308	\$57,319

Based on the finding above, two counties in Middle Peninsula fall 100% within the eligible household income criteria. The remaining census tracts, zip codes, block groups, and opportunity zones identified as green also qualify in accordance with the DCR “low-income geographic area” definition. The eligibility map for Middle Peninsula is below (**Figure 4**) and includes a red dot indicating the proposed project’s location.

■ = Low Income Communities

Figure 4 - Regional Low-Income Communities. The red dot represents Gloucester Point Beach Park.

Social vulnerability is the ability of individuals or groups to prepare for and recover from hazards, like flooding. The Virginia Social Vulnerability Index (SVI) Viewer indicates Gloucester Point Beach Park has a 'Low Social Vulnerability' score (Figure 5).

Figure 5 - Social Vulnerability Index Score.

i. What would happen (or not happen) if the applicant does not receive funding.

Without the construction proposed, the site and public infrastructure will be compromised, resulting in degradation of the site and loss of public assets. Flooding propensity remains the biggest weakness of Gloucester Point Beach Park. The area around the Park is prone to frequent flooding and lies within the floodplain of the York River. Any category of storm will flood the site, damaging the property and precluding access. Moreover, rising sea levels will have a negative impact on the property, inching the water closer to the site's active resources and increasing the likelihood of significant flooding. **Figure 6** below illustrates flood levels combined with sea-level rise and their effects on the site. Notably, floods in 50 years pose an issue to the many structures on site; a living shoreline will support efforts to mitigate the effects of exceptional floods and sea level rise 50 years and out.

Projection for 2040 Sea Levels

Projection for 2060 Sea Levels

Figure 6 - Site Sea Level Projections

j. Alternatives analysis of the viability of the project, how selected project reduces risk to populations at risk of flooding. Provide examples of current or previous related projects, data, outcomes, etc. that justify the approach chosen. Include how long and how much protection to be achieved.

Under the “do nothing” alternative, the site and public infrastructure will be compromised, resulting in degradation of the site and loss of public assets.

The proposed living shoreline project is the region's preferred nature-based solution for mitigating impacts of tidal flooding, storm surge, and sea level rise. A living shoreline will mitigate the effects of exceptional floods and sea level rise for 50 years or more. Additionally, since a living shoreline is feasible at this location, a hardened or non-living shoreline is not permissible per state regulations, thereby limiting the alternatives to implementing a living shoreline or doing nothing.

2. Goals and Objectives:

a. Goals should be listed as an outcome or result and solve the problem or need identified.

Goal 1: Reduce flooding and sustain the use of the Gloucester Point Beach Park facility for continued, or increased, public access to local coastal waterways and recreational areas to the greatest extent.

Goal 2: support the local economy through increased tourism to the recreational site and enhanced

accessibility for commercial users at the boat ramp.

b. Objectives must be specific, measurable and timebound.

Objective 1: Project Permitting (January 2024 – September 2024)

- Gloucester County staff will oversee the permitting process and attain all necessary permits for construction (DCR grant funds will not be utilized for this).
- VIMS Shoreline Studies Program, who developed the project design, will be contracted to provide assistance to Gloucester County staff regarding technical aspects of the project design and will provide modifications to the project design, as necessary.

Objective 2: Project Procurement (October 2024-December 2024)

- Gloucester County staff will procure a qualified contractor for construction of the permitted project (DCR grant funds will not be utilized for this).
- VIMS-SSP will provide assistance and guidance throughout the procurement stages of the project regarding technical aspects of the project design and will provide modifications to the project design, as necessary.

Objective 3: Living Shoreline Construction (January 2025 – August 2025)

- Contract with Gloucester County for construction of the living shoreline, the widening of the beach and heightening of dunes and installation of plants and rock sills as permitted, and other grant related activities. DCR funds will be used for construction labor and materials. Gloucester County will oversee construction and ensure compliance with all grant terms and conditions.

Objective 4: Post construction monitoring of living shoreline

- MPPDC staff will contract with VIMS to conduct post-construction monitoring of the site by capturing ground and drone imagery.

c. Objectives be achievable within the agreement period.

All objectives and goals will be achieved within the grant contract period.

3. Work Plan:

a. What are the major activities and tasks.

- Permitting: use the design developed by VIMS Shoreline Studies Program to develop and submit the Joint permit application (JPA).
 - Task 1 – Contract with VIMS.
 - Task 2 – Submit JPA and provide assistance and guidance throughout the permitting process.
- Procurement of the construction contract:
 - Task 1 – VIMS and Gloucester County will work together to develop bid packet.
 - Task 2 – Procure contractor for construction.
- Construction: the construction of the project will adhere to all the requirements of the permit. VIMS personnel will support the county during implementation of the living shoreline design.
- Monitoring: post-construction monitoring will be completed by VIMS. The site will be monitored with an as-built survey and a survey 1-year post-construction. In addition, LiDAR data and drone imagery will be obtained throughout the entire project to monitor changes. A long-term monitoring and maintenance plan will be developed for the site.

b. Who is responsible for completing the activities and tasks.

The following entities are responsible for the identified activities:

- Middle Peninsula Planning District Commission (MPPDC) staff will serve as the applicant of record and grant administrator.
- Gloucester County staff will oversee the permitting process and attain all necessary permits for construction, procure a qualified contractor for construction, and oversee construction and ensure compliance with all grant terms and conditions (DCR grant funds will not be utilized for this).
- VIMS Shoreline Studies Program, who developed the project design, will be contracted to provide assistance and guidance throughout the procurement stages of the project regarding technical aspects of the project design, provide modifications to the project design, as necessary, and conduct post-construction monitoring of the site by capturing ground and drone imagery.

c. What is the timeframe for accomplishing activities and tasks.

All activities and tasks will be completed in the three-years of the grant contract. We understand that activities must commence within 12 months of the agreement date and must be completed within 36 months.

d. Identify the required partners to ensure success and where they are represented in the workplan.

MPPDC will work alongside Gloucester County and VIMS staff to ensure all activities and tasks are completed within the three-year timeframe.

e. Deliverables

The main deliverables of this project include the following:

- Finalized permit applications to approve the construction of the living shoreline.
- Successfully procured construction contract.
- Construction of the living shoreline at Gloucester Point Beach Park.
- Post-construction monitoring data collection and reports by VIMS that highlight the success of the living shoreline.

f. Maintenance plan tied to the identified viability of the project. Plan for sustaining the project after the agreement period (if applicable).

Through the data collected in their post-construction monitoring, VIMS will highlight the effectiveness of the project. This is essential to assessing the conditions of the living shoreline. This includes ensuring the dune is growing and holding sand, which is necessary for shoreline stabilization. Additionally, County staff will perform long-term maintenance, as they have done for the park for over 40 years.

Standard maintenance of living shorelines includes, but is not limited to, the following:

- Debris removal: regular removal of debris, like litter, is important to mitigate accumulation of items that potentially disrupt the natural process of the living shoreline and impacts its stability.
- Vegetation management: replanting vegetation and removing invasive species may be required to ensure the health and stability of the living shoreline.
- Erosion control: assessment and management of erosion is needed to ensure the effectiveness of the living shoreline. This may involve adding additional sand to enhance its protective function.

4. Evaluation

a. Indicators of success.

The success of the proposed project and funding will be indicated by the completion of project deliverables:

- Finalized permit applications to approve the construction of the living shoreline.
- Successfully procured construction contract.
- Construction of the living shoreline at Gloucester Point Beach Park.
- Post-construction monitoring data collection and reports by VIMS that highlight the success of the living shoreline.

The success of the living shoreline project is measured through the following indicators:

- Erosion reduction
- Habitat restoration
- Biodiversity
- Water quality improvement
- Vegetation growth
- Cost effectiveness
- Resilience to climate change including reduction to property damage during and following flood events and reduction in duration of Park closures following flood events.

b. Data that will be collected and how the data will be used to measure success.

The post-construction monitoring work completed by VIMS will provide data crucial to evaluating the success of the living shoreline. Regular monitoring and evaluation of these indicators provides MPPDC and County staff with valuable insights that will help guide decisions on adjustments to ensure the long-term health and effectiveness of the living shoreline.

c. How was cost effectiveness evaluated and measured against the expected outcomes?

Cost effectiveness will be ensured by the County's use of competitive procurement and the project partners' experience and knowledge of market costs for shoreline projects such as the proposed.

d. What products, services, meetings, outreach efforts, etc. will be conducted and how will success be measured?

Success will be measured by observations made during the post-construction monitoring done by the project partners. Gloucester County will commit staff time for media coordination for public education about the project. VIMS regularly utilizes the beach and dunes as an outdoor classroom for grade school, undergraduate, and graduate students and will continue to do so following construction in a manner that highlights the importance and benefits of the DCR investment at the site.

e. Project progress monitoring plan to ensure project meets the requirements of the agreement and is delivered on time. Outline how delays or other findings may be used to modify or improve outcomes/deliverables.

Progress will be monitored monthly by comparing the actual progress to the anticipated progress in the original project schedule. Progress will be reported quarterly to DCR along with a reimbursement invoice in compliance with the terms of the grant contract. Explanations for discrepancies in anticipated and

actual progress will be provided along with corrective action steps and/or a request to revise the project schedule. Project delays may result in a request to extend the deadline. Other findings that may impact outcomes, deliverables, and the schedule will be described. We understand that activities must commence within 12 months of the agreement date and must be completed within 36 months. The final reimbursement request will be submitted to DCR within 90 days of the project completion date in compliance with the grant contract.

- f. If applicable, how the study may improve Virginia’s flood protection and prevention abilities in a statewide context.

NA; the project is not a study.

- g. Other necessary information to establish project priority
 - i. Repetitive Loss and/or Severe Repetitive Loss Properties

There are no repetitive loss and/or severe repetitive loss properties within the project area. **Figure 7** is a map of the repetitive and severe repetitive loss properties within 2 miles of the project location.

Figure 7 - Repetitive and Severe Repetitive Loss properties (red dots) within 2 miles of the project location (yellow star).

- ii. Residential and Commercial Structures

Gloucester Beach Point Park does not contain any residential structures. However, the site includes a County-owned and operated 2,000 square foot facility that provides public restrooms and showers, employee storage, and seasonal concession.

The Park also includes two boat landings that support commercial seafood activity, as well as a no-cost use fishing pier, which is believed to be a supplemental food source for many low-income families in the region.

- iii. Critical Facilities/Infrastructure

Gloucester Beach Point Park does not contain any critical infrastructure. The Park itself is a critical site for the County and region’s water based recreational and commercial economies. Investing in a more resilient living shoreline system is a top priority step for protecting this valuable asset and ensuring it continues to provide direct, indirect, and induced benefits to the county, region, and beyond.

Gloucester County has filed one FEMA claim for damages incurred from tidal flooding at the one building at the site. No claims have been filed since because the damage incurred to that structure have been mostly from nuisance tidal flooding which have slowly eroded and worn out the structure but has not created the level of an insurance claim. With that being said, it is anticipated that the living shoreline system with elevated dunes will reduce nuisance flooding at the site such that the slow deterioration is slowed or mitigated. Additionally, the primary losses to the County are related to costs incurred through staff time for repairs and maintenance following storm events as well as the lost indirect and induced values from the public not being able to access the park following flood events.

Benefit-cost analysis

Gloucester Point Beach Park is experiencing increased effects from coastal and tidal flooding. Without sufficient mitigation efforts starting at the beachline, secondary and tertiary effects of flooding and drainage issues will continue to plague the Park through faster deterioration of aging infrastructure, degradation of natural habitats, and compromised maintenance and usability of the Park's facilities. This is the County's most popular public recreation site and a central hub for regional commercial seafood activity. Flooding issues are exacerbated by continued sea level rise and the increased frequency and severity of heavy rains and storms in the region.

By widening and adding height to the existing beach and dunes using a living shoreline, the enhanced shoreline will protect the Park through natural flood mitigation and support drainage, thereby minimizing property damage, enhancing the resilience of public infrastructure, and ensuring longer-term viability, and significantly reducing the potential for injuries and/or loss of life.

While no specific economic impact studies exist which quantify the direct, indirect, and induced benefits of the Gloucester Point Beach Park, the County recognizes that the cost of investing in the facility will be returned many times over in the benefits generated from this important recreational and commercial hub. It is anticipated that the DCR and County investments in flood protection through the construction of a living shoreline will result in a reduction in flood damages to the property, reduce general maintenance and repair costs following storm events, and enhance the overall recreational and commercial productivity of the site. All of these benefits provided by the project are anticipated to surpass the project costs many times over, not just over the immediate term, but for decades to come as flood conditions are forecast to worsen.

No adverse impact

This is a coastal shoreline project that will not create or move flooding issues in the upland areas. This project will prevent tidal, storm surge, and sea level rise flooding at the coastline to protect upland areas. Limiting tidal, storm surge, and sea level rise flooding along this section of shoreline will not increase flooding along other sections of shoreline.

Approach, Milestones, and Deliverables:

Project Permitting (January 2024 – September 2024). Gloucester County staff will oversee the permitting process and attain all necessary permits for construction.

- Task 1 – Contract with VIMS. VIMS Shoreline Studies Program, who developed the project design, will be contracted to provide assistance to Gloucester County staff regarding technical aspects of the project design and will provide modifications to the project design, as necessary.
- Task 2 – Submit JPA and provide assistance and guidance throughout the permitting process.
- Deliverables: JPA and permit.

Project Procurement (October 2024-December 2024). Gloucester County staff will procure a qualified contractor for construction of the permitted project.

- Task 1 – VIMS and Gloucester County will work together to develop bid packet. VIMS-SSP will provide assistance and guidance throughout the procurement stages of the project regarding technical aspects of the project design and will provide modifications to the project design, as necessary.
- Task 2 – Procure contractor for construction.
- Deliverable: construction contract.

Living Shoreline Construction (January 2025 – August 2025). Gloucester County will oversee construction and ensure compliance with all grant terms and conditions.

- Task 1 – Construction.
- Deliverable: construction of the living shoreline.

Post construction monitoring of living shoreline (September 2025 – August 2026).

- Task 1 - MPPDC staff will contract with VIMS.
- Task 2 - VIMS to conduct post-construction monitoring of the site by capturing ground and drone imagery.
- Task 3 – VIMS will develop a long-term monitoring and maintenance plan.
- Deliverables: post-construction monitoring data collection and reports by VIMS that highlight the success of the living shoreline.

RE: Applications Submitted by MPPDC to Virginia Community Flood Preparedness
Fund ROUND 4

Dear Lewie,

Gloucester County supports all eligible applications requesting funding under the Department of Conservation and Recreation (DCR)'s Community Flood Preparedness Fund (CFPF). The proposal submitted by MPPDC staff enhances and builds upon regional and local resilience efforts within the Middle Peninsula. We further support project proposals that demonstrate a primary purpose of prevention or protection to reduce coastal, riverine, or inland flooding. The MPPDC Fight the Flood (FTF) Program serves as the region's flood resiliency coordination program. The MPPDC Living Shoreline Incentive Program design and the MPPDC FTF Program design provide the operational and administrative oversight for resiliency planning, coordination, and implementation. These programs, especially MPPDC FTF program, recognize the inherent risk to the delivery of essential governmental services, including public safety, posed by coastal storms and recurrent flooding of all types and the relationship between at-risk waterfront real estate values and funding of essential governmental services.

Gloucester Point Beach Park is the only public beach access in the County. In addition to beach access, the park also supports boating and fishing recreational activities. This project will protect the park through natural flood mitigation and will ultimately ensure the economic, social, and environmental resilience of this location.

In addition to regional support, Gloucester County will provide the required matching funds as needed.

Should you have any questions concerning our support for the work of the MPPDC, I can be reached at 804-693-4042.

Sincerely,

Carol E. Steele
County Administrator

Historic flooding data and hydrologic studies projecting flood frequency

The entirety of the site is located within a mapped floodplain, with portions located within FEMA Flood Zones AE and VE. The shoreline has eroded at a rate of about -1 to -1.5 ft per year since 1994 (Shoreline Studies Program Shoreline Change Database). The project site is impacted by ever increasing effects of coastal and tidal influences, resulting in site flooding and drainage issues. Due to the project site's adjacency to the York River and relatively low elevation, the site has an extensive history of experiencing flooding events that have resulted in significant impacts to infrastructure and the environment. For example, the project location has long been, and continues to be, impacted by tropical, sub-tropical, and Nor'easter events. **According to NOAA's Coastal Flood Mapper, this project location is at the highest risk of coastal flooding.**

The damage from Hurricane Isabel in 2003 was extensive, likely the storm of record in the Park's 40-year existence. In addition to approximately 5' of water in the building, the storm ripped up the Park's pier, pushed the stage through one of the services building's cinderblock walls and damaged the playground.

Despite not being named storm events, the site is subjected to regular flooding events, that result in damages, although perhaps not to the degree of the aforementioned events. With nearly every nor'easter the boat landing, parking lot, and park flood.

During other smaller storms, water ponds within the park and lots. A design is needed to achieve the goals of stormwater management, to keep the Park as usable as possible and to protect the expensive infrastructure and amenities. While flood insurance is maintained for the services building (a claim was filed for approximately \$47,000 in 2003 due to Hurricane Isabel) retaining the building in a condition that is subject to flooding impacts is not the best way to manage resilience long term, subjecting the County, its taxpayers, and even state and federal taxpayers to incremental and varying costs.

MAINTENANCE, MANAGEMENT, AND MONITORING PLAN

The MPPDC and project partners propose the following activities as required by the DCR CFPF Round 4 Manual, which will ensure that the public investment of DCR CFPF funds is protected.

MPPDC staff will utilize the below maintenance agreement template, which includes explanation of the responsibilities for monitoring, replacement (as necessary), and reporting of the project following construction. Each property owner will sign this document and MPPDC staff will submit the signed document to DCR prior to any construction occurring. MPPDC staff is willing to work with DCR to modify the agreement and related maintenance, management, and monitoring activities should DCR wish to see these matters handled differently.

DCR Provided CERTIFICATION OF PROPERTY OWNER Property Protection Project

Grant No. [Insert Number]

Name: [Name of Property Owner/Entity]

County, State Zip: [Address of Property]

Phone: [Insert Phone Number]

Email: [Insert Email]

The undersigned certifies to the Middle Peninsula Planning Commission District (PDC), that

1. I am/we are the owner/co-owner of [Insert address of Property where project is taking place].
2. I am/we are the recipient of Grant [Insert Grant Number] for the purpose of deploying a nature-based solution on my real property or at [Insert Address] for the purposes of flood prevention or mitigation.
3. I/we received [Insert Award Amount] (DCR Funds) to fund, in whole or in part, the stormwater protection activities including construction of a stormwater collection system on the Historic Antioch Rosenwald School Building.
4. I/we understand that it is my/our obligation to maintain the stormwater collection system for a minimum of 10 years.
5. I/we have the necessary resources to maintain the stormwater collection system for a minimum of ten (10) years.
6. That I agree to annually inspect and certify to both the PDC and the Virginia Department of Conservation and Recreation that the project is maintained in good order for no fewer than ten (10) years.
7. That I agree to permit the PDC or the Virginia Department of Conservation and Recreation to inspect the project to ensure that it is being maintained in good order for a period of ten (10) years after its completion. Inspections may occur at the discretion of the PDC or the Virginia Department of Conservation and Recreation; however, reasonable notice shall be given prior to the inspection, and no project shall be inspected more than once in a calendar year, provided that inspection does not result in needed repairs.
8. That I agree that I will repay the full amount listed in Item 3 if the project is not maintained in good repair for a minimum of ten (10) years.
